Mr. MICHENER. Mr. Speaker, during the war many factories were constructed by the Government or financed by the Government, to meet wartime military production. Many of these plants have been declared surplus by the War and Navy Departments. They are standing idly by, awaiting the day when they will be utilized in manufacturing peacetime commodities. The process of reconversion is lagging. The one thing that is going to do much to meet the requirements of our peacetime economy, remove the cause for price-fixing, and priorities, is production. My attention has been called to a statement recently appearing in the press made by Mr. Brouwer D. McIntyre, of Monroe, Mich., which, coming from a successful manufacturer, is most pertinent. Pursuant to the privilege given to me, I include the release which is as follows:

Turning white elephant war plants into work horse production centers through a more liberal give and take policy by both Government and industry was suggested today by a Michigan industrialist as a fast means of boosting output of much-needed peacetime goods.

Such a policy, he declared, also would help maintain employment, help reduce Government costs and serve to concentrate building activity on homes and apartment buildings instead of new industrial properties.

A still further advantage should be the bringing together of management and labor in a movement that should result in definite benefits to both, it was pointed out by Brouwer D. McIntyre, president of the Monroe Auto Equipment Co., who made the suggestion.

"Countless plants which were Government-financed or Government-operated during the war are standing idle today, even while industry is seeking to expand rapidly to meet civilian demands," Mr. McIntyre said. "Some of these plants were built before the war and are not of thoroughly up-to-date or desirable industrial construction. Others were built during the war for specific needs which do not now exist. All of them are costing the Government money in State and local

taxes, insurance, maintenance, skeleton guards and stand-by personnel, and similar expenses.

"The placing of such plants in immediate production by private enterprise is being halted—or at least delayed or obstructed—by two factors. First, the Government is holding them for sale or lease at appraisal figures which are not based on today's production schemes or values and which offer little incentive compared to the advantages of building a new plant designed to fit specific, individual manufacturing needs. Industry, therefore, is prone to consider Government prices too high.

"The second factor is that industry may be too quick in deciding that the now idle war plants are not modern enough from a production standpoint, not profitable enough from an investment standpoint, and not suitable enough from any one of a number of other standpoints—labor supply, transportation facilities or geographical location, for example.

"Unquestionably, there is much to be said on both sides, and Government and industry each is largely right from its own viewpoint. But all the while, the plants are idle—the white elephants are still white elephants and not work horses as they should be in this reconversion period when people are doing without automobiles and washing machines and refrigerators and many other things they need.

"On the other hand, it would appear that the Government would be quick to benefit if these plants would be placed in immediate production. Certainly, the savings in Government costs of maintaining them in idleness would be worth while to the taxpayers, if nothing else. Industry, too, would be a gainer if it had plant space in which to produce the things people want to buy.

"A solution of the problem lies in the Government reexamining its appraisal values and prices in light of today's conditions, and lowering them accordingly. Industry, then, should reexamine its requirements and modify them in line with the lowered costs of buying already-available plant space, even though it might not offer topnotch manufacturing facilities. Many of the plants can be adapted to immediate needs. Many of them are in excellent locations—often, manufacturing could be concentrated instead of spread out over distant territories. Lowered costs would permit companies to spend money for plant improvements.

"And, apart from the obvious advantage of boosting production when a boost is urgently needed, a give-and-take attitude on the part of both Government and industry would help local communities, it would provide jobs for returning veterans, it would permit the building industry to focus its attention on places to live, and it would be a program acceptable to labor because of its employment features."

Wyatt Housing Program

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on the Wyatt housing program, by Carl M. Fleming, past president of the Toledo (Ohio) Real Estate Board:

The Wyatt housing program and the Patman amendments propose to socialize the building and real-estate industry.

The Wyatt program is supposed to help the country meet the housing shortage. Actually, it will prolong the shortage by handicapping industry and forcing it into a subsidy program. It will retard construction of homes for veterans by clamping down rigid price ceilings.

Mr. Wyatt has called for the construction of 2,700,000 homes by the end of 1947. This includes conventional houses and unproved prefabricated homes. It involves:

1. Premium payments for increased production.
2. Guaranteed markets for materials manufacturers.
3. Priorities and allocations of equipment and materials.
4. Wage-price adjustments or price increases where they are necessary and not inflationary.
5. Rapid tax amortization for plants which are newly built or converted to produce essential building materials.
6. Absorption by Government of undue risks in developmental work on new-type materials.
7. Use of war plants for prefabrication experiments.
8. Immediate enactment of the Wagner-Ellender-Taft housing bill.

Although no specific legislation embracing the Wyatt program has been prepared, Mr. PATMAN has announced his intentions to introduce amendments to his own bill which would seek to incorporate the major points of the Wyatt program.

Nothing has been said about total costs of the Wyatt plan. Here they are:

1. The Wagner-Ellender-Taft bill	$3,960,000,000
2. Subsidies to materials producers	600,000,000
3. Temporary reuse of war housing	250,000,000
4. Tax amortization for materials production	?
5. Training program	?
Total	4,810,000,000

An additional $200,000,000 will probably be required to encourage increased production of new or substitute materials.

The program provides for the impossible by proposing to concentrate home-building materials to houses selling for not more than $6,000. This would exclude 70 percent of the country from participation in the program. Under today's material and labor costs it is not possible to build an acceptable house and sell it complete with lot for $6,000 in 70 percent of the Nation. It simply is not in the cards, and the program would stall on this point.

Mr. Wyatt proposes to subsidize the production of building materials to the extent of $600,000,000. The manufacturers of building materials have categorically declared that they do not want such subsidy. They have stated that the only thing they need to insure 100-percent production is price relief. If they are given reasonable ceilings they can get into capacity production immediately. They estimate that $200,000,000 increase in prices would bring quicker and more permanent results than $600,000,000 in subsidies. And there would be no bill for the taxpayer to foot.

The Wyatt program involves an attempt to force Federal subsidies down the throat of an industry that does not want them and has said so.

The Patman bill and the proposed amendments involve a comprehensive plan subsidized by the Treasury which it is proposed to force upon the building and real-estate industry without permitting that industry to make an appearance at hearings to offer testimony or countersuggestions. It is taxation without representation amplified many times.

This program is intended to provide housing for veterans. Unfortunately, by compelling industry to take a course it does not want, and under which it cannot operate, it will stop housing for veterans instead of building it. It was hastily conceived in star-chamber sessions and is now being offered without the customary benefit of public hearings or an examination by a committee of the Congress. It will not produce housing for veterans. Instead it will deceive them into thinking they will get houses. When the housing is not produced after being promised in this program there will be widespread resentment among the veterans.

It is completely possible to evolve a housing program for veterans under which industry can produce the houses. That should be done. That must be done.

The Congress has the right to demand that such a program—not the Patman-Wyatt program—be presented to it.

The Public Debt

REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. OUTLAND. Mr. Speaker, a few days ago the gentleman from Pennsylvania [Mr. RICH] commented on the announcement of Secretary Vinson that the Treasury would pay off in cash $2,800,000,000 of obligations maturing in March. The gentleman then went on to say that the Treasury could pay off $20,000,000,000 of the debt out of the money now in the Treasury.

The House will be interested in a full statement of the facts. The cash balance is now $25,800,000,000. This strong position of the Treasury is the result of the splendid response to the Victory Loan. The Treasury set a goal of $11,000,000,000. The American people subscribed $21,000,000,000. The American people have shown in this way their continued confidence in United States Government securities as the best investment in the world.

The present cash balance is large. But this balance must meet large needs in the next few months. The big expenses of war have stopped. But it takes a good deal of money to redeploy our armed forces and to muster out the returning men and women. In addition, the Government has large maturing obligations, some of which will be paid off in cash and some of which will be met by issuing new securities. The Treasury must take all this into account in handling its cash balance.

The suggestion of the gentleman from Pennsylvania that $20,000,000,000 of the Treasury balance could be used now to pay off part of the debt is not in accord with the facts. A large part of the cash balance will be used in the next few months. By June 30, 1946, 4 months from now, close to $15,000,000,000 of the balance will have been used; it will be down to less than half of what it is now. And in the few months after that the balance will be still further reduced to meet the expenses of the Government and such maturing obligations as are paid in cash.

Thus, by the end of the summer, the Treasury balance will be down to a mini-

mum conservative level. And this will be done in an orderly way that will not upset the money market during the important reconversion period. To have the Treasury suddenly pay back $20,000,000,000 of outstanding obligations and then in a month or two come back and again borrow a large part of it would upset the money market and hinder the reconversion program, without any real saving to the Government.

The rapid reconversion of industry is essential to expand our peacetime production to prevent inflation. Every policy of the Government must take this into account. Finance is no exception. A wise financial policy can help smooth reconversion. The present public-debt program is intended to do just that.

A Letter to Laski

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

A LETTER TO LASKI

DEAR PROFESSOR: At a pin't-dawn dinner in New York (with Mrs. Roosevelt at your side) you tell us that "free enterprise and market economy mean war; socialism and a planned economy mean peace."

You are the latest of a long line who have been coming over here to tell us what a rummy country we have. We have been told that the Declaration of Independence was a great mistake. We have been told that General Washington's dream of an independent destiny for Am.rica was a false start in the progress of mankind. But for utter gall and nonsense you tower among your brethren.

You are chairman of the British Labor Party now in charge of what our socialites continue to call our mother country. You are here to tell us, and Lord Keynes is here to sell us. At the same time that Keynes tells us that Britain will collapse unless we send you four billions more, you have the nerve to say that our system of doing business has made starvation a symbol of our power. Just whom have we starved, Professor?

The four billions are to be heaped on top of twenty-five billions of lend-lease, and all we did to save democracy and the Empire in World War I, and to prevent starvation afterward. However, twenty-five billions would have built five million houses here for our returning soldiers at $5,000 each. We need some houses here, Professor.

The brains and enterprise which enabled us to ship 25 billions overseas did not come from following your cockeyed notions of the good, the beautiful, and the true. You have fooled your fellow islanders with your stage magic of a brave new world, cleansed of the profit motive and purified with the selfless incense of politicians. With these four billions you can get your people to thank you for being elected by them. But the dough, the spondulix, the mazuma, and the long green, Professor, still comes from the country whose system you despise; in short, from England's Uncle Sap from the Grand Dupe of Russia.

We did not start this war. England declared war on Hitler without consulting us. And two of your "planned economy" boys, Hitler and Stalin, fixed things up private like before the panzers moved east and the Reds rolled over Poland.

After the "Hounds of Hell" were set loose, Britain fought with pit-dog courage. Americans admire courage even more than monocles. But now that the shooting is over, where is Poland? And the Atlantic Charter? And whose fingers are on the trigger in Iran and Turkey today?

I don't deny that our free enterprisers with their striped-pants helpers in our State Department have sometimes sent marines to collect overdue dividends from the natives. But we have not started two world wars. The "planned economy" boys start the big wars, Professor.

When government runs everything, including foreign trade, then every race for a new oil field becomes an "international incident" and mobilizes a million men with triggers set; whereas, when our free enterprise handles foreign trade it never gets more than a few marines interested, and seldom that.

For a long time, Professor, you had a backdoor key to the White House. A surprising number of us, Professor, have begun to think it is time to change the lock. Mr. Truman, please note.

I close by saying we never expect to see our dollars again, but if we never see you again we will get some return on our investment.

Yours truly,

PLAIN AMERICAN.

P. S.—We will do what we can to feed and clothe the starving victims of your socialistic-planned economies. But if you don't stop advising us, we'll scream.

SAMUEL B. PETTENGILL.

OPA Extension

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. MILLER of Nebraska. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD, I include a letter from a constituent in my district.

Mr. Speaker, this letter is from a prominent minister who has served, all during the war, on the local OPA board. He served, not because OPA was a salvation of the Nation, but rather to be in a position to try and give the people of the country, the kind of justice and administration of the act, which they expected.

The OPA, by its foolish rules and regulations, has driven many of the old-line manufacturers of shirts, wearing apparel, and other goods out of the market. The show cases of Washington and the merchants of the country are filled with cheap, gawdy-looking sport shirts, which are being sold at a high price, because customers cannot get anything else. It is high time that this Congress do something about the OPA hoodwinking the American public on the pretense that they are holding the line. One needs only compare the prices of 1941 on a lot of the essential items of living, and you will find that the line is not being held, even with consumer subsidies. Production is more important than just holding the line. It is the true antidote of inflation and black markets.

The new Administrator, Paul Porter, made the statement that he did not take over the OPA, to act as liquidator of OPA. He says that the OPA is a going concern, with a faithful and loyal staff. I am convinced, Mr. Speaker, that there is no intention, in the near future, of ever closing shop, as far as OPA is concerned. As long as it is in existence, and continues its present method of brow beating business and industry, just so long will there be a shortage of essential items of living.

The OPA, a few days ago, spoke about the price of sugar. Bowles said that sugar went up to 30 cents a pound after the last war and gave the impression that this was a hardship. My sugar charts show the price went up to 26 cents a pound and stayed there less than 2 weeks, not long enough to hurt anyone. The truth about sugar after World War I, is this. Sugar stayed at 9 cents a pound during the war. After the war it went from 9 to 26 cents and then back to 8¼ cents within 1 year. It took 5 months to bring the price down to 8¼ cents. In another year, it was down to 4¾ cents. We got sugar. What good is a low price on sugar if you do not get sugar?

Bowles refutes his own argument when he asks Congress to keep up subsidies so he can keep prices down. Another department of government tells us that since people have so much money for spending they must now have subsidies. It is just double talk when they ask for a billion dollars in subsidies to keep the cost of living down a billion dollars. It really costs much more because you have to spend money advertising the program. His program is like putting a ceiling on Joe DiMaggio of 10 homers a year and then subsidizing him.

All this talk of Bowles holding the line against inflation is tommy rot. Inflation is already here. We can either recognize this fact and put in a flexible price control system which encourages production and takes these facts into consideration, or we can plunge this Nation off the deep end into economic disaster.

FEBRUARY 21, 1946.

The Honorable A. L. MILLER,
Congressman,
House of Representatives,
Washington, D C.

DEAR MR. MILLER: As your constituent I am writing to you to ask you not to favor the continuation of the OPA for another year. At least not to have the OPA continue to exercise its present powers, so detrimental to the American way of life and the postwar reconversion.

As you well know the OPA is trying with might and main, using every strategy to perpetuate itself, not only for another year, but for many years to come. The leaders of the OPA speak about holding the line of inflation. They are, it is true, holding the so-called line, but on the opposite end of that line they are choking the life out of the business of thousands of small merchants throughout the land. In spite of the OPA we already have inflation of money, inflation of wages, and inflation of consumer goods. The so-called price control which is so strongly advocated is no price control at all. There is no price control when apples for example sell for $5.50 per bushel—a 200-percent raise since 1941. There is no just

price control when the price of sugar has raised only 15 percent since 1941, whereas 90 percent of other foodstuffs raised 50 to 100 percent At the present price of sugar there always will be a shortage and consequently an OPA bureau. No one can, nor will anyone attempt to cultivate or process sugar to a large extent in this country at such ruinous prices.

The American people in general well understand the dictatorship of the OPA. Although in a less conspicuous form at present, nevertheless it will continue to grow if we permit it to do so, and sanction its existence. The American people are not as fearful about the so-called inflation bugaboo as they are about the continuation of the bureaucratic dictatorship of the OPA.

I have served gratis on the OPA local board during its entire existence in this country, not because I was convinced that the OPA was the salvation of the Nation, but rather I wished to be in a position to help, and see to it that the people of this country received as far as possible some kind of justice and consideration at the hands of the OPA bunglers.

We may not live to read in the future the unbiased history of the OPA in this country, but I am certain that whenever it is written it will go down in history as the greatest act of injustice and tyranny ever perpetrated on the American people since the Boston Tea Party. I believe I can truthfully say that Al Capone and his gang in prohibition days could be declared saints compared to some of the bureaucrats of the OPA and their associates of the black markets.

In conclusion I wish to say that I am not a crank by any means, and I am not writing this letter only to voice my personal opinion and feelings regarding the OPA. I am likewise expressing the feelings of hundreds of my own people, as well as hundreds of others in this country who are not able to, or who will not take the time to write to you personally.

With best wishes in the continuation of your splendid work, and hoping that you can give this matter your sincerest consideration, I am,

Respectfully yours,

A CONSTITUENT OF THE FOURTH DISTRICT, NEBRASKA.

OPA Is Ruining Coffee Industry

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. PITTENGER. Mr. Speaker, the subject of coffee is nothing new in my office because over a period of time the Andresen-Ryan Coffee Co. has contacted me relative to the coffee shortage and on other occasions I have had the painful duty of presenting information to the Office of Price Administration. So again I want to take this matter up with the OPA through the mediumship of the CONGRESSIONAL RECORD. I hope I have better success than I have had in past months. I have a telegram which came to the office yesterday and which reads as follows:

DULUTH, MINN., *February 25, 1946.*

Hon. W. A. PITTENGER,
Member of Congress, Old House Office Building, Washington, D. C.:

We have just wired the OPA that unless relief is given our plant, in operation here since 1916, will be closed due to lack of coffee. Importers who usually have thousands of bags to offer say they have none or let us have 15 bags, enough for 15 minutes roasting. This means 50 people will be out of employment, and we are not in a position to close and continue again later on. The situation is desperate with us. Please do something.

ANDRESEN-RYAN COFFEE CO.

I set forth this telegram in full, Mr. Speaker, so I cannot be accused of having any bias in this matter. I want to be accurate so far as the facts are concerned. This telegram indicates that like the statistical meat which OPA furnished when there was a meat shortage, this outfit is getting ready to furnish statistical coffee. Right now while OPA is carrying on a propaganda campaign in different parts of the country, trying to convince people that the cost of living has been kept down and that OPA is of great benefit to the American people, this telegram, and other complaints like it, point an accusing finger at the bureau and the bureaucrats.

If American labor and business and industry are to be subjected to such foolish regulations as have been enforced in reference to the coffee problem, then we can expect some long lines of unemployed people, knocking at the doors of shops and small factories and small business establishments which have been closed by these wrong policies of OPA.

Program for Voluntary Service in the Army and Navy

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. RAMEY. Mr. Speaker, under leave to revise and extend my remarks, I include herein a letter which I have received from an outstanding public citizen of Toledo whose life has been devoted to the best interests of his country and who has been the friend of the school children of Toledo. He has not only given of his substance but of himself toward the students of our schools.

I might say that I concur in the sound judgment of Mr. Page that we should not begrudge our serviceman a living as good or even better than he could enjoy as a civilian.

Hon. HOMER A. RAMEY,
Ninth District of Ohio,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN RAMEY: Before many weeks have passed it will be up to the Congress to determine if our Nation shall have some form of compulsory military training and if the Selective Service Act shall be extended beyond its May 15 expiration date. My personal opinions on both these subjects follow the same pattern of reasoning. I most sincerely do not believe that any form of military service that is even remotely considered to be of a compulsory nature will work in harmony with our democratic principles. In time of war the very life of our Nation was at stake and we patriotically put aside our freedom to assure victory. We are now at peace, and our outlook is different. As long as any man is compelled to serve in the armed forces against his will there will be neither efficiency nor harmony.

If we are, as many national leaders state, destined to play a major role in future world affairs, and if this role is to be strengthened by a continued display of armed might, then let us set about a long-range program to establish this military strength on the only basis that our people will continue to accept—a voluntary basis. You may say that this is easier said than done, which, according to present standards, is quite true; however, this need not be the case if certain changes are made to place our Army or Navy career on a par with dignified civilian professions.

Some suggestions I can offer along this line would be to—

1. Adjust a serviceman's income so that it is comparable with that which he could be normally expected to earn as a civilian. This would cost a lot of money, but if we have a role to play in world affairs and we are all united on our policy to pursue this course, we most certainly should not begrudge our servicemen a living as good as they could enjoy as civilians. Let us not resort to compulsion because it is cheaper.

2. See that all future commissioned officers rise from the ranks of noncommissioned officers and that if certain civilian specialists are required by the armed forces let them be employed in civilian capacities rather than grant them commissions as high-ranking officers.

3. Let all future entrants to West Point and Annapolis come from the ranks of the enlisted men and let their appointments be made on a competitive basis.

4. Employ civilians to "keep house" for the armed forces—and thus restore dignity to the career of a professional soldier.

5. Narrow the gap of special privilege between officers and enlisted men so that we can approach a degree of relationship similar to that which exists in private industry between employer and employee, or labor and management.

In brief, raise the standards of an army and navy career to a plane whereby they can be regarded as professions just as dignified and as well compensated as comparable positions in civilian life. Do this and your problem is solved. Fail to do it and your problem will remain forever the headache it is today.

I should be most interested in your own viewpoints on this subject.

How About Giving GI Joe a Break?

EXTENSION OF REMARKS

OF

HON. DWIGHT L. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Fort Lauderdale Daily News, and was written by the owner of that newspaper, Gov. R. H. Gore:

HOW ABOUT GIVING GI JOE A BREAK?

The disgusting spectacle of three enlisted marines being thrown into the brig in Honolulu to await action of higher authorities because they allegedly circularized a petition protesting the "slow" demobilization policy of the Corps, should shock every free-minded citizen in this Nation into action to rid our

armed services for once and for all of the tyrannncal and caste-ridden policies which are making a mockery of the democracy we preach.

We are supposedly proud of our rights of free speech and of our rights as free men to protest the actions of our governing authorities. Yet we see our own sons, serving in the defense of this country and its ideals, thrown into jail by some nit-witted officer of the Marine Corps because they allegedly "violated lawful orders" in sending a petition to Washington protesting their slow demobilization.

"Lawful orders," indeed. By what rights does any authority in this Nation, whether in the armed forces or not, deny a constitutional privilege to American citizens. The right of petition to adjust wrongs is one of the cornerstones of our democracy, but it is apparently one of the rights that the "brass hats" want a man to abrogate when he dons an enlisted man's uniform.

The American people have had a 'bellyful" of thes- kinds of incidents. It is time that Congress initiates action to see that a little bit of democracy we are so proud of is installed in our own armed forces.

The vast majority of enlisted men who served during the war came back wit' nothing but utter disrespect for the so-called "channels of command." The unfair "caste system" is one of the main reasons thousands of enlisted men still in the services are clamoring to get out and get back home where they can actually be "free" citizens again.

Congress should investigate the jailing of these men immediately. We need a large Army and Navy but it can't be maintained under the present treatment accorded enlisted men by the "brass hats." We fought for democracy and it's time that we get it in our armed forces.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. BIEMILLER. Mr. Speaker, a subcommittee of the Foreign Relations Committee of the Senate is now holding hearings on the proposed St. Lawrence Seaway. Many distinguished Americans of all walks of life have appeared in favor of this long needed project. I sincerely hope both Houses of the Congress will take affirmative action on the pending legislation in the near future.

As part of my remarks I desire to include a resolution on the seaway passed by the Wisconsin Federation of Women's Clubs and forwarded to the Senate committee:

Whereas President Truman, following in the great tradition of his predecessors, Presidents Taft, Wilson, Harding, Coolidge, Hoover, and Roosevelt, has recommended to Congress the early enactment of legislation to complete the St. Lawrence power and navigation project; and

Whereas such legislation is now the subject of hearings before the St. Lawrence Subcommittee of the Foreign Relations Committee; and

Whereas the St. Lawrence River is the greatest single undeveloped source of hydroelectric power on the North American Continent, and the past failure to harness this vast energy constitutes an act of neglect and waste which is contrary to all precepts of good housekeeping in Government; and

Whereas the development of the St. Lawrence seaway will extend the benefits of ocean shipping to the industrial heart of America; will facilitate the free flow of trade between interior and seacoast areas which will redound to the economic prosperity and well-being not only of the Middle West but of the entire Nation; and will permit a considerable expansion of foreign trade, thereby implementing our national policy of permanent peace based upon good will and expanded trade relationships; and

Whereas in accordance with recent census figures, the population of the United States has increased by 20,000,000 persons since 1920, with strong indications of a continued growth for several decades to come, and the needs of this fast-growing Nation will require a substantial expansion of its transportation systems—the development of the St. Lawrence seaway being of primary importance in any such expansion program; and

Whereas the industrial and agricultural resources of the Middle West could have been more effectively employed had the St. Lawrence seaway project been available for use prior to the outbreak of and during World War II, by expediting direct shipment of men and matériel from the industrial heart or the Nation to battle fronts all over the globe; and

Whereas World War II has proven the absolute necessity of the St. Lawrence project for the national defense and military security of this country by providing a safe interior location for national defense industries, for storage of strategic materials, and for construction of naval and merchant vessels in sheltered harbors: Now, therefore, be it

Resolved by the Wisconsin Federation of Women's Clubs, That we strongly endorse the St. Lawrence seaway and power project, and request that this resolution be entered in the records of your hearings with the confident trust that after consideration by your honorable committee of the great merit of this important project, you will recommend to the Congress the passage of the seaway legislation now before you.

Time To Stop Appeasement and Set Up Real Program for Dealing With Russia

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article by John Griffin, which appeared in the Boston Sunday Post, Boston, Mass., on February 26, 1946:

TIME TO STOP APPEASEMENT AND SET UP REAL PROGRAM FOR DEALING WITH RUSSIA—ATTITUDE OF REDS TOWARD CANADA IN THE PRESENT SPY REVELATIONS EXPLAINS STALIN'S ONE WORLD PLAN

(By John Griffin)

Few governments have ever been as arrogant as the Soviet in their condemnation of Canadian officials for turning up a spy plot designed to give Russia secrets of the atom bomb. Instead of being chagrined at the revelations, the Russians have taken the offensive and tried to place all the blame on Canada.

They say, in effect: "What do you mean by getting your nose in the way of my fist?" and apparently they expect the world to condemn Canada for having the nerve to expose the workings of the Russian spies.

Undoubtedly they will find some people in this country ready to support them, too. Already Joseph E. Davies, one of America's wealthiest men, has declared that Russia has a perfect right to place spies in this country and every moral right to try to get the secret of our military weapons.

SEES HOSTILITY

Mr. Davies suggests that "if Russia had developed the atomic bomb and the United States were in her shoes, we certainly would try to obtain such information—especially if we faced a potentially hostile world."

Mr. Davies might also have suggested what would happen to spies caught in Russia in an effort to obtain Russian military secrets. Everybody can make his own guess as to that. They can't, however, guess so easily what Mr. Davies means by his suggestion that Russia faces a hostile world.

Does that mean that the United States is hostile to Russia? We are the most powerful nation in the world. Where is the threat to Russia that he is so worried about? Does he see any threat to America at all?

Apparently he would have us turn over all our military secrets to Russia. He was once Ambassador to Moscow and he ought to know that Russia, even when we were allies in war, showed no disposition to give us any of the Russian secrets.

He ought to know that not only were American correspondents refused permission to observe the Russian military effort during the war, but also that the Russians refused to allow official American military observers near the front.

KEPT US AWAY

He ought to know that the Russian Government did all it could to prevent the Russian people from knowing how much aid we gave them in the way of materials and equipment. And even he ought to see through the phony statement of Moscow to the effect that Russia doesn't need any further information about the atom bomb.

If the Russians are not interested in this secret, what are their spies doing in Canada and in the United States? The Moscow statement said that the Soviet military attaché in Canada "received from acquaintances among Canadian citizens certain information of a secret character which, however, did not present a special interest to Soviet authorities. These matters had already been published."

There's a puzzle for those who like difficult problems: How could the information be secret if it had already been published?

It's about time that Americans took a realistic view of Russian activities, and it's also time for the United States Government to settle on some kind of policy besides constant appeasement. Those in this country who have been so loud about the advantages of the one-world idea ought especially to be realistic when they see the Russian idea as set forth in the recent preelection speech of Mr. Stalin.

FOR ONE WORLD

Stalin made it plain that he, too, is for the one-world idea and intends to do everything possible to achieve it. Only his idea of one world is to have it all communistic.

While we, in this country, hear our leaders say that "it is to the best advantage of the American worker that the price line be held" and see in the same announcement a decision that price controls will be relaxed to allow limited increases, and wonder whether anybody here has any idea of definite policy, Stalin goes merrily on his way knowing just what he wants and just how to get it.

He knew what he wanted at Yalta, and he got it, although the man who gave it to him had no right to make such concessions, and in making the concessions paid no attention to the principles set forth in the so-called Atlantic Charter.

The Senate had no knowledge of concessions which they should have been consulted about, and the Secretary of State knew nothing about them either. In fact, nobody seems to know even now if all the concessions have yet been revealed.

Stalin is well on the way to dominating Asia as well as Europe. According to an experienced foreign correspondent of the New York Times, who is just back from Europe, it is only a matter of time before most Germans in the Russian-ruled area of Germany become Communists.

They'll probably have to in order to survive under present conditions. The correspondent put it plainly when he said "the Russian answer to nazism is communism," and "in every way possible it's made very convenient for a German to become a Communist."

FINE EXAMPLE

In Stalin's speech on the eve of the election in Russia he said, "The Soviet state system has proved an example of a multinational state system where the national problem and the problem of collaboration among nations are solved better than any other multinational state."

So there it is. If anybody wants to set up the "one world" system, Stalin will provide the means, and as long as it's Communistic he will be wholeheartedly for it. As for its being democratic, well, he doesn't think so much of that.

He blamed both World Wars onto capitalism, although he found the second war quite different in character. "It must be kept in mind that the main Fascist states, Germany, Japan, and Italy, before attacking the Allied countries," he said, "had abolished at home the last remnants of the bourgeois democratic liberties, had established a cruel terrorist regime, had trampled under foot the principles of sovereignty and freedom of the small nations, declared the policy of seizure of other people's lands as their policy, declared for the whole world to hear that they strove for world domination and spread of the Fascist regime throughout the world."

Analyze that statement and try to see what other nation it fits besides Germany, Japan, and Italy. Perhaps the Russians will now include Canada in that classification. Great, big, powerful Canada ought to be ashamed of bullying poor little Russia. Canada ought to get its nose out of the way of Russia's fist.

Exports of Lumber and the Housing Emergency

EXTENSION OF REMARKS

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 13, 1946

Mr. TALLE. Mr. Speaker, I have given several months of earnest study to the housing problem. The RECORD for December 11, 1945, contains a plea I made for constructive action before the last session of the Congress ended. Two days later I introduced a bill for the purpose of stopping the export of lumber and lumber products used in construction, and subsequently I introduced another measure which included plywood.

It seemed wise to me last year, as it does now, that building materials should not be exported in the face of so grave an emergency as that which faced us then and which is even more acute now. It is apparent, however, that the State Department does not share my view, as may be noted from the following letter:

DEPARTMENT OF STATE,
Washington, January 28, 1946.

MY DEAR MR. TALLE: In accordance with your verbal request of January 25, 1946, regarding the cessation of lumber exports, I should like to make the following comments:

As a general policy, the Department does not look with favor on export embargoes or other artificial impediments to the free flow of international commerce.

With regard to logs, lumber, and certain lumber products, exports are screened thoroughly by the Civilian Production Administration, the Department of Commerce, and the Office of War Mobilization and Reconversion, and licenses are granted only after this screening.

The subject was discussed with the Office of War Mobilization and Reconversion. It was found that figures are not available as yet for 1945, but production of lumber for that year is expected to reach 27,500,000,000 board feet, whereas actual exports will not exceed 375,000,000 board feet, or, roughly, 1.36 percent. The rate of wartime exports was far below the average of the 5 years preceding the war, when it was 4.59 percent, and much lower than the average year in the early 1930's, when exports reached almost 6 percent of production.

United States imports for the first 9 months of 1945 were 742,000,000 board feet, or 3.37 percent of production, and only since the war began have imports been consistently twice as high as exports. Canada is the largest source of imports and one of the principal countries of destination for exports.

It is understood that some sawmills, especially in the Douglas fir region, are equipped to produce sizes demanded for export, and that an export embargo would result in unemployment. These mills could not be converted easily to the production of domestic grades of lumber.

Anticipating the construction of five hundred to seven hundred thousand units of housing in the United States in 1946 at 8,000 board feet each, there would be a demand for about 4,000,000,000 board feet, which is less than one-half of the estimated production of construction lumber for 1946.

A refusal on the part of the United States to share its lumber with its neighbors would be contrary to the President's policy of assisting European countries in reconstruction and rehabilitation. Moreover, adoption of an embargo on exports might result in similar action by foreign countries, with the result that this country might not be able to import commodities necessary to its economy, such as logs, lumber, woodpulp, tin, or natural rubber.

In view of these considerations, including the harmful repercussions which might result from adoption of the proposal, I am sure you will understand the Department's concern.

Sincerely yours,

DEAN ACHESON.

Mr. Speaker, to this statement the National Retail Lumber Dealers replied, as follows:

NATIONAL RETAIL LUMBER
DEALERS ASSOCIATION,
Washington, D. C., January 28, 1946.

Hon. HENRY O. TALLE,
House of Representatives,
Wasington, D. C.

MY DEAR MR. TALLE: I appreciate your forwarding a copy of the letter dated January 28, 1946, addressed to you by the Acting Secretary of State regarding the export of lumber.

There are certain statements made in the Acting Secretary's letter which, although substantially true, are misleading and are apt to create a false impression.

The Acting Secretary points out that the estimated production of lumber for the calendar year 1945 will probably reach, when the final figures are assembled, 27,500,000,000, whereas actual exports will not exceed 375,000,000 board-feet, or roughly 1.36 percent. But the Acting Secretary failed to mention that under the allocation of the Civilian Production Administration for the last 6 months of 1945 it was possible to export 692,000,000 board-feet. The Acting Secretary, in pointing out that the actual exports did not exceed 1.36 percent of the 1945 production, should have mentioned that this small percentage was the result of a combination of the late programming on the part of the War Production Board (August) and the strikes in the west coast industry. In other words, even though the War Production Board made it possible to authorize the export of 692,000,000 feet in the last half of 1945, actual exports were not achieved because the foreign missions in this country were not able to place their orders sufficiently early to get shipment, and even in the cases in which the orders were placed, the shipments were delayed because of strikes. This combination of circumstances is not likely to repeat itself and the export of lumber in the future is apt to reach the actual authorized amount.

A license to export lumber is valid for 1 year after issuance. In other words, if delivery does not take place on orders which have been licensed during the particular quarter in which issued, that license constitutes a potential drain against the supply during the succeeding quarter. It is estimated that there are outstanding valid licenses issued in 1945 authorizing the export of lumber on which 150,000,000 feet of lumber can be, but have not been, exported. In many instances the orders which have been licensed are firm orders which have been placed with the mills. In other words, without granting any further licenses in the first quarter of 1946, there is likely to be a minimum of 150,000,000 board feet of lumber exported in the first quarter of 1946. With an authorization for the Office of International Trade Operations to issue additional licenses for 225,000,000 board feet in the first quarter of 1946, the drain on the domestic supply in the first quarter of 1946 may possibly exceed 250,000,000 board feet. Comparing this with the annual rate of production based on the last quarter of 1945, which will not exceed 6,000,000,000 board feet, this means conservatively that one-twenty-fourth of the lumber produced in the first quarter will be shipped for export consumption. This is 4 percent. However, the Acting Secretary would leave you with the impression that exports during 1946 are not apt to exceed the quantity exported in 1945, which were 1.36 percent of the total production. The Acting Secretary, I trust, has been misled.

The Acting Secretary also states that he understands that there are some mills which produce lumber for export that cannot be converted easily to the production of domestic grades of lumber. The Acting Secretary infers that these mills would shut down if their export market were cut off and that this would contribute to an unemployment problem. I do not know what kind of mill produces what kind of lumber that cannot be consumed domestically, or what kind of mill produces what kind of lumber that cannot be remanufactured for domestic use. This, Mr. Congressman, I would like to see.

The Acting Secretary states: "Anticipating the construction of 500,000 to 700,000 units of housing in the United States in 1946, at 8,000 board feet each, there would be a demand for about 4,000,000,000 board feet,

which is less than one-half of the estimated production of construction lumber for 1946." What the Acting Secretary does not mention is that one of the principal factors which limits the number of homes that can be produced is the shortage of building material—one of which the Civilian Production Administration asserts is lumber. According to Mr. Blandford, Administrator of the United States Housing Authority, the estimated demand for new homes is 1,200,000 units of housing (which I believe is slightly inflated). The Acting Secretary also failed to mention that the estimated domestic requirements for all types of lumber exceed the most optimistic production figure of 30,000,000,000 feet, and that the current rate of production based on the last quarter of 1945 does not exceed 24,000,000,000 feet annually. I might also mention that production in the first quarter and the last quarter of the preceding year are normally about the same—usually the first quarter being slightly lower.

Mr. Congressman, I am afraid that this is another case of one department of the Government attempting to do that which is diametrically opposed to what another department is doing. I regret that it is necessary for me to burden you with these problems, but I feel that the Congress is entitled to know all the facts.

Very truly yours,

NATIONAL RETAIL LUMBER DEALERS ASSOCIATION,
H. R. NORTHUP, *Secretary-Manager.*

Mr. Speaker, it is fair to say that the letter addressed to me by the State Department fails to take account of a number of significant facts:

First. Most of the exports occurred late in 1945, and the percentage does not represent fairly the quantity that might have been exported in the absence of the factors noted in the reply of the National Retail Lumber Dealers Association.

Second. Certainly the export potential for 1946 and 1947 is an appreciable quantity, especially when one considers that an export license is good for 1 year and that a carry-over from 1945 must be taken into account.

Third. The contention that certain "mills could not be converted easily to the production of domestic grades of lumber" leaves me puzzled. In the first place, I do not believe that the contention is valid; and, secondly, if the emergency is so severe as everyone admits, it may be proper to suggest that conversion should take place even if it cannot be done easily.

Wholesale Dealer Protests OPA Ruling

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. PITTENGER. Mr. Speaker, I received a telegram yesterday from Edward J. Lee, Jr., president Lee Distributing Co., calling my attention to what appears to be a new regulation, one of the million issued by the Office of Price Administration. This protest from this businessman is typical of the many calls for help which come to my office and I presume other Members of Congress are similarly situated. The telegram reads as follows:

DULUTH, MINN., *February 25, 1946.*
Hon. WILLIAM A. PITTENGER,
Member of Congress:

Service wholesale mark-up on amendment 45 absolutely ruin us. Such low mark-up will force us to discontinue handling our entire quotas on this merchandise. People in this area are entitled to their share. Meeting at OPA C. H. Keakes dairy and poultry branch, old census building, Third and D Streets, Southwest, Tuesday, February 26, a. m. Your support is necessary.

LEE DISTRIBUTING CO.,
EDWARD LEE, JR.,
President.

This telegram, Mr. Speaker, illustrates better than any claim I might make, the disadvantage which the small businessman faces in his efforts to continue in business. Mr. Lee has called upon his Congressman to participate in a hearing. I presume a similar appeal has been presented to many of my colleagues. If, as Mr. Lee sets forth in this telegram, the OPA regulations will not make it possible for his firm to handle certain lines of merchandise, then it strikes me that I can properly suggest that Congress ought to have some other agency handle the price control proposition.

Consider the Facts—Form Your Own Opinion

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. HOFFMAN. Mr. Speaker, the people of the Fourth Congressional District of Michigan are quite capable of forming their own conclusions, arriving at a correct decision, when they have the facts.

Through propaganda paid for by the taxpayers, Chester Bowles, OPA and a half dozen other Government agencies, having at least the interest of continuing themselves in power, have, through the press, and over the radio and in the movies, presented their side of the controversy.

General Motors, Steel, General Electric, a dozen other corporations which give jobs, meet the pay rolls, and manufacture the things you and I need, have attempted, with comparatively limited resources, to answer the Administration's propaganda.

Other organizations, such as the NAM and McGraw-Hill Publishing Co., Inc., have joined in the effort to give information—present their opinions.

One of the latest follows. You have listened to and read other statements. Here is one more. Use your own common sense; recall your own experiences; form your own opinions. Then, if you have any instructions for your Representative which call for any change in his policy, send them on.

THE PRESIDENT'S WAGE-PRICE POLICY WON'T WORK

(Our attitude on this much discussed and highly controversial subject is expressed in this editorial which is directed to American industry through the March issues of 25 McGraw-Hill publications. You may, if you care to do so, quote all or any portion of it with or without credit.)

The American public had every right to expect that the long-awaited wage and price policy would break the impasse blocking the way to the swift and orderly reconversion of industry from war to peace.

The policy announced offers little promise of such solution, and this may well constitute a national calamity.

There is only one thoroughly constructive feature of the Presidential statement of February 14, and its implementing Executive order. It is the first Government pronouncement since the defeat of Japan to clearly define inflation as the major danger confronting us in the period immediately ahead.

That is a correct appraisal, and one long overdue. Up to now Government spokesmen, almost invariably, have sought to carry water on both shoulders. The administration has justified its policy of promoting wage increases as a measure necessary to forestall deflation—to keep purchasing power from falling and forcing the economy into a violent tailspin. The strict holding-of-the-line on price ceilings has been defended as necessary to prevent run-away inflation. Unfortunately, while the President now exhorts all to enlist in a crusade against inflation with a voice that is clearly Jacob's, his program for dealing with it still employs the hairy hands of Esau to promote the very danger which he is urging everyone else to combat.

The "new" policy provides for a continuation of the wage increases that have been pressured through by Government mediators, "fact-finding" boards, and direct seizures until they have been made general throughout industry upon the dimension established in recent patterns. It offers industry the single concession of prompt hearings and decisions upon claims for price advances, but the yardsticks for judging such claims are exactly those which OPA has applied in the past. Since the past procedure has led us into our present difficulties, it is hard to see how it will serve now to lead us out of them.

PAST GOVERNMENT POLICY FOSTERED DISSENSION

At the war's end it was obvious to everyone that what was needed was the swiftest possible reconversion of industry. It should have been equally apparent that we were faced with the difficult problem of controlling tremendous inflationary pressures which would be particularly insistent until peacetime production could be mobilized at high volume. This was made almost inevitable by the huge backlog of accumulated demand, for both capital and consumer goods, and by the unprecedented volume of liquid funds at the disposal of individuals of all classes. The only circumstance that could have modified the inflationary complexion of the postwar picture was the possibility of such wholesale and prolonged dislocation and unemployment in the process of readjustment that people would have been frightened into freezing onto their savings instead of spending them.

It soon was apparent that just the opposite was taking place. The early transition was extraordinarily swift, unemployment was lower than anyone had dared hope, and civilian spending outstripped all previous records. The circumstances called for strong anti-inflationary fiscal measures, along with a firm maintenance of price and wage controls alike.

Instead of adopting such a balanced program, the Government immediately discarded all wage controls, and in addition started on active campaign for promoting large wage increases. The President, upon a number of occasions, stated flatly that American industry generally could and should grant substantial pay advances without any compensating price rises. His Office of War Mobilization and Reconversion estimated that average increases were practicable to the extent of 24 percent. Given such governmental encouragement, it was inevitable that labor leaders should do exactly what they did—file extravagant wage demands at the beginning of the reconversion process, when accurate appraisal of production schedules and costs were least susceptible of calculation, and when the shortage of civilian goods multiplied the inflationary effect of any increase in purchasing power.

At the same time the OPA was fighting to hold the price line in a good cause, but with singularly inept procedure. It acted, seemingly, upon the premise that it was always better to give less price relief than was needed rather than enough, that relief provided under its formula was preferably to be granted later rather than on time, and that the interests of lower-bracket-income receivers should be protected by a particularly tough resistance to raising prices of cheaper goods. The latter procedure seems to have boomeranged by virtually driving many of the lower-priced lines off the market.

The sum of these wage-price procedures resulted in work stoppages of epidemic scope. Many business concerns faced with the prospect of immediately unprofitable operation, uncertain that new wage demands would not be made with Government support as soon as volume production was established, and without assurance as to when price controls would end, refused to assume inevitable losses even when confronted with combined union and Government pressure. The fight was on.

NEW POLICY DIFFERS LITTLE FROM OLD

With inflation now clearly recognized as the immediate danger, it might have been expected that the new wage policy would reverse the former practice of lending active encouragement to new wage advances. But that would have brought down upon the administration the wrath of all organized workers who had not yet been granted increases already bargained through by other groups. This was avoided by directing the National Wage Stabilization Board in effect to approve any wage increases necessary to give general advances comparable to those already made. The only brake applied on the wage side lies in a directive to the Board not to approve, as a basis for price relief, wage advances that go beyond the established pattern.

On the price side, the new directives to the OPA entail no important departure from its past procedures. Even the concession to review hardship cases promptly rather than after 6 months is only a pious hope, since it is unlikely that OPA is equipped to deal rapidly with the thousands of cases that will arise. A hardship case is defined as one in which, after absorbing an approved wage advance, an industry or establishment in a 12-month period of normal rate operation is judged by the Price Administrator likely to operate at a rate of profits to net worth less than it averaged in the base period of 1936–39.

Let us see what this really means. In the first place, the rate of manufacturing profits in the base period was only moderate. But since the average net worth of manufacturing corporations has increased one-third over what it was in the base period, the application of the OPA formula, assuming that its Administrator correctly appraises the 12-month outlook, seems to provide for absolute profits one-third higher than the 1936–39 average.

The OPA formula, however, applies to profits before taxes. What really matters to stockholders is profits after taxes. Corporation taxes have been increased from an average of 17 percent in the base period to 38 percent now. This means that the price adjustments granted by OPA on average will yield profits after taxes no larger in dollar terms than in the 1936–39 period, although 1946 manufacturing sales are expected to be more than twice as high. Under this procedure the ratio to net worth of profits after taxes will be one-fourth lower than the 1936–39 average. This clearly undermines the incentives upon which production at high level depends.

The workers get wage increases which promote inflation. The Government, bailed out from its previous mistakes, gets political credit for raising wages. And the entire bill is handed to American industry for payment.

BUT THE DANGER OF INFLATION IS REAL

Under these circumstances, there is a growing demand on the part of business groups that price controls be rescinded immediately. It is argued that, once the restrictive influence of price controls is relaxed, capacity production soon will supply sufficient goods to prevent undue price inflation.

It is understandable that business should wish to be rid of Government controls which have operated in such a thoroughly inconsistent and damaging fashion. Unfortunately, there is ground for believing that more harm might result from this cure than from the disease.

There is nothing in our situation that could bring on the kind of inflation that has been experienced by certain countries of Europe and Asia—in which the value of currency deteriorates until it takes a cartload to buy a pair of shoes. But our situation now is definitely more threatening than it was in 1919, after the First World War. At that time wholesale prices and the cost-of-living skyrocketed almost 25 percent within 12 months. If we discard all controls now, as we did then, prices might easily go up from 25 to 50 percent in a year's time.

An inflation of that dimension can do tremendous damage. While it lasts, all those dependent upon fixed incomes are damaged—all bondholders, including those who hold war bonds, all life insurance and annuity beneficiaries, all pensioners. Generally, the purchasing power of wages and salaries would shrink, with white collar and unorganized production workers hardest hit. Controlled-rate industries, such as railways and other utilities, would be squeezed. General business would suffer least of all—while the boom lasted.

But such soaring booms cannot last. The 1919 boom burst in mid-1920. By summer of 1921 industrial prices had fallen 40 percent and industrial production was off 35 percent; farm prices had fallen 50 percent. This time the boom might soar higher and last longer, but that would merely result in an even more precipitous drop. Business would be hard hit along with everyone else, and high wage rates would mean nothing to the unemployed.

CONTROLS MUST BE CONSISTENT AND PROGRESSIVELY RELAXED

But if the Nation cannot afford to risk disastrous inflation by immediately abolishing controls, neither can business afford to accept the program which the administration now proposes.

The wage-price policy will not hold the inflation line so long as the administration is leading the assault to breach that line on the wage side, as it has done ever since VJ-day.

The administration is now going before Congress to ask for a broad extension of its wartime powers for an additional year beyond June 1946.

Congress must see that this is not granted except upon terms that guarantee the use of such power with a consistency that has been conspicuously absent up to now

1. It must provide sufficient price relief to yield profits normal to high-level operation.

2. The basis for price relief must be clearly defined and geared to actual costs of operation at the earliest possible date.

3. OPA administrative procedures must be speeded up and streamlined, or the delays that characterized past administration will become intolerable.

4. It must see that, once established, the new line is held as long as wartime controls are continued by enforcing restrictions on wages as well as prices.

5. It must set an early date for the termination of all wartime controls and provide for progressive and bold steps for de-control to be taken before that date, as soon as production levels in any field are sufficiently high to restrain runaway prices.

6. It must proceed without delay to marshal fiscal and monetary policies to combat inflation, in order that price controls may be discarded at the earliest possible date.

Unless Congress does this—and it will not be easy in an election year—we are headed for an explosion. It will come in one of two forms—either in a continuance of industrial strife, or in a rocketing inflationary boom that can only end in collapse and depression.

JAMES H. MCGRAW, JR.,
President, McGraw-Hill Publishing Co., Inc.

Small Business Takes the Count

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. PITTENGER. Mr. Speaker, we have pointed out from time to time the great harm that the Office of Price Administration has done to the American people. Its policy of preventing anyone from making a profit out of any business transaction is not only unsound and silly, if you talk in the language of common sense, but it is full of danger to our American economic system. The way to fight inflation is to get the productive agencies in our economic system to produce. You cannot do this by asking them to operate at a loss. Yet that is exactly what OPA has been trying to do right along and wherever possible OPA has not only ruined existing small business enterprises, but has prevented other enterprises from coming into existence.

Here is a memorandum issued by a representative of small business which came to my desk unsolicited and which tells much more eloquently than I can tell the story of menace and danger of OPA to all of us. This includes the man who works, because if business and productive enterprises cannot keep operating, then we are going to have a lot of unemployment. So when people get lined up before the employment office, wanting jobs, and no jobs available, just remember that OPA has done everything it could to bring that about.

The item which I think will interest every Member of the House of Representatives is as follows:

WHAT OPA IS DOING TO US

FEBRUARY 20, 1946.

The Zinsmaster Hol-Ry Co. is a Minnesota corporation manufacturing exclusively, hardtack rye products. The chief materials used are rye flour, a small amount of salt, and water. The company is operating at capacity 24 hours per day, 6 days per week—does a national business, and employs approximately 50 people.

The company was organized and started operations in 1929. Since 1929 it has built up a national volume of sales of over one-third of a million dollars.

In December 1941 our chief and practically only ingredient—rye flour—cost us $1.90 per barrel. January 28, 1944, we applied to OPA for a price increase as this same rye flour, in carload lots, had increased to $5.82 per barrel. After considerable delay on the part of OPA we were finally granted, on July 7, 1944, nearly 6 months later, a 1 cent per package price increase, equivalent to about 8 percent.

The price of rye flour, with no ceiling, has reached an all-time high, advancing from $5.82 per barrel in July 1944 to nearly $10 per barrel at the present time.

This company, with a low overhead, practically no advertising expense, a good labor contract, and no administrative salaries, has been operating at a loss for several months. Already a competitive company in Minneapolis has recently closed, due to no price relief from OPA.

We have applied to OPA for relief and up to the present time—no action. We have not been able to meet the demand for our rye products and contemplated a new plant in the East. However, with a run-away, uncontrolled rye market, and with rye prices advancing from $1.90 per barrel in 1941 to nearly $10 per barrel in 1946, expansion plans are out of the question.

Unless OPA gives us some price relief in the very near future, it may be the ruination of another small business. If the United States Government believes in free enterprise, we certainly deserve their help. A word from you to OPA in Washington might mean the salvation of another small business, which means so much to our present economy.

Thanking you for any assistance you care to give us, and with kind regards.

Sincerely yours,

HARRY W ZINSMASTER,
President, Zinsmaster Hol-Ry Co., Duluth, Minn.

I charged last fall Mr. Speaker, that OPA has developed into a large propaganda factory for the purpose of taking credit for everything good that happens in America and further they want to blame somebody else for everything bad that happens. This fellow in OPA who yells his head off about inflation, and cries loudly that he is preventing inflation, ought to take the time to tell the people that he is falsifying the facts. He ought to tell the people what his outfit is doing to Mr. Zinsmaster and to thousands of other small businessmen throughout the country. I venture the modest suggestion, however, Mr. Speaker, that the loud speaker, alias the Director of OPA, now deceased, speaking from the standpoint of officialdom, will never admit a mistake and can always be depended on to cover up the true facts.

I am concerned because a lot of good substantial folks are being deceived. They do not seem to realize that OPA tries to create a scarcity in production, because only in that way can they have any excuse for existing. They are afraid to let the productive process work, because when you have plenty of goods, the price goes down and you do not need controls.

So that we can have the record correct when you hear the familiar cry, "We must have OPA or else inflation," I want to repeat what I have said many times before. We need price controls and we need rent controls, wherever there is a scarcity. Those controls should not be used to destroy the productive process. OPA is using those controls for that purpose. We ought to get rid of OPA and have another agency established to take its place, with some men in charge who still believe in our system of free enterprise.

Now, Mr. Speaker, OPA legislation is pending before the Banking and Currency Committee of the House. What are they going to do about the case of Mr. Zinsmaster and thousands of other small businessmen? What is Congress going to do about this case? What are the Members of the House of Representatives going to do about it individually? I see only one answer to these questions. Vote to abolish OPA and serve notice on the administration leaders that we intend to do that. Then let them bring out some decent legislation providing for the abolishment of OPA and the transfer of its functions to some existing Government agency with businessmen in charge.

Resolution to Increase the Aid to Dependent Children Program

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include therein the following resolution adopted by the General Court of Massachusetts in February 1946:

Resolution memorializing Congress to increase the aid to dependent children program

Resolved, That the General Court of Massachusetts hereby urges the Congress of the United States to immediately pass legislation to so amend the Federal aid to dependent children law as to permit the matching with Federal funds of all amounts expended by States, or their political subdivisions, on account of aid to dependent children; and be it further

Resolved, That copies of these resolutions be sent by the State secretary to the President of the United States, the President pro tempore of the Senate, the Speaker of the House of Representatives, and the Members of Congress from Massachusetts.

In house of representatives, adopted, February 5, 1946.

LAWRENCE R. GROVE,
Clerk.

In senate, adopted, in concurrence, February 11, 1946.

IRVING N. HAYDEN,
Clerk.

A true copy.
Attest:

F. W. COOK,
Secretary of the Commonwealth.

United Nations Organization

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 27 (legislative day of Friday, January 18), 1946

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered on June 29, 1945, before the Independent Voters of Illinois, at Chicago, Ill., on the subject of the United Nations Organization.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

You are here because you have covenanted with the living and the dead that war shall not again come to curse your loved ones. At last the peoples of the world who pay the price of war have sworn to have peace.

Fifty nations, Tuesday of this week, signed in San Francisco the Charter of the United Nations, in its significance the greatest document in human history. In the presence of our President the signatures of the representatives of the United States were affixed.

With that signing was given the moral commitment of the people and the Government of the United States that we would ratify that Charter conceived upon our own soil, born out of the suffering of all those who have fought and worked through two wars, fathered by two of the bravest soldiers of democracy of all time, Woodrow Wilson and Franklin D. Roosevelt.

This great Charter will reach the Senate from the hand of the President on Monday.

It has been long in the making.

It has been carefully, painstakingly, and prayerfully carved out.

It represents compromise, tolerance, and reciprocal confidence and trust among nations.

It is both a dream and the anvil upon which dreams are beaten into moving reality.

It comprehends the whole order of the earth and the whole reach and scope of man's life.

The eyes of the Nation, of the world, of the wounded, of those still fighting and dying in the war against Japan, the eyes of those who look upon us from the world above are now focused on the Senate of the United States.

The Senate cannot, must not, and shall not fail mankind.

The Senate cannot, must not, shall not be the cruel cross upon which shall be crucified another generation of guiltless men and women.

We cannot but expand with pride in the accomplishment of all those who have played their part in the consummation of this Charter.

President Roosevelt, who called this great Conference, who named our able and bipartisan delegation; President Truman, who commissioned it to new life and gave it new impetus; all the members of our delegation and of other delegations; and untold numbers of others, nameless to fame, who gave themselves to it: these will always be honored in the everlasting memory of history and in the warm heart of the world.

Here truly was democracy functioning at its best.

In San Francisco, significantly chosen as the Golden Gate to the golden future of peace, gathered 50 nations of many lands,

languages, colors, cultures, and creeds. Picture in your mind's eye the variety of peoples which met in San Francisco to weld a new unity.

There was no distinction in this great labor, as there has been none in this great war, of race, color, sex, or creed.

There is but one reservation in our joy—that is, that Franklin D. Roosevelt could not have lived to see how truly and greatly he had wrought.

Yet, he knew that we were going to have this happy day.

Only a few evenings ago a friend told me that 3 weeks before his death he talked to the President.

He had looked fresh and buoyant, so much so that my friend remarked upon it.

The President replied, "I feel better than I have felt in a long time, for a great load has been lifted from my heart—I now know we are going to win the peace."

He knew then, he knows now, that we have won the peace.

This great Charter was not born like Venus, full grown, out of an ocean wave.

It is the crowning achievement of centuries of the slow and painful development of a great idea.

Down through the ages one sees the steady growth of the concept of peace and justice on the earth.

In the city-states of ancient Greece and Italy, even before Rome became great, there were organizations to keep the peace. Again through the Middle Ages, scholars and statesmen sought to establish among nations and peoples that accord and cooperation which would keep the peace and promote the welfare of all.

And again in the jeweled cities of the Italian Renaissance that ideal was renewed.

In modern times we have seen this dream of an organization of nations gain greater and greater force. At Westphalia in 1648, at Utrecht in 1713, at Aix-la-Chapelle in 1748, at Vienna after the downfall of Napoleon, at Paris in 1856, and at Berlin in 1878 and 1885, the nations of Europe, in so-called congresses, tried to set up the machinery for cooperation to prevent war and to maintain peace.

In 1899 nearly every nation in the world assembled at The Hague to consider disarmament and the substitution of arbitration and conciliation for war. A second Hague conference devoted to the same objectives met in 1907. A third was interrupted by the outbreak of the First World War.

We in this country can take a just pride in our own forerunners of this great organization of the United Nations.

On May 5, 1910, Theodore Roosevelt, speaking before the Nobel committee in Norway, cried out for "the establishment of some sort of international police force and power competent and willing to prevent violence as between nations."

The United States Congress added its voice of approval, for in June of 1910 the Congress adopted a public resolution establishing a commission of five members to consider the expedience of constituting the combined navies of the world into an international force for the preservation of universal peace.

The world knows that Woodrow Wilson was one of the principal prophets of peace, for it was he who fathered the League of Nations at the Paris Peace Conference after the last war.

That League failed doubly.

It failed in the Senate of the United States and it failed to prevent World War II. But it was the highest point humanity had ever reached in organizing nations against war and in promoting the welfare of the world.

Altogether, 56 nations were members of that League, even if we were not.

It was housed in a great edifice, the spacious elegance of which even today attests what that League might have been, had its high purpose been kept and had governments, who are the makers of war, given it their support.

It did stop some wars and even yet there are living signs of its great accomplishments, in the international labor organization and in other League functions which still survive.

But the League died as the keeper of the peace, and World War II followed after, to wreck the earth, to drench it in blood, to squander its riches, and to inflict upon it the unspeakable horror of needless death. As Divine Providence, it may be, provided Franklin D. Roosevelt the spiritual heir of Woodrow Wilson, was President of the United States in this war.

He tried to stop it peacefully, but nothing save greater force could stop the determined dictators who were bent only upon war and conquest.

But President Roosevelt knew when the seeds of that war were sown and he knew where they had grown.

He must have prayed that he might be the gardener of the world who would uproot once and for all the poisonous weeds that grew from that sowing.

We see, therefore, the President starting, before we entered the war, the foundation of this great Charter we now have.

You will remember how the world was thrilled in August of 1941 by the promulgation of the Atlantic Charter, born in the Western Hemisphere.

Not a month after the dagger of war was at last driven in our backs, the United Nations was born, on New Year's Day, 1942, in our White House.

President Roosevelt and Churchill gave it that name.

Twenty-six nations subscribed to it, and covenanted with one another to wage a common war against a common enemy and to subscribe to the principles embodied in the Charter.

But this was only a start.

In the midst of war, the United States began working together for peace.

You will remember the conference of 44 nations which, at Hot Springs in June 1943, set up an international food organization.

And the conference at Atlantic City in November 1943 at which 44 nations set up an international relief and rehabilitation organization.

You will remember Bretton Woods where in July 1944, 44 nations put together a plan for an international bank and an international fund to stabilize the currencies of the world.

You have not forgotten that here in your own great city of Chicago, 52 nations met in November 1944 in a momentous international air conference to regulate air commerce among the nations of the world.

All these conferences were laying a firm foundation of international cooperation, establishing the pattern of united international agreement and action.

A few months before the air conference in August 1944, representatives of Great Britain, the Soviet Union, China, and the United States met at Dumbarton Oaks in Washington, and carved out the rough outlines of a mighty political charter for the future international peace and security.

Then, in the truly democratic way, that Charter was made known to the world. Discussion and criticism were invited so that for months the opinion of mankind was brought to bear upon its perfections and its imperfections.

Finally, this great congress of the nations was called to meet in San Francisco to perfect that Charter.

President Roosevelt chose a great delegation, bipartisan in character and completely united in its desire to achieve the purposes for which it was called. And, unlike the secret conclaves of diplomats in the past history of mankind, the public was invited in a representative capacity. The official American delegation was aided and counseled by hundreds of organizations and individuals, reflecting a cross section of the private citizenry of the Nation.

Our delegation went to San Francisco determined to work out a pattern for lasting world unity with delegations from the other nations there present.

Together the statesmen of the Big Five and the Little Forty-and-Five, through long hours day and night, through meeting after meeting, committee after committee, crisis after crisis, fought a momentous battle.

No one man, no one nation, can claim responsibility for the great achievement that resulted.

Mr. Molotov and Mr. Gromyko, Lord Halifax and Mr. Eden, Mr. Stettinius, Senator Connally, Senator Vandenberg, and the other members of the American delegation, as representatives of the Big Three who carried most of the brunt of the battle against the Nazi hordes, ardently and with good will worked together to achieve the desired end, unity in peace, as there had been unity in war.

The tolerance and the willingness to compromise of these men is in large part responsible for the splendor of the Charter.

Mr. Paul Boncour, of France, and Dr. Wellington Koo, of China, added the brilliance of their ideas and the warmth of their hopes for peace.

General Smuts, of South Africa, and Mr. Evatt, of Australia, among many others of equal merit, brought to the meeting their fine ideals and their strong support for the rights of small nations to participate fully in the processes of the new international organization of the United Nations.

Finally, with the world beaming its approval and congratulations, the document was subscribed to in intelligible form on Tuesday last—a date which shall be a milestone in human history.

The dead, this time, shall not have died in vain, if the United States Senate now does its part.

In the preamble of this Charter is to be found the ranking purpose of the Organization. Let me read it to you:

"PREAMBLE

"We the peoples of the United Nations, determined to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind, and

"To reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small, and

"To establish conditions under which justice and respect for law and the pledged word can be maintained, and

"To promote social progress and better standards of life in larger freedom, and for these ends

"To practice tolerance and live together in peace as good neighbors, and

"To unite our strength to maintain international peace and security, by the acceptance of principles and the institution of methods to insure that armed force shall not be used, save in the common interest, and

"To employ international means for the economic and social advancement of all peoples, have resolved to combine our efforts to accomplish these aims.

"Accordingly, our respective governments, through representatives assembled in the city of San Francisco, who have exhibited their full powers found to be in good and due form, have agreed to the present Charter of the United Nations and do hereby establish an international organization to be known as the United Nations."

The cynics, the disillusioned, the poor in spirit still choose to sneer at the words I

have just read, and at the ideas those words express.

They choose to believe that these ideals are merely a false face behind which the specter of power politics continues to grimace. They choose to disbelieve in the possibility of lasting peace and international unity. Specifically, they choose to promote as best they can with the weapons of slander and slur the notion that we cannot maintain our war-born unity with the Soviet Union.

The Soviet Union gave up much, just as it got much, in the San Francisco Charter. So did the United States, and Great Britain, and France, and China, and all the other nations who signed that great document. Russia has agreed, as we have agreed and as all the United Nations have agreed, to renounce war as an instrument of national policy and to act together with other countries to maintain international security. It will continue to do so. No nation which has lost so much and suffered so much from war as has Russia can want more war. The only people who want war are those who still believe that they can gain personal benefit from the slaughter of the people of the world in combat. And they shall not prevail. The unity that has been forged in the inferno of the greatest conflict the world has ever known is a unity which no petty, self-seeking and Fascist-minded minority in this or any other country can undermine.

The Charter which has been born from this unity is not only high in its ideals, it is practical in the machinery it has established for putting those ideals into effect. It has outlined an organization through which the nations of the world may act to preserve peace, maintain international security, and improve the living standards of all people.

The organs through which this organization shall function are a general assembly, a security council, an economic and social council, an international court of justice, a trusteeship council and a secretariat.

The General Assembly will be the world forum.

In it each member nation shall have one vote.

It will be a meeting place where men may give expression to the hopes and fears of the peoples of the world.

The Security Council, composed of 11 members, of which 5—Great Britain, Russia, China, France, and the United States—shall be permanent members, is the executive body, charged with the administration of the organization and with the maintenance of the peace of the world—if necessary, by force.

The Economic and Social Council, composed of 18 member nations elected by the General Assembly, is new.

This council shall be the agency through which the organization will promote the health, prosperity, culture, and progress of the peoples of the world.

It is the organ through which nations shall work together for the economic and social good of each and all.

It is our hope that this great council shall largely remove or mitigate the economic causes of war and, therefore, make the need for force to keep the peace ever less.

The International Court of Justice is the international organization under the United Nations through which the disputes of nations may be peacefully settled without recourse to war.

Finally, there is established a trusteeship council which shall be the guardian of those peoples who have not yet won their independence but to whom the nations of the world owe an obligation to help them in gaining their independence and maintaining their security.

There will be a permanent staff, a secretariat, of course made up from all the United Nations, because it will be a going organization all the time.

Now, this great ideal of organizing for peace is within our grasp—only the ratification of the Senate stands between this Charter and an effective United Nations in being; for, if the Senate of the United States ratifies it, I am sure no other nation in the world will fail to ratify it.

The Foreign Relations Committee of the Senate will begin hearings on the 9th of July.

We are resolved that there will be no recess, no delay in bringing this matter to the floor of the Senate.

There is every reason for confidence in what the Senate will do, because the overwhelming majority—over 90 percent—of the people want this Charter.

But we must remember that 80 percent of the people of the Nation were for the League of Nations a generation ago.

We must remember that there is still the power of filibuster under the rules of the Senate.

Another little group of willful men could defeat all that has been done in the winning of the war and the building of this Charter. We must remember that the Charter will not be valid unless it is ratified by two-thirds of the Senate. That means it takes two Senators for it for every one against it.

We know that there may be those who will try to sabotage the Charter by amendment and reservation. Yet these Senators are the people's Senators, the Senators who sent the people's sons and loved ones to war.

The people must let their Senators know that they are looking to them in this great moment to save their sons and grandsons, their husbands, brothers, and fathers, from another war.

Every white cross cries out to every Senator to keep the faith. Every broken body, every disordered mind in its anguish, pleads with every Senator to keep the faith.

All those, all over the earth, who sigh for touch of a vanished hand, the sound of a voice that is still, beg, too, every United States Senator to ratify this Charter.

Now is the time for the people to work and to fight, to let no petty partisanship, no ugly prejudice, no scheming obstructionism, no vaulting ambition, deny them this Charter which their gallant warriors, their great leaders, have now put in their keeping.

Let us forge the Nation into united support of this declaration of interdependence. Let us secure its speedy ratification by the Senate, bring to heel the last evil enemy in the Orient, and we can say that God has blest us to live to see the dawn of that happy day of which Tennyson dreamed—when:

"The war drum throbb'd no longer,
And the battle flags were furl'd
In the Parliament of man,
The Federation of the world.

"There the common sense of most
Shall hold a fretful relm in awe,
And the kindly earth shall slumber
Lapt in universal law."

Hold the Price Line

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I should like to include a letter received from Merle Bennett, president of Local 901, United Electrical, Radio and Machine Workers of America, Fort Wayne, Ind., concerning the necessity of holding the line on prices.

Mr. Bennett's letter was accompanied by petitions signed by 500 members of local 901, urging that price controls be continued.

Mr. Speaker, those of us who witnessed the inflation which followed World War I, and who remember the hardship and suffering it caused among families with fixed incomes, are not anxious to see history repeat itself.

The threat of serious inflation is greater today, in my opinion, than it was 25 years ago. To combat it, we must use every weapon at our command. And one of these weapons is price control.

Until production approaches normal levels, and until supply and demand are more nearly equal, I believe it would be disastrous to permit uncontrolled prices.

Mr. Bennett's letter, together with several telegrams on this same subject, follows:

UNITED ELECTRICAL, RADIO AND
MACHINE WORKERS OF AMERICA,
Fort Wayne, Ind., February 21, 1946.

Congressman GEORGE W. GILLIE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN GILLIE: We believe you are familiar with the fact that the National Manufacturers Association has opened an all-out drive to destroy price control. Under separate cover we are sending you petitions calling on you to help hold-the-price line signed by 500 of our pickets who are today fighting for a living wage.

Many times we have discussed price control with you and believe you know our sentiments on this matter. It's bread-and-butter economics with us. With price control we are able to buy the bread for our tables—without it, we stand in line for bread.

We have no vested interest in price control. It pertains to the welfare and security of our country and that is why we fight for it. As a representative of the people, you, we believe, should do likewise.

Very truly yours,
MERLE BENNETT, *President.*

FORT WAYNE, IND., *February 19, 1946.*

Hon. GEORGE W. GILLIE,
House Office Building,
Washington, D. C.:

Local Chapter Delta Kappa Gamma Society urges your active support for the extension of price control.

RHODA WILLIAMS,
Chairman of Legislative Committee.

FORT WAYNE, IND., *February 16, 1946.*

Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:

If OPA goes out, what will happen to us? My purchasing power went down when I went back to 5 days per week. Help hold the line on prices.

C. R. SCHROCK,
New Haven, Ind.

FORT WAYNE, IND., *February 16, 1946.*

Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:

Please continue OPA so I can use my savings for a future home.

O. E. STEVENS

FORT WAYNE, IND., *February 16, 1946.*
Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:
What will happen to we wage earners if you remove ceiling prices?
CHARLES NULL,
Rural Route 1, New Haven, Ind.

FORT WAYNE, IND., *February 15, 1946.*
Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:
All that my family ask is the American standard of living. Please continue OPA. Hold the line on ceiling prices.
VERL BANEY.

FORT WAYNE, IND., *February 15, 1946.*
Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:
We are returned veterans of World War II. We came back to find the cost of living for our families going higher and higher. Is this what we fought for? We feel that it is the duty of our Government to hold prices down by maintaining OPA.
GEORGE W. MARSHALL, *Chairman,*
JAMES HODGE,
L. E. SHORE,
C. J. HIMSOTH,
PAUL C. FISH,
Veterans Committee.

FORT WAYNE, IND., *February 15, 1946.*
Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:
If ceiling prices are taken off how can I feed and clothe my family on $35 per week?
FRANK C. ANKENBRANDT.

FORT WAYNE, IND., *February 15, 1946.*
Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:
How can I feed my family and keep up my home if they take off the ceiling prices? Please help continue OPA.
Mrs. JOYCE TUCKER, *Housewife.*
(And Neighbors.)

FORT WAYNE, IND., *February 15, 1946.*
Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:
How can we maintain our standard of living if ceiling prices are lifted? Please help hold the line.
BRYCE DE ARMOND.

FORT WAYNE, IND., *February 15, 1946.*
Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:
My family cannot afford to have ceiling prices lifted. Your help is badly needed.
L. E. SHORE.

FORT WAYNE, IND., *February 15, 1946.*
Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:
How can I live on $30 per week, take-home pay, if you remove ceiling prices?
PAUL S. MOORE.

FORT WAYNE, IND., *February 15, 1946.*
Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:
Please hold the line on ceiling prices. The common people need your support now.
B. H. LOOMIS.

FORT WAYNE, IND., *February 16, 1946.*
Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:
How can we keep our standard of living if ceiling prices are lifted? Please help hold the line.
J. C. MACY.

FORT WAYNE, IND., *February 16, 1946.*
Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:
Don't remove ceiling prices. My family can barely exist now.
ELDON ZENT.

FORT WAYNE, IND., *February 16, 1946.*
Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:
If the OPA goes out it will be doubly hard on the wage earners. Your consideration is needed.
R. R. REGENOLD.

FORT WAYNE, IND., *February 16, 1946.*
Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:
This is my first time to correspond with you. And now it is very important. The people of my community are asking that you help hold the line on ceiling prices.
M. WALTERS.

FORT WAYNE, IND., *February 16, 1946.*
Hon. GEORGE GILLIE,
Representative Building,
Washington, D. C.:
I am using all my savings and bonds to maintain my family since I have been working only 5 days a week. Help us to keep OPA.
HOWARD MINIER.

The Terrorist Leader Haj Amin El Husseini and His Cousin Janal El Husseini Should Be Tried as War Criminals at Nuernberg

---

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1946

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter:

FEBRUARY 26, 1946.

Hon. JAMES F. BYRNES,
Secretary of State, Washington, D. C.

MY DEAR MR. SECRETARY: There are two well-known Arab war criminals who should be on the roster for trial at Nuernberg. One is Haj Amin El Husseini, the so-called Grand Mufti of Jerusalem, and his cousin, Jamal el Husseini.

They are notorious agitators whose activities endangered the Allied war effort in the Middle East. Their pro-Hitler propaganda and pro-Axis organization are known facts. They conspired to bring about the revolution in Iraq against the British. They sought to establish Axis bases in Syria and the Levant in general. The Grand Mufti was a Hitler stooge. He went to Berlin under the aegis of the Nazi Party and broadcast to the Arabs all the glories of the Nazi Party and of the decadence of the democracies. He organized the Arab brigade whose members killed many American and British soldiers. Several thousands of these Grand Mufti followers are now prisoners of war at Camp Opelika, Ala. The Grand Mufti is now under residential surveillance in France. This racketeer and killer is frequently seen gallivanting around in Parisian cafes. He has never stopped his nefarious practices of espionage and pro-Nazi propaganda. He has incited Arab riots against the Jews of Palestine as part of the Hitler game. He has even struck out against the British, who now seek to appease him.

There is no doubt about his criminality as a conspirator with the Nazis. Yet the British seem to be aiding and abetting his return to Palestine and are apparently seeking to reestablish this perjurer and murderer as the Grand Mufti of Jerusalem. How the British can condone his crimes is beyond comprehension. Proof has been submitted that he joined with Hitler to exterminate all the Jews in Europe and Asia. It has been said that Brigadier General Clayton of the British Intelligence Service in Cairo has urged London to permit his return to Palestine.

That his return to Palestine is gaining favor with the British is evidenced by the return of his cousin Jamal el Husseini whose return was permitted by the British after 8 years of exile. His violent anti-Semitism is well known. His return is adroitly timed to coincide with the Arab-Jewish conflict in Palestine. His entry was a triumphant one. He was received with honors while the British stood on the sidelines watching him being pelted with flowers and welcomed by whirling dervishes. He is the terrorist leader who along with his cousin instigated the riots in 1936 and 1939.

According to the procedure now obtaining with reference to the indictment of war criminals, it is essential for one of the United Nations to make the request that certain individuals be named as war criminals. Neither Britain nor France has shown the moral courage to name the Grand Mufti and his cousin as such.

It therefore behooves the United States to do so. I ask that you act on behalf of the United States, insisting that these men be included with Goering, Hess, and the rest and tried for their bestiality and for their crimes against humanity.

With assurances of highest esteem, I am,
Sincerely yours,
EMANUEL CELLER,
Representative, Fifteenth Congressional District, New York.

International Agreement To Abolish Compulsory Military Service as a Policy and Practice of Nations

---

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1946

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement which I made before the Committee on Military Affairs of the House today in support of my resolution, House Resolution 325, calling upon the President, the Secretary of State, and the

United States representative on the United Nations Organization to work for an international agreement whereby compulsory military service shall be eliminated from the policies and practices of all nations:

Mr. Chairman, I wish to thank you and the members of the Military Affairs Committee for the opportunity to appear before you.

You have called me here at a time of mounting world tension. The great powers are so bristling with armaments and armies that the slightest difference of opinion gives rise to fears of war.

The world will never be sure of peace until we have reduced armies and military establishments to a reasonable level. I propose that the most simple and logical step in that direction is to work for the abolition of compulsory military service. It is a step which would cost no nation a single dollar, but on the contrary would reduce every nation's burden.

The machinery already exists in the United Nations Organization to put this suggestion into effect and it is the responsibility of the United States to make this machinery work.

To those who say this proposal is impractical, I say you will not know how practical it is until you try it and the least it can do is to test the good faith of the world powers.

American foreign policy never should be a partisan issue. Let me here and now express my confidence that Republicans will support any reasonable foreign policy based on tolerance, justice, humanity, enlightened self-interest, and friendship toward all nations. The objective of achieving world peace is not the exclusive property either of Republicans or Democrats. It is a problem which concerns all Americans. I wish to make it clear that my purpose in making this proposal is to provide a basic principle on which we can unite as Americans and thus revitalize the leadership of this Nation and broaden its influence for world peace.

I also wish to make myself clear on the subject of the national defense. I propose that while maintaining a strong national defense, we negotiate at the same time for the renouncement of compulsory military service and the eventual reduction of armaments. You will note I have included reduction of armaments. I do so because it may now appear advisable to broaden the scope of my original resolution which referred to compulsory military service only.

It is imperative, Mr. Chairman, that Republicans and Democrats unite to work for a clear definition of foreign policy. The American people are suffering from war nerves. Yet their apprehensions come not so much from fear for their own personal safety as from fear that American leadership will be inadequate. The leaders of this Nation must rise to the greatness of the American people. They must not follow a policy of appeasement; they must not permit America or the world to drift; they must not abdicate from America's position of high moral responsibility and practical influence in world affairs.

This is a time for dedicated service. This is a time for loyalty to America's high principles.

We are a Nation of God-fearing people who like neither militarism nor power politics. We are neither cowards, nor bullies. We are a people who abominate war, yet will stand firm for our rights and our principles and will yield to no one or to no nation the power to dictate to us how to manage our affairs. By the same token we do not wish to interfere with the internal affairs of others. We like to look upon others with the tolerance we expect from them.

Nevertheless, we see in the possibility of another war a threat not only to ourselves but to all humanity. We see that the interests of the whole human race, just as a matter of ordinary common sense, call for the avoidance of war. We are not so cowardly, nor so hysterical that we will permit others to play upon our desire to avoid war and so induce us to betray our highest principles. We will not yield to every pressure and every threat. We seek friendship and cooperation from all other nations in the cause of peace. That friendship and that cooperation must be based on mutual respect.

We are not so foolish as to throw away all our weapons and leave ourselves defenseless in these uncertain times; but we are not so ruthless as to turn this Nation into a menacing militaristic state ready to ride rough-shod over the world. We are not so blind we do not see the disorder, the implicit violence, the forces of desperation and unrest which are at work in this postwar world. Yet we are confident in our strength and we believe we can use that strength with firmness, kindness, and tolerance to influence the nations and the people of the world to discard the psychology of war and turn back to the ways of peace. Certainly the prospect of horror and destruction in modern war is so great as to justify any efforts we can conscientiously make to restore the world to order.

Now how can America best use her strength to accomplish this purpose?

Obviously the very first requirement is to establish a clear, definite, dynamic foreign policy. We must, also, clearly state all our foreign commitments. This policy and these commitments must be laid before the whole people and receive their endorsement. If this policy and these commitments do not have the full support of the American people, then our representatives in international councils cannot speak with the full authority and influence of this great Nation. American diplomacy then will inevitably degenerate from the level of statesmanship to the level of political or secret maneuver. The result can only be appeasement, uncertainty, the loss of American moral influence, and the certainty we will drift toward another war.

Let me say again that Republicans will work with patriotic devotion to support a definite foreign policy, provided only the administration adheres to high principle and is loyal to the interests of the American people.

Let us see such a policy formulated and, once formulated, adhered to—with understanding, but with firmness for the right, and without fear of political or partisan opposition.

The next step, after the administration has clearly defined our foreign policy and our foreign commitments, is to take such measures in the national defense as are necessary to protect ourselves and to enforce our obligations.

I am not a military expert and cannot speak with authority on the details, but any reasonably well-informed person can see the logic of our present situation. Reserves are important and the National Guard should be expanded and better equipped. However, what we need for the national defense right now is not a mass of demobilized Army or Navy Reserves scattered among the grocery stores and factories and farms of the Nation but a strong Army, and a strong Navy, and a strong Air Force in being—that is, mobilized, prepared, fully armed and equipped with modern weapons, ready and able to fend off the kind of sudden blow with which the next war would undoubtedly start. These forces, of course, must be large enough as well to garrison such territory as it is absolutely necessary for us to occupy.

The cost of such combined forces will undoubtedly be very great. It will be a huge drain on the human and financial resources of America. It is a burden which will weigh so heavily on the backs of every American man, woman, and child that we must not overlook any possible way of reducing it.

I must, also, point out that, although these large forces will be a deterrent, they will not be a guaranty against war. In fact, the lesson of history shows that the arming of one nation leads to the arming of another. Development of military power leads to suspicion and fear of it, and begets the development of military power and more suspicion and fear, until all the nations are armed to the teeth and eventually set upon one another. We are approaching that condition today. It is time to assert American leadership now. It is time for a concerted drive to reverse the trend which will otherwise take us straight into war.

It is for this reason I advocate the negotiation of agreements abolishing compulsory military service first, and then carrying negotiations further, as fast and as far as practicable, to reduce the armaments of the world. In other words, while we are now obliged to keep a six-shooter in one hand, we extend the olive branch of peace with the other.

Let us not think of this proposal as a Republican suggestion. It is too big and all-embracing for that. Think of it as the one first step in a series of steps which must be taken by the American people if we are to achieve the peace.

Mr. Chairman and members of the committee, we must not simply dub this suggestion as impractical, and leave it untried. It is the one proposal which gives some promise of restoring the world to sanity. Surely after the sacrifice of millions of brave American men and women, we can do no less.

It is not a proposal to extend half-heartedly. It is not one for languid or secret diplomacy. It is one for open and dynamic action. It must be expressed as an appeal by the whole American people to the peoples of all nations to banish their fears and unite in, putting aside the weapons, the organizations, and the psychology of war and fulfill the dreams and hopes of the common man everywhere, throughout the ages, for peace.

If the Congress of the United States passes such a resolution and if the President of the United States executes the negotiations and makes the appeal with energy and spirit, the news of it will ring in the hearts of the human race and give them hope. It is not inconceivable that the fear of war pulses so strongly and that this hope would have such dynamic appeal its effect would be revolutionary, and the stabilization of the world be brought about through the common demand of its people. After all, the common people are the same in every nation. They do not want war. They know upon them falls the sufferings and the sacrifices. We can count on them to rally to the call for peace.

Let me emphasize that the necessary diplomatic machinery has already been established for just such action. In three distinct clauses, the United Nations Charter already empowers the Security Council and the General Assembly to consider and recommend methods of disarmament.

It is the express duty of the United Nations Organization to develop a plan for this purpose. What a great opportunity for America to have demonstrated its capacity for constructive world leadership! If only this resolution had been passed by the Congress and been presented to the delegates assembled in London several weeks ago.

Just think, while the United Nations diplomats were arguing over the acquisition of 50 square miles of New York and Connecticut and the erection of great, stately, white temples, they could have gathered in one small hotel room and earned deathless fame by proposing to do away with the initial causes of war—compulsory military service and

armaments. It is up to America to bring the United Nations down to bedrock and make it work. This is one way to make the UNO justify its existence.

Here is a proposal which needs only the support the Five Great Powers of the Security Council to give it force and effect. If America drives for the renouncement of military conscription, it will require only the agreement of Britain, China, France, and Russia to accomplish it. The other nations would follow suit, and here would be the first practical, forward step in promoting amity and good will among nations and restoring this troubled world to order.

We need, then, only to persuade these four nations—and I would like to point out that Russia in 1927 favored abolition of compulsory military service and disarmament proposals far more sweeping than this. I am placing in the record a copy of their proposals for the information of the committee.

We should throw the power and influence of the United States behind the resolution before the committee today, and put it over. It is time for a little American salesmanship in foreign affairs.

Remember, the very least we can achieve by backing this proposal is to find out where the other world powers stand and how sincere is their desire for peace. Either the governments of the world want peace and do not need the regiments and the hardware of war, or we must conclude they want huge armaments because they expect to use them. In either event, now is the time to find out.

If successful, abolition of military conscription will reduce the armies of the world. Then we can proceed to the problems of international disarmament, which is an absolute prerequisite to enduring peace.

If successful, we must recognize a new responsibility. Agreements by the nations to disarm will impose upon each successive administration of the United States the responsibility of seeing that those pledges are carried out in spirit and in letter. It would be one fixed element of a fixed American foreign policy to insist on the adherence to such agreements.

Mr. Chairman and members of the committee, the issue between war and peace involves heavy stakes. What you determine here will have a profound influence upon every man, woman, and child, not only in the United States, but throughout the entire world. You bear a heavy and solemn responsibility. Upon your judgments may depend the welfare of the human race. Either we will use the power, the strength, and the great world-wide influence of the United States of America to tip the scales in favor of peace or we will resign ourselves and deliver all humanity over to the heavy burdens, the bitter sacrifices, and the universal destruction of war. Although America cannot alone decide whether there shall be war or peace, certainly America can make a strenuous and practical effort to make peace possible. If we can persuade the governments of the world to forswear their enormous conscripted armies and their peace-threatening armaments, then we will release the creative energies of the whole human race. Perhaps we can open up an era of unprecedented promise in which at last men all over the world may have enough food for their tables and clothes for their backs and shelter for their bodies. Who knows but what the creative energies and the inquisitive mind of man may then have time to develop new uses for atomic power, other than destruction, uses which may so expand the horizons of the human race that a new and marvelous age may come into being? A magnificent dream, you say? But it is from such inspiring dreams as this have come the great advances of mankind.

We know the alternatives: guns instead of butter; warships instead of housing; mud and horror instead of comfort; blackened rubble instead of rising spires; human degradation instead of human dignity.

Certainly, this proposal is worth trying.

There is no time to waste. America must stage a drive for peace.

The whole world looks for the moral and elevating leadership which will lift all peoples from the valleys of doubt and despair up to the summit of hope. America must provide that leadership.

NINETEEN TWENTY-SEVEN PROPOSALS FOR GENERAL DISARMAMENT SUBMITTED TO THE LEAGUE OF NATIONS

The delegation of the Union of Socialist Soviet Republics is authorized by its Government to propose the complete abolition of all land, naval, and air forces.

The Government of the Union suggests the following measures for the realization of this proposal:

The dissolution of all land, sea, and air forces and the nonadmittance of their existence in any concealed form whatsoever.

The destruction of all weapons, military supplies, means for chemical warfare, and all other forms of armament and means of destruction in the possession of troops or in military or general stores.

The scrapping of all warships and military air vessels.

The discontinuance of calling up citizens for military training either in armies or public bodies.

Legislation for the abolition of military service, either compulsory, voluntary, or recruited.

Legislation prohibiting the calling up of trained reserves.

The destruction of fortresses and naval and air bases.

The scrapping of military plants and factories and of war industry equipment in general industrial works.

The discontinuance of assigning funds for military purposes both on state budgets and those of public bodies.

The abolition of military, naval, and air ministries, and the dissolution of general staffs and military administrations and institutions of every kind.

The legislative prohibition of military propaganda and military training of the population and of military education both in state and public bodies.

Legislation making the infringement upon any of the kinds of armaments and means of destruction with a view to the removal of incentives to the invention of the same.

Legislation making the infringement of any of the above stipulations a grave crime against the state.

The withdrawal or corresponding alteration of all legislative acts, both of national or international scope, infringing upon the above stipulations.

Address by Hon. Francis J. Myers, of Pennsylvania, at Annual Founder's Day Dinner of the General Alumni Association of Temple University

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 27 (legislative day of Friday, January 18), 1946

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the annual founder's day dinner of the General Alumni Association of Temple University, in Philadelphia, on February 15, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I've never seen an atom and I know none of you have either. But we know enough about it now to make us wish sometimes that we'd never heard of the thing. The tiny atom has put the whole world in a short-sheeted bed—it's made it that we can't pull the covers over our heads anymore.

So we might as well open our eyes and take a look around at things. There are a lot of things we see that we don't like. But, my friends, we've got to keep on looking. Otherwise, that thing we have all learned to fear—that atom—is liable to go off right in our faces.

I don't want to be alarming. I don't think there is cause for alarm. There is cause, though, for concern. If ever citizenship carried responsibility, it's now.

During the war the responsibilities of citizenship were easier to recognize. There was a band playing in our hearts every second of the day. Even those who failed in their responsibilities in those days—the chiselers, the black marketeers, the tax dodgers, the hoarders—seldom, if ever, in their own minds connected their action with the war. No one was so lacking in self-respect as to admit to himself that he wasn't doing his part—or some part—in some way—for the war.

The vast majority of people didn't have to think up alibis. They did what they knew had to be done. They played ball for victory.

Well, the war's over now—thank God. Some day—please God it will be soon—the peace may arrive. Until it comes we can't safely relax.

Some people think we've attained peace already just because the shooting is over. I wish it were true.

That we all want peace—a real peace—a lasting peace—is as certain as was our desire for military victory.

We don't have to worry any more about opposition on that score.

We don't have to fear, as we once may have had reason to, that some people—let's say the munitions makers—want war because it's good for business. That's pretty silly now. The munitions makers like to live, just like the rest of us do, and they have wives and children, too. There isn't any American I know of that we can point to and truthfully says he wants war. The atom took care of that.

That doesn't mean we won't have war. But it's helpful—it means maybe we can avoid it.

We can avoid war in only one way—by wanting peace more than anything else in the world. And we've got to make that desire contagious, so that all people everywhere share it with the same zeal.

How well are we doing in that ambition?

Well, we're doing better than we did 10 years ago—a whole lot better. We've got a better conception of the problem; we have some pretty good tools to work with now that we didn't have 10 years ago, and we have some other advantages.

The world has been rid of its Nos. 1, 2, and 3 public enemy powers and of a lot—but not all—of the small fry who either sat in with the big fellows or would have liked to, in order to get a slice of the loot. So we have made progress.

Also, the United Nations is set up and functioning. We're going to be mighty glad it's there. It has already had some first-class scraps aired before it and the newspaper headlines were recently full of charges and countercharges voiced by various countries against each other, and there'll be more scraps like that and nobody really gets hurt

and that's fine. The air gets cleared, and that's fine, too.

If we can have out all our international fights that way, the prospects for peace will be pretty good.

But there's a whole lot more to the problem than that.

The United Nations can air all the subjects of international discord that there are and seemingly settle every one of them and still we can have war. The settlements have got to be based on justice and on fairness, on compassion, and on understanding or they won't last. And the United Nations can act on that basis, only if all of us and all the people of the other nations—and I mean the people—believe in and insist on such a foundation for peace.

We're not going to have it if Russia believes her own strength is the only thing she can depend upon for her protection and throws her weight around in a never-ending search for complete nationalistic self-sufficiency.

We're not going to have it if the United States and Russia between them, or with perhaps Great Britain and one or two less powerful nations as partners, set themselves up as exclusive arbiters of the world's future.

On the other hand, we're certainly not going to have it if suspicions and fears among the big powers are nurtured and inflamed by hotheads and hate-peddlers at home.

I don't want to scold. Too often, those of us who over the years have had firm convictions on the necessity for close working, international cooperation along the lines we are now developing—were prone to scold. Perhaps there were reasons for scolding then—for being alarmed at the foolish fallacy of isolationism. But there's not reason to scold now. Instead, we need only some reminders.

We need to be reminded that national selfishness won't get us anywhere as an international policy. We need to let our public officials know that too. When a bill is introduced in Congress, as it was the other day, to prohibit the shipment of any wheat overseas until it is established that America—get this—will not suffer any reduction in its normal supply of white bread—that's demagogery and we don't want any of it.

When a bill to guarantee the constitutional rights of large segments of our citizenry is blocked by a minority on phony grounds, that's demagogery too, and we can do without it.

When false issues and false slogans are raised to split the Nation with hates at a time when we must be united in a solid, unflinching front for world understanding and world peace, that, too, is demagogery. It's worse—it's a manifestation of peace criminality.

We need the world and the world needs us. Right now, perhaps at this particular moment, the world needs us a little bit more than we need it. We're in a position, right at this moment, to do all right for ourselves. If ever we could safely be isolationists it's right now, today, this year. But attractive though it might be to say to hell with the rest of the world, the whirlwind we would sow by such a policy could blow us down for good—erase us off the earth.

We've got our big chance now to make friends for keeps. We covet nothing of our neighbors and have much to give to ease his postwar plight. Those neighbors will be back on their feet some day and we're going to be awfully glad at that time if we can sincerely know we were their friends in these trying times of suffering. That goes for all the United Nations.

Since we've got to do it anyway for the eventual safety of our own individual and collective hides, let's be decent about it, and do it with grace—because we want to.

Let's forget the squawks about the cost of being the good Samaritan and think of the rewards.

Let's hoot down the petty complaints about those alleged hardships we must endure—like eating bread that isn't quite white so that others won't starve.

Let's make sure our country remains in a economic position to help others by seeing that we prevent inflation. Yes, that means more price control, irksome as it might be to some.

But all right—so we won't get to be millionaires this year. There will be other years when getting rich may not mean gouging the boys who fought to save our necks. Oh, it's true that the United States is still the strongest country in the world, the richest. It's true that we could get away for a while with not being so decent to other nations. Sure, we're big.

But it's always wise to remember that big as we are, the smallest thing in the world, the atom, can blow us right off the face of the earth.

Cardinal Faulhaber Says He Will Ask Pope To Issue Pastoral Message Against Anti-Semitism

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1946

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following news article:

CARDINAL FAULHABER SAYS HE WILL ASK POPE TO ISSUE PASTORAL MESSAGE AGAINST ANTI-SEMITISM

MUNICH, February 10.—Cardinal Faulhaber, archbishop of Munich, told members of the Anglo-American Palestine Inquiry Committee yesterday that he plans to ask Pope Pius to issue a pastoral message calling on all Catholics in Europe to fight anti-Semitism.

The cardinal, who is to leave for Rome today, declared he would present a memorandum to the Pope requesting that he take every step possible to eliminate anti-Semitism not only from Germany but from the rest of the world, particularly Europe.

Cardinal Faulhaber voiced these sentiments during a 2-hour audience he gave Bartley Crum, American member, and Sir Frederick Leggett, British member of a Palestine inquiry subcommittee in his palace here.

"Anti-Semitism is a curse against humanity," Cardinal Faulhaber was quoted as declaring. "The whole Christian religion was founded on the Old Testament, a product of the Jewish spirit, and, therefore, anti-Semitism is completely an act of antichrist. I, as cardinal, will do everything in my power to convince the Catholics of Bavaria that they must eradicate from their hearts any remnants of anti-Semitism.

"A Germany without Jews is unthinkable. We must have Jews in Germany. Jews have the same right to live in Germany as I, having been born in Germany, have a right to live here. The Jews likewise have a right to live in peace here. I hoped to see German Jews return to Germany. I had hoped to see our great Jewish physicians return to our hospitals. I am astonished to learn that only one has returned."

The committee members pointed out to the cardinal that in their questioning of displaced Jews in the American zone of occupation they had found that virtually 99 percent of them wished to go to Palestine. These displaced persons have made up their minds, the committee members said, that there was no future for them in Germany and that if the Americans withdrew from Germany the Jews felt they would be slaughtered, as their relatives were.

Cardinal Faulhaber asked Crum to take up with President Truman the possibility of bringing into Germany canned milk and clothing collected under the auspices of the Catholic Church, which is now being held in Switzerland because it has not been cleared by the American authorities for shipment to Germany. These supplies, he said, would be used not only for Germans but for Jewish children as well.

International Exchange of Students

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, February 27 (legislative day of Friday, January 18), 1946

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Idea for Friendship," written by William Philip Simms and published in the Washington Daily News of February 26, 1946, and an editorial entitled "Student Exchange," published in the Washington Post of February 19, 1946, on the subject of international exchange of students.

The article and editorial concern Senate bill 1636, which I introduced last year, and on which hearings have just been completed before a subcommittee of the Committee on Military Affairs.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of February 26, 1946]

IDEA FOR FRIENDSHIP

(By William Philip Simms)

Few people outside Congress ever heard of Senate bill 1636, hearings on which are now under way before the Military Affairs Committee. But its passage would probably do more to make friends and influence foreigners than almost any other one thing the United States could do.

Its author is 41-year-old Senator FULBRIGHT, Rhodes scholar at 21 and at 35 president of the University of Arkansas, his home State. He would dispose of part of our surplus property in such a way as to create an educational fund to bring foreign students to this country and send American students abroad.

In England, France, Italy, Belgium, Central Europe, Russia, the Middle East, Far East, and elsewhere there are billions of dollars worth of surplus war stocks. Admittedly we can't bring the stuff home. The alternatives, therefore, are to let it rot, give it away, or sell it for a few cents on the dollar. But even the last isn't simple, because few, if any, of the governments concerned have the money.

But William I. Nichols, also a former Rhodes scholar and now editor of This Week magazine, has another solution. In Washington to testify for the Fulbright bill, he proposed conversion of some of these surplus supplies into what he calls cultural currency.

"Where practical," Mr. Nichols said, "we would dispose of them for a certain amount of cash, or goods actually wanted or needed in the United States. But for the major part of the payment we would ask the receiving nation to agree to establish what is, in effect, an 'endowment fund,' dedicated to building better understanding between that country and ours

"Once normal conditions are established, that fund would provide for regular exchange visits between citizens of the two countries. Such exchanges should include groups of teachers, students, journalists, labor leaders, farmers, musicians, artists, workers, scientists, and business leaders. The expense would be borne in whole or large part by the country receiving our surplus goods."

Fundamentally that is what Senator FULBRIGHT is aiming at. Only surplus material outside our continental area and possessions would be available for this plan. In no case would more than $2,500,000 be set up for any one country in any one year.

In principle the Fulbright measure recalls the use to which the United States put the Boxer indemnity. The total for all the allies amounted to some $333,000,000—a fantastic sum for the China of those days. Our share came to about $25,000,000, most of which we returned. To show her appreciation, China decided to use the funds to educate students in this country.

To carry out this purpose, Tsing Hua College was established in Peking. There, until the war came, a constant group of approximately 400 students, chosen by competitive examination, were prepared for entrance to American universities. Thus upward of 100 Chinese were graduated in this country annually to return home, where they became enthusiastic boosters for the American way of life. This has had a profound influence in China and the Orient generally. Nothing the United States ever did ever paid back such big dividends in good will, friendship, and understanding.

[From the Washington Post of February 19, 1946]

STUDENT EXCHANGE

Friendship between nations as between individuals, flows from mutual understanding. It seems to us that there is a great deal of merit, therefore, in two proposals now before Congress to facilitate international exchange of students, scholars, and technicians. This sort of exchange is an invaluable supplement to the program now being undertaken by the new Office of International Information and Cultural Affairs which Secretary Byrnes has established. Americans who are afforded an opportunity to study abroad are likely to find their prejudices about foreign countries dissolved; foreigners who come to American colleges and universities will return to their homes with a fresh awareness of American values. A harvest of good will is the certain product of such a transplanting.

One of the bills for this purpose, introduced just prior to the congressional recess by Senator FULBRIGHT, follows closely a suggestion offered by the Post last September. We said, in speaking of the disposal of our war surpluses abroad, that "a constructive way of handling such transactions might be to let the funds (from sale of surpluses) be used for the establishment of foundations in buying countries dedicated to the diffusion of knowledge of the seller and purchaser countries." The Fulbright bill would designate the State Department as the disposal agency for surplus property outside continental United States and would specifically authorize it to enter into agreements with foreign governments under which local currencies received for surplus property would be used to send foreign students to American colleges abroad, to pay their transportation to the United States, or to meet the expenses of American students studying in foreign institutions.

It would be in the last category, obviously, that this arrangement would be most effective. And it might prove of tremendous value to veterans who wished to pursue studies overseas under the GI bill. The tuition and living allowances due them would be met, then, by the country in which they chose to attend school, out of its own currency, and the United States Treasury would to that extent be spared expense. We can think of no more useful form in which to receive payment for the surplus materials which we do not wish to bring home and which are needed by foreign countries lacking the dollar exchange to purchase them.

Because of a shortage of dollar exchange, many foreign countries will be unable to send students to the United States. A bill introduced by Representative BLOOM would make provision for this need. It would extend to European countries the facilities for exchanging students, scholars, and technicians with the United States which we now maintain in relation to the Latin-American Republics and China. This exchange system has proved immensely fruitful. When the United States remitted about $10,000,000 of the indemnity paid this country as a result of the Boxer Rebellion in China, the Chinese Government placed the money in a trust fund for the education of Chinese youth in American institutions in China and in the United States. The act contributed tremendously to the good relations which have existed between the two countries ever since.

We hope that Congress will give sympathetic consideration to both the Fulbright and the Bloom bills. They are companion or supplementary measures. The meeting of minds, in a literal sense, which they would help to bring about should go far toward promoting the international understanding upon which our hopes of world peace must be founded.

Loan to Britain

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 13, 1946

Mr. WOODRUFF. Mr. Speaker, the following article by George Rothwell Brown of the Hearst papers in their issue of November 11, 1945, which I recently received through the mails, reminds me that my recent utterances on the floor of this House on the presently proposed further loans (gifts) to Britain are simply a continuation of my long-time undertaking to bring about some degree of fairness and honesty among certain other nations in their financial dealings with us. When I ponder the fact that American boys and American money have twice saved the British Empire and that she is again knocking at our door for more billions after naming us Uncle Shylock when we asked the previous loans be paid, I am reminded of the little jingle:

When the devil is sick,
The devil a monk would be.
When he gets well the devil a monk is he.

The article follows:

THE POLITICAL PARADE

(By George Rothwell Brown)

WASHINGTON, November 20.—If Prime Minister Attlee's chief errand in Washington was in connection with the proposed British "loan"—rather than with the secret of the atomic bomb, as many believe—he has not aided his cause in Congress.

Congress may not have the last say with regard to splitting the atom, but when it comes to splitting our Treasury deficit it cannot be ignored.

As pointed out in this place some time ago, Washington is jittery over the application of atomic energy to military purposes. Notwithstanding the United Nations Organization, there are freely expressed fears of a third World War.

So what many realists in Congress are asking is, "In that event, and if Europe cannot prevent another war, why should we finance it?"

It isn't a foolish question at all, for that is precisely what we did after World War I.

On the eve of World War II, 16 European countries owed to the United States Government $11,433,857,404.72, on a total indebtedness of nearly thirteen billions.

All but little Finland had defaulted on interest and principal. The argument was that they could not afford to repay sums which had been borrowed from Uncle Shylock to save them from conquest.

In 1937 in a speech in the House, Representative ROY WOODRUFF, of Michigan, a Republican member of the Ways and Means Committee, made certain statements about these debts, which are being recalled today, as Europe again turns to the United States for financial assistance in fabulous amounts. He said:

"It was officially announced recently that the British Government is to spend for war materials and supplies during the next 5 years the enormous sum of $7,500,000,000.

"His Majesty's Government now owes us the sum of $5,107,000,000. Of this amount $739,446,980.97 in principal and interest is past due.

"Their total debt to us constitutes approximately two-thirds the sum they propose to spend within the next 5 years for their navy and other war equipment—and yet they would have us believe they are financially unable to pay us, their saviors, the comparatively modest sum they formerly agreed to pay."

Mr. Woodruff then went on to discuss the debt of $4,081,227,249 which France then owed the United States—and which France still owes. He thus referred to France:

"And what have they been doing since the day they declined to make further payments on their debts to us? They have been spending more and more each year preparing for war. A small part of the money they are spending each year for this purpose would meet their pledged payments to us, and we would have some assurance that the American people are not going to be taxed eventually to discharge this obligation."

Turning then to Russia—which is again seeking an American "loan," Mr. Woodruff said:

"The Government of Soviet Russia has been recognized officially by the United States. The people of that country owe the people of this country $366,688,455.88. * * * Payment of this debt constitutes a sacred obligation upon the existing (Russian) Government, regardless of its character."

Germany, in 1937, owed the United States, as Mr. Woodruff pointed out, $1,200,000,000. And Germany, he added, was rebuilding her military machine.

How escape the conclusion that it was with money owed to the American people that Europe, after World War I, armed for World War II?

Washington's Birthday Address By Senator Maybank

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 27 (legislative day of Friday, January 18), 1946

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered at Charleston, S. C., on the anniversary of the birth of the Father of our Country, before the Washington Light Infantry, one of the oldest National Guard companies in America, which has seen service in every war.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is fitting on this anniversary of his birth that we recall that George Washington, our great soldier and first President, was also the presiding officer of the convention which met in Philadelphia and proposed to the States of the Union the framework of our Government, the Constitution of the United States.

It was Washington who, at a discouraging hour of that convention, when it appeared that its great purpose might fail, arose and said:

"If to please the people we offer what we ourselves disapprove, how can we afterward defend our work? Let us raise a standard to which the wise and the honest can repair. The event is in the hand of God."

Under the form of government created by the Constitution and adopted by the States of the Union, human freedom and liberty have grown and flourished. Under that form of government, our economic system of free enterprise, with its capacity of production and distribution, has become one of the wonders of the world. Republican in structure, it guards against the evils of totalitarianism as well as the excesses of unbridled democracy. It combines government "of the people, by the people, and for the people" with guaranties safeguarding the freedom of the individual or of any minority from oppression or infringement of legal or constitutional rights.

Twice in the last 25 years there have occurred world struggles between free men and those who would dominate and enslave them. In these two great conflicts, the United States of America has proved to be the deciding factor. Its capacity to mobilize its public opinion and the strength of its men and women under our form of government, and its capacity to produce the weapons and supplies of war under our economic system of free enterprise, have tipped the scales in favor of the cause which we believe to be right. Two World Wars have been settled adversely to those who would threaten freedom and liberty by what we call the American way of life.

And so long as we cherish the fundamentals of our form of government and preserve the economic structure of free enterprise which is a vital part of our American way of life, the verdict of those two wars cannot be reversed by those who would dominate the world and enslave mankind.

We are now in a period of confusion and readjustment following the ordeal through which the Nation has just passed, and there is a tendency to introduce and advocate legislation of one kind or another which, though motivated by good intentions and a sincere desire to solve some problem of governmental, social, or economic nature, is inconsistent with the spirit of our governmental or economic institutions. Too often such legislation is advocated in the name of a kind of democracy which, if carried to its ultimate conclusion, would endanger the legal and constitutional rights of our citizens and lay temporary minorities of our people defenseless against that oppression which our charter of government, the Constitution of the United States, was intended to end forever. Much of this legislation just as effectually proposed a change in our form of government or in our economic system of free enterprise as would result from an amendment duly adopted to the Constitution itself.

Let us constantly keep before us this admonition given to the people of the United States by George Washington in his Farewell Address, when he said:

"The necessity of reciprocal checks in the exercise of political power, by dividing and distributing it into different depositories, and constituting each the guardian of the public weal against invasions of the others, has been evinced by experiments ancient and modern; some of them in our country, and under our own eyes. To preserve them must be as necessary as to institute them. If, in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designated. But let there be no change by usurpation; for though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed. The precedent must always greatly overbalance in evil, any partial or transient benefit which the use can at any time yield."

Our institutions have so far been the surest guaranty that freedom in the world has had up to this time. God grant that we shall preserve it to that end.

Labor Unions in the National Economic Picture

EXTENSION OF REMARKS
OF
HON. RAYMOND E. WILLIS
OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 27 (legislative day of Friday, January 18), 1946

Mr. WILLIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Is This Paper Against Unions?" published in a recent issue of the Wabash Plain Dealer, of Wabash, Ind.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IS THIS PAPER AGAINST UNIONS?

"Your paper has been banging away at these strikes. Are you against the labor unions?" another subscriber asked us yesterday.

"No," we said, "we are not against labor unions. We feel there is a definite place and responsibility for unions in the national economic picture. But we are for fair and just treatment in a free land * * * in a land of equal opportunity," we replied.

This average newspaper reader didn't take time to read one of our editorials that appeared on the inside of the paper, where editorials normally should appear when conditions are peaceful and the country is not torn apart in a civil war—where editorials should make an attempt to interpret and explain the news of the day.

This editorial we refer to was written by Louis Ruthenburg, an outstanding Indiana manufacturer who has the intestinal fortitude to come right out and call a spade a spade.

We not only call your attention to this again, Mr. Newspaper Reader, but also your attention, Mr. Labor Leader. Here it is again, in big type, on the front page. Read it. Pick it apart. See if you can honestly disagree with what we agree with.

Mr. Ruthenburg said, and we concur:

"American labor has repeatedly and conclusively demonstrated its fine patriotism and adherence to American ideals, but labor is being increasingly victimized by the Communists' subtle and effective technique of boring from within.

(Did you read Mr. Hillman's remarks after the President's wishy-washy labor program in his message to Congress?)

"Under such conditions true collective bargaining is impossible. Shotgun bargaining and collective coercion are the order of the day," Mr. Ruthenburg stated.

"Until all men again stand equal before the law, no procedures for collective bargaining can have real meaning. As an essential preliminary step toward the resumption of reason and democratic processes—as the primary means of restoring essential freedom and human rights—all men must again be caused to stand equal before the law," Ruthenburg said.

"Let an aroused and informed public opinion demand that the Congress of the United States, once more responsive to the broad public interest as opposed to that of an organized minority, take immediate steps which shall be as follows," Mr. Ruthenburg suggests:

"1. Revise the Wagner Act, preserving all of labor's equitable rights of organizing for collective bargaining, but, balancing every unfair labor practice for which the employer is held responsible by an equally weighted practice for which organized labor must assume responsibility.

"2. Enact such legislation as may be needed to rescind all of labor's immunities and special privileges under all laws of the land, not excluding antimonopoly measures, tax laws, and all other laws which apply to business corporations."

These two points are the simple Ruthenburg formula, as he adds:

"Having thus cleared away the rubble, reestablished moral values and reconstructed the foundation of equity, we may proceed with constructive, progressive legislation, with effective agreements, with true collective bargaining and with law enforcement," and he goes on * * *.

"Thoughtful labor, now oppressed or about to be oppressed by monopolistic unions, as well as all other Americans of good will, cannot fail to support this simple, understandable program. Wise labor leaders will support it, if only to avoid the penalties of impending repressive and reactionary legislation."

(Read that last part again, carefully, Mr. Labor Leader. You know, and we know, there are always those who would destroy unions altogether if they possibly could.)

Mr. Ruthenburg goes on, "Unless we thus retrace our path and recapture the moral values we have lost, we shall suffer under flimsy, ineffective, reactionary legislation until chaotic conditions shall have overwhelmed us." (Mr. Congressman, please note.)

He concludes, "Then our cherished institutions may be superseded by stateism and dictatorship—not through the conspiracy of crackpots, but through the fateful sequence

of unemployment, economic maladjustment, and resultant social disorder.

"It is later than you think."

Mr. Newspaper Reader and Mr. Labor Leader, read this over again and again. If you can shoot holes in it, write down your thoughts and bring them to us. We'll be glad to give your arguments to our readers. After you read this, can you honestly think this newspaper is against unions?

Bomb Parachute Was Designed at Wright Plant in West Warren, Mass.

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1946

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a recent article from the Springfield (Mass.) Union outlining the magnificent contributions to the war effort of the William E. Wright & Sons Co. of West Warren, Mass., which is located in my district.

This ably managed concern produced the rayon fragmentation bomb parachute with a most commendable ingenuity and resourcefulness, and overcame many obstacles of science and production in order to furnish this critical type of parachute to our armed forces.

The article follows:

BOMB PARACHUTE WAS DESIGNED AT WRIGHT PLANT IN WEST WARREN

WEST WARREN, January 23.—The rayon fragmentation bomb parachute, one of the Army Air Corps' most effective offensive weapons, was designed at the William E. Wright & Sons Co. here, it was revealed today in a now-it-can-be-told story.

Probably the textile industry's most outstanding contribution to the war effort, the 'chute, used on all fighting fronts, was developed at the Wright plant at no cost to the Government, and the adequate use of rayon as against silk or cotton made the experiment one of the most economical of the war, millions of dollars being saved. More than 14,000,000 parachutes, constructed in accordance with the Wright-directed design, were purchased by the Government from manufacturers throughout the Nation.

The Japanese blockade of the silk supply and the inefficiency of the previous bomb 'chutes resulted in the careful designing of the rayon parachute. Prior to the development of the rayon parachute, company officials said, there was grave doubt as to whether the air forces could use extensively the fragmentation bomb, with parachute attached, in low level bombing due to the great number of failures of the parachute, which in each case meant the death of the pilot and the loss of the plane. Combat tests proved the great effectiveness of bomb-carrying parachutes dropped at low level (100 feet altitudes) against enemy personnel and equipment because of their phenomenal accuracy.

Clearing house for the entire experiment, the Wright company joined with the Government in lining up yarn producers, fabric weavers, fabric finishers, and braiders for the shroud lines, to tackle the gigantic task.

Materials were handled between the firms by special messenger, and planes were used in transporting samples where distances were involved resulting in dozens of test lots being prepared. Tests involved a range of fabrics and yarn twist to vary fabric porosity, which it was believed, had an effect on the opening of the 'chute. The tests also involved comparisons of cotton versus rayon shroud line to determine the effect of change in physical properties.

Details of all tests were telephoned to interested parties, the Wright firm serving as nerve center of the busy operations, and impetus point for all schedules for tests, specification outlines and assembly designs.

Data were available March 3, 1942, and 16 days later the final design was selected from the group of 'chutes submitted. But by this time the silk sewing thread which had been used in all tests became so critical that a substitute, nylon, had to be tested, and results were satisfactory.

Following the designing and development work, the Wright Co. began producing parachutes and ranked with the Nation's leaders in all this war project. Of the 446,022 parachutes produced, 78,741 were fragmentation bomb 'chutes; 230,589 aerial delivery; 136,692 flare. Also manufactured by the workers who came from the central Massachusetts towns were 12,997 tow targets. Two hundred and twenty-four carloads, or 6,698,187 pounds, of parachutes left the West Warren plant during the war days.

General Romulo Given Well-Deserved Honor—Rollins College Confers Upon Him Honorary Degree of Doctor of Literature

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1946

Mr. STEFAN. Mr. Speaker, on the day coinciding with the anniversary of the liberation of Manila by the American forces, Rollins College, of Winter Park, Fla., a 61-year-old American institution of learning, honored our colleague, Brig. Gen. CARLOS P. ROMULO, Resident Commissioner of the Philippines, by conferring upon him the honorary degree of doctor of literature. Rollins College has in the past honored other distinguished personalities such as President Truman with honorary degrees, and I am happy to note that it has seen fit to confer the same distinction on a Filipino who is a worthy spokesman of his people in this Congress and in the United States. The President of Rollins College is Dr. Hamilton Holt, one of America's greatest liberals, who was one of Woodrow Wilson's chief advisers during the drafting of the Versailles Treaty and is revered in America as one of its foremost thinkers and educators.

Dr. Holt was present during the deliberations of the United Nations Conference in San Francisco last spring. It was there that he saw and heard General ROMULO participate in the discussions of the committees and in the plenary sessions of the conference. Under leave to extend my remarks, therefore, I am inserting the citation which he read when he conferred the degree of doctor of literature on General ROMULO and the speech which was delivered on that occasion by the general:

CARLOS P. ROMULO, educator, editor, author, playwright, lecturer, soldier, patriot, I heard you at San Francisco last spring speak with unmatched eloquence for the 600,000,000 inarticulate and dependent peoples of the world. I saw you, who acquired your understanding of Americanism through education rather than through inheritance, stand before the delegates of 50 sovereign nations as the chief champion of liberty and freedom of the world. I witnessed your statesmanship force into the final draft of the Charter the adoption of the statement "that the backward peoples of the world "held as a sacred trust of civilization," had the right to aspire to full "independence," while the American delegation (shades of the signers of the American Declaration of Independence) went slavishly along with the empires on this issue until you turned the tide. You emerged from the conference with a moral grandeur which your imperialist opponents could not fail to recognize.

Since then I have read your three epochal books. In them you have made both east and west meet, which the poet says "never the twain" shall do. And today you are still fighting the good fight and keeping the faith for the rights of man in general and the independence of your country in particular, just as our founding fathers did in this country before 1776. And it is significant that they were young men like you.

Woodrow Wilson has said that the surest way to exert the maximum of influence on one's day and generation is to master the written and spoken word and champion liberal ideas. Thus, General ROMULO, because you have so nobly fought for the freedom of the Philippines and because, by voice and pen, you have constantly fought for the liberty of mankind, Rollins College confers upon you the degree of doctor of literature, and admits you to all its rights and privileges.

General ROMULO delivered the following address at the ceremony:

A NATION IS BORN

Thankful am I indeed for the privilege of being with you today, thankful for this recognition that is not for me but for the Filipino people, who live on the other side of the world in a land very like your own beautiful Florida. On July 4 of this year our people will become independent. President Truman, in his recent message to Congress, said: "We have already determined that the Philippine Islands are to be independent on July 4, 1946."

On your own Independence Day, therefore, we will install with ceremony and prayer a new member in the firmament of nations—the Republic of the Philippines. It will be a small, dim star in the beginning, for it moved into its predestined orbit during the darkest eclipse of reason the world has ever known. It came to birth during the world's desperation. It has been nurtured in darkness. But the time will come when it will shine more brightly because of that dark origin. For no nation in the world's history was born in so much travail and bloodshed, and with so many tears.

You Americans have shared in that bloodshed and travail, and you know that the Philippines has earned the right to stand alone and free. That is why President Truman repeated America's determination in his message to Congress. It is your reassurance of a pledge made long ago, a pledge that is to be redeemed this year on your Independence Day—which shall henceforth also be ours forever.

You who were born in America, whose year of freedom—1776—precedes ours by almost two centuries, you can perhaps have no concept of what this right means for the Filipino soul. That is what I want to unfold for you today.

History, to be exact, must ever be written from two angles:

First, from the point of view of those who are submerged.

Second, from the point of view of those who are on top.

We have seen, within the past year, the overwhelming defeat of a gang of aggressors who wanted to be on top. Over that victory we have seen superimposed the victory of a submerged people who have won their freedom. For the first time in history, a great sovereign power, flushed with victory, is voluntarily relinquishing its rule over a subject nation.

This is history written in a new language, written by those on top from the point of view of those under the wheel. This is an object lesson, not for Filipinos and Americans alone, but for all the world. To us, it is the culmination of a struggle that lasted for centuries and often seemed hopeless.

The struggle began 425 years ago. In the year 1521 Ferdinand Magellan discovered and claimed our islands in the name of the Spanish King. He was killed by a Filipino—the first native protestant against imperialism. From the beginning, the Filipino, like the American 255 years later, had no use for kings. He was a peaceful Malayan tiller of the soil, but he was ready then as now to fight for his land.

But the first siege of the Philippines was won—won by the Christian cross. Muskets and cutlasses had failed, but the priests of Spain, who followed the soldiery, had succeeded in winning the Filipinos and in Christianizing them for all time. What they won, however, was an allegiance to the rule of God, not to the rule of Spain. It was good will, not force, that won our hearts. The Christian faith we embraced with joy. The Spanish rule we hated with an undying ferocity. We fought Spain for more than three centuries. There was a revolt a year in the Philippines under Spanish rule. At last, as the nineteenth century came to a close, our victory had become certain.

At that moment, on May 1, 1898, Admiral Dewey brought your proud American ships into Manila Bay. The siege of Manila was on, and it broke Spain's dying grip on the Philippines. This was the beginning of a new era for us, and for all subject peoples everywhere. For America, too, won us more by good will than by force. America, too, brought us a faith—a political faith that matched the religious faith which was our heritage from Spain.

We rejoiced in that American victory over Spain. We saw in it the harbinger of freedom—freedom after 377 years of alien rule, freedom for the first time since Magellan's blood stained our earth and made it Spanish.

But a nation does not earn its freedom so easily. The struggle was not yet ended. Spain ceded her rights in the Philippines to the United States, and we were, we felt, a nation betrayed. The battle had indeed been won, and Filipino blood had been shed to win it. But the victory was not ours. We had planned our republic. We had written our constitution, taking for its model the American Constitution. But the republic remained only a dream, and the constitution only an exercise in statecraft.

And so the fight for freedom—the Philippine Insurrection—flared again. It was put down, more by American good will and friendship than by American force, bloody though the fighting was. And when it ended, we still fought on, no longer with guns but with ideas, no longer on battlefields but in America's own halls of state, and the fight was called the struggle for independence.

And the strength of our fight, and the wonder, was that it was the American fight. We dared face America on her own terms, for that was the American way. We learned that we could carry the fight into the very heart of America, into Washington, under the Capitol dome, onto the very floor of Congress. Our Manuel L. Quezon could battle there with his brilliant strategy of words. Our Sergio Osmeña, in Manila, could wage the war with all the force of the human heart, the human mind, the light of reason, the faith of Christianity, the rights of man. This was our ammunition. It was handed to us by America, in the American words written in the American schoolbooks and burnt into the hearts of the Filipino children. For America had declared that every Filipino child must have the right to learn, must share in the privilege which had been limited, before America came, only to the children of the rich.

These were the American words that were our ammunition: "We hold these truths to be self-evident * * * that all men are created equal * * * that they are endowed with certain inalienable rights * * * that among these are life, liberty, and the pursuit of happiness."

Here was our gift from America—a crystallized faith in government of the people, by the people, for the people. America has given us much in a material way. But nothing in her power to give is more precious than these American words.

For them, and with them, we battled for our right to be free. How did America meet our warriors? They were not forced to languish in prison. They were heard with respect. They were treated with honor. They were given an answer to their demands, and this was America's answer:

The Filipino must earn, as the American earned, his right to be free. He must earn it by showing his worth as a man capable of governing himself and guiding the destiny of his nation. And America would show him how that could be done.

In less than 50 years it has come about. In the first 10 years, the Philippine Assembly was created as a proving ground for the future Filipino leaders. Ten years more, and the Jones Act was passed in Washington, promising independence at some future date. Two decades later, the Tydings-McDuffie Act set a definite date for freedom and established us in our Commonwealth Government. Another decade and on July 4, 1946, the redemption of the pledge made by America.

That is the record and how it happened. But the real importance lies not in the how of it, but in the why of it. Why did it happen this way? The answer is the simplest, the most effective, known to man. It was good will.

The Americans had recognized in the Filipinos a Christian people fighting to be free, so eager for the advantages of democracy that they not only accepted these advantages but were ready to fight to preserve them. And the Filipino in turn recognized in America the idealism toward which he had been groping through the long centuries, and he took democracy for his own. When he protested, when he carried on his fight, it was not against America, but for America, because he was upholding the America that detested colonialism and believed that all men should be free and equal.

Ah, there were attempts to divide. In the lands of imperialism, this good will between American and Filipino was looked upon with suspicion. Here, indeed, were dangerous thoughts. And even at home imperialism lurked in the hearts of some men who outwardly pretended to democracy. All the old imperialist tricks were used, but they did not divide us. They were tried in the beginning and they failed. They were still being tried at the very hour of Manila's liberation; they are being tried today, but still they fail.

They fail because the strongest bond between men is their mutual respect for freedom, and this has held the Philippines to America and America to the Philippines.

They fail because we have believed in America's promise. And we have believed in the promise because we believe in America.

America is still young as a Nation. America has a history, but no mythology. We, on the other hand, have been nourished on myths as are the old European countries. Early England had its magical, chivalrous hero, the good King Arthur. Germany had its King Barbarossa, the good ruler with the red beard, who slept enchanted in a cave. And we in the Philippines had our own legendary King Bernardo who had lain hundreds of years imprisoned in a cave on Luzon and who would some day awake to stride gigantically across the land and set us free.

America taught us that only men, not myths, can set a people free. She taught us this in terms of her own history, and she pictured for us her own shrines—Concord, Lexington, Gettysburg, Shiloh—shrines where men had died in their struggle to set their brothers free.

Those were America's legends, but they were real—made real by the names of men whose voices are still heard in America. They had spoken out for freedom in 1776, 1812, 1863, and their voices are still clear and sharp. We heard them as this century began, spoken by American teachers in the new American schools in our country, and we made these men our leaders, their words our laws. We set them beside our own heroes in our hearts; we hung their pictures on our walls—your Washington and Jefferson and Lincoln beside our Rizal and Bonifacio and Mabini. The youngest schoolboy in the Philippines glowed over Concord and the Alamo and Gettysburg, and enshrined them beside our own shrines where men had died rather than submit to foreign power—Balintawak, Zapote, Tirad Pass. In Filipino hearts all these, from Lexington to Tirad Pass, are sacred milestones along the road to democracy, and it was because of our love for them that we joined you in adding these newest names: Leyte, Bataan, Corregidor. We know how deeply these Filipino place names are set now in your own American hearts. They were strange to you once, as your shrines were to us, but now they are ours together.

All this has been brought about within the twentieth century, which is not half over—within my own lifetime—within the lifetime of the majority of men alive today. It has been the product of a simple plan set up, directed, watched over by America:

First, the promise of freedom, with the warning that it must be worked for, appreciated, deserved.

Second, the preparation for self-rule, with the sovereign nation showing how it could be done, but not interfering.

Third, the setting of a specific date for independence.

And last, the redemption of the pledge, the granting of the rights of equality, the taking of our place amid the ranks of free men.

This was the way shown by America in the Philippines. There is no simpler way. It shines bright as a highway through the stars pointing east. Set along this path are the milestones like gleaming stars—Bataan is blazing there, and Corregidor, and all the places where Filipinos and Americans lived together and thought well of one another, and shed blood and tears together. Together we have proven that this is the only road to perpetual peace between men of two races and two worlds.

But before world peace can be assured, that highway must stretch around the world.

It can be built. We made it—11,000 miles of it—in less than 50 years. We had little to build on in the beginning, only resentment and suspicion and the centuries-old antagonism between Oriental and Occidental. We built it slowly. We paved it, step by step, with simple acts of human good will and understanding, with the sharing of books, music, common prayer, racial understanding,

good will toward all men, respect for all women, care and food and protection for all children, small gestures of courtesy, gallantry in action. This is the mosaic of little pieces with which we have paved our shining highway. It may yet serve to divert the armed forces of the world from their endless marchings. It may serve to lead all mankind to the dream of human brotherhood that Christ foretold.

I say that the highway leads 11,000 miles westward, to the Far East, and that its terminus is Manila. But that is not its end. It is no more than the beginning.

Look to the Orient now, for the fruition of the dream is there already, and Asiatic eyes are on it with admiration and longing. Troubled and stirred of blood, the ancient Orient is roused as never before. It may well come about that the traditional distrust of the Orient toward the white world—because of the white world's imperialistic rule through the centuries—will at last be stemmed, that the distrust may die under the new supremacy of simple good will. Java trembles on the brink of promised freedom, and what other country will next force its fearful way toward the edge of liberty? "Freedom was promised the Philippines," they say. "Freedom will be given the Philippines. Why not to us?"

This most potent of revolutionary doctrines—the recognition of human dignity—has been America's gift to the Far East. This most explosive of ideas—that, no matter what their color or creed, human beings have a right to know themselves as men and not as a subhuman species set on earth to serve the ease, comfort, or delight of men of another race—this is America's miracle. Because these forces have worked in the Philippines, we share a mighty victory.

And perhaps it is the greatest of all the victories won in the war that has now ended. Unless all nations mark the importance of this triumph, it may well be the last victory on this earth. For this is the victory over greed, over exploitation, over the feeling of superiority that has wrought so much evil on men.

Unless this victory is marked well and honored, unless it is permitted to spread over the world, all men will live in fear of the next and final war, the atomic war. Greed and arrogance will find little use for their talents then. Superiority, fancied or real, will be of little value to those who may survive.

There need not be another slaughter of the innocents along with the guilty arrogant. There is a way out. We found that way, we Americans and Filipinos, in the Philippines.

"One way there is, and there is no other—
There can be no peace till you call me
Brother."

Imperialism called us hewers of wood and drawers of water.

Democracy called us brothers.

As brothers, we fought with you to hold the Philippines and to shatter the evil ambitions of an aggressive foe.

Now we in the Philippines shall begin the new struggle, the struggle to survive. We start afresh. We shall be free for the first time in 400 years. We shall be free, and very poor, and very proud.

Our past is our pride. It has been harsh and poor and filled with the struggle to break free, but it held for us always the gleaming promise for the future. We dreamed in the past that its very darkness would insure the brightness of the future, but now we know that cannot be. The future also remains to be paid for, as nearly all that we built and planted has been wiped away by war. The Filipinos must fight now to pay for their future before they can live in it economically free.

But we are rich in spirit. We can stand as freemen in the midst of postwar devastation. Though our economic fabric may be unraveled to its outer fringe, we are ready to suffer, and suffer again, for the privilege of calling ourselves citizens of the free sovereign Republic of the Philippines. We have been through fire, and we have stood the test, and that is part of our inheritance from the war. We cannot, indeed, suffer more under independence than we have suffered in the war. We cannot sacrifice more toward our future freedom than we have already sacrificed in the past 4 years.

Spiritually we are ready. By the siege of Manila in 1898, by the siege of Manila in 1945, by other sacrifices heartbreaking to us, we have been prepared. By the Spanish centuries that seemed like aeons we have been prepared. By the Japanese years that seemed like centuries we have been prepared. We have learned that suffering can be endured if one has faith in the future.

Economically we are ready. We are poor but we know that America will not abandon us. Just as we did not abandon America, when we poured our safety, our hard-earned advantages, our very lives, into the crucible of our common destiny.

Physical protection we know will be ours, for American and Filipino power will be one in the Pacific, and our old dread of Japan is removed forever.

A new nation is about to be born, and it shall be born in poverty. But it will possess the spiritual riches of many centuries and of two worlds. Every man, white or brown, who died in this war, has made his contribution to this spiritual wealth. Every man who died has served to lift a little higher the face of the common man from the mud of degradation. This we have learned through suffering and this we shall treasure forever.

We have learned the schoolbook wisdom that partakes of the eternal wisdom—the practical common sense that underlies simple friendship and respect for all men. And there is no more vital part of our heritage than this.

We know now the greatest truth of all: that freedom can never be given. It must be earned. This is part of our equipment and our heritage.

The new Filipino Nation, to be born on July 4, 1946, salutes all America as its sponsor and its friend. All Americans, we know, will wish us well.

Lincoln Address of Hon. Clare Boothe Luce, of Connecticut

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. REECE of Tennessee. Mr. Speaker, when she came to the State to deliver Lincoln Day addresses at Johnson City and Nashville, our distinguished colleague from Connecticut, Hon. CLARE BOOTHE LUCE, by her charm, graciousness, accomplishments, and demonstrated capacity to understand and forcefully enunciate our national problems, foreign and domestic, won the hearts of Tennesseans; and, under leave to extend my remarks, I wish to present the able and inspiring address which she delivered in my home town of Johnson City, February 11, at a Lincoln Day dinner held under the auspices of the Republican Executive Committee of the First Tennessee District.

I am most happy to be here, and grateful for your cordial reception to me as a Republican woman and legislator.

Perhaps my greatest pleasure in being with you is to meet with the friends of my generous and most able colleague, Representative CARROLL REECE, your national committeeman and a leading statesman of our Nation—as you would all know, if you could see as I do, in what high esteem he is held by all his colleagues on both sides of the aisle. And it is heartening, too, to be in a Republican stronghold of the South, which gave 80 percent of its vote to the Republican ticket in the last election. That proves, you know, you are a free people—free as in the days when John Sevier, who became first Governor, marched in to make you free in the war of the Revolution. Theodore Roosevelt, in The Winning of the West credited this vicinity with having the first free government west of the Alleghanies—old Watauga settlement.

It is to that spirit among you, I address myself tonight—first as an American and only secondly as a Republican.

We are come together here today to celebrate the birthday of our greatest living American, Abraham Lincoln. I said "living" because everything is mere matter, dead or dying, which cannot survive its physical self, in endless resurrection. The oratorical revival of Abraham Lincoln, on these stated birthday festivals, is a common and happy phenomenon of American political life. But no ordinary phenomenon is the way his spirit really walks through all the land, and intimately comands every mind and heart in the civilized world, in times of great trouble and conflict. In times such as these, when brother is locked in mortal combat with brother, seeking to slay him, to starve or torture him into submission, to poison him with soft words, or paralyze him with false promises, all in order to prepare his limbs for the fetters of slavery—in such days Abraham Lincoln alone seems to be a wholly live man, with a shining face and loud ringing words on his lips. And many, who walk among us today in positions of power and authority, mumbling their dreary political inanities, seem to be the dead men.

What did Abraham Lincoln mean? What did he stand for? What was the essence of his belief? When we know that, we will know the secret of his triumphant resurrection.

Above all, I think, Abraham Lincoln believed in the brotherhood of man under the Fatherhood of God. From this fundamental credo all his articles of political faith most naturally and nobly derived. A man who held such a belief never talked in terms of "Negro rights" against "white rights" or "southern rights" against "northern rights," the rights of the property holder against those of the propertyless, or even the rights of nation against nation. His credo led with inexorable logic to the conclusion that there are no rights but human rights and that all human rights derive from man's membership in the human family, each member of which is a creature of God, regardless of birth, color, race, nationality, or political condition. Other reasonable corollaries of such a belief were that right makes might; that the conqueror must ever treat the vanquished with malice toward none and charity toward all; and that as no man would be a slave, so none should seek to be a master. Lincoln believed that in the practice of a political fraternity, based on a profoundly religious conception, lay the genius, the strength, and the glory of American democracy. And Lincoln knew that for Americans to betray this conception of democracy at home, or in our dealings with other nations, would mean in the end the betrayal of America itself and of the whole

world. For then, as now, the America which stood for this conception was "the last best hope of man" on earth.

So Abraham Lincoln knew that while peace is ever more to be loved and striven for than war, an evil peace is not to be preferred to a good war. He fought a good war to establish the truth of the dignity and equality of every individual, rather than accept a bad peace which would compromise that truth.

In 1918, and again in 1941, this Nation made the Lincolnian decision. This time the masters and tyrants who would enslave their brothers were Germans and Japanese and their cohorts. And once again we Americans and our great allies vanquished these tyrants. Once again the tree of liberty was watered with the blood of heroic freemen.

No nation, Lincoln said, can long endure half slave and half free. Do we deny today that this "one world" cannot long endure half slave and half free? The drama has widened in scope. The players are numbered by the hundreds of millions instead of millions. But the proposition which was true in the days of flintlock and cannon is no less true in the age of rocket plane and atomic bomb. These weapons merely emphasize the fact that our peril is greater if we do not accept it.

Let us face this fact, too. Abraham Lincoln did not come to his profound belief in the dignity of the individual man and the nature of his rights by consulting Gallup polls of Drew Pearson's column, or even the shrewdest statesmen of his own or other nations. He tells us himself that he came to it on his knees: he got it from God. It is one of the tragic paradoxes of divine justice that those who will not get their political direction on their knees from this Supreme Authority are in the end driven to their knees to get it from a tyrant. With this difference: God lets us rise from our knees to walk like free men. We stay on our knees for the tyrant.

It is in the light, tonight, of these cardinal beliefs of Abraham Lincoln which all Americans share, that I wish to consider the conduct of America's foreign policy since the days of Tehran and Yalta.

There are very few Americans who, when the facts are presented to them, do not know the difference between right and wrong even in so-called foreign questions. Every American knew, regardless of what he thought his Nation ought to do about it, that Hitler's persecution of the Jews was wrong. He knew that the Fascist suppression of all minority rights, and expressed opposition to that suppression was wrong. He knew that Japan's attempt to dismember China was wrong, and that the rape of Nanking was wrong. And there is not an American today who does not know that a political system, like the Soviet system, which keeps 18,000,000 people out of 180,000,000 in concentration, and forced labor camps is wrong, however, much apologists for that system may seek to justify it in terms of the well-being and comfort of those fortunate enough to stay outside of those camps. Now it may well be that the Soviet system of secret police, and firing squads, and the obliteration of all minority expression with propaganda or bullets, may one day produce a free and prosperous society. All things are possible to the hearts and minds of man, for they are always capable of transfiguration. So we may yet see Russia gather the figs of liberty from the thorns of oppression. But the present is what it is. Today's crop of evil cannot be justified by the hope of tomorrow's good harvest.

I mention Russia's teeming concentration camps, and multitudinous slave labor gangs, whether native or imported from conquered countries, as they are today, with the acquiescence of our State Department, because this day is sacred to the memory of a man who condemned slavery everywhere. Perhaps some will feel that to condemn these wicked fruits of the Soviet system is to prejudice the great goal of international cooperation. My retort to that is the retort of Lincoln, "You will never get me to support measures which I believe to be wrong, although by so doing I may accomplish that which I believe to be right."

And yet—you will ask at once, should not the Soviet Government enjoy the same right of sovereignty over their internal affairs that we enjoy and must always demand for ourselves? They should decidedly. But this political fact of sovereignty over their internal affairs in no wise alters the moral facts. Wherever our Government and our State Department give aid and comfort to Russian policies or propaganda which seek to extend, and solidify the area of concentration camps, and to acquire from other nations human fodder for them, we are abetting the cause of tyranny and betraying the cause of liberty for all mankind. I cannot speak more plainly, for if I could I would do so. Nor do I exempt from censure our administration's acquiescence in the imperialistic colonial policies of the Dutch and British and French in Indonesia, where hundreds of natives have been slaughtered for the crime of seeking the freedom promised them by the Atlantic Charter.

It is the plain truth to charge that this administration has abetted the cause of tyranny in many areas through the world, ever since the days of Tehran, and betrayed in so doing a democratic faith which was rooted in a Lincolnian hatred of slavery.

In 1914, the conscience of the whole civilized world was outraged when Kaiser Bill referred to his agreement with little Belgium as a "scrap of paper." What shall we say today of the Atlantic Charter? This document guaranteed to martyred Poland, no less than every nation in the world, the right to determine its own government by free democratic processes. Is that an honored document, or isn't it also just a scrap of paper now? Ask Latvians, Esthonians, Lithuanians, Hungarians, Austrians, and almost any Central European. Ask the Yugoslavs who are alive to answer, or do not fear to answer. The total is staggering of European and Asiatic peoples who fought in this war on our side. They fought valiantly in the open or hunted like beasts in the undergrounds, because they believed the promises given them by a democratic American administration that if they did so they would win the chance to have an American type economy, an American type of representative system, an American kind of freedom. Without them we might not have won the war. What do they think of American honor now?

I ask you, in the name of Abraham Lincoln, why since Tehran has all this been so? Why, why, do millions of innocent men, women, and children—the starving, hunted, persecuted, Siberia-bound men, women, and children of our allies, no less than the vanquished ones—think that "malice toward none and charity towards all" is an American idea that was buried with Abraham Lincoln?

What is the explanation? We must seek it in our own hearts, no less than in the hearts of our leaders. For the slow and bitter betrayal of our noblest American principles in the conduct of our foreign affairs since the days of Yalta and Tehran is a matter for which we may quite suddenly and terribly be called to account in an atomic age.

Three explanations suggest themselves: The first is the kindest and the most unlikely: The Democratic administration which has conducted our foreign policy for 13 long years may no longer know the difference between right and wrong. They may have grown hopelessly wedded, through long days in power, to the fashionable thesis that man is altogether an economic animal and not a moral one. Such a belief goes hand in hand with the thesis that the end always justifies any means, and that the sole end of men and nations is material security. Such men will be forever asking, Will this or that policy protect our physical shores, increase our trade, maintain our position as the world's leading power? Such men will never inquire how these policies will affect the liberties of men everywhere, or if they will increase liberty at home or abroad. Such men will not know—or care—that it was wrong to make the promises we did in the Atlantic Charter, and then to break them. Such men will not know—or care—that it was wrong to accede to the dismemberment of Poland when we promised we would not; to fail to carry out our guaranties of free elections in Europe; to fail to resist with every diplomatic means at our disposal what is happening in Indonesia. Above all they will not know—or care—that it is wrong to allow the innocent nationals of many European countries to be shot, imprisoned, or sent into slavery in vast numbers.

I know as you do, that there are men in this administration who are so blinded by that vengeance which properly belongs to the Lord that they cannot see through the red curtain of their hate that it is wrong for this Nation to adopt economic policies in Germany which will result in the wholesale starvation of children and pregnant women; policies which, if they are not changed, will in the end turn all of Europe into a pestilential poorhouse. That some members of this administration and the previous one may have lost their moral sense so that they do not know right from wrong, charity from hate, freedom from slavery, truth from lies, a Christian conscience from a barbarian one, is, as I say, possible. But it is not likely. For all Americans, who are not totalitarians in disguise, have too long lived in the climate of freedom to be easily deceived on such matters. Their forefathers and sons, who died in many wars that it should be preserved, have left them a most intrusive legacy of liberty.

There is a second explanation: The men who conduct our foreign policy may know the difference between right and wrong, but may wish to avoid contemplating it because to contemplate the growing wrongs in the world is too painful to the American mind, which is naturally optimistic, naturally inclined to see the best in everything, naturally indulgent to the ways of others. We are, perhaps, no longer a Nation of Pollyannas, but like Little Orphan Annies, it takes an awful lot to disillusion us.

I sometimes think that our present policy might be called the "three monkeys policy": "See no evil, hear no evil, say no evil." But, the oceans have been breached at last. And troubled Europe and Asia, once so remote, are on our very threshold. This is the age of rocket bomb, atomic bomb, radio and radar which reaches to the moon. This is one world, and Europe and Asia are in it, and there is evil there, such as we have never known here, or had to deal with before. If evil is to be vanquished, it must be understood, it must be seen and heard, and hard and true things must be said of it, that it may be shamed, which, by God's mercy, it often surprisingly is. We must be encouraged to face it in order that we may resist it, and diminish it, before it thrives and grows beyond our strength to resist or diminish.

So there are two possibilities which might explain the wavering and pusillanimous conduct of our foreign affairs by New Deal statesmen, (a) that they have not known, since Tehran, the difference between right or wrong, and (b) that like the three optimistic monkeys, they have ignored the moral obligation placed on man, to look right and wrong squarely in the face and choose between them.

But there is a third and, I believe, sounder reason, why many of the men of this administration have all but failed the cause of international justice to which the Atlantic Charter, no less than the blood of our sons, have pledged us.

The answer is fear: Fear for their political fortunes and their offices.

We hear these men tell us that the world is wearied of war, wearied to a point of despair, so that every appeasement of their's is justified as a charitable act which spares the world even the shadow of a shudder about further bloodshed. Is it not then remarkable that in Europe and Asia today many men who have already endured long terrible years of fighting and bombardment and pestilence and famine, are still not too wearied to risk torture and exile and slavery, and still seek arms to defend their political convictions? Does this not suggest that the question of liberty in Europe is still not settled? Certainly Americans are wearied of the war and want peace; want their men home; want to disarm; want to get on with their American lives and livings. And this weariness is certainly something of which even the most fearless statesmen today must take cognizance. But this is not altogether the reason why these New Deal statesmen gloss over every European and Asiatic incident which might agitate our war weary nerves. The reason is that they dare not tell the American people the plain truths and the solid facts of the European and Asiatic situations that have developed as a result of Tehran, Yalta, London, and Potsdam. They dare not tell us the commitments that were overtly or secretly made in moments of war's extremities by a mortally ill President, and perhaps mortally scared State Department advisers. Some of these commitments were bad, and ought to be reviewed by the whole American people before they are fulfilled. Some of them are good, but cannot be fulfilled without a realistic and idealistic explanation of why they must be fulfilled, even at the further sacrifice of our national wealth and individual comforts.

The man in the White House today, and the men who run our State Department, have inherited from a former administration and furthered a policy full of commitments so complex, so oblique, so secret, so confused, so personal, and whimsical that it would take a political genius to unravel it alone. But perhaps if it were laid before all the people, perhaps if of us together could unravel it. Perhaps all of us together, if we were inspired anew with the principles of Lincoln, would see the gigantic rehabilitation program through, to which we have been committed. But some cowardly men now in office fear that we shall rebel as a nation if asked to assume it. And, oh, how they fear our wrath when we discover all that has been done, or left undone, to make a peace in Europe. So, unable to confess the failure of a previous administration, with whose prestige their own is politically linked for better or worse, most Democratic leaders today, in House and Senate and in State Department, have been forced to adopt appeasement as their policy—appeasement of nations that they fear to speak up to, or back to, lest secret agreements, or agreements that now seem to betray the common man of Europe and Asia, be angrily revealed, and the revelation blast them all out of office; appeasement of the electorate, that is naturally demanding the reward that a previous administration promised so lavishly out of this war—an immediate, long, happy democratic peace in the world. Dare these men who served that administration and also serve this one admit that this peace has already been frittered away bit by bit? They do not. The old New Deal curse now falls upon far less inspired and adroit successors. They are doomed still to please everybody every Monday morning—and to promise endlessly what no man alive can ever deliver: A painlessly achieved Utopia come next election day. And in one matter they are wise—they are wise enough to know that even though they told the truth, while it might save the people, but it would not save them. For when Americans see that New Deal statesmen scuttled the ship of peace they are certainly not going to vote for the same men to salvage the cargo.

What is the result of a foreign policy which sometimes cannot distinguish between right and wrong, which sometimes does not wish to see, hear, or speak of evil, and which always fears to tell the people that evil has been done by ourselves, and by others? The men in power hope that the result—the immediate result will be reelection, power, prestige, patronage. Yes, plums for the few today, but what for the many tomorrow? You know the answer. It was the same thousands of years ago, it is the same today: a time of parlous peace, and dubious prosperity. Men will buy, sell, prosper a little, marry, build houses, eat, drink, and be merry—and then the flood, or the fire, the rain of atomic bombs upon our cities, wiping out millions. Then, indeed, we may all fall on our knees—but too late ever to rise as free Americans.

Will this come to pass?

I believe that it will not come to pass. Because I believe that there is no situation in Europe or Asia today which is not amenable to wise statesmanship. I believe that in the crucial years ahead we will choose an administration whose policies will conform to the principles of Abraham Lincoln. And then, and only then, the ways of peace will begin to open for all men.

The way to begin is to elect a Republican Congress in 1946, and a Republican administration in 1948. And only in this way shall we learn the truth about the conduct of our foreign policy—the truth that when revealed will set us free to work in the cause of liberty everywhere. The choice is the peoples'. It is our Republican task to lay before them the nature of the choice. Let us see to it.

And then indeed this Nation, under God, will have a new birth of freedom. And government of the people, by the people, for the people will not perish from the earth.

A Funny Man Reflects

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. WHITE. Mr. Speaker, in reading the daily newspapers and following the comments of columnists, it is interesting to find a humorist turned serious, particularly our old friend McLemore, found in his column appearing in the Evening Star of December 20 submitted here:

HEADLINES DISPUTE UNITED STATES GAINS IN WAR

(By Henry McLemore)

Sometime, somewhere, somebody is going to tell the United States what it won by winning World War II. I average 50 or 60 letters a day from people asking me to tell them what we gained by, almost overnight, becoming the mightiest power in the world. They all get the same answer—I don't know.

But, starting with this very paragraph which you are reading, I am going to guess what the United States achieved by conquering the Fascist nations. Nothing. I say it again, nothing. I am no thinker, but I can read. Pick up your morning paper and figure out for yourself what we have gained. You will read headlines like these:

"FBI Chief Hoover says crime wave to sweep country."

"British Mosquito bombers crush Indonesians."

"Hurley says Acheson blocked any chance for United States effort in Iran."

"No democracy in Yugoslavia, says Truman's representative, Mark Ethridge."

"Britain and United States fight for world air lines power."

That's enough to give you an idea. Remember, this is going on above the crosses of the dead. This, mind you, is being done by men standing on ground hallowed by men who gave their lives.

I would like to ask Mr. Truman, Mr. Molotov, Mr. Byrnes, and Mr. Bevin if they believe one single man died in this war to make headlines like those.

I am supposed to be a man who writes on little things in a light manner. I do not work in the field of heavy thought. But there comes a time when even the comedians must think of Hamlet, and Pagliacci must lay down his drum for Macbeth. There is no such thing as watching an American soldier die and ever forgetting it. I saw it. I saw them bury Americans in many strange places. They were all Americans who had fought against what they thought was bad.

It is up to us, the living and unworthy Americans, to fight what we think is bad.

We won't do it, but wouldn't this be a lovely country if we would?

Curbs on Conscription

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1946

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include a brilliant article entitled "Curbs on Conscription" from today's New York Times by that eminent military expert, Hanson W. Baldwin.

This article which supports the Martin resolution to abolish conscription is entitled to very careful consideration by every peace-loving American. To my mind, its reasoning and conclusions are unanswerable.

CURBS ON CONSCRIPTION—MILITARY ANALYST FAVORS MARTIN MEASURE URGING WORLD ACCORD TO ABOLISH PRACTICE

(By Hanson W. Baldwin)

The House of Representatives is the setting this week for an age-old dream of man: the abolition of conscription.

Representative JOSEPH W. MARTIN, Jr., of Massachusetts, minority leader, has scheduled hearings before the Military Affairs Committee on a resolution that would urge the President to support a world-wide agreement to abolish conscription, a step that has been officially advocated by Britain. Representative CARL VINSON, of Georgia, chairman of the Naval Affairs Committee, has introduced a bill to establish a special occupation force for Germany and Japan to be composed of volunteers. Its avowed objective is ending the wartime draft.

Both measures deal with different aspects of the same problem. These aspects are frequently confused and a sharp differentiation must be made between the so-called permanent peacetime draft, toward which Representative MARTIN'S measure is directed, and the continuing wartime draft, which would be ended by Mr. VINSON'S legislation.

The wartime draft is scheduled to end May 15 unless extended by Congress. With its essential nature as a wartime measure there can be no quarrel, no matter how much each individual may dislike the principle of compulsion to fight. Continuation of the war-

time draft during this postwar period, when the Army and Navy have been demobilizing but have had to be larger than their eventual peacetime size, was a necessity.

A TROUBLESOME PROBLEM

Just how long it should be extended has been a puzzling legislative problem. Mr. Vinson's desire to substitute a volunteer army of occupation for a drafted army is sound, but even if sufficient volunteers eventually were found, May 15 would be too soon to end the wartime draft.

By autumn the Navy and the Army Air Forces expect to have completed demobilization and to have established themselves on a volunteer basis. By that time, too, the Army ground forces will be largely demobilized and will have had a thorough chance to test the success of the volunteer enlistment drive.

Until then all the services will continue to be in a state of flux, with large personnel turn-overs, and the sudden ending of the wartime draft in May would greatly complicate major personnel problems. Next fall should be the time to end the wartime draft. There is a definite reason for extending it to that time, but from present indications little excuse for extending it beyond then.

Mr. MARTIN'S measure is not concerned with the date of terminating the wartime draft but with the principle of conscription itself and, indirectly, with the proposed establishment of a permanent peacetime draft measure in this country.

The War Department and the President have proposed, as a basic part of our postwar military policy, the establishment of a permanent peacetime universal military training measure, under which the youths of the country would be called up regularly, not for service overseas, but for 1 year of training in the United States.

ENCOURAGED BY BRITISH

As a countermove, Representative MARTIN, encouraged by the British proposal for an international agreement to end conscription, has introduced a resolution that, if approved, would put Congress on record in support of the international abolition of conscription.

Mr. MARTIN'S resolution ought to be supported fully. Though there seems to be little chance that Russia would agree to any such proposal, the attempt should be made, if only to lessen the strain and growing tension of the international situation. Conscription cannot possibly be interpreted as a constructive measure, philosophically, economically, or politically. The only justification for it in this country, where its peacetime perpetuation would mean a sharp break with all American concepts and traditions, would be the military security of the Nation.

If the United States had a "live" land frontier with dangerous aggressive nations bordering us the proponents of peacetime conscription would have a far better case. As it is, our "live" frontiers are in the air and at sea, and a mass of semitrained ground troops could do little to insure the security of those frontiers. Whether a mass army will ever again be useful in the atomic age no one can say; if war comes again armies, navies, and air force in some form will almost certainly be employed, as will also rockets and atomic bombs. But the necessity, indeed, the utility, of the draft in training the kind of atomic-age army that may be needed is open to serious doubt.

Moreover, the experience of this war, indeed, the experience of all past wars, has shown that we can train men far faster after an emergency has arisen than we can equip them. Industrial mobilization is even more difficult than manpower mobilization, and mass production takes longer than mass training.

There is an important doubt, therefore, whether the permanent peacetime draft can be militarily justified for the United States, regardless of what other nations do. The great expense of any such training program, its probable concentration on training large numbers of men in methods certain to be obsolete before the next war and the resultant over-emphasis on the creation of a large, semitrained reserve might—and probably would—hamper the development of far more important security measures, an adequate intelligence system, a comprehensive research program, industrial mobilization, finely trained services of professional soldiers, sailors, and airmen, ready for instant action and cable leaders.

Moreover, the international argument, while it can be overdone, must not be ignored, and it tends to offer support for Mr. MARTIN'S resolution. Developments since the end of the war indicate the unsatisfactory nature of the international situation.

No realistic American can be willing today to rest his country's security entirely on the weak and undeveloped structure of the United Nations Organization. We must still depend in large measure on national strength. However, if UNO is to get a chance to broaden and develop, the world atmosphere cannot be too harshly militant.

FINE BALANCE NEEDED

We have to draw, therefore, in all our military policies, a nice balance between the necessities of national security and our efforts toward international organization. To go to either extreme at this juncture in world history would threaten our own security and defeat our own objectives: the creation of a more secure world for all and a period of protracted peace.

So far most of the emphasis has been on purely national measures of security. No disarmament or arms limitations programs have been started, and yet until some limitation is put on armaments the militant atmosphere of the world—an atmosphere inimical to any sort of international growth—will continue.

The UNO has, it is true, authorized the creation of an atomic bomb commission, but Mr. MARTIN'S resolution urging the world-wide abolition of conscription represents the first real attempt at limitation of armaments. If Britain, whose strategic position is far less secure than our own, can support such a step, we can certainly do so. We do not in any sense imperil our own security by supporting it and we help, even though the proposal be rejected, to advance the cause of international collaboration.

The Martin resolution deserves enthusiastic support.

Un-American Activities

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1946

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks, I desire to comment upon the New York transit strike.

The transit strike in New York is over, but the danger of a complete break-down in the future still exists. Just so long as we have Communists and Red lovers playing Stalin's game, just so long will we have chaos in this country.

The man who threatened the New York transit strike is the type of Communist labor leader who would stoop to anything to gain his ends. If there ever was a union that should be cleansed at the top by the rank and file at the bottom, it is the one headed by Michael J. Quill, the Red Russian lover. The complete record of Michael J. Quill, taken from the files of the Dies committee is as follows:

Michael J. Quill

Affiliation	Activity	Source
American Committee for Protection of Foreign Born	Panel speaker at conference	Program, fifth national conference, Atlantic City, N. J., Mar. 29-30, 1941.
American League for Peace and Democracy	Speaker at aid China rally	Daily Worker, Feb. 4, 1938, p. 2.
American Peace Mobilization	Member, national council	Pamphlet, What is APM?, p. 12; leaflet, To the Delegates to the Emergency Peace Mobilization; Daily Worker, Sept. 3, 1940, p. 4, columns 7-8.
American Peace Mobilization, New York Council	Speaker, Armistice Day peace rally, Mecca Temple, Nov. 11, 1940.	Leaflet, What, When, Where?
Anti-Injunction Committee, United Retail and Wholesale Employees of America	Sponsor	Letterhead, dated July 11, 1938.
Bronx Victory Labor Committee	Speaker	Daily Worker, Oct. 13, 1942, p. 3.
Committee for Boycott Against Japanese Aggression	Signer of appeal	Daily Worker, Feb. 25, 1938, p. 4.
Committee for Defense of Public Education, American Federation of Teachers, locals 5, 537.	Sponsor; will testify at hearing	Leaflet, Come to a Citizens' Open Hearing, Manhattan Center, New York City, Dec. 18, 1940.
Conference on Constitutional Liberties in America	Sponsor	Program leaflet, Call to a Conference on Constitutional Liberties in America, June 7, 1940, p. 4.
Consumers National Federation	do	Pamphlet, The People vs. H. C. L., Dec. 11-12, 1937, p. 3.
Consumers Union	Member, labor advisory committee	Undated circular.
Emergency Peace Mobilization	Speaker, Chicago peace rally, conference	Daily Worker, Aug. 31, 1940, p. 4, columns 1-8.
National Council of American-Soviet Friendship	Sponsor, Congress of American-Soviet Friendship	Daily Worker, Oct. 30, 1943, p. 5.
Do	Member, executive committee	Letterhead, dated Nov. 6, 1940.

Transport Workers Union	President; telegraphed protest of the committee's investigation of radio commentators' scripts, Oct. 15, 1945.	Do.
American Federation of Teachers, Local 5	Speaker at conference	Daily Worker, Mar. 31, 1938, p. 3.
American Labor Party	Sponsor, mass rally	Handbill, Protest Brutal Nazi Persecutions!
American Peace Mobilization	Signer of call	Call to American People's Meeting, p. 4, New York City, Apr. 5-6, 1941.
American Peace Mobilization, Brooklyn division	Speaker, mass rally, Brooklyn Academy of Music, Feb. 6, 1941.	Pamphlet, Defend Trade Union Rights, back cover.
American Youth Congress (participating sponsors: Washington Committee for Democratic Action; Washington Negro Youth Federation; Washington Youth Council; Washington Council, National Negro Congress; Washington Peace Mobilization).	Speaker, Town Meeting of Youth, Turner's Arena, Washington, D. C., Feb. 7, 1941.	Leaflet, Hear Ye! Open hearing on H. R. 1776.
Champion	Contributor	Champion, December 1937, p. 8.
Consumer-Farmer Milk Cooperative	Sponsor	Why a Milk Cooperative? back cover.
Consumers Union	Speaker, second annual meeting, May 16, 1938	Consumers Union reports, June 1938, p. 16.
Daily Worker	Contributor (reprint of letter to World-Telegram regarding Stolberg).	Daily Worker, Jan 28, 1938, p. 5.
Do	Interviewed on St. Patrick's Day	Daily Worker, Mar. 17, 1938, p. 5.
Emergency Peace Mobilization, organization meeting, Chicago	Member, national council	Daily Worker, Sept. 3, 1940, p. 4.
Emergency Peace Mobilization	Speaker, rally for peace at Coney Island, Aug. 14, 1940.	Daily Worker, Aug. 13, 1940, p. , column 1.
Gerson supporters	Signer of letter	Daily Worker, Feb. 10, 1938, p. 1.
Greater New York Committee for Employment	Speaker	Daily Worker, May 18, 1938, p. 4.
International Labor Defense	Signer of petition to Japanese Ambassador	Daily Worker, Mar. 19, 1938, p. 2.
International Labor Defense, Hudson County Committee for Labor Defense and Civil Rights.	Speaker	Daily Worker, May 7, 1938, p. 2.
Joint Anti-Fascist Refugee Committee	Trade union sponsor	Pamphlet, I Know You Are My Brother, p. 11.
National Council of American-Soviet Friendship, Inc.	Signer of open letter to the American people	New York Times, May 18, 1943, p. 17.
Do	Signer of open letter to mayor of Stalingrad	Soviet Russia Today, June 1943, p. 21.
National Federation for Constitutional Liberties	Executive committee	Letterhead, July 3, 1942.
Do	Signer of message to the House of Representatives opposing renewal of the Dies committee.	Leaflet, attached to undated letterhead.
National unity convention called by Jewish People's Committee	Endorser	Daily Worker, Mar. 1, 1938, p. 2.
National Unity Convention of Jewish People's Committee Against Fascism and Anti-Semitism.	Speaker	Daily Worker, Mar. 11, 1938, p. 2.
New York Tom Mooney Committee	Sponsor	Undated letterhead.
Petition to the Japanese Government protesting the arrests of Japanese citizens	Signer	Equal Justice, Mar. 1938, p. 1.
Progressive Committee to Rebuild American Labor Party	Candidate for delegate, eighth assembly district, Bronx.	Daily Worker, Sept. 17, 1940, p. 4.
Do	Member, executive committee	Leaflet.
Public Use of Arts Committee	Sponsor	Undated letterhead.
Reichstag Fire Trial Anniversary Committee	Signer of declaration honoring Dimitrov	New York Times, Dec. 22, 1943, p. 40.
Schappes Defense Committee	Sponsor	Pamphlet, In the Case of Morris U. Schappes, p. 9.
School for Democracy	Lecturer	New Masses, Jan. 20, 1942, p. 25.
Do	Guest lecturer	Catalog and program, January 1942.
Town Hall, Transport Workers Union, New York Typographical Union, Local 5, American Federation of Teachers, Trade Union Women's Committee for Peace.	Speaker	Daily Worker, Sept. 18, 1940, p. 5.
Trade Union Committee on Industrial Espionage	Speaker at conference	Daily Worker, Mar. 30, 1938, p. 5.
Transport Workers Union, American Peace Mobilization Club, No. 1	Speaker, Washington	Daily Worker, Sept. 11, 1940, p. 1.
Transport Workers Union delegation to State CIO convention, Rochester	Leader of delegation	Daily Worker, Sept. 20, 1940, p. 4.
Union of Concerted Peace Efforts	Signer of manifesto	Daily Worker, Jan. 11, 1938, p. 2.
United Office and Professional Workers of America; Transport Workers Union; New York meeting.	Speaker	Daily Worker, Sept. 13, 1940, p. 5.
United Youth Committee Against Lynching (organizations participating: Youth section of the NAACP, International Workers Order, Transport Workers Union, Young Communist League, Communist Party, Socialist Party, Federated Youth Clubs, Abyssinian Youth Clubs, Mother Aton Youth Clubs, Workers Alliance).	Speaker, parade for Antilynch bill passage	Daily Worker, Feb. 11, 1938, p. 5.
Washington Youth Council	Speaker, Town Meeting of Youth, Turner's Arena, Washington, D. C., Feb. 7, 1941.	Washington Evening Star, Jan. 29, 1941, p. 4.

Spoke at antiwar, anticonscription rally sponsored by the Brooklyn Community Peace Congress at Coney Island Velodrome, Daily Worker, Aug. 16, 1940, p. 2, column 4.

Attended meeting at Chicago Workers School, reported Communist activities, Aug. 22, 1940.

Endorsed the APM conference to be held in Washington, Jan. 25-27, 1941, Daily Worker, Jan. 14, 1941, p. 1, column 7.

Participated in Town Hall Meeting held in Washington, sponsored by the American Youth Congress. Daily Worker, Feb. 7, 1941, p. 3, column 2.

Housing for Veterans

EXTENSION OF REMARKS

OF

HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1946

Mr. PATTERSON. Mr. Speaker, during the war years, when the GI was fighting for democracy and all our individual lives, we did not hesitate to meet his needs with daring and with promptness. We saw to it that the materials he needed were produced, we saw to it that materials were allocated to his war needs, we saw to it that these materials were rushed to him promptly. When it was a matter of saving the life of GI Joe and incidentally our own lives, the talk was straight and to the point. Now that the war has ended and we must make provision for the greatest reconversion problem of GI Joe—where he shall live and how he shall live—the straight talk suddenly becomes double talk. Everybody is eager to say that there must be a housing program for the veterans immediately. But when good legislation comes up to provide this housing program, then prompt efforts are made to knock the teeth out of the legislation, leaving it just a hollow gesture which will neither fool the veteran nor the general voting public.

The Patman bill now before us permits allocation of scarce materials to construction of dwelling places for veterans. This permission to allocate materials must be kept in the bill for the simple reason that since there is a scarcity of materials, we must have a guaranty that these scarce materials will not be di-

rected toward nonessential construction. Trusting to human kindness and good will is certainly not going to insure the veteran that when materials are scarce, these materials will nevertheless go to constructing low- and medium-cost homes that he can afford and that he needs so desperately. These scarce materials can just as easily go toward the building of $30,000 homes, theaters, restaurants, and other types of nonessential construction. If this is done, just what chance does the veteran have of getting the 3,500,000 homes that he is going to need within the next 2 or 3 years? We must be realistic. Careful surveys and studies have been made and the average returning veteran needs a $6,000 home. Unless we pass legislation that will permit the allocation of scarce materials to this type of home, we are not going to come anywhere near meeting the great need of the veteran. We must recall that the first important point made by Wilson Wyatt in his report to the President is that there is an urgent need for some 3,000,000 moderately and low-priced homes and apartments during the next 2 years. If we seriously want to try to meet this need, if we are not just paying lip service to the veteran to whom we owe so much, we must give immediate thought to writing back into the Patman bill the authority to the Housing Director to allocate scarce materials when conditions make this necessary.

The question of price ceilings on new and existing construction is another essential part of the legislation now before us. We all clearly recognize inflationary trends in our economy today, and if we are to protect the veteran from harmful speculation and the crippling effects of inflation, we must see to it that price ceilings on both new and existing construction are provided when and if they are needed. There is no intention in the Patman bill of having over-all price ceilings nor of having any such ceilings if they are not necessary. However, if a particular locale, a particular type of construction requires ceilings to give the veteran protection against speculation, then authority to provide this must be given to the housing director and the local administrators of the veterans' housing program.

On the matter of new construction, if price ceilings are to be set, they will, of course, be based on the usual standards of the cost of the land, cost of construction, and comparative price values based on some normal year. In regard to ceiling prices on existing homes, this will be determined by agreement between the owner and buyer and this will be the ceiling price for 2 years, which will prevent inflation during a period when the danger of crippling inflation is very imminent.

Another essential aspect of the Patman bill is the granting of premium payments to speed the production of scarce building materials. When we were trying to win the war, we freely granted subsidies to those who were producing the materials of war, in order to speed the victory. Now we must be willing to grant subsidies for scarce building materials, so that the men who were on the battlefield last year can have a place to live next year. This granting of premium payments, which is another factor urgently recommended by the Housing Expediter to meet our goal of providing some 3,000,000 more dwelling places for veterans, is not now included in the legislation before us, but it must be included to provide the fullest guaranty that we really intend to carry out the program which is so critically needed.

The need of the veteran for homes is not something that has come on us suddenly. It has gradually been building up during the past five war years when materials were of necessity going to war. We must now meet with vision, with honesty, and with courage the obligation that we have to the returning veteran to give him a home to live in which will justify the reason for his living in fox holes for 4 years. We are all agreed on the need for an emergency program for veterans' housing. Now let us agree that the only way to carry out such a program is to back it up with effective and courageous legislation. With the necessary inclusion of amendments to grant premium payments and to grant authority to place price ceilings on existing homes, the Patman bill now before us will go a long way toward insuring the success of the emergency housing program.

Boston

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a very interesting article entitled "American Cities: Boston," which appeared in the February issue of the Caravan, a monthly magazine published by the New Yorker Hotel Corp. of New York City, which is edited by Shepard Henkin and whose business is managed by Rose Shokler. In one of the first pages of this magazine there appears a very timely and important editorial by the genial president of the Hotel New Yorker, Frank L. Andrews, which is headed "Hoard bonds, not cash" and reads as follows:

Now, more than ever before, is the time to hold on to your war and savings bonds, which you purchased. For these bonds increase most in value during the latter years of their 10-year life.

No other investment today insures so much security or so fair a return—United States savings bonds pay 3½ percent interest.

The wise man is one who lets his bonds attain their full maturity value, and thereby makes the greatest gain on his investment.

The following is the splendid write-up on the city of Boston:

AMERICAN CITIES: BOSTON

Boston, the oldest large city in the United States, was founded in 1630 by a chartered company of English colonists under the governorship of John Winthrop. Named Shawmut by its Indian inhabitants and Trimontaine by the early colonists, it received its present name on September 17, 1630, after the town of Lincolnshire, England, from which many of the company had come. Two years later it was established as the capital of the Massachusetts Bay Colony and is today capital of the Commonwealth of Massachusetts.

Although religious freedom was one of the principles on which the early English colonies were founded, the Puritan population of Boston soon became intolerant of divergent religious views. Some of the offenders were exiled, Anne Hutchinson among them and others, like Roger Williams who founded Rhode Island, emigrated voluntarily. Between 1648 and 1688 four women were executed as witches and four Quakers, who returned in defiance of their exile, were hanged .

For many years Boston was the largest town in the colonies and it has always occupied a position of leadership. It was the scene of the first American printing office and the first regular newspaper, the Boston News Letter, was published in Boston in 1704. America's first public school which is still in existence, the Public Latin School, was started in 1635. Harvard College, located across the Charles River in Cambridge, the country's oldest institutior of higher learning, was founded in the following year.

Boston, as the natural center of the Colonies that later came to be known as New England, was continuously in the forefront in the long dispute with the mother country that culminated in the American Revolution. Because of the lack of resources in New England—the soil and the climate were not suitable for the raising of the colonial staples, tobacco or cotton or sugar—this section of the New World soon became England's stepchild and came to learn that it had to fend for itself. The various trade and tax laws, imposed by Britain, worked a particular hardship on New England's seaport towns. Therefore, these could subsist only through their shipping among the other Colonies and between the Old and the New Worlds. As a result, Boston earned the name of hotbed of the Revolution, with the Stamp Act and Revenue Act riots, the Boston Massacre, and the Boston Tea Party and the Boston port bill, outward evidence of the city's right to the title. America still respects the names of the many rugged patriots who refused to accept England's punitive measures in silence, such men as Samuel Adams, John Hancock, Paul Revere, William Dawes, and James Otis, among a long list.

Because of the lack of natural resources and its limited agriculture, New England was ready to seize the opportunities offered by the industrial revolution around 1800. Textile mills sprang into being in towns all over New England where water power was available, and not long after the shoe industry followed suit. Boston became the natural center for these industries both as a market for their finished products and as the port of entry for their raw materials—cotton, wool, silk, and leather.

With the finest natural harbor on the Atlantic coast, Boston today is one of the world's leading ports, second only to New York in value of imports and in overseas passenger traffic. During the present war it has been one of the principal ports of embarkation for our armed forces and for lend-lease goods to Europe. During the war the port enormously expanded for Army and Navy needs so that few, if any American ports, will be able to boast superiority in this respect when peacetime trading is resumed.

Boston is the hub of a rail and bus transportation system that adequately cares for the heavy demands placed upon it by a busy industrial hinterland. Located as it is in the far northwest corner of the United States,

Boston is waging a constant battle to maintain equitable freight rates to outweigh its geographical disadvantage. But this position has come to be advantageous in the air transport picture of the future. Because of its nearness to Europe, Boston is destined to be the Nation's principal airport of embarkation for Europe and in keeping with an expected huge demand that will be made on it the city's air-field facilities are now being rapidly expanded. The General Edward L. Logan Airport in East Boston, nearer to the center of the business district than is that of any other large city on the Atlantic seaboard, is right now being enlarged to many times its original size.

The city has maintained its rank as one of the Nations leading industrial centers from earliest times. Before the present war, it still imported better than two-thirds of all foreign wool used in the United States to supply New England mills, but textiles and shoes, have long since had to share the industrial scene with a long and diversified list of products. In the Boston industrial area—the four counties immediately surrounding and including the city—are over 6,000 factories making clothing, confectionery, electrical goods, rubber goods, ships, printing, razors, foundry and machine-shop products, tools, and a host of other goods.

From earliest colonial days fishing has been an important endeavor in New England, first for subsistence; later as a commercial enterprise. Boston is the largest fishing port on the Atlantic seaboard with the world's biggest fish freezing plant. In peacetime more than 300,000,000 pounds of fish are received at the port annually for processing and distribution to inland markets.

Boston has played a leading role in the Nation's cultural growth. Referred to in another era as "the Athens of America" it certainly held undisputed claim to this title for many years. Here—and in neighboring Cambridge and Concord—lived and worked a colony of writers which gave to American letters a distinctive place among the world's great literatures. Names like Emerson, Holmes, Longfellow, the Alcotts, Thoreau, Hawthorne, Aldrich, Lowell, Howells, James, Parkman, and an imposing roster of others form a rich and substantial background for all American writing that has come after them.

In the other cultural fields Boston has likewise played a foremost part. The present Boston Symphony and the perhaps equally famous Pops have always played to capacity audiences because Boston is a city of music lovers.

The Boston Public Library boasts the largest per capita book circulation of any institution of its kind in America and incidentally it is housed in one of the city's show places, an authentic copy of an antique jewel case in true Italian renaissance architecture. Across Copley Square from the library is Trinity Church (once seat of the famous Bishop Brooks), the country's outstanding example of romanesque architecture.

The country's first home of education, Boston is still a city of colleges and universities. Harvard, Massachusetts Institute of Technology, Tufts, Boston University, Boston College, Jackson, Radcliffe, Wellesley, Northeastern, Simmons, Regis, and Suffolk are all located in metropolitan Boston and in addition there are literally hundreds of specialized schools such as the New England Conservatory of Music, Massachusetts School of Art, Forsythe Dental Clinic, Massachusetts College of Pharmacy, among a long list that make the city justly famous as a leader in education.

"Yankee ingenuity" which doubtless stemmed from the hardships of colonial days, has made itself manifest in many ways in Boston but especially perhaps in technological advancement. Outstanding among inventions and discoveries born in Boston are the telephone, the telegraph, the vulcanization of rubber and, not far away, the sewing machine. In medical research Boston has played an important part also. Ether was discovered here in 1846 as was the use of liver to counteract anemia and, more recently, synthetic quinine. Boston's hospitals are well up among the world's finest.

The geography of Boston is a subject which causes some confusion. With an area of only 44 square miles, Boston is the tiniest of the country's large cities. The population of the city proper in 1940 was 770,816, ranking it ninth in the country. But to see the true city it is necessary to consider the metropolitan area, consisting of 83 cities and towns by Census Bureau definition still smaller in area than, for example, Los Angeles proper, but with a population of nearly 2,500,000. In this area are many smaller cities such as Lynn, Somerville, Chelsea, Everett, Malden, Cambridge, Quincy, Salem, and Brockton, each an important industrial center in its own right; and, of course, many residential communities. That Boston is the business capital of this area, of the whole New England area indeed, is revealed in the fact that it is the country's third largest wholesale center, third largest retail center, and third largest banking and financial cener; outranked by only New York City and Chicago.

With its innumerable shrines, historical and literary, its beaches and parks and nearby mountains and lakes, its modern factories, its many schools and colleges, Boston is truly one of the showplaces of America.

Housing Priority for Veterans

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press statement of Evalyn Walsh McLean, and also a bill introduced by me on February 25:

FEBRUARY 23, 1946.

The Congress of the United States.

LADIES AND GENTLEMEN: During the past week, your attention was drawn to a scheme hatched by certain high-placed public housing bureaucrats to sell McLean Gardens, Naylor Gardens, and other publicly owned surplus housing projects direct to private real-estate interests and completely ignore the pleas of war veterans desperately in need of decent homes for themselves and their families.

Our brave lads who marched off and sailed away to win the victory we now enjoy, today are happy to know you have taken definite action to thwart this outrageous plan to short-circuit their rights to return to comfortable homes when and if they are ready.

Before you today is a House resolution introduced by Representative EDITH NOURSE ROGERS of Massachusetts, designed to give war veterans top priority in buying dwellings for their own use. In other words, when you have acted, the men who faced the enemy in this war are to have first choice to the fruits of victory rather than a last chance.

The Defense Homes Corporation, it is interesting to note, quickly changed their plan when the full spotlight of public opinion was turned on. They have announced they will hold up sale of these housing projects until further plans can be worked out. It is well they did.

During the war, combat soldiers, sailors, and airmen talking with one another by radio would end each individual conversation with the word "over." That was their way of telling the other guy to go ahead.

In this fight by our war veterans to secure the rights for which they battled around the world, they are now saying to you ladies and gentlemen of Congress, "Over."

In other words "go ahead—it's up to you."

No time should be lost, there must be no stalling, no more insufferable delays in making into the law of the land the safeguards which will guarantee our war veterans the rights they so richly deserve.

Over!

Respectfully,

EVALYN WALSH MCLEAN.

H. R. 5576

A bill relating to veterans' priorities in purchasing surplus property suitable for residential purposes

Be it enacted, etc., That as used in this act—

(a) The term "Chairman" means the Chairman of the Board of Directors of the War Assets Corporation or the officer, employee, or agency of the United States to which his functions with respect to surplus residential property are transferred.

(b) The term "residential property" means (1) any property consisting of land, together with any fixtures and improvements thereon, located within the District of Columbia, which is suitable for residential purposes, and (2) any war housing, whether located within or outside of the District of Columbia.

(c) The term "surplus residential property" means residential property which has been determined under section 11 of the Surplus Property Act of 1944, as amended, to be surplus property and is classified by the Chairman as suitable for residential purposes.

(d) The term "public notice" means notice given as required by regulations prescribed under section 11 (e) of the Surplus Property Act of 1944, as amended.

(e) The term "veteran" means (1) any individual in the active military or naval service of the United States during the present war; (2) any individual who served in the active military or naval service of the United States on or after September 16, 1940, and prior to the termination of the present war, and who has been discharged or released therefrom; or (3) any corporation, partnership, firm, association, or other entity either wholly composed of individuals described in clauses (1) and (2) or wholly owned or controlled by such individuals.

(f) The terms "Government agency", "owning agency", "disposal agency", "property", "State", and "war housing" have the same meaning as when used in the Surplus Property Act of 1944, as amended.

SEC. 2. Whenever any surplus residential property is to be disposed of other than to Government agencies or to States or their political subdivisions or instrumentalities as provided in sections 12 and 13 of the Surplus Property Act of 1944, as amended, veterans shall be granted a priority in the purchase of such property over nonveterans in accordance with the provisions of this act.

SEC. 3. Surplus residential property shall be subdivided into the appropriate units in which the Chairman deems it should be disposed of, giving due consideration to the character of the property and the objectives of this act to provide preferences in purchases thereof to veterans.

SEC. 4. (a) Veterans shall be given 60 days after public notice within which to signify in writing an intention to acquire any unit of surplus residential property which is offered for sale. The sales price shall be at

the reasonable value in a normal market as determined by an appraisal as provided in section 5.

(b) If after signifying an intention to acquire any unit of surplus residential property a veteran declines to purchase it at the appraised value or is unable to meet the terms of the sale, public notice shall be given offering the unit for sale to other veterans at the price fixed by the appraisal. Such public notice shall specify a reasonable time within which any veteran may apply for the purchase of such unit at the price so fixed.

(c) Units of surplus residential property not sold to veterans under subsection (a) or (b) may be disposed of to nonveterans, but no such unit shall be disposed of to any nonveteran upon terms more favorable than the terms under which the unit has been offered to veterans.

(d) The terms of the sale of any unit of surplus residential property to any veteran under subsection (a) or (b) shall include provisions requiring that in the case of any resale of such property during the 10-year period beginning on the date of the sale, the property will first be offered for resale to veterans at not more than the reasonable value in a normal market as determined by an appraisal as provided in section 5. Except as provided in this section, sales to veterans under this act shall be upon such terms as the Chairman may prescribe.

SEC. 5. Units of surplus residential property offered for sale shall be appraised by an appraiser selected by the disposal agency or other prospective seller and an appraiser selected by the prospective veteran buyer or, in case of disagreement of the two appraisers so selected, by an appraiser jointly selected by the first two appraisers. The determination of what constitutes a reasonable value in a normal market shall be based upon reasonable values during the period beginning January 1, 1937, and ending December 31, 1939.

Commentator Pays Deserved Tribute to Hon. Sol Bloom, of New York

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. LYNDON B. JOHNSON. Mr. Speaker, on Tuesday evening, January 29, Don Pryor, speaking from London, paid one of the most beautiful and deserving tributes ever paid any man in public life when he devoted his entire broadcast to the outstanding contribution made that day by the distinguished and beloved chairman of the House Foreign Affairs Committee, Hon. SOL BLOOM.

Throughout his long and remarkably successful political career, SOL BLOOM has always thought and acted in terms of people. In his persuasive address before the United Nations Social and Economic Council, he reminded this great group that if the UNO is to work, people must be the primary object of its concern.

Because SOL BLOOM puts men before machines, people before profit, little folks everywhere have hope that under his leadership the foreign policy of the greatest nation in all the world will be well handled.

Under leave to extend my remarks, I include the comments of the able CBS commentator, Don Pryor, delivered on The World Today, Tuesday, January 29, 1946, 6:45 to 7 p. m. eastern standard time:

SOL BLOOM, the old war horse of American foreign affairs, who came to London first many years ago as a young song writer of Tin Pan Alley, with a tune to peddle, sold the biggest bill of goods of his life today, on behalf of all the suffering peoples of the world. An American-sponsored resolution, calling on all the nations that are able to contribute to the UNRRA "kitty," was up for consideration by the United Nations Social and Economic Council. It has been passively opposed by some. The delegate of Saudi Arabia—all 51 nations were represented there today—objected to the levy of 1 percent of each nation's national income. The Uruguayan delegate protested that his country had heavy expenses at home.

So, SOL BLOOM, in a slightly rumpled suit, with the large, loose features of his face set grimly and using his hands and liberal, old-style oratorical gestures, pulled out all the stops, as he used to do now and then on the floor of the House of Representatives. "Can you get peace and security," he asked, "where people are starving, when fathers and mothers know what it is to have babies coming to them and pleading for a little piece of bread and for something to keep them warm?" He let the question answer itself. He paid lavish tribute to the work of UNRRA so far, but warned that it needed far more help, if it were to prevent disaster in the form of famine and epidemics. And it needs help this year, he insisted, for next year there won't be any people to feed. "If you can only give a bag of peanuts, give a bag of peanuts." All the opposition there was melted, and the resolution was adopted by acclamation.

The song SOL BLOOM sold when he came over here 40 years ago, The Honeysuckle and the Bee, is still selling, by the way, still giving pleasure to many people. But far more people may be affected by what he did today.

CIO Backs Truman-Wyatt Housing Program

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1946

Mr. SADOWSKI. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I would like to include the following statement:

President Philip Murray, of the CIO, and President R. J. Thomas, of the United Automobile Workers, CIO, today issued the following statement on the emergency housing program advanced by Mr. Wilson Wyatt:

"The housing program as presented by Mr. Wyatt and approved by President Truman recognizes the magnitude of the need of the homeless veterans, while at the same time it appraises realistically America's potential productive capacity to meet this need. It does so by enabling the building industry and related private enterprises to get going at a rate of peacetime production that will match our high wartime momentum. It will do this with a minimum but essential amount of Government assistance.

"Only those who have no faith in American democracy and American production genius will doubt America's capacity to meet the goals set in Mr. Wyatt's most practical program. Such defeatists are the same ones who only a short time ago attacked our wartime aircraft and shipbuilding goals.

"Actually the housing program will greatly aid the building industry, since not only will it enable it to produce at maximum to meet the present crisis, but will lay a firm basis for many years of full-scale output. When carried out, these measures will make possible for the first time continuous production of low-cost housing for the mass market of middle- and low-income families, for whom it is estimated that over 16,000,000 new houses will be needed in the coming decade. While the approximately 3,000,000 houses called for in 1946 and 1947 will greatly alleviate the present plight of the homeless, we will have to continue to keep our sights high for many years to come if we are to reach our goal of a decent home for every American family.

"The housing program must be put into effect at once. It must be a major part of the national effort to achieve full employment. Its enactment is in the best interest of the veteran and all citizens who want a prosperous American economy. It is now squarely up to Congress to pass speedily the necessary legislation—the Patman bill, the Wagner-Ellender-Taft bill, and the Kilgore-Mitchell bill—so that the new housing program can go forward."

Target: Housing

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1946

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of February 26, 1946:

TARGET: HOUSING

Congress begins debate today on Mr. Wilson Wyatt's plan to get 2,700,000 homes started in the next 27 months and thus prevent the housing crisis from getting worse. It is our earnest hope that the legislators will dispatch the program promptly—after plugging up two holes which were punched in it last week by a House committee.

The plan was made in one piece and each part was essential to arrival at stated goals on time. Mr. Wyatt defined the goals with the precision by which military production was turned out on time. "Target for 1946: 1,200,000 homes started. * * * Target for 1947: 1,500,000 homes started," said Mr. Wyatt, and he noted: "Neither business-as-usual, labor-as-usual, building-as-usual nor Government-as-usual will suffice." The country apparently agreed. There was hearty applause all around and no criticism to speak of. The only thing that has changed particularly since then is in the public temper—that people are more wide awake to the emergency and less patient.

It is hard to see what prompted the committee members to drop the $600,000,000 premium payments provision by which building stuff—the very first essential, now bottlenecked—is to be brought into the market. Conceivably it was thought that aid to be offered to some producers—premiums for producing more than the usual amount of conventional materials and for making the newer ones, such as light metal and plastics, which incidentally can be turned into houses faster—might upset the present competitive position of the producers. That this would happen is highly doubtful. Producers themselves have said right along that there is demand for far more material than can be made of every sort, and that incentives are

needed. Demand for 1,500,000 homes each 12 months will continue 10 years. There is left the possible objection, on principle, to this subsidy-like aid to private enterprise—a point on which it is worth while to note some recent observations by Senator TAFT, of Ohio, who will certainly be accepted as a stanch defender of our existing economy. In speaking of housing with Federal aid including subsidies for low-cost homes, Senator TAFT noticed that "If the free-enterprise system does not do its best to prevent hardship * * * it will be superseded by a less-progressive system which does."

The premium payments are required to make the rest of the program work, with its priorities to channel the material into moderate-priced home building and preference to veterans, encouragement to the recruiting of additional labor, and control of prices. The House committee also dropped the proposed ceiling on existing homes. This is a pretty tall ceiling, which would affect chiefly the speculators, in our judgment, for the proposition is simply to let whatever price a house is sold for at this time be the price for the duration of the emergency. There is little logic or fairness in putting a lid on new-home prices but none on those which already exist.

Importation of Vacuum Cleaners From Great Britain

EXTENSION OF REMARKS
OF
HON. BARTEL J. JONKMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1946

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and editorial:

[From the Chicago Herald-American of February 13, 1946]

VACTRIC LTD., CHAPELHALL, AIRDRIE, SCOTLAND

"United States of America orders 250,000 vacuum cleaners from Britain."

No, gentle readers, this is not a faked story or a bit of propaganda.

It is a reproduction of an advertisement in the London Daily Mail, trans-Atlantic edition of January 16, 1946.

Of course we do not believe that this is the vacuum cleaner Winston Churchill and Lord Keynes used on the United States Treasury. That machine must have been much more powerful than the household variety.

The advertisement deals with a gadget as distinctively American as ham and eggs, and it should make clear even to the dumbest politician what is happening to American trade and the prestige of American products not only in world markets but here in the United States.

American production of vacuum cleaners, washing machines, refrigerators, and other appliances is almost at a standstill while President Truman plays politics with Sidney Hillman and the OPA harasses and browbeats industry.

In the meantime, the smart British are not only destroying our world markets for vacuum cleaners and other products, but actually preparing to flood the United States with these same products made by labor which is paid about half of American wages.

What chance do you suppose American manufacturers are going to have to sell vacuum cleaners in South America, Central America, Europe, and Asia when the British can show that although we originated this machine, we buy British vacuum cleaners for our own use?

These people in other countries will never be able to understand that the people of the United States were forced to go abroad for vacuum cleaners because they could not get the superior products of their own factories.

Of course, the smug little Washington bureaucrats have not the slightest understanding of the enormous cost and difficulties of building up markets at home and abroad. Ninety percent of them could not run a hotdog stand successfully.

In England, however, the ablest men in the Empire devote their attention to the development of trade. With no natural resources, England must be intelligent or starve.

Beginning 1 month after Eisenhower's army landed in Normandy and months before Germany surrendered, England issued thousands of permits to businessmen to go abroad and prepare for after-war trade.

The British appropriated $800,000,000 to back export trade.

Lord Woolton, the Minister of Reconstruction, advised businessmen that the Government had made studies of overseas markets in 26 countries and was ready to back the drive for trade.

"The world abroad is hungry for our products," said Lord Woolton, "and we must not tempt our customers overseas to find other sources of supply."

Let us not be silly and get angry at the intelligent British.

Let us use some of these vacuum cleaners to do a thorough spring housecleaning in Washington.

HEALTH-MOR, INC.,
Chicago, Ill., February 25, 1946.

Hon. BARTEL J. JONKMAN,
House Office Building, Washington, D. C.

DEAR SIR: We wish to call your attention to the attached editorial regarding the proposed importation into the United States of 250,000 vacuum cleaners from Britain. The editorial appeared in the Chicago Herald-American for February 13, 1946, and is a stunning indictment of that kind of Washington muddled political thinking which proposes to assist the introduction of foreign merchandise into the American market in direct competition with American products.

We use the word "assist" advisedly. In the instance involved, 250,000 vacuum cleaners represent one-eighth of the United States record sales in the biggest year the industry ever had. The figure represents a huge slice of the present year's vacuum cleaner market potential. To make more grievous the injury about to be done to American vacuum cleaner manufacturers, there is good reason to suspect that this vast flood of domestic market-destroying merchandise will be financed in part out of the proposed $4,000,000,000 loan to Britain, * * * a loan to be paid for by the very people who will suffer from the import of this foreign equipment.

Since 1941, our organization and thousands of other American manufacturers have been "selling" the public on the vital necessity of waiting for home appliances, like vacuum cleaners, until after the war. Although the war ended 7 months ago, we still have practically nothing save excuses to offer the American public, * * * largely due to Washington-created shortages.

Also, the 45,000 small businessmen who move home appliances from manufacturer to consumer are without vacuum cleaners to sell, * * * although their books are loaded with advance orders from customers who are becoming extremely impatient with the unreasonable delay in securing merchandise. This delay, we may add, is all too frequently ascribed solely to the manufacturer.

Therefore, an industry that is equipped and ready to produce 2,500,000 vacuum cleaners in 1946, with a retail value of over $135,000,000, stands hamstrung with partially shut-down plants and skeleton crews of workers, while a few self-styled Washington "experts" indulge in manipulations that are supposed to adjust our economy to "a more abundant way of life."

Is it possible that we are supposed to accept as a solution to our problem the proposal that the American housewife buy British, while American industry is taught how to run its affairs? That we must stand by and be sandbagged by foreign competition because we have been rendered unable by our own Government to defend our domestic markets with vastly superior American-made products?

In order that public confidence in the vacuum-cleaner industry may not be entirely destroyed, we are proposing to the Vacuum Cleaner Manufacturers Association that a series of advertisements be placed in the principal newspapers of the Nation, telling the people why they must buy foreign vacuum cleaners if they want vacuum cleaners now. The time has come when we, along with other manufacturers who are paying an unearned penalty for un-American economic theorizing, must bring the injustice of our condition to the attention of the public.

You and every other intelligent, unprejudiced American must see the inexcusable stupidity of a condition which for seven long months has held the finest industrial system in the world at a standstill. We urge you, therefore, to take the following two steps in behalf of American industry:

1. Propose a bill that will immediately stop the importation of any article of commerce for which there is ample productive capacity in this country during the period that said productive capacity is held inoperative involuntarily.

2. Do everything in your power to remove the restrictions against reasonable price adjustments that now prevent United States industry from getting into high gear so as to attain maximum production.

Sincerely yours,
HEALTH-MOR, INC.,
ALBERT E. KRAMER,
Vice President.

Hon. Wright Patman, of Texas, Charges Real-Estate Lobby With Deliberate Falsehoods—Reveals Existence of Million-Dollar Slush Fund—Demands Homes for Veterans at Reasonable Prices

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1946

Mr. PATMAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I should like to include the script of a radio program which was broadcast at 10:30 p. m., February 26, over the Columbia Broadcasting System's network.

This public-spirited organization has a weekly feature entitled "Congress Speaks," which has done much to keep the American people informed of worthwhile things that are being done in Washington. Last night's program was

entitled "The Veterans Housing Scandal":

Mr. COSTELLO. One of the strangest aspects of the American postwar reconversion period is the fact that across the broad breadth of America, the fabled land of abundance, there has suddenly appeared the most acute housing shortage the Nation has ever faced. The situation had been intensifying slowly—almost imperceptibly—for several years. Then our armies started pouring home from the far-flung battle fronts over the world, and we faced a housing crisis.

With me in the studio tonight I have Congressman WRIGHT PATMAN, of Texas. He is the author of the administration's housing bill and leader of the floor fight for its passage. I have asked him to give us some first-hand information about how and why he believes the returning veteran finds himself in such a dilemma. Mr. PATMAN, what are your general views on this housing situation?

Mr. PATMAN. The desperate plight of our returning veterans in their vain search for a place to live is being written plainly on the want-ad pages of our daily newspapers. You can turn to any city in the country—New York, Chicago, Detroit, Dallas, Los Angeles—and read and hear the same story of their misery and need.

One would think, considering the eternal debt of gratitude we owe these youngsters who won the war for us, that Americans would gladly make an all-out effort to help veterans find a place to live when they are discharged from the Army. I think it is almost a national disgrace that this has not been the case. Instead, they are being made the victims of the biggest speculative swindle in the history of our country. They are being forced to pay fantastic prices for jerry-built shacks in order to find shelter.

I can cite literally hundreds of cases from my own mail—specific instances where veterans have been charged $10,000 for a $5,000 home. I have one case of a B–29 pilot who got back to his Chicago home 2 months ago. A landlord, who is not typical, demanded $150 as side-money before renting him an apartment. Literally thousands of veterans cannot afford the tremendous down-payments now required on a home.

In one Texas town there is a veteran who has his home half finished. He has a priority certificate. Last week he went from lumber mill to lumber mill seeking enough material to finish his home. These mills had lumber in their yards, they had wall-board, they had flooring, but the mill men told the veteran, "I'm sorry. This lumber was ordered for commercial construction. It is already sold."

And that's the story. Across the land new stores are being erected; theaters, bowling alleys, all types of commercial structures, are consuming the material that should go into homes for veterans.

We have a plan to put a stop to all this. It is the program recently announced by the President to build homes by the millions; build them faster than they have ever been built before; build them with the same speed and intensity that we built airplanes and ships and guns to supply the battle-fronts over the world: to mobilize the forces of the building industry in the same way that the automobile industry, the oil industry, and the building industry itself were mobilized to meet the problems of war.

The President and Mr. Wilson Wyatt, his Housing Expediter, set a goal; a goal to build 2,700,000 homes in the next 24 months; more than seven times the number that was constructed in 1945. The plan has been set in a framework of broad vision and careful planning. The President has called for bold and energetic action on the part of both Government and industry.

In November I introduced a housing bill to provide the legislative foundation for this program. Its one objective was to provide houses for veterans at a reasonable cost, and to hold down speculation in existing homes until the veteran demand had been met. What happened? The most vicious lobby of the Seventy-ninth Congress has been organized to oppose the measure and all its parts. For a month Washington representatives of the real-estate interest have been button-holing Congressmen, urging them to vote against houses for veterans.

These same interests sent word out over the country to legitimate lumber dealers, urging them to wire their Congressmen to oppose the bill. Thousands of telegrams have been pouring in upon the Representatives and Senators. All this costs money. I conservatively estimate that a minimum of $25,000 worth of telegrams have reached Congress in the past 10 days. Who paid for this campaign? Why would anyone spend thousands of dollars to defeat a plan to help veterans find shelter?

I think I know the answer. It has been reported in various newspapers that the Washington real-estate lobbyists have a slush fund of from one to five million dollars to be spent for such nefarious purposes as these. These lobbyists have stooped to downright falsehoods to dupe and mislead legitimate and responsible lumbermen and real-estate dealers over the country.

I have before me a copy of a publication called "Headlines", which these real-estate representatives sent out last week. It urges that the housing bill implementing the President's program be sent back to committee. It said, "The Wyatt program has been rushed to the floor of the House without the customary public hearings. Industry and private citizens have not been given the chance to submit facts about the effect it will have. Only by such facts will Congress be able to give proper consideration to this vital legislation."

Thousands of legitimate lumber dealers read and believed that statement. The truth was that the housing bill was introduced on November 20, 1945, and hearings were held on it before the House Banking and Currency Committee from December 3, 1945, until February 14, 1946. During this period of more than 2 months of hearings, a volume of testimony was taken. What is more to the point, the same representative who said industry had not been given a chance to testify, himself was heard for one full day by the House Banking and Currency Committee, and his statements occupied 15 pages of the hearing record.

Why should these lobbyists stoop to such practices? I believe there is a quite obvious answer to that. Should this legislation pass, they will be denied the greatest sucker market in history. The only thing they object to seriously in the administration's program is a formula which would prevent real-estate speculation during the housing crisis of some 18 months.

If the legislation passes, Federal appraisers will scrutinize builders' plans for new homes to see that the veteran gets his money's worth. The legitimate builders have found no fault with this, but the group of speculators who are paying these Washington lobbyists well know that the houses they are building will stand no such examination.

I personally know of instance after instance where veterans who have finally found a place to live are being evicted because their homes were sold out from under them by the landlord. These same speculators, worshiping at the great god greed, cry that we are ruining free enterprise when we want to build homes for veterans in the six to seven thousand dollar range. They claim that homes cannot be built in America for six or seven thousand dollars. The truth of the matter is that the speculators can make more profit per house on $15,000 mansions, and, therefore, they have not the slightest desire to build homes for veterans at six or seven thousand dollars.

However, personally I am convinced there are sufficient responsible, thinking Americans in our country who cannot be duped by propaganda and who will join in this program of helping us provide homes for our veterans.

That's a rather lengthy explanation, but I think the American people are entitled to know the facts of the housing situation.

Mr. COSTELLO. Every man to his own opinion, Mr. PATMAN. Now there are several points I would like to clarify in my own mind. You spoke of this formula for holding down speculation on existing homes. What formula did you mean?

Mr. PATMAN. Simply this, Mr. Costello. One of the major sections of the housing bill provides that the present owner of a home could sell it at any time for whatever price he could get for it. That price would then become the ceiling price for the duration of the housing emergency.

It protects the investment of the present owner. Its sole purpose is to prevent the speculative reselling that has skyrocketed the price of so many homes.

Mr. COSTELLO. How long would that ceiling price remain?

Mr. PATMAN. Only for the life of the housing bill—until December 31, 1947—some 18 months. I don't think that will hurt anyone, yet this has been one of the most misunderstood and controversial points of the whole legislation. It does hit the speculators squarely in their pocketbooks, however, and we have heard the resulting outcry.

Mr. COSTELLO. There does exist some sincere criticism of your bill, Mr. PATMAN, particularly on the question of subsidies. Mr. Wyatt is asking $600,000,000 to use for what he calls premium payments which a lot of people object to. What about that?

Mr. PATMAN. I sincerely believe, Mr. Costello, that these subsidies will be the cheapest way for us to get our production goals. All of us know that scarcity of materials is our biggest problem right now.

Some small marginal plants with higher costs are either shut down or operating at only partial capacity. The reason for this in most instances is that they cannot afford to pay competitive wage scales and hence cannot get workers; or their manufacturing methods are not as efficient as their competitors. It is Mr. Wyatt's idea to give these plants a premium price for their product. This extra money can be used to hire more men or take whatever steps are necessary to increase production. Once the plant gets into volume production, and the cost per unit drops, it can then compete and the need for subsidies no longer exists. It acts as a sort of industrial pump primer to get a plant under way.

Mr. COSTELLO. Some of the critics of the program, Mr. PATMAN, have been pointing out that this program will result in the veterans obtaining a lot of cheap, prefabricated homes, and in 10 years they will find themselves much worse off than if they had paid higher prices for conventional homes. Would you care to touch on that, Mr. PATMAN?

Mr. PATMAN. I most certainly would. That's another argument the speculators are using to keep us from building homes for servicemen.

Under the President's housing program, 1,200,000 houses are planned for 1946. Of these 700,000 are conventional homes and 250,000 are so-called prefabricated houses—so you can readily see that the emphasis is going to be on the conventional type home, built by local carpenters and construction firms. The prefabricated houses are expected to fill the gap beyond the capacity of the conventional building methods.

However, these prefabricated homes will be required to meet the same standards of construction that conventional homes do. They

must meet the same scrutiny of FHA appraisers, so that the argument that we will have thousands of prefabricated shacks under this program just doesn't hold water.

Mr. COSTELLO. About these lobbyist telegrams, Mr. PATMAN. Don't you believe that they come from legitimate builders?

Mr. PATMAN. Of course I do—and I answer every one of them which contains sufficient address. In most instances the wording of the telegram itself shows conclusively that the writer has been misinformed about the housing program. In many cases I later receive letters from them explaining that they have been misled and pledging their support of this legislation.

In connection with this, I have one specific instance you might be interested in. I received a telegram from a lumber dealer in Houston, Tex. I promptly and courteously replied to him, explaining my motives for introducing this legislation. He indignantly wrote back saying that he had never sent the telegram and wanting to know the circumstances around it.

I promptly turned the case over to the Department of Justice. It developed that one man came into a Houston telegraph office, gave the clerk a long list of names, and planked down several hundred dollars in cash, asking that the wires be sent to various Congressmen. My friend's name happened to be one of those picked at random by this lobbyist agent, unfortunately for him.

Mr. COSTELLO. What happened to the sender, Mr. Patman?

Mr. PATMAN. Unfortunately there is no Federal law, to my knowledge, Mr. Costello, covering a case like this, but it was a neat example of the methods of lobbyists. These instances I have given you illustrate the type of opposition that is facing those Congressmen who are attempting to carry out the will of the American people, in seeing to it that our veterans will have a place to live. I hope I have helped clarify some of the misinformation that has been bandied about on this bill.

Wyatt's Bold Plan

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1946

Mr. SADOWSKI. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I would like to include the following editorial from the Detroit News of February 13, 1946:

One of President Truman's appointments that looks to be panning out—though this is perhaps just luck, since the appointee is a power in Kentucky politics—is that of the very able and energetic former mayor of Louisville, Wilson Wyatt, as Housing Expediter. Mr. Wyatt, in office 7 weeks, has put together a plan which he thinks, with the blessing of Congress, may result in the building this year of 1,500,000 family units of housing.

The plan counts on the cooperation, not alone of Congress, but of the building industry and—what is more conjectural—of building trades labor. It goes on the assumption, as indeed it must, that the housing problem cannot be met without adoption in some degree of mass production methods and without some assistance in the way of underwriting the special risks of this innovation on the part of government.

Mr. Wyatt's plan, as might be expected in light of his record as Louisville's mayor, is a bold one. It may prove overbold, when it collides with the conservatism of the building industry and of those who work in it.

But none will deny, we expect, that boldness is a quality in the absence of which the housing problem is not going to be solved, certainly not satisfactorily.

In respect to no want of the people is the gap between demand and supply so vast as in respect to housing—the hardest of all wants to meet rapidly. The gap here is so huge, due to years of war and depression, that the building industry's present capacity would need a decade in which to fill it.

But, as with other commodities, so with housing, the only hope of heading off disastrous inflation of prices is to supply the demand, or a large part of it. Moreover, there can be no such thing as an inflation in realty and housing alone, without pulling other prices skyward with it.

The answer must be an expansion of the building industry's capacity, beyond anything it normally would attempt or risk of its own initiative. This is a large order, but, up to the moment, Mr. Wyatt looks like a man who will have a good try at filling it.

Extension of Emergency Price Control Act

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1946

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by John W. Snyder, Director of War Mobilization and Reconversion, to the House Banking and Currency Committee on the extension of the Emergency Price Control Act, Wednesday, February 27, 1946:

Mr. Chairman and members of the committee, in scheduling these early hearings on the extension of the Emergency Price Control Act of 1942 as amended and the Stabilization Act of 1942 as amended, your committee is performing a very real service to the American people. We must come to grips at once with the problem of keeping inflation in bounds. It is not a threat that may materialize in the future. It is a very dangerous present condition.

There is every likelihood that keeping inflation in check is going to be the most crucial domestic question before us for many months to come. That is why I consider it so important to take steps now for continuing price stabilization measures for a full year beyond June 30, 1946. I am glad that your committee has offered me this opportunity to discuss the problem with you.

American businessmen and consumers rightly fear the effect of inflation upon our economy. And they should know that their Government is prepared to safeguard their earnings and savings by stabilizing prices. And they should know now that the Government is prepared to remain on the price stabilization job until economic equilibrium is within reach.

As you know, I am on record as having said many times that I believe production, in the last practical analysis, is the only real solution to the problem of inflation. I want to take this opportunity to reaffirm that statement. At the same time I want to say, with equal firmness, that I believe we cannot drop our defenses against inflation before supply begins to supply demand.

Price stabilization is a measure we are using to safeguard our economy against the disaster of rising prices and costs.

We need that safeguard until production is sufficient, and the volume steady enough to begin balancing with demand. Demands at present are very heavy. They have built up during the war, and there are new demands at present for many things.

It will take time to manufacture consumer durables, components, materials needed by business and construction materials—and this alone is a big, time-consuming job which requires changing over and adjusting the Nation's complex business machinery from war to peace production. It will also take time to get these things to the markets. The channels of distribution, wholesale and retail, for business and consumers have to be filled up again. Anywhere from a few weeks to many months are necessary for this. And that supply, once volume production has been reached, will have to be maintained for more weeks and months in order to approach demand.

We should ask ourselves what would happen to production prospects if price stabilization were to end before we had allowed enough time for the practical tasks of reconversion. Suppose we entered a period of spiralling prices and costs. It happened after the last war. If it happened again industry would certainly be obliged to stock up with materials for manufacture before prices went higher. It would be natural for consumers to rush to buy what they needed before the cost of living climbed further.

It would be natural, too, for business to withhold finished goods from market, because it would be facing a loss to sell when prices were sure to go higher. This situation would for a time inevitably increase, not lessen, the shortages of both producer and consumer goods.

A disordered price structure, with prices and costs bolting out of control, would give business in general a poor chance to expand its output of goods and services. Many of the industries producing to fill the most troublesome shortages would run into further difficulties.

It is not reasonable to expect that all production would increase if all price ceilings were removed. In specific cases, where lack of production is retarding reconversion, we can divert labor and materials from other uses by granting measured price increases in order to step up output. This can be done effectively only under the stabilization framework. With all prices rising, that advantage would be lost.

At this stage in reconversion there are still a number of obstacles to be overcome before a larger volume of finished goods can flow to market. Shortages of labor, of components, and raw materials, still have to be met. Properly trained workers must be where they are needed and at the right times. Industrial plants and distributors have to reorganize for peacetime trade. Technical changes are still being completed. And labor and management must settle down again into normal bargaining.

These factors must be taken into account when we talk about achieving the kind of substantial production that will eventually smother inflation. But even so, even with practical problems still to be solved, our total civilian production is increasing. There has been noticeable progress in the production and shipment of finished consumer durable goods to market from the reconversion industries.

December shipments of vacuum cleaners, electric irons, refrigerators, electric ranges, washing machines, sewing machines, and radios ran 10 to 30 percent above November shipments. And industry expects shipments of these and other consumer durables to reach at least prewar rates of shipment by June of this year.

Goods from reconverting industries are coming to market in larger and larger quantities. This new production is coming in addition to over-all production for civilian use

that already stands at the highest level in our history.

During the war years production for civilian use, in addition to our unsurpassed war manufacture, outreached any previous peacetime period. And on December 31, production for civilian uses was higher than it had ever been before in peacetime.

During 1945, for example, food production in this country was 35 percent above the average for 1935–38, a peak up to then. An indication of today's volume of production is the amount of goods moving through department stores to consumers. It stands at an all-time peak.

Balance of supply and demand is an eventuality on which we can rely. But it has not yet materialized. It will require time. One reason that it will require time is that present demand for goods is so swollen that even better than ordinary production is not going to be enough to meet it immediately. This factor is one of the inflationary pressures that we have to watch.

Like many other inflationary pressures that have been developing since VJ-day, heavy demand is not itself a bad thing. On the contrary, it provides a bridge which we can use to reach a period of good jobs, stable markets, and better times for all of us. We can reach this period if we take action now to prevent runaway inflation. But if heavy demand and great purchasing power are allowed to dissipate themselves in a boom that can end only in a depression, we will not be able to build a sound economy in the future.

There are other inflationary pressures that have been building up since last August.

Prices continue to press hard against their ceilings. Wholesale prices have been inching higher and higher. Since last September, wholesale prices have risen faster than during any similar period since 1943.

Consumer spending continues to be heavy. Department-store, chain-store, and mail-order sales were higher during the whole of 1945, and higher during the ast month of the year than during comparable periods in 1944. Consumer buying in the last quarter of 1945 was at the highest rate in our history. Retail sales were at their all-time peak as the new year began.

All these evidences of the trend toward inflation must be considered along with another one. And this is the psychology of inflation that is becoming more and more apparent. Trade and business journals frankly cite the probability that prices will go up. We know that both public and private purchasing agents have frequently been unable to contract for future deliveries of goods except by agreeing to "escape clauses" providing for the possibility of a higher price.

The assumption that prices are going up gives business an irresistible motive to withhold finished goods from market in expectation of higher prices and higher profits. We have not yet been able to judge how much this fact accounts for a number of shortages. But we must reckon with it. It is a practice that adds an artificial scarcity to the very real shortage of goods that already exists.

This fear or anticipation that inflation is on the way, the assumption that prices are going up, could very well be translated into disastrous action. And the action would be a rush to buy that would accentuate the already strong demand for goods and services. There is sufficient buying power available among both business and consumers to give considerable impetus to a buying rush.

It is obvious that we will continue to need safeguards against such growing inflationary tendencies. It would appear that, to safeguard consumers against increased living costs, it would be necessary to control only the prices of food, clothing, rents, and housing. This view has been advanced by those who sincerely want to avoid the development of serious inflation.

I very much wish that this were all that was necessary. It would greatly simplify the task of the Congress and the administration. Unfortunately, while inflationary pressures remain as great and as general as they are today, this proposal simply would not work.

It would not accomplish our objective of stabilizing the cost of living, because price increases are contagious. If prices in the uncontrolled sectors boomed—as under present conditions they certainly would—no price administrator could hold back prices in the controlled sector.

Just suppose, for instance, that the prices of all durables—autos, refrigerators, radios, furniture, farm machinery—and all services also, increased materially. And this is not in the least unlikely if all price controls were removed.

Could anyone seriously suppose, to cite one example, that the prices of agricultural products could be held down while the price of durables the farmer has to buy soared?

Another type of argument, also advanced by those who do not want to see a "runaway" inflation, is the contention that continued general price control is really restricting production, and thus contributing to inflation. One main reason for this contention, I think, is that each businessman knows that if his own prices went up, without any change in other prices, he himself could produce more.

This is certainly true. If any single price were raised, while all other prices remained under ceilings, the producer in that line could raise both the wages he pays his workers and the price he offers for materials. He could then attract more labor, get more materials, and produce more. We have taken advantage of this under price control in increased output of materials and products which are bottlenecks in reconversion.

But it does not follow that removal of all controls would have the same effect. Instead, it would destroy the advantage and create disordered markets. Today's high demands can be filled only by many months and, in some cases, years of sizeable, steady production.

Certainly, lifting price controls would not help us complete certain necessary reconversion tasks that industry still is working on. The same practical and technical operations would still have to be finished. It would still be necessary to allow time for distributors to reorganize their sales outlets. Workers would still be relocating themselves. Collective bargaining would still have to operate.

If continued price stabilization were actually restricting all production, we would have been undergoing a very different sort of transition period since VJ-day. Instead of our present rapid progress, we would have had a limping reconversion. Unemployment would have increased much more sharply and quickly than it has.

However, relying on continued effective price stabilization to keep our economic house in order until production begins to approach a balance with demand, does not mean that we are determined on rigid and inflexible control of prices.

Existing stabilization powers provide sufficient room for necessary flexibility in price control. The development of a revised wage-price policy by the Government during the last fortnight illustrates this point. Since VJ-day there has been a fairly narrow category of wage increases that could be used by industry as the basis of request for price relief. We have been depending mainly on free collective bargaining by industry and labor to settle the wage issues, without resulting price increases. Industry, of course, could come in after 6 months and ask for price relief on the basis of wage increases that had been granted and that had increased production costs.

Now we have revised those ground rules. By dropping the 6-month rule, we have expanded considerably the category of wage increases that may be approved and used immediately as the basis for price relief for industry. Collective bargaining still remains the open avenue for wage settlement where no price increases are involved.

At the same time we have put a deterrent on excessive wage increases that would serve to promote a spiral of inflation.

Both the new wage policy and the new price policy put an even heavier requirement for speedy action on the Government. This will mean that the operating stabilization agencies—the Office of Price Administration and the Wage Stabilization Board—must accelerate their actions. And I know they are doing everything humanly possible to speed them up. They will need adequate personnel to assure prompt action.

The revised wage-price policy means that industry in general during the coming year will be assured of at least its minimum peacetime earnings. It means that labor in general will be able to soften the shock of reduced take-home pay that has followed the end of wartime pay rates. And it means that agriculture has a better income outlook for the very reason that labor is able to maintain wage levels and so continue to buy farm products.

This stabilization program can be adjusted to meet the changes of the transition period. It is not a formula for rigid control of the economy. We have already dropped the bulk of the wartime economic controls. The few still effective, in particular, price control, must remain for a time. We will lift these few remaining controls just as soon as conditions permit. As I have said many times before, conditions will themselves determine the timing.

The time will come when price control over many more products can be dropped. They should be dropped on each product as soon as supply is in reasonable balance with demand. This may very well result in price control becoming highly selective before the need for it comes finally to an end. But in the meantime we must maintain the machinery for general price stabilization.

During this war we kept prices and the cost of living from getting out of hand. The real battle is at hand. The pressures toward inflation are heavier now, as they always are following war. And at present, when we are fighting heavier pressures, our weapons of defense are fewer. The main one aside from public opinion has now come to be price control.

Subsidies have also played an essential role in stabilizing the cost of living during the last 3 years. They provided certain producers with sufficient returns to enable them to produce adequately without raising prices to the consumer. This was an important factor during the war in limiting demands for increased wages to meet increased living costs.

Farmers, along with consumers in general, have a stake in keeping the cost of living in line. Stabilization has kept the prices of things farmers had to buy from soaring at the same time that farm income has remained good. The drop expected during the last 6 months has failed to materialize. The December cash income of farmers was higher than the August level, with seasonable adjustments.

Nevertheless, even though the subsidy helps keep the cost of living in line, farmers do not like subsidies, and I sympathize with that view. Nobody likes subsidies. The Government recognizes that it is desirable to get rid of all subsidies as quickly as possible and intend to do so.

The Stabilization Administrator has announced that the remaining food subsidies will be terminated as soon as prices of the nonsubsidized elements in costs of living decline enough so that it will be safe to allow

the cost of the subsidized elements to go up. At the same time, farm incomes will be protected. Here again, as in price stabilization, it is a matter of keeping a balance. But because subsidies continue necessary for cost of living stabilization, it will be necessary to retain the authority to use subsidies, along with price control, during the 1947 fiscal year.

Important considerations of national welfare, as I have shown, make it imperative to extend the Emergency Price Control Act of 1942 as amended and the Stabilization Act of 1942 as amended. I have discussed a number of these considerations in some detail because each of them is important. It is vital to prevent inflationary trends from developing into a real inflation that will hamper business in its effort to produce. It is vital to keep the cost of living in line so that labor need not press for higher wages. It is vital to keep the cost of major raw materials in line so that production can go forward.

I urge your committee to act promptly so that the two acts on which the stabilization program rests may be extended for 12 months beyond June 30.

Mayor Kelly, of Chicago, Favors the St. Lawrence Waterway Project

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1946

Mr. SABATH. Mr. Speaker, on February 21, 1946, the Honorable Edward J. Kelly, mayor of Chicago, appeared before the Senate Committee on Foreign Relations to advocate favorable action on the pending resolution on the Great Lakes-St. Lawrence deep waterway project. His statement summarizes reasons for favorable action on the project. His views will, I feel, be of interest to the entire country because this project is bound to be advantageous not only to the Middle West and to the Great Lakes region, but to the entire Nation, as it will reduce the cost of transportation and will increase our export as well as our import business. Under leave to extend my remarks, I take pleasure in inserting his statement in the RECORD:

Mr. Chairman, Chicago interests favor the construction of the Great Lakes-St. Lawrence deep waterway, in particular the construction of dams and power works in the International Rapids section of the St. Lawrence River, in accordance with the agreement between the United States and Canada of March 19, 1941.

It is my firm belief that the more than 40,000,000 people in the Great Lakes region, in Chicago, and in the Northwest, will benefit greatly if this deep channel to the Atlantic is opened and it becomes possible to ship the products of farms and factories directly to foreign ports, as well as to the Atlantic seaboard. Similar benefits will accrue from the ability to receive imports directly.

This region is the workshop of the Nation and the most productive section in the whole world. This has been demonstrated in the past 4 years of war emergency. It was unfortunate that this connection with the Atlantic was not available in this emergency. It will be unfortunate if it is not now authorized and completed in a reasonable time.

The project is worth more than that, in the interest of national defense. During the 4 years of war more than 1,100 naval craft were built in Great Lakes boat yards and shipped 1,500 miles down the Lakes to Gulf Waterway, which had only a 9-foot draft from Lockport, Ill., to below St. Louis. More than one-eighth of these boats, drawing more than 9 feet of water, had to be lifted by pontoons and towed from Chicago to New Orleans. This was tedious and expensive. More than half of these boats, of shallow draft, had to go by way of New Orleans because they were too long to pass through the present locks on the St. Lawrence canals. Boats destined for the Pacific, of course, lost no time by going down the Illinois and Mississippi Rivers. However, the Great Lakes yards could not be used to build the larger ships, because the Lakes were landlocked. These yards on the Great Lakes are closer to the points of production of steel than are the seaboard yards. This St. Lawrence deep waterway should be opened in the interest of national defense if for no other reason.

Opening of this waterway, being the development of national resources, is bound to promote national welfare and prosperity. It will provide employment during construction, which is a worthy postwar objective. By bringing cheaper transportation to the Great Lakes region, on imports and exports, it is bound to promote growth. Any traffic lost by present methods of transportation should be more than offset by new traffic resulting from increased growth and increased production. The national welfare is promoted by increased production in any part of the Nation.

Statistics on traffic and transportation costs are better left to the experts whose business it is to study such matters and keep information up to date. It is only from such information that it can be determined whether or not it is advisable to make this project self-liquidating. It should be carried out in the interest of national welfare in any case.

Nothing should be done to delay the approval of the pending agreement by Congress. Except for articles VII, VIII, and IX, this agreement of March 19, 1941, provides for the construction and operation of the St. Lawrence seaway, and the distribution of the power developed thereby. In this Senate Resolution 104, articles VII and IX are omitted and the suggestion made that a treaty be negotiated regarding the matters in these articles. Such matters are the perpetuation of navigation rights in the Great Lakes and St. Lawrence River and the construction of remedial works above Niagara Falls and increased diversion of water from Niagara River for power purposes.

Article VIII covers matters closely allied to the matters in articles VII and IX and it would seem to be sound judgment to include article VIII in the same category as VII and IX. It certainly would save argument and delay. The ratification of the 1932 St. Lawrence seaway treaty failed March 15, 1934, largely because of the inclusion of article VIII in that treaty in practically the same terms as in the present agreement. The opposition did not come from Chicago interests at that time. More people in Chicago favored the seaway than were opposed. The only man from Chicago who testified at the 1932 hearings advocated ratification of the treaty. Chicago was then and is now in favor of the St. Lawrence seaway. Chicago is also interested in the Lakes to Gulf waterway and wants nothing done to interfere with its successful operation.

The opposition because of article VIII, in 1932, came from the Mississippi Valley Association and the Illinois Chamber of Commerce, a down-State organization, both of which associations were mainly interested in the Lakes to Gulf waterway and objected to the taking from Congress the jurisdiction over the diversion of water for this project. Other opposition was voiced in the Senate by nationalists who objected to the inclusion in a treaty of control over the diversion from Lake Michigan, which was an internal affair.

The Supreme Court decided January 14, 1929, that the diversion of water for purposes of sanitation had no legal basis; and decreed April 21, 1930, that diversion for this purpose must cease by December 31, 1938. The diversion was limited after that date to 1,500 cubic feet of water per second, annual average, for the purpose of maintaining navigation in the Chicago River, as a part of the port of Chicago.

The needs of the Illinois waterway and the Lakes to Gulf waterway have never been considered by the Supreme Court. Congress has jurisdiction over this matter and, on July 3, 1930, authorized that the water specified in the decree of the Supreme Court should be authorized for the navigation of the Illinois waterway. In the same section of the same act Congress intimated that it might take further action. No further action has been taken and perhaps none ever will be taken. There is no good reason, however, for this jurisdiction being taken away from Congress.

The Chicago diversion case has been settled. It was an internal matter and it serves no useful purpose to waste valuable time in argument and recrimination over past events. This matter is safe in the jurisdiction of the Supreme Court and Congress. Being an internal matter it is not a proper subject for reference in an international agreement, and certainly has no particular bearing in an agreement aimed to promote the construction of an international waterway.

The pending agreement would not be weakened by the omission of article VIII and the consideration of its subject matter later along with article VII and IX, but on the contrary its approval would be expedited and every item important to the construction of the deep waterway would be covered by the remainder of the agreement.

In my opinion it would be sound judgment to omit or amend article VIII, to expedite the approval of the agreement for construction, and get the work started.

Lincoln Day Address of Hon. Clare Boothe Luce, of Connecticut

EXTENSION OF REMARKS
OF
HON. CHARLES M. LaFOLLETTE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1946

Mr. LAFOLLETTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am very pleased to insert the following Lincoln Day address of my colleague, Representative CLARE BOOTHE LUCE, of Connecticut, given from the studio of Station WSIX in Nashville, Tenn., on February 12, 1946, at 11:32 p. m.

That address speaks for itself. Any observations of mine would add nothing to it, but I do wish to be recorded as endorsing its clarity, sincerity, and high purpose.

All over this land, for many years, February 12, 1809, has been celebrated as the birth-

day of Abraham Lincoln. Rather, we should celebrate April 15, 56 years later, the day that he fell a martyr to the assassin's bullet, for that was the day when he was truly born, never to die, in the hearts of endless generations.

Men all over the world have loved Abraham Lincoln, and love him today for a very simple reason: Lincoln believed that all men are brothers, and that this truth was worth dying for.

Now Lincoln's authority for his belief in the brotherhood of man was God, an authority, incidentally, whom he consulted with a simple trust that many modern statesmen bring only to the Gallup poll.

From his fundamental credo, the brotherhood of man under the fatherhood of God, all his other articles of political faith most naturally and nobly derived. A man who held such a belief never talked in narrow terms of Negro rights versus white rights, or southern rights versus northern rights, or the rights of the property holder against those of the propertyless, or States' rights versus Federal rights, or even the rights of nation versus nation. His belief led with inexorable logic to the conclusion that there are no earthly rights above human rights, and that all human rights derive from man's membership in the whole human family, each member of which is a creature of God, regardless of birth, color, race, nationality, or political condition. Other reasonable corollaries of such a belief were that right makes might; that the conqueror must ever treat the vanquished with malice toward none, and charity toward all; and that as no man would be a slave, so none should seek to be a master. Lincoln believed that in these practices of political fraternity based on a profoundly religious concept lay the genius, the strength, and the glory of our American democracy, which then, as now, was "the last test hope of man" on earth.

It is a political tradition for Republicans on these occasions of his birthday to quote the founder of our party, in order to prove some current political point dear to our Republican hearts. I shall not be an exception. I, too, want to use these Lincolnian principles as yardsticks of what my party might be expected to do on two important human issues which face us today.

To be sure, all political issues are human issues, for all affect, however indirectly, the lives and livelihoods of our citizens. But some issues affect them very deeply, very violently, very decisively. And accordingly as such issues are decided, they often change the whole course of history.

Such an issue, in Lincoln's time, was the issue of slavery versus freedom. Another was the issue of how, after a victorious war, the vanquished should be treated and the wounds of war healed. They were indeed two of the greatest issues in his Presidency. They are two of the greatest issues today. If the Republican Party fails to solve them, in Lincolnian terms, they will betray Lincoln. If all Americans do not solve them in Lincolnian terms, they will, in the end, betray America and thus the world.

No nation, said Abraham Lincoln, can endure half slave and half free. That is still true. Today, in our land there are 15,000,000 Negroes who are economically in bondage. They were freed physically by Lincoln from the individual master, only to become in many ways the economic slaves of the whole community. Until the Negro has an equal opportunity with every other American to get a job, to acquire an education, and to develop to the fullest the talents God gave him, this will not be a wholly free country, and we will not have completed the great experiment in democracy begun by Abraham Lincoln.

To this task, the Republican Party, born in the tradition of freedom for the Negro, must and will, I believe, increasingly dedicate itself. Said Lincoln: "In giving freedom to the slaves we assure freedom to the free."

So much for slavery at home. And what of slavery in this "one world" in which we live—a world that has been made dangerously small by radio and radar and rocket planes and atomic energy? The proposition still stands: This one world cannot long survive half free and half slave.

However expedient, however practical, however shrewd our present policy makers in the State Department today may feel themselves to be, many of them must have a very uneasy conscience when they see how their so-called realistic policies have led to the betrayal of freedom and the hopes of freedom everywhere. And just so long as they continue to make any deals or compromises, arrangements, or agreements, in open or in secret, with governments which actively oppose the brotherhood of man under the fatherhood of God, which have abolished the equal rights of every individual, which forbid freedom of speech, press, and religion, but which practice the suppression of minority rights by concentration camps, secret police and firing squads, just so long will these statesmen be betraying freedom at home. Perhaps not they, not we, but our children will live to curse the day they did so. For our strength and security do not lie in bristling armaments, or atomic bomb piles, or favorable trade balances, or bulging banks, or military or economic alliances. In the words of Lincoln: "Our reliance is on the love of liberty which God has planted in us, our defense is in the spirit which prizes liberty as the heritage of all men in all lands everywhere." For Lincoln knew that the love of liberty is the most infectious thing on earth. If our statesmen today cherished liberty for all men everywhere only one half as much as Lincoln did, our heads might spin at the speed with which governments of the people, and by the people, and for the people, would return to vast areas of the earth.

Our Government, if it is to follow Lincolnian precepts, must everywhere it can, all over this world give aid and comfort to those who believe, as Lincoln did, in the complete freedom and equality of the individual. Or at least, if it does not have Lincolnian courage to do right, as God gives it to see the right, it must not give aid and comfort to those who practice and seek to extend tyranny.

So much for the great issue, slavery vs. freedom, which took Lincoln to war and has twice carried us to war against the tyrannical Germans and their allies. What of the second issue, which comes at war's end? How to treat the vanquished, and bind up the wounds of war? Lincoln said it: "With malice toward none, with charity for all. * * *"

Today, millions in Europe are starving. The men, women, and children of our allies, no less than the innocent children of our defeated enemies. Do not let us deceive ourselves; many cannot, but millions of us can make a little sacrifice at our tables every day and endure some rationing to put food in the mouths of those who will surely die if we do not. The Republican Party will help this Administration in its announced task of feeding starving Europe.

It is our duty, as the opposition party, to see that it is done without waste, or corruption, and without placing undue burdens on any part of the population which cannot support them. Vigorous criticism of any New Deal program is necessary, for we know the habits of those who have been too long in power and how, when the honey-pot of public funds are handed them, they spend a great deal of time licking their own fingers. But criticize and watch them though we must, we know we should be betraying Lincoln's greatest precept of postwar charity if we sought to thwart the administration in accomplishing its program of relief and rehabilitation of wartorn countries.

Therefore tonight I see as three of the Republican Party's most important tasks in the future: The task at home of raising the economic status of the Negro; and abroad of aiding those governments where no man is a slave and none is master; and of succoring the innocent victims of war. When we have completed these tasks, we shall come at last into our own as the true political heirs of Abraham Lincoln.

Views of President R. J. Thomas of the United Auto Workers, Congress of Industrial Organizations, on Pending Legislation and Problems of Labor

---

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 22, 1946

Mr. SABATH. Mr. Speaker, under leave given me I insert in the RECORD a speech delivered by Hon. R. J. Thomas, president of the United Auto Workers, who, upon the request and in the absence of Hon. Philip Murray, president of the Congress of Industrial Organizations, expressed the views of the latter organization on two pending antilabor bills on the occasion of a caucus held on December 4, 1945, in the Old House Office Building. The caucus was attended by over 100 Members of the House, who were desirous of learning the facts about the pending antilabor legislation and who heard, besides that of Mr. Thomas, addresses by other outstanding labor leaders, including William Green, president of the American Federation of Labor; Mr. E. A. Lyon, executive secretary of the Railway Labor Executives Association; Mr. John O'Leary, an official of the United Mine Workers; Mr. Martin Miller, representing the National Brotherhood of Railway Trainmen; W. D. Johnson, vice president of the Order of Railway Conductors.

It is significant, Mr. Speaker, that the attendance of labor leaders at the caucus on December 4, 1945, was the first time in history that representatives of all labor organizations had united and joined in protest to the enactment of labor legislation which they deemed inimical to the interests of labor.

It is my opinion that Mr. Thomas' address applies with even greater force to that monstrosity now pending in the other body, H. R. 5262, which carries many more, and more objectionable, vicious, and restrictive antilabor provisions than in any proposed or previously enacted antilabor legislation considered by the Congress. The text of Mr. Thomas' speech follows:

Chairman SABATH. The meeting will come to order. Many Members have said that leaders and spokesmen for labor were not granted an opportunity to be heard before the Committee on the Judiciary on H. R. 3937 and H. R. 32, two bills which obviously threaten all that labor has gained in two decades.

Therefore, some of us decided to call together Members who desire to hear the real facts in regard to these bills.

I am indeed gratified that there are so many of you here. Do not fear that I shall talk a long time. I shall not. We have here today several gentlemen whom you want to hear and whom you came to hear. They have served equally their country and the cause of labor all their lives and are recognized as spokesmen for organized labor.

I have a telegram here from Mr. Philip Murray, president of the Congress of Industrial Organizations, from which I quote:

"Due to previous commitments I will not be able to attend this meeting called for Tuesday, December 4. I am asking R. J. Thomas, president of the United Auto Workers, to be present in my absence to give the views of the CIO on these two bills. Thank you for your interest.

"PHIL MURRAY, *President*."

Now it is a pleasure and privilege to call on Mr. Thomas to give his position, and the position of the great organization he represents, on these pending bills.

Mr. THOMAS. Mr. Chairman, ladies and gentlemen, I, too, want to thank Congressman SABATH for giving us, the representatives of labor, the opportunity to express to the gentlemen of Congress our views on this particular labor legislation which is before Congress. I, too, want to say, speaking for the Congress of Industrial Organizations, that the Congress of Industrial Organizations is opposed to all antilabor legislation which we feel is introduced for no other reason except to smash the labor movement in this country. I want to say that in the past few weeks I was one of the members representing labor in the labor-management conference called by President Truman, and one of the reasons that that conference was called was to get an agreement between labor and management. The reason that it failed, that it fell below the expectations of many people in America, is for exactly the same reason that I am opposed to this sort of labor legislation. That is, the workers of America have some fundamental problems which must be solved. The labor-management conference refused to take recognition of those problems and here we have laws introduced by people who think that these laws, if passed, could create industrial-labor peace in America without taking care of some of those fundamental problems which face the American workingman today. It is exactly the same. It is amputating a man's arm to try to cure him of heart trouble. That sort of operation is never successful.

When the Smith-Connally Act was first passed by Congress and during its discussion by Congress we in labor said repeatedly that the Smith-Connally Act would do nothing, would make no contribution toward labor-industry peace during the war. I think perhaps today everybody in America agrees with us on that proposition. I think some of the things which are causing the problems for labor today, some of the things we should try to think about a little bit and see what we can do to cure, is the problem in the first instance, before strikes and so forth do develop.

For instance, today I find that it's practically impossible for me to get any real collective bargaining in industry, and there are reasons for that. There have been laws passed by Congress that stop collective bargaining as far as our particular industry is concerned, at least.

For instance, in the automobile industry, which I consider, and I think all of us do, an industry that does control to a great extent the economic situation in America, I have found this to be true, that there is no haste on the part of that industry to put automobiles on the market due to the fact that because of the tax laws that have been passed, there is no incentive to put those automobiles on the market. That industry cannot make any more money the rest of this year.

We had another bill which was passed which I know as the George bill, which has carried proposals where industry is reimbursed in case of a strike. Now, I do not believe any Congressman thought of the idea as far as that bill is concerned, that where management and labor had disagreements that industry was to be paid while that disagreement was going on. That is the reason that we have a great amount of labor unrest today and it is not through that sort of thing that the situation will be corrected.

Labor has many different and difficult problems today. Since VJ-day the take-home wages of labor have been cut to a considerable extent. I know when my organization asked for a 30-percent increase in wages many people in America said, "Well, have the dead-end kids gone crazy again?"

The thing I want to impress upon you is that those workers are not asking for an increase in wages. They are asking that their former wages be protected. There has also been considerable down-grading in industry, which again cuts the individual's wages. There has been a continuous rise in the cost of living as far as workers are concerned and industry has been making record-breaking profit.

For instance, in the General Motors Corp., from 1939 to 1941, they made 50 percent of the net worth of that company in a 3-year period; and now after the war is over the company is in even better position, and yet there are people who think that in no other way can they stop industrial unrest except to tie up and hamstring labor.

I agree with President Green of the American Federation of Labor that we of the labor movement do agree with the free enterprise system of America, but we must also have free unions in America. During the past war many people all over America hailed the good job that labor had done during that war, and I remember standing on platforms before my membership time after time and being taken to task because I had agreed to a no-strike pledge for the duration of the war. For what reason? I took that no-strike pledge and carried it through in my union for the protection of my country, but I don't think you are going to ask me to do that for the protection of General Motors because the workers in America think that is discrimination and unfair.

The labor-management conference, as I said, failed to a certain extent because they didn't recognize those problems.

On the new proposed amendments to the Smith-Connally Act it is proposed to outlaw unions as a collective-bargaining agent. I will read from the bill: "The employer shall be relieved of any obligation under the contract and the labor organization shall lose its status as a bargaining agency for the period of 1 year." Now if you don't think this discriminatory legislation, I ask you to consider cases where management incites riots, and my God, gentlemen, that is done every day. Is management's business taken away from them every year? What penalty is put on them for violating a contract? It says that it should be done providing there was a violation of the no-strike pledge.

I have in our particular industry hundreds of contracts with no strike pledges in them, but I have always considered that when I negotiate a contract with management, whether it is to be for 1 year or 2 years—I don't believe we have contracts for over 2 years—I say that management and labor both have an agreement such as that, and to carry out any sort of an agreement there must be a decent relationship between the two.

I have always considered, and I think the majority of leaders of American labor consider, that there should not be strikes for the duration of the contract, whether there is a no-strike clause in that contract or not. A contract in my mind is no good if you don't intend to live up to it, but I say if this particular law is passed I will proceed to do everything I can to see that no-strike pledges are taken completely out of contracts. I say to you gentlemen here that that would promote more strikes in all industry in the United States and would not solve the problem.

There is another section here, which would ban labor from participating in a political campaign. It just so happens that I happen to be active in the national CIO–PAC, and I know that the people who are in favor of this legislation are not in favor of the common people of America expressing their views upon political candidates. They say, "Yes, look at the millions of union members and how they can go out and collect a dollar for each one and raise millions and millions of dollars!"

I know in the last political campaign how much our organization spent, and I know a great many heads of corporations of America that spent as much money as our organization spent. You say that is not discriminatory legislation? Why, the General Motors Corp. alone, through individual members of that corporation, can raise more money in any particular day for a political campaign for something they want than we can in a year. I don't think it's been any secret how much money the du Pont family has put into political campaigns. I don't think it's any secret to Congress how much Mr. Sloan, of the General Motors, has put into political campaigns, and that is all right, I don't object; but I do object when you try to take the principles of democracy from the American people.

I am beginning to wonder with legislation such as I have discussed here—under discussion at least. I thought we had just got through the war fighting nazism and Germany and Japan and some other foreign countries, and right today this Government is sending people representing labor to Germany and Japan and to other countries and saying that for a true democracy to be built in those countries it must be done through a labor movement or at least helped by a labor movement.

Here we are sending missionaries to our defeated enemies to build up democracy while here at home we are taking the other direction. I am beginning to wonder what we fought this war for. I mean the millions of Americans—what they fought this war for. Under this proposal, it seems to me in taking the rights of labor from them we could look back into history, and it seems to be the only way some people know how to solve these problems, is to go backward to what we were in the labor movement a century ago. Next thing I know you will be passing laws making slaves out of the working people of this country. It seems to me that is the trend these laws are taking.

Under the Hobbs bill, which is supposed to curb racketeering, I submit to you that I don't know of an instance where if there is racketeering in labor that it could not be taken care of by laws already on the statute books, and I will say as far as I am personally concerned in my organization, I have known one or two instances where I ran across individuals who would like to do a little bit of racketeering but they never got to first base. My organization has taken care of that and there just is no racketeering, yet we want to pass a bill like this which again I say is discriminatory. As president of my organization if I do any racketeering am I not just as liable under the law as some manufacturer and I know some that do a little racketeering. Being a member of a labor organization does not in any way protect an individual or a group from racketeering as far as the law is concerned.

That is about all I want to say to you except bring out some of the problems which are causing difficulty. I say the people who are advocating these things are not advocat-

ing them for labor-management peace in America—they are advocating these laws to break the labor movement.

I have here a photostatic copy of an automobile news letter, a marketing service for automobile dealers, I would like to read to you, and I can show you what your problem is, one paragraph out of this letter: "Perhaps the only solution is a policy of sitting tight and waiting until the economic pinch forces workers to realize they must stay on the job or starve. At the moment there is no disposition on the part of management to become frantic over labor unrest. A watching and waiting policy is the general rule." And I can vouch that that is the general rule at least in our industry today.

To show you, I have a number of notes here on what has happened as far as our situation in General Motors is concerned. Talk about a cooling-off period! For 97 days we cooled off, trying to negotiate with that company, asking Secretary Schwellenbach to send in conciliation, and we could only get conciliation in on the understanding, if you please, that these men were only observers. They didn't dare to open their mouths and I want to know how those men could do mediation. We could not even get collective bargaining. While we were there with General Motors, reading off a brief, trying to state our case, the people of the corporations sat there reading Liberty magazine and Saturday Evening Post. We asked them to listen to us and they said, "Aw, hell, we can get more out of this magazine."

In any demands for wages increases we have said that if the corporation can prove that they can't pay the wage increase we ask for we will scale down our demands, and as a final plan we offer arbitration, which was denied. And you ask what causes labor unrest in America. I believe that the main cause of it now is that we have no collective bargaining and, as I said before, the tax laws passed by Congress have already taken us out of our collective bargaining position.

To show you, here is just one instance: Paul Renko is one of our members who lives in 14349 Robinson Street, Detroit, Mich. During the war as an automobile worker he took home $65 per week. Now he takes home $38 a week and he has a family of four which must live on that. That is the cause of labor unrest in America. That is the thing that we have got to look into and see what it is that we can correct because of the increased cost of living. People with families cannot live on that sort of wage today.

In the President's message he talked about a cooling-off period. What I would suggest is that we should have a little cooling-off period on antilabor legislation. It would do us all a lot of good, I believe. As I said, we cooled off 97 days in negotiations, in the recent negotiations we have been in. In America, ever since the time of Abraham Lincoln when he discussed it very much, practically every great statesman in America has stated that labor must have the right to strike. Labor must have the right to strike if we are to have free enterprise in America.

Labor must have the right to strike. It is the only chance that labor has. During the war I was a member of the Labor Board and we took many decisions that we didn't like, but we took them for our country to make what contribution we could toward winning the war, and in our particular industry, which gets a lot of publicity for strikes, it may be interesting for you to know that the strikes in our industry were below the national average.

I cannot continue to say to workers forever: Let some board or agency take care of this problem. What we want today in America, in my opinion, is a cooling-off period on labor legislation and give the workers of America an opportunity to work out some of these prblems, and they will be fair, I assure you of that, gentlemen, and I am quite sure that a vast cross section of the workers in America, no matter what organization they belong to, want to see their country go on prosperous but they can't see how it can be done with millions unemployed and they can't see how it can be done with the way workers' wages are being cut and cut.

That, my friends, is the reason for labor unrest in America today, and all this sort of legislation which it is the purpose of some people to have passed. That will not solve the problem.

Again I want to express my thanks to you for the opportunity to be here today and discuss these problems with you.

The Housing Shortage

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1946

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the Retail Lumber and Building Material Dealers of Jacksonville, Fla.:

[From the Jacksonville (Fla.) Journal, of February 18, 1946]

TWO MILLION SEVEN HUNDRED THOUSAND; YES, MR. WYATT, IT CAN BE DONE

Is Housing Administrator Wilson W. Wyatt reaching for the moon, asking for 2,700,000 new homes in 1946 and 1947? Recalling that 900,000 in 1925 was an all-time home-building record, that 400,000 this year has been the most optimistic forecast, it seems the answer must be "yes." But, remember the early months of the war, when an annual production goal of 50,000 planes sounded fantastic? Well, we got 100,000. We needed a tenfold increase in ship production, too. Impossible? Sure, but we got it, with tonnage to spare. All along the line, under the compelling need for greater war production, incredible quotas were surpassed, records smashed, time after time. So, Mr. Wyatt, we say, it can be done.

IT WON'T BE EASY

Nobody knows that better than your retail lumber dealers. Besieged by material-hungry builders, begging the manufacturers and mills for scarce supplies, we are on the front line all day, every day. We can see the difficulties on both sides; the builders hampered by restrictive legislation, labor shortages, rigid codes and customs; the mills caught in the wage-price nutcracker squeeze. To solve these and scores of other such problems will take courageous leadership, bold initiative, and above all, a genuine spirit of patient cooperation among all parties—industry, labor, Government, and the public. Then the houses will start going up.

HOW DID WE GET THIS WAY?

People sometimes say, "How did the housing shortage get so bad, so fast?" Well, the fact is we had it even before the war. For the past 15 years fire and obsolescence have been taking 200,000 more houses each year than have been built. And, whereas the United States had a population of 130,000,000 in the thirties, we're now pushing 140,000,000. Even with 12,000,000 men under arms—overseas and in camps—families had begun to double up. Rapid demobilization after VJ-day did not cause the shortage, simply made it worse. Throughout the war, housing was consistently at the bottom of the priority list. Why? Because we had to have the guns, planes, ships, the war plants, and barracks. Since we couldn't have these and new houses too, houses had to wait. But now it's high time the houses were going up.

NOBODY LIKES PRIORITIES

Whether red and blue stamps or A, B, and C coupons; whether AAA or HH ratings; whether sugar stamps or your place in line for nylons—whatever form priorities take, nobody likes them. Nobody liked the war either. Nobody likes inflation, or the black market. But if it's going to take more priorities to channel vital lumber and building material into houses, then we'll grin and bear it. You will too, when the houses are going up.

SUBSIDIES OR PRICE INCREASE?

Part of the Wyatt program provides for subsidies or premium payments to manufacturers exceeding quotas on certain bottleneck items on the critical list. Most manufacturers think a price increase will furnish incentive enough to assure maximum production. What's the difference? On the one hand, you pay the extra freight in taxes. On the other, you pay more for your house. Debate on the question may be long and hot, but the only sense-making answer is the one that starts—and keeps—the houses going up.

We ourselves are only retail dealers in lumber and building materials. Shortages caused by bottlenecks up the line hit us first and when they do, we have to say, "Sorry," to you. Do you think we like that any more than you do? What's more, we have a big stake in Jacksonville—a busting-out-at-the-seams Jacksonville that simply can't help growing still more. That's why we say, Mr. Wyatt, it can be done. It must be done.

Retail Lumber and Building Material Dealers of Jacksonville: John W. Baldwin Lumber Co., Dawkins Building Supply Co., Marshall & Spencer Co., Bond-Howell Lumber Co., Foley Lumber Co., Mason Lumber Co., Thompson Lumber Co., Carolina Portland Cement Co., Lechner Lumber Co., Inc., Taylor Lumber & Appliance Co.

General Motors Head Admits Secret Agreement and Says Industry Should Run the United States of America

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 22, 1946

Mr. SABATH. Mr. Speaker, some time ago I called attention to a conference of Wall Street-controlled industries and industrialists. Some of the representatives present tried to deny these facts. Consequently, the testimony given by Mr. C. E. Wilson, president of the General Motors Corp., at a National Labor Relations Board meeting, as reported in the daily newspapers, is of great interest to me. Mr. Wilson's guarded statements before the Board make it clear that there was an agreement—some might call it a conspiracy—to destroy or at least weaken organized labor.

I should like to know, Mr. Speaker, if this agreement to which Mr. Wilson testified, under oath, is responsible for the delay in settling the General Motors strike?

Under leave to extend my remarks in the RECORD, Mr. Speaker, I desire to insert a news report of Mr. Wilson's statement as printed in the Philadelphia Record for February 15, 1946. At the same time, I serve notice that I shall insist on knowing all the facts in these statements, or otherwise I shall feel impelled to bring before the House a resolution for Congressional investigation of the industrial conspiracy against the legal and economic rights of organized labor.

Following is the text of the news report:

DETROIT, February 14.- General Motors President C. E. Wilson told a National Labor Relations Board hearing today that a group of American business leaders discussed "the hell of a shape we were in" last December.

He denied, however, the group entered into an agreement for a unified fight against union wage demands and Government price control. Then he added: "It's too bad that group can't make decisions for the country."

TESTIFIES AT HEARING

Testifying at the NLRB hearing on CIO United Auto Workers charges of unfair labor practices against GM, Wilson said the group met at New York's Waldorf-Astoria Hotel last January 9, because "they were all looking down the same gun I was." He explained he meant the threat of strikes.

Wilson identified those present as representatives of GM, United States Steel, Westinghouse and the meat-packing industry. Ford and Chrysler had no representatives there, he said, because they "were not looking down the gun."

Questions concerning the meeting, a luncheon given by GM, were fired at Wilson by Harold Cranefield, regional NLRB attorney.

MISTAKEN ON DATE

Cranefield pointed out that the luncheon was held a day before President Truman's fact-finding board reported its recommendation for a 19½-cent hourly increase for striking GM production workers.

During his testimony, Wilson said the meeting date was December 19, but late today he told the hearing officer he had been mistaken on the date. Both sides agreed to substitution of the January 9 date in the record of his testimony.

"No agreement came out of that meeting," Wilson said. "None were intended. There was nothing sinister about it. In fact, it's too bad that groups can't make the decisions for the country."

WILSON BACKS INDUSTRY

Cranefield asked if Wilson thought the group could make better decisions than the Government makes.

"That's their record for the last 4 or 5 months," the witness replied. "In fact, I think the way the country's been kicked around in the last 4 or 5 months is a crime."

Before Wilson resumed his testimony, Trial Examiner Gerard D. Reilly told union attorneys that a finding that GM failed to bargain in good faith would not insure back pay to the 175,000 production workers on strike since November 21.

Shortly after the NLRB hearing began on January 28, a union attorney said the UAW-CIO felt the Board should award the men back pay for the time they had been idle. Reilly pointed out the union does not charge a lock-out and does not accuse GM of refusing to take the strikers back. Those who were the only two cases, he said, in which the NLRB might hold they were entitled to back pay.

As the Board meeting proceeded, Federal Labor Mediator James F. Dewey continued his efforts to bring GM and the UAW-CIO together again in the wage and contract dispute. There have been no joint sessions since Walter P. Reuther, UAW-CIO vice president, rejected a GM offer of an 18½-cent-an-hour (16½ percent) wage increase last Tuesday.

The Filipino Veteran

EXTENSION OF REMARKS

OF

HON. CARLOS P. ROMULO

RESIDENT COMMISSIONER OF THE PHILIPPINES TO THE UNITED STATES

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. ROMULO. Mr. Speaker, the other day President Truman approved H. R. 5158, the First Supplemental Surplus Appropriation Rescission Act, but took exception to a legislative rider attached to the transfer of a $200,000,000 item for the pay of the Army of the Philippines.

In explaining his objection to this rider, President Truman pointed out that it would bar Philippine Army veterans from all benefits under the GI bill of rights with the exception of service-connected disability and death benefits which are made payable on the basis of 1 peso for every dollar of eligible benefits.

In behalf of my comrades, the Filipino soldiers who fought and died by the side of American soldiers in the war against Japan, in behalf of the widows and the orphans of these men who now live in hardship because the grim destiny of war struck down their men, I want to express our gratitude to the President of the United States. He has once again demonstrated the true American spirit of fair play. In the spirit of simple justice he has raised his voice against injustice. And he has instructed the Secretary of War, the Administrator of Veterans' Affairs, and the United States High Commissioner to the Philippines, who, by the way, since his return here the last few weeks, has been active in supporting us in our efforts for Philippine rehabilitation and for our veterans, to prepare a new plan which will redress this wrong by proposing further legislation which will be submitted to the Congress in March.

Mr. Speaker, it would be bad enough if the Filipino veteran were to be forgotten. It would be inconceivable that he should be discriminated against. I am sure that this is not the real intention of the Congress, any more than of the American people as a whole. We have shared too much, we are too close to one another, we have too much friendship and respect for one another to permit me to believe that there is a deliberate desire to discriminate against the Filipino soldier.

You know the story of heroism in the Philippines—the great and terrible saga of death and heroism, of martyrdom and of courage triumphant, of victory snatched from the jaws of defeat. Your boys played their magnificent role in that drama. And so did ours. The bullets they faced, and the shells and bombs, made no distinction between them. The misery of the prison camp felt the same in the Filipino heart as it did in the American heart. The terror, the determination, the courage of battle drew no line of demarcation between Filipino and American. The grief of bereaved families is a universal emotion, and it feels no different to a Filipino mother or wife than it does to an American mother or wife.

But there is a legal bond between us that serves to complement the moral and emotional bond. Our troops fought, not only as Filipino soldiers but as soldiers of the Army of the United States, as American nationals fighting in defense of the American flag on soil over which the United States had full sovereignty. When they fought, were wounded, were killed, they were Filipinos, yes, but they were also American nationals.

For these reasons, on behalf of our President, Sergio Osmeña, I have placed our views before the President of the United States and I now place them before the Members of the House.

The rider to which President Truman objected would deprive Philippine Army personnel, inducted into the service of the United States Army, of most of the benefits which American law provides to its veterans. Specifically, they would not be able to enjoy the benefits of the GI bill of rights—of the automatic gratuitous insurance against death in line of duty in active service between October 9, 1940, and April 19, 1942—which includes the whole period of the First Battle of the Philippines—of the pension for non-service-connected disability, of medical and hospital treatment and domiciliary care of veterans suffering from injuries or diseases incurred or aggravated in line of duty, including funeral and burial expenses, of vocational rehabilitation for disabled veterans, of civil-service preference, of the mustering-out payment law, of the 6-month death gratuity to dependents of personnel who died in line of duty, of the Missing Persons Act.

The new act, as it stands now, discriminates against Filipino veterans because it prevents them from enjoying the benefits which should be accorded to any veteran who fought under the flag of the United States of America.

The act does appropriate $200,000,000 for the pay of the Army of the Philippines. But this amount cannot possibly cover the benefits it intends to cover.

There is a final great discrimination against the Filipino veteran—the principle that he must be paid the same number of pesos as the number of dollars received by American veterans. In other words, where an American receives $50, a Filipino receives 50 pesos. The Philippine peso is worth 50 American cents. The Filipino veteran automatically receives exactly half of what his American comrade may receive.

I am not proposing today that full equality be restored in all cases. But I do want to call your attention to some of the results of this inequality.

Let us take, for an example, the case of two Filipino soldiers. One is in the Philippine Scouts. The other is in the Philippine Army. As the act now stands,

the Philippine Scout is entitled to exactly the same treatment as any American soldier. The Philippine Army man is entitled to only half. They may have fought side by side on Bataan, or on Leyte, or on Luzon, they may have both been wounded in the same part of their body, but one receives exactly half what the other receives in the way of veterans' benefits. If both were killed in action, the family of one receives exactly half what the family of the other receives in the way of pensions. Both fought for the same cause. Both are Filipinos. Both may have made the same supreme sacrifice. Yet, there the equality ends. It is an equality of sacrifice—but an inequality of compensation.

There is, of course, no true compensation for the ordeal of battle. There is no way of putting a money value on a man's life—the cost in tears, in unspoken sorrow, in the dreary weight of loss that fills the heart. But it is the obligation of those who have survived to make the way easier for the men who have fought and suffered and died so that we might be free.

In this moral obligation, no fine line can be drawn between one group of soldiers and another. When they were fighting, they shielded with their lives the things they held dear and they preserved freedom for us who survived. We cannot shame their memory by becoming accessories to injustice.

That is why President Truman's strong position on this matter has met with a wholehearted response of gratitude and appreciation among my countrymen. That is why we look to the Congress for the redress of a wrong which we know was not intended.

Petrillo Bill

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1946

Mr. WIGGLESWORTH. Mr. Speaker, I realize that the sentiment of the country is overwhelmingly in favor of the purpose sought by this legislation.

I realize also that the sentiment of the House is overwhelmingly to the same effect and that a vote against the bill will not be a popular vote.

Nevertheless, unless the House bill is amended, I cannot support the legislation in the final analysis.

The right to strike for legitimate purposes is a fundamental right in America. If that right is to be limited, the greatest care must be used to make certain that the limitation is confined to purposes which are clearly illegal or against the public interest.

As I read the bill as presented to, and passed by the House, the limitations prescribed go far beyond reasonable limitations.

For example, under section 506 (A) (1) of the bill, as I understand it, if any group of employees in a broadcasting business feel overworked and in need of further assistance, if they fail to obtain that additional help after bargaining with management, and if they then strike or even threaten to strike, each and every one of the group will be liable to a fine of $1,000 and to a year of imprisonment, or both.

No such provision, in my judgment, can be justified.

I voted for an amendment and for the motion to recommit which would have eliminated the proposed restrictions on the right to strike for legitimate purposes.

I voted for an amendment which would have eliminated the criminal penalties provided against the right to strike for legitimate purposes.

I voted for an amendment which would have limited the penalties to officers and representatives of any labor organization subject to the terms of the act.

I did not vote for the bill on final passage.

I cannot support it in the final analysis in the absence of proper amendment in conference by the Senate and House conferees.

The Right Kind of Labor Legislation

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. HOFFMAN. Mr. Speaker, recently many editorials have been printed calling attention to the fact that so-called antistrike legislation is not the remedy for labor disputes and strikes.

Often, these editorials carry the thought that until the basic law—NLRA—which organized labor hailed as its magna carta was amended so as to impose equal responsibility, grant equal privileges to parties to collective bargaining, we would not be on the right road toward a solution of industrial warfare.

That thought occurred to me in 1939, when, on March 13, 1939, amendments to the NLRA were proposed and, later, on March 11, 1940, printed in the CONGRESSIONAL RECORD, paralleling corresponding provisions of the NLRA.

When the present flurry of strikes threatened our economic existence the bill was again, for the fourth time, introduced, bearing the number H. R. 5334, and on February 1, 1946, again the proposed amended bill was printed in the CONGRESSIONAL RECORD, corresponding paragraphs paralleling the original provisions of the NLRA.

The road is plain and, while no claim is made that the amendments proposed are sufficient or accurately drawn, needed legislation is at least suggested, and some individuals with more knowledge might use it as a pattern.

One of the latest editorials calling attention to this need is that from the Saturday Evening Post dated March 2, 1946, which reads as follows:

ANTISTRIKE LAWS MISS THE POINT

Many efforts have been made to deal with the strikes which threaten to push this country into an inexcusable man-made depression. Too many of the efforts indicated immature thought or lack of courage. High-sounding but hollow expedients are not likely to succeed permanently. Neither are efforts by Congress to rework the Smith-Connally antistrike law. As the Ford and Chrysler settlements indicate, settlements of strikes occur soonest when the Government keeps out of the dispute and lets collective bargaining do the job.

The problem is not to forbid people to strike, but to make it harder for some people to persuade or force other people to strike. There are at least two things which give labor leaders a tremendous leverage in dealing with employees and their own rank and file. One is the Wagner Act, which, in setting up the conditions for collective bargaining, forbids many "unfair labor practices" to management, but none to labor. No one denies that management often deserved this impeachment. There is no important demand to remove legal prohibitions of acts which are actually unfair to workers. However, the power of labor-union leaders has increased since 1933, and we now find many of them employing intimidation, violence, and other pressures in campaigns for the organization of workers. Not one of these acts is forbidden or even condemned by the Wagner Act.

Perhaps the most useful intervention of Congress would be to amend the Wagner Act to make it prohibit unfair labor practices by unions. By judicial decisions and administrative acts, management has been denied the right to do hundreds of things that appear reasonable to the bystander. Since the National Government has undertaken to police the process of collective bargaining, it can no longer safely neglect the practices of labor unions any more than those of employers.

The power of union leaders was augmented during the war by the maintenance of membership clause which provides that, once a worker has joined a union, he must remain a member during the life of the agreement with the employer. If he leaves the union or is expelled, the employer must fire him. If he should be expelled from the union for conduct unbecoming a union member, he will ipso facto lose his job. As can be seen, this gives the labor-union bureaucracy the power actually to starve a minority which carries opposition far enough to be really effective. The maintenance of membership clause was inserted by the National War Labor Board into many union contracts on the theory that, because the no-strike pledge deprived unions of their ultimate weapon, they were entitled to have their membership kept to full strength by Government dictum. Certainly the reason for Government pressure to insist on union membership has long since disappeared. Labor-union responsibility will come into existence faster if the leaders are required to sell their own memberships. The Government should no longer be a party to a system which, as Donald Richberg put it recently, "forces employers to compel the workers to enlist and pay union dues—so they will be able to make war on the public with an imposing but largely conscript army."

Bringing the powers of the union leaders into better balance with those of employers will not settle everything. Much will remain to be improved in our industrial relations, after the parties in interest have been placed in equality. The employers, for example, might propose, where it is appropriate, an annual wage such as many industries have adopted already. They might propose a basic wage contract, with bonuses for production

above a fixed level and, very important, bonuses for individuals who produce more than their fellows. This last many union leaders will not accept because of ideological objection and because some employers abused incentive schemes in the past. Their opposition to incentives is certain to diminish with increasing pressure from the rank and file. In an impressive number of plants incentive pay for individuals has been put into effect over the union leaders' heads because the men at the machines preferred that extra $$ in the pay envelope to the high-domed theories of the CIO intellectuals.

This suggests the truth of what we have long suspected, namely, that men and women who work with their hands are not impressed by a doctrinaire fanaticism which would eventually produce what we have never had in America: a faceless proletariat, from which no man could hope to rise by dint of superior character and talent.

America Sleeps

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. MICHENER. Mr. Speaker, my attention has been called to an editorial appearing in the Jackson (Mich.) Citizen Patriot of February 24, which is thought provoking and expressed the viewpoint of many people at this particular time.

Pursuant to the permission granted to me, I am therefore including in these remarks a copy of this editorial, written by Mr. Carl Saunders, the editor. It is as follows:

AMERICA SLEEPS

Canada's discovery of Russian spy efforts to get atom-bomb secrets is a mere secondary phase of a pattern of intrigue aimed at destruction of democracy everywhere.

Canada has had the courage to confront the issue and challenge the perpetrators. The United States Government lacks that courage.

When and if the United States finally realizes that it must fight this enemy in its own house, the revelations will shock complacent Americans. Until those revelations are authenticated by Government indictment any who speak out as we now do will be vilified as disturbers of the peace and witch-burners.

What Canada has uncovered is part of a world-wide conspiracy. These men who gave away the war secrets of the Dominion are not petty hirelings who sold out for cash. They're Canadian citizens who look to Moscow first and to Ottawa second. Some are scientists who lean far left in sympathy with Bolshevist teachings or who are so politically naive they don't know what it's all about.

That is why the thing is dangerous. Here in America the Communist Party claims 100,000 members. Every one of them is an agent for Russia. Not one of them puts allegiance to the United States above obligation to the Kremlin. These people are Russian spies just as surely as though they were actually members of the NKVD (Moscow's world-wide secret police). They have infiltrated labor unions, educational institutions, and politics all over the democratic world.

Some of them are here in Jackson.

Those who know, and this includes many fine American union men, are aware that certain unions are completely dominated by Communists. Gullible spokesmen applauded the GM electric workers for making a contract which put the UAW strikers back of the eight ball. They didn't know that the GM electric workers union is Red-controlled and that it was trying to put loud-mouthed Walter Reuther in a hole. Reuther is a radical, but he belongs to either the Socialist wing or the Communist Party opposition (Trotzkyites). Moscow's Reds don't like him. Reuther is on his way out. His bitter vilification of GM and his early strike tactics made him a liability to the union, but it's the Reds who are helping to push him out.

Some maritime unions are Communist ruled. Their members refused to work when we were sending supplies to embattled Britain before Germany attacked Russia; but the moment Hitler crossed the Russian border they pressured Washington for more and more help for Germany's enemies. These same unions drew the blueprint for political strikes when they walked out in protest because they said troops weren't being brought home fast enough from the Pacific.

These Americans who are not Americans argue today with plausible sophistry the virtues of Russia's phony democracy. Tomorrow or tonight they would trade their American birthright for Moscow's blessing.

In India they foment revolt among the masses. (The real leaders of the Indian freedom movement are not sympathetic to the Communist-inspired Bombay insurrection.)

In India, likewise, they inspire mutiny among crewmen of the Royal Navy and the RAF.

In China they persist in civil war, though Moscow pretends disinterest.

In Indonesia they agitate the natives to rebel at the behest of the Kremlin.

Among our own troops and seamen they incite mass protests and mutiny. Known leaders of the protest demonstrations in both the Pacific area and Europe were active in Communist or fellow-traveler movements here. The form letters which soldiers send to newspapers and Congressmen complaining of Army policies are written by Communists. Reds infiltrated the editorial staffs of Army publications.

In Washington it is common knowledge that Gen. Pat Hurley spoke by the book when he said the State Department was permeated with fellow travelers and Communists. They plague MacArthur. Some among so-called specialists in Government sent to help him in Japan lean far left. They propose to mold Nippon to the Bolshevik pattern.

This threat to democracy is as real as the mutiny in India, the undeclared war in Manchuria, and the rebellion in Java. It isn't child's play. And it isn't just a political nightmare dreamed by moss-back conservatives.

Canada is getting ready to expose just a small fragment of the rotten whole. The thing is an ideological war from within, directed from without by Russia.

Its front-line combatants are the commentators on radio or in the newspapers who condemn Chiang Kai-shek as a dictator but who bow low to the east where sit the half dozen men who rule Red Russia.

Its agents are the men in labor unions and elsewhere who scream in pain when an American protests the needless waste of strikes but who vigorously cheer the Soviet system, wherein any man who strikes is doomed to prison or worse.

Its friends are the masquerading or misguided preachers in the pulpit who oppose any form of military youth training for America but who yield homage to the Red sickle flag under which no man is exempt from armed service.

Its dupes are the loving mothers and wives who cry out against the "slowness of deployment" in the Pacific and Germany, while those who urge them on sing hymns of praise to a Russia which is strengthening its occupation forces everywhere.

Its apologists are the weak-witted dreamers who believe dictatorship by a handful is true democracy. They would substitute the most tyrannical form of government known to the contemporary world for the freedom of America. They are not liberals. They lock backward, not forward.

Canada points an accusing finger at its own special scourge of rats. But in the United States we pamper the disease-bearing rodents whose allegiance is to an alien flag and a foreign ideology.

America doesn't care what kind of government Russia has. That is Russia's business. But the kind of government we have is our business. And a Russia which infiltrates a friendly America with spies and which aims for disaster and chaos throughout the world is toying with trouble. Canada has faced the issue. America should open its eyes.

Political Conditions in Poland

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter I have received from the Industrial Society of Polish Mechanics, Group 3, relating their views in connection with the present Government now in power in Poland:

CHICAGO, ILL., *February 18, 1946.*
Hon. THOMAS S. GORDON,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: As you are aware, Poland, the Knight of Nations, which was first to oppose Hitler's might, and who fought to the end on the side of the United Nations, has been sold down the line.

Cognizant of this, the Industrial Society of Polish Mechanics, Group 3, of the Polish National of America, the oldest and most influencial group in Chicago, assembled at a regular meeting held Sunday February 10, 1946, at Pulaski Hall, 1715 South Ashland Avenue, Chicago, Ill., has unanimously resolved to appeal to you as Congressman from the city of Chicago, to use all your efforts and prestige, to bring to the attention of the President and the Secretary of State, the fact that the members of our group join the over 6,000,000 of American citizens of Polish extraction, in demanding that the present communistic government in Poland be liquidated without delay, and that a truly democratic government be elected by the people of Poland, in a free and untampered by Russian pressure election, in which the misplaced Poles all over the world, including the Polish Army in exile, be given the right to cast their votes.

We also decry the giving to Russia, Polish lands in the east, and especially eastern Galicia with the city of Lwow, and the Galician oil fields so sorely needed by Poland, which were never under Russian rule.

The peoples of eastern Poland, Poles, White Russians and Ukrainians, who in overwhelming majority are Catholics, want no union with Soviet Russia a fact that Russia is trying to cover up, by wholesale deportations and executions of real democratic citizens of Poland, and by trying to force same people to join the nationalized Russian Orthodox Church against their will.

The members of our group exhort you, not to let anything stop you from the promotion of a just cause, and insist on justice to a heroic nation.

Yours truly,

PETER MACIEJEWSKI,
President.
ALBERT J. DANISCH,
Recording Secretary.

Parasites in Oysters—A Serious New Enemy of the Oyster

EXTENSION OF REMARKS
OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. BLAND. Mr. Speaker, in 1930 millions of adult oysters died in the Virginia waters of Chesapeake Bay from some strange new disease and since then there have been over 12 similar mortalities on public and private oyster beds in nearly every Atlantic and Gulf coast State from Delaware to Texas. The dying oysters in each case have shown a heavy infection of a microscopic parasite which produces paralysis of the shell muscle and deprives the oyster of its ability to maintain closure of the shell when exposed to air or subjected to attacks of its many natural enemies. The latter includes over 15 species of marine animals such as starfish, drills, crabs, fish, and so forth, which destroy a greater quantity of oysters each year than are harvested by this industry. Of course, it is fortunate that all of the spawn produced by our eastern oyster does not grow to maturity or there would be enough produced in 1 year to completely fill all of our coastal harbors, bays, and sounds.

This new natural enemy of microscopic size is also very prolific and invades the tissues of the oyster to the extent of several million per oyster, of which 100,000 or more become lodged in the circulation of the muscle, depriving it of food and oxygen. Fortunately, the complicated life cycle of this parasite has finally been unraveled by a scientist of the United States Fish and Wildlife Service, who found that this pest is transmitted from sick and infected oysters to healthy stock by the small mud crabs which are very abundant on oyster beds. In these intermediate hosts rapid multiplication of the parasite occurs, especially during early fall, when a single crab may release into the water over 5,000,000 of the infective stages which attack the delicate tissues of the oyster, causing great irritation and muscular damage, particularly in the older, spawned-out oysters.

The oyster industry is confronted with the problem of controlling this disease by eliminating the mud crabs or by exercising special care in the selection of seed oysters which are not heavily infected with the sporozoan parasite. The oyster planter is able to dredge these nonmigratory crabs from his beds before they are planted with seed, but it is unfortunate that such a procedure cannot be applied to our extensive public rocks or natural oyster beds. Research on the possibilities of chemical or biological control of the mud crabs is being conducted at the United States Fishery Biological Laboratory at Beaufort, N. C.

Under the leave granted me to extend my remarks in the Appendix of the RECORD, I include a brief report published in Science concerning the Life Cycle of Sporozoan, Parasite of the Oyster, by Dr. Herbert F. Prytherch, of the Fish and Wildlife Service, who has recently served as area coordinator of fisheries for the Chesapeake Bay and North Carolina region.

I am endeavoring with my committee and the Fish and Wildlife Service to make an intensive study of this disease, and I shall be glad for persons who suspect that their oysters may be affected to write me and give me full information on which their suspicions are based, describing the planted area, its location, and give other pertinent facts.

The insertion referred to above follows:

LIFE CYCLE OF A SPOROZOAN PARASITE OF THE OYSTER

Since 1930 serious oyster mortalities have occurred in five different coastal regions from Mobjack Bay, Va., to Lake Barre and vicinity in Louisiana. In each instance the oysters have shown an unusually weak condition of the adductor muscle and inability to maintain closure of the shell during dredging, transplanting, and shipping operations. Though the exact cause of these epidemics has not been definitely established the microscopical examination of weak and dying specimens from each region has disclosed a heavy concentration of spores in the tissues of the muscle, gills, and mantle, the number per oyster frequently amounting to several million. These resistant, thick-walled spores, ovoidal in form, are generally grouped in variable numbers (1 to 16) in hypertrophied host cells and surrounded by a crescent-shaped epispore. The mature spore (length 20 μ, diameter 11 μ) contains a single vermiform sporozoite folded twice on itself and is the resting or final developmental stage in the oyster.

Studies conducted under natural and laboratory conditions show that the meats of dying, infected oysters are readily devoured by the common mud crabs, Panopeus herbsti and Eurypanopeus depressus, in the intestine of which hatching of the spores takes place. The sporozoite escapes through a micropyle and migrates to the epithelium of the gut, where it becomes attached by a globular epimerite. In 15 to 20 hours it develops into a very small, delicate, cephaline gregarine which soon detaches and undergoes precocious coupling with other sporonts (primary sporadins), forming syzygies of 2 to 10 individuals in chainlike formation. The chains break up and the young gregarines after another short period of attachment, develop into short, cylindrical sporonts (hypersporadins) having a length of 18 to 30 μ. The characteristic gregarine stage in the crab has a granular, spherical protomerite with a lens-shaped, epimeric cap of hyalin material. The long deutomerite, rounded at the end, has a more dense, granular cytoplasm containing a large vesicular nucleus with single nucleolus. A clear, well-defined cuticle surrounds both parts and forms a wedge-shaped "muscular collar" or septum at the point of junction.

The sporonts grow to a considerable size and form syzygies of two individuals of unequal length in which the primites attain a length ranging from 275 to 342 μ and the satellites from 220 to 286 μ. These migrate to the rectum of the crab, and after becoming attached to the cuticle by an adhesive disk, coil up and form strong, thin-walled gametocysts, varying in diameter from 81 to 192 μ. The two gregarines in each gametocyst undergo extreme nuclear division into gametes which, after a period of mixing, fuse in pairs forming zygotes that become arranged radially in small groups around slightly larger central cells. These rosettes of zygotes, or gymnospores, 4 μ in diameter, are released into the water with the rupture of the gametocysts and are carried into the shell of the oyster by the feeding current. The possibilities of heavy oyster infections are great considering the general abundance of the crabs and their close association with the mollusc, and the fact that 40 to 80 gametocysts, containing from approximately 8,000 to 90,000 gymnospores each, may be produced in a single crustacean host.

Experiments with vitally stained gymnospores show that they attach to and penetrate the epithelium of the oyster gill by means of a pseudopod projected from the central cell. Though the zygotes may develop here to maturity they generally are picked up by the phagocytes and transported in the circulatory system to nearly all parts of the body. In the blood vessels and sinuses of the gills, mantle, and muscle the infected phagocytes accumulate in large numbers and increase to a considerable size (diam. 30 to 100 μ) with the rapid growth of the zygotes and their transformation into sporozoites. After each sporozoite has surrounded itself with a heavy, double-walled sporocyst, the parasite has reached the characteristic resting or dissemination stage commonly found in Ostrea virginica. The spores were also found in the following pelecypods: Pecten, Anomia, Ostrea equestris, Modiolus, Venus ziczac, and Martesia, and in the gastropod, Urosalpinx.

The life history and morphology of this sporozoan parasite resembles that of the porosporidae described on the French coast by Leger and Duboscq and Pierre Hatt. It is a heterogenetic gregarine with alternation of hosts, having the vegetative and reproductive phase in the intestine of decapod crustacea and sporogony in mollusks, particularly in lamellibranchs. The resistant, monozoic spores found in Ostrea are similar to those first described as Nematopsis by Schneider in 1892. The American form, which will be described in detail in a forthcoming paper, is a new species for which the name "Nematopsis ostrearum" is proposed.

Studies of the effect of the parasite on adult oysters were conducted in the laboratory, where heavy infections could be produced by keeping them in close association with mud crabs carrying gametocysts or by the introduction of ripe gymnospores. In bulk experiments with several hundred oysters, losses of 66 to 73 percent were obtained over a period of 3 months. Kymograph records of shell movement of 35 heavily infected oysters showed abnormal and frequent contractions of the adductor muscle followed by loss of holding power and death of the molluscs. Retraction of the mantle, cessation of shell growth, and weak attachment of the muscle to the shell are also characteristic of mortalities in the field and laboratory. The injury to the oyster host may be due to a toxin given off by the developing sporozoites, particularly in the sensitive mantle tissue, or to actual physical obstruction of the circulation by the masses of enlarged, infected phagocytes found in the blood vessels of the gills and muscle.

Practical prevention of the infection of oysters by this parasite is possible by control of the primary host, the mud crabs, and by exercising care in the selection of uninfected seed oysters for restocking growing and maturing areas. The crabs do not migrate and can be easily removed, before the beds are planted, by the use of dredges or scrapes equipped with fine mesh bags. In certain regions where valuable oyster beds have been abandoned or their productivity seriously

reduced because of damage by this microscopic pest it should be possible to reestablish and increase production by the procedure suggested above.

HERBERT F. PRYTHERCH,
United States Fisheries Biological Station, Beaufort, N. C.

The Bells That Toll for Mount Vernon

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mrs. BOLTON. Mr. Speaker, I wish to extend my remarks by inserting in the RECORD an article published in the Washington Post Sunday, February 24, 1946, entitled "The Bells That Toll for Mount Vernon":

THE BELLS THAT TOLL FOR MOUNT VERNON
(By Jean Dulaney)

One of the Navy's oldest yet least familiar traditions was founded on a May morning in 1801, just 18 months after George Washington was laid to rest beneath the grassy slopes of Mount Vernon. Brilliant sunshine accentuated the beauty of the white manor house overlooking the Potomac as three frigates sailed past on their way to the new Washington Navy Yard.

Let Commodore Charles Morris, United States Navy, who was aboard the U. S. S. *Congress* that May morning, tell the story:

"Everyone was on deck to look upon the dwelling where Washington had made his home. Mrs. Washington and others of the family could be distinguished in the portico which fronts the river. When opposite the house, by order of Captain Sever, the sails were lowered, the colors displayed half-masted, and a mourning salute of 13 guns was fired as a mark of respect to the memory of Washington, whose life had so recently closed and whose tomb was in our view. The general silence on board the ship and around us, except when broken by the cannons' sound; the echo and reecho of that sound from the near and distant hills, as it died away in the distance; the whole ship's company uncovered and motionless, and the associations connected with the ceremony, seemed to make a deep impression upon all, as they did certainly upon me. When the salute was finished the sails were set again, the colors hoisted, and we proceeded up the river."

Thus the U. S. S. *Congress* inaugurated a custom still followed by the United States Navy. Nearly a century and a half later, every naval vessel passing the tomb of Washington tolls its ship's bell as the bugler sounds taps and officers and men stand at attention and salute.

Until recently, a popular legend insisted that the custom originated with a squadron of British ships which sailed up the Potomac during the War of 1812. But the Mount Vernon Ladies Association, which has maintained Washington's home since 1858, was reluctant to admit that an erstwhile enemy could outdo Americans in honoring their country's No. 1 hero.

The association, therefore, was delighted to find evidence which undermined the legend. The first clew was a photostat letter given them last year by the New York Public Library. Written by Bushrod Washington, nephew of George and proprietor of Mount Vernon from 1802 until 1826, it is dated November 29, 1814, and describes in some detail "the late invasion of this part of the country by the enemy." He writes:

"The squadron lay at this place some days in its ascent and on its return, and yet I do not believe that during the whole time a single barge approached this shore. This distinguished forbearance I owe to the generous feelings of Commodore Gordon for a place which had once been the residence of my venerated uncle. He expressed to one of the Alexandria commissioners, who was deputed to stipulate for the safety of the town, an anxious desire to visit this spot, but was so delicate as to declare his resolution not to do so, presuming that my official situation [Washington was at that time an Associate Justice of the Supreme Court] would render such a step peculiarly embarrassing and distasteful to me."

Just to be on the safe side, however, the ladies turned to the Navy Department for more definite information. They were rewarded with the excerpt from Commodore Morris' autobiography describing the ceremony aboard the *Congress*. This document establishes beyond question that naval vessels had begun saluting Washington's tomb 13 years before the arrival of the British squadron.

Most civilians are unfamiliar with the custom; even Navy men whose orders have kept them far from the peaceful Potomac sometimes confess ignorance of it. President Theodore Roosevelt himself, Navy conscious though he was, was taken by surprise when he witnessed the ceremony from the deck of the Presidential yacht *Mayflower* in 1906. Inquiring about the ritual, he was told that it took place not by official order but merely as a matter of tradition. With characteristic enthusiasm, Theodore Roosevelt immediately issued an order prescribing the ceremony to be observed by all United States Navy vessels passing Mount Vernon between sunrise and sunset.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oakland (Calif.) Post Enquirer of February 5, 1946:

FAVORABLE ACTION URGED ON HAWAII'S STATEHOOD APPEAL

They are talking about putting another star in Old Glory.

Out on the cross roads of the Pacific where Kamehameha the Great once established an empire, they are looking for the realization of statehood.

Nine years ago when a congressional committee visited the islands, it was favorably impressed but suggested that action be delayed until there was unmistakable evidence that a substantial majority of the residents desired statehood and until the international situation was less disquieting.

The Territorial legislature called for a plebiscite and, in the general election of November 5, 1940, the residents favored statehood by a vote of 2 to 1.

A Gallup poll revealed that public opinion was divided in about the same proportions on the mainland.

At the close of the war the Territorial legislature renewed its appeal.

Another committee was named. It held hearings in Hawaii and its report is now before Congress.

The committee found that the Caucasian population had increased from about 6 percent in 1878 to 34 percent and that well over 85 percent of the present population was born in Hawaii or on the mainland.

It found that Hawaii produced approximately $65,000,000 worth of sugar in 1944 and $45,000,000 worth of pineapples; that it had consistently paid more into the Federal Treasury than it had taken out and that the 1945 contribution amounted to $173,939,227; that in 1944 and 1945 Hawaii had exceeded several States in the total of its internal-revenue collections.

The report was favorably received. Senator SHERIDAN DOWNEY declared:

"I favor statehood for Hawaii and I will support it. The whole Territorial picture, from the standpoint of economy, production, and strategical location, make it very necessary that Hawaii be welded into the Union."

Hawaii was annexed by the United States in 1898 and became a Territory in 1900. Its pioneer American families are, for the most part, the descendants of New England missionaries who came to the islands to convert the natives to Christianity. It has a commendable war record. Thirty-three thousand of its citizens served in the armed forces. Not one single act of sabotage or fifth-column activity was reported before or after the attack on Pearl Harbor.

It was not unexpected, therefore, that the congressional committee brought back a favorable report. They found that "the people have demonstrated beyond question not only their loyalty and patriotism but also their desire to assume the responsibility of statehood."

Hawaii has come of age.

A Statement About the United States Rice Industry

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1946

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include a statement about the United States rice industry prepared by Hon. Frank A. Godchaux, Jr., president of the Louisiana State Rice Milling Co., Inc., from Abbeville, La.

Mr. Godchaux is not from my district; however, his company has millions invested in my district in the way of rice mills, canals, farms, and other interests, and is the president of the foremost corporation who have interests in connection with the rice industry in Louisiana and other States in the United States and therefore, is recognized as a leader and an authority on the subject. The statement follows:

LOUISIANA STATE RICE MILLING CO., INC.,
Abbeville, La., February 15, 1946.

Hon. J. H. DAVIS,
Governor of Louisiana,
Baton Rouge, La.

DEAR GOVERNOR DAVIS: We have read with interest the Honorable Clinton P. Anderson's letter of February 7, addressed to you, in which he challenges your statement that 30,000,000 pockets of Siamese rice have been allocated to England.

I believe we were one of the sources of your information on this point, and one basis for our statement was the Washington Food Report of January 5, section II, page 4, under the head "World rice shortage squeezes United States supply." It read as follows:

"Britain has concluded a peace treaty with Siam, the only far eastern country with a rice surplus. The treaty requires that Siam furnish a minimum of 1,500,000 tons of rice as restitution for assistance given to the Japs during the war. Actual amount that will go to feeding hungry peoples in other British-controlled far eastern areas has not yet been decided. United States believes that 1,500,000 tons is too great and is holding conversations with the British with the aim of getting them to take no more than 800,000 tons. Reason behind our urging the British to be more moderate in their demands is that in prewar years Siam's exports were about 1,500,000 tons. If the British were to take this amount, little or no rice would be available to meet our responsibilities in the Philippines and to aid General MacArthur in helping the Japanese to get through the winter."

One million five hundred thousand tons are equivalent to 33,600,000 pockets. It appears, therefore, that your statement of 30,000,000 pockets, or bags, was on the conservative side instead of being an overstatement. Other publications about this same time carried approximately the same information as contained in the Washington Food Report. We have seen no contradiction of this by any Government reports. It was reasonable to assume, therefore, that the information contained was approximately correct.

The Washington Daily Reporter System, No. 25, issued February 4, reports on page B-14 that the 1945 Egyptian rice crop is relatively large, and that the Egyptian Government has agreed to make available to the British Ministry of Food 330,000,000 pounds, or 3,300,000 pockets, for export and for British requirements in Egypt. They add that "Production of a bumper crop, however, may make possible some additional supplies for export."

We believe it is correct that the surplus of Brazilian rice, which was jointly contracted for by the United States and British Governments, has been allocated by the Combined Food Board to Great Britain.

It would seem, therefore, that the 33,600,000 pockets from Siam, which is almost twice as much as our country produces, and the 3,300,000 pockets from Egypt, together with the surplus from Brazil, is giving Great Britain a rather ample share of the world's available rice.

There is another interesting comment in the Washington Food Report of January 19, section I, page 4, which reads as follows:

"Allocation of 1,925,000 pockets for the domestic trade is misleading. Government take makes it impossible for that amount to be delivered. Large part of the rice remaining after the Government takes its cut is too low grade for the trade to accept.

"British are taking all the rice in Siam until the harvest starts in November 1947. Although the deal with Siam is for 1,500,000 tons, London advices are that they expect to pick up less than that from accumulated stocks. This will be moved to British people in the Far East except that some will go to the Dutch. Crop from present harvesting is about 20 percent less than normal, allowing about enough to enable the British to continue distribution from old stocks, but there will be very little for other oriental demands or possible world markets until January 1947.

"Every report about the rice situation in the Far East is worse than its predecessor. British have grabbed all available rice in Burma as well as Siam. Considerable rice will be needed in China. Picture isn't entirely clear as the British have not been offering as much money as the Chinese want; rice has remained in the interior and accurate estimates as to quantity are lacking."

The best information that we can get indicates that the Philippines will get no more than 1 percent of the rice the Siamese Government has committed to Great Britain, which will amount to 15,000 tons, or 336,000 pockets. If these figures are incorrect, we believe it is up to Secretary Anderson to give us corrected figures. The statements to you in his letter of February 7 are exceedingly hazy. He states that "all rice available in Siam is subject to allocation, recommended by the Combined Food Board." Does "available" mean rice stocks over and above the 1,500,000 tons which went to Britain on treaty agreement? If this large quantity of rice has been turned over by Britain to the Combined Food Board, and if the Philippine needs are so great, then surely more than 1 percent of this amount should be allocated to the Philippines instead of endangering the future of the rice industry in the United States by taking the pitifully small amounts that can be gotten from this country and exporting it to the Philippines.

We will grant that no one in the United States is going to suffer from hunger, even if they get no rice at all, but since we now produce more than twice as much rice as we consume and will, therefore, need to cultivate the consumption of rice in the United States, which must always be our main outlet, it would seem that some consideration should be given to the economy of this country in determining our relief program. If our purpose is to feed hungry people in the Far East, we do not necessarily have to give them rice merely because they prefer it—any food can appease actual hunger.

The Washington Daily Report on Agricultural Commodities No. 32, of February 13, says:

"Among the foods for which consumption per person is expected to be higher than in 1945 are beef, pork, fish, evaporated milk, cheese, fluid cream, lard, processed fruits and vegetables, and potatoes. A little more sugar may be available than last year."

These foods are well established on American tables. If more rice is made available to domestic consumers, less of these and other foods will be required. Many southerners choose for their daily diet between rice and bread. If more rice is allowed them, less wheat products will be required and more left for export. It makes sense that whatever relief we send to the Far East might better be in commodities for which a future demand might be developed, rather than in rice, of which they grow a huge exportable surplus which is used to compete with our production in the Cuban market.

Mr. Anderson also suggests that additional control measures may be necessary to prevent excessive shipments to Cuba and Puerto Rico. Our reply is that practically all the rice we have shipped to Cuba has been of grades that neither the domestic trade nor the Government would take and we have reason to believe that other mills' shipments have been in like proportion. It is neither Cuba nor Puerto Rico that is causing the dearth of rice in the United States. It is the amount that is being exported for relief purposes for which other foods might well be substituted in the interest of our domestic economy.

Everyone interested in growing, milling, distributing, or conserving rice appreciates your efforts to get a reasonable amount released for home consumption, and everyone in Louisiana knows that rice is important to the economy of our State and that when you seek to protect the rice industry you are rendering a service to the State.

Yours sincerely,

FRANK A. GODCHAUX, Jr.,
President.

Number of Small Business Failures

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. KEFAUVER. Mr. Speaker, on Friday, February 15, the gentleman from Illinois [Mr. ALLEN] cited some figures compiled by the Bureau of Foreign and Domestic Commerce of the United States Department of Commerce with regard to the number of small business enterprises in the United States which had discontinued operations during the years 1940 to 1943, inclusive. The figures showed that an average of 25,000 or 26,000 small businesses had discontinued annually during that period.

On the basis of these figures the gentleman from Illinois attempted to show that American small business had fared very badly during the last 4 or 5 years.

I am afraid that the gentleman did not complete reading the document prepared by the Bureau of Foreign and Domestic Commerce on which he based his remarks.

I have recently had an opportunity to examine this document, and I find that the facts cited convey quite the opposite impression from the one the gentleman sought to convey.

He referred to the discontinuance of these businesses as business "failures." But the document makes it clear that they were not necessarily failures. The gentleman should know that there is quite a difference between discontinuing business and failing in business, especially since the Bureau's document makes this point amply clear.

Just so that there may be no further misunderstanding about this, I quote from the Bureau's remarks on the subject:

> The decline in number of firms has not, on the whole, been accompanied by a similar decline in the profitability or volume of business. Although there have been notable exceptions, production, sales, and profits in most lines—for small as well as large enterprises—have been maintained at a high level during the war. Indeed, a large number of recent business deaths have been due, not to the fact that the economic forces of the war have driven entrepreneurs out of business, but that the owners have found attractive alternative opportunities in war industries or have been called into the armed forces.

The gentleman, to give the real picture of the number of bankruptcies in business during these years, should have used a different set of figures. This is what the Wall Street credit rating firm of Dun & Bradstreet's records show:

Year:	*Bankruptcies*
1940	13,619
1941	11,848
1942	9,405
1943	3,221
1944	1,222
1945	810

It does not seem that business—large or small—has fared at all badly in recent years.

That was not the case, however, under the last Republican administrations. Here is Dun & Bradstreet's record for that unlamented period of American business history:

Year:	*Bankruptcies*
1920	8,881
1921	19,652
1922	23,676
1929	22,909
1932	31,822

These figures speak for themselves. I am sure that the small-business interests of this country will not be misled by the kind of statistical legerdemain that the gentleman from Illinois saw fit to indulge in here the other day.

Trend Toward National Bankruptcy

EXTENSION OF REMARKS

OF

HON. NOBLE J. JOHNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. JOHNSON of Indiana. Mr. Speaker, the following article by Mr. Frank R. Kent contains much food for serious thought and shows the trend of the present administration toward national bankruptcy:

WRITER BELIEVES 30,000,000 SHOULD WORK FOR LABOR PEACE, INFLATION CURES

(By Frank R. Kent)

There are approximately 80,000,000 persons in the country who own war bonds and stamps. There are 71,000,000 holders of life-insurance policies, and 16,725,733 individual savings-bank depositors as of July 1, last. Of course, there is some duplication in this, but certainly more than 90,000,000 of our citizens have either war bonds, insurance policies, or savings accounts, and more than half the whole population has all three.

This being so, and these investors not being idiots, every one of them must have a primary interest in the soundness of their investments. Given even rudimentary intelligence they are bound to be against anything that undermines their value or lessens their security.

Now, no one denies that the greatest threat to every form of fixed income is inflation. With inflation, the cost of living goes up and the purchasing power of the dollar goes down. With uncontrolled inflation, the dollar becomes debased to the point of having no value at all, and bonds, insurance policies, savings-bank deposits, and all other securities become worthless. A period of complete economic chaos then ensues in which everybody suffers—but, of course, most deeply, the poorer classes.

INFLATION POSSIBLE

It is the custom to say that we will not have that kind of inflation here. And, of course, we ought not to have it and there is no excuse for having it. Nevertheless, it is conceivable and it is possible. With our Federal finances out of control, as they almost are now, once we get into that upward spiral of rising prices and rising wages, inherent in the present situation, there is slight chance to avoid it.

Considering these facts, it would seem that solely out of self-interest the holders of Government securities, insurance policies, and savings-bank accounts would cease taking a passive interest in what goes on in Washington and become as active as they know how. It is clear that the two essentials are a truly balanced Federal Budget and uninterrupted industrial production. Certainly, the many millions of small investors are vitally concerned in seeing that nothing is permitted to block these achievements.

To this end the weight of these concerned citizens ought to be solidly behind legislation in Congress that will find some sound way of settling labor-industrial disputes which strangle the economic life of the country and affect the necessities of life for the people. Also, this weight should be unwaveringly against Federal waste and extravagance and in favor of rigid governmental economy.

INDIGNATION IN ORDER

Yet, it is not exerted in either direction. A labor bill, not as comprehensive as it should be but to which few sound objections can be made, has passed the House but has a poor prospect in the Senate, where the hint is given that the CIO Senators, who most violently denounced the filibuster on the FEPC bill, will filibuster on the Case bill—if it seems likely to go through.

There should be real indignation about this from the aforesaid 80,000,000 bondholders, etc., but there has been small sign of such. Equally, there should come from the millions of small holders vigorous protest against the phony economy preached by the Truman budget message, which isn't economy at all but extravagance.

Not only are there more civilian jobholders on the pay roll today than there were when the war ended, but there is no plan for reducing them—quite the contrary. In addition, it is proposed to spend more in every department in the year beginning July 1 than was spent in the year ended June 30 last. A recent authoritative estimate is as follows: Agriculture, up 22.5 percent; Commerce, up 101.2 percent; Interior, up 47.5 percent; Justice, up 36.8 percent; State, up 144.2 percent; Treasury, up 58 percent; War (civil functions), up 111.1 percent.

TREND TOWARD SPENDING

In brief, we are not going to reduce the Federal pay roll; we are not going to reduce Federal costs; we are not going to reduce the Federal debt. There is literally nothing in the Truman fiscal plans, as one man remarked, "to make any civil-service job holder turn over in his groove."

As under Mr. Roosevelt, the trend is toward spending, not saving. The gestures toward economy are feeble and meaningless. The new State Department propaganda experiment to cost $30,000,000 has the President's support. So has the $70,000,000 UNO site and plant (for which we will chiefly pay), though Senator VANDENBERG, a strong UNO man, insists that both as to size and cost, they are ridiculously large. And certainly, without being penny pinching or cheese paring, they seem so.

These two incidents of new expenditures are mentioned here merely as examples. There are plenty of others. It is a dangerous road we travel, made the more so by a Secretary of the Treasury who, apparently, is not interested in economy. At any rate, he sponsored a tax bill reducing Treasury revenue $7,000,000,000 and exempting 12,000,000 persons from all taxes.

Relationship Between Domestic and Foreign Policies of the United States

EXTENSION OF REMARKS

OF

HON. CHARLES M. LaFOLLETTE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. LaFOLLETTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a radio address made by me under the auspices of the Indiana Committee for Victory over Station WFBM, Indianapolis, Ind., on February 10, 1946:

I want to talk about the inescapable connection between our domestic policies and our foreign policies and aspirations for future peace. If I were choosing the easy way, or the politic way, I would not do this because it is a subject which many self-styled liberals on international cooperation would like to avoid. As a matter of fact, this connection between our domestic and foreign policy is the most shunned and avoided subject in America today. The failure to discuss it can be fatal to the hopes of the peoples of America and of the world for peace in the future.

In the parlance of the times, "I don't want any part of" the mealymouthed, emotional, self-styled liberal on the international issue who, now that a United Nations Charter has been written and the United Nations has come into existence, ostrichlike wants to shut his eyes to the economic truths without which no writings on paper, created by the statesmen of the world, can or will long endure.

You cannot have peace in the world unless you raise the standard of living of the people who inhabit the world. If we assume that this is true, and it is, then we must also understand that you cannot have world commerce and world trade, which are necessary to increase the standard of living of the people of the world, unless you make certain that in the United States of America we have full employment, at wage levels high enough to permit our people to increase their standard of living so that they may consume the products which other people can produce without causing domestic unemployment. I am no starry-eyed visionary when I bring these truths to your attention.

In the event you do not know it, may I remind you that the Committee for Economic Development is an organization of leading hard-headed American businessmen, industrialists, and financiers, headed by a Hoosier, Mr. Paul G. Hoffman, of South Bend, who is the president of the Studebaker Corp. This organization just issued a new book entitled "International Trade and Domestic Employment." I now give you two quotations from this book:

"The maintenance of a high level of employment in the United States is the most fundamental condition for keeping in operation a program of international trade expansion. Evidence indicates that the level of our industrial activity is the greatest factor in determining the volume of our imports, on which many countries depend for their purchasing power in international trade."

"If our National Government stands ready to take strong internal measures, whenever necessary in time of depression or threatened depression, to maintain domestic employment, imports need not be feared as a cause of unemployment."

In these quotations this organization has spoken a fundamental truth and they have spoken it forthrightly. In any intelligent use of the term, therefore, their treatment of this subject has been radical, and since I agree with them, I consider it to be an honor and a privilege to stand with these radicals on this issue.

However, you cannot keep a high level of employment in America unless you give to the worker in American industries, particularly mass-production industries, the highest possible wage rate at prevailing prices which are consistent with a reasonable degree of profit to those who own the tools which the worker operates. You must do this because you cannot maintain a high level of industrial activity in America without it. Certainly the experience of the twenties

should teach us that. Furthermore, you cannot obtain for these workers this necessary share of the wealth produced by the workers and the owners of the tools unless the workers have strong unions through which to obtain their rightful share of this wealth. Again the experience of the twenties should teach us that. I am speaking of the intelligent approach to this question, evidenced by the best minds in the labor movement; namely, that there must be a raise in real wages; that is, a greater share to the worker of the wealth produced without any appreciable increase in the cost of the product. Anyone who knows anything about production knows that with the pent-up consuming power presently available in America, we are faced with a period of increased consumption, which means increased number of units produced and, as the number of units produced increases in mass production, the profit per unit increases at the same price level. But this increased number of units cannot be consumed if the owner of the tools takes such a great share of the wealth produced in the form of profits that he repeats the mistakes of the twenties and fails to leave the producers a sufficient amount of money to consume his product.

It follows, therefore, that if you are intelligent, you cannot believe in international cooperation, which depends upon world trade, and at the same time gratify your emotions by labor-baiting, or like a blindly ignorant, uninformed reactionary, cling to theories of economics which in the past have always brought us to depressions and then the wars which follow out of the economic stresses which depressions produce.

Again, if there is to be hope in the world and people are to live in a world in which governments exist with the consent of the governed, without which philosophy there is no freedom in the world, our country must bring the moral leadership to the world which will make this possible. This means that we must assume the leadership which is necessary to say to the white nations of the world, which heretofore have lived by depressing the standards of living and retarding the educational and cultural development of the yellow and the brown and the black peoples of the world, "It is time for you to release your hold and permit these people to realize the freedom which they now desire to attain."

This position is not only sound morally, but it is also again sound from the standpoint of jobs, production, and profits because you can't sell sewing machines, or kitchen ware, or medical supplies and drugs, or oil, or its derivative products, or farm machinery of the simplest kind- let alone radios, ice boxes, bathtubs, and automobiles—to yellow, brown, or black people who receive such a small share of the wealth which they produce—from under the surface of the earth which they inhabit or from the soil upon it—that they can barely maintain themselves as humans under the most primitive conditions. But these people occupy almost three-fourths of the surface of the earth and offer the greatest potential market for industrial goods in the world today. Therefore, it is not only morally sound but it is good business for this country to furnish the leadership which will strike the colonial fetters from these people and relieve them from the economic injustices to which they have been forced to submit for 400 years. However, if America is to furnish this leadership, it must do so by setting an example in its domestic policy on the question of race and economic suppression of dark-skinned people in our own midst, whether they be Negroes or of Indian or Mexican origin, which is consistent with the position we are attempting to assert internationally. America cannot send out into the world a clear bell-like tone of moral sincerity upon this question of race and colonial suppression if we continue to project it from a warped and cracked domestic background. We cannot any longer permit an invidious, irrelevant, and biologically unsound prejudice on the subject of race produce discriminations in economic opportunity in our own country and hope to avoid, out in the world, the charge of hypocrisy, from the white colonial nations of Europe, or the feeling of suspicion on behalf of the yellow and brown and black-skinned people, whom we are professing to help.

It follows, therefore, that even if there are those among us who would attempt to close their eyes to the immorality of our domestic policy on the question of race, they cannot come to me, or to you, or to any intellectually honest person, with a profession of interest in international good will and peace unless they are first willing to take one of the vital steps necessary to bring that condition about; namely, the clearing up of our own situation here at home.

It is one world, my friends. What we do in America determines the effectiveness of our efforts to produce a stable economy and moral justice in the world, without which all of the United Nations documents and all of the provisions for world courts will accomplish nothing in the way of bringing peace to the world or preventing a Third World War. If you fail to understand this, or, understanding it, fail to fight for it here at home, then please be honest with yourself and with the world and abandon your claim to being a liberal on the international issue, for your actions make your definition of yourself empty and meaningless.

A Filipino Hero

EXTENSION OF REMARKS
OF
HON. CARLOS P. ROMULO
RESIDENT COMMISSIONER OF THE PHILIPPINES TO THE UNITED STATES
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. ROMULO. Mr. Speaker, under leave to extend my remarks in the RECORD today, I take pride in paying tribute to a Filipino war hero who embodies the courage and the heroism of those who in Bataan, Corregidor, Leyte, and all over the Philippines, fought so loyally for the United States and the ideals and principles for which this country stands.

Man's memory is short. Victory is here, and in the flush of triumph we are too prone to forget those who served the cause at the risk of their lives. During the first days after the attack by the Japanese on Pearl Harbor, a Filipino aviator, then Capt. Jesus Villamor, recently promoted to lieutenant colonel by General MacArthur, gave a display of matchless courage when in a dilapidated training ship he dared attack a Japanese formation of planes and scattered them, thus bolstering the morale of both the soldiers and civilians at a time when everything was dark and desperate for our side. He was the first Filipino officer to be decorated by General MacArthur with the Distinguished Flying Cross. The President of the Philippines decorated him with the Distinguished Service Star.

After the fall of Bataan, Colonel Villamor was taken by one of General Royce's planes to Australia, from where a year later he was sent by General MacArthur in a submarine back to the Philippines, then under enemy occupation, to contact the Filipino guerrilla leaders and coordinate their activities. Again he displayed the same daring and intrepidity and succeeded in unifying the different guerrilla factions, and because of this he materially helped organize and strengthen Filipino resistance against the enemy. For this he was decorated by the late President Quezon with the Medal for Valor, the highest decoration of the Philippines.

The other day he was decorated in the War Department with the Legion of Merit by Maj. Gen. Charles Willoughby in behalf of General of the Army Douglas MacArthur. If any officer in the uniform of the United States Army deserves such a decoration, Colonel Villamor certainly does. His services to the Allied cause should be recorded in the annals of the war as among those to be remembered forever.

The Filipino people are proud that they have men of the character and valor of Lt. Col. Jesus Villamor, than whom there is no greater living hero in the Philippines today.

Speech Before Fourth Ward Republican Club of Marion County

EXTENSION OF REMARKS
OF
HON. CHARLES M. LaFOLLETTE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. LaFOLLETTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by me before the Fourth Ward Republican Club of Marion County at Indianapolis, Ind., on February 15, 1946:

The Republican Party can either save itself and America, and indeed the world, or it can destroy itself and America, and the world. The time for decision has run out, so that the day of decision is upon us.

I am pleased that tonight this audience is made up of people who are closely identified with the fourth ward Republican organization and of voters of that ward, who I presume, usually vote the Republican ticket in Marion County, or who usually want to vote the Republican ticket.

Basically, there is no difference between the desires, hopes, and ambitions of people who closely affiliate themselves with the organization work of political parties and those who consider themselves only as members of the party because they usually vote that party's ticket. They are the same kind of people; they desire the same end—an America to live in, in which there is the most equitably possible division of wealth which we can produce in America under an economic system and a Government which, at the same time, grant the greatest degree of true freedom—which exists only when we have rule by law, not men.

Very often organization people, so-called, conclude that the average voting-party member is indifferent, impractical, and at times too demanding, considering the fact that usually he only shows up once every 2 years at a general election, and rarely twice every 2 years, in those years that he takes the time to vote in a primary. On the other hand, party members, who are usually nothing but voting-party members, seem to develop the

mistaken idea that organization workers are too efficient and officious, and too callous toward the so-called theory of government. Both groups are too often wrong in their judgment of the other, and it is a good thing for them to come together occasionally, just for the purpose of learning that the people in each group are very human people, both trying to attain the same goal. I know this is true, because I have stood in precincts, worked to get out the vote, worked with organizations, and I have also fought organizations. From that I have learned that the reason that people gain recognition in political organizations and are effective in working in political organizations is a very simple one, namely, that they put their time and effort into the humdrum, drab, unpleasant work of getting out the vote, and doing the hundred and one other things which are necessary, if a party is to function successfully on election day.

Therefore, it follows that both party voters and party precinct and ward organization workers have an interest in the success of their party and in the advancement of the best interests of their country. Neither deserves to have the interest of the party jeopardized by the "palace guard," a few people sitting near very high places in the party organization, whose only simple desire is selfish, namely, to manipulate the party for their own interests, or for special-interest groups which they try to serve and protect.

I also understand the difference between the obligations of candidates of political parties and the obligations of party organization workers. It is the duty of candidates to present to the public a program and a policy which will make it easier for the organization workers to secure votes for the party. Nothing has a more deadly effect upon a party worker than to find that the candidates, thrust upon him by high leaders of his party seeking to serve their own or other special interests, represent policies which the public is not interested in supporting.

Therefore, we ought to take a look at the traditions of the Republican Party to see what it really stands for when it is true to its traditions, and then we ought to consider whether the things for which the party really stands are the things which the people want today. I haven't found any Republican yet who is willing to denounce Lincoln, even though I hear a lot of them today who, by their talk, are betraying him. Therefore, it ought to be safe in advocating Republican policy to see what Lincoln said about it.

At New Haven, Conn., on March 5, 1860, in discussing the capitalistic system as he understood it, he said this:

"So while we do not propose any war upon capital, we do wish to allow the humblest man an equal chance to get rich with everybody else * * * I want every man to have a chance and—I believe a black man is entitled to it—when he may look forward and hope to be a hired laborer this year and the next, work for himself afterwards, and finally to hire men to work for him."

That is basic Republican doctrine, and upon that doctrine I base my republicanism, and I do not intend to be driven from it by those uninformed, historically ignorant Republicans who are presently running around the country praising something they call "conservatism" and damning something they call "radicalism," but who are actually spouting the Democratic policy of Stephen A. Douglas and his present poll-tax Democratic successors, under a banner of false republicanism. If they are going to do that they should at least be honest enough to denounce Lincoln openly and repudiate him, or to admit that they are so ignorant of Republican tradition that they don't know what the party tradition requires of it today. They can have either horn of that dilemma they choose, but it is about time they grabbed hold of one of them.

Lincoln was espousing the basic principles of radical capitalism—radical in the sense of being fundamental and as stating the only conditions under which capitalism can live and survive, and grow, and become great, as the means of fulfilling the democratic desires of the people, as stated in our Declaration of Independence.

Lincoln was talking about the dignity of the individual. He was stating that people are dignified and have the same basic rights without regard to the color of their skins; that the dignity of man lay inside him, not on the outside of him. He was telling people that as a part of that dignity was the right of every man to feel a sense of participation in his economic life, a personal interest in the thing which he was producing, and that he had a voice in determining his share of the wealth which he was assisting to produce If the Republicans who are declaring that they are going to drive the radicals out of the party and out of office are denouncing that kind of radicalism, then they are not only denouncing Lincoln; worse than that, they are doing their very best to destroy the stake which the industrialists, whom they think they are serving, presently have in the economic system of America. If these industrialists could take a little time off to observe economic and social trends all over the world, to learn a little about the principles and aspirations set out in the Declaration of Independence to which all democratic peoples aspire, then they would truly say of such Republicans, "God save me from my friends."

So far as I am concerned, I cannot accept the philosophy and theories of the Communists, because I cannot see how the evils of oligarchy and bureaucracy, with their static effect upon the economy or the government of a country, can be overcome, so that the system can remain democratic and therefore a vital, dynamic system, over any extended period of time. Furthermore, I likewise cannot accept the ethics, or rather lack of ethics, to which the American Communists almost invariably subscribe. But I do know this, that the mass of the people, if they are eventually driven to a choice between privately owned monopolies, in which they feel they have no part and over which they feel they have no control, and if they continue to become so powerful and strong that they stifle the hopes of the people to participate in the things which affect their own lives, then the people will be driven to accept state ownership of the economy of the country and to reject capitalism solely on the theory and with the hope that since they are a part of the country they will have some measure of control over it. I think if the people make that choice, they will be deluded. Certainly they will be deluded if they do not preserve a strong parliamentary system. For myself, I am not prepared to accept either of these alternatives without trying, to the best of my ability, to create a capitalistic system in which the people feel they have a part and under which we do not continue to have their never-ceasing concentration of power over our economic life in the hands of a few people, and of wealth constantly increasing in the hands of those who own the tools by which the economy of America is operated.

Now, what are some of the things which must be done to create a capitalism which approximates the standards which Lincoln expounded in his New Haven speech?

First, we must broaden the base of ownership of, and participation in, the decisions which control the operation of our mass-production industries. Certainly a revised form of corporate taxation, in which income taxes are for all practical purposes eliminated against corporate earnings and are taxed directly to the stockholders, will have the effect of helping to eliminate the present condition under which the small stockholder is indirectly paying, under our present high corporate tax rate, a much too great share of the taxes, which should be paid by the large stockholder or extremely wealthy stockholder. It is surprising to me that there are as many small stockholders in corporations as there are today when we consider this inequity in corporate taxation.

Second, the development as an immediate first step of real worker-management cooperation, so that the worker can feel such a sense of participation in the decisions which affect his daily work that we may in good conscience exact of him a higher sense of responsibility. Whether we like it or not, it is increasingly difficult for any man, who feels that he is a freeman, and an intelligent man, to have a real sense of responsibility, when he is working for a wage, no matter how satisfactory, under conditions where he has no personal relationship with the owner of the plant in which he is working, or no sense of participation, in any degree, with the owner in the decisions which vitally affect his life as a worker.

Third, as an additional aid to the cracking up of this concentration of wealth, a system of tax relief incentives for both investors and workers in new industries should be developed and varied, if necessary, in proportion to the new ownership of the wealth involved, in addition to the risks involved.

Fourth, all people in this country must have a feeling that they have an equal economic opportunity with all other people, so that we must at once strike down by Government action those invidious and irrelevant discriminations which arise from prejudices on the subject of race, creed, or color, which are morally and biologically untenable.

Fifth, if we are to maintain a capitalistic system, with its inevitable shifts in consumer desire, and its consequent shifts in manufacturing activity to satisfy that desire, we must make provision for both the owners of the tools and the worker who works with the tools, to be carried over until the owner develops a new business and the worker a new skill, without losing both the buying power and morale of either, or both. It follows that no capitalistic system can successfully operate so as to satisfy the people unless there is maintained a broad, adequate social security system, in the broadest possible meaning of that term.

Sixth, certainly we shall have to keep a high standard of real wages in the hands of the masses of the people in order that the people may consume the goods which they produce with the owner's tools. If the owner takes too much of this wealth, he can't consume his product and he deprives the people of the opportunity of consuming it. Thereby, we create another depression which this capitalistic system can't stand and survive. It isn't only the industrialist who is hurt by that, but all the rest of us who are trying to preserve the good freedoms which we think are inherent in it.

Seventh, any person who goes around the country today telling the industrialists and the bankers of America and the middle-class people of America that we are going to have less Government-fixing of rules under which our economy must run than we have had in the past is a false prophet and telling an untruth. Whether he does so willfully or otherwise is not important.

The greatest check against the dangers inherent to an enlargement of Executive power is a strengthened and revitalized Congress. A Congress strengthened in its machinery, made more fluid and responsive to legislative demands of a majority of the people, and staffed and equipped so well that it will have the ability, not only to inquire with intelligence into problems presented to it by the Executive, but also equipped to act as an auditor and as a check upon the activities of the Executive. (This proposal is indeed radical—so much so, that the Scripps-Howard newspapers have been advocating it for over

3 years.) Oddly enough, the so-called conservative Republican leaders, both in Indiana and elsewhere, who are denouncing radicals, have made no contribution, in all their long legislative careers, to the development of this necessary reform. I assure you though, that no man of average intelligence needs to sit in the Congress more than 6 months before the need becomes most apparent.

I have always assumed, because I have represented a lot of them, that businessmen and industrialists and bankers have average intelligence, from which I also assume they should be able to test the sincerity of the public interest and the value of the advice now being offered them by these self-styled conservative Republicans by the fact that they have done nothing about this very necessary reform. Those who can see, let them see; those who can hear, let them hear.

Eighth, another world-wide depression, with the inevitable war which will follow it, will destroy not only the capitalistic system in America but the world with it. Yet, you can't avoid a world depression unless you have world trade. Without world trade you can't have a United Nations, because a charter, no matter how beautiful its words may be, cannot of itself prevent people from going to war in times of economic stress. You cannot have world trade without an economically strong America, and you cannot have an economically strong America without a happy, satisfied, well-paid American people, and you can't have a happy, satisfied, well-paid American people by resorting to the rather negative device of labor baiting. You can only produce such an America by attempting to offer some constructive suggestions for America's economic problems. Therefore, you can't be a so-called liberal on the international issue and privately oppose every constructive attempt to find solutions for the maladjustments in our domestic economy.

I certainly know that the proposals which I offer tonight are not all-inclusive. I do not even believe that everything I have said cannot be said better, or that better proposals cannot be advanced, but I do claim that, more than anything else, I want to produce a system in America under which people can live and be happier and treat each other more fairly and really enjoy living together, so that in this, our country, we may offer to the world a system of economics and government which will come the nearest to solving man's earthly problems. I know this cannot be done without an approach to our present economic system which is fundamental in its character and forthright, and therefore "radical." I further know that a man who is such a political coward that he is afraid to offer proposals on the theory that they might not be popular has no business in public life, because the problems of this world will not be settled by people who close their eyes, sit on their hands, and keep their mouths shut.

It is fundamental that every thought which is publicly expressed stimulates thinking and that the great value of democracy is the freedom to express thought, so that out of this stimulated thinking the correct solutions may eventually be offered to and chosen by the people. Any man who won't assume this responsibility has no right to hold public office in America. Conversely, any person who attempts to deny to me, or to anyone else, the right to speak, in order that the people may consider my proposals, as well as the proposals of anyone else, is not fit to live in a democracy. It makes no difference to me how wealthy such a person may be, or what his so-called social position may be, he is a Fascist at heart and unworthy of the democratic society which the blood of Americans, rich and poor, has won for us from Lexington to Okinawa.

Finally, I do know, that as the result of the growth and the development of Russia under her system and as the result of the growth and development of various forms of totalitarianism throughout Europe and Asia, we in America are faced with a competitive system which is attracting the attention of many of the peoples of the earth, as well as that of many of the people of our own country.

I, for one, welcome that competition with Russian thought, for it happens that I believe in competition. (I am not like certain people who cry for free enterprise and competition but at the same time try to stifle freedom of speech, without which there can be no free enterprise). But I also recognize that there are maladjustments in capitalism, as it is operating in America today, which endanger it because they cause it to hold out too little hope for a chance of real participation in the system to 90 percent of our people. We do not have capitalism as Abraham Lincoln defined the standards under which it could survive and prosper. Therefore, we must examine it fundamentally, forthrightly, and therefore radically, and make such changes as this examination demands, if we are to meet the competition which the Russian experiment has thrust upon us.

I further know that Abraham Lincoln is the greatest Republican that the party ever produced, and he is; and if the party is obligated today to be true to the traditions of Lincoln, then I am a better Republican than any conservative Republican who is presently spouting off on the American scene today. I am also a better American and a better friend of capitalism. But in the final analysis, you are the people who will determine this issue, who have to make the decision.

I leave that decision in your hands.

The Postal Pay Raise Bill

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. LUDLOW. Mr. Speaker, the time has come, in my opinion, when the postal employees of America should receive an increase of pay as a matter of sheer justice.

They are entitled to a raise, and by that I do not mean a mere token increase, but an increase that will be substantial and that will cover advances in the costs of living that are so obvious to everybody and that are being felt so keenly in every household. The basis of the sort of increase to which I think they are entitled is a bonus of $500 a year.

I supported the staggering appropriations necessary to win the war, and now, with the war over, I think we may well direct our attention to the correction of major inequities and maladjustments in our economic system. I shall not balk or hesitate for one second to vote for the amount that is necessary to do justice to the faithful postal employees—an amount that is relatively insignificant and a "drop in the bucket" compared with the money we have spent for big guns and battleships.

Today I appeared before the House Committee on the Post Office and Post Roads and asked for a favorable report on legislation to provide a pay increase for postal workers. I also filed with the gentleman from Virginia, Chairman BURCH, of the committee, a letter which reads as follows:

FEBRUARY 28, 1946.

Hon. THOMAS G. BURCH,
Chairman, Committee on the Post Office and Post Roads,
House of Representatives,
Washington, D. C.

DEAR CHAIRMAN BURCH: I am taking this means of expressing to you and the members of your committee my very deep and genuine interest in H. R. 5059, the bill you have introduced to provide additional compensation for postmasters and employees of the postal service.

I commend you cordially for introducing this timely bill and I hope that the prestige of your name and the backing of your great committee will open the way for its speedy enactment.

There is just one change I would like to see made in the bill. I hope that you and the members of your committee may see your way clear to liberalize the provisions of the bill by making the annual bonus $500 instead of $300. I believe the larger amount is none too much to cover the increased costs of living and to place postal workers on the same plane as others who have benefited by current and past salary raises. Only a $500 bonus will be enough to compensate postal employees for the loss of overtime and Saturday pay and to enable them to meet rising living costs. I am sure that an investigation will show that an increase of $500 in postal workers' pay would be in line with increases now being granted in private industry.

As chairman of the Appropriations Subcommittee that brings in the annual supply bills for the Post Office Department and the postal service it has been my good fortune to have been brought into close contact during the last 11 years with the postal employees and it is my considered judgment that there is no finer group of workers in the world. In storm and stress and all kinds of weather they are faithful to their task of seeing that the mails are moved. They have been caught between two millstones—the lower millstone of low fixed salaries and the upper millstone of mounting costs of living—and we, the Representatives in Congress of the Nation they serve so well, will fail sadly in our duty if we do not bring relief to them in the form of an increase of pay that will enable them to cope with the soaring costs of the necessities of life. The temporary raise of $300 we gave them last year has been more than wiped out by the loss of overtime and Saturday pay and their take-home pay is less now than it was before that law was passed.

The time is ripe for action in their behalf and I am confident that Congress will rise to its responsibility and pass the bill (H. R. 5059) introduced by the great chairman of the Committee on the Post Office and Post Roads, with an amendment providing that the annual bonus shall be $500. To that end I pledge my very best efforts.

Yours sincerely,

LOUIS LUDLOW.

Building Material Shortage

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following Associated Press release printed in the La Crosse Tribune, February 24, 1946:

RETAIL LUMBERMEN BLAME OPA FOR BUILDING MATERIAL SHORTAGES

The Wisconsin Retail Lumbermen's Association declared in an open letter to President Truman that the OPA "is more to blame for building material shortages than all other factors combined."

The association also sent a letter to the OPA, protesting the agency's absorption policy, as well as "all other impractical regulations which have and will continue to disrupt the even flow of materials for homes and farms."

Wisconsin lumber dealers, the letter to the OPA said, "are on the verge of revolt."

Both communications were drafted by the association's resolutions committee.

The text of the letter to President Truman:

"DEAR MR. PRESIDENT: This appeal is addressed to you after mature reflection to demonstrate the principal reason for the existing housing shortage and to offer concrete suggestions for a solution.

"We retail lumber dealers recognize the extreme shortage of building materials which we desire to furnish to homebuilders. We cannot do this until lumber and other building materials are made available.

"We are convinced that the Office of Price Administration is more to blame for material shortage than all other factors combined. OPA's price-control efforts have been unrealistic, showing astonishing ignorance of manufacturing and distribution procedures and appear to be motivated by an effort to socialize American business.

"These efforts have actually created shortages, caused inflationary prices, and have resulted in black-market operations. Thus far efforts to change OPA's attitude or to obtain a reasonable administration of the Price Control Act have been useless, and unless OPA's philosophy can be modified the only alternative is to abolish the OPA.

"This letter is addressed to you by approval of our membership after 3 days of consideration in our fifty-sixth annual meeting.

"Respectfully submitted.

"THE WISCONSIN RETAIL LUMBERMEN'S ASSOCIATION."

Following is the text of the telegram to the OPA:

"After 3 days of mature consideration 583 Wisconsin lumber and building-material dealers attending their fifty-sixth annual meeting unanimously protest the absorption policy now under way.

"During the war they loyally accepted each and every restriction suggested or required by the war necessity. They now protest the new absorption policy and all other impractical regulations which have and will continue to disrupt the even flow of materials for homes and farms.

"They have taken all of the punishment they can and are on the verge of revolt. Frankly, the dealers will not stand for your absorption policy. They have absorbed increased expenses, wages, and reduced margins, and any further effort to load retail dealers with further burdens will result in a demand for the immediate abolition of the OPA.

"They have directed an open letter to President Truman protesting OPA price policies, which are creating shortages of home-building materials, while other governmental agencies attempt to create false impressions in the minds of the public as to the responsibility for the housing shortage.

"We demand that you give serious consideration to the consequences of your present policy before imposing further penalties on these dealers. They are attempting to stay in business as Americans under our constitutional guaranties in order to serve our GI home builders.

"THE WISCONSIN RETAIL LUMBERMEN'S ASSOCIATION."

The British Loan

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mrs. DOUGLAS of California. Mr. Speaker, under leave to revise and extend my remarks, I include in the Appendix of the RECORD a speech on the British loan delivered by GEORGE E. OUTLAND, Representative from the Eleventh District of California, in New York City on February 27, 1946. Mr. OUTLAND'S speech is the clearest and most comprehensive presentation of the facts relating to the loan that I have read. It follows:

On November 11, 1918, ended the First World War. Our President had described it in terms which meant much to the great mass of the American people; he called it "The war to end all wars; the war to make the world safe for democracy." Twenty-three years later, on December 7, 1941, we found ourselves embarked on a conflict far more terrible and far more costly. Why? Because in the years following 1918 we failed to take the steps which would have prevented the second war. We were anxious to get back to what an American Presidential candidate ungrammatically called "normalcy"; we were tired of the conflicts of the Old World; we desired only to retreat behind the seemingly safe barriers of the Atlantic and the Pacific and live by ourselves. Our Senate flatly refused to permit us to join the international association of nations which had been conceived by our own President; our Congress insisted on a narrow and short-sighted policy of economic nationalism which proved to be equally fatal. Ignorance and isolationism, prejudice and passion, partisanship and provincialism had their way, and surely, although unknowingly, we traveled down the path to World War II.

Now we have been granted that which is seldom given to nations or individuals: a second chance. Once again a great war has been won by American might. Once again the nations of the world are stumblingly and haltingly attempting to find a formula which will prevent future aggression. Our own Nation has been extremely vocal in its advocation of world cooperation and world peace. We have enunciated over and over again our desires for these goals. But peace does not come merely through hoping for it or wishing for it. We must work for it; we must take concrete steps in addition to lending lip service to the ultimate objective. We must give up certain of our cherished traditions and prerogatives; we must not only participate, but we must set examples to the other nations of genuine internationalism.

Basically, these examples fall into two fields—politcal and economic. America's greatest woman will tell us tonight about some of the political aspects, centering as they do, around the United Nations Organization. It will be my task to discuss one limited field of economic cooperation, namely, the proposed loan to Great Britain. Had I the time I would go into the important implications of the Bretton Woods Agreement, the reciprocal trade treaties, and the proposed international trade conference. This evening, however, I must limit myself to this one vitally needed phase of international economic cooperation—our proposed loan to England. It is not fair to consider the vital importance to us, and to the world, of the British loan, without taking into consideration the whole problem of world trade and its relationship to world peace. In a world where distance has ceased to be important, where blitzkriegs are already out of date, and where the atom is deified, everybody knows we must have peace. We'll have peace or we'll have the end of the world.

I know this concept of an atomic world is almost beyond the threshhold of our comprehension. But we must grasp its true significance or perish. The scientists have discovered the atom bomb; they have proven their theory of matter for they have now harnessed the potential energy inside the atom. We are entering a new scientific era. We simply cannot have another war and survive.

The British loan is one of the steps necessary to prevent economic blocs in which the seeds sown by vicious trade practices might germinate and produce the atom genie which would destroy us all. The British loan is necessary, absolutely necessary to us, as well as to Britain, and to the rest of the world. For it would mark the beginning of the regeneration of British export trade and the free flow of goods throughout the world, and be the prelude which is vital to the success of the International Monetary Fund, the International Bank for Reconstruction and Development, and the International Trade Organization. Those are prosaic titles and musty phrases, but the meaning of those words is neither prosaic nor musty. The meaning of those words is peace, and peace is certainly not prosaic.

Secretary of the Treasury Fred Vinson made a plain and simple statement of fact on January 9. I want to repeat it for all of us. They are monumental words:

"After the last war we had an opportunity to build a world in which our countries could work together in peace and prosperity. We muffed that opportunity. International economic relations were allowed to break down. Instead of economic cooperation, the world resorted to economic warfare. Instead of economic statesmanship, countries resorted to exchange depreciation, exchange controls, trade restrictions, bilateral clearing arrangements and similar measures."

We can't afford to muff our opportunity again. The atom genie is right outside the door, just waiting for a chance. If he gets his chance there might not be any Secretary of the Treasury, or a secretary of anything, for that matter, to say in 1989, "After the last war back in 1946 we had an opportunity to build a world in which our countries could work together in peace and prosperity. We muffed that opportunity."

Just what is this opportunity? What does it mean in terms of the British loan? Why is the British loan as necessary to the iron workers in Indiana as it is to the coal miner in a British colliery?

The answers to those queries are neither long nor complicated. These answers are contained in one phrase: international economic cooperation. As you know, war made a slave of Britain, an economic slave. In order to mobilize, Britain imposed trade restrictions and currency restrictions. These were necessary because Britain, at war since 1939, needed foreign exchange. Foreign exchange, in a complicated economic world, is oxygen to the British, because it is a country which has to import food and raw material in order to survive. In normal times the British export many things and they were able to pay

for their imports as they went along. British exports, her foreign investments, and her shipping and other services, which produced tremendous income for her during peacetime, took a tremendous beating during the war. The factories which produced for the export market converted to the production of war implements and much of the British foreign investments, which had been the lifeblood of the British commercial system all over the globe, were sold. They were sold to provide foreign exchange to pay for the imports which were necessary to British war production. And, a substantial part of her great merchant marine, which moved a large part of world trade from international market to international market before the war, went down before German U-boats and Japanese torpedoes. Britain's foreign debts mushroomed because her exports and services, which would normally have paid for her imports, were curtailed and her factories turned to the making of tanks and guns and planes to replace those which it was no longer possible to import at any price.

And while the British were making these commercial sacrifices they made other sacrifices, which we all should understand. For 6 years the British had no eggs, little meat, practically no gasoline, and everybody worked long and arduous hours—even the old men and women. I was in London during the robot bombings. I saw the pinched faces of thousands of small children driven to sleeping in the subways because their homes were totally destroyed. And as I think back on both their sufferings and their courage, a feeling of shame comes over me when I hear some people complain that they are not going to be able to get all the white bread they want. All of us sat by our radios in 1940 and 1941 listening to Winston Churchill, when his spiritual inspiration to the British and free people everywhere seemed to be the only bar between Hitler and world conquest. By converting its resources, by selling its foreign investments and fighting off Hitler alone for nearly a year Britain bought time, time for the United States and Russia to ready themselves for inevitable conflict. And the price they paid, besides the fallen British soldiers on Crete, in Thailand, in Java, and at Dunkirk, and the fallen civilians in London, Coventry, and many other cities, was that they became economic slaves.

Let me explain it in a little more detail.

During the war England's export industries were converted to war production or shut down. In 1944 she exported only 30 percent as much as 1938. War forced the British to sell $4.500,000,000 in foreign investments, and they lost forever the foreign exchange income which the investments produced. The British used the proceeds to buy goods from us and the other countries. Britain incurred, besides this, $13,000,000,000 in foreign debts. It is in this position that we find England today, needing dollars or currencies convertible into dollars in order to rebuild the British Isles, devastated by bombs, and to rebuild her trade. Her alternative is a series of stifling bilateral agreements with many countries which would form an unquestioned economic bloc strangling the revival of extensive world trade so necessary to world peace.

Knowing all this the British and United States got together and worked night and day for 3 months. They worked out what is known as the financial agreement between the two governments. This agreement is simple enough. We extend to the United Kingdom a line of credit of $3,750,000,000 which can be drawn upon until December 31, 1951. In return, the United Kingdom will end a series of wartime financial and commercial restrictions and practices which have the effect of discriminating against American trade and reducing the flow of world trade, so essential to peace. The Congress must first authorize our Government to extend this line of credit. When the House and Senate authorize it, we send a note to England to go ahead and draw on the funds, and we are then on our way toward a revival of world trade that should bring a better standard of living to Uncle Sam, to John Bull, to the entire world.

Does England need this money? She simply must have it. If the English are to import the food and raw materials essential to their economy, and to provide themselves with the exports by which they will pay for further imports, they must have this emergency credit in order to do it. The English will use this money to buy goods and services in the United States with which to revive their commercial life, and by means of which they can undertake multilateral world trade—not bilateral trade, with specific countries—but multilateral trade, one of the keys to world peace. And remember, under the agreement the English cannot use the credit to pay off the debts they owe to other countries. Nor will the British use it to nationalize their big industries. It will be used only to buy vital imports until Britain can catch her economic breath once more.

At this point somebody always wants to know where we are going to get $3,750,000,000. Well, let's face the facts. Our Government will have to borrow the money from the American taxpayer, and that money will be transferred to an account from which the British will draw, from time to time, until December 31, 1951. They won't draw it all at once, nor will they necessarily draw all of it. In return for this loan, we will receive the principal of $3,750,000,000 and about $2,500,000,000 in interest, so the net result is that this loan should not cost the taxpayers of this country a dime. But let me make this clear: it would be a good investment for America in terms of long-range peace and security even if we should lose some part or even all of the money, for without British trade revival there will be economic sores festering continually, awaiting for the infectious germ of world depression to start the atom plague. Beginning in 1952 the British will pay us back $140,000,000 a year in interest and principal. The interest rate is 2 percent. This repayment sum will not only take care of the projected line of credit, but also the payment by the British for the surplus and lend-lease property they have bought. If, in a given year, world economic conditions are in such a state that to make the British pay the interest would be harmful to the United States, Britain, and the whole world, the interest may be waived. But we still get the principal, and we still have some economic security, and we have removed one of the basic threats to world peace, which I consider all important.

The next question that comes from the pondering American public is, why don't the British borrow from somebody besides us. England has already borrowed from others; England has accumulated $13,000,000,000 in debts during the war. This very minute the clerks in London are adding up new sterling accumulations, new debts for raw materials, and services pouring into war-torn England. Those clerks will be busy for several months, if not years, doing the same thing, adding, adding, and adding, while the English industrial machines retool for production of exports which will eventually pay her debts.

Well, says John Q. Public, I should think that the English would quit spending so much money when they can't pay for the things they are buying. They have. Why do you think the British are still on an austere wartime rationing system? Why can't they have eggs for breakfast, unlimited gasoline? Why? Because those things cost money and the British are prepared to do without everything they can until their industries reconvert, and until their exports rise to a level which will enable the British to take their place in a world cooperative scheme of multilateral trade agreements, which will ensure us economic prosperity all over the world, and not just in England, or in the United States, or in Moscow. The scheme of world trade is so inextricably bound together by full production everywhere and free exchange of goods that it will fail completely if one of the main trading nations of the world is forced to curtail its activity.

If I sound a little technical on some of these points, it is not because of any desire to confuse, or to veil the real issues. I want to reiterate that the real issue is peace, and that these somewhat musty explanations of trade and finance and of the British position are made with one thought in mind—peace and the expansion of United States trade and United States prosperity, with the attendant economic revival and prosperity of not only countries and continents but the world. Peace without salutary economics is a time bomb, ticking away in the economic trenches, waiting to blow up. Only this time it's an atom time bomb, and when it goes off there won't be any more time bombs. There won't be any more time, for that matter. It will have run out.

But if we keep our heads about this affair, and realize what it means to the United States in terms of prosperity, as well as what it means to the rest of the people on this planet in terms of potential peace, we won't have to worry about time bombs or atom bombs. For the United States, as a result of the British loan, or more correctly, the British line of credit, will move ahead into a greater world market than ever before. Today the entire world wants to buy from us, and we haven't even supplied our domestic market yet.

Unless the British line of credit is authorized by Congress we will suffer a great loss in world markets. We will lose the great potential market which economists refer to as the sterling area. Practically every country in the British Empire, Canada and Newfoundland excepted, is part of the sterling area. Besides the Empire, the sterling area includes Egypt, Anglo-Egyptian Sudan, Iraq, and Iceland. In those countries—or the sterling area, as the economists prefer to call it—the British have built up huge debts of British sterling. Those countries supplied the British with vital raw materials and war imports throughout the war. All the British Isles could give in return was their word that they would pay. They gave credit in British sterling. England had to limit the use of those sterling credits during the war. Those credits, for the most part, were not convertible into dollars. The English were justified in restricting the flow of sterling during the war. They had to. Otherwise their debts to one nation would have been preponderantly greater than to all the others. Today, this very minute, the billions in sterling credit which the English built up throughout the war in the sterling area are not convertible into dollars, and won't be, unless the British line of credit is extended by our Government. We will lose the tremendous world market there, and we will see the continuance of the sterling area, which in peacetime is an economic fester stretching round the world. The British have agreed to restore the convertibility of these sterling credits to dollars if we loan them money. When those sterling credits become convertible into dollars, and into other important foreign exchanges such as the Swiss franc and the Swedish kroner and the Dutch guilders, all of which must move freely in a world of international economic cooperation,

they will become customers of American industry. When the sterling area countries are able to convert their sterling balances over a period of years into American dollars they will be able to buy American production for many, many years after the domestic market has been surfeited here in the United States. This continuing demand will be vital to us, and will keep the wheels turning here as well as in India, China, Britain, Russia, France, and everywhere. Without it, our dreams of domestic full employment is impossible of realization. If one wheel stops it is only a matter of time until they all stop. And the next step is war, for the shooting war always follows an economic war. It always has, and it always will. So we must stop the economic war before it starts, and one of the initial steps—by all means not the only one—is to extend this line of credit to the British.

And when we do the British will assume their obligation of membership in the International Monetary Fund and the International Trade Organization, which will serve only the purpose of facilitating the growth of balanced world trade. England will settle her accounts—her blocked sterling balances—by the spinning wheels in her own factories and by her own resources.

Some Americans fear that this loan to England will be but the forerunner of similar loans to all the other countries of the world. I am firmly convinced that these fears are groundless. I am convinced that through mechanisms already established, such as the Bretton Woods Bank and Fund and the Export-Import Bank, the financial difficulties of other nations will be met. I do believe, however, that it is at least as important to spend for peace as it is to spend for wars.

This $3,750,000,000 loan to England is equivalent to just 2 weeks of war. That's exactly what we were spending every 2 weeks toward the end of the war. Secretary of the Treasury Vinson said, on January 9, that "this is not an expenditure, but an investment. It is sound business for America." I agree thoroughly. "This is not an expenditure, but an investment."

It's not an investment in terms of money or profit or interest or capital gain. It is an investment in world security, it is an investment in insurance, world insurance against the relentless borrowing economic virus which in the atom age not only means war, but destruction.

Ladies and gentlemen, this investment will not be made without a struggle. The forces opposed to genuine international cooperation are still active and becoming more active daily. Ignorance and isolationism, prejudice and passion, partisanship and provincialism are attempting to lead us down the same path which they led us in 1919. The Chicago Tribune, the New York News, Mr. Hearst, and the entire wrecking crew are mustering their forces against this proposed loan. Their opposition will be formidable; it will be difficult enough to beat them without encountering the additional opposition of forces which normally would be helping the cause. Let us not be led into irrelevant objections. Let us not fight this loan because we do not approve of Britain's policy in Palestine or India or the Malay Peninsula. I do not approve of these policies either, but I ask you in all frankness, what in heaven's name is the relationship between those policies and a loan which is to be made primarily in our own self-interests and the interests of world peace. As the American Farm Bureau has so well pointed out, these loans are in the long-time interests of our own Nation; it is sheer selfishness, if you please, combined with the contribution which is being made to international economic peace.

For my part, I shall work for this loan with all my heart, both on the Banking and Currency Committee of which I am a member, and on the floor of the House of Representatives. I would not like to think that generations from now future Americans would say, "That man was one who helped cause this atomic war; he claimed to believe in international cooperation, but he failed to work for legislation which would help to prevent it." In the name of all that we hold sacred, in the name of civilization itself, I trust that this time the American Nation, through its Congress, will not muff the ball; I hope we shall all have the farsightedness and the courage and the intelligence to take those steps to implement the ideals about which we are always talking. If so, then our children will rise up and call us blessed; if not, the prospects of an advancing civilization are dim indeed.

The Filipino Disabled Veterans

EXTENSION OF REMARKS
OF

HON. CARLOS P. ROMULO

RESIDENT COMMISSIONER OF THE PHILIPPINES TO THE UNITED STATES

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. ROMULO. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD a communication received from the Filipino—USAFFE—Disabled Veteran Association, which I wish to bring to the attention of my distinguished colleagues in this House. My speech on the floor today is a plea for these veterans and their comrades who fought so heroically for the American flag. The communication follows:

FILIPINO (USAFFE) DISABLED
VETERAN ASSOCIATION,
Manila, P. I., February 11, 1946.

Brig. Gen. CARLOS P. ROMULO,
Resident Commissioner to the
United States, Washington, D. C.

MY DEAR GENERAL ROMULO: We who are permanently and totally disabled veterans of Bataan and Corregidor (PA-USAFFE) hereby respectfully request your helping hand in fighting for the cause of your less fortunate countrymen who bore the brunt of war and suffered miserably in defending America's flag in this part of the world.

While the service of the Philippine Army after its formal induction into the services of the United States armed forces in the Far East at the outbreak of the war is not considered service in the United States Army according to the military order of the President of the United States dated July 20, 1941, it cannot be denied that in the fields of Bataan and Corregidor the Filipinos made supreme sacrifices to defend the honor and prestige of America in a war she had declared against Japan.

Furthermore, our induction was never requested by us, for we could have rallied under America's colors to prove our loyalty without such formal process; but, the War Department under whose authority our induction was made had convinced us further of America's sense of fairness in treating us as equal in the fields of battle. Therefore any attempt to exclude us from any benefit, however limited, due other members of the United States forces who fought with us will be unjust and unfair.

While America has made in glowing terms her praises of the heroism of the men who fought and bled for her cause, she has forgotten her promises to us now that everything is over. To shirk from the moral responsibility and obligation to provide help to us now that we are deprived of every opportunity to earn a decent living is indeed against all the very principles for which America involved us in fighting this war.

Pursuant to the provisions of the military order of the President of the United States dated July 20, 1941, exception in the payment of benefits is made only in case of disability or death subject to the laws administered by the Veterans' Administration. Excluded from all other privileges, rights, and benefits conferred upon members of the armed forces of the United States with whom we fought, sacrificed, and died side by side against the enemy in the fields of Bataan and Corregidor, a legislative proviso was made recently to provide 50-percent benefit—the rate of pension proposed being a peso for every dollar any other United States Army veteran gets.

We wish to voice our sentiments against such legislation of the United States Congress through you. Such discriminatory provision certainly violates basic human principles for our disability contracted on the same fields of battle, is now, by virtue of such legislative provision, judged under different standards and criteria from the other members of the United States armed forces while it is evident that we underwent the same hazards, dangers, exposures to death, sacrifices, and sufferings.

Among those who joined and rallied under American colors, the plight of the disabled veterans is the most miserable one. To us, the future lies ahead dark and gloomy. For all that we have had during the years of patient accumulation when we were physically fit, making little fortunes and future for our loved ones, are now gone—our homes, our property, and every little thing dear to us were either confiscated by the enemy, burned, or devastated, not to mention the deprivations, suffering, and torture done to us for remaining loyal to the United States, to whom we owe allegiance. Now that every vestige of our economy is disrupted, making the cost of living very high; now that we find ourselves helpless and deprived of the power and ability to earn a decent living to provide for our children; now that we are total victims of war and destruction, what else is in store for us? What else can we do but to appeal to America's sense of justice and humanity? Undoubtedly, we feel that the 50-percent payment of benefits to the less fortunate crippled veterans of Bataan and Corregidor defeats the very spirit and purpose of America's act of rewarding their sacrifices.

We believe that this is only due to the lack of a more considerate understanding of the situation. We believe further that a more generous act on the part of the American Congress in the matter of payment of benefits to men who bore miserably the brunt of war and who unhesitatingly made heroic sacrifices to uphold the honor of the flag of the United States in this part of the Pacific can be considered the best example of American altruism and generosity to those who were willing to give their lives for the cause of freedom and democracy.

We therefore humbly solicit your helping hand to enable us to enjoy the full measure of America's act of generosity which the people of our country and the people of the world shall acclaim as an expression of America's spirit of justice and equality.

Trusting that you will not fail lending us your helping hand in this matter, and reiterating our confidence and faith in your ability and courage in fighting for our cause before the American people, we remain

Very respectfully yours,
Lt. JUSTO CONDES,
Chairman.
Lt. FLAVIO CERVANTES,
Vice Chairman.
Sgt. ADRIANO S. OLIVAR, Jr.,
Secretary.

Peron Defeat May Get United States Out of Unhappy Situation

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Chicago Sun of February 27, 1946:

PERON DEFEAT MAY GET UNITED STATES OUT OF UNHAPPY SITUATION

(By Sumner Welles, former Under Secretary of State)

These reflections are written before the announcement of the outcome of the Argentine national elections.

If Jose P. Tamborini, the presidential candidate of the Democratic Alliance, is elected, the Argentine people will return to the form of democratic government which they maintained for many decades prior to the first revolt of the Argentine Army in 1930.

Dr. Tamborini's election also would result in the renewal of nominal relations with the United States and Argentina. His election would save the United States from a critical and dangerous embarrassment.

But no matter what the outcome of the elections may be, the State Department's recent action will arouse suspicion and hostility toward the United States throughout Latin America for a long time to come.

In The Time for Decision, I wrote 2 years ago:

"The people in this country who have so vehemently urged this Government to adopt a policy of coercion, or at least of retaliation toward Argentina, are advocating a course which will have completely opposite results from those they seek.

"Not only do the basic principles of existing inter-American agreements and the good-neighbor policy itself preclude an attempt on the part of any American nation to dictate the policy of another, but also any such attempt will provoke a reaction upon the part of the Argentine people which may well create a permanent rupture.

"Such measures could do incalculable damage to the interests of the Western Hemisphere during the uncertain years which lie ahead. If we believe in the efficacy of democratic principles and in the ultimate power of public opinion, then we must permit the Argentine people to determine their own destinies for themselves."

The State Department's blue book was made public 2 weeks before the Argentine national elections. It obviously was intended to influence their outcome. It will be widely interpreted as intervention in the sovereign concerns of the Argentine people.

One can imagine what the reaction here would be should some major power, such as the Soviet Union, publish an official document assailing the highest authorities of the Government of the United States and a Presidential candidate immediately prior to national elections in this country.

The document was published by the Department of State without prior consultation with the governments of the other American republics, as is required by existing inter-American agreements.

The communication of the document to the ambassadors of the other American republics barely 24 hours before its publication does not constitute even the semblance of consultation. The action taken by this Government was purely unilateral.

The State Department persists in its fatuous insistence that the legitimate grievances of all of the peoples of the Americas against the present Argentine dictatorship warrant the prosecution of a bitter and exclusive feud between Argentina and the United States.

It is incapable of understanding that what is required is a joint effort on the part of all of the American governments patiently and constructively to cure the deep-seated political, social, and economic evils which enable such demagogues as Col. Juan D. Peron to gain wide popular support.

There is no statesman of the Americas who is a better democrat, nor a truer friend of the United States, than Dr. Oswaldo Aranha, former foreign minister of Brazil. Dr. Aranha informed the press on February 14:

"I can assure you that the State Department has hurled a bomb with its blue book, without previously informing the Brazilian foreign office, which was taken by surprise."

The charges contained in the blue book have been known to the Government for a considerable period. Had the Department of State desired to strengthen the inter-American system, rather than pursue its unilateral campaign against the present Argentine regime, it would have communicated these charges to the governments of the other American Republics for the purpose of official consultation and of joint action long before the commencement of the electoral campaign in Argentina.

Evidences of the success of interventionist propaganda that the United States should disregard the sovereign rights of weaker peoples whenever it sees fit are accumulating. They even are apparent in a recent report of the Foreign Policy Association, where such statements as these are made:

"The United States must face the fact that as the great American power it has responsibilities to the inter-American system that go beyond those of the other nations. * * * While it has on various occasions spoken out strongly * * * it has not yet been able to follow up its strong language by action."

Such statements mean that the United States should revert to the fatal policy of the first quarter of the present century, when this country continually intervened, and frequently by armed force, in the other independent Republics of the Americas.

That course would destroy the foundations upon which the good-neighbor policy and the inter-American system rest; recognition of the sovereign equality of all the American states; respect for the independence of all of the peoples of the Americas, and full cooperation in all questions which affect the peace, security, and welfare of the New World.

The ideology and the practices of the Perons and of their followers undoubtedly represent a major danger to the well-being of the New World.

But there is scarcely a thinking Latin American outside of the ranks of the interventionist propagandists who will not insist that United States policy has done far more to increase that danger than to dissipate it.

There is no valid distinction which can be drawn between our recent policy and imperialism.

It is the same policy as that recently followed by the Soviet Union in eastern Europe and in the Balkans. It is a policy which asserts the right of a major power, solely because of its strength, to dictate the political determination of its weaker neighbors.

It can end only in the destruction of the sovereign liberties of smaller states. It is tantamount to the proclamation by the United States of a sphere of influence within the New World.

The Case Bill

EXTENSION OF REMARKS
OF
HON. CARL VINSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. VINSON. Mr. Speaker, the Nation is fed up on strikes. The people are tired of labor-management disputes. Because of these disputes today the Government has had to operate oil refineries, meat-packing plants, tugboats in the New York Harbor, and various other businesses. The reconversion program has been slowed down by the steel strike and by the unsettled General Motors strike.

These conditions have led to congressional action. In an effort to remedy the labor-management disputes, the House, on February 7, passed what is known as the Case bill by a majority vote of 258 to 155. The underlying principles of that bill are to preserve and protect the right of collective bargaining and at the same time to insure that labor disputes affecting the public interest should be settled fairly and, so far as possible, without interruption or delay in the production and distribution necessary to the public interest.

The most pertinent provisions of the Case bill are:

First. The creation of a permanent Labor-Management Mediation Board, vested with jurisdiction to settle disputes by conciliation, mediation, and voluntary arbitration;

Second. This Board is given the power to outlaw strikes called during a 30-day period for peaceful settlement efforts and to require the maintenance of status quo;

Third. The Board is vested with the right to go into Federal court for injunctions, if necessary, to maintain conditions unchanged through the period;

Fourth. Mutual responsibility is fixed, making collective-bargaining contracts equally binding upon management and labor;

Fifth. Unions and employers alike will be liable to damage suits in the courts if contracts are violated;

Sixth. Violence or threats of violence and intimidations by either party to a dispute will be outlawed—district courts being granted specific authority to enjoin violent picketing and threats of violence, and organized boycotts being specifically outlawed; and

Seventh. Union organization of foremen or supervisory employees will be banned unless such employees performed manual work.

Too often has the public interest been flaunted by both parties—labor and management—for their selfish gain. This must be stopped. That is exactly what the Case bill proposes to do.

The role of the Government under the Case bill is no less the guardian of the general welfare than of individual freedom. Rightfully, legislation has heretofore been enacted to guarantee the

right of collective bargaining, but such right should not be permitted to be exercised to the detriment of the interest and the rights of the general public. Parties to a contract, whether they be labor or management, must be made to respect and comply with such contracts. The use of force, violence, and compulsion violate our sacred principles of freedom and self-government. It was with the deepest conviction of these principles that the House passed the Case bill.

Mr. Speaker, I received the following letter from the president of the Georgia Farm Bureau Federation, which is most pertinent and self-explanatory:

MACON, GA., *February 21, 1946.*

Hon. CARL VINSON,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN VINSON: I am taking this opportunity to thank you in behalf of the farmers of Georgia for your able support and vote on the Case bill.

We have felt for a long time that labor should have some responsibilities as well as industry and agriculture. The fact that they have been allowed to strike, boycott, and actually destroy property without any responsibility has been very much disturbing to other groups.

I was very much pleased to note that the entire Georgia delegation supported and voted for the bill. It will be a pleasure to pass this information on to the farmers.

Thanking you again for your support in behalf of this legislation, I am,

Sincerely yours,

H. L. WINGATE,
President.

Veterans' Priority in Purchase of Army Surplus Property

EXTENSION OF REMARKS
OF
HON. PAUL STEWART
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. STEWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

ARDMORE, OKLA., *February 15, 1946.*

Hon. PAUL STEWART,
United States Congress,
Washington, D. C.

DEAR SIR: In support of the movement for new legislation to improve the priority standing of veterans in acquiring Army surplus property, I would like to state my experiences in trying to purchase some heavy construction equipment through the Smaller War Plants Corporation and the War Assets Corporation.

Since being released from the Army, as indicated by my letterhead, I have been engaged in the construction business. What little equipment I now have, I have secured from dealers directly, but as you well know, dealers are unable to supply very much in the way of equipment.

I have been certified by the Smaller War Plants Corporation since July 1945, but as yet, have been offered only two units of equipment, that were absolutely worn out. After driving 400 miles to Austin, Tex., to inspect a caterpillar tractor, model D-7, with bulldozer, hydraulic controlled, priced at $7,812, I found that this piece of equipment was completely worn out. The original price of this piece of equipment from a dealer was $8,200, being only $388 more than the Reconstruction Finance Corporation's price. Judging from the small difference in price, I supposed that the machinery was new or practically new. After making an 800-mile round trip, I found that this equipment had been used some 2,800 hours and was very much abused.

The other piece of equipment offered me was a model LS, 8-yard, LeTourneau scraper, which was listed by the Reconstruction Finance Corporation at $5,200 with tires in fair condition. I did not bother to make the trip to Camp Claiborne, La., to inspect this piece of equipment as the Reconstruction Finance Corporation's list price was $700 more than the original cost of this model scraper.

A few days ago I was at Camp Gruber, Okla., and while there found several new caterpillar tractors, model D-7, equipped with cable-controlled bulldozers, three model D-6 caterpillar tractors equipped with hydraulic-controlled bulldozers and with Hyster winches mounted on rear, also various other makes and models, all new. I was informed that all of this equipment had been declared surplus by the Army and turned over to the War Assets Corporation for disposal. At that time I had with me a Smaller War Plants Corporation form No. 63, which has been certified and is supposed to entitle me to purchase three model D-6 caterpillar tractors equipped with hydraulic bulldozers. I was told by the surplus property officer at Camp Gruber that this equipment would have to be purchased through the Veterans Surplus Property Office of the War Assets Corporation, Fort Worth, Tex. I then made a trip to Fort Worth and was told at the Veterans Surplus Property Office that there was no way for me to purchase any of this equipment as it had not been listed with them and that they didn't know if and when it would be listed with them. I had the serial numbers from seven of these tractors and was also informed that there was no way to trace the listings and prices of these tractors through their serial numbers.

I have been out considerable expense and loss of business by not having sufficient equipment. I have made several trips to Oklahoma City and to Fort Worth and have been unable to accomplish anything. I am beginning to believe that none of the Army surplus equipment that is usable will ever become available to veterans unless there is some change made in the system now used in the disposing of this property.

I would appreciate any assistance you may be able to render on this matter.

Yours very truly,

HOYT E. KIRBY.

Inflation for the Veteran

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. MADDEN. Mr. Speaker, the following letter from Michael J. Holajter, Jr., of 4904 Grasselli Avenue, East Chicago, Ind., a returned veteran, echoes thoughts that are in the minds of the great majority of the boys who fought in World War II.

In my remarks Tuesday on the pending Patman housing bill, H. R. 4761, I stated that the average veteran could not pay over five or possibly six thousand dollars for a home.

As set out in Mr. Holajter's letter, profiteering is not solely confined to the sale of dwellings, but unless drastic measures are taken, every necessary item will become embroiled in an inflationary tailspin:

EAST CHICAGO, IND.,
February 25, 1946.

Congressman RAY J. MADDEN,
Washington, D. C.

DEAR CONGRESSMAN MADDEN: With conditions as they are I do not know which is the worst—being in service or being a civilian again.

I have been out of the service since November 1945 and find that the ones who are hard hit are the servicemen.

It is beyond me to see a 1941 four-door Dodge sedan with radio and heater selling today for $1,225. This as you know is within the OPA ceiling price. I, myself, had a car of this very make and only paid $1,129 with radio and heater early in 1941. In early 1942, at which time I was inducted into the service, I was forced to sell my car for $750 and which car was less than a year old. This I do not see even though the cost of living has gone up considerably since 1941.

The same goes for a home. For the past 2 months I have tried to purchase a home for my family and find that I have to pay $9,000 for a house that probably only cost $5,000 to build 5 years ago.

It is my opinion that the cost of such items that are at least 5 years old or better should be based on the cost it actually cost to build, minus wear and tear, and not in accordance with the cost of building today. These were built before the prices went up and should be priced accordingly. Why should we pay such prices when it did not cost that much to build in the first place. Are we supposed to pay for the cost of upkeep and operation that was incurred by the seller for the last 5 years and which he had good use of?

Everybody is out selling their cars and homes today because they know they can get the price for them. Let's stop this racketeering and give us fellows a fair chance to get back on our feet.

It is easy for young couples whose husbands were not in the service and who had the opportunity to buy a home or car when the prices were down to say, "We have only been married 3 years and we already have a home and car of our own." I, too, could have had a home today had I not been inducted into the service. I am not sorry I served my country but would like a fair chance to make ends meet.

I, like many others, am in favor of the OPA continuing on, at least until June 1947, and trust that something will be done soon in regard to these high prices.

Respectfully yours,

MICHAEL J. HOLAJTER, JR.

Mob Law, 1945

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. LUDLOW. Mr. Speaker, by unanimous consent of the House, I present for publication in the CONGRESSIONAL RECORD a very thoughtful editorial which appeared in the Washington Post re-

cently entitled "Mob Law, 1945," as follows:

MOB LAW, 1945

It is a commentary upon American "mores" that one is tempted to point with pride to the fact that only one person was lynched in the United States during the year 1945. The record is better than it has been in any recent year, far better than it was a decade ago or throughout the first quarter of this century. Two persons were murdered by mobs in 1944, three in 1943, five in 1942. But in 1935, lynch law took the lives of 20 human beings; the toll in 1920 was 61, while in 1901 it was as high as 130. These grim statistics give some ground, then, for hoping that Americans have come to entertain a higher respect for the laws they themselves fashion and for the system of justice under which they live.

Unhappily, statistics do not tell the whole story. It is sometimes difficult to distinguish between the brutal action of a mob in shooting, hanging, or burning a prisoner taken from the hands of law-enforcement officers and the murder of an accused or suspected individual by three or four men who have chosen to take the law into their own hands. There have been killings in the course of the past year, and in other years as well, which might very well have been cataloged as lynchings. For they represented, if in somewhat less atrocious form than the behavior of an insensate mob, the same sort of disregard for the regular processes of justice which is one of the ugly aspects of lynching as it is narrowly defined.

We have no record, moreover, of how largely the threat of lynching has been used to intimidate and repress Negroes in our Southern States, where this kind of violence has become a tradition. It is impossible to estimate the extent to which even courts of law have yielded to mob sentiment as a means of averting mob action. The best that can be said is that there has been a heartening decline in what Dr. Guy Johnson, executive director of the Southern Regional Council, has called "the old-style mob lynching," and a growing abhorrence for this sort of lawlessness among the officials and the decent citizenry throughout the South.

We shall need to stand vigilantly on guard against any return to lynch law in the transition period from war to peace. With the return of Negro soldiers to their homes, there may be a dangerous tendency to implement prejudice with violence. Economic dislocations exacerbate racial tensions and foment mob hysteria. The comparatively good record of 1945 affords no occasion for complacency. Lynching has not yet been altogether uprooted from our way of life. Its existence even as a threat is a stain upon our society.

Post Office Workers' Pay

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. MADDEN. Mr. Speaker, the House Post Office and Post Roads Committee opened hearings this morning on H. R. 5059, known as the Mead-Burch bill, providing for a raise for the postal employees of the Nation. I appeared before this committee and urged a $500-per-year increase.

The salary of the postal workers of America has not kept pace with the rising cost of living during the last 25 years. Great numbers of their personnel served in the armed forces of the United States during World War II and the added labors of the increased mail load during the war was carried on by an insufficient postal personnel during the late emergency.

The following editorial in this morning's Times-Herald is timely and contains a valuable message to the Members of Congress that immediate and favorable action should be taken on H. R. 5059:

POST OFFICE WORKERS' PAY

The Post Office employees are among the best and most efficient of our numerous Federal civil service workers, barring an occasional officious little sourpuss behind some Post Office wicket; and they are among the worst paid.

Their salaries never were princely. During the depression they took various fancy pay cuts, the deepest of which was 27½ percent, and it was not until the end of 1934 that their salaries got back to the 1925 levels.

THEY DESERVE A PAY RAISE

Since 1934 wages in most industries have been on the upgrade, and a widespread 15 percent boost was granted by the Little Steel formula in 1941. In the period 1925–43 the postal workers managed to obtain an increase in take-home pay totaling only $1.69 per week. Withholding taxes and retirement deductions are now eating seriously into their salaries, while the cost of living keeps going up.

Bills to raise postal salaries by $300 a year on a temporary basis have been introduced in Congress by Senator JAMES M. MEAD (Democrat, New York) and Representative THOMAS G. BURCH (Democrat, Virginia). The postal workers would like to raise the figure to $500.

Certainly it seems to us that in this period of rising living costs and rising wages in private industry these public employees deserve some increase in pay—and that Congress ought to take early and favorable action on their request for an adequate raise.

The Housing Shortage

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oil City (Pa.) Derrick of February 26, 1946:

CONCENTRATE ON HOUSING

There is not enough being done in this country about the housing scarcity. It is not only a matter for the Federal Government, but for every State and local government where living quarters are woefully short. Like many another problem this one can be licked if we set out to lick it.

Some weeks ago the administration in Washington authorized an announcement that a movement would be launched to provide housing. The plan is in charge of a Mr. Wilson Wyatt. The goal is 2,700,000 homes. But nothing was said as to how this could be done. The contribution is merely one of lip service.

Homes should have priority. Factories, schools, churches, office buildings, and others of that kind can wait. There should be concentration on housing. Take lumber. If we cannot get it from our own mills, let us import it. What are all the cargo ships we built during the war doing? Turn them into lumber ships.

Is labor the bottleneck? Then let us induce young men to get into the building trades. Let us get the unions to cut the apprentice period in two. Let us appeal to their patriotism. Every young serviceman should have a place to live. We owe those boys a tremendous amount of service. They rendered a tremendous amount to us.

There is no sleight-of-hand in making bricks. There is no heavy investment in brick-making plants. It is purely a matter of preparing material, molding, and burning it.

Take plumbing. Let us simplify plumbing. Let us standardize toilets, wash stands, and bath tubs. Let us cut out frills.

There is plenty of glass. There should be plenty of plaster. There is not much to roofing and spouting. Small steam or electric shovels can dig cellars in no time. Tile or cement blocks will furnish good foundations. Sewer and water connections are simple operations.

Let the large industries turn loose all the carpenters, bricklayers, and other builders they can spare so they can go to work on houses.

When we read of spending seven or eight thousand dollars for a six-room frame house it gives us a pain. Under present conditions such prices may be justified, but present conditions are simply atrocious.

During the war we managed to secure mass production of ships, planes, guns, shells, and other material. Why cannot we engage in mass production of homes? Where are our industrial brains? Where is our fighting spirit? Let us smash the log jams and the bottlenecks.

Some of the fellows who are sitting pretty in these days of shortages will kick. Let them kick and be hanged. There is a big job to be done. There are millions of young married couples without homes. They are living with their parents or other relatives. Many of them have babies to care for. Many of them are living under conditions which are positively distressing.

In a country like America this housing matter is a disgrace. We can build automobiles, refrigerators, washing machines, etc., in great quantity. Then why in the name of all that is holy cannot we build homes for the men who fought for us in Europe and the Pacific; who went through hell for us over there?

It is a community, State, and Federal responsibility that will not be discharged by honeyed words from politicians who, as a rule, do not give a hang for anybody except themselves.

A Remedy for Strikes

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. ROBERTSON of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Henry W. McLaughlin, director of country, church, and Sunday-school extension of the Presbyterian Church in the United States:

Strikes are becoming a national menace. The welfare of the entire consuming public

is being threatened. They are, therefore, a matter of public concern. The conflict between the two contending groups needs to be looked into by eyes that have not been blinded by prejudice either against capital or labor. Strikes are caused mainly because labor feels that it does not get a just share of the wealth it produces. And management is irritated by the fact that labor seems to try to get as much as it can for services as small as possible.

The remedy, we believe, lies in the adoption of measures that will make the best interests of both groups more nearly identical. Each faction should be made to see things from the other's point of view.

INSIDE THE CAR

When automobiles first began to be used, a friend of our family was prejudiced against the owners of cars. She asserted they deliberately tried to frighten horses with these new "inventions of the devil." She had a horse and buggy view of the matter. I had just gotten a new car. I valued her good will and friendship. So I asked my wife to invite the lady to take a ride. She enjoyed it immensely. Whenever we approached a horse that shied at the car, she laughed and said, "Now I see it from the inside of the car." It was not very long until she had one of her own.

In Great Britain labor unions in their beginning were largely recruited from the members of the Christian churches, and have continued to be dominated largely by altruistic motives. There is a better understanding between labor and capital than here in America. The two groups seem to work harmoniously, each sharing a definite responsibility in increasing the efficiency and larger productivity of commodities. That kind of teamwork and cooperation seems to be lacking in America. Only where there is such cooperation and teamwork can bargaining between the two groups settle their difficulties. Bargaining to be successful must be between friends, not enemies. Otherwise, it becomes bickering, and bickering settles nothing. When we read in the newspapers that a strike has been settled, we know it has just been patched up. It is like patching an old, worn-out automobile tire, getting ready for another blow-out. It is not much better if the strike is settled by arbitration, as long as prejudice and hatred survive on the part of both groups. The present antagonistic attitudes are undermining the foundations of both their houses.

A BASIC PRINCIPLE OF ECONOMICS

A basic principle of economics is for each country to produce those commodities which it can at the least cost. The permanent prosperity of a country depends upon the percentage of the agricultural and manufacturing commodities which it can produce more cheaply than other countries. The highest interests of both capital and labor in America are to get and hold foreign markets for our agricultural and manufactured products. Profits too big and wages too high not only work a hardship upon our own buying public, but make it much easier for other countries to underbid us and take away from us our export trade which we now have the golden opportunity to establish.

What America needs is to produce more cheaply, more abundantly, and more efficiently. Strikes are deadly to the welfare not only of the public at large, but also the pressure groups themselves that foment them.

INTERESTS OF BOTH GROUPS THREATENED

Free enterprise and capitalistic economy with all their good features are doomed unless labor can be reconciled. We may think it cannot happen in America, but it has happened in Russia and other countries. Huey Long, with his share-the-wealth proposals, is dead. John L. Lewis can never be President of the United States. But they will have their successors, probably abler and more subtle. As labor discontents grow, prejudice becomes more blinded and hatreds more bitter, agitators will gather to themselves a following that will destroy our present way of American life.

THE BIGGEST GANG

One day I talked with some CCC camp boys. I asked them what they thought of the plan. One of them replied, "My father died and left my mother with a large family of children to support. I was the eldest. I tried to get a job, but failed. I was sent to a CCC camp. I've learned a lot of things, and $30 a month has been mailed to my mother. In order to keep the family from starving, she had been compelled to mortgage our home and little farm. With the $30 a month additional to what she and the children could produce, she has been enabled not only to support the family but to pay off the mortgage." I shall never forget the eagerness in the face of the boy just approaching voting age when he added, "They tell me President Roosevelt has a lot of enemies." I replied, "Yes; a lot of enemies." (It was during the campaign when Franklin D. Roosevelt was a nominee for the third term.) The boy then said, "They tell me they have a lot of money." I replied, "Yes; they have a lot of money." The boy then with much satisfaction remarked, "They may have the most money, but we are the biggest gang."

There is food for thought in the fact that this biggest gang of which this youth was a typical representative is rearing large families of children, and, therefore, producing the majority of the future voters of America. The remedy lies in the direction of making laborers sharers in ownership. Owners of property are not easily converted to communism or even socialism.

MIKE'S PIG

The following story illustrates. Mike was an ardent Communist, and loud in his praises of the system. Pat said, "Do you mean to tell me that people who have things have to share 'em with people who haven't?"

Mike: "That's it."

Pat: "Mike, if you had two farms, would you give me one?"

Mike: "Sure."

Pat: "If you had two houses, would you give me one?"

Mike: "Sure."

Pat: "If you had two cows, would you give me one?"

"Sure," was Mike's answer.

Pat: "If you had two pigs, would you give me one?"

Mike: "No, I got two pigs."

Mike was a Communist until it concerned the property he really possessed.

EXORBITANT WAGES NOT THE REMEDY

Labor should have just and fair wages, sufficient to guarantee a comfortable standard of living, but not an extravagant one. Management should have fair and just profits, but not big enough to encourage extravagant living on the part of the owners. Extravagance is fatal to happiness and the best interests not only of adults, but especially of their children. This is true if the possession of too much money leads to spending for useless or harmful things such as intoxicating liquors and gambling. It is true the possession of too much money encourages idleness. Idlers are a menace to society—whether they be idle poor or the idle rich. The Bible teaches charity to the unfortunate, but the Apostle Paul was wise when he wrote to the Thessalonian Christians, "For even when we were with you, this we commanded you, that if any would not work, neither should he eat."

High wages mean high cost of living, so it is a vicious circle. The farmers justly demand and will get a parity of prices. If labor becomes too arrogant and too grasping, management which has to sell in competition with the rest of the world cannot afford to operate. If labor continues to demand ever-increasing wages, capital will be forced to transfer to other countries where factories can be operated to produce goods more cheaply and efficiently. This will inevitably lead to widespread unemployment in America.

THE PLAN

The remedy which I propose is as follows: Require by law that every corporation set aside 10 percent of the annual net profits with which to purchase stocks in the company to be given to the workers annually. In order to protect the laborers from their own follies in selling and spending the proceeds of the stocks on foolish things, it should be required by law that these stocks cannot be sold until the owner reaches 60 years of age. If he should die in the meantime his wife must have reached the age of 60 before the stocks become negotiable. By that time they should have sense enough to keep the stocks and continue to draw the dividends. If they do sell at 60 they will probably invest the proceeds in a home or some other venture that will guarantee security in old age.

The dividends equal to 10 percent of the net profits should be distributed not upon the basis of wages received by individuals, but upon the basis of other standards. These standards by which every worker should be graded should be worked out jointly by a representative of labor, management, and the Department of Labor of the United States Government, the representative of the Government having the deciding vote in cases of disagreement between the other two. The factors determining these standards should be (1) length of time of service with the company; (2) number of hours devoted to duty during the year; (3) the spirit of cooperation and interest in production; (4) efficiency in the performance of tasks assigned. Other facts may be considered. These would all encourage loyalty, efficiency, and a personal interest in the success and profits of the enterprise. When laborers are interested in the profits of a corporation and become actual sharers in their benefits it will do much to remove the motive for strikes, layoffs, and inefficiency.

In order to prevent the owners of big business from consuming the profits in exorbitant salaries there should be a just and fair regulation of salaries to be paid in accordance with the efficiency and character of services rendered by those employed in management. No deadheads should be tolerated simply because they own a large block of stock. Looking at this plan for what it would do over a period of years, it certainly would be to the advantage of owners and operators. It would also be an advantage to laborers who would share in the increase and the profits. They would receive their dividends annually, and at the age of 60 would have accumulated a competency for the security of old age.

It would create a motive that would stimulate good will and cooperative teamwork between management and labor. It would be a remedy for strikes.

Extension of Price Control Act

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. OUTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

FIGHT INFLATION NOW—A CALL TO ACTION

We, the undersigned, call upon members of our organizations, other organizations, and all other citizens to unite now for the immediate extension of the Price Control Act.

The present Price Control Act expires June 30.

If the act is not extended, prices will soar, rents will skyrocket, the value of the dollar will tumble—inflation will have us in its grip.

THE PRICE CONTROL ACT MUST BE EXTENDED NOW

Business should know now whether or not there will be ceiling prices after June 30.

If the Congress waits until June to extend the act, there is danger that some businesses will hold up production hoping that ceilings will go and they can boost their prices.

THE ACT MUST BE PASSED WITHOUT WEAKENING AMENDMENTS

Congress must make it possible for OPA to maintain its standards for holding prices.

If Congress should amend the act to require OPA to grant a price increase whenever there is an increase in cost, or place any similar limitation on OPA's established policy, it would invite the spiral of inflation and destroy the act.

SUFFICIENT FUNDS MUST BE PROVIDED

Congress must provide OPA with a large enough appropriation to maintain its present organization in full force.

The job of holding the line against inflation has never been harder. Lack of funds can be as disastrous to price control as a bad law.

OUR TASK IS CLEAR

We must let every Congressman know that we the people, all of us, want:

Price and rent control for another year.

Immediate extension af the Price Control Act.

No weakening amendments.

Adequate appropriations for the big job of holding the line against inflation.

Helen C. White, President, American Association of University Women; Ralph E. Hemstead, General Secretary, American Association of University Professors; Lelia Massey, Executive Secretary, American Home Economics Association; Jack W. Hardy, National Commander, American Veterans of World War II (Amvets); Faye Stephenson, President, Congress of Women's Auxiliaries, CIO; May Gibbons Executive Secretary, Council for Social Action of Congregational Churches; Colston E. Warne, President, Consumers Union of United States; Mae Wright Downs, President, Delta Sigma Theta Sorority; Mrs. LaFell Dickinson, President, General Federation of Women's Clubs; Jo Davidson, Chairman, Independent Citizens' Cammission for Arts, Sciences, Professions; Katharine Armatage, President, League of Women Shoppers; Bishop Lewis O. Hartman, President, Methodist Federation for Social Service; Mrs. Henry A. Ingraham, President, National Board, Young Women's Christian Association; Mrs. William A. Hastings, President, National Congress of Parents and Teachers; Cecie P. Henry, President, National Congress of Colored Parents and Teachers; Alice Hamilton, President, National Consumers' League; Ruth Craven, Executive Secretary, National Council of Catholic Women; Mrs. Joseph M. Welt, President, National Council of Jewish Women; Mary McLeod Bethune, President, National Council of Negro Women; Willard E. Givens, Executive Secretary, National Education Association; James G. Patton, President, National Farmers' Union; Clyde B. Murray, President, National Federation of Settlements; Anna Lord Strauss, President, National League of Women Voters; Lester B. Granger, Executive Secretary, National Urban League; Rose Schneiderman, President, National Women's Trade Union League; George C. Hatch, President, New Council of American Business; Thomasina Johnson, Legislative Representative, Nonpartisan Council, A. K. A. Sorority; Clark Foreman, President, Southern Conference for Human Welfare; Reinhold Niebuhr, Chairman, Union for Democratic Action; Mrs. Herman Lowe, President, Women's Auxiliaries of Labor, A. F. of L.; Thelma Stevens, Executive Secretary, Woman's Division of Methodist Church.

Food Subsidies

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of February 21, 1946:

STOP SUBSIDIES NOW

Stabilization Director Chester Bowles asks Congress to continue food subsidies for another year. He is no fonder of the subsidies, he says, than are the farmers and other groups now protesting their continuance. He feels, however, that dropping them would be ruinous at this time. "It would be impossible to make a success of the new stabilization program," he says, "with food prices shooting up."

We think Mr. Bowles is wrong in this. The new stabilization program is a program of economic readjustment. Wages and, to a lesser extent, prices are to be moved up to a new level. They are then to be stabilized at that level, so far as possible. Is there any good reason, while a general readjustment is being made, why food prices should not be permitted to rise sufficiently to compensate for the dropping of subsidies?

If subsidies were dropped, the price of bread should rise 1 cent a loaf. The price of canned vegetables should go up 1 cent a can. Meat prices should climb from 3 to 5 cents a pound. Butter should go up 12 cents and cheese 14 cents. The American food bill thus would be increased $1,579,000,000 to the consumer—and reduced $1,579,000,000 to the taxpayer.

It was questionable to allow these subsidies in the first place, for they made food prices unrealistic. It is a mistake to continue them, for the same reason.

Under the present system, with Government paying some of the food bill of every consumer, part of the "drive toward inflation" is being concealed instead of faced. We shall have to face it some day. Isn't it best to face it when we are trying to set a new line against inflation? If we continue the subsidies for another year, it will be still harder to rid ourselves of them. The time to drop them is now.

Will Wyatt's Government Building Plan Wreck an Industry?

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks I include an excellent study on the housing plan of Expeditor Wyatt by Dr. Willford I. King, one of our Nation's leading economists. Dr. King declares Wyatt's Government building plan, as incorporated in the so-called Patman bill, now being considered, will not only wreck the building industry, but it will add tremendous tax burdens.

This, Mr. Speaker, is a study every Member of Congress should read before casting his vote on the Patman bill.

WILL WYATT'S GOVERNMENT BUILDING PLAN WRECK AN INDUSTRY?

(By Dr. Willford I. King)

On February 8, 1946, President Truman requested Congress to enact promptly the legislation necessary to carry out the housing program, recommended by Mr. Wilson W. Wyatt, Housing Expediter.

Mr. Wyatt explains that "private enterprise must assume the leading role in this task, as it did in the task of war production—industry is entitled to a fair return—labor is entitled to a fair return—and that means higher wages, in some contributing industries, where workers have been historically low paid."

TO MEET ANOTHER EMERGENCY

Mr. Wyatt's program is avowedly designed to meet an emergency. Just now, we also have an emergency in sugar, an emergency in wheat, an emergency in automobiles, an emergency in steel, an emergency in transportation. The assumption is, that, as long as these emergencies continue, it is the duty of government to assist and direct private industry, and that, without such assistance and direction, the emergencies will continue indefinitely.

From the economic standpoint, such a system, in which private industry is supervised by government, parallels the one which Mussolini established in Italy, and called fascism. It is practically identical with that installed by Hitler in Germany, and designated as national socialism. One characteristic of all such collectivist systems is the existence of a never-ending series of emergencies. Why is this true?

The answer is that, when government assigns to bureaucrats the direction of industry, the inevitable result is a failure of supply and demanded to balance.

AN IMPOSSIBLE ASSIGNMENT

The reason for this is that the man has not yet been born who has knowledge sufficient to enable him to estimate, even approximately, the magnitudes of the factors making for supply, and of the factors making for demand. When the Government officials sets the price, it will either be so high that part of the product cannot be sold, or so low that a shortage will develop. We can be sure that, as long as government continues to control either prices or production, we shall always be efflicted with surpluses, shortages, and emergencies.

What is the origin of the present housing shortage? Not long before the war we had a great housing surplus, vacancies were numerous. Second-hand houses, in good condition, were selling at fractions of their

reproduction costs. From 1935 on, rising incomes strengthened the demand for houses, and active building continued until the war started. At that time it was rare to find any but new houses selling for more than two-thirds of their reproduction costs, and vacancies were still common. One must, therefore, conclude that in 1942 we had a surplus rather than a shortage of housing.

EMPTY HOMES ARE FEW

Today, by contrast, residential prices have risen sharply, and empty houses are undeniably hard to find. Why? For this situation, there are several reasons:

1. During the war home construction came practically to a standstill. This tended toward a deficiency of home units.

2. At the same time, the Government indulged in an orgy of inflation. This has cheapened the value of the dollar. Wage receipts and the national income have almost doubled. Rents have been held down by ceilings. This is equivalent to depressing rents sharply, in comparison to wages and income—in other words, housing has been made a very cheap commodity. When things are cheap, people buy more of them. Families have spread out, and occupied the previously vacant space.

3. Since, as just mentioned, real rents have fallen, landlords have found the renting of houses unprofitable. Many houses have, therefore, been allowed to deteriorate, until they are uninhabitable.

4. The war added more than a million to the normal number of marriages. Now these new families are seeking independent dwellings.

Mr. Wyatt asserts that "an inflationary spiral would be fatal to the building program." If such is the case, he had as well resign himself to failure.

INFLATION IN CURRENCY

At the end of 1937 the Nation's total currency supply, counting both money and demand deposits, was less than $34,000,000,000. By the end of 1944 it had risen to $115,000,000,000. While official figures are not yet available, the indications are that, at the end of 1945, the total amount of circulating medium was at least $121,000,000,000, or 3½ times the 1937 figure. This means that, in 8 years, our currency supply was inflated by about $87,000,000,000, or more than 250 percent. Had production remained at the 1937–38 level, the result to be expected would have been a 250 percent price increase.

Fortunately, however, production in 1945 was roughly double that of 1937–38. Under such circumstances, the effect normally to be expected is not a multiplication of the price level by 3½, but instead its multiplication by something like half that amount—or 1¾, in other words, a price rise of 75 percent. This probably accords roughly with what has actually occurred. The holding down of certain prices by the OPA has merely accentuated the increases of other prices. Great quantities of goods have been sold in the black market, at high prices. Sellers have surreptitiously advanced the nominal grades on a large variety of other goods. Prices of diamonds have trebled. Stocks have advanced widely. Jewelry has skyrocketed.

Mr. Wyatt's faith that inflation can be prevented by price regulation is akin to that of the man who tries to keep his house cool on a hot day by putting ice on the thermometer bulb. In reality, since the budget is not yet balanced, his program spells more inflation, and more robbery of the thrifty.

SUBSIDY WITHOUT LIMIT

There is no doubt that, now, and indefinitely in the future, veterans and others will stand in dire need of housing. They will be in dire need of food, of clothing, of fuel, of light, of house furnishings, of medical care, and of vacations. If it is the duty of government to furnish them with housing, it is equally the duty of government to furnish them with all these other things.

Experience shows that by far the most effective device yet discovered for providing citizens with the things which they need, is free competition—free enterprise. Neither fascist Germany nor socialistic Russia has been able to hold a candle to American capitalistic industry, as regards output per man-hour. Neither has shown evidence of being able to give to its citizens adequate supplies of those goods, which the citizens have really needed and wanted.

THE COLLECTIVIST PHILOSOPHY

There is an irrepressible conflict between the philosophy of Grover Cleveland, and that of Wilson Wyatt. Cleveland said it was the duty of the citizens to support the Government, and not the duty of the Government to support the citizens. Mr. Wyatt takes exactly the opposite position—that of Fascists, Socialists, Communists, and collectivists in general.

If it be granted that planning by Government is superior to planning by private enterprise, it follows that Mr. Wyatt has probably done as good a job of planning as is feasible. But just where is the evidence that Government can do the job even approximately as efficiently as can private enterprise? After World War I, houses were scarce, just as they are now, but did the scarcity bring national disaster? Everyone knows that it did not. Without governmental aid, private industry soon remedied the shortage.

REMOVE THE CONTROLS

At the present time, if the Government would take off all controls on prices, interest rates, and production, it would not need to engage in a housing program. A million Americans would "take a flyer" on putting up a house or two, and a few would put up dozens or hundreds of houses. The housing shortage would quickly be overcome, and it would not require Government subsidies, Government guarantee of loans, or Government training of workers. With price controls removed, supply and demand would balance, there would be no shortages and emergencies would tend to disappear.

Such would almost certainly be the result if the Government withdrew its support from the tyrannical labor monopolies, which prey upon both workers and the public, by limiting production, raising wage rates so high as to cause mass unemployment, and exacting from buyers unreasonably high prices, not only for houses, but for products of all kinds.

If the Government goes into house building, it will take labor and material away from private builders and wreck the private building industry. Is this desirable? Moreover, on the basis of all past evidence, it is almost certain that any given grade of house will cost the Government far more than it would cost if built by a private builder.

BARRACKS INSTEAD OF HOMES

Furthermore, it is clear that Mr. Wyatt plans to go in heavily for prefabricated houses. These are likely to resemble barracks more than dwellings of the type which Americans generally desire. One of the goals to which the ambitious American aspires is to the privilege of building a house to suit his particular taste. Houses last a long time. Do we want to have the landscape marred for half a century by rows of structures looking more like chicken coops than residences?

It is, of course, undoubtedly true that many veterans and other people as well, will be delighted if Government—that is, the other citizens—will pay part, or all, of the cost of their new houses. However, the fact must not be overlooked that veterans represent most of the families of the Nation. After all, passing the buck to Uncle Sam does not lessen in any way the total cost of the houses. That bill must be paid by someone. What Mr. Wyatt's plan boils down to is that the families of veterans and others who happen to want, and get, the Government-subsidized houses, will be sponging a large part of the cost of their houses off the families of other veterans. Is this a square deal?

POOR REWARD FOR VETERANS

It is well to remember that the veterans do not represent a small and isolated group. Instead, they constitute the majority of the able-bodied male members of a whole generation. There is no feasible way of having one generation supported by others. It seems unreasonable to suppose that the vast majority of veterans are asking for anything of the kind. Everyone is agreed that those who are disabled should be given ample care. But the best present that can be made to the able-bodied young man returning from the war is that he be given an opportunity to climb as high as his talents will allow on the ladder of success, unhampered by artificial restrictions and governmentally-sponsored labor monopolies. Under such conditions, he will not need to lean upon the crutch of Government housing subsidies, as represented by the Wyatt program.

ESSENTIAL FEATURES OF WYATT'S PROGRAM

1. Construction during the next 2 years of 2,700,000 homes, of which all but 250,000, are to be of permanent construction.

2. Preference for veterans and their families, in the rental or purchase of these homes.

3. Appropriate provisions for nonveteran hardship cases.

4. A Government subsidy to builders, amounting to not less than $400,000,000.

5. Absorption by Government of undue risks in developmental work on new-type materials.

6. Guaranteed markets for materials manufacturers.

7. Purchase by the Government of any houses constructed under the program, if the builders cannot sell them in the open market. Any houses, so purchased, will later be sold by Government, at the best prices obtainable.

8. The houses are to be sold for not more than $6,000 each, or are to be rented for not more than $50 per month.

9. The Government will insure mortgages, up to 90 percent of the value of each home.

10. The Government is to control strictly the prices of materials, and the rents of the houses.

11. Ceilings are to be set, or maintained on rents, and prices of old and new houses, and on building lots in urban areas.

12. One and one-half million additional workers in construction are to be recruited and trained (presumably by Government).

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before a subcommittee of the Senate Foreign Relations Committee with reference to the St. Lawrence seaway, February 22, 1946:

Mr. Chairman, there isn't much that I can add to the wealth of testimony offered in

support of the further development of the St. Lawrence route. However, I do wish to take this opportunity to allay the fears of some of the more violent opponents to this important program.

A half century ago when the construction of the Panama Canal was under consideration its principal opponents were the railroads. Then, as now, they were convinced the completion of the project would bring certain ruin. The greatest opposition to the seaway, as was true with the Panama Canal, comes from the eastern railroads. Just how exercised the eastern lines are about the project can be appreciated when one takes into account the fact that as recently as 15 years ago the western railroads were all strong supporters of the St. Lawrence seaway. Apparently their vision has been obscured since that time by the eastern lines.

The railroads really have no cause to fear the competition of the St. Lawrence seaway for at most the commerce carried over this water route will only be a small fraction of the present commerce of our eastern ports, and it is estimated to amount to less than 3 percent of the ton-miles carried by the railroads. The tonnage carried via the St. Lawrence seaway will be largely new tonnage resulting from economic expansion which cannot be realized under the present land-locked conditions of the Middle West. This economic expansion will be stimulated by the seaway and the whole country, as well as the railroads and other opponents of the project will be greatly benefited. The new industries and business that will rise in the Middle West as a result of the seaway will assure expansion of transportation needs which will more than offset any possible diversion of the railroad's traffic.

The power companies and the coal operators, next to the railroads, are the greatest antagonists of the seaway. The power companies are concerned about the possibility of the Government going into the power business. I am opposed to Government entering into competition with private enterprise but have no fear of that possibility in connection with this project. The power in this instance is but a by-product of the seaway. Since the power is available it should be fully utilized. The power development will not compete with existing power but will be merely supplementary for it will greatly industrialize the areas it serves.

As for the coal industry, it apparently fears the competition from foreign fields. If the fears were well-grounded then all of the cities on the east coast would have taken advantage of the available foreign coal. However, we find that even though there is no tariff on coal the imports amount to only sixteen-thousandths of 1 percent of the total volume of American production. Furthermore, we find that Canada prefers our coal to that of the British Isles even though the British coal can now be shipped in ocean vessels to Montreal. Even today more than 80 percent of the coal needs of Canada are supplied by the United States. As to the effect of the domestic sale of coal as a result of the power project, it has been pointed out that in the TVA area alone, since the advent of this project, the coal consumption has increased fivefold. It is but a fulfillment of the old adage that "new business brings new business."

The completion of the St. Lawrence seaway will permit the rise of new industries which will not necessarily compete with those existing elsewhere but merely complement and supplement them. Therefore we find that organized labor in the State of Wisconsin, the A. F. of L. and the CIO is strongly in favor of the St. Lawrence seaway and have asked that its interest be noted.

The completion of the seaway shall open a new frontier in our national development which will open to world trade the important ports on the Great Lakes. The modernization of the St. Lawrence route will benefit not only the people of the Middle West but the entire Nation. In the long run, it will greatly help those interests that today are attempting to block its attainment. The completion of the St. Lawrence is long past due; let us get on with it in order that the full wealth and productive power of the Middle West and the country as a whole can be realized.

Immigration Quotas

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial which appeared in the Milwaukee Journal on February 26, 1946, entitled "Halving Immigration Quotas":

HALVING IMMIGRATION QUOTAS

Effort is now being made by some alarmists in Congress to cut immigration quotas to this country in half for a 10-year period. The cut would apply to all countries, except that the minimum quota figure of 100, now applying to 39 countries and isolated areas, would remain the minimum.

There is no possible excuse for this type of guesswork reduction at this or any other time. If our immigration quotas are to be revised at all, the revision should be made on the basis of a thorough study of all the elements involved. A House subcommittee has already suggested that such a study be undertaken by a commission created expressly for the purpose.

Surely there is no emergency at this time. Present quotas total only 153,879. Great Britain and Ireland account for 83,574, so that the total for the rest of the quota world is only 70,305. The British-Irish quota is never fully used, and in recent years actual admissions have not averaged anything like the half to which quotas would now be reduced.

The country can easily assimilate even the full number allowed to enter under present quotas, if that number should presently be reached because of conditions abroad.

Thus there seems to be no reason for a change in policy. There are several reasons for keeping to the figures established in 1929, one of which is the importance of supporting the general nonisolationist policy of the United States. When, in 1921, this country began restricting immigration, it did so only to keep the number of newcomers down to a point where assimilation would not be too difficult. The present law has achieved that objective. No change should be made in it, except after the most careful study and to correct specific faults.

The Gossett bill should be defeated.

George Washington and His Men at Valley Forge

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address I delivered Sunday, February 24, 1946, in the Washington Memorial Chapel at Valley Forge, Pa.

This was my first trip to historic Valley Forge. On approaching this hallowed spot I felt as if I trod upon holy ground. To be sure, there are many historic places within the confines of our great country, but probably none surpassing Valley Forge.

Years ago, Rev. W. Herbert Burk, D. D., conceived the idea of having each of the several States, through their respective Governors, to officially conduct Sunday services in the Washington Memorial Chapel. February 24 was designated as South Carolina Sunday. The colors of our State were displayed prominently in the beautiful and impressive chapel. I was commissioned by our Governor, the Honorable Ransome J. Williams, to speak for him on this occasion.

Since the passing of Dr. Burk his worthy successor, the Reverend John Robbins Hart, as rector, is carrying the work forward in a very commendable fashion. I am proud to have participated in my State's service at Valley Forge and commend the work most heartily.

The address follows:

Mr. Chairman, ladies, and gentlemen, I bring you greetings from Gov. Ransome J. Williams, of South Carolina, who has commissioned me to speak for him at this historic place on this eventful day. I am greatly honored but approach my task with all humility as I seek to discharge the high trust I bear. Coming as I do for the first time to this hallowed spot, I would interpret some of the sentiments of my fellow South Carolinians as I discuss the subject of Washington and His Men at Valley Forge.

The army which Washington led at Valley Forge was greatly inferior in numbers and equipment to the enemy which faced it across the river. It was a body of brave, courageous men worse than ill fed, ill housed, and ill clothed. "The men were literally naked," says a famous historian, "some of them in the fullest extent of the word." "Part of them mud, part of them blood, the rest of them—not at all." The situation here at Valley Forge in that cold, bleak winter of 1777 was dark and desperate. It seemed that our fight for liberty was doomed to perish beneath the heavy snows of these wooded hills you and I look out upon today.

But the fight for liberty did not perish here at Valley Forge; it rose up with a spirit that performed the incredible and accomplished the almost impossible. The place where we are now met is not the graveyard of American independence, but the cradle of it. This is indeed hallowed ground upon which you and I stand, my fellow citizens, ground hallowed by the sacrifices and personal privations which Washington and the men of his army endured to win for us the right to live in a free and independent nation. We are the recipients of a goodly heritage.

The only way that we can be worthy of this heritage is to be willing to guard and defend it with the same degree of unselfishness, patriotism, and individual sacrifice which was required to win it for us. In the war that we have just won, I feel that such a spirit was characteristic of the attitude and conduct of the great majority of our people. We could never have won the war without such spirit. The most disturbing signs of the times in which we are now living, however, are evidences of a growing feeling or belief that such spirit will not be required to win the peace.

My friends, the same degree of devotion, willingness to sacrifice, and patriotic service is required to win the peace and to maintain it as was required to win the war. "Unto whom much is given, much is required," says Holy Writ. Much, indeed, is required to meet the opponents of the American way of life who seem to be organizing in an all-out effort to substitute for the principles of free enterprise, which rewards a man for effort, initiative, and merit, the promises of a deadly concept which holds that the government should give a man his sustenance whether he is willing to work for and earn it or not.

It was not so many years ago that the late Speaker of the United States House of Representatives warned:

"There are evidences of certain sinister influences and minorities now seeking to sap and mine the pillars of this temple of freedom. We may have been too tolerant of some of their recent manifestations of subversive treachery. We have sought with rather grim patience to respect the guaranty of freedom of speech; but it may be only fair to admonish all such groups that they take counsel of their prudence lest by going one step too far, it will be too late to escape the wrath and indignation of all real Americans."

We are still waiting with "grim patience" but our patience is tried almost to the breaking point when we reflect upon the price others have had to pay in order to keep the fires of liberty burning. When one thinks what Washington and his weary and bedraggled Army had to endure at Valley Forge, all justification for tolerating such manifestations of subversive treachery ceases to exist.

May we not on this hallowed ground rededicate our own individual lives to the tasks that are ahead of us. Let us seek to emulate the example set for us by George Washington and his followers. Then in truth it may be said, "America, we do not know beneath what sky nor on what sea shall be thy fate. We only know it shall be high. We only know it shall be great."

The Housing Bill

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. AUCHINCLOSS. Mr. Speaker, the motive behind the bill under consideration in the House, H. R. 4761, is to provide homes and dwellings for the returning veteran and as has been so well said by the Members in the debate on this bill, there can be no controversy over that objective. Veterans who have returned from the wars, having spent a considerable part of their formative life out of the country defending it from its enemies and thereby having been deprived of securing real estate or planning to build homes, should have every encouragement and every facility offered to them to achieve that aim.

But, does this bill do that? Does this bill make it easy for a veteran to build a home and to finance it? Does it enable him to acquire a priority on the material necessary for the construction of a dwelling, and does it in any way expedite the manufacture and the flow into the market of those materials?

Let us inquire a little bit into the history of the effort made in the GI bill of rights to give a veteran an opportunity to borrow money for the organization of a business or the building of a home, and see how it was worked out. Under the original GI bill, title III, a veteran was enabled to borrow $2,000 under a guartee of the Federal Government with the approval of the Veterans' Administration, and after this law was in operation for a short time it was discovered that in making a loan for the purchase of real estate a veteran would have to have two appraisals made, one by the lending agency and one by a representative of the Veterans' Administration, and the veteran had to pay the appraisal fee on each occasion.

During the first session of the Seventy-ninth Congress, because of many complaints about the complicated procedure required by the Veterans' Administration, as well as the expense involved, the Committee on World War Veterans' Legislation carefully went into this matter and after considerable thought and discussion, amendments to the GI bill were brought to the House for action and subsequently were written into the law. Under the present law a veteran may borrow up to $4,000 with a Federal guarantee and only one appraisal is necessary in the purchase of real estate; the maturity date for loans was extended to 25 to 40 years. Loans are now being made under the authority of the revised law.

Now let us see what this bill, H. R. 4761, provides as far as the veteran is concerned. In section 703 (a) it is provided as follows, and I quote from the bill:

> The Director is authorized to require any person who owns, holds an interest in, deals in, or offers to sell or to buy any housing accommodations to furnish information under oath or affirmation or otherwise, to make and keep records, and to make reports. * * * The Director may require any such person to permit the inspection and copying of records and other documents and the inspection of housing accommodations.

Here we have once more all the red tape of bureaucracy and the effort which the Congress has spent in trying to make things simple, easy, and expeditious for the veteran in building a home is done away with. The provisions of this bill would certainly make it far more difficult for the veteran to build a house than under the present law.

Now, what does the proposed law do in expediting the manufacture of materials that go into the construction of a dwelling? Under section 705 of the bill it is provided that whenever in the judgment of the Director there is a shortage of building materials, he may regulate or allocate such materials in such manner and under such conditions as he deems necessary and proper, and he may give preference in the purchasing or renting of housing accommodations in connection with this subject.

There is not one provision in the bill which would tend to stimulate the manufacture and production of articles necessary to the construction of a house. It is the testimony of everyone who is at all cognizant of the building industry that a great bottleneck exists in the production and manufacture of housing materials and this is attributed to the policies and attitude of the OPA in maintaining strict and rigid price ceilings, thereby discouraging production. Business cannot operate at a loss, no matter what the New Deal philosophy preaches.

It has been suggested in the debate that subsidies could be paid to stimulate the production of these materials, but as the gentleman from Illinois [Mr. DIRKSEN] so ably pointed out in his remarks yesterday on this subject, a 10-percent increase in the price ceiling for building materials would be far cheaper for everybody than a Government subsidy. I would add to the remarks of the distinguished gentleman that such a policy would also tend to strengthen our system of free enterprise and not open up another opportunity for Government deficit financing.

Veterans should have priority on materials; veterans should have priority on rentals; veterans should have priority on construction labor; in short, veterans should have priority on everything which goes to the building of a home, but unless the materials used in home building are produced and made available, all these priorities mean absolutely nothing.

In its present form this bill is a hodgepodge of words which, I think, would be productive of very little construction, and whether or not it can be made workable by amendment remains to be seen.

The British Loan

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. BENDER. Mr. Speaker, like most questions involving foreign policies, the arguments on the British loan have developed far more heat than light. Those who argue for the loan insist that the only alternative is the opening of a new and destructive trade war between the British and ourselves. In such an economic war all the weapons of the imperial system would be turned against us. The Empire preferential system which we have been criticizing so strongly in recent years, would be invoked against us. The argument runs that maintaining the British economic structure is vital to our own well being.

On the other side, there are those who assert that our obligations to ourselves as the one great capitalistic government must require our first consideration. They say that Britain has resources in land and colonies which could well be applied against her debts and that before we talk money to the British we should sit down and talk turkey. There are British possessions in the Western Hemisphere which the British have always declared to be economic liabilities. If they are economic liabilities, they are certainly not needed to protect any British interests against us. Before we consent to any outright grant, it would certainly be well for us to discuss frankly the possibility of transferring British

possessions in the Western Hemisphere to our Government.

It would be a good idea to talk over aviation landing rights in the British home islands and the development of a trusteeship policy over colonial and mandated lands that would promise some hope of peace in the Near East and in India. This would not be taking advantage of Britain's present needs. On the contrary, I believe it would be a realistic effort to solve some of our problems in a spirit of frankness and businesslike good will. We have had too much secret diplomacy in other areas. Certainly we do not need it with the English-speaking people of Great Britain.

I should like to make one further observation in connection with the British loan. There are many people who still hunger for the good old days when we could regard ourselves as a separate New World. Europe was the old country and we wanted nothing whatever to do with its affairs. During the year 1945, we loaned 11 nations the sum of $2,458,000,000. The Export-Import Bank has been approached by 6 other countries looking for financial aid. Italy is asking for $1,000,000,000; China wants about $2,000,000,000; Poland needs a minimum of $400,000,000; Finland has requested $100,000,000. Czechoslovakia and Yugoslavia have just lined up at the window but their figures are not yet in shape to forecast.

There has not yet been news of the lending needs of Russia and France, but it is safe to guess that they will be large. France received $850,000,000 in 1945, and is now seeking to modernize her industry. Stalin told a Congressman in Moscow last year that his country could use $6,000,000,000 to reconstruct its shattered economy.

Before we cancel these debts or sanction futher loans, let us assure ourselves that our own resources are equal to these drains and that we will not incur an additional burden of taxation which will crush our own industry and commerce. Let us assure ourselves that our debtors will be not only able but willing to repay these loans and that if their purpose be to restore them to prosperity with a view to a lucrative foreign trade with us, that such trade will be worth the investment and that the money will be used for that purpose and not to enrich individuals or to strengthen economic systems hostile and ruinous to our own. We are under no moral or legal obligation to our allies. It was we who saved them from subjugation and it is they who should be grateful to us.

Sign Up and Trust the OPA

EXTENSION OF REMARKS

OF

HON. HARVE TIBBOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. TIBBOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Johnstown Democrat, Johnstown, Pa.:

SIGN UP AND TRUST THE OPA

"Sign up and trust the OPA."

That now is the watchword in Washington. That is the advice to industry now facing, or about to face, demands for wage increases.

That is the advice, specifically, being handed out with a straight face to hundreds of fabricators of steel products, of which there are three currently affected in this city.

These plants are facing a double squeeze. They are caught between labor demands for 18½ cents an hour more, on the one hand, and an increase of $5 a ton in the price of the semifinished steel they buy, on the other.

Yet they are told, "Sign up and trust to OPA."

Can they trust OPA? What has been the record of OPA in expediting price appeals in the past? What has been the record of OPA, specifically, in expediting price appeals for the steel industry?

Not good.

The basic steel industry had been dickering with OPA for price adjustments long before the January 21 shutdown over the wage dispute. Months of futile investigation, dozens of endless hearings, had gone on.

The OPA, through a spokesman, admitted to the steel industry that it was entitled to price relief on the basis of the rapidly rising costs of production. Yet, despite this admission, no price increases were forthcoming until a month-long strike over a wage increase threatened the Nation's peacetime economy.

Would it be too cynical to wonder whether the steel industry would not be singing for price relief today if the Government had not been forced to act by the throttling of production due to the strike of 750,000 steel workers?

Now the fabricators—many of whom also had been manufacturing and selling some of their products at a loss, even before the double-bladed increase in the cost of steel and their wage bill—are advised to "sign up and trust to OPA."

When the steel mills shut down over the wage dispute, did the Government say to the United Steel Workers of America, "Sign up and trust" to some alphabetical agency or another?

Now that a general wage-price policy has been established and price increases promised, sooner or later, to steel fabricators, does the Government say to steel workers not yet covered by contracts calling for the 18½-cent wage increase, "Sign up and trust to OPA?"

It does not.

How long will the Government of the United States maintain the labor-industry highway as a one-way street? Is it not about time that Government stopped mixing politics and economics, and settled down to a bit of old-fashioned frankness and honesty and justice for all hands?

As things now stand, the pleader before the bench of governmental bureaus stands an excellent chance of leaving the courtroom with what he wants, or part of it, at least, if he has a couple of thousand potential votes sticking out of his pocket—or a couple of hundreds of thousands of potential votes, as the case may be.

But let the man or the company, which would be doing well if it marshalled half a hundred votes, appeal for deserved relief from Government control, and he is told bruskly, "Sign up and trust to OPA."

We still are supposed to be operating under a republican form of government, the learned counsel to the House Un-American Activities Committee to the contrary. But maybe that gentleman is right, in some degree, at least, when he insists that America is no democracy.

In many respects, we are crowding the line of national socialism. Before and during the war we used to call national socialism nazism. If we continue as we have been, we soon will have to find a new name for it.

Housing Wilderness

EXTENSION OF REMARKS

OF

HON. ROBERT K. HENRY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. HENRY. Mr. Speaker, under leave to extend my remarks, I include an editorial which appeared in the Wisconsin State Journal of Madison, Wis., under date of February 22, 1946:

MOSES WITH A RIGGED COMPASS

If there yet be a simple soul trusting the Federal Government to lead this country out of the housing wilderness, let him ponder Madison's experience, which is on a comparatively small but still important scale.

Long ago, Madison officials took the initiative in trying to solve Madison's emergency housing requirements. They requested the Federal Public Housing (FPHA) to assign us 100 demountable housing units. Possible sites were picked, some selected. Madison made itself ready for them.

"Sure," said FPHA finally, "Madison can have them."

They were assigned, but they never arrived.

They were never even found. Lost in the red tape. Buried at the bottom of somebody's "Immediate Action" basket.

Again seeking to care for its own, Madison moved to develop Truax Field as a housing area. Surveys, coats, blueprints were made ready. It would be an expensive proposition, but Madison was willing to bear all that was found necessary. Since the demountable plan to be shared by the FPHA was lost in somebody's shuffle, would the Federals instead kick through with some financial aid out of the specific sum already provided by Congress?

Now comes the Federal answer:

No. No money available.

But in the same breath comes this as well: The Federals may—just may—develop 100 temporary units at Truax itself, as a Federal project.

And just to make the confusion complete: All this, says FPHA, need not prevent the city's proceeding to develop its own 1,000 units out there at its own expense, for which facilities will be made available "as soon as details can be worked out."

Oh, sure, sure! Back in the basket!

Ah, yes, the FPHA moves in mysterious ways, its own miracles to perform.

But is it so mysterious? No money for a municipal project, but plenty for a Federal plan. Now explain that?

There isn't anything puzzling about it.

An agency set up ostensibly to speed public housing and work through, with, and in behalf of localities is doing no such thing. It is part and parcel of the whole new and redeal plan to block private and municipal construction and to keep all the power, material, and programs in the grasp of the Washington political bureaucracy.

That's first.

The cold and homeless, fed with high-sounding pap to keep them warm, are strictly second.

Attention United States Senate—Special Attention, Senate Judiciary Committee

EXTENSION OF REMARKS
OF
HON. ROSS RIZLEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. RIZLEY. Mr. Speaker, recently I called attention to the liquidation of two dairies in New Canaan, Conn., by Local 338 of the International Brotherhood of Teamsters, Chauffeurs, and so forth. Further supplementing the statement I made concerning the matter, together with the news article as it appeared in the March issue of the Farm Journal, I include as a part of my remarks under permission heretofore granted for the Appendix of the RECORD, two additional articles, one appearing in the Wall Street Journal under date of January 30, 1946, and the other from the New York Herald Tribune under date of February 2, 1946:

[From the Wall Street Journal of January 30, 1946]

THE MILLER'S MISTAKE: THEY KNEW DAIRYING BUT NOT ABOUT A. F. OF L.—SO NEW CANAAN BROTHERS, WHO LIKED TO SELL GOOD MILK, HAD TO GO OUT OF BUSINESS

(By Sydney B. Self)

NEW CANAAN, CONN.—On Monday, a small dairy, started 4 years ago in this community by the three Miller brothers, closed its doors and went out of business.

The Miller brothers were brought up on a farm. They knew the dairy so well that they put all their savings into it. But they reckoned without Local 338 of the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, A. F. of L.

The dairy's seven or eight drivers had been called out on strike by the union. The demands were a 28-percent increase in basic pay and a 5-day week which, the Millers figured, would boost their pay roll more than 50 percent. The union, according to the brothers, also was asking for a 66⅔ percent increase in commissions.

Furthermore, the proffered union contract barred the Millers from doing manual work around the dairy. They have been putting in a 7-day week and doing more than half the labor as well as driving the trucks in a pinch. Union negotiators said they would let the Millers work, but refused to put this concession in writing.

TWO HUNDRED PICKETS IMPORTED

Last week end was probably the most trying in the lives of the Millers.

Their striking drivers represented only a corporal's guard, but the union sent a small battalion of pickets from out of town—about 200 to 250—to police the dairy. A detachment of 60 Connecticut State troopers came too, to keep order. Women customers who came to get milk for their babies had their auto tires slashed.

The few Miller employes who were not among the pickets decided they had enough. They quit. The Millers, too, decided they were through.

"We would merely be signing a petition of bankruptcy in advance," said William C. Miller, dairy president, in an open letter to Frederick Conrad, union president, explaining the closing of the dairy.

Like other small businesses, the Millers do not keep a staff of cost accountants. But they can add. They figured something like this:

They had a pay roll of $455 a week which would be raised by the proposed union wage scale to $600 or $700 a week, not including the higher commissions which were demanded.

The brothers sold about 2,000 quarts of milk daily at retail for 16 cents, and paid 9.5 cents, higher than the going wholesale rates. That's because they sold only Jersey or Guernsey milk which, they say, is the richest in cream. Plus some small wholesale business that they performed, this brought their net to around $144 a day, or say $1,000 a week.

MILLERS FEEL THEY CAN'T MEET DEMANDS

Subtracting $700 wages from $1,000 would leave $300 for the salaries of the Millers who would not be allowed to work. Then, there would be the additional costs for trucks, gasoline, pasteurizing, bottles, and other operating costs.

So the Millers, even without cost accountants, figured that it simply couldn't be done.

The union had a solution. It proposed, according to William C. Miller, that the brothers sell their business to a larger concern which could meet the union's demands.

"We will not sell our customers," was Mr. Miller's answer to this proposal in his open letter to the union's Mr. Conrad. His letter continued: "If we cannot give them (the customers) our product—the product they have come to know and trust—we will not ask them to blindly go to another, merely because we have turned over to that other our route books and have written glowing praises of our purchaser, obviously put into our mouths."

New Canaan is a small commuting village where people like Jersey milk with plenty of cream. Big dairies sell "standardized milk," with butterfat content brought down to the legal minimum, well below the butterfat content of the whole milk from Jersey and Guernsey cows sold by the Millers. The brothers built up their business by supplying the local demand for richer milk.

In closing his letter to the union, William Miller says, "You have won a brilliant victory. I applaud you but—the golden goose is dead, the eggs are no more."

[From the New York Herald Tribune of February 2, 1946]

THE CASE OF THE MILLERS

One of the first rules of sound journalism is that news and editorial comment should be strictly segregated. Nevertheless, every so often a news story bobs up which, without any conscious effort on the part of the writer to make it one, turns out, through its sheer simplicity and factuality, to be as effective an editorial as any that could be purposefully contrived.

Such a story is the half-column account sent in to the Wall Street Journal this week from New Canaan by Staff Correspondent Sydney B. Self on what happened to the Miller brothers of that little community, which borders on Stamford, Conn. The Millers, Mr. Self explains, are three brothers, who were brought up on a farm, knew all about dairying (and put all their savings into it), but who had "reckoned without Local 338 of the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, A. F. of L."

"Last week end," writes Mr. Self, "was probably the most trying in the lives of the Millers." The union had called out their drivers, demanding a new contract which was tantamount to a 50-percent increase in the pay roll, asked for an increase of 66⅔ percent in commissions and barred the Millers from doing any manual work around the dairy. Although the Millers had only seven or eight drivers working for them, the union sent in from 200 to 250 pickets from out of town to police the dairy (which necessitated the use of 60 State troopers to maintain order). When women customers drove up to the dairy to get milk for their families the tires of their cars were slashed.

The employees decided they had had enough and quit. And the Millers followed shortly. The Millers didn't have an accounting staff, but they could add and subtract, and they got out paper and pencil and did just that. Their business (around 2,000 quarts a day) grossed about $1,000 a week, out of which a $455 pay roll had to be met, in addition to the cost of trucks, gasoline, pasteurizing, bottles, and other necessary expenses of doing business. It did not take much figuring to see that with the pay roll jumped to between $600 and $700, themselves barred from working and with other expenses continuing as usual the Miller brothers, as they wrote to Frederick Conrad, union president, in signing the proposed contract would simply be "signing a petition of bankruptcy in advance."

The union had a solution for this problem. Why, they suggested, didn't the brothers sell out to a larger concern, which would be better able to meet the union's wage demands? To this the Millers, who had built up a quality business, with butterfat content of the product well above the legal minimum, answered with a flat refusal. "We don't propose to ask our customers," they declared, "to go blindly to another, merely because we have turned over our route books and have written glowing praises of our successor—obviously put into our mouths."

The battle between the powerful teamsters' union and this little Connecticut enterprise was short, and the defeat was a crushing one. But it was more than a defeat for the Millers; it was one more defeat for the thing that over the years has been this country's greatest source of strength—the right of an American citizen to go into business for himself with a fair chance of making a success of it if he works hard and produces something that the community wants and needs. That is the essence, not only of free enterprise, but of the only kind of equality that is consistent with the dignity of man—equality of opportunity. There are many threats to that system today, but none is greater than that presented by organized labor grown to manhood with respect to power, but with no corresponding increase in responsibility. As Congress prepares to write a new labor law, one could wish that every member had the case of the Millers before him. Because the case of the Millers is neither more nor less than today's labor problem in America presented in simple microcosm.

Southern New England Farm and Home Show

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. FORAND. Mr. Speaker, on February 21 the Southern New England Farm and Home Show was held in the Cranston State Armory, Providence, R. I. Part of the proceedings were broadcast and I offer for printing in the RECORD the radio round-table conference held on that occasion. It sets forth very forcefully Rhode Islands position in agriculture.

Mr. John Johnson, of Newport, R. I., the president of the Rhode Island Agricultural Conference, opened the program

and introduced Dr. Raymond G. Bressler, who led the discussion. It follows:

Mr. JOHNSON. It is a high honor and personal privilege for me as president of Rhode Island Agricultural Conference to introduce our efficient and popular State director of agriculture, Dr. Raymond G. Bressler, who will act as toastmaster and conduct the radio round table.

Mr. BRESSLER. The applause you are hearing is coming from the banquet hall of the Cranston Street Armory in Providence, R. I. The occasion is the revival of the winter farm show which was abandoned during the war years.

In keeping with the spirit of the new era we are coming out in new clothing and with a new name. Henceforth, we will be known as the Southeastern New England Farm and Home Show. This emphasizes the economic boundaries of our State rather than its political boundaries. This is the occasion when we wish to show the agriculture of Rhode Island, eastern Connecticut, and southeastern Massachusetts to the rest of the world. And we also wish to show our own folks what the rest of the world has developed by way of implements, machinery, equipment, insect and pest controls, and food and feed products for the farm and home to make their everyday work less burdensome and more attractive.

We have discovered during the last 4 weeks, however, that we may be a year too early. No one anticipated last summer that we would run into February 1946 with much of the new equipment for the farm and home still in the making stage. It appears now that we are ahead of the manufacturing and that we shall have to wait another year before we can show you all the good things we had planned. Let us hope, in the meantime, that labor and management will adjust their differences and get ahead with the main business of making the things you and I wish to buy.

There is a great gathering here tonight of farm and city folks, ladies and gentlemen of the radio audience. Following the banquet of more than 300 reservations the room rapidly filled up. I understand that there are many standing in front of the amplifiers in the main exhibition hall. John, how many would you say there are in this room at this minute?

Mr. JOHNSON. Six or seven hundred, I should judge.

Mr. BRESSLER. At least 600, Mr. Johnson. By the way, Mr. John Johnson, of Newport, is president of the Rhode Island Agricultural Conference. This is a federated organization, consisting of 25 member societies, all interested in promoting agriculture and rural life in our southeastern New England. They have done a fine job in sponsoring this 1946 show.

Seated with me on the radio stage are: His excellency, the Honorable John O. Pastore, Governor of Rhode Island; Mr. Carl Wilken, of Sioux City, Iowa, economic analyst of the Raw Materials National Council and research consultant of the National Association of Commissioners, Directors, and Secretaries of Agriculture; and Mr. L. L. Rummell, of Cincinnati, Ohio, agricultural counsel of the Kroger Grocery & Baking Co.

In the audience we have the members of the agricultural committee of both houses of the Rhode Island General Assembly, the speaker of the house, the president of the senate, the chairman of the finance committee, the director of our department of labor.

We also have with us the commissioners of agriculture from the Northeastern Association, W. H. Allen and A. K. Gardiner, of New Jersey and Maine; a committee of prominent labor leaders; and a group of leading industrialists. It is in these last two groups that we are especially interested tonight. Pleasantly, we have an ax to grind with them. We don't think they recognize the full importance of agriculture in our State and National economy. Well, you men can get ready, gentlemen, for in just about 30 seconds we'll start telling you how important agriculture is.

By and large, though, listeners on the radio, our gathering is composed of men and women from rural Rhode Island, and a fine group it is. Mr. Governor, what do you think of them? How do they look to you?

Governor PASTORE. Mighty fine. If you hadn't just told us of the visitors from other States I would have thought they were all from Rhode Island.

Mr. BRESSLER. I wonder if you realize, Mr. Pastore, before you became Governor, how great an agricultural State Rhode Island really is?

Governor PASTORE. Not exactly, Dr. Bressler. I knew, of course, that there were many fine farms in Rhode Island and that our agricultural products were as good as any in the country. In fact, I have been told many times that they are better, and that a Rhode Island fresh egg is a premium anywhere. But I hadn't quite appreciated the significance of our agriculture to the State.

Mr. BRESSLER. What do you mean by "significance," Mr. Governor?

Governor PASTORE. Just this: There are 3,800 farms in our little State whose combined capitalization is about three hundred millions and with this capitalization the products that are produced annually are valued at about sixteen millions. This means cash, the most definite measure of success in farming or in any other business for that matter.

Mr. BRESSLER. That would be good production in any field, wouldn't it, Mr. Governor?

Governor PASTORE. It would, indeed. Many a manufacturing concern doesn't even approach that mark.

Mr. BRESSLER. Well, Mr. Wilken, I see a twinkle in your eye. That record is almost as good as Iowa's, isn't it?

Mr. WILKEN. Yes, it is. But an Iowan doesn't like to admit that there are any farms in the United States that produce as well as those in the State where the tall corn grows. I suppose you are aware, Doctor, that farm-for-farm Rhode Island ranks at the top of the Nation.

Mr. BRESSLER. Oh, yes. I have had to defend Rhode Island agriculture too many times with you fellows from the Central West not to look up some statistics. Cow-for-cow, hen-for-hen, and farm-for-farm, we are better than most States, and I am including both Iowa and Ohio in this comparison, Mr. Rummell.

Mr. RUMMELL. That's a good point, Dr. Bressler. I have never thought that mere bigness was the best measure of greatness. What the individual unit accomplishes whether it be a cow, a hen, or an acre, is most important. The total production of any State is merely the sum of all its units. Poor little Rhode Island can't help that it is not as big as Texas.

Mr. WILKEN. "Poor little Rhode Island." By the way, Doctor, why don't you make that your State song?

Mr. BRESSLER. State song! We love the melody, Carl, but we object to the title. There is nothing poor about us. Do you men realize that the cash income per farm in Rhode Island is 75 percent more than the average for New England, that the average value of implements and machinery per acre is three times the country's average and the value of our farm land is almost four times that of the country.

Governor PASTORE. Mr. Rummell was telling me during dinner that we also have one of the best produce market set-ups in the Northeast.

Mr. WILKEN. The Governor needn't confine himself to the Northeast. The Providence wholesale market stacks at the top in the country.

Mr. BRESSLER. We like to hear that, don't we, Mr. Governor? Especially when it is true.

Governor PASTORE. You wouldn't say, Doctor, that we don't always tell the truth about our State, would you?

Mr. BRESSLER. Oh no, never; but we try to make the most of what we have, although seriously, Mr. Governor, it is impossible to overemphasize the importance of the work of the farmers—the food and fiber producers of our country. Agriculture is one of America's basic industries.

Mr. WILKEN. That's right, Doctor. I like to put it this way. Agriculture is the key to our prosperity. Factory pay rolls always approximate farm income whether stable or fluctuating, up or down.

Mr. BRESSLER. In other words, Mr. Wilken, what you are saying is that your total pay rolls for industry in America are always close to the total farm income and that they go up and down together.

Mr. WILKEN. Yes; except there is a time lag of about 6 months. Agriculture normally goes down first and starts up first. When this happens, as sure as there is an economic law of supply and demand, industry will follow in 6 months or thereabouts. Let's look at 2 years which will illustrate this relationship. In 1928 and in 1932 our farms produced substantially the same quantities of grains and livestock but the price received in 1932 was less than half what it was in 1928. The national income dropped to less than half, maintaining an approximate 7 to 1 ratio. Factory pay rolls took an equivalent drop. Automobile production fell from 4,000,000 to 1,186,000. The value of construction dropped even more sharply. The net result was approximately $42,000,000,000 of loss in 1932 as compared to 1928. Farm income reached its low in 1932 and started moving up in 1933. But most of the other elements in our economy, following the natural lag behind agriculture, reached their low in 1933 and did not start up until the turnover of increased farm dollars began to take effect. In 1937 farm income approximated $10,000,000,000. Then, with a larger production on the farms, prices weakened, the farm income in 1939 dropped over a billion dollars, factory pay rolls dropped over a billion, and the Nation fell off over seven billion. In 1939 everything started up toward the present level, but, if we don't try to stabilide our farm income and in turn our national income at a high level our country will be in a deplorable state in a few years.

Mr. BRESSLER. And that means a high price for farm products and a high wage for labor. Would you say that agricultural and labor income are Siamese twins, what affects one affects the other? If one gets sick the other follows.

Mr. WILKEN. Precisely, except that agriculture always seems to be the one to catch it first. You can't prevent a future depression unless agricultural production and prices are maintained.

Mr. BRESSLER. The agricultural dollar then is a very important factor in our national income?

Mr. WILKEN. It is the most important consideration in our whole national economy, for it determines over the years what the Nation's income will be, the number of jobs and the wages that can be paid. It doesn't make any difference whether our national income is high or low. The farmers' dollar multiplied by seven approximates $7 for the Nation. The ratio of 1 to 7 held for the good years in the 1920's, the bad years in the thirties, and the boom years of the war. If our country wishes to meet its obligations for operating expenses, interest payments and amortization of its debt, there must be an annual income of at least one hundred and forty billions.

Mr. BRESSLER. And you say that to get that much money the farmers of our country must receive in the aggregate twenty billions?

Mr. WILKEN. Exactly; you've got the point. We are too heavily in debt ever again to be a low-income nation.

Mr. BRESSLER. Mr. Governor, you seem to have a question.

Governor PASTORE. Well, hardly a question as yet. You know, Doctor, I am beginning to understand what you were driving at in your annual report when you said, "Fat farms make fat factories, fat factories make fat banks, fat banks make fat citizens, and fat citizens make fat farms." I think you also said that, "a nation wishing to be strong must look to the welfare of those who work with the raw materials of nature; the farms, fisheries, forests, and mines." What bothers me is how to bring about the things that Mr. Wilken suggests must be done. How can we bridge the gap between theory and action? What is the machinery for doing all this? How can the farmers be guaranteed the income you say they must have?

Mr. BRESSLER. What about this, Carl?

Mr. WILKEN. The gap is already partly bridged, Mr. Governor. Let's start with the easy items first: mineral and oil resources. Of course the prices should be stabilized and in fact they have been for a great many years. Six big oil companies control the price of crude petroleum at around 95 cents to a dollar a barrel. The Guffey Coal Act and the Wagner labor law, between them, have further stabilized this industry even at considerably higher base prices.

Fisheries and forestry, in the main, are in the hands of commercial interests and become more a question of wages than prices. Unlike farming, most of the employees in these two industries are working for someone else. Price of the product affects them less directly. The price the farmer receives is both his salary and his profit.

Mr. BRESSLER. Why do you assert, Carl, that agriculture is the most important factor in our national economy? Couldn't our national income be maintained just as well by supporting factory pay rolls?

Mr. WILKEN. It could, but why start with some point along the line when the logical place to start is with the source of wealth, our raw materials?

First. Agriculture is a basic raw material industry.

Second. It supplies 65 percent of the raw materials utilized in the United States.

Third. Its products, except fiber, are used quickly and therefore become buying power faster than mineral or forest products.

Fourth. There are twice as many business units in agriculture. Roughly, there are 9,000,000 business units in our whole country, of which 6,000,000 are in agriculture.

Fifth. Two-thirds of the capital invested in productive enterprise is in agriculture. Do you want any more reasons? I can consume the rest of our time, you know.

Mr. BRESSLER. No; I guess that's enough for our radio audience. We may continue this in your discussion off the air later. Your point is that agriculture is not the tail in our national economy but rather the dog himself priming the pump of national prosperity.

Mr. WILKEN. Yes, it is, if you wish to put it that way.

Mr. BRESSLER. You have answered only one of the Governor's questions. What about the machinery to make your program effective?

Mr. WILKEN. Well, here it is:

First, Congress should pass a foundation parity law including only the basic nonperishable or the unprocessed crops—corn, wheat, cotton, oats, barley, rye, rice, flax, hay, potatoes, peanuts, soybeans and the like. You understand of course that the dairy cow and the hen are as much processors of food as the pickle factory or the bakery.

Mr. BRESSLER. Yes; but it is the first time I have ever heard a cow compared to a pickle factory.

Mr. WILKEN. For my purpose they are the same.

Second. That we protect agriculture by import duties on both raw materials and finished goods at our parity levels.

Third. That we sell our surplus raw materials and finished goods at the world price level and absorb the loss from revenues obtained from tariff collections on imports.

Fourth. That we provide a 100-percent dollar and regulate the value of it at 100 for all groups.

Fifth. That we use the Bretton Woods agreements as a yardstick for world prosperity and stabilize gold and silver in line with American parity price level. Silver is the monetary medium of exploited nations. To leave it out simply means continued exploitation and dollar devaluation.

There it is, Doctor. If we use the American price level for a yardstick, we will be worth $600,000,000,000 and can have one hundred and fifty billion income annually with full employment and prosperity. If we use the world level, we will be worth only three hundred billion with seventy-five billion income, resulting in unemployment and chaos.

Mr. BRESSLER. Well, Carl, that certainly sounds impressive, and it looks as though we might be heading to make this grand old country of ours a land of "milk and money." And bringing milk into our discussion enables us to get away from agricultural prices and onto dairying, the second most discussed problem in the field of agriculture. Our guest speaker from Ohio, Mr. L. L. Rummell, was formerly editorial writer of the Ohio Farmer. Mr. Rummell, what about the dairy industry; is there anything in the air other than just more and more milk?

Mr. RUMMELL. That's a big order, Dr. Bressler, because our dairy industry is such a far-flung enterprise in our whole agricultural picture.

Mr. BRESSLER. In Rhode Island, Mr. Rummell, dairying is our leading agricultural business and we take pride in the production records and quality of milk that our fine herds produce. But what are the dairy folks doing in a national way.

Mr. RUMMELL. During the years when I was on the staff of the Ohio Farmer and director of the Ohio Holstein I got very close to the situation. You probably know of the work which is being done by the American Dairy Association—even though Rhode Island dairy producers are not affiliated with the association in their broad, constructive program.

Mr. BRESSLER. Yes; I am familiar with their efforts, and I think a good many of our progressive dairymen in Rhode Island are, too.

Mr. RUMMELL. The American Dairy Association supports a research program which is designed to help the consumer—which means every one of us. We all know that milk is as nearly a perfect food as possible but, unfortunately, not all of us use as much milk as the nutritionists tell us we should.

Mr. BRESSLER. I know one family that uses all the nutritionists tell us to use and then some. About a year ago I started protesting the monthly milk bills——

Mr. RUMMELL. You didn't get far with that.

Mr. BRESSLER. No, I didn't. My wife started giving me the line about a quart of milk having as much food value as a pound of beefsteak, and so forth. But we must get back to the American Dairy Association. How is the association supported? Where does the money come from for all this fine research work?

Mr. RUMMELL. A fund for the work is derived from contributions made by the association members. Every year, during the first 2 weeks in June, each member keeps a record of his production and contributes to the fund 2 cents per hundredweight of the amount of milk he delivers at the plant.

Mr. BRESSLER. That sounds fair enough. It's a cooperative venture then, and each producer gives according to the measure of his business.

Mr. RUMMELL. That's right, Dr. Bressler. This fund then is used to support research studies at various institutions of learning, such as your own Rhode Island Agricultural Experiment Station at Kingston. Dean Campbell tells me that the college dairy herd is one of the finest in this part of the country.

Mr. BRESSLER. It certainly is, and the Rhode Island dairy industry have their experiment station to thank for many improvements in milk production procedures, and for making our Rhode Island dairy herds among the best in the country. Did you know that only New Jersey has a higher cash income per dairy cow than Rhode Island?

Mr. RUMMELL. No, I didn't.

Mr. BRESSLER. Well, I just threw that in to keep the record straight and to please Bill Allen, commissioner of agriculture from New Jersey who is here at the head table. New Jersey is also one of the small States and must do a lot of howling to keep its agricultural head above water. Go ahead, Mr. Rummell, with what you were saying.

Mr. RUMMELL. I'm hoping that your forward-looking Rhode Island dairymen will support the research program of the American Dairy Association, for you have the facilities in Rhode Island to help us with our work.

Mr. BRESSLER. To come to another of your interests, Mr. Rummell. I read in the local paper several days ago a financial statement of the Kroger Grocery & Baking Co. It almost blew my hat off. To be perfectly frank I had never heard of the Kroger Co. until I learned you were to be associated with it as agricultural counsel. Tell us something about the company.

Mr. RUMMELL. I wouldn't want to recite a lot of figures here. That would make me sound like a talking annual report. But I can tell you that through Ohio, the Midwest, and the South we operate nearly 3,000 retail stores, and are in a position to know a good deal of what the consumer wants and needs—folks like you and me and all of us.

Mr. BRESSLER. I should think so. Are you using your present position to study consumer desires, for instance?

Mr. RUMMELL. Very much so. In Columbus, Ohio, for example, we have been cooperating with the Ohio Agricultural Experiment Station in a survey of packaged vegetables. We have been putting up vegetables, keeping them at low temperatures and marketing them so that there is no waste.

Mr. BRESSLER. No waste. Well, that sounds like one of the postwar dreams we've been hearing so much about these last few years.

Mr. RUMMELL. It's no longer a dream, Dr. Bressler. The housewife can go to a store, buy these packaged vegetables and when she gets home, put them right in her oven or in the boiling pan. She knows exactly what she is buying and how much she is buying. They're all prepared and in addition to that she doesn't have to fill her garbage container with wilted leaves or half-spoiled vegetables.

Rhode Island will be seeing such packaged vegetables, I'm sure. That's one of the fine things that results from cooperation and research in a free democracy like ours. New discoveries are quickly disseminated throughout the Nation.

Mr. BRESSLER. Rhode Island already has these packages, Mr. Rummell. For 6 or 7 years our Lungo Brothers have been packaging spinach, lettuce, cut cabbage, and a mix they call the salad bowl all ready for french dressing or whatever you like on it. I understand that you go farther. You have

experimented with about everything from onions to cauliflower.

Mr. RUMMELL. That's right.

Mr. BRESSLER. Which brings me back again to the start of our discussion, when I referred to our land of "milk and money." After all, vegetables are also an important part of good diet, and we can't be a strong Nation unless we eat the right things.

We certainly appreciate your interest in our agricultural problems here in Rhode Island, Mr. Rummell, and are most happy that you could take the time from your busy life to come East from Cincinnati to be with us. The pattern of life in Iowa and in Ohio is not too different from our own. As consumers, we're all in the same market basket, so to speak.

Restoration of Ford's Theater

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Friday, March 1 (legislative day of Friday, January 18), 1946

Mr. YOUNG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Plan To Restore Ford's Would Fill Last Panel in the Lincoln Tragedy," written by Nelson B. Bell, and published in the Washington Post of February 24, 1946.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLAN TO RESTORE FORD'S WOULD FILL LAST PANEL IN THE LINCOLN TRAGEDY

(By Nelson B. Bell)

Thousands of pilgrims annually visit Mount Vernon and come away with a vivid impression of the surroundings and manner in which George Washington lived.

Other thousands visit the old Ford's Theater on Tenth Street and carry away little more than the bare knowledge of the geographical location of the spot on which Abraham Lincoln was assassinated the night of April 14, 1865.

This is a memorial discrepancy which Senator MILTON R. YOUNG, of North Dakota, patriotically and wisely seeks to remedy.

On February 6 Senator YOUNG introduced a joint resolution (S. J. Res. 139) directing the Interior Secretary to estimate the cost of reconstructing Ford's Theater.

In offering his resolution, the Senator observed that "a visit to Washington is to many an American family an experience of a lifetime, long planned for and undertaken with a singleness of purpose and a sincerity of interest. To visit the Lincoln Memorial, the Capitol of the United States, and the White House are great experiences in the lives of many of our people."

A BARREN SHRINE

"To those who love Lincoln, a visit to Ford's Theater is an additional experience long anticipated. But in visiting Ford's Theater they feel a distinct disappointment. They do not see the theater at all.

"Although nearly 81 years have elapsed since that tragic event, it is not too late to bring back to the American people a vision of exactly what occurred. The home in which he died, located at 516 Tenth Street, is a Lincoln shrine and is intact. It is very unfortunate that the theater across the street is not also intact.

"The restoration of the stage, the boxes, and the scenery in Ford's Theater is a duty which should be carried by us all. It is not a question of the cost. Each visitor is now charged by the Department of the Interior an admission fee. These moneys could be applied to the cost of restoration."

DETAILED RESTORATION

"I look to the earliest possible restoration of Ford's Theater. Not just the stage, boxes, and scenery, but the chair in which the immortal Lincoln last sat and the flag that draped his box."

Senator YOUNG is wholly justified both in deploring the present state of Ford's Theater and in his confidence that its restoration lies easily within the realm of possibility.

When apprised that the Senator contemplated bringing the issue to focus on Lincoln's birthday, or as near that date as filibusters and whatnot would permit, we paid a visit to Ford's and found no semblance of a theater.

The low-ceilinged room to which the public is admitted upon payment of the 10-cent fee is thickly studded with supporting pillars and glass showcases which afford meager material for reconstructing the scene on the fatal night of April 14, when Lincoln attended Laura Keane's performance of Our American Cousin, the last play ever presented on the stage at Ford's.

Thin black lines trace the bases of the columns supporting the Presidential box, the stage-line and the footprints of John Wilkes Booth as he made his escape into the opposite wings. That is all.

Except to the liveliest imagination, the structure is far less suggestive of the playhouse than of Government offices, warehousing and the other utilitarian uses to which it has been put.

While all source material is, of course, available to the Government, there has been extensive research looking to the exact reproduction of Ford's Theater as it was that night in 1865. These data, embracing dimensions, decoration, equipment, furnishings, and stage settings, are, or should be, extant.

TWO MOVIE STUDIES

They were gathered first for the Rockett Brothers' production for First National of the motion picture "Abraham Lincoln," released as a silent film January 27, 1924, and again by United Artists for another Lincoln biographical picture released under the same title on August 31, 1930.

The Ford's Theater sequences in the Al and Ray Rockett "Abraham Lincoln" were so painstakingly realistic that they were authenticated and applauded by members of the Lincoln audience still living in 1924, and by the late distinguished character actor, William Ferguson, who was a member of the cast of Our American Cousin.

Neither is Senator YOUNG too optimistic with regard to other features of the proposed restoration.

The chair in which Lincoln sat when Booth shot him from behind is still in existence and, I am given to believe, in a fair state of preservation.

The same is true of the American flag that draped the presidential box. My understanding is that it is in official custody, with the rent caused when Booth caught his foot still unmended.

It is also presumable that in the Oldroyd collection, housed in the shrine at 516 Tenth Street, opposite Ford's, are other relics of the martyred President's last hours that would be appropriate to the rehabilitation of the theater.

With the theater restored, the two buildings might well be jointly conducted by the Interior Department, or under whatever auspices, as the complete picture of the passing of one of the world's immortals.

A NAME REDEEMED

In such circumstances the specious suggestion always is heard that the theatrical profession might tacitly resent so vivid reminder that it was an actor who killed Lincoln.

The black stigma that attaches to the name of John Wilkes Booth should be completely erased from the minds of the profession by the rich contributions made to the stage by his older brothers, Junius Brutus and Edwin Thomas Booth, and their abhorrence of the act of their kinsman.

Senator YOUNG's proposal deserves universal and unflagging support.

Harvest of Stars Radio Program Celebrating Texas Independence

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. THOMAS of Texas. Mr. Speaker, International Harvester Co.'s Harvest of Stars program is heard Sunday at 2 p. m. eastern standard time, over the entire NBC network, and brings together each week one of radio's greatest assemblages of stars. Raymond Massey, star of screen, stage, and radio, is the narrator of the program and is featured in the dramatic sketches; Howard Barlow conducts the 70-piece Harvest of Stars symphonic orchestra and Lyn Murray directs the 30-voice chorus.

Harvest of Stars is produced by Russ Johnston, vice president in charge of programs for McCann Erickson, Inc., who represent the International Harvester Co. The premiere of the program was October 7, 1945.

The Harvest of Stars program March 3 is devoted to Texas, "the State so big it has to have a program all to itself." The program will honor the one hundred and tenth anniversary of the most famous event in Texas' struggle for independence—the fall of the Alamo. The program also commemorates the hundredth anniversary of Texas' statehood.

Jan Peerce, Metropolitan opera tenor, will be the guest soloist for the Texas celebration and all of the program and the music will honor the State of Texas.

Under leave to extend my remarks I include the program as follows:

Mr. MASSEY. This is Raymond Massey. Welcome to another International Harvester program—Harvest of Stars. Our guest today is the brilliant young tenor of the Metropolitan Opera, Jan Peerce—and we're going to pay our respect to Texas, the State so big it has to have a program all to itself. This week is the hundred and tenth anniversary of the most famous event in Texas' struggle for independence—the fall of the Alamo, the shrine of Texas liberty. We're going to do a play about that later * * * but now, let's start the program with Howard Barlow conducting the International Harvester orchestra and chorus in three songs that are part of Texas and the southwest: Chisholm Trail, Carry Me Back to the Lone Prairie, and La Cucaracha.

(Barlow, orchestra and chorus: Western medley.)

Mr. MASSEY. Let's listen to some Texas brags.

Voice No. 1: Texas occupies all of the continent of North America except a small part set aside for three places called the United States, Canada, and Mexico.

Voice No. 2: Why—if you fold Texas north, you're up into Canada; fold it east, and you're out in the Atlantic; fold it west, and you're into the Pacific. But it's healthier to leave Texas alone.

Voice No. 3: If everybody in the United States moved to Texas, they'd still have plenty of elbow room; and they'd probably live a lot longer.

Mr. MASSEY. Yes, Texas is the place. And now here is International Harvester's guest star, Jan Peerce, to sing a Mexican song all Texans love—the beautiful La Paloma.

(Peerce and orchestra: La Paloma.)

Mr. MASSEY. Thank you, Mr. Peerce. You know, the Mexican tradition is so strong in Texas, and so famous, that travelers are usually surprised to find that down in the southeastern part of the State there's a very strong German influence, too. It goes back to the days of the eighteen-forties, when many Germans were fleeing from middle Europe to escape political persecution, and just naturally headed for Texas in their search for freedom. They brought their music with them, and it became a true part of Texas culture. Here is Howard Barlow to conduct a Texas favorite, the lovely Strauss waltz, Southern Roses.

(Barlow and orchestra: Southern Roses, by Strauss.)

Mr. HANCOCK. Howard Barlow has just conducted the International Harvester Orchestra in Southern Roses, by Strauss. And now, here is Raymond Massey to play Col. William B. Travis in a story about the fall of the Alamo, the fortress at San Antonio—the story of the 12-day siege that ended with every Texan dead at his post.

(Music: Builds to a crescendo, and out of it.)

Voice No. 1: Thermopylae had its messenger of defeat; the Alamo had none.

(Music: Builds again. Then, out of it.)

Voice No. 2: Remember the Alamo!

(Music: Builds again. Then, out of it.)

Mr. MASSEY. Commandancy of the Alamo, San Antonio de Bexar, February 24, 1836. To the people of Texas and all Americans in the world: Fellow citizens and compatriots, I am besieged by a thousand or more of the Mexicans under Santa Anna—I have sustained a continued bombardment and cannonade for 24 hours and have not lost a man. The enemy has demanded a surrender at discretion, otherwise the garrison are to be put to the sword if the fort is taken; I have answered the demand with a cannon shot, and our flag still waves proudly from the walls—I shall never surrender or retreat. Then, I call on you in the name of liberty, of patriotism, and everything dear to the American character, to come to our aid with all dispatch. The enemy is receiving reinforcements daily and will no doubt increase to three or four thousand in 4 or 5 days. If this call is neglected, I am determined to sustain myself as long as possible and die like a soldier who never forgets what is due to his own honor and that of his country. Victory or death. William Barret Travis, lieutenant colonel, commandant.

(Music: Builds swiftly with cannonading behind it.)

Voice (over it, softly): Inside the walls, a hundred and eighty-seven men, with a little food and a few guns, led by the four: William Travis, called Buck; Jim Bonham; Jim Bowie; Davy Crockett (pause), March 3d, the tenth day.

(Music and cannonading hit a climax, then fade swiftly to nothing. Out of the silence, softly, lonesomely, a guitar, and a young voice singing.)

Smithers (singing):

"Go tell Aunt Rhody,
Go tell Aunt Rhody,
Go tell Aunt Rhody,
That her old gray goose is dead.
The one that she was savin',
The one that——"

Travis: Smithers!

Smithers: —"she was"—Uh? Oh! Mornin', Colonel Travis!

Travis: What are you doing here? Why aren't you up on the walls?

Smithers: I been relieved; I been up there all night.

Travis: Then why aren't you sleeping?

Smithers: Well, I sort of lost the habit, Colonel Travis. Besides, the Mexicans been so quiet this mornin'. I don't figure I could go to sleep, 'thout a couple of cannon goin' off around my head.

Travis: Is Colonel Bowie awake in there?

Smithers: Yes, sir. And coughin' purty terrible. He's got the consumption bad.

Travis: Better try to get some sleep, Smithers.

Smithers (quick fade): Yes, sir, I'll try. But it's so quiet!

(Coughing fades in.)

Travis: How is it, Jim?

Bowie: Eh? (Coughing stops.) I'm all right, Buck. How is it out there?

Travis: Quiet. (Coughing again. It stops.)

Bowie: Aaahhh! What a way to be! I wish something would happen. Jim Bowie never figured to die in bed.

Travis: Anything I can get you?

Bowie: No. Any of the messengers come back?

Travis: No. I keep waiting for Bonham.

Bowie: He won't come back. Fannin'll talk him into staying there at Goliad.

Travis: But we've got to have Fannin! If he brings his men up, we can hold off Santa Anna until he dies of old age! It's our one chance!

Bowie: Well, don't count on Fannin. He's a careful man. (He starts coughing again.) Aaahhh! (Firing, off.) What's that?

Travis: It's outside the walls!

Campbell (fading in): Colonel Travis! Where is he? Colonel Travis!

Travis: What? Here!

Campbell: There's a rider coming over the hill. Headed for the east gate.

Travis: Is it Bonham?

Campbell: I don't know. He's on a white horse. And the Mexicans are pourin' on everything they got!

Travis: Get on the gate! Smithers!

Smithers (off): Yeah? (Firing is heavier.)

Travis: Get on the east gate! Get ready to throw it open! See you later, Jim!

Bowie (fading): Bring him back here!

Travis (yelling orders): Up on the east wall, men! Crockett! Where's Crockett?

Crockett (off, yelling): I'm ahead of you, Buck! Up there, men! Pour it on! Pour it on!

Travis: Dickerson! Open up with your guns! (Men are yelling.)

Voice: Fire! (A cannon booms. Another.)

Crockett: It's Bonham! Jim Bonham!

Travis: Smithers! You on the gate?

Smithers: Ready!

Travis: Throw it!

Crockett: Pick 'em off, men! Don't just shoot! Save your lead and pick 'em off! (Horse fades in at gallop.)

Smithers: He's in!

Travis: Shut the gate! (Horse comes to stop.) Jim, you all right?

Bonham: Sure I'm all right. Hello, Buck.

Crockett: Got him! There's another for Betsey! (Firing slackens.) Save your lead, men! They know they're licked!

Travis: Come on inside. What's the news from Fannin?

Bonham: Bad. (Takes a deep breath.) Let me get my breath. How's Bowie? (Firing fades out in a scatter.)

Travis: You'll see. He's in here. (Coughing fades in.)

Bonham: Is that him?

Travis: Yeah.

Bonham: Aahh—that's bad. (Coughing stops, on.)

Bowie: Bonham, is that you?

Bonham: Hello, Jim! Well! You're looking fine!

Bowie: Save that for the girls. What about Fannin?

Bonham: He won't come.

Travis: Won't come! Why not?

Bonham: He doesn't think it's any use, Buck. And he figures he's going to be attacked any day, and he'd better sit tight at Goliad.

Travis: Of all the lily-livered—!!

Bonham: Now wait a minute, Buck. He sees it his way. And besides, if you want to know, he hasn't got much of an army. (Bowie starts laughing and coughing.)

Bowie (coming out of it): Well, Buck, there goes your chance.

Travis: Yeah, there goes my chance.

(Music: Transition.)

(Crowd murmurs: "What's up? Where's Travis? What're we all doing down here? What's Travis want us for?")

Bonham: 'Tention!!

Smithers: There he is. There's Travis. (Crowd subsides.)

Travis: Easy, men; everybody here?

Voice: Where's Jim Bowie?

Bowie: Here I am, flat on my back, bed and all! (Laughter.)

Voice: You alone, Jim? (Laughter.)

Travis: All right, men. (Silence.) The time's come for us to do a little talking. The Mexicans are holding their fire; I think we can talk now.

Voice: Wouldn't matter if they kept right on shooting! They haven't hit a one of us yet! (Laughter.)

Travis: That's right; 10 days now, and they haven't hit a one of us. And we've hit quite a few. But I don't know how much longer we can go on that way. The enemy hasn't tried to storm the walls yet, he might try any day; and when he tries, he might get over, and if he gets over—we'll die fighting, but we'll die. You see—it's time we gave up the idea that help's going to come; it's time we understood that we stand here alone. And that's what I came to ask you: How much longer you think you want to stand. I'll make it short. You've seen the red flag that flies over the church in town; you know what it means: No quarter; death to the rebels. And that's what we are: Rebels. Free men, fighting for freedom. We know what it means, we've been doing it all our lives, our fathers did it before us. Fighting for freedom's a lifetime job; you can never let go; you stop for a minute, and you lose it all. Well, I'm not asking you to stop. But you're all free men, and I've got to give you a choice. There are ways of getting out of here, not for many, but for a few, one at a time, to make a run for it in the dark. Those of you who have wives and children—I have no right to ask you to stay here and die. You can get away and fight for freedom tomorrow. That's what I came to tell you.

Voice: You've got two kids of your own, Travis.

Travis: My job's here. Well?

Voice (quietly): Who'll cross the line and stand with Travis? (Pause.)

Voice (quietly): Here I come.

Voice (quietly): Here I come.

Voice (anxious): Hey, Jimmy! Wait for me!

Voices (in an uproar): Yea, Travis! Here we come! Liberty and freedom! God and Texas! Here we come! (A tremendous cheer.)

(Music: Blasts out full, and into it the sound of firing and cannonading. It holds solidly, and then, over the music and noise.)

Travis: God and Texas! Victory or death!

(Music: Continues up full, then quickly subsides into a minor strain.)

Voice (softly, into the music): Thermopylae had its messenger of defeat; the Alamo had none.

(Music: Out.)

Mr. HANCOCK. Now, here is International Harvester's guest star, Jan Peerce, in another bow to Texas, with a favorite song of the southern border, El Rancho Grande.

(Peerse and chorus: El Rancho Grande.)

Mr. MASSEY. This is Raymond Massey again. Let's get back to Texas—it's hard to keep away from it. The State that calls for superlatives. First in petroleum, first in beef cattle, first in cotton, first in spinach, first in roses, longest, tallest, widest, deepest, the State with one ranch bigger than Delaware, with more goats than Missouri has people, with more sheep than the population of Pennsylvania, the only State that came into the Union by treaty as a sovereign nation; the only one that has the right to divide itself into five States if it wants to—but what Texan would want to. Here is Howard Barlow to pay tribute again, as he conducts the International Harvester orchestra and chorus in The Texas Blue Bonnet Song and Tin Pan Alley's contribution, Deep in the Heart of Texas.

(Barlow, orchestra, and chorus: Closing medley.)

Return to Liberty

EXTENSION OF REMARKS
OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, March 1 (legislative day of Friday, January 18), 1946

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Return to Liberty," which I delivered in Kansas City, Mo., on February 12 before the Missouri Republican Club.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Republicans and my good friends, all over the United States today the Republican Party is opening the campaign of 1946. I come from the political arena in Washington, where confusion reigns supreme, the place to which as yet no peace has come; and so far as the Government is concerned we have not even recognized the cessation of hostilities. The Democratic Party is hopelessly divided between those who follow the PAC program on every issue, and those who insist upon constitutional government but don't care very much whether progress is made within that system or not. At first it was doubtful which way Mr. Truman would turn, but he has chosen to follow the PAC course on nearly every measure. He has chosen the course of unlimited public spending and increased power to Federal bureaucracies. Fortunately, half the Democrats and most of the Republicans in Congress disagree with that course. But the result is a national deadlock at a time when we should be moving on sound lines toward increased prosperity. Only by the return of the Republican Party to power can we achieve a unified and constructive program of progress within American principles of freedom and sound government. Today begins the campaign to make that program possible, to elect a Republican Congress in 1946, and a Republican President in 1948.

The foundations of any Republican program must be liberty and justice. In 1837 Abraham Lincoln, whose birthday we today here celebrate, said that our forefathers' task in America was "to uprear upon its hills and its valleys a political edifice of liberty and equal rights." And at Gettysburg he spoke those immortal words, "Fourscore and seven years ago our fathers brought forth on this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal." Liberty and equality; liberty and justice; liberty under law equally administered; those are the bases of the American Republic.

They must be the basis of any Republican program. Whatever progressive purposes we may announce, whatever the measures to carry them out, they must be designed in accord with these principles, and I speak tonight particularly of liberty. We must maintain the liberty of the individual guaranteed by the Bill of Rights so that his daily life is not regulated by some Government bureaucracy. We must maintain his liberty to say what he pleases and to worship as he pleases. We must maintain the liberty of States and localities to rule themselves without orders from Washington, for only thus can we prevent the vast concentration of power in Washington which would bring real national freedom to an end. We must draft our measures without delegating unrestrained authority to Federal bureaucrats so that the liberty which men have may be protected in the courts.

This Government was established in 1776 to secure the blessings of liberty for its people. We have fought two world wars, not to dominate the world or save other peoples, but to be certain that Nation remains free from any foreign domination or threat of foreign domination. At home, liberty is the basis of the success which we have achieved. Our standard of living was brought about by the initiative, the genius, the daring, and the inspired hard work of our people. These qualities could only have come into existence through liberty of thought and liberty of action.

Today that liberty is threatened by the steady spread of totalitarian ideas. We have defeated three great totalitarian states which set out to conquer the world without regard for liberty or justice. But we have half accepted many of the theories of states which we have conquered. These theories are the style today, not only with our left-wing writers, but with many who do not see the results to which they threaten to bring us. Too many who ought to know better seem to believe that more government is the solution of every problem. If anything is wrong, some czar must be set up and be given power to correct it, to find a remedy if he can, in his arbitrary discretion. If any project is attractive, Washington must put up the money to carry it out. These ideas not only destroy local self-reliance, but they play directly into the hands of those who consciously plan a complete concentration of power in the state. The state must manage everything, it is said, if we are to avoid depression and unemployment. It would be a tragic result if a war successful in securing liberty from foreign domination resulted in the destruction of liberty at home by foreign ideologies.

The President has accused Congress and the Republicans of delaying his legislative program. They have delayed it because they have been opposed to its attacks on liberty. They have opposed it because the thinking of the Democratic administration is dominated today by the policies and thinking of the PAC, derived directly from Marx via Moscow. I know of no body of men more representative of the American people than is Congress—Congress has opposed the Truman program because the American people have not yet come to this kind of thinking, because they still believe in liberty.

Nearly every feature of the Truman program calls for more Federal power, which means less liberty for the people. Most features call for more Federal spending, which means more Federal power. It would be hard to point to a project for spending money which the President has not endorsed. More Federal buildings—Federal grants for every kind of local public works, Missouri Valley Authorities, Arkansas Valley Authorities, Central Valley Authorities, St. Lawrence Waterways, billions for Bretton Woods, billions for the Export-Import Bank, billions for UNRRA, billions for the British, billions for compulsory health insurance, billions for compulsory military training. Nowhere in all of these messages do we find any concern whatever about the burden of taxation or the burden of debt which must result from such a policy. The Budget is unbalanced and it fails to include huge sums in the nature of loans to foreign countries which will certainly increase further the public debt. Spending is power—if inflation or depression result from this reckless policy it leads to a demand for more power, more regulation, and less freedom.

The key to the Truman program was the so-called full employment bill. In its original form it contained an absolute Government guarantee of a full-time job to every citizen and an endorsement of the Keynes-Wallace compensatory-spending theory. That is, the President was directed to estimate the number of jobs that might be wanted, the gross national income necessary to create these jobs at some average wage to be fixed by him, and then submit a program of economic measures with Federal spending and investment equal to the difference between this inflationary goal and the probable national income. The theory of the bill was that in the last analysis prosperity could always be produced by sufficient Government spending. The calculations required might easily have called for the additional expenditure by the Government of thirty or forty billion dollars over the normal budget. It was based on the theory that we could spend ourselves into prosperity.

The jobs-guaranty provision came directly from the Soviet Constitution, article 118, where it is said, "Citizens of the USSR have the right to work—the right to receive guaranteed work, with payment of their work in accordance with its quantity and quality. The right to work is insured by the Socialist Organization of National Economy * * *." Only a Socialist state has ever succeeded in guaranteeing employment, and no Socialist state has ever begun to equal the standard of living of the people of this country under a free system.

Congress amended and modified the Truman-PAC bill until the bill agreed on last week contains no mention of full employment, no guaranty by the Government, no compensatory-spending program, no national budget. The bill is even milder than the House bill which the President denounced as wholly unsatisfactory to his philosophy. It only directs the President to submit each year a general plan, covering all features of our economic system to bring about maximum employment and general prosperity. Of course, we all agree that we should plan to avoid the calamity of another depression. But that planning must be based on sound financial principles and the reduction of public debt, not on unlimited Government spending and the power which that spending gives.

The President complains that the Congress has not enacted his recommendations regarding unemployment compensation, but the President's real program was, and is, to federalize unemployment compensation. Congress is opposed to that tremendous centralization of power. As a step toward his goal, the President tried under PAC pressure to get Congress to enact a bill increasing all unemployment compensation to $25 a week for 26 weeks, taking from the States their right to fix their own rates. He vetoed the act to reduce Federal expenses by returning the employment offices to the States. Everyone admits that these offices and the unemployment compensation bureaus should be run by the same government. The President is trying to federalize the whole outfit and,

in effect, give control of employment to left-wing labor. Congress does not propose to abolish the United States Employment Service, but only to return to the States the local offices which President Roosevelt seized without authority the day after Pearl Harbor. The United States Employment Service would continue to exchange information and handle interstate requirements. The State offices, coordinated by the USES, can give just as much and better service to veterans and other applicants for jobs. Congress insists on State control because local and State management means more freedom for our citizens.

The President favors the continued control of prices and rents "for many months to come" and objects to the fact that we only continued the Second War Powers Act until July 1, 1946. Congress and most of the Republicans disagree. We believe in eliminating Federal control over prices and priorities at the earliest possible moment as a necessary step to reconversion and to that increased production which alone can bring an ultimate reduction in prices. I believe it will be necessary to continue controls over rents and a limited number of scarce articles beyond July 1, 1946, but I also believe that the commodities to be controlled should be expressly named and a more definite and fairer rule prescribed for fixing prices and rents. But today the Bowles propaganda machine is working overtime to continue controls indefinitely, over all business transactions. It is choking production. It is imposing injustice on large and small business alike but small business suffers far more because it has less reserves. The policy of price control in time of peace crushes the initiative and freedom essential for progress.

The whole policy of inflation control is hypocritical today, because while the President denounces inflation he is promoting the greatest peacetime inflation this country has ever seen, first, by lavish spending of Government money, and, second, by urging a general increase in all wages and salaries. The increase may be justified in many cases, but since the average increase in hourly wage rates since 1941 is already 42 percent, compared to a 33 percent increase in the cost of living, a further general increase in wages can only result in further increases in prices. We see it now in the absolute necessity of increasing steel prices. Inflation control is sought more because it gives power over business than because it will control inflation.

The President has recommended the continuation of subsidies. He says the removal of subsidies would result in increasing the cost of living by 3 percent, which he considers outrageous although he is recommending a general increase in wages and salaries many times that amount. There is no more inflation in permitting a necessary increase in prices than there is in borrowing the money to pay subsidies and thereby increasing the national debt. We cannot escape either way the result of rising costs and wages brought about by Government policy. Subsidies are a means by which the Government can control the operation and the profits of individual concerns, thus reducing the reward for efficiency, initiative, and hard work. They mean both more spending and more power for the Government. They should be eliminated.

The President insists upon an FEPC Act so drastic and granting such tremendous power to the Government over every individual and corporate employer that even its advocates last week in the Senate admitted that it must be extensively amended. I have presented a bill in accordance with the Republican platform, designed, by study and voluntary appeal, to lessen constantly the disadvantage under which the Negro is placed today in seeking for work. But it does not give the Government the vast power demanded by the PAC, and therefore I am denounced by the left-wingers as a reactionary.

The President has endorsed the plan for compulsory military training by which every boy, more than a million of them a year, shall be taken for a full year of military training. It is impossible to conceive of any more totalitarian measure, one which places the life of every citizen during his formative years for a substantial period under the absolute control of the Federal Government. The Government may upset his plans for education, his plans for an occupation, his plans for a family, at its arbitrary will. It may indoctrinate him with the current philosophy which dominates the thinking of Washington. Such conscription has been a feature of every great totalitarian state. It cannot be justified short of absolute necessity, and no case has been made out to show that a reserve of 10,000,000 men from 18 to 27 will even serve any useful purpose of national defense. Yet, it is supported by many people on the ground that our boys need discipline and a certain kind of education which can only be forced down their throats by an all-powerful Government. Incidentally it also involves Federal spending at the rate of at least $2,000,000,000 a year. More power and less freedom.

The Army should have turned its attention first to establishing a voluntary peacetime Army of a million men, or perhaps a million and a half while Germany and Japan are being occupied. But they have simply retarded the demobilization of a wartime Army without preventing the demoralization of those who remain. Even the advocates of compulsory military training have never claimed that there would be conscription for the Army itself. The War Department should have devoted itself to establishing this new peacetime Army instead of wasting its energy and its propaganda on compulsory military training and the unification of the services under Army control. We must make the Army sufficiently attractive to establish the necessary peacetime force on a voluntary basis. We could well add to that a reasonable reserve through a voluntary system of military training in cooperation with the existing schools and colleges.

The President demands Federal compulsory health insurance. That means that from three to four billion dollars is arbitrarily deducted from all pay rolls and flows into the Social Security Board in Washington. There it is used to pay all the doctors in the United States. The President says this is not socialized medicine because you can choose your own doctor; but, of course, the man who pays the doctor is his employer and that is to be the Federal Government. Not only is medicine socialized, but it is socialized under the control and direction of a Federal bureau in Washington. Of all of President Truman's program, this represents the greatest extension of power and cash—the greatest limitation on the daily freedom of the American citizen to manage his personal life.

Only in the President's labor bill has he antagonized the PAC, and certainly there could be no milder measure than he has proposed. But it is characterized by the same demand for power, because it leaves completely to the President through his personally appointed fact-finding boards the power to indicate the solution which is likely to determine the outcome of many labor controversies. The Congress, surely, should clarify and declare the principles of labor relations on a much more definite and detailed plan, and Congress is inclined to do so without abolishing the freedom of industry and labor to work out their own problems in each business.

In foreign affairs the President has always exercised a greater power to act without consulting Congress or the people, but the measures which have been forced through by the violent propaganda of the State Department have practically eliminated every power over foreign affairs reserved to the Congress or the people. I was much in favor of our joining the United Nations, and I am quite willing to obligate ourselves to submit our disputes to a world court or to arbitration. But through the Bretton Woods Act, through the Reciprocal Trade Act, through the act setting up our delegation to the United Nations, Congress has given the President almost unlimited power, both over our economic relations with other countries and over our political relations with other countries. Through his delegate on the Security Council, he may make war without the approval of Congress and without the approval of the people of the United States. He may reduce tariffs to a point which will destroy American industries and yet be entirely within his legal rights. He may purchase goods abroad and import them into this country, thereby setting the price of such goods. Almost the only restraint upon him today is the power of the purse which requires him to submit to Congress a proposal like the British loan.

I do not say that all of these powers should be refused. In some cases they may be essential, but if all this Truman program were adopted, there would remain little freedom to the people of the United States against the arbitrary determination of an arbitrary President. I believe that in foreign affairs Congress should determine the rules by which tariffs shall be fixed, by which our boys shall be sent into foreign wars, and by which our economic relations with other countries shall be governed. Unlimited delegation of discretion to the President in all foreign affairs can easily lead to a complete absence of freedom at home.

In the domestic field we should definitely write the laws, not leave them to be written by administrative bureaus. We should leave all possible control in the hands of local and State governments. We should avoid plans which require detailed regulation of every farmer and every business. We should reduce Federal power and reduce Federal spending instead of constantly increasing it. Only by such policies can we avoid the present-day trend to the all-powerful state.

I have indicated the position on many current issues which I believe should be taken by any party which believes that this should be a free America. The Republican Party has presented a very definite and affirmative program in the platform of 1944, and in the recent statement of principles adopted by the Republicans in Congress and the national committee. Of course, the minority party is not in a position to bring its program before the Senate or the House because procedure is controlled by the Democrats. We ask for an opportunity in 1947 to present that program for action through a Republican House of Representatives. But it can be easily summarized.

If liberty is the key to peacetime progress, it is time that we declared the end of hostilities and terminated most of the war powers. Price and rent controls should only be continued after July 1 for those articles which are really in scarce supply. A peactime army should be immediately built up by sufficient inducement so that every drafted man can be released and the draft of other men brought to an end. We should constantly reduce expenses until further tax reduction can be brought about without creating a deficit. Particularly, tax reduction should extend to the incomes of the lowest income group, to most of the war excise taxes, and to the duplication of taxation on corporations and the dividends from common stocks.

We must insist upon a balanced budget in order to prevent further inflation, to assure stability of wage level and price level, and to prevent the depression which follows any inflated boom. The control of credit may be expanded, but direct control of industry and

prices must be removed to insure increased production. We want reasonable progress with worth-while public works, and plans to increase that program if there is any falling off in private purchasing.

I have repeatedly outlined the Republican plan for social welfare. We are in favor of extending the coverage of the old-age-pension system and unemployment compensation to many groups such as agricultural labor and domestic service. We should undertake to see that no family or individual willing to work suffers hardship and poverty, by assisting the States to provide a reasonable floor under subsistence, housing, medical care, and education.

We must recognize that the expense of this system must be borne by the more fortunate four-fifths of the population who do not need it. We, therefore, cannot impose upon them so heavy a burden as to discourage their initiative and activity. Nor can the minimum standards, the floor, be so high as to destroy the interest of men in securing something better through their own efforts. The prosperity of the country depends upon the activity of the four-fifths, but a country as productive as the United States should not fail to provide a minimum standard of living for everyone who is willing to work, or who is unable to work by reason of mental or physical handicap.

The initiative and the administration should rest upon the local and State authorities, because local self-government is an absolute essential of real freedom. The standards on which aid is granted should be clearly indicated in the Federal statute so that nothing depends upon the mere discretion of the Federal bureau. Federal aid should be confined to the lower-income groups and not extended to the whole population as President Truman's health program proposes.

We have endorsed the program of Federal aid to enable States to extend their health- and medical-care programs to cover all unable to pay for health and hospital service.

I believe we should adopt a housing program, including a reasonable amount of public low-rent housing, which will constantly improve the housing plant until all are assured of decent shelter in decent surroundings.

I believe that we should extend Federal aid to assist education in those States which, after making at least the average effort, are unable to give every child a basic education.

This social-welfare program can be worked out within our constitutional system and without limiting the freedom of our people. It can be worked out at a total cost of perhaps $750,000,000 a year instead of the fifteen billion of social security proposed in the Murray-Wagner-Dingell plan.

Our labor policy, too, should be based on the principles of liberty and justice: liberty from Government interference and real impartiality between employee and employer. I am opposed to compulsory arbitration of all labor disputes, and a prohibition of those strikes which are concerned with basic questions of wages and hours, because I believe it must lead inevitably to Government fixing of all wages. I don't see how a Government can fix wages without going on to fix prices, and then every man and every transaction is ruled from Washington. We can reduce labor strife by a sound board of mediation, but it must be completely impartial between the parties. We should insist that unions be incorporated and thereby made responsible for the performance of their collective-bargaining contracts. That can only strengthen and build up the principle of collective bargaining effectively prescribed by the National Labor Relations Act. Beyond this there are amendments which may reduce violence on both sides and correct injustices between the parties.

I have read many editorials and speeches, criticizing the Republican Party because this program is not sufficiently liberal. There is seldom any specification in these criticisms, seldom any indication that the writer has read the program or listened to the views of Republican leaders. Most of the criticism comes from those who are clearly New Dealers themselves and merely wish to discredit and reduce the strength of the Republican Party. Whenever any criticism is heard, it is acclaimed by all the claque of commentators and columnists and editors who either take their tone directly from Moscow or the PAC, or those others who have so easily accepted the doctrine that every ill can be cured by more Federal power and more Federal spending and want the Republican Party to propose new plans for such power and spending. It is time that these critics get down to cases, that they let us know clearly whether they are in favor of the specific measures introduced into Congress after being written by the left-wing groups in New York, carefully phrased to write into law their totalitarian philosophy. If not, what is their liberal program? As I understand the word "liberal" it means something which renders the people more free. It means measures which turn away from control by the Government and from the concentration of vast power in Washington. It means a program which is designed to build our progress on those two fundamental principles which have made our people the most progressive, the most powerful, and the most tolerant which the world has ever seen, the principle of justice, and the liberty of freemen.

Embargo on Shipments to Spain

REMARKS

OF

HON. CHARLES R. SAVAGE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. SAVAGE. Mr. Speaker, in the past months, I have been deluged with letters, telegrams, phone calls, and personal requests from great numbers of my constituents to halt the flow of American materials of war to the Axis-created Franco regime in Spain.

For this reason, I have spoken before and shall speak again in favor of House Resolution 312, introduced by my distinguished colleague, the Honorable JOHN M. COFFEE, of Washington, which calls for a complete diplomatic and commercial break with the Axis-created regime of Francisco Franco in Spain.

It is my conviction that the United States Government must, in the very near future, make the program of the Coffee resolution the American diplomatic policy vis-à-vis Franco Spain. But until that happy day why must we continue arming an enemy state?

I am today introducing a resolution calling for an embargo on all raw and manufactured war materials to Spain until Spain is once again under a democratic government which will confiscate the German cartel factories in Spain and turn the Nazi war criminals now at liberty in Spain over to the justice of the United Nations.

There has been much talk lately of Franco giving way in favor of the monarchy which was repudiated by the Spanish people at the polls as far back as 1931. There is nothing the cartels would like better than to see the monarchy restored to Spain, because they know that under the Bourbons the cartels would not be touched in any way in Spain. Even Franco in an interview on February 20 with Mr. Cyrus Sulzberger, of the New York Times, declared that he has always been in favor of a monarchy in Spain. This latest declaration of Franco must not be forgotten in the months to come.

Mr. Speaker, I offer the following resolution for the consideration of the House:

Whereas the United Nations Organization has twice unanimously voted to bar from membership in the United Nations the present Nazi-Falange regime of Spain; and

Whereas in the recent blue book issued by the State Department on Argentine links with the Axis the present regime of Spain was exposed as being guilty of plotting against the military security of the United Nations; and

Whereas the present Nazi-Falange regime of Spain has permitted over 100 German cartel factories to establish themselves in Spain; and

Whereas the Nazi-Falange regime of Spain has repeatedly refused to hand German cartel criminals and their assets over to the United Nations; and

Whereas it has become known that Nazi scientists are now at work on atomic energy projects in German cartel laboratories in Spain; and

Whereas the German cartel masters are planning a third world war against the democracies; and

Whereas under Franco, Spain is the chief industrial, political, and military base of the German cartels; and

Whereas an embargo must be declared before we can stop the sale of planes and bulldozers or any other equipment to Spain that she might use to start a war: Now, therefore, be it

Resolved, That we, the people of the United States, acting through our elected Representatives in the House of Representatives in Washington, urge it upon the President of the United States to protect American lives and security by immediately declaring an embargo on all arms, ammunition, aircraft, motor vehicles, cotton, ores, oil, and all other fabricated and raw materials of modern warfare from the United States to Spain until the Franco regime is replaced by a democratic Spanish government which will confiscate all German cartel assets in Spain and turn over to the United Nations War Criminals Commission all those Nazi war criminals who are now at liberty and in positions of economic power in Spain.

Postal Pay Is Inadequate

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include the following timely editorial from the Detroit Times:

POSTAL PAY IS INADEQUATE

It is an ironical situation that the national administration, which has professed so much concern for improved wage standards in private industry, remains indifferent to

the shockingly inadequate wage standards of Federal postal employees.

The Nation's postal workers are still the most poorly paid group in America, despite the paltry increase given them last July by the Salary Reclassification Act which became effective at that time.

That was the first pay increase they received in 20 years.

Even so, it added only $400 a year to the pay of the individual postal worker which was largely nullified by the increased withholding tax and retirement deductions.

In fact, the only actual increase in "take-home" pay for the postal worker after his increase in wages, was gained from overtime for Saturday work, and he is now deprived of that.

The actual situation with respect to the Nation's thousands of postal workers now—and they constitute one of the most indispensable groups in our national life—is that they are compelled to maintain their homes and families on even less pay proportionately than before the skimpy gesture made by Congress last year.

There has been some recognition of this situation in Congress, Representative BURCH, of Virginia, and Senator MEAD, of New York, having introduced a bill which, if passed, will provide an additional temporary increase of $300 annually.

But why is the proposed new increase temporary?

And why is it such a niggardly sum?

Surely, the postal workers of the Nation, who perform such a vital service for the country, are entitled to adequate pay on a permanent basis.

Indeed, in view of the higher costs of living which now prevail, an annual increase of $500 would be little enough.

It would not put postal workers on a level with even the lowest paid workers in private industry.

But it would enable them to conduct their homes and raise their families a little closer to the American standard of living than has been possible in the last quarter century.

If the American people as a whole have been under the illusion that the increased postal pay voted by Congress last year entirely discharged the national obligation to these vital workers, they should face some facts.

The joint conference of affiliated postal employees provides some of the pertinent facts.

A married mail handler in the senior grade, with 20 years of service, now has a total take-home pay of $33.64 per week.

A newly appointed married man and war veteran in that same post takes home only $29.10 a week, and if he is single he takes home only $27.27.

Do you think that is adequate pay for a type of public service that means so much to every individual citizen and every business institution in America?

Congress should promptly pass an adequate salary readjustment bill in the interest of postal workers, not in the penurious terms of the Burch-Mead bill, but with recognition of the long and continuing injustice to postal workers of which the Congress and the country are jointly guilty.

Return to Justice

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, March 1 (legislative day of Friday, January 18), 1946

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Return to Justice," which I delivered in Dallas, Tex., on February 14, 1946, to the Republicans of Texas.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Republicans, I was delighted to be invited to come to Dallas to speak on the occasion of your Lincoln Birthday dinner. I eagerly accepted your invitation because it gave me an opportunity to express again my gratitude to the Texas Republicans for the wonderful treatment they gave me in 1940 at Philadelphia when they still stood with Ohio on the last ballot. I hope that I have given them no cause to regret the course which they took at that time. I have been able to keep in touch with your leaders, and I would be ungrateful indeed if I did not express my admiration for the political wisdom and courage of your national committeeman from Texas, Col. R. B. Creager.

This week, all over the United States, Republicans are meeting in honor of the birthday of the real founder of the Republican Party, Abraham Lincoln. During the last 2 days I have participated in great enthusiastic meetings in Missouri and Kansas, and I have heard reverberations of similar meetings in other States. We are opening the campaign of 1946. There is no doubt in my mind that the control of the Congress will return to the Republican Party this year, and the control of the entire Government in 1948.

During recent years we have wandered far from the principles of Abraham Lincoln, but those principles are still strong in the hearts of the American people. They have seen remained strong in the hearts of a good proportion of the Democratic Party. That party today is hopelessly split between those who follow the Political Action Committee program on every issue, and those who believe still in the principles of American constitutional government and free enterprise. Unfortunately, the American wing is so demoralized by the course of the prevailing forces in the party that it is unable to develop any program of progress within those constitutional principles. At first it hoped that Mr. Truman would turn in its direction, but he has chosen to follow the New Deal PAC course on every important measure which he has proposed, except his timid fact-finding labor suggestion. He has chosen the course of unlimited public spending and constantly increasing power to Washington bureaucracy. He complains that Congress delayed the adoption of his measures. Undoubtedly, there has been such delay because Congress—most of the Republicans and half of the Democrats—differ basically with his philosophy. The newspapers are inclined to be critical of legislative bodies, but Congressmen represent the views of the people of the United States far more than any group which can be gathered together anywhere. They do not vote against Truman and the PAC because of any prejudice or any partisanship. They vote against him because they know that if they would stay in Congress, they must vote their own principles, and represent the true feelings and philosophy of the American people in their districts.

The Republican Party is founded on two great principles of government. In the platform of 1944 and the recent statement of principles, by the Republicans in Congress we have proposed a constructive program of progress in every field into which government should enter. But in drafting that program we are concerned that every measure be in accord with those principles. Lincoln stated them eloquently in his Gettysburg address, "Four score and seven years ago our fathers brought forth on this continent a new Nation, conceived in liberty, and dedicated to the proposition that all men are created equal." Liberty and equality; liberty and justice; liberty under law impartially administered.

At Kansas City I pointed out that every one of President Truman's measures is based on a restraint of liberty, on more regulation of business, on more regulation of the lives of our citizens, on more centralization of power in Washington and less independence for States and local communities. If we go along that course, we will be accepting the very totalitarian ideas which we have fought two wars to destroy.

Tonight I want to dwell particularly upon the necessity of a return to justice, a return to principles of fairness and impartiality between every citizen, a return to a rule of law and of equal justice under law. There is no principle which more distinguishes the Republican ideals of America from the totalitarian ideal of Hitler and Mussolini to destroy which so many American boys have lost their lives on the field of battle. There is no principle which more distinguishes America and England from Russia, and leads to the differences which we find in all our negotiations with our Allies. Abraham Lincoln once expressed his view of its importance, when he said: "Let reverence for the laws be breathed by every American mother to the lisping babe that prattles on her lap, let it be taught in the schools, in the seminaries, and in colleges; let it be written in primers, spelling books, and in almanacs; let it be preached from the pulpit, proclaimed in legislative halls, and enforced in courts of justice."

The whole ideal of justice is foreign to a totalitarian state. There the law and the courts are instruments of state policy. It is inconceivable to them that a court would concern itself to be fair to those who appear before it when the state has an interest. Nor do they feel any need of being fair between one man and another, nor to present logical argument to justify a position. Nothing is more typical of the American Communist than to assert and reassert an argument which has been completely answered and disproved, in order to secure his point by propaganda to the ignorant. This inclination to disregard justice, impartiality, and logic has spread into the United States, first with the New Deal type of legislation, and then with the war, for war is a great promoter of totalitarian government. "Inter arma leges silent."

In war all of us recognize that justice to the individual, vital as it is, must be subordinate to the tremendous national necessity of preserving the nation itself. Abraham Lincoln suspended the writ of habeas corpus. But now we are faced with a government which, in effect, proposes to continue war powers as long as they can be stretched, and with them the subordination of fairness to some supposed national policy. We hear constantly the fallacious argument. "If you would surrender these rights to win the war, is it not just as necessary to surrender them to win the peace?" "If you will incur a $50,000,000,000 deficit to win the war, why not a $50,000,000,000 deficit to create prosperity at home?" Unless we desire to weaken for all time the ideals of justice and equality, it is absolutely essential that our program of reconversion abandon the philosophy of war, that it be worked out within the principles of justice.

We had already wandered far from justice at home. Expediency was always the key of New Deal legislation. In particular those who have administered the law have felt no necessity to be fair. There are countless examples.

The National Labor Relations Act was based on the sound principle that collective bargaining should not be interfered with by employers. But wide discretion was given to the Board, and the first Board members, instead of trying to administer the act fairly, regarded themselves as crusaders to put a

CIO union into every plant in the United States without consideration of any element of impartiality. I sat for weeks hearing the bitter complaints against the administration of that law, and the most violent complaints came from the heads of the American Federation of Labor. I do not think that any more serious miscarriages of justice have ever occurred in the United States than under that first National Labor Relations Board. Even President Roosevelt was finally forced to replace all the members of that Board. There are still many injustices in the labor field. Industry still feels that questions regarding the calling of elections and the reinstatement of workers are decided without the slightest consideration of principles of justice. Industrialists are being criticized because they do not submit their disputes to arbitration by the President or his appointees. Obviously, they feel from experience that those appointees will be strongly prejudicial against their position, and that the decision will be based not on principles of law but on Government policy. The fact-finding board in the General Motors case clearly stated that its decision was based on a wage-price policy declared by President Truman in a speech without authority of law. If we establish fact-finding boards, we ought to declare by law the principles on which they must act. Furthermore, there is no justice in a situation where the employer is responsible for carrying out his agreements, but the union is not. Unions should be required to be incorporated and furnish financial reports to their members.

Now we have the same kind of enforcement proposal in the Chavez bill to set up a Fair Employment Practice Commission. Even in the endeavor to stop discrimination we cannot afford to go further with the unfair labor-practice technique, because it gives arbitrary power to a board necessarily prejudiced, with practically no appeal to the courts. I introduced an FEPC bill based on the Republican platform, and based on the principle of intelligent study of employment situations, and voluntary plans to improve employment opportunities for Negroes, against whose employment there is serious discrimination in many localities—more, I believe, in Northern States than in the South. I believe that progress can only be made in this field by voluntary means, but certainly it cannot be made with safety by making injustice a part of the procedure.

The practice of creating administrative boards has destroyed justice in many fields. When Government got into the business of regulating the production of every farmer, telling him what he could sow and what he could reap, it had to set up an administrative machinery far beyond the capacity of any court to control. The enforcement of milk prices, production, and distribution by Federal milk boards has been pursued without regard to any legal principle. The attempt to control cattle through the OPA has operated to bring losses to thousands of farmers. Regimentation is inconsistent with justice because the detailed control of millions of individuals has to be left to administrative boards. Such boards are always concerned with policy, but not with justice.

I have followed closely the history of the Office of Price Administration. I felt that price control was necessary in war, and I helped to draft a fair bill. More and more the actions of the OPA have come utterly to disregard the law and disregard justice or fairness to individual producers, manufacturers, and distributors. It is almost impossible to get a prompt hearing, particularly before the man who makes the final decision. Months pass before action is taken on protests. The Government policy to keep all official prices from rising in any degree dominates every decision where businessmen are concerned. As costs rose, one concern after another was squeezed until thousands of small businessmen were forced to quit. During the war, while I protested, I felt that, after all, these concerns were casualties of the war, no more unfortunate than the thousands who battled in the Army. But the same injustice continues today.

Except in the case of rents and very scarce commodities, I believe that our only recourse is to let controls expire on July 1, 1946. As to the controls which remain, we had better abolish OPA and transfer what is left to other agencies. It is the more necessary because those who dominate the OPA and its enforcement division have utterly lost the American philosophy of justice. They have no desire to be fair.

Business has received the same kind of treatment under the reciprocal trade treaty law. Hearings are held before boards which have nothing to do with making the final decisions, decisions which may destroy an American industry. Now it is even proposed to hold a general conference in Europe with a number of foreign nations to make these reciprocal treaties in some secret meeting, with even less opportunity to be heard for those whose business is at stake. In this field, as in many others, we have delegated to the President powers to be exercised in his individual discretion, without the slightest requirement of any conformity to law or principle.

I have seen something of the enforcement of the Wages and Hours Act. The director is prosecutor, judge, jury, and instigator of private suits. The employer is presumed to be guilty until he proves himself innocent.

Since the days of the New Deal's attack on the Supreme Court of the United States, the whole fabric of our constitutional law has been weakened. He is a rash lawyer who, today, will predict that any law passed by Congress will ever be held unconstitutional by the present Supreme Court.

Practically every measure presented by the administration in the field of social welfare is based, not on law laid down by Congress, but on unlimited power given to a Federal bureau to deal with States, local governments, and individuals, according to regulations made in the arbitrary discretion of some bureau chief and changeable at any moment by his arbitrary will. For years the administration has opposed the passage of the bill regulating administrative procedure in Federal agencies. It has opposed it because that bill strikes at the very heart of the New Deal, the action of Government bureaus according to policy and expediency without restraint by law or justice. Progress can be made in these fields of social welfare under law, if Congress will take the trouble to write the law. But the administration of matters in the field of social welfare should be left to the States, where it is usually conducted in strict accordance with the law, and without the detailed regulation by administrative boards which is so serious a denial of justice.

One thing which has turned the people back towards an appreciation of law is their experience with the Army. Justice in the Army is hardly justice at all. Thousands of men feel that they have not had a square deal. Over and over again promises were made, only to be broken because the heads of the War Department believed that national necessity knew no law. Having accepted this principle they make the mistake of confusing their own opinions and policies, changing from day to day, with national necessity. Once you admit an exception to the rule of law, there is no stopping place in your slide toward statism, the arbitrary control of the individual by the State. There is a general feeling that the courts martial conducted by the Army have departed from many principles of justice, that men have not had fair trials, and that grossly excessive penalties have been imposed. In Hawaii the Army took over the administration of the courts, and the history of that administration should be an eye-opener to those who think that Americans have some innate sense of law and justice, which differentiates them from other people. It can happen here. Innocent men were imprisoned without trial, courts were conducted without the slightest regard to the most elementary rules of evidence, there was absolutely no appeal to anyone from the arbitrary arrogance of minor officers. The moment you admit that Government policy is above the law, you soon reach an absolute denial of the principles of justice on which we thought this country was founded.

There is another field in which we seem to have accepted the principle of expediency or necessity, and abandoned the principle of justice. That is in the whole field of foreign policy. We have drifted into a condition where in substance the world is to be ruled by the power of the great nations, and not by international law. I felt we should join the United Nations Organization, and I approve the Charter, but under the Charter in many respects the set-up of the Security Council is a denial of justice.

Article 39 gives the Security Council power to adopt any measure, economic or military, which it considers necessary to maintain or restore international peace and security. While the Charter prescribes justice as one of the guides for the assembly, it can in no way be construed to make it a guide or even a consideration for the Security Council.

In perfect accord with the Charter, the Security Council could decree the destruction of a nation, although its cause is just, simply because its location or its misfortunes make it a center of international contest. I offered an amendment on the floor of the Senate, directing our delegate not to vote for the use of force against any nation unless he was satisfied that the result would be in accord with international law and justice as well as peace and security. The fact that this was rejected by the administration shows the extent to which they have accepted the philosophy of force as the controlling factor in international action.

I believe that ultimate peace can only be achieved by a rule of law and justice, accepted by the public opinion of the world. Force, even if applicable to all powers, which it is not while the veto power exists, should only be one of the weapons of justice. I believe that our delegate, by insisting always on justice, can lead the world in that direction. Apparently, only the Republican Party can make justice a policy of the United States Government.

At Tehran, at Yalta, at Moscow, we have forgotten law and justice. Nothing could be further from a rule of law than the making of secret treaties distributing the territory of the earth in accordance with deals and pure expediency. We cannot excuse ourselves by declining territorial acquisition or subjecting ourselves to unreasonable and illogical restrictions on our sovereignty over unpopulated Pacific islands. We are just as much to blame if we acquiesce in unjustified acquisition of territory by others and hand over to them property without trusteeship, as in the case of the Kurile Islands.

There can be nothing further from justice than the proposed territorial settlements of Europe and Asia. Without a word of protest we seem to have agreed to the acquisition of Estonia, Lithuania, and Latvia by the U. S. S. R. There is little justice in the action we have taken regarding these Baltic peoples. There is little justice to the people of Poland in the arrangements we have made regarding the government of that unfortunate country. The extending of justice throughout the world may be and is beyond our powers, but certainly we need not join in the process by which force and national policy is permitted to dominate the world. I believe that all Americans view with discomfort the war trials which are going on in Germany and Japan. I do not purport to pass final judgment on the wisdom of that procedure, but they do violate that fundamental principle of American law that a man

cannot be tried under an ex post facto statute. If these men committed military crimes I would almost rather see them executed by court martial than go through the elaborate procedure of the Nuremberg trials. I feel that it may discredit the whole idea of justice for years to come.

In the last analysis, even at the end of a frightful war, we should view the future with more hope if even our enemies believed that we had treated them justly, in trials, in the provision of relief, and in the final disposal of territory.

I have been in the Senate now for 7 years, and at times I have been hopeful that the administration of the Democratic Party would admit liberty and justice again into its councils. Many of its leaders would welcome that result now, but with the acceptance by President Truman of every theory and every philosophy of the New Deal bureaus at home, and of the American imperialists abroad, I believe that hope is vain. If we do not desire the foundations of our Republic to be washed away from under us there is no remedy except the return to power of the party which its great leader, Abraham Lincoln, started on its career of liberty and justice. There is no great difference today between the parties in the ideals of economic world peace, progress, high-level employment and production, and social welfare which the Americans desire to attain. The question is whether they shall be temporarily and superficially attained by huge grants of power and money, by Government policy and no attention to individuals, or whether they shall be permanently reached under the form and substance of an American republic, based on impartiality between man and man, between capital and labor, between the state and the individual, between nation and nation.

What Should We Do About the British Loan?

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, March 1 (legislative day of Friday, January 18), 1946

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by me entitled "What Should We Do About the British Loan?" at a round-table discussion on American Forum of the Air on February 26, 1946.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WHAT SHOULD WE DO ABOUT THE BRITISH LOAN?—STATEMENT AND QUESTIONS BY EDWIN C. JOHNSON, OF COLORADO

STATEMENT

Wild and uncontrolled inflation is sweeping the earth. Tonight a cup of coffee costs $100 in certain cities; and yet we Americans smugly think it cannot happen here. Under Federal Reserve arrangements every dollar of our huge bond issues is printing-press money. Tonight the currency of the United States, which includes a trainload of interest-bearing printing-press money which we call bonds, totals more than three hundred thousand million dollars. Now it is proposed that we add another carload of printing-press money to that trainload of inflated currency which already is threatening the very existence of this Republic. It is proposed that we issue three thousand seven hundred and fifty million additional paper dollars to finance a British loan. During the next 3 years Britain expects to spend twice the amount of this loan on armaments. If Britain gets such a loan from us she will be able to hold her own in the world's current armament race. Henry Wallace says not only must we put up six thousand million dollars to carry out our pledge in the Bretton Woods agreement, plus three and a half thousand million dollars through the Export-Import Bank, plus several thousand million dollars for UNRRA, but in addition to those carloads of paper money this great liberal leader anticipates that during the next 3 years we must put up fifteen thousand million dollars for additional loans to Europe and Asia. I do not charge the American sponsors of these vicious loans with a desire to finance a world armament race, but the net result of their fantastic proposal will do exactly that. What a bankrupt heritage this generation of Americans is leaving to posterity. It can happen here, Ted Granik. If the present trends continue, soon a cup of coffee will cost $100 right here in Washington.

QUESTIONS

1. During the next 3 years Britain is expected to spend twice the amount of their loan from us in an armament race. Should American taxpayers finance such an expenditure?

2. The Secretary of Commerce says the trading deficit of Europe, Asia, and South America for the next 3 years will be $51,000,000,000. Excluding the United States, the rest of the world will expend during the next 3 years $65,000,000,000 for armaments. If it were not for the current armament race, would there be a deficit of $51,000,000,000 abroad?

3. If Secretary Wallace is correct that the United States must dig up an additional $15,000,000,000 to be loaned to Europe and Asia, is not the projected British loan merely the first instalment of a huge avalanche of foreign loans?

4. Is the British loan a loan to end all loans, or is it a loan to open the floodgate of countless colossal loans?

5. The United States Treasury, through its colossal bond-funding program, has imposed a mortgage on every item of private property in the United States for every cent it would bring on a good market. The United States owes more money than all the other nations combined (excluding, of course, Germany, Japan, and Italy). Why does not the State Department disclose these facts to the American people?

6. The United States has indulged in deficit financing for 15 years. A deficit of $20,000,000,000 is anticipated for the year beginning July 1, 1946. How much deeper in the red can our Treasury go without exploding?

7. I have a substitute for Mr. Clayton's irresponsible and wildly inflationary scheme to subsidize American exports. My plan does not add to the already inflated currency of America; it subtracts from it. Instead of being inflationary and therefore ruinous, my proposal is deflationary. I would authorize the Treasury to sell special bonds to American investors; the proceeds to go to Britain and in turn whatever interest and principal is paid by Britain would be paid to these investors. These bonds would bear on their face, "Not backed by the credit or guaranteed by the United States." What is wrong with my substitute, Mr. Clayton?

8. Under the GI bill of rights we guarantee loans to our veterans at 4 percent; while the British loan agreement the interest rate is considerably under 2 percent. Are not American veterans as worthy as the British Empire?

9. Foreign holdings in the United States on January 1, 1946, not including $4,000,000,000 in foreign-owned gold, total more than $14,000,000,000. American assets belonging to the United Kingdom are $3,200,000,000 and Canada $1,750,000,000. How do you like that?

10. Why does not a British financial statement accompany the British loan application?

11. Exports from the United States to the United Kingdom amounted to $513,955,000 in 1938. That was the insignificant sum of two-thirds of 1 percent of our national income for that year. At that rate it would require 8 years for our exports to the United Kingdom to consume the projected loan. Is two-thirds of 1 percent of our national income so vital an export item that we are justified in wrecking our economy in order to obtain it?

12. Lend-lease cost our Treasury $46,000,000,000; but if it saved the lives of American soldiers it fulfilled a noble mission. No one complains that the United Kingdom got the lion's share of this gratuity. However, under the guise of lend-lease we sold British every conceivable article from sewing needles to locomotive engines. The bulk of this merchandise had no direct connection with the war. From us it was a gift; but the British Government sold these gifts to her people at full market value and put the money in her own treasury. That helped her taxpayers finance her war. If we really owed Britain anything for fighting Germany, have we not paid that debt in full?

13. Britain began her conversion to civilian production 1 month after Eisenhower invaded Normandy and long before Germany surrendered. After that we had the task of bringing Japan to her knees, so Britain had almost a year's start on us. Why is official Washington so concerned about British reconversion and so complacent about our own reconversion?

14. An advertisement in the London Daily Times January 16, 1946, reads: "USA orders 250,000 vacuum cleaners from Britain!" Before the war we sold such household equipment to the United Kingdom. Is not this reversal in trading significant?

15. While Britain is applying for a loan here she is negotiating loans to other nations. Greece, for example, gets forty million in British loans and Britain receives in return valuable commercial and political advantages. Why is Britain loaning money if she herself must borrow?

16. Britain owes India and Latin America $15,000,000,000. This debt must be and should be serviced and paid in British goods. Everyone except our State Department understands what a tremendous advantage that gives British factories over our factories. Loans from us cannot change her natural trading advantages. We have no foreign debts which we can liquidate with American production. Does not the nature of the British debt structure give her a tremendous trading advantage over the United States?

17. According to Werner Knop in the Saturday Evening Post, February 9 issue:

"The net income of every Briton after taxes has exactly doubled. His wartime savings equal $35,000,000,000 plus $14,000,000,000 in bank deposits and twenty billion in postwar credits."

That totals $69,000,000,000 of British purchasing power through savings. On a per capita basis British savings equal ours. Why should not the British Government borrow from her own citizens as our Government must?

18. Germany and Japan, Britain's two prewar competitors for world trade—thanks to the Morgenthau scorched-earth policy—have been completely eliminated as industrial nations. What more can Britain ask from us than that?

19. Lending money to foreign nations was not one of the original purposes for which the United States of America was created. Should the pawnbroker's emblem—three balls—now decorate the United States Treasury in Washington? Are the founding

fathers turning in their graves as they view this disturbing spectacle?

20. In the United States politicians and officeholders are here today and gone tomorrow. Is a nation operating under such a political system equipped to make a success of the international banking business?

21. Would not my slogan "Billions for the relief of the starving babies abroad, but not one cent for the relief of empires" be timely and very proper at this time?

22. We are all seeking an easy way out and a short cut to glory, but is not the solution to our problem, Britain's problem, and the world's problem, work and sweat? Is there any other real solution?

A Letter From a Constituent

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a letter I have received from the members of the band of the U. S. S. *Dixie* who give their reasons for their desire to transfer from their present assignment.

U. S. S. "DIXIE" BAND,
U. S. S. "DIXIE," FOURTH DIVISION,
CARE OF FLEET POST OFFICE,
San Francisco, Calif., February 26, 1946.

Representative THOMAS J. LANE,
Member of Congress,
Washington, D. C.

DEAR REPRESENTATIVE LANE: The reason for this letter is to appeal to you to do all you can to have the U. S. S. *Dixie* band transferred from its present duty. We have many excellent reasons for this change of duty but so far our requests seem to have fallen upon deaf ears. Nor are we given any sensible information as to the why or wherefore.

We are writing all the Members of Congress who represent the respective members of our organization. We sincerely hope that you can take a just view of our condition and help us all you can as our ship is ready to sail April 1 for at least 6 months of foreign sea duty and very possibly more.

In the following paragraphs you will find the reasons we set forth and upon which we base our claims that we rate, need and deserve a change from sea duty to shore duty.

We are not being used as musicians. There is little likelihood that we will be in the future. We haven't played for 4 months. Several of our key men have been released or transferred which seriously cripples our ability to play even if we are switched back to our music duties. Our present duties include mess cook duty, watches, bus driving, stevedoring, and various working parties. This work is normally done by seamen or non-rated men. We are all rated musicians.

When we left the school we were told that after 18 months we would be given shore duty. Later the bureau changed it to 24 months. There was an Alnav put out in 1945 that stated that after 24 months of sea duty a man is eligible for rehabilitation leave and reassignment! Our ships files seem to be incomplete and we are unable to find the number. We have been on the *Dixie* for 26 straight months of uninterrupted and continuous sea duty!

Our powers as musicians have been waning considerably. The future will not help. In our profession, where 3 to 6 hours a day of practice are almost necessary to keep in good playing condition, this 4-month lay-off with 6 more in the offing will be disastrous. This ship has no facilities for individual practice and very little for band rehearsal. This ship does not need a band.

We are definitely not essential! That is definitely proven by the type of duty which has replaced our specialized duties.

We are all maladjusted and nervous from our continued duty in the Pacific. We didn't see any kind of civilization for almost 2 years. We sincerely doubt if we will be able to mentally survive another ordeal of 6 months or possibly more time at sea.

We haven't spared ourselves in the slightest to do our part during the war which our records will testify. Now that the war is over we feel that we surely rate some consideration.

Out of a group of 1,400 men the band is practically the only senior group to return to sea.

We hope that you can do something for us and that you will be convinced of our plea before April 1.

Sincerely yours,

Paul S. Barth, Musician Second Class; Robert E. Puff, Musician First Class; Gerald W. Bordner, Musician Second Class; Robert F. O'Brien, Musician Second Class; Clyde W. Reynolds, Musician Third Class; David L. Walters, Musician Second Class; Donald L. Dean, Musician Second Class; Turner M. Gaught, Musician Second Class; Leslie E. Walden, Musician First Class; E. Donald Stute, Musician Second Class; Golden A. Smith, Jr., Musician Second Class; Robert G. Appleton, Musician Third Class; Bruce B. Denney, Musician Second Class; J. H. Foley, Musician First Class; J. W. Haas, Musician Second Class; F. J. Hanneman, Musician Third Class; Gordon W. Sperl, Musician Second Class; C. L. Hartmann, Musician First Class.

Radio Address on Congress Speaks Program

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me on the program, Congress Speaks, over CBS, Station WTOP, Washington, D. C., February 12, 1946:

Of all the experiences I had while on the committee's assignment to the Pacific bases, the most vivid impression remaining with me is the vastness of the Pacific Ocean. Here is an area of tremendous distances. It is impossible to describe adequately the magnitude of the task which faced our fighting forces in mounting the various stages of the offensive against Japan. Thousands of miles separate the many groups of islands from which the Japs had to be routed before our men could move forward to their ultimate goal.

Hundreds of thousands of tons of shipping were required to move men and equipment across thousands of miles of ocean on the long road from Guadalcanal to Iwo Jima. If nothing else has been accomplished, this assignment has convinced me that the United States must never again lose sight of its true relationship to the lands which lie across the Pacific Ocean. To maintain and protect that relationship the first essential is an adequate navy—with the correct type of ships and bases.

Millions have been spent in developing island bases, some of which are so situated that they are of vital strategic importance to the future security of our country. After weighing carefully all the considerations involved, it is my sincere opinion that several of these island groups must be retained by the United States as our exclusive possessions.

The Marshalls, the Marianas group and the Carolines are, I believe, of particular importance. These must be developed even further until they are formidable American outposts. I am unable to see how we can intelligently advocate any other plan.

These islands have been of tremendous value in the development of the offensive against the Jap homeland. Their importance to the security of the United States has been clearly demonstrated in the war which has just closed. If further evidence of our right to these bases is required, then I respectfully and humbly call attention to the pretty, well-cared-for cemeteries which dot those islands; where row after row of white crosses bear mute testimony to the terrific price our people paid to win these island outposts. The great sacrifices which were made by the people of the United States convince me that we must continue to be vigilant in order to make certain that the peace these brave men bought with their lives shall not be disturbed. Because of these men who gave the last full measure of devotion our western frontier is now far west of San Francisco.

I had the privilege of talking to many of the enlisted men in the service who are stationed on the islands and in Japan and China. I was particularly fortunate in meeting some from my own State. Most of those I met had but one wish in life—to come home.

My colleagues and I asked a lot of questions about demobilization. I know it is a tremendous job—with many heartaches—but the Navy, by and large, is trying hard to do the job well. There has been some regrettable confusion and, in some instances, delays which were particularly galling. But there is plenty of shipping available now and the men are on the move toward home. I expect even greater progress will be shown as the new recruits become available for replacements at the bases and aboard the ships overseas.

The stations where some of the men are serving are particularly distasteful. Some bases are being rolled up and there is little or no activity outside of caring for surplus equipment and stores and making the stations ready for inactivation. Some of the stations are pretty rugged and at some bases the climate is horrible. All these things, added to the fact that the men want to come home, makes it pretty tough and it's no wonder that the men gripe.

Some of the men are depressed because they don't know just why they are occupying particular areas. I found this to be true, particularly among the marines in China. From my conversations with the men I learned that conditions were deplorable when they first arrived. Housing was far from adequate and there was little or no heating. The Jap quarters which the marines took over were filthy and the weather was bitter cold. They have come a long way since then, but these men need some serious consideration.

The men have heard and read about statements of various authorities attempting to explain why the marines are in China. Their job is supposed to be helping China to repatriate the Japs. They are guarding railroads and communication lines and many of them wonder if they are destined to become a permanent garrison. The letters which they receive from home indicate the same concern is shared by their parents. This frame of mind is not good.

I firmly believe our State Department should make a forthright statement outlining our policy in Asia. I have met many who are convinced that we are definitely committed to intervention in China. I have met just as many who are convinced that we have no clear-cut policy of any kind relative to the Far East. This is an unhealthy situation. Our policy in China and in the Pacific islands is interwoven with our policy toward all Asia. It needs to be honest and clearly set out. The servicemen and the folks waiting for them at home are entitled to know what that policy is, and I believe it is now possible to set a date for the withdrawal of all the marines from China. If such a move is made I know the marines there will feel a new lift. They will then become enthusiastic ambassadors of the United States. As it is now—they certainly aren't selling America to anyone. They are discontented. They are discouraged.

I think our State Department, on many occasions, has been altogether too bashful about setting forth our position. I appreciate and admire the efforts to promote harmony among various nations, but, I don't believe in harmony at any price. I can understand that a lot of give and take is necessary in international relations, but I think we ought to stop concentrating on the give for just a little while and pay some attention to the taking part of the bargain.

China impresses me as a potential market for just about everything that the United States can produce. The struggles which these brave people have borne for so long have brought them to the brink of destitution. They need just about everything. An enlightened American policy toward the people of China will enable both peoples to reap great reward for many years.

One of the biggest problems we found is that involving surplus property. I can't begin to tell you the impression I received when I saw acres and acres covered with equipment and material of all kinds. Naturally, we were concerned primarily with naval property, but the Army has a similar problem with which it is wrestling.

Because our military leaders could not afford to contemplate the capitulation of Japan short of invasion of their homeland, it was necessary to lay up vast stores of material of all kinds. Just about the biggest job the Navy has now is taking care of all these supplies.

Warehouses have been built and requisitioned. Great efforts have been made by the men at the various stations to get as much as possible under cover. However, it is impossible to protect all of it.

The climatic conditions on many of the islands are such that a great deal of this surplus property is deteriorating rapidly.

I have talked the matter over with my colleagues and it is our intention to suggest some definite policy in connection with the disposition of this property. Much of it can be returned to the United States for disposal but to undertake to return all this equipment would be, I am convinced, a very costly operation and one almost certainly destined to be wasteful.

I might add—in anticipation of future construction work at some of the bases which we propose to develop to the maximum degree possible—the Navy is setting aside, under proper protective arrangements, a great deal of equipment and parts which can be used by contractors. This will result in a considerable saving to the Government.

The devastation and destruction of the villages and cities over which the war rolled defies belief. I can't begin to describe to you the conditions which we saw.

Although I had read of the great bombing raids on Tokyo and other Japanese cities—I was not prepared for the sights which met us on our arrival in Japan. General MacArthur and his staff and the men serving under his command have worked wonders, but there is still a great deal to be done.

The plight of Manila is very sad. Once a most beautiful city, it now lies in almost complete ruin. Bravely the people of the city carry on, and on every hand there is the evidence of the struggles of men and women to erect homes and chapels out of the wreckage that lies all about. The Philippines are receiving considerable help from our armed forces, but I fear they will need a great deal more substantial assistance before they will have even started on the road to recovery. All through the islands the situation is the same.

I have learned a great deal on this assignment of the Naval Affairs Committee of the House of Representatives. I wish it were possible for all Members of Congress to cover the same ground. I wish many of our civic leaders could see this vast area. I am sure it would be good for the country.

It is an area which presents great opportunities—but it also presents grave responsibilities. These we cannot avoid—even if we would.

Care of Disabled Veterans

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, March 1, 1946

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

PORTLAND, MAINE, *February 20, 1946.*
Hon. ROBERT HALE,
House Office Building,
Washington, D. C.

DEAR SIR: The national commander of the American Legion, Dr. John Stelle, continues to criticize Gen. Omar Bradley, the present head of the Veterans' Administration, for defending the very policy upon which the Veterans' Administration was established, namely, the giving of medical care to the war wounded and disabled.

General Bradley has now been Director of the Veterans' Administration for 6 months, during a very difficult period. He was appointed last August when the Veterans' Administration was in a bad mess. He was put in because the "antiquated and inefficient" methods of the Veterans' Administration needed to be changed. He came into a new job at a time when the returning soldiers were flooding the Veterans' Administration with a stupendous amount of work. Moreover, during the war, the Veterans' Administration had a depleted staff. Most of the doctors in it had left for service in the Army and Navy, as well as civilian help. Many of the demands made upon it were completely unreasonable.

General Bradley has rightly requested that the hospital admission be restricted to service-disabled cases. This restriction was suggested in an effort to relieve much of the present overcrowding. There is a 90,000-patient bed load and two-thirds of these are non-service-connected cases. General Bradley is reported to have questioned the whole policy of hospitalization of veterans who do not have service-connected ailments. So do we, who have watched its operation for twenty-five long years. I am sure that General Bradley is doing a good job. He has given it 6 months of close study, with many good advisers from the Disabled American Veterans of World War I and others interested in the returning soldier. These men who are not in politics and not interested in getting votes are in full agreement with the general's conviction that the Veterans' Administration should be for the war-disabled veterans. It was never the intent of the law to hospitalize ex-servicemen for nonservice disabilities unless these servicemen were indigent—in other words, unable to pay. A pauper's oath is required of all non-service-connected cases, and according to General Bradley, this requirement in practice has become mere fiction. He therefore justly and correctly suggested putting an end to this sabotage of Veterans' Administration facilities.

Apparently the Veterans' Bureau and the public need to be reminded that we have no right to jeopardize the established policy of this Government that America's wartime disabled be given first consideration by the Veterans' Administration. For this purpose it came into existence. To throw into its lap the medical problems of every veteran, regardless of the cause and ability to pay, saddles it with a program so vast that the really needy—the war wounded and disabled—will die before their needs are met.

Every doctor in private practice and every veteran with eyes and ears open knows of financially able veterans of World War I who have no service-connected disability, who went in and crowded out of needed beds disabled soldiers with service-connected disabilities. No one wishes to deny any ex-service man or anyone else the right to hospitalization and medical care if he is unable to pay. But when there are not enough beds, when the Veterans' Administration is flooded with phony claims of men who expect to get something from the Government, when they know full well that they have no service-connected disability, and when men able to pay go to the Veterans' Administration to demand medical attention to which they are not entitled, then we thank God that we have men like Omar Bradley. He is willing to fight for what he believes is right, even when he must fight the commander of the American Legion.

The American Legion is a big organization with millions of votes. Its rules prevent it from entering politics, but its commanders have not always been above trying to get political plums for themselves, or above misinterpreting the ideas of the members in their own way of thinking. Commander Stelle is courting the good will of the "gimme" members. Veterans often spend money liberally for liquor, unneeded automobiles, and other luxuries—but are not willing to pay out a red penny when they need medical care. I am glad to say that it was only a small percentage of the Legion members who tried to sponge on the Veterans' Administration. If a pauper's oath is required, it should not be kept secret, as it has been. The press, social welfare workers, the Red Cross, and the American Legion have led some ex-soldiers into the belief that their military service entitles them to medical service for themselves and family for the rest of their lives.

The disabled veterans' organization has comparatively few members though it has all the talking points. It has too little influence. Many Americans have never heard of its existence. It is a minority group. It is an organization in which the strong must look out for the weak and the discouraged. This is true of both the American Legion and the Disabled American Veterans. I have belonged to both organizations since their inception soon after the 1918 armistice, and I know whereof I speak. Ever since World War I the disabled veterans have had to fight for the principle that the disabled veteran is the reason for the existence of the Veterans' Administration, and they should not be crowded out by financially able, able-bodied men.

The war of killing people is over. After this second terrible World War, there are many more disabled soldiers and they are entitled to the best possible care. Surely the veterans themselves do not want to inter-

fere with the rights accorded by law to the disabled who have service-connected disabilities.

Gen. Omar Bradley has always been known as a soldier's general. He knows how important it is to separate phony claims from the real McCoy. This takes time. He is trying to put first things first, and that means the war-disabled soldiers come first. I am sure they will as long as he is head of the Veterans' Administration.

ADRIAN H. SCOLTEN, M. D.

The Ordnance Victory System

EXTENSION OF REMARKS
OF

HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Friday, March 1 (legislative day of Friday, January 18), 1946

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Ordnance Victory System" written by Lt. Gen. L. H. Campbell, Jr., Chief of Ordnance, and published in the spring, 1946, issue of the magazine Dixie Business. This article deals with the miraculous achievements of production by the Ordnance Corps of the Army under General Campbell's direction during the war.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ORDNANCE VICTORY SYSTEM

(By Lt. Gen. L. H. Campbell, Jr., Chief of Ordnance)

During World War II the industry-ordnance team produced more than $9,000,000,000 worth of ammunition, more than $3,000,000,000 worth of small arms, more than $5,000,000,000 worth of artillery, and more than $19,000,000,000 worth of tank and various types of combat and noncombat military vehicles. The total dollar volume was in excess of $38,000,000,000.

Here are a few typical items. The industry-ordnance team produced nearly 11 tons of artillery ammunition, about 6,000,000 tons of bombs and rockets, more than 15,000,000 rifles, carbines, pistols, revolvers, and Browning automatic rifles, more than 22,000,000 helmets, more than 180,000 pieces af aircraft artillery, more than 270,000 tanks and self-propelled weapons, more than 2,000,000 trucks, and more than 1,000,000 other vehicles.

This gigantic production for our own combat forces and for more than 40 Allied nations was made possible by the application of four simple formulas which I have been asked by the editor to outline briefly for the readers of Dixie Business.

First of all, throughout the war, the emphasis was placed upon industry-ordnance cooperation.

My first official act on becoming Chief of Ordnance on June 1, 1942, was to establish a personal advisory staff consisting of four outstanding business and industrial leaders who were thoroughly familiar with all phases of mass production. The men chosen were Bernard M. Baruch, chairman of the War Industries Board in World War I; Lewis H. Brown, a regimental supply officer in World War I and president of the Johns-Manville Corp.; Benjamin F. Fairless, who completed in just 22 years the transition from a raw young surveyor in the field to the chief executive position in the U. S. Steel Corp.; and K. T. Keller, president of Chrysler Corp., who in less than a year directed the planning, building, and outfitting of a mammoth tank arsenal and completed production on his first tank. The appointment of these men was intended to underscore again and to reaffirm in the most emphatic way the tremendous importance of industry's role in the great, bewildering, onrushing armament program.

These and other advisory groups gave generously of their time, entirely without compensation, to help the Ordnance Department carry on, as quickly and efficiently as possible, its vital part in the most gigantic manufacturing, training and warehousing program in human history. At various intervals, civilian experts and ordnance officers worked over a great variety of problems—engineering and production problems, administration and personal problems, maintenance and supply problems, facility-expansion problems, training problems, and a multitude of miscellaneous questions pertaining to such matters as contract terminations and property disposal.

Industry-Ordnance cooperation was not a new idea. The novelty was in bringing to perfection the teamwork, the ability to work together, of a new civilian-military backfield with a new quarterback calling the signals. The same teamwork which was developed in the executive backfield was also developed in the line—the operating branches.

This wholehearted cooperation between industry and Government, which was demonstrated so forcibly during the war years, created an invaluable precedent which has equal bearing and importance in the peacetime years ahead. Industry and Government should continue to work together in building a better and more prosperous America.

Our second principle of operation was to clear the way for industry at maximum capacity and efficiency. Our six old-line arsenals, together with our headquarters technical staff were the principal repositories of armament knowledge down through the years. Our greatest responsibility was to pass on to industry this priceless know-how in the manufacture of rifles, artillery, ammunition and tank-automotive vehicles. After that industry was encouraged to improve upon our techniques, if at all possible, particularly in the way of mass production methods. While it is true that industry had to meet rigid military specifications, our one desire was to aid industry in every possible way rather than to dictate to industry how the job should be done. This faith in the ability, ingenuity, and resourcefulness of American industry was amply repaid in unprecedented production.

Our arsenals were at all times prepared to supply production techniques to civilian manufacturers who had no previous experience in the production of ordnance equipment. But our arsenals also received many benefits from those industrial firms with which they have been associated. At the beginning of the national emergency the arsenals were able to contribute their pilot line techniques to civilian manufacturers. Later in the war these same manufacturers were able to improve upon initial arsenal techniques, to speed up production, and to lower costs. Volume or mass production replaced laboratory or pilot-line production.

At Watervliet Arsenal, for example, some private firms learned for the first time such cannon-manufacturing processes as the boring of the deep holes, rifling, powder chambering, and step threading. On some jobs it was advisable to have contractor personnel perform the duties of the operator in the arsenal to insure a successful beginning in the civilian plant. Sample cutting tools were made available so that they could be duplicated as to proper material, hardness, clearance angles, sheer, lips, and grinding finishes. Facility and operation drawings were provided. In some cases it was necessary for industry to plan better facilities than those available to produce cannon in larger quantities than had ever before been attempted. These retooling jobs were handled in an excellent manner and often pointed to methods that were adopted at Watervliet to manufacture the same or similar cannon components.

Having obtained basic armament production information, industry then began to improve upon original ordnance methods and suggested a great variety of time-saving and material-saving techniques. In the early phases of the national-defense program ordnance engineers, technicians, and arsenals taught industry; in the latter phases industry instructed ordnance in many new shortcuts in mass production.

The moral is that, given encouragement and relieved of unnecessary restrictions, regulations, and red tape, American industry is capable of production miracles. Had the Ordnance Department insisted that everything should be done the Ordnance way, if Ordnance had interfered at every step of the production process with gratuitous advice, suggestions, and commands the job of arming America and her allies would not have been done half as well as what was actually achieved in production in an incredibly short time.

Our third principle of operation consisted of the development of industry integration committees.

These committees represented the cross weave in the fabric of America's wartime ordnance-production program. The lines of mutual assistance between industry and Ordnance were well developed by the eary part of 1942, but intraindustry ties, such was the force of peacetime rivalry and competition, were relatively undeveloped. Part of my job as a production expediter was to put highly diversified companies, large and small, into harness together. Many companies found themselves far afield from their normal peacetime pursuits. They were awarded Government contracts for the production of unfamiliar items under strange and complicated wartime rules and regulations. Ordnance had to train, guide, and assist them individually during the initial stages of production and then weld them together into intimate groups for the rapid manufacture of specific ordnance items. In both instances the task was sometimes as difficult as teaching a right-handed man how to write with his left hand. Early difficulties were soon overcome, however, and industrial integration, the vital cross weave that knitted together hundreds of companies from coast to coast, became a permanent feature of the wartime Ordnance manufacturing program.

There has been considerable publicity on the integration program and occasional press comment on the good work accomplished by a few committees; but there has been only an imperfect realization of the Nation-wide extent of this unique form of industrial teamwork as applied to ordnance production. On VE-day there were 82 industry integration committees, covering 162 types of ordnance equipment and combining the efforts of 1,527 prime contractors and approximately 10,000 subcontractors. The largest number of committees in operation at any one time was 131. Of the total number of such committees in June 1943, 75 committees were working on tanks and automotive equipment, and 15 on such artillery items as guns, gun carriages, and fire-control instruments.

The fourth and last principle of wartime ordnance operation which yielded rich dividends was the principle of maximum decentralization.

I am well acquainted with all the arguments favoring concentration of power and centralization of authority. Ordnance experience has proved, however, that the Department can best function under a decentralized plan of operation, and it has been my consistent policy to delegate authority whenever and wherever possible. The person

to whom authority is delegated automatically assumes responsibility for results. I measure him by results. We carved up a $38,000,000,000 program into as many parts as good management dictated. Results achieved in the war are indicative of the soundness of the policy.

The ordnance districts may serve as a practical illustration of the scope and range of our decentralization policy. Ordnance procurement was initially decentralized in 13 ordnance districts, roughly corresponding to the major manufacturing areas in the United States. Eight districts, in turn, progressively decentralized their operations until on VJ-day these districts had 39 region suboffices. The Boston ordnance district had one suboffice; the St. Louis ordnance district had seven; two of the five suboffices of the Detroit ordnance district were located in Canada.

Regional offices were established primarily to administer ordnance supply contracts with facilities located at such distances from a district office as to make it just as difficult and uneconomical for that office to work directly with manufacturers as it was for facilities, particularly small facilities, to have their top management away 2 or 3 days on travel to and from the district office. During the war, ordnance production and inspection personnel, working out of nearby suboffices kept in constant touch with manufacturers and rendered immediate assistance in anticipating and overcoming production problems. In the spring of 1942, when each week saw new fronts ablaze, with resultant changes in raw materials and manpower conditions, it became apparent that some adjustments would have to be made in the previously conceived form of departmental organization.

After lengthy conferences with my advisory staff, we decided to extend the traditional ordnance policy of decentralization from the district system to other fields. Four major decisions were taken—to decentralize the administration of artillery ammunition production, to establish a tank-automotive center in Detroit, to form a small arms ammunition office, and to create a field office for safety and security matters.

In keeping with these decisions, I ordered the transfer of the administration of ammunition plants from Washington to a local point geographically central to the various ammunition plants which included, in addition to Government-owned, Government-operated plants, approximately 60 Government-owned, contractor-operated new Ordnance facilities producing ammunition above caliber .50 and allied raw materials under cost-plus-fixed-fee contracts. This new decentralized office was established in St. Louis.

On the same day that the St. Louis office was officially established, the five-fold job of designing, manufacturing, buying, distributing and maintaining all Army automotive land vehicles not carrying guns or armor—trucks, passenger cars, jeeps and ambulances—was transferred from the Quartermaster Corps to Ordnance. Motor transport, in itself a gigantic responsibility, was superimposed on the previous Ordnance responsibility of a similar nature for tanks, combat cars, and all other motorized fighting equipment carrying guns or armor. Here indeed was a new and major challenge to Ordnance. In order to meet the rapidly expanding automotive program successfully, Ordnance needed all the additional help it could possibly secure from Industry. It was therefore a logical step to set up a new tank-automotive office in Detroit—the motor capital of the world. The success of this decentralized plan of operation is indicated by the fact that my office in Detroit accepted 3,050,000 major pieces of automotive equipment during the war, valued at 16 billion dollars.

Our next major decentralization order in the summer of 1942 established an ammunition suboffice of the Small Arms Division in Philadelphia to exercise the functions pertaining to the manufacture, procurement, production, inspection, and acceptance of small-arms ammunition and accessories. This office successfully supervised the manufacture of 47,000,000,000 rounds of small-arms ammunition from June 1940 to VJ-day—a highly creditable achievement in every way.

Our last major decentralization order established a safety and security office in Chicago. It was a certainty that the unprecedented expansion of explosives and ammunition facilities would present hazards of vast and ominous magnitude. The manufacture of explosives and ammunition has always been attended by recurrent disasters in the past, and the new decentralized office was activated to keep loss of lives, property, material, and time to an absolute minimum. So successful was the operation of this office that, according to a recent tabulation, of all disabling injuries at ordnance plants more than 95 percent were in no way due to explosives manufacture but were attributable to the common variety of industrial exposures found in miscellaneous manufacturing industries.

Decentralization, in ordnance terminology, is not synonymous with abandonment. The transfer of many responsibilities out of Washington did not mean that the various centers and suboffices were left without guidance, direction, and supervision. Contact with Ordnance headquarters and these offices was maintained in various ways—by the usual means of communication, by periodic directives and reports, by regional conferences, and by frequent meetings in Washington and in other parts of the country. I believe that it is part of my job to get out of Washington from time to time and to see for myself what is going on. From June 1, 1942, to VJ-day, I traveled almost 200,000 miles, mostly by airplane.

Stop the Appeasement Policy Toward Communism

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. RANKIN. Mr. Speaker, it was heartening, indeed, to real patriotic Americans to hear the statements by two of our representatives who have just returned from London.

I refer to my distinguished friend, Senator ARTHUR VANDENBERG, of Michigan, and my distinguished friend, Hon. James F. Byrnes, Secretary of State.

According to their statements, it seems they have come to realize that appeasement of Communism is getting America nowhere except into trouble.

The American people are behind them in this attitude and are demanding that they stiffen up, go forward with it, and let the world know that we mean what we say, and that we do not propose to have our country undermined and destroyed.

I am going to suggest to Secretary Byrnes that he not only stop appeasement abroad but that he begin to clean out his own department and every other department of government that has these Marxist Communists on the Federal pay roll.

Let us help to maintain peace among the nations of the earth. But at the same time let us see that our country is protected at home and respected abroad.

Mr Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting the address of Secretary Byrnes delivered in New York on yesterday.

The matter referred to follows:

TEXT OF SECRETARY OF STATE BYRNES' TALK OUTLINING AMERICA'S POSITION ON DISPUTED WORLD PROBLEMS

We are beginning to realize that the war is over. It is good to have sons, husbands, and fathers home again. It is good to open a newspaper without fear of finding in the casualty lists the name of one near and dear to us.

But this is not wholly a time of celebration and rejoicing. As families in their homes on the farms and in the cities settle back from the dinner table to hear the boys tell of Normandy and Iwo Jima, there is an unspoken question in every mind. The question is what we can do to make certain that there will never be another war.

During the war our goal was clear. Our goal was victory. The problems of industrial and military mobilization, it is true, were problems of the first magnitude. Production bottlenecks often seemed unbreakable, transportation difficulties and manpower shortages insurmountable. On the fighting front, the combined land, sea and air operations were heartbreaking in complexity.

These were hard tasks. Yet we were able to apply a yardstick to each proposal by asking a simple question: "Will it help to win the war?" The common goal of victory served to unite us and to give purpose and direction to our efforts.

Now that we have come into calmer waters, our relief and gratitude are mixed with uncertainty. Our goal now is permanent peace, and surely we seek it even more anxiously than we sought victory.

FINDS PEACE PATH DIFFICULT

The difficulty is that the path to permanent peace is not so easy to see and to follow as was the path to victory.

When an issue is presented, we ask, "Will it help to win the peace?" When the answer is slow to come or does not come at all, we grow uneasy and apprehensive.

While we may be in doubt about many things, there are certain basic propositions on which we are clear.

One is that a just and lasting peace is not the inevitable result of victory. Rather, victory has given us the opportunity to build such a peace. And our lives depend upon whether we make the most of this opportunity.

Another thing of which we are certain is that we Americans alone cannot determine whether the world will live in peace or perish in war. Peace depends quite as much upon others as it does upon us. No nation is the complete master of its fate. We are all bound together for better or for worse.

Because we know this, we have pinned our hopes to the banner of the United Nations. And we are not content simply to take our place in that organization. We realize that although the dreams of the world are lodged in it, the United Nations will fail unless its members give it life by their confidence and by their determination to make it work in concrete cases and in everyday affairs.

DISCUSSES LONDON MEETING

And so I wish to talk to you about the first meetings of the United Nations. What has been said in these meetings had been said as

plainly and bluntly as anything I have heard said by responsible statesmen in any private conference.

These first meetings were intended only to establish the various organs of the United Nations. But so pressing were some of the problems presented to the Security Council that they had to be dealt with before there was a chance for the Council to adopt even provisional rules of procedure.

All was not calm and peaceful at the meetings in London. There was effort to use the United Nations to advance selfish national aims. But the clash of national interests and purposes which were reflected in the debates in London was very much like the clash of local and special interests which are reflected in our National and State Legislatures.

We may deprecate some of these clashes of interest. But when they exist, it is better that they should be publicly revealed. If these conflicts of interests did not appear in the forums of the United Nations, these forums would be detached from reality and in the long run turn out to be purposeless and futile.

ON MIDDLE EAST DEBATE

A most significant precedent was established when the Security Council finished its discussions of the complaint of the Syrian and Lebanese Governments requesting the withdrawal of French and British troops from their territories.

The Council did not take formal action because of a difference among the permanent members as to the form of the resolution. But no one questioned the general proposition that no state has the right to maintain its troops on the territory of another independent state without its consent, nor the application of this proposition to the pending case.

The particular form of resolution to this general effect which was presented by the United States representative, Mr. Edward R. Stettinius, was supported by most of the members of the Council. It failed of acceptance, however, because the Soviet Union vetoed it on the ground that it was not definite enough.

But the British and French Governments immediately announced that, notwithstanding the technical veto of the Soviet Union, they would act in accordance with the American resolution as it clearly represented the views of the Council.

This indicates that the mere legal veto by one of the permanent members of the Council does not in fact relieve any state, large or small, of its moral obligation to act in accordance with the purposes and principles of the Charter.

TELLS OF GOOD START

The United Nations got off to a good start. However, that does not mean it is an assured success. It simply means that the Charter will work if the peoples of the United Nations are determined to make it work. At times our Congress may make serious errors of omission and commission. Such errors are not the fault of the Congress as an institution. They are the fault of its members or of their constituents who fail to measure up to their responsibilities.

So it is with the United Nations. It will succeed only as we, the peoples of the United Nations, measure up to our responsibilities.

I should be lacking in candor if I said to you that world conditions today are sound or reassuring. All around us there is suspicion and distrust, which in turn breeds suspicion and distrust.

Some suspicions are unfounded and unreasonable. Of some others, that cannot be said. That requires frank discussion between great powers of the things that give rise to suspicion. At the Moscow Conference there was such frank discussion. It was helpful. But the basis of some suspicions persists and prompts me to make some comments as to our position.

We have joined with our allies in the United Nations to put an end to war. We have covenanted not to use force except in the defense of law as embodied in the purposes and principles of the Charter. We intend to live up to that covenant.

But as a great power and as a permanent member of the Security Council we have a responsibility to use our influence to see that other powers live up to their covenant. And that responsibility we also intend to meet.

Unless the great powers are prepared to act in the defense of law, the United Nations cannot prevent war. We must make it clear in advance that we do intend to act to prevent aggression, making it clear at the same time that we will not use force for any other purpose.

The great powers are given special responsibilities because they have the strength to maintain peace, if they have the will to maintain peace. Their strength in relation to one another is such that no one of them can safely break the peace if the others stand united in defense of the Charter.

The present power relationships of the great states preclude the domination of the world by any one of them. Those power relationships cannot be substantially altered by the unilateral action of any one great state without profoundly disturbing the whole structure of the United Nations.

Therefore, if we are going to do our part to maintain peace in the world we must maintain our power to do so, and we must make it clear that we will stand united with other great states in defense of the Charter.

If we are to be a great power we must act as a great power, not only in order to insure our own security but in order to preserve the peace of the world.

FOR MILITARY TRAINING

Much as we desire general disarmament and much as we are prepared to participate in a general reduction of armaments, we cannot be faithful to our obligations to ourselves and to the world if we alone disarm.

While it is not in accord with our traditions to maintain a large professional standing army, we must be able and ready to provide armed contingents that may be required on short notice. We must also have a trained citizenry able and ready to supplement those armed contingents without unnecessarily prolonged training.

That is why in the interest of peace we cannot allow our Military Establishment to be reduced below the point required to maintain a position commensurate with our responsibilities, and that is why we must have some form of universal military training.

Our power thus maintained cannot and will not be used for aggressive purposes. Our tradition as a peace-loving, law-abiding, democratic people should be an assurance that our force will not be used except in the defense of law. Our armed forces except as they may be called into action by the Security Council, cannot be employed in war without the consent of the Congress. We need not fear their misuse unless we distrust the representatives of the people.

SEES NO CAUSE FOR WAR

I am convinced that there is no reason for war between any of the great powers. Their present power relationships and interests are such that none need or should feel insecure in relation to the others as long as each faithfully observes the purposes and principles of the Charter.

It is not enough for nations to declare they do not want to make war. Hitler said that. In a sense he meant it. He wanted the world to accept the domination of a totalitarian government under his direction. He wanted that without war if possible. He was determined to get it with war if necessary.

To banish war, nations must refrain from doing the things that lead to war.

It has never been the policy of the United States in its internal affairs or in its foreign relations to regard the status quo as sacrosanct. The essence of our democracy is our belief in life and growth and in the right of the people to shape and mould their own destiny.

It is not in our tradition to defend the dead hand of reaction or the tyranny of privilege. We did not fight against the Nazis and Fascists who turned back the clock of civilization in order that we might stop the clock of progress.

WANTS POSITIVE DIPLOMACY

Our diplomacy must not be negative and inert. It must be capable of adjustment and development in response to constantly changing circumstances. It must be marked by creative ideas, constructive proposals, practical and forward-looking suggestions.

Though the status quo is not sacred and unchangeable, we cannot overlook a unilateral gnawing away at the status quo. The Charter forbids aggression and we cannot allow aggression to be accomplished by coercion or pressure, or by subterfuges such as political infiltration.

When adjustments between States, large or small, are called for, we will frankly and fairly consider those adjustments on their merits and in the light of the common interests of all States, large and small, to maintain peace and security in a world based on the unity of all great powers and the dominance of none.

There are undoubtedly vitally important adjustments which will require our consideration. Some of these situations are delicate to deal with. I am convinced, however, that satisfactory solutions can be found if there is a stop to this maneuvering for strategic advantage all over the world and to the use of one adjustment as an entering wedge for further and undisclosed penetrations of power.

We must face the fact that to preserve the United Nations we cannot be indifferent—veto or no veto—to serious controversies between any of the great powers, because such controversies could affect the whole power relationship between all of the great powers.

The United States wishes to maintain friendly relations with all nations and exclusive arrangements with no nation. Naturally, there are some problems which concern some nations much more than other nations. That is true in regard to many problems related to inter-American affairs. That is true in regard to the control of Germany and Japan.

AGAINST EXCLUSIVE BLOCS

In our relations with the other great powers there are many problems which concern two or three of us much more than the others of us. I see no objection to conferences between the Big Three or the Big Four or the Big Five.

Even conferences between ourselves and the Soviet Union alone, conferences between ourselves and Britain alone, or conferences between ourselves and France or China alone, can all help to further general accord among the great powers and peace with the smaller powers.

But in such conferences, so far as the United States is concerned, we will gang up against no state. We will do nothing to break the world into exclusive blocs or spheres of influence. In this atomic age we will not seek to divide a world which is one and indivisible.

We have openly, gladly and wholeheartedly welcomed our Soviet ally as a great power, second to none in the family of the United Nations. We have approved many adjustments in her favor, and in the process resolved many serious doubts in her favor.

Only an inexcusable tragedy of errors could cause serious conflict between us in the future. Despite the differences in our way of life, our people admire and respect our allies and wish to continue to be friends and partners in a world of expanding freedom and rising standards of living.

But in the interest of world peace and in the interest of our common and traditional friendship we must make plain that the United States intends to defend the Charter.

Great powers as well as small powers have agreed under the United Nations Charter not to use force or the threat of force except in defense of law and the purposes and principles of the Charter.

We will not and we cannot stand aloof if force or the threat of force is used contrary to the purposes and principles of the Charter.

WOULD SPEED PEACE MAKING

We have no right to hold our troops in the territories of other sovereign states without their approval and consent freely given.

We must not unduly prolong the making of peace and continue to impose our troops upon small and impoverished states.

No power has a right to help itself to alleged enemy properties in liberated or ex-satellite countries before a reparation settlement has been agreed upon by the Allies. We have not and will not agree to any one power deciding for itself what it will take from these countries.

We must not conduct a war of nerves to achieve strategic ends.

We do not want to stumble and stagger into situations where no power intends war, but no power will be able to avert war.

We must not regard the drawing of attention to situations which might endanger the peace, as an affront to the nation or nations responsible to those situations.

It is quite possible that any nation may in good faith embark on a course of conduct without fully appreciating the effects of its conduct. We must all be willing to review our actions to preserve our common interests in the peace, which are so much more important to all of us than the differences which might divide us.

We must get back to conditions of peace. We must liquidate the terrible legacy which the war has left us. We must return our armies to their homelands. We must eliminate the breeding grounds of suspicion and fear. We must not deceive ourselves or mislead our Allies. To avoid trouble we must not allow situations to develop into incidents from which there is no retreat.

CALLS FOR PATIENCE NOW

We must live by the Charter. That is the only road to peace.

To live by the Charter requires good will and understanding on the part of all of us. We who had patience and gave confidence to one another in the most trying days of the war must have patience and give confidence to one another now.

No nation has a monopoly of virtue or of wisdom, and no nation has a right to act as if it had. Friendly nations should act as friendly nations.

Loose talk of the inevitability of war casts doubt on our own loyalty to the Charter and jeopardizes our most cherished freedoms both at home and abroad.

There are ideological differences in the world. There always have been. But in this world there is room for many people with varying views and many governments with varying systems. None of us can foresee the far distant future and the ultimate shape of things to come. But we are bound together as part of a common civilization.

As we view the wreckage of the war, we must realize that the urgent tasks of reconstruction, the challenging tasks of creating higher standards of living for our people, should absorb all our constructive energies.

Great states and small states must work together to build a friendlier and happier world. If we fail to work together there can be no peace, no comfort and little hope for any of us.

Brotherhood or Bombs—Which?

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, March 1 (legislative day of Friday, January 18), 1946

Mr. CAPPER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a very timely address delivered on February 28, 1946, at the Church of the Reformation in Washington, D. C., by Frederick Taylor Wilson, author-lecturer, on the subject Brotherhood or Bombs—Which?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Moses, the first and greatest of lawgivers, solemnly said to his people at an anxious hour in their history: "I call heaven and earth to record this day against you, that I have set before you life and death, blessing and cursing; therefore choose life that thou and thy seed may live."

In our own land, in other years, James Russell Lowell warned that—

"Once to every man and nation
Comes the moment to decide,
In the strife of truth with falsehood
For the good or evil side."

Mankind, now, however, faces its greatest decision.

The year 1945 was an amazing one. Historians, centuries hence, will write in wonder of its world-shaking events. The triple sudden deaths in that year, all within a period of less than 20 days, of President Roosevelt in a quiet Georgia retreat, and the fated endings of Mussolini and Hitler, the one at the hands of outraged fellow Italians and the other, like Samson of old, amid the falling ruins of Germany, were great historic events. The successful closing of the long, drawn-out wars with both Germany and Japan, soon thereafter were occasions for world-wide rejoicing. After long enduring the dark night of war, mankind, like Dante of old, in joy again beheld the stars of peace.

But the most momentous events of 1945 were not the sudden passing of these national leaders, however good or evil they may have been, for other leaders before them had passed. Neither was the ending of global wars, horrible as they were, our most thrilling events, for wars before them had come to a sudden end.

The two events of 1945 which history will record as of most far-reaching significance to the human race were the successful completion at San Francisco by the representatives of 51 different nations, of the plan for the United Nations Organization and the announcement a few weeks later of the release and the application of the deadly effect of the atomic bomb upon two helpless cities in Japan. The work at San Francisco was the real beginning of what can become the parliament of man and the federation of the world, about which poets have sung and prophets have long prophesied. The old League of Nations, however great may have been its work, did not include in its councils representatives of either Russia or the United States, and, therefore, could not be called truly international. The release of the atomic bomb with all its potential power suggested to thinking man the coming of the awful judgment day of his childhood and was a terrible omen of what could prove to be the means for man's ultimate destruction. The hell-fire of other days again entered into the imaginative thinking of a frightened world. As Mathew Arnold expressed it:

"Down came the storm. In ruins fell
The worn-out world we knew."

Mankind suddenly realized that a new age had burst upon it which can prove to be either the end of all or another golden age for man. It is significant that the meeting place at San Francisco was near what the world knows as the Golden Gate.

The work at San Francisco was not of a spectacular nature. There great men and women labored day after day with anxious interest as spokesmen for a majority of the peoples of the world and hewed out in brilliant fashion from the hard oak of realism what, under God, could prove to be the world's greatest structure of idealism. There, the blueprint was made for a universal workshop, in which sane leaders of nations, in the future, may in actuality beat their swords of war into plowshares and their spears of battle into the pruning hooks of peace. In dignity and decorum these representatives of 51 different nations garbed in the dress of their native lands and speaking their own varied languages, came forward and affixed their several signatures to what should prove to be the Magna Charta of mankind and the world's first great declaration of independence. That work has now been approved by a majority of the nations represented at San Francisco and the foundation for universal peace and brotherhood has now been laid.

Contrast this constructive work at San Francisco with the awful destructive scenes which took place a few weeks later in Japan. There, like Prometheus of old, man, poor, weak man, brought down fire from heaven, and scenes far more thrilling than the days of debate and compromise at San Francisco took place. From a murky sky, lonely pilots of the purple twilight let loose upon war-battered Japanese cities, like the dew of death pictured by Tennyson, the most destructive weapon of war ever used before by man. Flames of heat of 4,000,000°, brighter than the light of the midday sun, swept heavenward to a height of more than 8 miles, and at a velocity of more than 500 miles an hour, and in a short while untold thousands of helpless men, women, and children melted away like wax in the deadly flames of this ghastly invention of man. The imaginative inferno of Dante was eclipsed by the real inferno which man's genius had let loose upon the world.

All of this was the work of a weapon of war no larger than a common cocoanut. It had been released at a cost of $2,000,000,000, or one-fifth of the entire wealth of all Manhattan Island, and in it was a pent-up power greater than that of any weapon of war yet devised by man. It would require a contribution of near $1 from every human being on earth to pay this bill.

It is said that one pound of uranium 235, an element used in the construction of the atomic bomb, equals in potential energy 1,500 tons of coal, 250,000 gallons of gasoline, and 80,000,000 cubic feet of gas. And yet only one-tenth of 1 percent of the possible power which could have been released was released upon the bewildered cities of Japan. At last a Frankenstein monster created under the leadership of the wisest among us had been devised and the world learned for the first time of this horrible instrument of war which could quickly destroy it.

Now, as Zoroaster proclaimed long ago, two great forces—the one of light and the other of darkness—contend for world mastery. Which shall prevail?

The United Nations Organization may in truth with its world-wide ramifications become the word forum where voices of the oppressed among the nations, long silent, may be heard and long maturing plans for a just and lasting peace among the nations reach their final perfection. It can be the way, under God, in which a new day of brotherhood and good will can be made to prevail.

"Where the bars of race and creed and speech
which sever
Will be fused into one humanity forever."

There is great satisfaction in the thought that the future control of this awful bomb will be under the direction of the United Nations Organization. There this new-found power may be directed to the work of prolonging human life rather than of destroying it; to lifting burdens from the backs of tired men and women rather than multiplying them; and to performing the divine task of bringing a statelier Eden back to man. If man should have once lost his paradise of plenty, that paradise can be regained. Piety and poverty were never genuine yoke fellows. Riches and righteousness are not natural rivals, but can learn to walk together in heavenly harmony. Despair and disease were never destined to haunt forever the home of man made in the image of God. There is a divine discontent in the human family which can be satisfied. The kingdom of peace, power, and plenty can be realized.

There is great hope for man in knowing that mighty voices in the church of God had a vital part in the promotion of this new world parliament. Its spiritual opportunity is as unlimited as its political future.

The alternative is too terrible for human contemplation. The potential destructive power of the atomic bomb is beyond human comprehension. It is said that three such bombs properly placed could, overnight, destroy the entire industrial structure of America. No city or nation could successfully protect itself against such a day of doom. One scientist declares that 123 such bombs properly placed could wreak more deadly damage than all the recent years of war. Mother earth itself—like exploding stars—could be completely annihilated. A mad race among the nations to excel in the making of this weapon of destruction could only end in their universal bankruptcy.

For such a time as now the church universal has come. For 2,000 years good men and good women have talked and written of human brotherhood. The hour is now upon us when that brotherhood must become a grand reality or we perish. The key to the future peace of the world lies in the successful operation of the United Nations Organization. The success of that organization lies in the support of a church universal, for only the moral and spiritual unity of man will make workable the political unity of the nations. The time has long past when any sincere religious group should spend its time sniping any other group, great or small, which seeks to promote good will among men. Tolerance and truth demand a respect for every apostle of human brotherhood.

What a task for the church? The Master of all men in confidence declared that His Kingdom lay within the hearts of men. Whenever all human souls possess that kingdom the reign of righteousness will be universal. The universal church is greater than any human organization. It is something more than Jewish or Gentile, Catholic or Protestant. It is rooted in the recognition of God as the universal Father and of all the children of men as made of one blood. No particular faith holds a monopoly of religious truths. There is in each religious faith a vital truth which can be used in the building of this ecumenical edifice. Micah's plea for justice, mercy, and humility as the requirements of God was a universal plea. Freedom, knowledge, and human kindness are the common property of every great faith. Let us believe that the Kingdom of God lies just ahead. The arrival of "The one far-off divine event," can, under God, be hastened. It will come, not by observation as a cosmic catastrophe, but like the leaven in the lump, when the spirit of Christ is universal.

It is of supreme importance that every potent pen and every vibrant voice in the world today—whatever their religious beliefs—become enlisted in this mighty effort for the promotion of the universal spirit of tolerance, truth, and good will. These are the God-given arches which will support forever the bridge of brotherhood. It is a momentous task, for millions of the human race, like Laocoon and his sons, are still caught in the awful coils of ignorance, intolerance, and religious superstition.

But there is hope ahead. There is a perpetual plasticity in man's nature and the miracle of a redeemed humanity can become a glorious reality. For such to become true, a light more brilliant than that which rose above the cities of Japan must break upon the world. Such a light will not flash from the blast of bombs, but from the throne of Eternal Love, a love that transcends all love for nations, the love that holds the sun and moon and stars, the love for humanity. Then a new day will dawn upon the world. And with its coming, there will be ushered in the age sublime which will bring to the broken sons and daughters of men—

"A brotherhood that shall grow stronger
Than the narrow bonds which now distract the world;
When cannons roar and trumpets blare no longer,
The ironclads rust and battle flags are furled."

Then we shall have a new heaven and a new earth, for the first heaven and the first earth will have passed away. Brotherhood and not bombs will rule the world!

A Real Farmer Speaks His Mind

EXTENSION OF REMARKS
OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. PLUMLEY. Mr. Speaker, in common with all members of the House, I have received a large number of letters respecting many matters and things pending before Congress.

Recently I received a letter from a man who knows whereof he speaks, concerning the plight of the farmer.

Under consent granted, I am extending my remarks and including a letter from Walter Smith, of Plainfield, Vt., which deserves to be read by all who are interested to relieve the situation which obtains. This is it:

PLAINFIELD, VT., *February 25, 1946.*

DEAR SIR: I am writing you in regard to the labor situation on the farm. Are you aware that it is almost impossible to hire any help at any price? It is scarcer than during the war, and farmers are also finding it hard to meet the price demands of the few farm laborers that there are. During the war we had some help, but many left after hostilities ceased. We would be glad to have farm labor receive as good wages as help in other business, but how can the ordinary farmer pay $100 a month and room and board? Room and board elsewhere would cost a person over $50 a month. How can we pay this at the present cost of feed? After feeding our cows and paying the hired man I would have a bare living, to say nothing of supporting my family. It is true that farm work is long hours and hard work, but a farmer can't operate on an 8-hour day.

Just how many more average cows would a farmer have to keep in order to meet these wage demands? How many more hens, etc.? At that it would be a losing battle; we couldn't then operate at a profit. Isn't a farmer entitled to a fair profit on his investment?

We are getting a good milk price but no notice is taken of the fact that all we have to buy has increased in proportion. Why try to keep some prices at a 1937 low with the cost of production at a 1946 high?

In my situation I have decided that it will be impossible to produce any maple products this year because of lack of help. Why not lumber that sugar place as it is of no worth as a maple producer now and quit sugaring for good? Of course, it takes 60 to 80 years to raise a maple tree but the price of lumber is good.

Why is the cost of equipment so high? I bought a milking machine pail to go with my other machines. The pail could be made for not over $10 worth of material I firmly believe. The inflations and other parts might cost $8 and there is a pulsator that is no more complicated than the $5 carburetor on a Ford car. Yet I paid $90 for this pail. Last spring I ordered a tractor to be delivered as soon as possible. I haven't received it yet and today was told that because of strikes it was probable that my tractor wouldn't come through until summer. Unfortunately my hay dosn't understand strikes and will probably mature at the accustomed time; how shall I harvest it? If we can have neither machinery nor help what point is there in attempting to operate a farm? My farm is 300 acres and therefore I feel some help is necessary; it is hardly a one-man farm. I keep a herd of 40 milkers and approximately 70 head of stock, a flock of hens, pigs; I raise 15 ton of squash, 150 gallons of maple products, 500 pounds of beans, 75 to 100 bushel of potatoes above my own needs. I ship approximately 200,000 pounds of milk and produce several hundred dozen eggs. This farm supplies all the needs of the stock outside their grain. Are we to sell the stock and let this farm lie idle for a few years to let people realize it is necessary for the farmer to exist? There is no insurance for a farmer against hard times. Other businesses provide unemployment insurance but if my farm is to go out of production because of reasons beyond my control how about insurance for me?

If I have to sell a beef it is always called grade B or C product, but if I wish to buy a cut of beef for my own use I pay grade A price. The slaughterer gets a subsidy and the farmer takes the loss.

We can't get grain for our hens so we are forced to sell them at the price a dealer offers. From comparison with the price in the market someone must make a profit and again the farmer takes the loss.

Why are we supporting a full staff, or nearly so, of OPA officials when most articles have been removed from the ration list? Are we going to keep them in office until they too retire on a pension?

Most politicians claim on their platform to be farmers. How many operate their farms and pay all expenses of the farm and have a profit? If they are farmers let them come now to the aid of the farmers. We need help unless we are to be forced to sell our stock and only keep what we can handle alone, this labor situation must be clarified, and the importance of it made clear to the people of this country. The farmers did more than their share during the war and

believed we would not again be the forgotten group when we were not so desperately needed. But what has been done to insure us a place so that we can maintain an adequate standard of living?

Other groups depend partly on the power of a strike to enforce their demands but what would happen if the farmers went on strike? You have no fear of this believing that we are not well enough organized. But that is only part of the truth, most farmers more than any other group have a social consciousnes that prevents their using this weapon as farmers alone realize that a farm strike would bring such suffering as our country has never had to endure. Farmers would hesitate to inflict suffering on innocent children that would be the main victims. But what can we do?

If you and other Congressmen have the interests of the farmer at heart now is the time to show it. Do something about the cost of equipment or give us a milk price in proportion to it. See that some way is made to insure farm labor. We have to have machinery and help.

Thank you for your attention, I am

Sincerely yours,

WALTER SMITH.

Committee on Un-American Activities

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. KOPPLEMANN. Mr. Speaker, under leave given me to extend my remarks, I wish to insert in the Appendix of the RECORD a letter from Ellsworth Huntington, professor of geography at Yale University, protesting the actions of the Committee on Un-American Activities.

I have singled this letter out from a number that I have received criticizing the manner in which this committee has been handling its investigations. Professor Huntington is a member of one of our earliest families. He is outstanding among the scholars of this Nation, and indeed of the world. He has long been famous for his expeditions in geographical research and for his published studies on the interrelationship of geography and economics. During the First World War he was a captain in the Military Intelligence Service of the Army. His background and thinking are thoroughly American.

Mr. Speaker, I think it important that the Members of this House read Professor Huntington's observations on the operations of the House Committee on Un-American Activities. Our constituents are not restricted by the rules of this body from expressing themselves regarding our actions as a whole or the actions of any group representing us. They are watching us closely and when we so conduct ourselves as to bring forth their condemnation, it behooves us to pay attention to what they say. As a Member of this House I am jealous of our good reputation and trust that Professor Huntington's remarks will fall on attentive ears and cause the committee to realize that a change in its methods and approach to the problem it has undertaken to resolve is in order, lest the tide swell and public opinion be so roused that the dignity of Congress be seriously injured and the democratic process be subject to disparagement and suspicion.

YALE UNIVERSITY,

New Haven, Conn., February 22, 1946.

Hon. HERMAN P. KOPPLEMANN,

House Building, Washington, D. C.

DEAR MR. KOPPLEMANN: My attention has just been called to a curious letter sent out by the Committee on Un-American Activities. This letter was signed by Ernie Adamson. The letter contains a phrase which says that the National Committee to Combat Anti-Semitism is engaged in "solicitation of money for the purpose of controlling the thoughts of American citizens." The use of the word "controlling" is wholly unwarranted. It carries, and is apparently meant to carry, a somewhat sinister suggestion that the Committee to Combat Anti-Semitism is doing something wrong.

That committee undoubtedly wishes to influence people's thoughts. That is exactly what you do when you seek election, and what I do when I write a book. We none of us try to control people's thoughts, but only to influence them.

The letter of the Committee on Un-American Activities is one of many examples of what seems to me a very dangerous attitude on the part of that committee. I strongly protest against such action and against the assumption of the committee that any organization with which it does not happen to be in sympathy is therefore un-American.

My personal belief is that the Committee on Un-American Activities ought to be discharged at once. It does more harm than good.

Very truly yours,

ELLSWORTH HUNTINGTON.

Anglo-American Financial Agreement

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mrs. DOUGLAS of California. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include a pamphlet on Questions and Answers on the Anglo-American Financial Agreement.

There seems to be so much confusion about the facts regarding the British loan, it might be helpful to see what the facts really are.

The Treasury Department has tried to describe the agreements clearly and simply so that the people of the United States will understand what they have to gain from helping the people of Great Britain get back on their feet.

QUESTIONS AND ANSWERS ON THE ANGLO-AMERICAN FINANCIAL AGREEMENT

(U. S. Treasury Department, Washington, D. C., January 1946)

FOREWORD

When the financial agreement with England was announced, the Treasury received many inquiries about the proposed credit. These questions came from Members of Congress, from business and civic organizations, and from private citizens interested in the urgent problems dealt with in this agreement.

It seemed to me that millions of our citizens must be asking themselves these same questions. They want to know the facts about the financial agreement. They want to know why the proposed credit is necessary. I have, therefore, asked the Treasury staff to present in plain language the questions that we have received and the answers that we have given on the financial agreement.

The American people want a world of peace and prosperity. So do the people of all countries. This will be possible only through international cooperation to establish fair currency and trade practices that will make it possible for world trade to expand and grow. We have made a good deal of progress toward this goal. Unfortunately, England will not be able to commit herself to the prompt application of these principles until she is sure that she will be in a position to secure her essential imports of food and raw materials.

For 6 years, England devoted most of her resources to fighting the war. She converted her export industries to war production. She sold foreign investments and incurred a foreign debt of $13,000,000,000 to pay for her world-wide war expenditures. But now the war is over. England can secure imports only by paying for them with exports. She can meet her huge foreign debt only by finding markets for her products. With some help, it will take a few years for England to restore her export industries and to reestablish her export trade. In the meantime, England must import. Otherwise the health of her people will be impaired and her industries will decline.

If England can secure a credit that will help pay for her essential imports during the next few years, she can immediately accept the principles of fair and nondiscriminatory currency and trade practices. In fact, England will be greatly benefited by an expansion of trade on such a basis. That is the policy England would prefer.

But if England cannot secure such a credit, she will have to take drastic steps to curtail her imports and to force her exports on other countries. Our exports would be excluded, as far as possible, from British Empire countries which would concentrate on trade with each other. Such a policy would inevitably divide the world into conflicting economic blocs. In blunt language, the world would be at war—economic war.

The consequences of such a policy would be tragic for the United States, for England, and for the entire world. That is why the representatives of the United States and England went over this problem in discussions that lasted more than 3 months. They agreed that England would need help in maintaining essential imports and that part of this help should be in the form of a credit of $3,750,000,000 from the United States. And they agreed that with this help England could abandon wartime currency and trade discriminations and join with the United States in a program of international economic cooperation. This is the essence of the financial agreement between the United States and England which is now before Congress for approval.

This financial agreement, and the proposed credit will be a big step in preventing economic warfare. It will also be a big step in building a world in which countries live and work together in peace and prosperity. For England it will mean a chance to feed her people and reconvert her industries in a world of expanding trade. For the United States it will mean opening the markets of our best customer, England and the British Empire, to the products of our factories and farms. For all countries it will mean a chance to reconstruct a war-shattered world, with expanding trade, greater employment, and higher standards of living.

The people of the United States and the United Nations have agreed on a program in which countries cooperate to maintain peace and prosperity. The United Nations Organization, with its Security Council, General Assembly, Economic and Social Council, and International Court of Justice, constitute one side of this program. The International Monetary Fund and the International Bank for Reconstruction and Development and the proposed International Trade Organization constitute another side of the same program. The financial agreement with the United Kingdom is essential to the realization of this entire program for peace and prosperity. This is what I hope the people and Congress will bear in mind in considering the financial agreement.

FRED M. VINSON,
Secretary of the Treasury.

WASHINGTON, D. C., *January 1946.*

QUESTIONS AND ANSWERS

1. What is the Anglo-American financial agreement?

The financial agreement between the Governments of the United States and the United Kingdom is an agreement under which—

a. The United States will extend to the United Kingdom a line of credit of $3,750,000,000, which can be drawn upon until December 31, 1951.

b. The United Kingdom will end a series of wartime financial and commercial restrictions and practices which have the effect of discriminating against American trade and reducing the flow of world trade.

The loan will be repaid in 50 equal installments, beginning in 1951. The amount to be paid each year for principal and interest of 2 percent is fixed at $120,000,000 on the $3,750,000,000 credit, plus an additional $20,000,000 on the $650,000,000 settlement for lend-lease and surplus property. This makes a total of $140,000,000 a year. The portions of the payment that will be credited to principal and interest, respectively, will vary from year to year, the portion to be credited to principal increasing and that to interest decreasing.

The financial agreement is associated with a far-reaching agreement on commercial policy and a settlement of the outstanding lend-lease and surplus-property problems of the two countries. The commercial policy statement proposes the establishment of an International Trade Organization which would aim to expand world trade by reducing trade barriers, avoiding trade discriminations, and eliminating cartel practices.

2. Who decides whether the credit should be extended?

Congress has to authorize the Government to extend the line of credit to England. Section 1 of the financial agreement states that it will take effect on the date when the United Kingdom is notified by the United States that Congress has made the necessary funds available.

The authorizing legislation will have to be passed by both Houses of Congress.

3. Does England need this credit?

In the next few years England will not have enough income from abroad—foreign exchange from exports and services—to pay for food and materials which the British people must buy abroad, if they are to live and their industries are to operate. The British estimate that, even if they economize strictly on imports and buy nothing which is not essential, they will have to spend abroad in the next several years from $5,000,000,000 to $6,000,000,000 more than they can sell abroad.

The British cannot pay for these essential imports with their own currency, the pound sterling. Foreign countries already have more than $13,000,000,000 of sterling and will be increasingly reluctant to sell their goods and services for this currency. Therefore, the British need a credit in foreign money to continue to buy imports from the United States and other countries. In a few years their export industries will be restored and they will earn enough foreign exchange to pay for their imports and other expenditures abroad.

After careful study, the American representatives concluded that a credit of $3,750,000,000 from the United States, plus her other resources, will enable England to meet the postwar deficit in her international trade. If England's needs turn out to be smaller than estimated, she will not use the entire amount of the line of credit. England will try to keep her obligations to a minimum, in order to keep down the annual payments of principal and interest which she will have to make.

4. How did England get into this position?

England got into these foreign-exchange difficulties because she devoted most of her resources to the war. In the next few years her earnings from overseas business will be lower than before the war because—

(a) British exports are lower. During the war England's export industries were converted to war production or shut down. In 1944 she exported only 30 percent as much goods as in 1938. It will take several years to reconvert these industries and restore their trade.

(b) British foreign investments were sold. During the war England sold over $4,500,000,000 of her foreign investments, and thereby lost forever the income which they formerly yielded. The proceeds were used to buy war goods from us and other countries. In addition, England incurred foreign debts of $13,000,000,000.

(c) England's income from shipping and other services has fallen off. Part of her merchant fleet was sunk in the war. Many of the other services she sells abroad, such as banking and insurance, are linked with the revival of her trade.

While the war has reduced England's earnings of foreign exchange, some of her foreign expenditures will be increased. The destruction from bombing has to be replaced, and this means increased imports of raw materials. Much of the capital equipment in her factories deteriorated during the war, and this, too, must be replaced, in part by means of increased imports.

5. What will England do with the credit?

Section 3 of the financial agreement states:

"The purpose of the line of credit is to facilitate purchases by the United Kingdom of goods and services in the United States, to assist the United Kingdom to meet transitional postwar deficits in its current balance of payments, to help the United Kingdom to maintain adequate reserves of gold and dollars, and to assist the Government of the United Kingdom to assume the obligations of multilateral trade, as defined in this and other agreements."

Since England needs a large quantity of the kind of goods which the United States can best supply, it is probable that a large part of the credit will be used to finance direct exports from the United States to England. The British will also use the credit to pay other countries for imports, when these countries want dollars to buy imports from the United States. Thus India, for example, will be able to use the proceeds of her exports to England to pay for her purchases in the United States.

6. Will England pay off the blocked sterling with the credit?

Section 6 of the financial agreement provides that "any amounts required to discharge obligations of the United Kingdom to third countries will be found from resources other than this line of credit." This means that England will not use the loan to repay any part of the huge sterling balances which other countries acquired during the war. These and other British obligations will have to be settled from such other foreign exchange resources as may be available to England.

7. Will England use the credit to nationalize her industries?

This credit is to help Britain meet her foreign exchange problem which would be precisely the same under a Labor Government or a Conservative Government. The money will be used only to buy goods and services from abroad. It will be used to help eliminate wartime trade and exchange restrictions which are entirely unrelated to the nationalization of British industries.

This loan of dollars is for England's external needs—her business with foreign nations. As a matter of fact, if England wants to acquire a British industry she does not need foreign credit for this. She can pay the owners by giving them British Government bonds, or by paying sterling secured by taxes and loans in England.

8. Why is the loan referred to as a "line of credit"?

The dollars lent to England will be used ultimately to buy goods and services or settle claims in the United States. The British will use dollar funds only as they need them to meet obligations. The United States will therefore provide the money in a series of transfers extending over a period of years, rather than in a lump sum.

Under the terms of the agreement, the line of credit will be available for use by the British until December 31, 1951. The annual amounts withdrawn from 1946 through 1951 will be added together, and that sum will constitute the principal of the loan. If the entire line of credit is used, the principal will be $3,750,000,000. Repayments of principal and interest at 2 percent will begin in 1951, based on the amount outstanding on the last day of that year.

9. Is the rate of interest reasonable?

The rate of interest is 2 percent on the outstanding amount of the loan, and interest payments begin in 1951. The effective rate of interest will be somewhat lower than 2 percent, if either substantial amounts of the credit are used before 1951, as is probable, or the interest payment in any year is waived, as is possible under the agreement.

The rate of interest is low compared with what American banks would charge a foreign government. It is not low compared with what England can undertake to pay in dollars. Even with the rate of interest at 2 percent, the payments of interest and principal will be about $140,000,000 a year for 50 years on the $3,750,000,000 credit and the approximately $650,000,000 which the British will owe for the settlement of lend-lease and surplus property. This is a large sum of dollar exchange which the British will have to earn each year and transfer. Over the 50 years the total interest to be paid will be $2,600,000,000. This is additional to the principal.

The rate of interest should be considered together with the other provisions of the financial agreement, many of which England would not have agreed to in return for a loan whose carrying charges she would consider beyond her capacity. It should also be remembered that before the negotiations there were many persons who felt that only a grant would make it possible for Britain to abandon the wartime financial and commercial restrictions of the sterling area.

10. What will be the burden to the American taxpayer?

The immediate effect of this transaction will be to transfer funds borrowed from the American public to an account from which the Government of the United Kingdom can draw as needed. The credit is an investment, not an expenditure, by the United States Government. There will be a cost to the taxpayer only if—

(a) Some portion of the loan is not repaid; or

(b) If the interest payments prove to be less than the cost of borrowing by the United States Government.

The average interest rate which the United States Treasury pays on the Government debt is slightly lower than the rate of interest which England will pay on the credit. However, because England is not required to begin interest payments until 1951 and because some interest payments could conceivably be waived, it is possible that over the whole life of the loan the United States Treasury will pay to American bondholders somewhat more in interest than it receives from England as interest payments.

The loan will, of course, bring many direct and indirect benefits. It will promote production and trade. The income of the American people will be higher. And with more trade and income, the United States Government will find its revenues increased.

11. Why will interest payments be waived under certain conditions?

The waiver clause recognizes that temporary adverse conditions can make payment of interest difficult. The British point out that American purchases of British goods might in a depression sink so low that over several years it would be impossible for them to earn the dollars necessary for their interest payments.

It has not been customary to make allowance in foreign loans for the possibility of a depression in world trade. The absence of such a provision is one of the reasons why default was often difficult to avoid. Our representatives thought that a provision which permitted interest to be waived in especially bad years was not only fair but also to our benefit. We certainly would prefer to collect the principal rather than force default, which might be the only alternative.

England may request a waiver of interest and the United States will grant it in any year if (a) the British find a waiver is made necessary by the present and prospective conditions of international exchange and the level of British gold and foreign exchange reserves; and (b) the International Monetary Fund certifies that the income from exports of goods produced in England, plus their net income for services rendered to foreigners, such as insurance and shipping receipts and foreign investment, falls below an agreed minimum, stipulated in the financial agreement, necessary to pay for essential imports.

The agreement provides that the amount of interest due will not be waived in any year unless interest payments are also waived on other obligations of England incurred during the period from December 1945 to the end of 1951 and unless payments on the accumulated sterling balances are correspondingly reduced.

It should be noted that the waiver does not apply to repayment of principal. The whole of the principal of the credit must be repaid without qualification.

12. Can England repay this credit?

As world trade recovers after the war, it is expected that England will have an expanding income from exports and from insurance, shipping, and overseas investments. By 1951, when the first annual payment on the loan is due, England's foreign exchange income from these sources should be large enough to enable her to make payments without unduly curtailing essential imports. England will use a portion of her foreign exchange income to meet the annual installments on the credit instead of increasing her overseas purchases or adding to her monetary reserves.

Of course, no one can predict with certainty what will happen in the next 50 years. It is possible that world trade will sometimes break down. England made payments on her World War I debt to us until 1931 when President Hoover proposed that payments be suspended on all war debts for 1 year. Because during the depression our imports were reduced and our foreign investments stopped, England was unable to obtain sufficient dollars to resume payment on her war debt.

A primary purpose of the loan is to prevent a break-down in world trade. This purpose will be furthered by the establishment of the International Monetary Fund and the International Bank, and the proposed International Trade Organization. If we succeed in achieving a high level of world trade, there can be little question as to the ability of England to meet her obligations under this loan.

13. Will we have to increase our imports?

Ultimately, we must import more goods if we intend to export on a large scale and derive the full benefits of increased international trade. During the immediate postwar period, however, we shall probably be a net investor in foreign countries and the amount of this investment will enable us to export without equivalent imports.

At a later stage we shall not only have to import more, but we shall want to import more. Our population will be greater. Our national income will be greater. In addition, we are very likely to need more imports of many raw materials in the future. Some of these raw materials we do not produce at all. Of others, our own resources will be too small for our growing needs.

In the long run, increased imports will have the effect of raising our standard of living so long as we maintain employment at a high level, because increased imports mean more goods available for consumption.

14. Why doesn't England borrow from other countries?

England has borrowed from others. During the war, foreign countries accumulated billions of sterling in exchange for the goods and services they supplied England. Since they could get only limited quantities of goods in return, the effect was that England borrowed from them. These accumulated sterling balances amount to more than $13,000,000,000 and are held mostly for the account of countries in the sterling area.

England is borrowing from others. Sterling is still piling up in London to the account of foreigners, at the rate of roughly $2,000,000,000 a year. Foreign countries are taking this sterling—a loan to England—in exchange for the goods and services they are now supplying.

England will borrow from others. She is now seeking other credits on long term, for example, from Canada.

The United States is not alone in helping England with credits. But it must be remembered that, aside from the United States and Canada, nearly all the capital-lending countries have been physically devastated by war and are themselves in need of aid. Therefore, England must look to the United States for the bulk of the credit she requires.

15. Why couldn't the International Bank extend this loan?

England will handle her own internal reconstruction and development. The line of credit is to meet a large external emergency. We all know that as an island nation, England relies heavily on trade with other countries. The balance between what she ships in and buys and what she ships out and sells was thrown out of kilter by the war. She needs credit in foreign currency to continue buying until she can restore her export trade.

The Bank is not intended to deal with special needs of this sort. The Bank's resources must be used for long-term reconstruction and development purposes. The proposed loan to England is a long-term emergency credit unsuited to the operations and purposes of the bank.

16. Why doesn't England sell her foreign investments?

England has already sold $4,500,000,000 of her foreign investments. She will have to dispose of still more in settling her wartime debts.

A portion of what is left is not salable because of wartime destruction, disruption of trade and other causes. Another large portion would have to be sold mainly in the currencies of the countries in which they are located and therefore would not solve England's need for dollars or currencies convertible into dollars. Finally, any investments would have to be sold gradually to realize anything like their value.

When a country sells any of its foreign investments, it terminates for all time its foreign income from those investments which are sold. To England this would mean a further deterioration in her balance of payments and even greater difficulty in securing essential imports.

17. Why doesn't England cut her foreign expenditures?

At the present time, England is drastically cutting her overseas expenditures. Her war expenditures in foreign countries are of course being greatly reduced. Her dollar expenditures, especially, have been cut and orders have been given to all sterling area countries to purchase for dollars only those essential items which cannot be otherwise obtained.

England's urgent need for $5,000,000,000 to $6,000,000,000 is not based on large foreign expenditures. On the contrary, even with the credits from us and other countries, England will have to maintain her imports at an austere level. It will be hard to feed and clothe her people and rebuild her homes and factories on such a level of imports. England's standard of living will be little different from wartime.

18. What would England have to do if we do not lend the money?

If the credit from the United States is not extended, England would be forced to continue her wartime currency and trade restrictions and drastically curtail all expenditures in the United States. These restrictions would have to be applied not only by England but by nearly all of the British Empire. The dollars earned by these countries would continue to be turned over to the British and allocations would be made by the British permitting the expenditure of these dollars only for the most essential goods that could not be obtained within the British trading area.

Judging by the recent past, England would also extend her system of bilateral agreements to still other countries. These agreements, like the present sterling area arrangements, would discriminate against and perhaps exclude American trade.

Without the loan, these restrictions and arrangements would be continued because England would be compelled—

(a) To cut her dollar deficit by diverting purchases, even at higher prices, to other countries.

(b) To obtain credits from other countries by importing from them and by paying in sterling.

The continuation of these wartime devices would in effect establish a sterling bloc based on the need to reduce purchases from the dollar bloc. The attempt to exclude the United States from these markets would enhance the possibility of economic conflict.

19. Why shouldn't the credit be financed by allowing citizens to invest in British obligations directly?

The people who make this proposal overlook the fact that regardless of the terms of the loan, no foreign bond issue of this size could be floated in our markets. Furthermore this is not a practical proposal because the financial agreement involves many considerations other than the extension of a credit.

As explained elsewhere in this document, the real question is whether the long-range

interest of the United States requires that England be offered this financial assistance at this time. The credit is designed to make it possible for England to remove discriminatory restrictions on international trade and to associate herself fully with the United States in a program designed to encourage the world-wide expansion of trade.

In other words, the credit to England must be viewed as an integral part of the financial agreement with all of its benefits to American business. It cannot be judged as an ordinary commercial credit.

20. What is the sterling area?

Just as the "dollar area" is understood to include a number of countries that have close trade and financial ties with the United States, so the sterling area before the war were the countries closely linked in trade and finance with England. These countries held the larger portion of their monetary reserves in London, and carried out most of their international transactions in sterling, which was convertible into practically any currency in the world.

When the war came England restricted the convertibility of sterling into dollars and limited the use of sterling in purchases from the dollar area. Other countries in the sterling area imposed similar controls. While the currencies of the sterling area countries could be exchanged for each other, none of them could be converted into dollars except to the extent permitted by the monetary authorities in London.

As a war measure, to conserve the exchange resources of England and the sterling area countries, these controls were essential. In peacetime, they can only bring about a serious reduction in trade and the diversion of trade into uneconomic channels. The prewar sterling area, like the dollar area, was a convenience to trade. The wartime restrictions are a menace to trade.

At the present time the sterling area includes all of the countries and territories comprising the British Empire (except Canada and Newfoundland), Egypt, Anglo-Egyptian Sudan, Iraq, Iceland, and the Faroe Island. One purpose of the financial agreement is to restore the convertibility of sterling, particularly with respect to current transactions, such as imports and exports. Thus, the sterling area will in considerable measure return to its prewar form.

21. What is the dollar pool?

The so-called sterling area dollar pool is an arrangement by which the dollars earned by countries of the sterling area are pooled and allocated by London in accordance with essential needs.

It works like this. When an Indian exporter sells goods in the United States, he turns the dollars over to the Reserve Bank of India for rupees. These dollars are then sold to England for sterling. And this happens in all of the sterling-area countries that have net dollar receipts. In this way, all the dollar holdings of the sterling area are pooled. Then, when a country in the sterling area needs dollars, it applies to London. To conserve dollars, funds are not allocated to buy goods in the United States that can be secured in any sterling-area country. The American producers of such goods are virtually shut out of the sterling-area markets.

If the dollar pool is continued into the postwar period, the difficulty of reestablishing multilateral trade would be considerably increased. Moreover, its operation in peacetime would inevitably involve discrimination against American exporters. Trade among the sterling-area countries would be developed in preference to trade with the United States or other non-sterling-area countries.

Under the terms of the agreement, the dollar pool will be abolished within a year, unless this Government agrees that an extension is necessary.

22. Will sterling-area countries now be able to purchase more freely from the United States?

As a result of the credit made available to England, most sterling-area countries will be in a position to make larger purchases from the United States. Within a year, unless the United States agrees to a later date, the current receipts of dollars and sterling of each sterling-area country will be available to make purchases anywhere. Thus, India's sterling income from exports to England could be converted into dollars to make purchases in the United States. Under present restrictions such income can only be used for purchases in the sterling area.

The proposed United States loan will substantially increase the total amount of dollars available to England and all the sterling-area countries with which to buy our exports.

23. What controls will England place on American sterling balances?

In section 8 of the financial agreement, the United States obtains a written commitment that American exporters selling goods to the United Kingdom will be paid in dollars or if paid in sterling, they will be allowed to convert the sterling into dollars.

Until 1951, the imposition of exchange controls by the United Kingdom will be governed by this commitment and specific provisions of the International Fund Agreement. After 1951, all exchange controls will be subject to the International Monetary Fund.

24. What will England do about other bilateral monetary agreements?

These agreements, which have been made with many European and some South American countries, will have to be substantially revised within a year after the financial agreement comes into effect.

The British bilateral agreements provide that the sterling received for exports to England can be used only for purchases or payments in the sterling area.

Under section 8 of the financial agreement, England states that within a year—unless a later date is agreed with us—she will impose no restrictions on payments and transfers for current transactions. British payments for Danish exports, for example, which are now used only inside the sterling area, will soon be convertible into other currencies, including dollars, and be available for use in any country. The existing bilateral agreements will have to be revised to give effect to this principle.

When that is done, a large amount of potential discrimination against American trade will have been removed.

This commitment lasts until 1951, by which time all the provisions of the International Monetary Fund will apply.

25. Will England discriminate against us by means of import restrictions?

In section 9 of the financial agreement, each government undertakes not to discriminate against the other through import quotas, or like devices. Since England's imports are mainly controlled through import permits, this is an important protection to American exporters. It will last until 1951, when it is expected that the rules of the proposed International Trade Organization will govern.

In practice, this should mean that quotas will not be so administered as to refuse permits for American goods while granting permits for similar goods from other countries.

26. What will be the nature of the settlement of sterling balances accumulated during the war?

During the war many countries accumulated sterling balances. These sterling liabilities, which amount now to more than $13,000,000,000, arise as a result of England's large war expenditures overseas. Because of exchange restrictions the balances could not be used for purchases outside the sterling area. Because of wartime shortages and commodity and shipping controls, they could not be used to make purchases in England. Therefore, the sterling balances accumulated.

It is not possible for England to produce in the near future a sufficient volume of exports to pay off these balances. Furthermore, her holdings of foreign exchange are too small to permit the sterling to be exchanged for other currencies which the owners could spend elsewhere.

In section 10 of the financial agreement, England states her intention to make agreements with each of the countries concerned for an early settlement of these balances. With respect to countries belonging to the sterling area, it is expected that the accumulated balances will be divided into three categories. One will consist of a portion to be made available immediately for current transactions, including purchases in the United States. Another will be gradually released for current transactions over a period of years beginning in 1951. This, too, can be used for purchases in any country, including the United States. The remainder is to be adjusted as part of the common costs of winning the war against the Axis powers.

It is likely that many countries outside the sterling area will also agree to gradual liquidation of their sterling balances over a period of years.

27. Does the loan give England an advantage over the United States in world markets?

On the contrary, the proposed loan will put American exporters on an equal competitive basis with the British in selling to the countries of the sterling area. Any country that has funds, say sterling, that can be used to buy in England will be able to use the funds to buy in the United States if their people prefer to buy here. No country will be forced to discriminate in its trade as between the United States and the sterling area.

When the accumulated sterling balances are released, it is agreed by England that the money may be used for current payments anywhere. The money can be used to purchase American, British, or any other goods.

28. Is the British credit a precedent for other loans?

It is not. No other country has the same crucial position in world trade as England. The wide use of the pound sterling in world trade, the large proportion of the world's trade which is carried on by the countries of the British Empire, the extreme dependence of England upon imports—these and other factors mean that the financial and commercial practices of Britain are of the utmost significance in determining what kind of world economy we shall have.

We expect that, as a general rule, the needs of foreign countries for help will be met through UNRRA, the International Fund, the International Bank, and the Export-Import Bank. If any special case could not be handled through these established organizations, the question of a loan would be put to Congress for its authorization.

29. How is the loan related to the objectives of the United Nations Organization?

The proposed credit to England is vital to the objectives of the United Nations Organization. We have learned from long experience that world peace depends on world prosperity. It is not enough to deal with the political problems that threaten world security. We must also deal with the economic problems that can lead to conflict between nations. The charter of United Nations Organization recognizes this fundamental interrelationship between peace and prosperity by establishing an Economic and Social Council to encourage and facilitate international economic cooperation.

By promoting a high level of world trade on a multilateral basis, the financial agreement will make an important contribution to world prosperity. It will help assure closer friendship and greater commerce between England and the United States by eliminating the harmful currency and trade practices. It will prevent the danger of economic warfare. In addition, the agreement provides the basis for a broader understanding on international trade practices to be drawn up at the forthcoming conference on trade and employment. The elimination of currency and trade restrictions and discrimination and other forms of economic warfare is essential to the building of a peaceful and prosperous world. That is a major purpose of the financial agreement.

30. What does the United States gain from the financial agreement?

Broadly speaking, each provision of the financial agreement benefits the United States because each is part of the whole structure of cooperation between the two countries in establishing international commercial and financial policies designed to promote the balanced growth of international trade.

Throughout these questions and answers the specific benefits of the financial agreement to the United States have been discussed in some detail. The following list summarizes briefly the principal benefits which the United States will receive, in addition to payment of principal and interest on the credit:

(a) The credit will enable England to buy goods and services in the United States, and these transactions will increase the employment and income of the American people.

(b) Payments by England to other countries will increase the ability of those countries to buy goods and services in the United States.

(c) The sterling area dollar pool will be dissolved, with the result that sterling area countries which acquire dollars will be able to use those dollars directly to buy goods and services in the United States.

(d) Sterling paid for exports or other current business will be freely convertible. Any country can then use such sterling to buy goods and services from the United States or from any other country in the world.

(e) Exchange controls will not be used to prevent residents of the United States from converting into dollars the sterling they get from exports or other current business with England.

(f) Britain's import controls will be administered in such a manner that no discrimination against American products will result.

(g) England will release a portion of the blocked sterling balances held by British Empire and other countries, and the sums thus released will be freely convertible to make purchases in the United States or any other country of the world.

(h) England will be able to assume the full obligations of membership in the International Monetary Fund and the International Trade Organization and can afford to abandon those restrictions and practices which would otherwise have been retained during the transition period.

(i) England will settle the blocked sterling balances with her own resources and this large problem which hinders the restoration of world trade will be solved.

(j) The elimination of exchange and trade restrictions and the solution of these problems will increase American prosperity by increasing the volume of world trade.

(k) The foregoing specific measures will eliminate many causes of economic friction which might threaten the good relations between the two countries.

(l) Finally, all danger of a division of the world into conflicting British and American economic blocs will be averted.

Reply of Robert R. Wason to Criticism by Chester Bowles of Price-Control Attitude of the National Association of Manufacturers

---

EXTENSION OF REMARKS
OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, March 1 (legislative day of Friday, January 18), 1946

Mr. BRIDGES. Mr. President, in recent weeks much publicity has been given to criticism made by Mr. Chester Bowles of the attitude of the National Association of Manufacturers on price control. Mr. Robert R. Wason, president of the National Association of Manufacturers, has answered Mr. Bowles in a radio address on February 26. In the interest of fairness I ask unanimous consent that the address delivered by Mr. Wason be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Bowles contended last Tuesday that the only way to prevent inflation is by continuing price controls.

The National Association of Manufacturers contends that the only way to prevent inflation is to get rid of price controls.

It is obvious Mr. Bowles and the National Association of Manufacturers have the same objective. Both want to prevent inflation.

The difference between Mr. Bowles and the NAM is solely on the way to accomplish this objective.

Mr. Bowles admits that his plans to hold prices haven't worked. He confesses that OPA has not been able to hold the price line he set some months ago.

Of course, he explains that is a mere bulge in the price line when he now puts into effect the new price rises on clothing, meat, and the other necessities of life.

The important fact is that the prices cause a rise in your costs of living, whatever Mr. Bowles calls it. Actually, it is a plain breakthrough to a higher cost of living.

Let's look at the actual facts in this problem so vital to every housewife.

Under what Mr. Bowles calls his new all-out attack, which is also his confession that the old attack has failed, general wage increases in the neighborhood of 50 percent above the prewar level are possible.

Under his plan any compensating increases in prices will be held to the below-normal level of profits during 1936–39. That was a period, as Mr. Bowles admitted on an earlier occasion, when six out of ten of the Nation's companies were operating at a loss.

Now, Mr. Bowles expects production to climb on red ink and continued losses.

He is denying human nature—the fundamental instinct of self-preservation. It can't be done. It is the same instinct that prompts you to change jobs when you find one that pays more money for the same kind of work.

He is forgetting that, in America, every investor is a voluntary investor. The man who bought automotive shares or invested in steel or oil, could have bought an automobile, or a radio, or a vacation, instead.

Finally, he is defeating the objective of jobs for all, which the administration shares with industry.

He apparently does not realize that the greatest contribution industry can make to the Nation is its ability to keep turning out goods. A busted business provides neither goods nor jobs.

Mr. Bowles also said, you will remember, "There is no question that the stoppage resulting from labor disputes has seriously delayed production at critical points."

Certainly strikes are holding up production. But Mr. Bowles failed to add that the length and number of these strikes are due to the fact that the President of the United States urged management to raise wages 18½ cents while OPA has refused to allow prices that make it possible to meet the President's request.

If the industrial machine is producing, the housewife, vainly searching the stores for food and textiles and household necessities, can tell you that they are either not manufacturing what she wants or else much of their production is finding its way into black markets.

Black markets and bootlegging flourish in many every-day products that are prevented from being manufactured in quantities.

Many manufacturers, in accordance with OPA regulations, make higher-priced articles to stay in business. This deprives the housewife of low-price goods and the manufacturer of volume of sales opportunities. These restrictions cut down production of the articles most people want and need.

One large maker of men's work socks tried for 9 months to get a higher price ceiling from OPA, without results. Now, 80 percent of his machinery is idle.

Have you tried to buy such a commonplace essential as clothespins? If you are lucky enough to find some, they were probably not produced in the United States. Do you know the reason? Many clothespins used to come from Maine, but the Maine company can't make them under OPA ceilings. One chain store gets them now from Denmark and Mexico.

A friend down in New Orleans built up a national business in strawberry preserves. He hasn't been able to produce preserves for over a year now. Why? The sugar shortage?

No, the ceiling prices on strawberries in the patch are higher than he can charge for his preserves in the jar, under OPA.

You have tried to buy shirts. This is an OPA classic of production frustration. You can't buy shirts for love or money.

Can this be one of the causes? The OPA ceiling on one quality of cloth used in low-priced white shirts is 54 cents a yard. But running this cloth through a press to give it colors, the ceiling price under permitted OPA regulations becomes $1.70 a yard.

So your stores may have high-priced fancy shirts. They don't have low-priced white shirts.

Last week Mr. Bowles mentioned the fact that the meat you serve at supper actually costs you less. There are thousands of us that would like the address of Mr. Bowles' butcher.

Mr. Bowles did not mention butter among his OPA blessings. Have you had any lately? And what did you pay for the quarter-pound that came out from under the counter?

Milk production is reaching an all-time high. But the war isn't over as yet when it comes to butter.

According to the American Dairy Association, the trouble is that the OPA ceiling on butter is 46 cents a pound "although the butter makers must pay 60 to 72 cents for the cream they need to produce it. Under this policy, the more butter they make the more money they lose." You don't have butter for your children's bread but you have ice cream.

Both production and employment must be retarded while OPA fiddles with prices.

Prices in a free market are set by the consumer, not by the producer. Any producer can price himself right out of the market if he is short-sighted enough to ignore competition. You simply won't buy if you think that prices are too high.

NAM is contending for the removal of price ceilings so that the industrial machinery of the Nation may turn out the goods that you want, rapidly and in unprecedented volume, and still stay in business.

Yet the American housewife is one of the shrewdest purchasing agents on earth.

Every manufacturer is under constant pressure to give the housewife greater values to induce her purchases of his goods with his competitors. Only by giving constantly lower prices can he obtain her approval to remain in business.

Historically we have never gotten runaway prices on a rising production. Such a runaway of prices cannot be expected unless the Government runs the presses that print the money.

Runaway prices always result from scarcities. It is the scarcities created by OPA to which NAM objects.

Prices should be returned to American housewives.

The ceilings the housewife sets, everyone in industry and agriculture must set.

The price discretion of the housewife is far more to be trusted than the demagogs and crystal gazers, the slide-rule experts and bureaucrats of Washington.

Stripped of all economic prattle, what we are contending for, therefore, is that you, and not the OPA should be putting the ceiling prices on the things you want.

That's the way it has always been in this country, and that's the way we want it to be now.

Feed Famine Will Bring Ruin to Our Farmers

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 1, 1946

Mr. LYNDON B. JOHNSON. Mr. Speaker, my section of Texas is an area which largely depends on the success of its farmers. They are serious, realistic, patriotic people who realize that all our wealth comes from the soil.

I try to keep in pretty close touch with my people and depend on them for their suggestions and criticisms. Every day I find suggestions on tablet paper, written in pencil, which the Congress would do well to follow.

When I first came to Congress I received about 25 or 30 letters a day. During the years I have been here I have constantly urged my people to assist me by giving me their suggestions. My incoming mail has grown until last week I averaged around 150 letters a day. Although it is a definite strain on my own capacity as well as the limited staff allowed me by law, I read and carefully study these letters and endeavor to fulfill the requests of every kind and type possible. I feel that receiving 1,000 letters a week from a district of approximately 300,000 people is really a democracy at work, and I sincerely hope that everyone of my people who reads the three statements which have recently been issued will write me their suggestions about things that should be done to better our area.

Under permission previously obtained I include the comments referred to:

FEED FAMINE WILL BRING RUIN TO OUR FARMERS

Congressman LYNDON B. JOHNSON today urged Secretary of Agriculture Clinton P. Anderson to take action immediately under War Foods Order 9–19 by delivering substantial quantities of protein feed to the Texas area in order to alleviate the feed famine which is bringing ruin to farmers by the score.

The Congressman said, "This is not merely a problem that needs adjustment and cooperation. It is an immediate crisis that requires emergency measures or a substantial group of our agricultural community will become impoverished as a reward for producing food for a war-ravaged world."

Congressman JOHNSON added, "It simply is not an answer to the present plight of Texas farmers and producers to tell them that the Department of Agriculture statistics show the State receives 93 percent as much feed as was used there during 1945. Frankly, they don't believe it. Millers and feed stores are at the point of closing; poultrymen are desperate and have little hope of salvaging their investment or getting their chickens and turkeys to market; hatcheries are receiving cancellations on egg contracts; cattlemen are constantly in fear of being unable to procure feed; and veterans, who have gone in debt under the GI bill of rights to purchase their small ranches, are being wiped out."

OUR FARMERS NEED HIGHLINES, HIGHWAYS, HIGH SOIL PRODUCTIVITY, STABILIZED FARM PRICES

"Farmers are just as poor as the land they live on," asserted Congressman LYNDON B. JOHNSON in a statement to the House Rules Committee Friday as he urged passage of the Poage bill authorizing use of surplus Government equipment in soil-conservation work by conservation districts and county commissioners courts. This legislation would enable these agencies to obtain surplus material, equipment, and supplies to carry on conservation practices. Graders, tractors, trucks, maintainers, bulldozers, and other soil-moving equipment would be made available immediately.

Stating that the soil-conservation program, which has been necessarily curtailed drastically during the war years, must move full-steam ahead if we are to maintain and rebuild our soil, JOHNSON went on to say: "Good soil practices have materially increased the productivity of farm lands in central Texas. We have prevented waste, increased the yield, and consequently increased the land values, but just a start has been made. My farm program for the tenth district is simple but clear—highlines and highways to our farms, high soil productivity, and high but stabilized farm prices. We cannot achieve our conservation aims unless machinery for carrying on the work is made available. The Army and Navy have this equipment stored in depots and warehouses here at home and all over the world. Much of it is out in the open, subject to rapid deterioration.

"Why waste them longer? We can and should stop the waste of material and in doing so stop the wasting of our soil. Give our local officials and our progressive farmers a chance and they will make the most of it."

LIGHT OUR FARMS NOW

The House of Representatives on Thursday, February 14, passed the Urgent Deficiency Appropriation Act of 1946. Included in funds authorized by the bill is an appropriation of an additional $100,000,000 for rural electrification construction until July 1, 1946.

Congressman LYNDON B. JOHNSON spoke before the Congress in behalf of the REA appropriation, calling attention to the successful and model rural electrification program in the Tenth Congressional District. Congressman JOHNSON pointed out that more than 10,000 farm homes in his congressional district are already served by rural electric cooperatives and more than 10,000 other farmers in the area are without electricity because the war cut off the supply of materials.

JOHNSON asserted that although these people had paid membership fees in REA cooperatives, lack of materials and appropriated funds would make it impossible to construct new power lines to their homes unless immediate action was taken.

"Today they—the Pedernales and Lower Colorado River Electric Cooperatives—are applying for a loan from the REA, but they cannot get one dollar. There will not be 1 mile built in that large fertile area of central Texas, unless this amendment is adopted," the Texas Congressman said.

The REA amendment was approved and the bill now goes to the Senate for consideration.

Texas Congressmen who spoke and were actively urging the additional funds for farm electricity included W. R. POAGE, of Waco; LUTHER A. JOHNSON, of Corsicana; GEORGE MAHON, of Colorado; J. M. COMBS, of Beaumont; and JOHN C. LYLE, of Corpus Christi.

Address of Hon. Kenneth C. Royall, Under Secretary of War

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 1, 1946

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable Kenneth C. Royall, Under Secretary of War, before the chamber of commerce, Wilson, N. C., at 8:30 p. m., Friday, February 15, 1946:

It is fine to be back here in eastern North Carolina. The longer I have been away and the more I have seen of other places the more keenly I realize that to a person born and bred in this section there is no other satisfactory place to live. I look forward to the time—which I hope will not be too distant—when I can come back home and stay down here the rest of my life.

But it is not merely the heart warming of homecoming that stirs me about our native State. I am moved—and during the entire war have been moved—by the inherent patriotism of our people and particularly by the spirit and valor of the young men which we sent to our armed forces. I have chosen tonight to talk about these young men as well as the older men who served with them.

I have two simple thoughts which will run through my talk and which, I hope, will merge largely into one single idea. First, the American soldier of World War II, particularly the enlisted man, was the best treated soldier that America or any other nation has ever had and, second, this same soldier produced the greatest fighting force that the world has ever known.

A little more than 6 months ago the fighting phase of the greatest war in the annals of the human race came to a close with the unconditional surrender of Japan. It is still too soon for us to grasp the significance of this war to the future of mankind. It is too soon even to grasp the magnitude of the war itself. Practically everyone of the 2,000,000,000 human beings that inhabit the earth are directly affected by the conflict. And the course of the lives of billions yet unborn will be influenced by the results of this struggle.

During the years that we were participants, more Americans were under arms than in all the wars of our previous history. During the course of the war approximately 15,500,000 men served in the Army and Navy and other armed services. Of this number 10,600,000 served in the Army. Seven million three hundred thousand of these were on duty overseas and a very large percent of them fought in one or more of the major campaigns. They—our American soldiers—fought on every continent and on every sea. They fought in every clime—in the jungles and in the Arctic. Our armed defenders flew in the rarefied substratosphere and navigated the ocean depths. And we won a great victory.

But the magnificence of that victory should not blind us to the enormity of the human cost. A million men were casualties. Our dead lie in scores of cemeteries from Greenland to Australia—from Holland to India. More than one-fourth of a million men were killed in action or died of wounds. That is four times as many as in all of America's wars against a foreign enemy.

It is a source of pride to all of us that in our Army 260,000 North Carolinians served. It is a source of both pride and sadness to know that many North Carolina soldiers died in the service of their country. Hundreds were decorated for bravery and for valiant service.

This army of more than 10,000,000 represented every walk of life. The proud and the humble, the rich and the poor, the farmer, the professional man, the laborer, the merchant, the manufacturer, served together—often in the same squad—and shared alike the pride and hardship of service.

Some served as officers and some served as enlisted men. And our officers were drawn from the same classes as the enlisted men. I think it would be interesting to see where we get our officers.

There were approximately 900,000 officers who served in the Army from the beginning of the war to the end of hostilities. This included 872,000 male officers. In this number were 72,000 chaplains, doctors, dentists, pharmacists, and veterinarians appointed directly from civil life and approximately 24,000 other officers, largely specialists, such as lawyers and scientists also appointed directly from civil life. There were 227,000 officers from the Reserve Corps and the National Guard. Many of these had previously served as enlisted men. There were 18,000 Regular Army officers, of which half were graduates of West Point.

All of the other officers were enlisted men of this war who had completed the course in officer candidate schools or in air training schools or had won battlefield promotions. Selections for officer candidate schools were made on the basis of demonstrated merit from among those who applied for admission. Altogether 531,000 of our officers were commissioned after serving as enlisted men in this war. If we exclude the chaplains, doctors, and other specialists, this is 70 percent of all our officers. More privates became officers of our Army in this war than in all of our previous history. Many other officers served as enlisted men in the last war or at some other time. I am certain it is no exaggeration to say that, exclusive of medical officers and other professional specialists, more than four out of every five officers had served as enlisted men in the Army. There was more opportunity for an enlisted man to become an officer than in any of our previous wars.

There has been some comment on the number of generals in the Army. Fifteen hundred generals seems a large figure but all the figures in this war were large. As a matter of fact there were fewer generals proportionately in this war than in any previous war ever fought by the United States.

In this connection it may be interesting to mention some of our general officers who served as enlisted men in previous wars: General Hodges, commander of our First Army, and General Krueger, commander of our Sixth Army, both rose from privates in the Regular Army. General Kenny, head of General MacArthur's Air Forces, is a former enlisted man, and General Doolittle enlisted as a flying cadet in the First World War. General McLain rose from private in the Oklahoma National Guard to be a corps commander with the rank of lieutenant general, and General Lear, former head of our Ground Forces, was an enlisted man of the Colorado National Guard. And these are only a few of a long list.

Certainly in respect to the selection of its officers the American Army is truly democratic. Just as in our political life and in our business life the humblest citizen has an opportunity to reach the top depending upon his demonstrated ability and qualities of leadership, so it is with the Army.

Of course, there have been mistakes in the selection of officers just as there are mistakes in the selection of officeholders in our civil government and just as there are mistakes in the selection of foremen and managers of businesses. As long as any system is administered by human beings there will be mistakes. But on balance the officers of the United States Army demonstrated that their selection was good. These officers had a magnificent record of achievement. They conceived, planned, executed, and led a series of military campaigns with successes never surpassed in the history of warfare. They could not have done this without the skill and bravery of all ranks. But skill and bravery can win success in war only under leadership.

We hear today criticism of what is called the Army caste system; that is, the distinction between officers and enlisted men and the additional privileges which officers enjoy. We hear this after every war and we hear it to a lesser extent during a war. May we analyze this a little?

America is an independent Nation. American boys grow up with the spirit of independence. They do not like to work under commands. They do not like artificial distinctions of any character. Our Army is made up almost entirely of such young men. That is one side of the picture and an important side. But there is another side. No fighting organization can be successful unless it is trained and disciplined. Our own history and that of other countries is replete with examples of large, well-equipped forces but with little or no training or discipline, succumbing to attacks of units numerically much smaller but thoroughly trained and thoroughly under the control of officers. I read in the press the other day a statement by a retired chief of naval operations and a prominent diplomat giving an outstanding example during the present war of a large army with little or no distinction between officers and enlisted men which was defeated by a much smaller, disciplined army. His story told how this larger army, as a result of that experience, strengthened the authority and position of its officers and thereby built one of the great fighting forces of the war.

Officers are necessary in a military organization and these officers must have authority. A machine shop must have a foreman. A store must have a manager. A large farm must have someone in control of its operations. A ship must have a master. A football team must have a coach and a captain. And leadership and the right to command and control are all the more necessary when men are expected to face new tasks and strange tasks and dangerous tasks. Without the leadership and the right to command, an army becomes an ineffective mob. We must have officers to guide our armies when our country is threatened and our citizens imperiled.

If we ask officers to take the responsibility of leadership in time of national danger, such officers must have some advantages. Without them there would be little incentive for a man to be an officer and we could not expect to have competent leadership. During this war there was developed a considerable feeling on the part of enlisted men that they did not want to become officers. I personally know of many who felt that way. This is partially due to the added financial and other benefits which have been given to enlisted men during this war and in part to the unwillingness to assume the additional responsibility that a commission would entail. When some of the best of our enlisted men have no desire to become officers, we are deprived of leadership which we need, and if this feeling should spread—if there should be a lessened inducement and incentive to become an officer—then surely our military efficiency would be decreased.

There would be another result. The enlisted man is entitled to the best quality of leadership he can get. With a narrower field for the selection of competent officers he would be deprived of this leadership. No one would suffer from the lack of competent officers as much as the enlisted man. There is not a person present who would want his son or brother to go into battle except under the leadership of the best officers that could be found.

There, of course, have been shortcomings and failure on the part of some officers. There have been officers who have abused their authority and privileges. Unfortunately, this is inevitable. It would be impossible to select with speed nearly 1,000,000 officers and not have this occur. These cases are the ones you hear about but they are relatively few and the fact that they are few is a tribute to the character and leadership of young Americans who formed the bulk of our officer personnel.

So here are two conflicting considerations on the question of the so-called caste system in the Army. First, the independence and proper pride of the enlisted man; and, second, the necessity for discipline and for officers to maintain this discipline. These two considerations must be reconciled as far as possible.

The leadership of the Army has tried to reconcile them by permitting as much democracy and equality in the relations of officers and enlisted men as is consistent with efficiency and safety. It is a difficult line to draw and we have witnessed in other nations at various times errors in both directions.

No decision made on this question will be free from criticism—perhaps, from both sides. There have been charges of injustice to enlisted men and, because there are many enlisted men, we hear much of these. There have also been charges of relative injustice to officers. There are fewer officers and we hear less of these charges.

There may well be—and probably is—merit in both contentions. Neither Congress nor the Army nor any group of men can be wise enough to devise for an organization as large as the Army a system that is perfect. We can only strive to make it as nearly perfect as possible.

I am convinced—and I believe practically every officer who served in both wars is convinced—that there is a much more sympathetic association of officers and enlisted men in World War II than there was in World War I. I can't imagine, for example, in World War I the congenial relationship with the Supreme Commander that manifested itself whenever General Eisenhower visited a group of GI's. If you had seen his willingness to give them autographs, to talk with them, you would have gotten a fine view of the attitude of our military leaders—our brass, if you wish—during this war.

It has become fashionable in some quarters to sneer at Army brass hats. I never know exactly what is meant by a "brass hat." The most satisfactory definition seems to be that a brass hat is an officer at least one grade higher than you, whom you don't like or who doesn't like you. Whatever may be

meant by this or similar phrases it seems to me that almost every soldier in this war—be he a private or a brass hat—did a magnificent job and clearly earned the everlasting gratitude of his country.

The value of our officers and men has been recognized—by all of America—by the Congress who passed our laws—and by the Army who administered those laws.

These officers and men were fed better, they were clothed better, and they were cared for better than any army of all time. The food of our soldiers was nourishing and varied and appetizing—much better than the repeated "goldfish" and "slum" and "corn Willie" of World War I. Of course, the soldiers—men and officers—grumbled about the food. That is a constitutional right and applies not only to the Army but to colleges and to restaurants, to the Pentagon Building in Washington and even at home.

Clothing and beds were warm and in ample quantities. Of course, there were times, for example at Ardennes, when our soldiers were cold. There will always be times in any war when there cannot be sufficient covering and clothing at a particular spot at a particular time. But whenever the military situation permitted it, this condition was remedied.

No army in history received such excellent medical care as was given to our wartime force. Epidemics have been really nonexistent. Health was maintained at an exceptionally high standard. Battlefield casualties received immediate care, and the system of evacuation by air and motor to rear hospitals was truly remarkable. The percentage of complete recovery of wounded soldiers is outstandingly high. And the Army has assisted and is assisting the competent Veterans' Administration in caring for the disabled and in providing the best possible artificial limbs and other prosthetic devices for the living casualties of the war.

And we paid our soldiers and their families a record amount. In fact, enlisted men were so liberally paid that numbers of them would not even seek to become officers. There is no income tax to pay on allowance for dependents and none to pay on the food or clothing furnished an enlisted man. I could give you cases where enlisted men with a large number of dependents and with a fairly large outside income received larger net amounts for their services in the Army than did general officers with a like amount of outside income. But the comparison of a general officer and an enlisted man is not typical. A better and more common example is that of a master sergeant with long service and with a wife and two children who is not quartered or rationed at an Army post. His monthly pay and family allowances amounts to $390 plus his clothing, as compared with $392 for a captain with similar service and also having a wife and two children. And this example does not give effect to opportunities for an enlisted man to get more value for his money than an officer, and does not take into account the public expectation that an officer should have a higher scale of living.

Recreation facilities and entertainment were provided for officers and enlisted men during this war on a scale never before attempted—and they were furnished almost up to the front line. And there were rest areas with excellent facilities. Here again the enlisted man had a financial advantage, for his were free and officers paid at least a part of the cost. In southern France practically all the hotels and clubs in the great resort city of Nice on the Riviera were taken over by the Army and used solely for the recreation of enlisted men—all without cost to them. Of course, there was complaint that the soldiers were not permitted to gamble at the Monte Carlo casino, but knowing soldiers as I do I am confident that they probably found a good and well-known substitute.

And our soldiers have had the most rapid rate of orderly demobilization that has ever been experienced by any Nation. By June 30—a little more than 1 year after VE-day and about 10 months after VJ-day—we will have discharged from the Army about 7,750,000 men, leaving in only about 500,000 who were serving on VE-day—and practically none who had seen battle and none at all, other than volunteers, who have served more than 2 years. Here again the enlisted men have been preferred, and officers held a longer period of time.

All this and more you did for your soldiers. The credit belongs to you and all the American people and to their Representatives in Congress. The Army was only the implement of accomplishment.

None of us begrudge what we did for our soldiers. We could have liked to have done more and, particularly in the case of our junior officers, I am convinced that we should have done more. When we contemplate what our men did and what our officers did, we are entitled to feel that every cent we spent and every service we rendered to our soldiers was repaid by them many times. We had a magnificent Army—in my judgment the greatest that ever fought under any flag. Its courage, its skill, and its leadership brought us to victory, and saved our Nation and the present peace of the world.

It has been my privilege recently to attend the presentation of several Congressional Medals of Honor. It is an inspiring experience and one that will keep alive your faith in our country and its citizens. About 3 weeks ago such a medal was awarded to Pfc John R. McKinney, of Woodcliff, Ga., and I would like to read you a part of that citation:

"Just before daybreak approximately 100 Japanese stealthily attacked a light machine-gun position. Having completed a long tour of duty at this gun Private McKinney was resting a few paces away when an enemy soldier dealt him a glancing blow on the head with a saber.

"Although dazed by the stroke, he seized his rifle, bludgeoned his attacker and then shot another assailant who was charging him. Alone, Private McKinney was confronted by 10 infantrymen who had captured the machine gun.

"Leaping into the emplacement, he shot seven of them at point-blank range and killed three more with his rifle butt.

"He warily changed position, secured more ammunition, and reloading repeatedly, cut down waves of the fanatical enemy with devastating fire or clubbed them to death in hand-to-hand combat. When assistance arrived, he had thwarted the assault and was in complete control of the area. Thirty-eight dead Japanese around the machine gun and two more at the side of a mortar 45 yards distant was the amazing toll he had exacted single-handedly."

This wonderful accomplishment by a small-town southern boy is, of course, unusual and outstanding, but the spirit and the courage behind it was typical of thousands and hundreds of thousands of our soldiers. And it was the spirit of officers as well as of enlisted men.

In fact, in World War II the casualties among the officers were proportionately heavier than the casualties among the enlisted men. This could have come from only one cause—the officers shared the dangers with their men and in many instances led them to battle instead of following them into battle.

In the great victory of World War II, North Carolina men and North Carolina officers played an outstanding part. Among the divisions were two whose names mean much to us, the Thirtieth and the Eighty-first Divisions—the Old Hickory and the Wildcat. While they did not contain the same proportion of North Carolina boys that they contained in World War I, they symbolize to many of us, particularly the veterans of 1917–18, our State's contribution to the fighting forces. The Thirtieth fought gloriously in Normandy, in northern France, at Ardennes, and in the Rhineland. And the Wildcat—with which I served during the entire World War I—made a great combat record, this time in the western Pacific, the mandated islands, and the southern Philippines.

I saw none of the fighting in this war except for a short time at the front in Italy; but from my brief glimpse there, and more largely from the first-hand stories of men and officers who were engaged in combat, I know that on the fighting front the enlisted man and the officer worked together as a coordinated team and developed a spirit of mutual confidence and mutual respect and friendliness which made our combat Army great. And while the fighting lasted this same spirit prevailed behind the lines.

It has been easy to lose this friendly and cooperative feeling when the excitement of war is past and the men are anxious to get back home and civilian life. It is hard to create this spirit of mutuality in men who leave home and enter the service now without the inspiration of a great combat task to perform. But under the influence of this peacetime let-down, we must not forget the real part, the joint part, that both men and officers played in winning the war.

The people of any nation are mercuric in their metal attitudes, quickly forgetting past accomplishments in their intense—and sometimes selfish—interests in the problems immediately before them. America is very much that way. There is already a tendency to relegate to history the valor and courage of the men who sacrified and braved danger during this war. These men deserve better than this and the Nation deserves better than this. Their deeds represent an all-time high in American patriotism and in American spirit and we cannot recall those deeds to our minds too often.

Tonight I have spoken principally of the Army because of my connection with it during the war and now. What I have said of the Army, of course, applies equally to the Navy, the Marines, the Coast Guard, the merchant marine, and the other great services of this war. They are entitled to the appreciation of all Americans.

I hope that the comradeship born on the battlefield and in the camps and nurtured by the mutual pleasures, hardships, and dangers, will continue into peacetime. I am certain that this will eventually be true. I am equally certain that a great majority of the officers and men in resuming their places in civilian society will realize that the opportunity for service in peace is only secondary to that in war. The same qualities of courage, skill and leadership which these men have demonstrated will help the Nation solve the manifold problems that confront us now. These officers and men have been willing to die for their country—and many have died. Those who have returned will, I am sure, be willing to live for their country.

These veterans of World War II, together with the veterans of World War I, have demonstrated their right to the confidence of all of America. They are entitled to this confidence from the Nation and if given an opportunity to mold in peace as they have defended in war, they will build in the next generation a greater and stronger America.

Resolutions Urge Removal of Controls on Building Materials

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. SHAFER. Mr. Speaker, in discussing H. R. 4665, known as the Patman

housing bill, I should like to bring to the attention of the Congress two resolutions adopted by the Michigan Retail Lumber Dealers Association at its annual convention held in Grand Rapids, Mich., February 5, 6, and 7. The resolutions follow:

Whereas the members of the Michigan Retail Lumber Dealers Association typify the small businessman of the Nation; and

Whereas small business enterprise of every nature is being more and more regulated and controlled by bureaucratic decree; and

Whereas in our belief this is in direct opposition to the ideals of free enterprise as practiced by our forefathers and approved by the rank and file of small businessmen: Therefore be it

Resolved, That the Congress of this United States, our only representative body and as such sworn to uphold the best interests of our country, be advised of our beliefs and requested that such regulation and control be removed now that the emergencies of war are over and allow the small business enterprise to again take its place as a free institution and a vital part of our national life.

Whereas the Michigan Retail Lumber Dealers Association, representative of the lumber industry of this State, is vitally concerned with the building of homes; and

Whereas the Federal Housing Administration, as it functioned before the war, was an important factor in the building of homes by simplifying the financing and insisting on sound construction; and

Whereas at the present time the Federal Housing Administration is under the National Housing Agency, which includes all of the public housing programs now fostered and subsidized by the Federal Government: Now, therefore, be it

Resolved, That the Michigan Retail Lumber Dealers Association, in convention assembled, direct its collective voice to the Congress of the United States, and particularly to the Members thereof from Michigan, to exert every influence at their individual and collective command to divorce FHA from NHA as soon as is practical, and return it to its prewar status where it served as a great aid to both private industry, private builders and the home owner; and be it further

Resolved, That a copy of this resolution be sent to the Michigan Members of the United States Congress.

Broadcast by Hon. Charles M. LaFollette, of Indiana

EXTENSION OF REMARKS
OF

HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. HERTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast by Hon. CHARLES M. LAFOLLETTE, of Indiana, under the auspices of National Conference of Christians and Jews, Willkie House, Tuesday, February 19, Station WEVD:

Perhaps my approach to brotherhood will differ from that which is usually used, and, therefore, I am asking you to think with me as I go along and withhold judgment until I have finished.

Recently the whole idea of the kinship of man, the universal spirituality of man and the universal fallibility of man have been ignored by those who have been working the hardest in good faith to advance a resultant idea of the brotherhood of man. Consequently, our advancement toward the goal of universal brotherhood has been retarded by the means which too many people are using to attain it. Brotherhood is not a milk-and-toast subject, because people are not milk-and-toast individuals. A concentration upon the good side of human nature which ignores man's fallibility, and, therefore, the presence of evil characteristics in his nature fails to present a true picture of the nature of man so that the distortion thereby produced offends the intelligence of man. This hinders our progress toward the goal of understanding and tolerance without which no real feeling of kinship can exist.

Brotherhood is a lusty, hardy thing. It must arise out of our contacts with each other on the sidewalks, in the drug stores, in the tavern, in the subways, on the job, at the prize fight, and the ball park. These are the places where men come in contact with each other most often. And these are the places where human beings are human. Consequently, it is in these daily contacts that the characters of individuals are laid bare. Some of us push and crowd and some of us stand back a little. It is in these circumstances and at these times that we learn and, therefore, should remember that all men inherently want to push a little, elbow a little, take an advantage a little, ask for service out of order a little. These things are inherent in man. It is in these contacts that an "I'm sorry," "I beg your pardon," "Go ahead," "Where is the end of the line?" as they are dropped into the maelstrom of daily activities do more to create good will, mutual understanding, and the liking of individuals for individuals, which is the essence of brotherhood, than all of the speeches made at all the formal brotherhood meetings, where people are consciously on their good behavior, can ever accomplish.

Therefore, let us quit closing our eyes to realities and acknowledge the truth about ourselves, that is, that it is easier to grab than to hold back. But that each act of self-restraint on the part of each of us as an individual is not only a contributing factor but that it is a necessary factor in preparing the soil of human understanding into which we propose to plant the seeds of economic equality of opportunity, of full production, of freedom of speech and restraint in name-calling; seeds which we prepare in the cloistered atmosphere of pure democratic thought. For unless these seeds are planted in a soil of mutual understanding, arising out of decency in everyday contacts, we cannot harvest the crop of democratic realities worthy of our democratic planning.

I have no quarrel with the making of plans for the advancement of the democratic ethic into all of man's relationship with his fellowman. Indeed, in some measure I have been privileged to participate in the making of those plans and to join in the fight for their advancement. But certainly it makes good sense to point out that the capacity of humans to understand large plans, calculated to advance equality of opportunity among people and fairness with each other in debating the advisability of those plans, must depend upon a basic initial respect, understanding of and genuine liking of their fellowman as they find him on the streets in their daily contacts with him. That is the first step. For how can we humans develop the capacity to comprehend plans for the extension of fair play among men, which demand a capacity for vision and speculation, before we have learned to deal fairly with each other in our present everyday contacts?

It is relatively easy to advance abstract theories, designed to lessen the stresses under which men live on this earth and to bring about a greater equality of material well-being and truer degree of equality under law. The difficulty lies in getting people to evidence the personal individual capacity for self-sacrifice, self-restraint, and understanding, without which these plans cannot operate.

Therefore, the democratic way, which is always the hard way, demands of us that we as individuals develop the capacity to live in a manner which is consistent with our thinking and our ethic. We will not spring overnight into individuals capable of so living. It is the nature of things that men must develop this capacity. It is pleasant to close our eyes and ignore this fact, but like many pleasant things, it is also foolish and foolhardy to do so. If we are trying to build a world in which there is brotherhood, then let us face the facts that we must build each day our individual ability for fair play as we live with each other in our daily humdrum activities.

If the bricks are made of mud, the towering structure of democracy lying in the minds of democratic philosophers cannot be built for the bricks will be unable to stand the strain placed upon them by the design of the builders.

I feel it is proper also to make one or two observations about the means being used to create understanding among people. As I have pointed out, basically this problem will be best solved by the actions of individuals in their daily contacts with each other. But this is a field in which the planning of activities and the organization of efforts to promote understanding may, under proper leadership, be handled by people who have the time to devote to this effort as specialists. Nevertheless, when we delegate to professionals the job of promoting understanding among people, we, as individuals, have a tendency to excuse ourselves from further consideration of the problem and from further examination of the means used by professional purveyors of brotherhood to bring about the desired result.

Humans are fallible. Therefore, professional leaders of brotherhood groups are fallible. Out of this fallibility arises a very positive tendency to develop practices which satisfy the emotional longings of the people who have the greatest need for the desirable effect which a condition of mutual understanding in the world would produce. A professional or semiprofessional speaker on the subject of brotherhood therefore always finds a responsive audience and great applause when he approaches the subject of mutual understanding by pointing out to those who are the victims of our present lack of decency in human relations, the errors of those who wittingly or unwittingly create the condition. But I doubt very much whether this does much from a constructive standpoint to advance the cause of mutual understanding. Actually, such a speaker cheats his audience. He takes up their time to regale before them things which they already know. He does this too often consciously for the purpose of being loudly cheered and credited by his audience with having a great understanding of the subject. Of course, he is credited with having a great understanding because he recites the wrongs which the audience already knows. But constructively he has accomplished nothing.

This pattern, too often followed by the professional promoter of brotherhood, is pure unadulterated cheating. It cheats the people who contribute the funds for the purpose of creating brotherhood. It cheats the people who are being harmed by the imperfect condition of brotherhood which now exists. It cheats those who are lacking in a capacity for brotherhood, by failing to bring to their attention the mistakes in the thinking and the errors of their conduct, in order that they may be awakened to the errors of their ways and furnished a pattern to follow in changing them.

And finally, it cheats the professional promoter himself, for he destroys whatever ability he might have had in the beginning to do the job the hard way by pointing out to those who need it the reforms in conduct which they must effect by their actions; he cheats himself by feeding his ego with the easily obtained plaudits of the oppressed.

I do not generalize or make this charge against all of those who work earnestly to advance the cause of mutual understanding among people. Generalization, of course, is one of the basic causes of misunderstanding. But the pattern, which I have pointed out, appears too often to permit me to ignore it, if I want to make some constructive contribution to the cause of brotherhood. We who wish to bring about understanding cannot afford to ignore the existence of means and practices which are negative in their effect and therefore of little value, merely because we fear the criticism of professionals in this field, who often have great power to injure or destroy their critics.

I confess my own fallibility. The soundness of my judgment on this question I submit to the bar of public opinion. But having a conviction, and believing that by expressing that conviction I can aid the cause of brotherhood, I must speak it. Understanding among people must be attained by constructive acts and he who believes in brotherhood and desires it earnestly must not withhold his opinions from fear of being misunderstood or risking his personal popularity. The time is too short. The need is too great. There is no place on this battlefield for the coward.

The Pauley Nomination

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of February 26, 1946:

WHY FURTHER HEARINGS?

William A. Patterson's testimony before the Senate Naval Affairs Committee yesterday virtually amounted to a charge that Edwin W. Pauley tried to sell him a Government favor for a $35,000 donation to the Democratic Party and took a threatening tone when he declined to buy.

The president of United Airlines said that, at a time when his company had a franchise application pending in Washington, Pauley said to him, after he had refused a request for a $35,000 contribution to the Democratic campaign fund: "You'd better think twice before turning us down."

Mr. Patterson's testimony discredits a nominee whose discrediting has now become supererogation. As President Truman's nominee for Under Secretary of the Navy, Mr. Pauley has been discredited so often and so roundly that if there were such a thing as a referee in a confirmation hearing, he would be compelled to call time in order to stop what has now become a slaughter.

Mr. Pauley was discredited when, after he had denied under oath that he had discussed the tidelands oil issue with President Roosevelt, former Attorney General Biddle, or Secretary of the Interior Ickes, the fact that he had talked with them all about it was proved so conclusively that he was forced to admit under oath that he had talked with all three of them about it, with Mr. Ickes "50 or 100 times."

Mr. Pauley was discredited when former Assistant Attorney General Littell swore, over Pauley's denial, that the nominee had tried to persuade him to withhold the Government's tidelands suit on the ground that it was unwise politically.

Mr. Pauley was discredited when, after having testified under oath that the Mexican Government had formally approved a project of his to establish an oil plant in Mexico, he was compelled to admit under oath that the Mexican Government had not formally approved it.

Mr. Pauley was discredited when Secretary Ickes, over the nominee's denial, testified—and backed it up with diary notes jotted down at the time—that Pauley had told him $300,000 in contributions to the Democratic Party could be obtained from oil men if they could be assured the Government would withhold the tidelands suit.

Senator TOBEY, the chairman of the Senate Naval Affairs Committee, has said that the record will show that Pauley, when pressed, has reversed himself on no fewer than six occasions, all under oath.

What useful purpose, therefore, can be served by the taking of further testimony? How does the Senate Naval Affairs Committee know whether or not to believe what Mr. Pauley is saying now, when it has six glaring proofs that it could not afford to believe what he has already said? Or if the committee expects to believe some of his testimony and disbelieve some, what method does it have at hand—crystal ball, tea leaves, or phrenology—to determine which is which?

Mr. Truman has made it known that he doesn't care how often Mr. Pauley has sworn to both sides of a question—that he still thinks he has made a fine nomination. There ought to be somebody in Washington who cares about such things, and a good place for a start would be in the Senate Naval Affairs Committee. The committee could, by a single simple action, testify that it likes veracity and dislikes being misled. That action would be to end hearings forthwith and throw the nominee out.

Overseas Information About the United States

EXTENSION OF REMARKS

OF

HON. JAMES P. RICHARDS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. RICHARDS. Mr. Speaker, the people of foreign countries hunger for information about the United States. All other great Nations are meeting their responsibility in this field by dissemination of information and news. The United States is lagging far behind, and unless machinery is set up by this Congress through which the world may be properly informed of our ideals, advantages, and activities at home, the day of regret will surely come. In this connection, I include guest editorial by Herbert Ager carried in the Saturday Review of February 9, 1946:

THEY WANT TO KNOW

Congress has been asked by the Department of State to authorize an overseas information program as an addition to the foreign service of America. Our present foreign service is chiefly concerned with reporting to Washington about events abroad. It is proposed that in all our embassies and legations we should have men whose sole duty is to help foreigners to understand our life, culture, and institutions so that current events in the United States can be seen in a proper perspective.

Two objections may be raised to this plan: Why should America spend money on advertising herself, and why can't the newspapers, press services, and radio supply all the necessary information by private enterprise, without help from Government?

The answer to the first question is easy: America should not spend money on advertising herself, and is not proposing to do so. The Department of State is merely undertaking to meet a widespread and articulate demand, a demand for help and guidance in knowing and judging America. It was essential during the war that our allies and our neutral friends should have such help. It is just as important to continue the help in peacetime, since the threatened human race is at last trying to close its ranks and to work cooperatively for the salvation of the world.

Those who took part in the overseas information work of OWI learned the encouraging fact that the outside world is eager for more knowledge of America. We don't need press agents or good-will merchants; we do need people who can meet the desire for facts, for documents, background material, and interpretations of our policies and purposes. It is good news that the desire exists. If the nations are to become less quarrelsome, they must become more informed. If the decent people of the world are to trust each other, they must first know about each other. Since the wish to know has been created by the wars and the repeated disasters of our lifetime, it is surely a wise policy to make the wish come true.

If we are proud of our country, we must believe it is to everyone's advantage to have our country understood. If the world were indifferent there might be nothing we could do, in dignity, to break down the indifference. But when the world is asking for help it would be folly to refuse.

In Great Britain, for example, the schools, the armed forces, the press and radio, women's clubs, trade unions, business organizations, churches—all the institutions of society, public and private—ask continually for help. An information officer is not putting pressure on people to accept his wares; he is under constant pressure to provide more wares.

The answer to the second question—why can't this be done entirely by private enterprise?—can be given in terms of one form of enterprise: the newspapers and the great news agencies such as AP, UP, Reuters, etc. English newspapers, even if they someday return to prewar size, are very small by American standards. They have no room to print full texts, or even long excerpts, of important speeches in Congress or by the President; they have no room for more than the briefest summary of government documents.

Since they cannot print full texts, they naturally will not pay cable charges on full texts. They buy from the new agencies, or receive from their own correspondents, about as many words as they expect to use. So a 5,000-word speech may be reduced to 200 words—and they are likely to be the most flamboyant, spectacular, or perhaps even the most quarrelsome words in the speech. This implies no criticism of the press. The most exciting passages are the most newsworthy, though they may fail to give an accurate impression of the whole.

If an editorial is written on the basis of the 200 words, instead of the 5,000, it may be unfair to American policy. If a speech is made, or a question asked in Parliament, on the basis of the 200 words, it may start a chain of misunderstandings and recriminations. This is one of the ways in which

well-meaning people, who would like to know and trust each other, drift into ignorance and hurtful criticism. It is very much in the national interest of America to avoid such mistrust as much as possible.

A Government information service can provide the full text, in the case of really important speeches, at the same time that private enterprise provides the brief excerpt. The editorial writer, or the politician, wants the full text. Repeated experience during the war shows that he wants it, that he will read it if he can get it, and that he will comment fairly and intelligently if he has a chance to do so. Private enterprise cannot always provide him with the chance. Government can, and therefore Government should.

There is no use trying to pick up the pieces after a misunderstanding has been allowed to happen. As in the famous case of Humpty Dumpty, all the king's horses and all the king's men can never fit the pieces together again. Neither can all the President's horses and all the President's men. But a trusted accurate information service can often prevent the breakage.

Such a service will not trespass on the domain of private enterprise. The press, the radio, the films, the books and magazines, tell much of the story of America. The more they tell, the better for all concerned. The more they tell; the easier the task of a Government information service. But it is not their prime purpose to foresee and to ward off misunderstandings, to fill in the gaps, to help the foreigner to know everything about us which he has the will and the ability to learn. In the past, it has been nobody's job to give such help, and the past is dark with unnecessary and undesired ill will. If the future is to be brighter, we must find new ways to allow our neighbors to know us. People can always get along with each other better than governments, if people are given a chance to understand.

HERBERT AGAR.

John Cardinal Glennon

EXTENSION OF REMARKS

OF

HON. JOHN B. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks, I include an editorial from the St. Louis Star-Times of Tuesday, February 19, and another from the St. Louis Post-Dispatch of the same date, commenting on the great honor that has come to the city of St. Louis and the great territory west of the Mississippi River in the elevation of the universally beloved Archbishop John Joseph Glennon to the College of Cardinals.

[From the St. Louis Star-Times of February 19, 1946]

THE COLLEGE OF CARDINALS

Following a secret consistory in the Vatican, Archbishop John Joseph Glennon, dean of American Catholic bishops, yesterday received formal notification of his elevation to the cardinalate.

When on Thursday he receives his red hat from Pope Pius XII, he will enter an institution that began in the fourth century when the early Roman Christians were emerging from the catacombs. The title cardinal comes from cardo, meaning a hinge, around which things turn. Originally it was applied to all priests permanently attached to churches, but later it came to be reserved for the chief priests of the principal churches of Rome, whence the modern practice that each cardinal take his title from some Roman church.

Developing as the needs of the church imposed new tasks on the Sacred College of Cardinals, it took about eight centuries for the cardinalate to acquire its present status. Starting as writers of the lives of the martyrs and advisers of the Pope, the cardinals did not see their position firmly established until 1059. In that year it was recognized that the election of a new Pope and the interim government of the church rested in their hands when death vacated the pontificate. In 1180 the College of Cardinals was recognized as a corporation under canon law.

In 1247 the election of a new Pope was reserved to the cardinals exclusively, although it was not until 1562 that Pope Pius IV finally confirmed this policy. By 1300 their main duties had become those of counseling the Pope, helping to govern the church by participating in consistories, acting as papal ambassadors abroad and serving as protectors of religious orders.

In 1857 the total number of cardinals was fixed at the present 70—6 cardinal bishops, 50 cardinal priests, and 14 cardinal deacons. Today, though the three orders of cardinals remain, their duties depend on whether they continue as bishops or archbishops of important cities or whether they hold office at the Vatican. In either case, they still have the responsibility of counseling the Pope and electing his successor when he dies. Cardinal Glennon with his princely dignity, his wisdom, and his love for people is worthy of the prestige of the College of Cardinals. As he joins it as a prince of the church, St. Louis is cognizant of the merited honor that comes to him.

[From the St. Louis Post-Dispatch of February 19, 1946]

THE CHURCH UNIVERSAL

Amid scenes of glittering splendor and reverent ceremonial that are the highest symbols of the religious faith to which some 330,000,000 of the world's population adhere, Rome this week is witnessing a spectacle unprecedented in the long history of the Roman Catholic Church—the elevation of 32 of its prelates to the high honor of membership in the College of Cardinals.

These new princes of the church have been chosen by the Supreme Pontiff for their "learning, holiness, and honorable life," or, as another authority puts it, their "doctrine, piety, and prudence." St. Louisans of whatever faith feel pride in the fact that one of these, the senior in years among the group, is John Cardinal Glennon, of this city. There is pride in this recognition of the trans-Mississippi region of America for the first time in the highest council of the church, no less than in the personal tribute to the churchman of whom the Commonweal recently said:

"Archbishop Glennon, of St. Louis, might be described as the grand old man of the American hierarchy, continuing the tradition of personal charm, simplicity, and directness so widely associated with such great figures of the past as Archbishops Dowling and Ireland."

There are other regions, several of them, whose ordinaries are for the first time to wear the long-trained red soutane and the engraved ring with its relics of the saints. All the world's continents are now represented, with the appointments from Australia and China. The Sacred College has its largest membership in generations and the long tradition of an Italian majority in its composition has been broken.

So, in the wisdom of Pius XII, an act of statesmanship has been performed that demonstrates with new forcefulness the church's proud claim to universality. "Now," in the words of Cardinal Glennon, "the Holy Father will be surrounded by representatives of all peoples, thus fulfilling the command of our Lord to His Apostles, 'Go forth and teach all the nations.'"

In a day when the revival of intense nationalisms disturbs the advocates of world cooperation for the future peace and security of mankind, the Catholic Church by this historic reorganization has set an example before the temporal statesmen of the nations. Pius XII, himself an Italian, views equably the prospect that his successor may be a "foreign Pope," the first since Adrian VI, the Netherlander who held the papal throne in 1522–23.

The concept of the church universal, signified in Rome this week by the churchmen who have crossed the oceans to participate in the moving ceremonies under the stupendous dome of St. Peters', is of loftiest import to the followers of the faith. The precept they represent is an ancient and revered one, for their office is proclaimed as in spiritual succession to the Twelve Apostles, those first evangelists of the new faith which sprang from the shores of Galilee.

The church universal finds spiritual comfort in its living unity no less than in its credal teachings, and that unity has never been so broadened and strengthened as in the solemn proceedings now progressing in the Holy City. For men of all faiths and of no faith who administer the political realm as the hierarchy administers its sector of the religious, there is a profound lesson in what the spectacle means.

Pay Raises for Postal Employees

EXTENSION OF REMARKS

OF

HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. PATTERSON. Mr. Speaker, when the Committee on the Post Office and Post Roads began its hearings yesterday on H. R. 5059, the Burch-Mead bill, to provide pay raises for postal employees, I sent a statement to Chairman BURCH of that committee, urging that the committee take prompt and favorable action on this important legislation and requesting that the committee amend the bill to replace the present provision for a $300 pay increase with a new provision for a $500 increase.

Today I should like to take this opportunity to call the attention of all of the Members of the House to the need for immediate and favorable consideration of this bill.

Our postal employees have served the Nation faithfully and well for many years, and our postal system has provided a public service in which we can take a great deal of pride. I sincerely regret that we cannot take a similar pride in the compensation which we have provided for these employees. Rather, we must feel ashamed of the inadequate income on which these people are expected to live.

Never generous in the past, the income of postal employees has now become quite inadequate to the needs of an American

family under the present high cost of living. We expect and we receive from these workers a very high degree of efficiency and service, but in return we offer them a very poor recognition of their work.

In these difficult days of reconversion, when the whole country is undergoing industrial upsets and disturbances in the effort to win just compensation for the labor of the workingman, the Federal Government cannot hope to establish a workable policy which will influence and help straighten out the problems of employees and their employers so long as we do not even provide adequate pay for our own Federal employees.

It is the responsibility of the Government to lead the way in this effort to provide decent living standards for our working people. We cannot afford to lag behind.

In view of the tremendous quantities of money which were gladly devoted to the winning of the war, we cannot now hesitate at the prospect of the relatively small amount required to provide a decent income for our own people who are employed by the Postal Department.

Our tremendous expenditures during the war were justified on the grounds that they made possible the destruction of a terrible threat to our potential peace and well-being. Certainly this small expenditure now is more than justified, for it constitutes a real investment in that peace and well-being at home for which we fought.

For these reasons, then, I believe that it is no less than a duty for the Congress to approve the postal pay-raise bill and to amend it to increase the raise to $500 per year, for only in this way can we provide a decent standard of living for our postal employees, who so clearly deserve it.

His Lordship Speaks on the British Loan

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 1, 1946

Mr. STEVENSON. Mr. Speaker, Lord Rotherwick, managing director of the Clan Steamship Line, in London this week denounced the proposed United States loan to Britain, saying it should be an outright gift, free of all interest.

In his speech before the chamber of shipping, Lord Rotherwick said:

If this loan, with its one-sided, impossible, and unbelievable conditions, takes place it will mean the elimination of this country as one of the great powers for peace and stability in the world, and I am afraid it will result eventually in this country sinking to a small third-class power—an illegitimate forty-ninth State of America, dragging down with her the other members of the Empire. It is something to be ashamed of. It was nothing more or less than the selling of the British Empire and its independence to America.

Mr. Speaker, those are the words of a British lord. If that is the feeling of the British peerage at this time, do you believe their opinion will change or that they will ever want to pay interest or any part of the principal of any loan made by the United States to Britain?

Washington's Birthday Address of Hon. Kenneth C. Royall, Under Secretary of War

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 1, 1946

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable Kenneth C. Royall, Under Secretary of War, at an Americanism banquet sponsored by the Winston-Salem (N. C.) Junior Chamber of Commerce, at 8 p. m., Friday, February 22, 1946:

On this anniversary of the birth of the greatest of all Americans, I want to discuss one of the least known of his many "firsts." I refer to our system of military justice which George Washington established for our Army 170 years ago and which with periodic revisions continues as our system today.

In my discussion tonight my theses are three. First, the present system of military justice as administered by the American Army—and I will include the Navy—is a sound system, comparing favorably with other systems of justice, civil or military. Second, this system is not a perfect system and is subject to improvement in the light of experience during this war. And, finally, the system of military justice is one of the most misunderstood and misrepresented of all Army activities.

In this latter connection may I give a composite example of the wild and inaccurate stories about military justice which are floating around and sometimes find their way into reputable papers and emanate from prominent sources.

The War Department receives a pitiful letter from a young wife asking that her husband be released from imprisonment and complaining that he had received a 40-year sentence and is contributing nothing to her support. According to her story—given to her largely by her husband—John Blank had been guilty of only 3 days' absence from a rear overseas post and had returned for duty voluntarily. She said he had previously served honorably on the front and had a good record in the Army and before entering the Army. She claimed he had received an unfair trial and an excessive sentence and that after confinement he was a model prisoner. A man prominent in public life makes a scathing statement about this case and some of the press pick it up and criticize the Army and the whole system of military justice.

The story is slightly incorrect. John was absent 3 months, not 3 days. He did not return voluntarily to his unit; he was apprehended with great difficulty. His offense was desertion from his unit not at the rear but near the front, and he boasted that he would be living when his buddies were dead. As for his previous record he had deserted his wife before he went into the Army and had gone a. w. o. l. three times before the occurrence for which he was tried. He had not been a model prisoner but had sought to escape.

And the story fails to state some other material facts. When he deserted his unit it was moving into the area of fire and he had to be replaced by a patriotic soldier who was willing to do his duty. During the period of Blank's desertion his unit had suffered 10 percent casualties, of which one-third were killed. The loyal soldier who replaced him was among the dead.

There are many such incorrect stories and many resulting criticisms of the Army.

Those of us lawyers who have dealt at times with civil criminals recognize that rarely can you rely upon statements that they make about their own crimes—even to their own counsel. If you would interview the inmates of an average penitentiary a majority of them would protest their entire innocence and most of the others would insist that there were extenuating circumstances—which in fact never existed. And they would criticize the court that tried them. It was an old English saying that "No wretch e'er felt the halter draw with good opinion of the law."

In civil life we do not give credence to the criminal. But put the same man in uniform and his false and uncorroborated story makes the front page.

Let us make a fair analysis and appraisal of our much-criticized system of military justice. It differs from the civil system of justice in several respects. For example, it recognizes not only civil offenses but also an entirely new class of offenses, usually called military offenses, that is, offenses which would not be crimes in civil life.

If a man quits his task in civil life, his punishment is usually at the most a discharge from his job. It is apparent that this system would not work in the Army. The Army must be kept intact and it must have the requisite amount of discipline to perform its work. Hence, the military crimes of absence without leave, desertion, disobedience of orders, misconduct in the face of the enemy, and other similar offenses call for penalties that must often be severe.

And these offenses must be punished not only to preserve the military organization, but also in justice to the conscientious and law-abiding soldier who performs his tasks. If a man deserts on the eve of battle, when every ounce of power is needed to gain and hold an objective, he has done more than betray his country in the abstract sense. He has betrayed his fellow soldiers, increased their labors and their peril, and has perhaps signed the death warrant of an individual or a platoon or a company.

I should now make it clear that the criminal soldiers I am discussing tonight represent a small—a very small—percentage of the men in the Army. Less than 1 percent of our soldiers were ever sentenced to confinement by general court martial. In some theaters of war, for example, the European theater, the figure was as low as one-fourth of 1 percent. If we except those who commit minor infractions not punishable by general court martial, more than 99 percent of our troops were good soldiers and patriotic soldiers and brave soldiers and successful soldiers. But I would not have you think that the Army has forgotten even the 1 percent—these lost sheep—while it is caring for the ninety and nine.

It should be remembered that the court-martial system is a statutory system prescribed by Congress under the express terms of our Constitution. The statutes are called the Articles of War. The Army does not make the system, it merely implements and administers it under the congressional enactments.

Today—as after every war—the court-martial system is under attack. Many criticisms are totally unfair. Some of the others at least have elements which require consideration in the light of the war's experience.

We frequently hear that soldiers charged with crime are kept in jail a long time awaiting trial. And then we hear that soldiers are hurried into trial without adequate time to prepare their defense. On the whole, neither of these inconsistent criticisms is justified. The average time between arrest and trial is about 16 days, the period being longer where a defendant needs it for a proper preparation of his defense. I believe that our civil courts could well follow this example of prompt—reasonably prompt—justice.

It is charged that the court martial provides for no grand jury proceeding and no formal indictment. The United States Constitution expressly exempts courts martial from this requirement. However, there is under the court-martial system a thorough and impartial investigation preceding trial that, in the opinion of most lawyers who are familiar with it, provides a greater protection for the accused than does the grand jury proceeding.

At this preliminary investigation the accused can be represented by counsel and he has the right of cross-examination. The investigating officer may find that there is not sufficient evidence to support the charge. And even if he finds otherwise, that finding is reviewed by higher authority before there is any trial.

It is sometimes said that the right of the accused is not protected in a court-martial case. But he is provided defense counsel of his own selection, without any expense to himself. If civilian counsel are available he may also employ them at his own expense. By regulation it is the duty of counsel to defend the accused by all legitimate means. And you have known of the vigor of such defenses, even in recent cases where enemy defendants were involved.

Another criticism sometimes leveled at courts martial is that they are convicting courts. Let us look at the true picture. In the first place, I wish to emphasize that the percentage of men tried by general court martial has steadily decreased over the course of the years. Even as late as 1931, 28 men out of every 1,000 were tried in 1 year by general court martial. This was in peacetime and, of course, there are normally more court-martial trials in war than in peace. Yet, during the present war, less than 10 men out of every 1,000 were tried over the entire 4-year period. These figures indicate not only a better behaved Army but also a much more careful investigation before trial—which eliminates cases that should not be tried.

And even after this screening there has been during this war a remarkable record of acquittals. For example, in murder cases 32 percent have been acquitted and 37 percent found guilty of lesser offenses, a total of 69 percent. A similar total for manslaughter cases is 70 percent acquittals or reductions, and for rape cases 66 percent. The total finally sentenced in general court-martial cases over the entire 4-year period is around 8 men out of every 1,000. We believe that this war has justified the old Army statement: "If you are innocent, take a court-martial trial. If you are guilty, seek a trial by some other court."

The court-martial system provides a complete procedure for review of every case—an automatic appeal, again without expense to the accused. In fact, there are two reviews, one in the accused's own unit and another in the War Department—or during war by the theater commander. And death cases in peacetime also go automatically to the President for final decision.

These reviews, as well as the trials themselves, are conducted not by a tribe of strangers, but by officers, the vast majority of which have previously served as enlisted men. Four-fifths of our line officers of this war have so served and most of these, 531,000, have come up from the ranks during the war.

But, after all, you may ask: "Aren't many court-martial sentences too severe?" And in frankness I must answer, "Yes"—if you leave out of account the Army plans of restoration and clemency. But the answer is a decided "No," if you take into account these two remedial measures—restoration and clemency. I will discuss these later, but for the moment let us consider certain aspects of original court-martial sentences and some of the reasons behind seemingly excessive punishments.

First, let me make it plain that here again in the matter of punishments we are met with many inaccurate stories and, even if the stories are accurate, we are met with criticism that would almost pass unnoticed in the case of civil courts. Civil punishments, whether they err on the part of severity or leniency, are sometimes criticized locally but anything connected with the Army concerns every part of America and, therefore, one court-martial mistake—or one alleged mistake—resounds throughout the land.

We must remember that the Army is a cross-section of America. We have kept out men with known criminal records, but it was impossible to exclude men with unknown criminal records or with criminal tendencies. The Army has good men and it has bad men, and the uniform alone does not change the bad into good.

There are necessarily some slackers and cowards and those who want to foist on others both their work and their danger. There are gangsters and highway robbers and thieves and murderers, and, strange to say, some of them performed well in battle. This is to their credit, but that credit cannot extend to a general immunity. Those who commit crimes, particularly serious crimes, must be appropriately punished.

I have already talked on strictly military offenses. Without discipline and without the enforcement of discipline an Army would become a mob and the lives and safety of the good and conscientious soldiers would be endangered.

The Army also has to deal with the same type of crimes that are punished in civil life—murder, rape, robbery, fraud. Here we are frequently met with the plea that because of the combat record of some men they should not be punished even for the offenses for which they would be punished in civil life.

But a combat record is not a continuing license to kill or steal or defraud. It would be unfair to our good citizens, our orderly citizens, to establish a principle which would turn loose in our cities and in the country a class of criminals who would feel that they were superior to any law or any punishment.

Of course, in court-martial cases, as in civil cases, the innocent relatives often suffer. The family of a man convicted by court martial is deprived of its family allotment. The family of a man convicted in a civil court is similarly deprived of the earning power of the prisoner while in confinement. Whether these innocents should suffer and whether a system can and should be devised by which this suffering can be alleviated is a question broader than military justice. It is a sociological question that the nation must answer before our lawmakers can apply it to either civil or military courts.

Of course, there have been mistakes and injustices in initial military sentences. Under the stress of war and the necessity for discipline there may have been more such initial mistakes than in civil courts. But in fairly evaluating military sentences we must consider the whole process, including the restoration and clemency systems. The process is not complete and the sentence is not in any real sense final until the prisoner has had his chance under these systems.

The Army considers its 1 percent delinquents one of its most important problems. It feels that every soldier, regardless of his bad record, should have the chance to salvage himself and restore himself to useful life. No one recognized this more than our former Under Secretary, Hon. Robert P. Patterson. In fact, no one recognizes any problem of the GI more clearly or more sympathetically than does my predecessor in office.

Under Judge Patterson's jurisdiction there was established and administered in this country and overseas a system of rehabilitation centers, set up to restore to duty as many general court-martial prisoners as possible. Under this plan prisoners who seemed likely to prove restorable were screened carefully, given special training in a prehonor and then in an honor company, and, if they qualified, were restored to duty. This privilege of restoration was extended to qualified men, no matter what their offenses or sentences might have been. To date, the total of such restorations is in excess of 25,000 men, the practical equivalent of two divisions.

It is a tribute to the system and to the men who qualified under it that less than 1 out of 8 of those who have been restored have failed to make good. These men were saved from a lifelong stigma of being postwar convicts, were saved the crippling disability of a dishonorable discharge, and were given and accepted an opportunity to serve their Nation honorably in its great crisis. You may recall the case of 115 railroad battalion men who had been convicted of pillaging Government supplies in France and had been given long prison sentences. They made restitution and were formed by General Eisenhower at their request into a special company for active combat service.

But restoration to duty was not the only remedial process set up by the War Department under the guidance of Judge Patterson. There was established a clemency procedure by which all cases of general court-martial prisoners could be reviewed as rapidly and as thoroughly as possible—reviewed not once but periodically. A War Department Clemency Board was appointed by Judge Patterson early last year, and special clemency boards operating under the first Board were constituted after VJ-day.

I was fortunate enough last November to get former Supreme Court Justice Owen J. Roberts to act as chairman of the War Department Clemency Board. Under his guidance and that of Mr. Austin MacCormick, a well-known penologist, and with the assistance of Colonel Snow, of my staff, the clemency boards started a few months ago a systematic and intensive review of each of the cases of the 32,000 general court-martial prisoners then in confinement. Between 12,000 and 13,000 of these cases have already been reviewed, and it is confidently expected that the review of all cases will be completed by June of this year. Special and primary attention is being given to those who were sentenced overseas.

We are not engaging in a general pardon procedure and we strongly oppose those who urge a jail delivery for all who committed either civil or military offenses. As to military offenses particularly, we must bear in mind the soldiers who performed their duty and tasks faithfully and stuck to their guns day in and day out. We must be just to these good soldiers.

But we are reviewing each case thoroughly on an individual basis. Full information on the offender's life history is obtained. Weight is given to personality factors which may explain the offense, such as immaturity, mental defects, excessive anxiety over home conditions, etc. It is recognized in the case of military offenders that now there is less necessity for severe exemplary punishments. The sentence mentioned in my composite il-

lustration would probably be reduced from 40 to 7 or 8 years.

There is inevitably some lack of uniformity in sentences from various theaters. The boards seek to provide this uniformity and to reach an ultimate sentence which is consistent with justice and, in the case of civil crimes, is in line with what would have been the sentence in a civil court.

That is our system of military justice. The soldier who finally has to serve a sentence imposed by court martial will know, even if he will not admit it, and any who have the true facts will also know, that the soldier's case, be he officer or enlisted man, has been fully investigated before the charges were preferred, that he has had an opportunity to defend himself, that he has been tried by a group of officers, a majority of whom had probably served as enlisted men. He will know that his sentence has been carefully reviewed under court-martial procedure, not once but twice. He will know that in addition to such review he has had an opportunity for restoration to duty. He will further know that, if he was not restored to duty, his sentence has been individually considered by a fair, efficient, and high-minded group under the leadership and direction of a former Supreme Court Justice of the United States.

That is our system that we present to the Nation.

But we do not offer this system as perfect. Of course, there will be mistakes. We cannot claim perfection for any system of justice or business or government devised by men and administered by men.

It would have been unwise to change our system of military justice during the war. Suppose the standard of punishment for desertion had been fixed the day after Tarawa or during the fighting on the Anzio beachhead or at Ardennes. Any change must come in the calm atmosphere of peace, when we have available to us a complete record of the experience of war. After every conflict the Army evaluates its campaigns, its organization, its discipline, its military justice. The Articles of War and the court-martial procedures have been reviewed after other wars. They are being reviewed now.

The responsibility for the system of military justice is upon Congress, who can properly make such changes as it deems necessary. But this does not relieve the War Department from the duty of recommending to Congress changes that should be made. We expect to make such recommendations as may seem appropriate to us. In addition to a review within the Department we have asked the American Bar Association to appoint a special committee to give thorough and independent study to our system. We also welcome the opinions of interested citizens and we carefully consider all opinions expressed to us.

Our object has been—and will be—to provide for our Army an administration of justice which, while maintaining the necessary military discipline and reasonably protecting the public from crimes and criminals, will also give personal justice to the wayward 1 percent of our troops.

Keep the Navy Free

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. ANDERSON of California. Mr. Speaker, I commend to the attention of my colleagues the following thought-provoking article written for the magazine Ships by the distinguished chairman of the Naval Affairs Committee, the Honorable CARL VINSON, of Georgia. No Member of the House is better qualified to discuss the important subject of sea power and its value to the security of our Nation.

KEEP THE NAVY FREE

(By Hon. CARL VINSON, chairman, House Committee on Naval Affairs)

There is a serious and well-supported attempt being made to subordinate the place of navies, and in particular the United States Navy, in the over-all military scheme. This attempt goes under the name here of unification of the armed forces, and proposes the abolition of the Navy Department. Universally, proponents of unification argue that recent developments in air power and explosive energy have minimized the importance of ships and navies, and make separate establishments unnecessary. This argument can only stem from minds, military or otherwise, which do not understand, or choose to disregard, the historical importance of sea power. And in the war just ended, fought over a globe three-fourths of which is water, the absolute value and necessity of sea power was positively demonstrated. The victors had sea power and the vanquished did not.

Shipbuilders, of course, understand sea power and its importance to the defense of a nation, but it is essential that the meaning of sea power be made clear to everyone so that the danger of making the Navy merely a component or supplemental branch of the armed forces will be realized.

Ships are the backbone of sea power, but sea power embraces more than just ships. Sea power includes everything which makes a nation powerful upon the sea. It is the influence which a nation can exert to uphold its interests on the seas both in peace and war, and it implies the ability to contain or blockade, or deny the free use of the sea to an enemy. Sea power takes in the battle fleet, the submarines, the carrier aircraft, the merchant marine, the shipyards and floating drydocks, the advanced bases, and all the personnel and machinery necessary for the construction, operation, and maintenance of the above elements. Sea power is in proportion to the strength of a country's navy. The United States has more sea power than any other nation because it has the strongest navy. If the Navy is to be weakened, as it will if it loses its identity as a separate department of the Government, it follows that our sea power will be weakened, thus impairing the national safety.

Sea power kept open our supply lines in the Atlantic and Pacific; sea power prevented Germany from invading England, the Azores and Bermuda; sea power prevented Argentina and Spain from aiding Germany; sea power made possible our invasions of north Africa, France, and the Pacific islands, and from the Pacific islands land-based aircraft were able to destroy Japanese cities. Sea power has defeated every would-be dictator from Xerxes to Napoleon to Hitler.

After every war the demand is made that the United States reduce its Navy, scrap its ships and shipbulding facilities, and in general make itself impotent in the realm of sea power. Now we have a further demonstration of such short-sightedness in the proposal to do away with a separate Navy Department. To subordinate the Navy will naturally lead to a subordination of our merchant marine and our shipbuilding and shipbuilding facilities. It has been so through history. When our Navy was strong, or growing, our ocean commerce flourished, our shipyards expanded. When the Navy was small or in periods when our people were indifferent to its existence, our merchant ships sailed few seas and our shipyards were idle. World peace is our hope, but no man knows the future. This is the very worst time to be considering anything but a strong and independent Navy.

In addition to its probable debilitating effect upon sea power, the subordination of the Navy will have other national and worldwide repercussions.

Unification of the armed forces under a single cabinet head would reduce civilian control over the military establishments. The Air Force has now grown so large and so strategically important that it should have representation in the Cabinet, which would give the President the assistance of three civilian administrative heads of the armed forces. But if the Air Force is not to be made separate, and is to be merged with the Navy and Army, there will be only one Cabinet member instead of three to advise the President. Under this one head will come a supreme chief of staff for the armed forces, who will be the military leader for Navy, Army, and Air. This military leader would have more power in his hands, military and economic, than has ever before been entrusted to an appointed official in this country. If there had been a supreme chief of staff during the war, he would have had to make decisions affecting 12,000,000 men and the expenditure of a major portion of our gigantic war budget. In a democracy it is better that a council of leaders make decisions when the lives of so many people and so much wealth is involved. The Joint Chiefs of Staff was our wartime answer, and it is still the answer.

And if we did require the services of a supreme chief of staff, where would we obtain him? With all due respect to our present outstanding military and naval leaders, I do not think any one of them would submit that his experience was qualifying. How could it be? Our generals have been trained for ground or air warfare, our admirals for sea fighting. And if we begin training our officers to be Army and Navy and Air officers, they are no longer going to be experts, but rather jacks of all trades and masters of none. What will happen to our infantry and tank and amphibious and carrier specialists? Modern war is specialized war, and while we all hope for permanent world peace, we must continue to train men in the highest specialized arts of war, in order better to help preserve the peace. The only way to be sure of having these specialists is to permit the unhindered growth and development of each branch of the services, with the consequent emergence of Navy, Army, and Air Force leaders. Then we can coordinate, by means of a national security council and the Joint Chiefs of Staff, military policy and decisions on the highest levels.

There should be a greater degree of coordination and integration of the armed forces. But why all the haste on insisting that present unification proposals are the answer? Why is discussion being shut off? Without the proper congressional committees having heard testimony for or against a merger, it is said that "all the evidence is in." That is as wide of the mark as anything could be. Very little of the evidence is in. Our industrialists and business leaders have not been heard from, except one, Mr. Ferdinand Eberstadt, who opposes the merger. Our diplomats have not been heard from, nor our labor leaders, manpower experts, Government leaders, medical men, or farmers. It would be most unfair to consider any legislation affecting the future organization of the armed forces of this country without inquiring into the attitudes of the people whom the armed forces serve.

There have been periods in our development when the people of the United States have forgotten that we are a naval power. But in times of crisis—1812, 1898, 1917, and

1941—it was our reliance on sea power that preserved us and brought us victory. The spearhead of our sea power must be a strong and independent Navy. That Navy has and will continue to exercise coordination with the other arms, but it must never be subordinated to them.

Work of Selective Service Boards

EXTENSION OF REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. HAND. Mr. Speaker, quite recently the Congress very properly recognized the members of the selective-service boards throughout the United States. Appropriate ceremonies were held, and certificates of service and medals were issued in the name of Congress.

I want to say that I am glad to see this recognition accorded these men. Many of them have been on the job for more than 4 years. It has been for them a most unpleasant task, and has required a great deal of time and constant exercise of good judgment. These community leaders have devoted themselves patriotically and unselfishly to this work, and are still doing it. I desire to make a permanent record in this way of the citizens of my congressional district who have been engaged in this task.

Having myself served for 2 years as chairman of the selective-service board, I think I have a personal knowledge of the devoted work they are doing. They have done it without a cent of pay, and they are richly entitled to the gratitude of their country.

Men having served in my congressional district are as follows:

ATLANTIC COUNTY

Local Board No. 1: Reuben L. Babcock, C. Raymond Kears, Theodore E. Stokes, Carl M. Voelker.

Local Board No. 2: Robert Burns, Daniel D. Conway, John C. Cook, Michael L. Ruberton.

Local Board No. 3: Harrison Cook, John W. Kellum, Albert A. F. McGee, Walter L. Molineaux, Hiram Steelman.

Local Board No. 4: Allen B. Endicott, Jr., Harold W. Faunce, Edward M. Hackney, Hugo Krause.

Local Board No. 5: Preston Crook, Harry L. Fairbairn, Jr., L. R. Ressler.

Local Board No. 6: Dean Burton Crawford, Clarence S. Steigerwald, Lee F. Washington, John R. Wilson.

CAPE MAY COUNTY

Local Board No. 1: Leo M. Danerhirsh, Horace W. Gardiner, J. Thornley Hughes, Allan McClain.

Local Board No. 2: Robert Bright, Floyd P. Hoffman, Harry W. Orme, Edward H. Phillips.

CUMBERLAND COUNTY

Local Board No. 1: Russell S. Henderson, Herbert W. Letts, Paul D. Lucas, Henry S. Sharp.

Local Board No. 2: Herbert C. Bartlett, Solve E. D'Ippolito, C. Emerson Nash, Stuart D. Taylor.

Local Board No. 3: Richard N. Chubb, Foster V. Mitchell, Josiah S. Newcomb, Howard M. Sheppard.

Let Us Be Fair

EXTENSION OF REMARKS

OF

HON. LUTHER PATRICK

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. PATRICK. Mr. Speaker, I am sure every Member of this House, and all the people of our country, agree with the desire of the gentleman from Mississippi [Mr. RANKIN], expressed on this floor yesterday, to do honor to the memory and the heroic service of the late Gen. George S. Patton, Jr., by award of a Congressional Medal of Honor. No tribute we can pay that valiant soldier is too great, nor can we ever fully express this Nation's gratitude to him.

Unfortunately, the gentleman from Mississippi coupled his plea with a slur upon the Anti-Defamation League of B'nai B'rith. B'nai B'rith, more than 100 years old, is a large and highly respected Jewish organization recently cited by both the Army and Navy for its patriotic contribution to the war effort. It has long been engaged in the promotion of understanding and good will among all religious faiths. The gentleman has intimated several times, apparently without presenting supporting evidence, that the league was in some way responsible for newspaper stories of the so-called "slapping incident."

As a matter of fact, relations between General Patton and the Anti-Defamation League were most cordial and friendly. Under unanimous consent to extend my remarks, I include correspondence between General Patton and Joseph A. Wilner, the resident commissioner of the league:

OCTOBER 11, 1945.

Gen. GEORGE S. PATTON, Jr.,
A. S. N. O–2605,
Commander Fifteenth Army,
APO No. 408, New York, N. Y.:

As bereaved father of two sons lost in service, one, Capt. John Wilner, of your command, I am deeply distressed at injustice being done your reputation by Columnist O'Donnell of Patterson newspapers. Article attributes to you certain remarks derogatory of Jewish servicemen at time of Sicily hospital incident and falsely asserts soldier involved, Charles Herman Kuhl, was Jewish. Whole implication of article is that you are guilty of sentiments contrary to the fair-mindedness which my son's correspondence described. Would appreciate assurance of misrepresentation your attitude by aforementioned newspapers.

JOSEPH WILNER,
Washington, D. C.

HEADQUARTERS, FIFTEENTH
UNITED STATES ARMY, OFFICE OF
THE COMMANDING GENERAL, A. P. O. 408,
October 15, 1945.

Mr. JOSEPH WILNER,
Washington, D. C.

MY DEAR MR. WILNER: Replying to your Western Union telegram I am glad to have the opportunity of categorically denying that I have ever made any statement contrary to the Jewish or any other religious faith. I am a sincere believer in the Supreme Being and have never interfered with or even examined the religious or racial antecedents of the men I have the honor to command. My sole effort has been to provide victorious soldiers who can serve their country and defeat the enemy with the minimum loss to themselves.

With appreciation of and thanks for your interest, I am

Yours truly,

GEORGE S. PATTON, Jr.

HEADQUARTERS, FIFTEENTH
UNITED STATES ARMY, OFFICE OF
THE COMMANDING GENERAL, APO 408,
November 21, 1945.

Mr. JOS. A. WILNER,
Washington, D. C.

DEAR MR. WILNER: Replying to your letter of November 6, please accept my thanks for the interesting clippings enclosed and also for your kind remarks. I am sure that your interest in the matter has been amply justified by the results obtained.

Truly yours,

G. S. PATTON, Jr., *General.*

DECEMBER 12, 1945.

Gen. GEORGE S. PATTON, Jr.,
Heidelberg Hospital, Germany:

In common with all Americans shocked and grieved by your misfortune. Our congregation Adas Israel is offering prayers for your early recovery.

JOSEPH A. WILNER.

The British Loan

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Arkansas Democrat, Little Rock, Ark., of December 16, 1945:

THAT LOAN TO BRITAIN

You'll be hearing agonized yelps about our $4,400,000,000 loan to Britain. It must be approved by Congress, and all the vote-seeking foes of the administration will have a noble chance to sound off.

You know the tune they'll hit. The administration is squandering our substance. It's flinging the taxpayer's hard-earned money to a foreign nation. We'll never get it back. The unpaid loans of World War I will be reviewed with tremolo vocal effects and oratorical antics. There'll be touching references to the needs of our own people. The flag will be waved and resounding statements made about home and mother and the iniquity of plastering a mortgage on tots in the cradles.

Well, that's politics. Free government everywhere has its circusy aspect, and most healthy people like it. Life must be a dreary business in countries where government is just a dull routine of power doing as it likes, with no political plays and counter-plays, no rousing appeals to the people.

Apparently, the British House of Commons had its grandstand act in the course of approving the loan provisions. There were 2 days of debate, with the Conservative minority heckling the Laborites who are responsible for the terms of the loan. And Commons wasn't deciding on lending money—only on accepting it.

But this is one case where the borrower had much of the trading advantage on his side. The loan is vital to Britain, true enough. Yet it is also important to us that we make it.

For without this credit, Britain would have to embark on a fight for world trade by every device she could invent. Only so could she live. She would have to tighten relations with all parts of her empire and with her neighbor countries in northwest Europe, building up a trade bloc with preferential tariffs and quotas and any other means available.

We would be virtually shut out of that large market. We would have to battle that set-up, with its wealth of raw materials and its manufacturing skills, for trade in South America and every outlying corner of the world.

It would be sheer stupidity to force such a course on Britain. The cost to us in trade would eventually be far greater than the amount of the loan, even if it's never repaid.

More than that, Britain must be strong if there is to be a balanced world, with any prospect for peace. She is our natural ally, and a feeble, impoverished Britain during the years it would take her to recover unaided, would weaken our own position.

This loan isn't an act of charity. It's just good sense.

The British Loan

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 1, 1946

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I would like to include the following article by Clifford B. Ward, editor of the Fort Wayne (Ind.) News-Sentinel, concerning the proposed loan to Great Britain:

GOOD EVENING

(By Clifford B. Ward)

FEBRUARY 27, 1946.

DEAR MEMBER OF CONGRESS: If I were in your position as a Member of the Congress of the United States, I would vote against the so-called loan to Great Britain, for the following reasons:

1. It isn't a loan, but a gift. The English themselves prefer that it be so regarded.

2. Opposition to the loan in England is for the purpose of making those Americans, who are not too bright, believe that we have put over a sharp Yankee deal on the English, which, of course, is not true.

3. If we lend the English the three billion seven hundred million which they are asking, we agree as a part of the deal to cancel the two billion three hundred and thirty-one millions still due to us on England's World War I debt and also reduce the twenty-five billions which England owes us on the World War II lease-lend account to a figure in between fifty millions and seven hundred and fifty millions.

4. There is no provision for amortizing the principal of the new debt and no interest will be payable unless Great Britain has an export trade for more than 5 years which averages above its export trade for the years 1936–38 which is improbable. If this happens England will pay interest at the rate of 2 percent a year, but only if it happens. When the trade drops again, the interest payments stop.

5. If we make this cash-on-the-barrel head loan to England, forgiving all her World War I debt and canceling nearly all of its World War II lease-lend account, we set a precedent which we must follow in dealing with every other nation wishing a loan and owing us money. We must loan Russia the billions it is requesting while also canceling its debt. Then we must do the same for France and any other nation that puts the bee on us, else we will dangerously discriminate between nations.

6. The money which we are being asked to lend can only come from Americans who already hold nearly three hundred billions of dollars worth of I O U's from their own Government. With each loan that we now make, we will lessen the value of every one of our Government securities outstanding. Every investor in United States securities will take a loss as a result of the additional loans.

7. But while we are making these loans so-called to other nations at no interest, we are going to force our taxpayers to pay 2½ percent on them. Yet only a few years ago our Government said that one-third of our people were in need. Granting that this was an exaggeration for political purposes, the fact remains that few average Americans are in a position to give several hundred dollars apiece to the people of other countries.

8. The presumption is that we are a solvent country, but there is no one who knows whether we are solvent or insolvent as a Nation. There has been no balance sheet run off on our national resources and liabilities. Until such a balance sheet is struck off, we should make no more loans.

9. Granting that England and other countries need dollars, let's ask them what they have to sell. These countries all have tremendous assets by way of raw materials, land, military bases, etc. Let them sell us some of these things which we need and for which we are willing to pay.

10. The economic hope of the world is the United States, but that hope cannot be realized unless we keep on an even economic keel. We as a Nation do not exist merely to dissipate our wealth for the benefit of the rest of the world.

11. I am interested in what happens in the rest of the world, but I am primarily interested in what happens to us.

The Housing Bill

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 1, 1946

Mr. LeFEVRE. Mr. Speaker, there seems to be more confusion over the so-called Patman bill than on any legislation coming before the House in a long time. After all is said and done, the great majority seem to place the present lack of building materials right in the lap of OPA. Extension of price control in the housing field, as proposed by this bill, would appear to be unworkable and further prevent the recovery of private enterprise in housing. Price control in the lumber industry is not new. The experience over the past 4 years has brought out the unrealistic policies of OPA and accounts for the present lack of production. The statements from the Office of Price Administration that their policies are not hampering the production of lumber are absurd. Evidence from practical lumber manufacturers all over the country is absolutely contrary and this evidence comes from men who make lumber and not from those philosophizing about it. Mills are closing down because of the inadequacy of ceiling prices.

Let us get down to brass tacks. Low cost houses, costing around $5,000, require about 8,000 feet of lumber. Suppose this lumber averages in cost $90 per 1,000 feet to the consumer, and I believe I am very fair in this figure, the lumber bill would be $720. Now suppose to get adequate production it would require an increase in ceiling prices of 10 percent—and I do not believe this would be necessary—the increase in cost to the consumer would be $72. Now would not that be better than the present black-market proceedings? OPA has announced a few increases in the South, the western mills, and flooring mills. The story is that again the retail dealers are to be asked to absorb these increases. I believe the retail dealers have absorbed all they can afford. I sincerely hope the amendment which Mr. BUFFETT announced he would offer will be adopted. After fixing the amount necessary to get production, that amount will be passed along to the ultimate consumer and distribution would go through the regular channels. This would discourage illegitimate black-market dealers and there would be no discrimination between the retail dealers and the manufacturers.

I also would like to see another amendment adopted and added to the Wolcott bill—an amendment, which I understand will be offered, granting every possible priority for channeling all necessary building materials for the veteran's own home, or for his own business, or his farm buildings. After such requirements are filled, the producer or manufacturer of said building materials shall have the right to dispose of any surpluses through the regular distribution channels, for further building purposes.

This country needs housing for its veterans. First, let us smash the bottleneck and by law so change the present law so as to require some real workable policies, realistic and flexible enough to meet conditions and get production.

Civil-Service Appointments

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 1, 1946

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and memorandum received by me from the President of the Civil Service Commission:

UNITED STATES CIVIL
SERVICE COMMISSION,
Washington D. C., February 27, 1946.

Hon. JOHN W. McCORMACK,
House of Representatives.

DEAR MR. McCORMACK: The President of the United States, on Monday, February 4, 1946, signed Executive Order No. 9691 "directing the Civil Service Commission to resume operations under the Civil Service rules, and authorizing the adoption of special regulations during the transitional period."

As the signing of this order and the issuance by the Civil Service Commission of regulations to carry out the provisions of the order relate directly to the problems of those seeking employment in the Federal Government, as well as the problems of those who

are now employed in the Departments and agencies under war-service appointments, we thought that it might be helpful to you if we gave you a brief summary of the new program.

The Executive order is, in effect, a directive to the Civil Service Commission to begin operations at once for holding examinations for regular civil-service appointments.

As you know, since March 16, 1942, all appointments in the Departments and agencies, with the exception of the field service of the Post Office Department, and since October 23, 1943, all appointments in the field service of the Post Office Department, have been for a period not to exceed the duration of the war and 6 months thereafter. The primary reason for making provision for these war-service appointments was to make sure that positions in the Federal service would not be filled on a permanent basis while millions of our fellow citizens were serving in the armed forces.

As a result, the Civil Service Commission does not have today any lists for regular civil-service appointments. It must start from the beginning in compiling such lists. Such a start will be made within the next few weeks. As we announce examinations for regular civil-service appointments, we will, as has been the case in the past, inform your office of these announcements.

During the period that we do not have lists for regular civil-service appointments, the departments and agencies under the provisions of the Executive order are authorized to make purely temporary appointments pending the establishment of our new lists. This is in accordance with the practice which has been followed since the civil-service system was first brought into existence in 1883.

In making these temporary appointments, however, the departments and agencies must give preference first to disabled veterans, second to nondisabled veterans, and third to former Federal workers. They must also conform to the qualifications standards for the various jobs in the Federal service as issued by the Civil Service Commission.

Persons interested in securing these temporary appointments may be referred direct to the departments and agencies where persons with their particular qualifications are being hired. If your office is not informed where persons with particular qualifications are being hired, applicants may be referred to the Civil Service Commission, or to one of the regional offices, where they will be given all available information.

The President's Executive order also sets forth the policy to be followed in determining the future status of persons now serving under a war-service appointment. Such persons, if they have any hope of continuing to serve in the Federal Government, must file for the regular civil-service examinations when they are announced for the types of positions now occupied by them. If they fail to pass these examinations when they are announced, they will be replaced by persons from the top of the regular civil-service lists. Many of the persons at the top of these lists will, of course, be veterans, in accordance with the provisions of the Veterans Preference Act of 1944.

War-service appointees who take and pass the regular civil-service examination will, in many instances, be certified for a regular civil-service status provided, of course, that all veterans who have superior rights under the Veterans Preference Act of 1944 are taken care of first. The Civil Service Commission and its regional offices, as well as personnel offices of the various departments and agencies are prepared to explain the conditions under which a status is acquired. Thinking, however, that you might, from time to time, receive inquiries from interested persons concerning this and other questions, we are enclosing with this letter a memorandum which you may desire to use in replying to correspondence.

The Civil Service Commission is fully aware of the heavy work load in all offices of Members of Congress growing out of the human problems which are the direct result of the transition period from war to peace. To the extent that these problems affect civil-service applicants and employees of the Federal Government, we want to assure you that we stand ready to assist you in every possible manner in dealing with these problems.

If you have any questions relative to the matters set forth in this letter, or any other matters over which the Commission has jurisdiction, please feel free to communicate with us.

Very sincerely yours,

HARRY B. MITCHELL,
President.

CHANGES UNDER EXECUTIVE ORDER 9691

1. Regular civil-service appointments to be resumed: As directed by Executive Order 9691 of February 4, 1946, the Civil Service Commission has begun operations for holding civil-service examinations for regular appointments. It will not be possible to announce all the examinations at once for the hundreds of types of positions that exist in the Federal service. Some of the examinations will be announced in the near future; others later.

2. Establishment of eligible lists: The eligible lists resulting from these examinations will be set up in the order determined by eligibles' numerical ratings modified by such factors as veteran preference and by the State apportionment in filling positions in Washington, D. C.

3. How war-service employees may acquire a civil-service status: If a war-service appointee takes and passes the examination, he may receive a regular civil-service appointment in one of the following ways:

(a) If he receives a high enough grade so that under the regular certification provisions the Commission reaches his name in the course of filling requisitions for personnel, he will be certified to the agency in which he is employed for a regular civil-service appointment.

(b) If, under the regular certification provisions, the lowest rating reached by the Commission on the list on which his name appears does not exceed his rating by more than five points, he may, upon recommendation of the department or agency in which he is now working, be given a regular civil-service status provided all veterans ahead of him have either been appointed or have received the consideration to which they are entitled under the Veterans Preference Act of 1944. This means, for example, that if, in connection with supplying names to departments, the Commission has reached the grade of 89 on an appropriate civil-service list any nonveteran war-service appointee who has received a grade of 84 or more on such list may be given a regular civil-service status provided that all veterans above him have been appointed or have been given the consideration to which they are entitled under the Veterans Preference Act of 1944.

In order to receive a regular civil-service status under the second plan, as in (b), the person holding a war-service appointment must have served for at least 1 year. In determining whether his service has been for this length of time, military service will be counted if he left the position to enter military service.

4. Temporary appointments authorized until probational appointments can be made: Until the civil-service examinations have been held for probational appointments, and the eligible lists have been established, Federal agencies have been authorized to fill their vacancies through temporary appointment. Agencies will receive applications for temporary appointment, determine the applicants' qualifications (in accordance with the Commission's standards), and will make selections from among those who are qualified. They will be required to consider applicants in the following order: (1) 10-point preference veterans; (2) 5-point preference veterans; (3) former Federal employees who are not veterans; (4) other applicants. The temporary appointment may continue until an eligible list is established and appointment is made to fill the position on a probational basis.

5. How to apply for temporary appointment: Application should be made to the Federal agency or establishment in which employment is desired. If the applicant does not have information indicating where persons with his particular qualifications are being hired, he may communicate with the Commission or with one of its regional offices and he will be given all available information.

6. How to establish eligibility for probational appointment: Persons who wish to establish eligibility for regular appointment must qualify in an examination given for such appointment. When the examinations are announced they will be given appropriate publicity.

We Desire Cordial Relations With Russia

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks and following the great address in the Senate by the able and brilliant Senator from Michigan, ARTHUR H. VANDENBERG, on February 27, I desire to call attention to the House and to the country of a portion of the program of the Communist International.

Is the United States playing the same role today that Chamberlain did at Munich—appeasement?

Members of Congress and representatives of the press have repeatedly expressed their incomprehension of the aims and motives of the Soviet Government in its present policies throughout the world. There is little cause for bewilderment on this score since the unrepudiated and still valid program of the Communist International has made this unmistakably plain. The present confusion results from the temporary suspension of these aims for the period during which the Soviet Union was under direct attack from Nazi Germany and in dire need of the aid of the democratic capitalist countries. Every act of the Soviet Union and its foreign agents in the Communist Parties in this and other countries demonstrates the resumption of these aims on a higher scale and the present validity of this statement which I quote from the program of the Communist International:

World economy has been split into two fundamentally hostile camps, the camp of the imperialist states and the camp of the dictatorship of the proletariat in the USSR. The difference in class structure and in the class character of the government in the two camps, the fundamental differences in the aims each pursues in internal, foreign, economic, and cultural policy, the fundamentally different courses of their development, bring the capitalist world into sharp

conflict with the state of the victorious proletariat. Within the framework of a formerly uniform world economy, two antagonistic systems are now contesting against each other: the system of capitalism and the system of socialism. The class struggle, which hitherto was conducted in forms determined by the fact that the proletariat was not in possession of state power, is now being conducted on an enormous and really world scale; the working class of the world has now its own state—the one and only fatherland of the international proletariat. The existence of the Soviet Union and the influence it exercises upon the toiling and oppressed masses all over the world is in itself a most striking expression of the profound crisis of the world capitalist system and of the expansion and intensification of the class struggle to a degree hitherto without parallel in history.

The capitalist world, powerless to eliminate its inherent contradictions, strives to establish international associations * * * the main purpose of which is to retard the irresistible growth of the revolutionary crisis and to strangle the union of proletarian republics by war or blockade. * * * Thus, as a result of the first round of imperialist wars a new, fundamental antagonism has arisen of world historical scope and significance—the antagonism between the USSR and the capitalist world.

Those who cherish the illusion that if we grovel sufficiently in our appeasement policy or if we rely upon the good will of the Soviet leaders, cordial relations with the Soviet Union will be assured, are not looking facts in the face and are doomed to bitter disillusionment. I am heartily in favor of cordial relations with the Soviet Union, but the leaders of that country will have to demonstrate by their behavior the sincerity of their desire for such relations, before America can rely upon them. Thus far they have established little ground for confidence.

Wyatt Asks Builders for Full Effort

EXTENSION OF REMARKS
OF
HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks, I include the following article from the February 28, 1946, issue of the Chicago Sun:

HOUSING CHIEF IN APPEAL HERE—WYATT ASKS BUILDERS FOR "FULL EFFORT"

(By Leonard Castle)

Wilson W. Wyatt, National Housing Administrator, told the Nation's home builders last night that his program for the construction of 2,700,000 new homes in the next 2 years offers them the greatest opportunity and the greatest challenge in history.

Speaking at the National Association of Home Builders' convention at the Stevens Hotel, Wyatt said that "the role of the private home building industry is at the core of the entire veterans' emergency housing program."

FULL EFFORT URGED

The Nation needs and must have "full effort, full participation and full cooperation" from home builders and "on that basis we can meet the challenge of the veterans housing emergency and we can lick that emergency," Wyatt said.

His plea for full cooperation was presented as various members of the association were assailing the program as a "conspiracy for socialized housing," and there were indications that the convention today would place itself formally on record in opposition to the Wyatt program.

"PRIVATE ENTERPRISE," HE SAYS

At an earlier press conference, Wyatt answered the charge of "socialized housing" by contending that "this is a private-enterprise program, from soup to nuts."

He explained that 2,500,000 of the homes would be constructed by private builders, while the remaining 200,000, in the form of temporary, emergency housing, would be built by private industry under contract to the Government.

"It is inconceivable that the home builders would oppose the program," he told reporters. "I don't feel that the home builders are against it. If they are it is sheerly through misunderstanding. The program offers them their greatest chance for sustained activity at a minimum of risk."

WYATT ASSAILED IN LOBBY

Wyatt had said in Washington Tuesday that an "integrated lobby" was opposing the program. Frank W. Cortright, executive vice president of the association, said here yesterday that the home builders' group "has made no statement of policy on Wilson Wyatt's housing program."

"We have no lobby either attacking or defending it in Washington," Cortright said, adding that no stand would be taken until after a board meeting with Wyatt today.

BOON TO JOBS SEEN

In his speech, Wyatt told the builders: "If we face up courageously and vigorously, we will have done due service to the urgent needs of our veterans.

"We will have built an industry which will contribute in vast measure to full production, employment, and prosperity in America. And we will be adding to the heritage of America the treasured right of decent homes for all families."

The Government's role in the housing program, he said, will be to get the materials, the labor, the financing aids, and all other needed assistance into the hands of the men who will build houses.

The No. 1 bottleneck, today, he explained, is a shortage of materials and the Government intends to break this bottleneck by premium payments to manufacturers.

SIX HUNDRED MILLION NEEDED

The legislation now before Congress calls for an appropriation of $600,000,000 to make these premium payments to speed up production.

Other steps the Government anticipates taking under the program were listed as:

1. Obtain 1,500,000 additional building trades workers through a vigorous recruitment and liberalized apprentice training program, with special emphasis on attracting veterans to the building trades.

2. Assure adequate financing for moderate and low-priced homes. "The future of the housing industry as a large volume leader in the American industrial system lies in that mass housing market."

3. Cooperate with organizations striving to modernize local building codes to permit "the use of all sound new materials and new construction methods." He said he was sure builders generally would support the removal of all needless and obsolete restrictions in local building codes.

4. Tap the capacity of prefabricators. He denied that this phase of the program involves unfair competition with conventional home builders for "under this emergency program there will be capacity business for all."

When the goal of 2,700,000 homes is achieved, Wyatt said, the industry will not have built itself out of a market, but will have put itself in postion "to start on the sustained long-range job of building decent homes for all American families in enormous, record-breaking numbers, every year."

LONG-RANGE PLANS URGED

"That is why the need for emergency housing measures and basic, long-range measures are inseparable and equally urgent.

"That is why the veterans' emergency housing program includes both essential emergency measures and the general housing bill which would stimulate sustained development of new markets for private housing, help in rebuilding of our cities, and provide for our families of low income," Wyatt said.

Statement of Henry J. Kaiser

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Henry J. Kaiser before the Banking and Currency Committee, United States House of Representatives:

My response to your invitation to testify today stems from a deep sense of duty as an employer to my employees, as a seller to my customers, and as an industrialist to my colleagues in the business world.

The subject before us is of such momentous importance to America and to the civilized world that it calls for a clear and uncompromising statement of position. In requesting my presence here, it may be assumed that your committee believed we could speak from the experience of operating 25 industries, including steel, aluminum, chemicals, ships, home construction, household appliances, cement, concrete, and many other construction materials. It is not generally known that certain of these industries were in successful operation for many years before the outbreak of the war, and that for 30 years we have been marketing products to the public, direct and through dealers.

These 25 enterprises operate today at least 50 plants, grouped at 5 major regional centers—southern California, northern California, the Northwest, the Midwest, and the East. They produce more than 130 different items, marketed as individual products some of which are listed here: Agriculture, aircraft, aluminum, automobiles, cement, chemical, concrete, contracting, engineering, ferroalloys, gypsum, household appliances, housing, insurance, iron and steel, lime, machinery, magnesium, medical, mining, refractories, sand and gravel, shipbuilding yards, ship repair yards, steamship.

SOUTHERN CALIFORNIA

Kaiser steel plant

Pig iron, coke, steel ingots and blooms, toluol, creosote, slag, pipe stock, steel plate and structural shapes, tar, ammonium sulfate, xylol, flake pitch, steel merchant bars and shapes, sheet piling and specialties, phenol, light and fuel oils, benzol, solvents, sodium carbonate, reinforcing steel, fertilizers.

Long Beach plant

Automobiles.

NORTHERN CALIFORNIA

Richmond shipyards (Nos. 1, 2, 3, and 4)

Victory ships, coastal vessels, C4 cargo vessels, repair work.

Permanente industrial center (near Palo Alto)

Portland cement, rock products, lime, magnesium, light metal alloys, sand castings, magn sia, magnesium, hydroxide, oxygen, brick, periclase, volitalized silica, raw dolomite, calcined dolomite, hydrated and processed lime, doubled burned dolomite, ramix, ferroalloys, fluxes, miscellaneous chemical specialties.

Building materials plants

Washed gravel—all sizes, crushed gravel—all sizes, crushed rock screenings, railroad ballast—all types, crusher run base, slurry base, concrete sands, plaster sands, asphalt sands, stock car sand, asphaltic concrete—all types, plant mix, oil mixes, stabilized base, ready mixed concrete.

NORTHWEST

Columbia River shipyards, Portland, Swan Island and Vancouver

Victory ships, coastal vessels, C4 cargo vessels, repair work.

Spokane aluminum plants

Aluminum ingots, aluminum sheet.

MIDWEST

Willow Run plant

Automobiles.

EAST

Fleetwings aircraft plants

Military aircraft, hydraulic valves, aircraft subassemblies, stainless steel specialties, personal aircraft, appliances.

The inflation which we are called upon to fight today is due in major part to the tremendous demand for goods of all kinds throughout the world. The unsatisfied needs of mankind, not only in America, but in every land, exert the greatest pressure on the price structure. Our huge wartime national income has swelled the demand for ample food, new clothing and adequate shelter. The price of these necessities is our first concern. They must not be priced beyond the people's reach. The people of America are hungry, besides, for all of the other manufactured products that industry can produce. Let me give you a dramatic example from our own experience in the automobile market in New York City. Men and women stood for hours in a blinding snowstorm, in a line four-deep and four blocks long, hoping to see and to place orders for the transportation they so sorely needed. Similar demonstrations appear daily on every main street in America where lines form to purchase the limited supplies of certain staple foods and certain luxuries, such as nylon stockings and other products, which are considered essential to a high standard of living.

There is grave danger in the common argument that this tremendous demand could be met by so simple a device as removing price controls. Such an expedient would spell ruin for the great mass of mankind which has only limited purchasing power. The long years of war all but exhausted the basic supplies in the markets of the world. This tragic circumstance has created a scarcity without parallel. The situation calls for the utmost cooperation between all branches of industry, labor, and Government to maintain sound price levels, and thus protect the dollars that will convert wants and needs into purchases until production can satisfy demand.

The enterprises for which I am responsible are business organizations. For more than 30 years we have been engaged in those fields of free enterprise which are the most highly competitive. In the hard school of experience, we have faced the problems of production. We know the problems of selling. We know the importance of costs and the survival value of efficiency. We know the importance of looking ahead and in that foresight we have confirmed our belief in the future of this country. We know that sound business is not out to make a quick killing.

From all this experience, we are today ready to testify that the surest cure for inflation is production—the highest possible level of production at the earliest possible moment. Production, not price control, is the problem that we must solve. The Office of Stabilization can and will help us to increase production, and I am certain that the OPA will handle its pricing power to the end that maximum production will be achieved.

I cannot agree with those who profess to be able to estimate the extent to which the new wage-price policy will increase the cost of production. Thus far generalities about future costs are too vague to be convincing, and no one will deny that we are still a long way from potential peacetime production levels. As a matter of fact we can cite instances from our own experience where increased wages have actually lowered costs through increases in production.

I hear no dissent from the principle that increased production is the true solution to the problem of inflation. If this principle is sound, then the best way to increase production will be to stop bickering and go to work, with all sides ready to give and take in the all-important effort to raise production to the level of demand.

As a people trained in the democratic tradition, we cherish the right to criticize our Government in all its branches, but the best criticism stems from experience. In managing 25 industries we have come to learn how the OPA works. In all of our enterprises, throughout the war and since, we do not know of a single instance in our dealings with the OPA where, after the facts were presented, we were not accorded fair and equitable treatment by this agency. This statement covers our total experience with the OPA as a seller and producer in the market.

As a buyer under the OPA for our various industries, we can again report satisfactory treatment. We, too, are faced with a shortage of essentials. Our experience indicates that the supply of basic materials is equal to about half of the demand. As buyers, we would be greatly concerned if suddenly all restrictions on the seller were removed and we were compelled to bid at auction for vital supplies.

To illustrate the point, this committee may be interested to know that as buyers we recently faced new situations wherein we found ourselves unable to purchase steel. In the first instance, the Kaiser Co. tried for 4 months to place orders for sheet steel for the production of a low-priced dishwasher. Our inability to satisfy this requirement from any supplier forced us to adopt an aluminum tub for this household appliance.

The Kaiser-Frazer Corp. encountered exactly the same experience in regard to steel for automobile bodies. Until this week we were unable to secure a commitment on any specified tonnage of steel for the manufacture of automobiles. Some suppliers said that no tonnage was available. Others promised to advise us later on how much tonnage we can have and when.

The Kaiser interests are taking four steps to remedy this alarming situation:

1. We have expressed our belief that a failure on the part of industry to cooperate in this critical emergency will necessitate action on the part of the Stabilization Director.

2. We have approached Mr. Bowles with the request that he study such allocation of steel as would be fair and equitable for all producers. This would preserve that competitive force which is so indispensable to the life of American industry.

3. We have been obliged to lease from the Government and to operate an aluminum ingot plant and an aluminum rolling mill in order to produce our own raw materials. In the aluminum industry we will welcome regulation from the OPA in our pricing of this light metal which is also in critical shortage. Only recently we were advised that the earliest delivery of aluminum which we could expect was 48 weeks, which comes dangerously close to being a year.

4. Finally, the shortage of steel sheet is so critical that in addition to leasing the aluminum plants we are also studying available DPC steel plants. At South Chicago, for example, there is a Government-owned, war-built $93,000,000 steel plant for which competitive bids are to be received April 1 by the War Assets Corporation. We are investigating this plant, with the thought in mind that there may be ample floor space to increase its facilities and to install a strip mill for the rolling of steel sheets. If our studies show it is economically sound, we will be among the bidders making a proposal to the War Assets Corporation.

In our opinion, the consumer demand for products requiring sheet steel is so great that it will require the operation, for at least 3 years, of all of the steel capacity of the United States, including the additional capacity installed during the war. Again I say, the only way to reduce government controls is to use all of our existing facilities for production, and to build, where necessary, new facilities to give us increased production and meet the demand. Congress has already done its part in providing the Surplus Property Administrator with ample authority to make these plants quickly available to industry, after a check by the Attorney General to insure they are so allocated that competition is encouraged.

I have thus spoken from experience because I do not wish to generalize. In facing the actualities of inadequate supply, we have learned that price control is vital to the health of our country through this emergency, and that inflation will finally be brought into balance by production. It is now altogether clear that the Office of Stabilization is necessary at this critical juncture in order to protect buyers, sellers, and the public both as to pricing and as to allocation; for these two are kindred necessities in a market where demand so far exceeds supply. In this transition period from war to peace, when the barrel holds so much less than the customers want, the customers will either fight for it or overbid for it. When industry produces enough barrels full of the things that people want, then we won't need allocation and price control.

The National Association of Manufacturers has recently taken full-page advertisements in the Nation's press to urge the abandonment of OPA. In this campaign, NAM has given no indication of how this procedure would remedy the present emergency. I cannot believe that this is the unanimous verdict of its members. Outside of NAM there are thousands of manufacturers whose opinions are certainly not represented in NAM's advertisements. I know that the NAM has not approached us for our viewpoint. The vast majority of American businessmen in trade and production, who are not members of NAM, are a force to be reckoned with, and should be heard.

With this knowledge, it appears to me that the NAM—before taking a position in which it presumes to represent American industry—should make a poll and furnish this committee with its results. In preparing a questionnaire for such a poll of American industry, the facts for and against inflation should be presented. If NAM prefers to poll only its own members, we may hope that it will make some attempt to find out what the employees of its members are thinking, because, after all, it is the people who will have to pay the price for inflation.

I notice a tendency today to use the phrase "the little man." I presume this means the plain citizen whose voice is too seldom heard. If this is a proper definition, "the little man" is industry's biggest customer. He is the one who needs protection. The savings of the worker, the widow, and the dependent would suffer most if we permit the United

States to stage a general auction in which the price of everything will be bid up until only the few can satisfy their needs. America's huge financial reserves, born of war and represented by the earnings and savings of our people, must now have that fair and equitable protection which is afforded by agencies such as the OPA and the Office of Stabilization.

One look back into history should be enough to convince us that we must not open the road to uncontrolled inflation. We had the experience—after the abandonment of price control—of the soaring boom of 1919. And we had the experience of a total bust in 1920. Does experience teach us nothing?

There is no more brilliant chapter in the history of American economics than the story of price controls throughout the Second World War. The necessity for those controls will not be past until full production has been achieved. There is, as yet, no convincing argument that full production must await removal of price controls. The answer would be an inflation of disastrous proportions, in the financial markets, the commodity markets, and throughout the whole field of production and distribution, and, as always, laying its heaviest toll on those who are the least able to bear it.

In concluding this statement, the committee should understand that I do not believe that the OPA is perfect—there is no such thing as perfection anywhere. It is easy to criticize, easy to say what should have been done, or what should be done, as one watches from the sideline. It is a real responsibility, however, to initiate a program such as the OPA, to coordinate it, to guide it, and to keep it free from those who may unwittingly hurt it with criticism. This is not a time when we need criticism. We need to work together for the common good, which is increased production. The OPA needs help from everyone—from Congress, from the people—and we must all join in the use of this agency, and make it stronger by giving it our confidence.

Expansion of the Marine Corps

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. KOPPLEMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to insert a copy of my radio address which I made February 27 over Station WDRC, Hartford, with regard to H. R. 5331, which I introduced on February 1, to expand the Marine Corps for occupation duty, and replacements:

This evening I would like to discuss a bill which I introduced in the House a few weeks ago regarding the expansion of the Marine Corps. Senator MCMAHON introduced the companion bill in the Senate. Before introducing the bill both of us consulted with Government officials, especially Marine Corps officers of top rank, and with private citizens, among whom was Thomas Beck, of Wilton, Conn. All of us are deeply concerned because GI's and their families are asking why they are not being discharged, now that the fighting is over. Yet, like all responsible American citizens, we recognize the importance of retaining a substantial part of our armed forces for some time to come, and that we have an important job to do in the occupation of countries in Europe and Asia until conditions are more nearly normal.

Our bill is chiefly for the purpose of assigning our occupation responsibilities to the marines. Especially in so-called peacetime, the marines have traditionally been the American occupation force—they are trained for that work—they know when they enlist that their duties will carry them to foreign lands.

The present peacetime strength of the Marine Corps is 100,000. Its top wartime strength was under one-half million. Our bill would expand the corps, through volunteer only, to 700,000. Only for a time, during the war, were draftees permitted to select the Marine Corps. But now all men who enlist in the Marines, do so as volunteers in the regular corps, not as reserves. Bear that distinction in mind. There is a difference between the regulars and the reserves whether you are talking about the Army, Navy, or Marines. The regulars enlist for a definite period, peacetime or wartime, to serve as long as their enlistment lasts. The reservists are the millions of men who enlisted or were drafted for the war, to serve as long as the emergency lasts. For instance, they are eligible for discharge on points. The regulars are not.

I have made this explanation because I want to point out emphatically that our bill calls for volunteers in the regular Marine Corps. If our bill passes, it will enable the speedier discharge of the millions of men still in the reserves of the Army, Navy, and marines, who feel that since the fighting has stopped, they are entitled to return home.

The draft law expires on May 15 unless Congress extends it. In order to stop the draft, a tremendous drive has been made for volunteer recruits in all the services. More attractive inducements are offered, but volunteer recruiting has not been as fruitful as we hoped. Consequently, our bill offers not only more attractive housing, educational, and recreational opportunities but also, and this is most important, more pay.

I believe that our failure to reach our recruiting goals is due largely to the inadequacy of the pay we have been offering. Personally, I doubt that a former GI, are one who now anxiously is counting the weeks until he can get home, will care how much money the fellow gets who elects to go over and finish the job.

There is another angle to this pay item. Except in war, when we glorify everyone who wears a uniform, unfortunately we do not look upon the man who joins the Army or Navy with the respect which is due him. We don't give him the incentives to serve his country in military life that we give him in civilian life. The pay is paltry and, hence, capable young men who would benefit from such service, and from whom the country would benefit, look askance at the idea that they join the Regular Army, Navy, or Marine Corps for a period of, say, 2 to 4 years. Any man with ambition is bound to feel that he can do better financially at any other job.

Consequently, for the most part, our peacetime services have drawn into the ranks the fellows who couldn't do better in civilian jobs. And yet, service in the Army or Navy is fully as important to the Nation as service in any other Government branch.

World conditions are far from stable. We ranked high in the councils of war because we not only had the arsenals, we also had manpower. We had all the wherewithal for victory. There are grave questions to be decided before the peace can be written. There are serious differences of opinion between our member allies which we will be called upon to decide. We cannot do as we did in 1920—build a fence around ourselves. The world can be encompassed in a matter of hours. The world can be destroyed in a matter of hours. The fence age belongs to past history.

Until we know what security and protection our Nation can depend upon from the international police force which is provided for in the United Nations Charter, a force yet to be developed, we cannot willy-nilly withdraw our forces, weaken our protection, curtail our Army and Navy, and say "We will peace, therefore we shall have peace." We thought we could do that once in a less dangerous age. We were wrong.

It may be months, it may be years before we can, with other nations, decide on just what strength our Army and Navy must be, just what share of the world will be ours to police, but until that time, any irresponsible weakening of our strength will spell disaster for ourselves, and surely for our children. We don't know what awaits us, and until we do know, we cannot weaken the foundations of the peace we are attempting to build by destroying our most potent argument—a big stick.

Opinions still differ as to how large our occupation forces must be. Some say 350,000 for the Pacific and 335,000 for Europe, besides those in training.

Our bill does not seek to eliminate the Army and the Navy. Both Senator MCMAHON and I feel that fewer men will be required if the big occupation job can be turned over to the marines.

By June 30, all men in the Army with 2 years in service will be eligible for discharge. Many with 2 years of service will be out before that time. Not all, but some of them will have to be replaced. But the question then arises—how many such replacements can be obtained? Selective Service has stopped drafting the fathers. Surely then, all fathers in service should be released. Selective Service has also stopped taking men over 26. Consequently, all men over 26 should be discharged. That limits us to non-fathers between the ages of 18 and 26. That reservoir has been pretty much depleted. I personally doubt that we can obtain enough draftees from that category to replace the men who are entitled to return, which means we must appeal to volunteers.

Of course, as time goes on, our overseas and domestic needs will be smaller. But for some time to come, we will need forces overseas as well as in this country.

We can streamline that occupation job, so far as manpower is concerned, by training men especially for occupation duty. And that is where the Marine Corps comes in, because by training and tradition our marines have always done our occupation job and done it well. There are over 100 instances wherein our marines have served as occupation troops, not necessarily from the standpoint of military occupation, but oftentimes, as right now in China, by invitation of the country to help them recuperate.

Our occupation troops can do a marvelous job of good will. Their conduct will impress the people of the nations where they are stationed—either for good or for bad. The marines have a splendid record for esprit de corps—or, in other works, great team work.

It's not easy for someone like myself to direct young men to give up their careers and delay their planning for their futures by remaining in service. I can well appreciate their natural desire to come home. I can well appreciate the natural incentive which made them do the job superbly while the job they thought necessary had to be done, but now that fighting is over, and since they are really civilians, they want to get back to civilian life.

An alternative must be found. And I think that the bill Senator MCMAHON has introduced with me is the answer. The marines have had good reason to boast of their corps d'esprit. They have built it up through 170 years of glorious achievement, during peaceful years and bitter years of fighting. I am not making a brief for them. They have made their own. I am asking the Congress to make it possible for the Marine Corps to expand its ranks, to enlist young men from 18 to 25, single young men with no home ties, to make it worth their while to

give, 2, 3, or 4 years to their country during these critical years during which we must have a force in readiness while we build the foundation for the peace we hope will last for all time.

Our fighting men have done a marvelous job. It is now our duty to permit them to write finis to their job as early as possible. I know the marines will be delighted to take over this added responsibility.

The Taxicab "Army"

EXTENSION OF REMARKS
OF
HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 1, 1946

Mr. ROWAN. Mr. Speaker, I submit the following editorial from the February 23, 1946, issue of the Evening Star of Washington, D. C.:

THE TAXICAB "ARMY"

Granting that citizens have the constitutional right peaceably to petition Congress respecting their grievances, it is not clear what the "invasion" of Washington by a Chicago taxicab "task force" of 150 cabs and their drivers is expected to accomplish. The grievances voiced by leaders of the "army" have to do with alleged injustices done them by the city of Chicago. More specifically, the protesting drivers, most of them war veterans, are complaining about a Chicago ordinance limiting to 3,000 the number of taxicabs licensed to operate there. That would seem to be a strictly local matter which does not concern Congress or the Federal Government, yet the drivers apparently have vague hopes of obtaining Federal intervention through some sort of legislative action or Department of Justice proceedings under the antitrust laws.

Washington, with painful memories of other veterans' marches after the First World War, is gratified that the uninvited delegation has conducted its invasion in orderly fashion. It is disturbing to local officials and residents, however, to learn that the group is making no plans for early departure, despite the fact that its members are running out of funds and have begun to appeal for financial aid. The city already has assisted the "army" in finding a bivouac, although it must be admitted that in turning over Camp Simms to the visitors the Commissioners were not only accommodating the drivers but relieving Washington's already congested streets of added parking burdens.

One danger of this type of demonstration is that it has a tendency to induce other groups of petitioners to adopt similar methods of focusing public attention on their problems. The march on Washington in 1932 by veterans demanding bonus legislation began in a small way in May of that year, when the first small groups of veterans arrived from the Midwest. The early arrivals were orderly and were extended every possible courtesy by the police. The movement grew by leaps and bounds in June and July, however, with radical elements taking an increasing interest in the demonstration. Disorder followed disorder until the climax on July 28, when two resisting veterans were shot fatally by police and troops were called out to evict the "bonus army" from its Anacostia camp.

It is interesting to recall that in his report on the origin of the disorders, Attorney General William D. Mitchell told the President: "This experience demonstrates that it is intolerable that organized bodies of men having a grievance or demand upon the Government should be allowed to encamp in the city and attempt to live off the community like soldiers billeted in an enemy country. Attempts by such groups to intimidate or coerce Congress into granting their demands hurt rather than help their cause." The Chicago taxicab "army" fortunately cannot fairly be said to fall into the category of offenders that the Attorney General had in mind. But there is always the possibility that demonstrations of this kind will lead to other marches by less orderly groups.

Disabled American Veterans' Day

EXTENSION OF REMARKS
OF
HON. JAMES DOMENGEAUX
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 1, 1946

Mr. DOMENGEAUX. Mr. Speaker, I am today introducing a joint resolution which would establish a just and lasting tribute to that large number of our fellow Americans who offer the greatest evidence of the horrors and aftermath of war.

I propose that the first Sunday in December of each year be set aside throughout our Nation as Disabled American Veterans' Day, in honor of those who have given their health, their youth, and their future in the cause of America and for the sake of a better world for all mankind. The observance date has been selected because of the fact that it was on a Sunday, December 7, 1941, at Pearl Harbor, T. H., that Americans were first called upon during World War II to sacrifice their lives, their limbs and their blood at the hands of militaristic and ruthless aggressors. The victory over those forces that would destroy freedom has been won, but at the cost of a great human toll.

It is most fitting and proper that we set aside a special day in commemoration of the sacrifices of those who have been wounded, gassed, injured, or disabled while serving actively in the defense of our Nation in time of war. In time of peace we are all too likely to overlook the problems that face these men whose jangled nerves, shattered minds, and wrecked bodies bear testimony to their devotion to their country and their willingness to give their all in order that right and justice prevail. There is need that public attention be called periodically to the duty of extending a helping hand to deserving disabled veterans and their dependents, and the dependents of our war dead, and to the preservation and promotion of the rights and benefits to which they are entitled. It is particularly necessary that the war disabled be assured the opportunity of self-sustaining, gainful, and useful employment, supplemented by adequate compensation, medical treatment, hospitalization, and vocational training, justified on the basis of their service-incurred disabilities. It is a privilege and duty that our entire citizenship support all constructive measures deemed to be desirable on behalf of the disabled veterans, their dependents, and the dependents of our war dead.

The measure I am sponsoring authorizes the President of the United States to issue annually a proclamation calling upon officials of the Government to display the American flag on all Government buildings on the first Sunday of each December, and urging the public to observe the occasion in schools, churches, or other suitable places, with appropriate ceremonies.

I hope that Congress will speedily adopt this measure. It is the least we can do for those who have done so much.

Maj. George Fielding Eliot Doubts Benefits of Unification

EXTENSION OF REMARKS
OF
HON. ED. V. IZAC
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 1, 1946

Mr. IZAC. Mr. Speaker, under leave to extend my remarks, I am including an article appearing in the February issue of Sea Power by Maj. George Fielding Eliot, a leading commentator on military and naval affairs for many years. Unaffiliated with any specialized group or interest he has expressed his own opinions in the pages of the Nation's newspapers and magazines, in books, and over the air waves. This article on the subject of the merger of the armed forces is based on testimony which Mr. Eliot gave before a congressional committee recently:

The supporters of the program of unification of the services rest their arguments largely upon conjectural benefits. They believe that the system they propose will produce results beneficial to the national security, and to the armed services which must be the pillars of that security. Presenting these beliefs, they ask that a system which has in fact proved itself an adequate instrument of victory be changed for a system which has, in fact, wherever it has been tried by this Nation or any other, been disastrous in its results. Their conjectures are directly opposed to fact.

It is a fact that, whenever a naval service has been subordinated to a land service, or placed in a position where it could be primarily controlled—as to policy, appropriations, organization, and general direction—by land officers or by an administration in which land officers had a controlling voice, it has deteriorated. This is the universal verdict of history. There are no exceptions.

It is a fact that no nation has been able to develop true air power except when, by one means or another, the development of its air forces has been freed from the control of officers of the land and sea services. This, too, is the universal verdict of history, though the experience we have had with aviation is far shorter than with sea power.

Now the primary purpose of the bill before you is unified control of our armed forces. The bill seeks to introduce the element of one-man decision over all our armed forces at a lower echelon of command than that of the President of the United States. It seeks to compel agreement between them by appointing a single Secretary and a single Chief of Staff who can, at some point in a discussion, say: "That is enough; I have made my decision." When you do that, you commit the future security of the United States to the wisdom of that single decision. You

make a mistake against which all experience arises to warn you.

You are gambling the future of this country on the chance that your Secretary of the Armed Forces will always be impartial, uninfluenced, and evenly balanced, and that the Chief of Staff of the Armed Forces, his principal military adviser, will always, as he assumes office, forget all his ties with his own service, and at the same time acquire, by some mysterious heavenly gift, a complete understanding of the needs and nature of the other two services.

It will not happen that way; it has never happened that way.

Let us look at the record of history. From the earliest days of sail, naval warfare has, in essential respects, been different from land warfare, requiring another type of training, different genius, a dissimilar approach to problems of strategy, tactics, logistics. Air warfare is now affected by similar considerations.

A RECORD OF FAILURE

One of the earliest lessons I would mention was the defeat of the Spanish Armada, a great fleet sent out by the greatest power of the time to cover the invasion of the British Isles by a Spanish army. But the fleet was itself commanded by an officer who had never previously served at sea, the Duke of Medina-Sidonia; in it, military officers were supreme, the sailors were in positions of subordination; and it was completely defeated, as you all know, by an English fleet much inferior in force, but commanded by seamen—Drake, Hawkins, Frobisher, and the rest.

France has tried one-man control of her armed forces three times: Under Louis XIV and his great minister, Louvois; under Napoleon; and under the Third Republic, in the days just preceding this war. In all three cases, disaster was the result. Under Louvois, France suffered the great naval defeat of La Hogue. Under Napoleon, she suffered naval defeat at Trafalgar, which brought to naught all the land victories of the great Emperor. Under the unification schemes of the 1930's, she suffered defeat by land largely because of lack of air power. Twice the navy suffered; the third time it was the air force; the result was the same—national disaster.

In Germany, the army has always dominated military thought. The results speak for themselves. In the war of 1914–18, Germany had created a great navy, but the German High Command had no idea how to use it. The German surface fleet served no purpose whatever; for the most part it rusted away at anchor, though there were occasions on which it could have challenged the British dominion of the seas, and had it been successful, Germany would have won the war. In this war, the Germans had a much smaller surface fleet, but they accomplished nothing with it worth its cost. In both wars they did something with submarines, but were unable to make this weapon produce decisive results. As for German air power in this war, the famous Luftwaffe never developed a true strategic air force; it was hampered throughout by subordination to the views of land officers in the high command, and at last was virtually destroyed.

AIR ARM MAY ALSO SUFFER

Russia, like Germany and France, has always suffered from the domination of army officers in the field of over-all military planning and policy. Consequently the Russian Navy has never amounted to much. It was used in 1914–18, in the Baltic Sea, as a mere appendage of the army, under the control of the army commander in chief, to guard the army's right flank. It was similarly used in this war both in the Baltic and Black Seas. Russian air power never developed beyond the tactical, support-of-ground-troops stage. It was the invariable Russian practice to put the air commanders on any front under direct orders of ground commanders, to be used as a sort of long-range artillery.

There is a little American experience along this line. In the earliest days of this Republic, our Navy was under the War Department. It had nobody to fight its battles and present its needs to the Congress. Consequently we came to the very brink of war with France, in 1798, without a single seagoing warship ready for action. Three frigates which had been laid down in 1794, at a time when we expected some trouble with the Barbary pirates, had lain uncompleted ever since. It was not until President Adams asked Congress to create a separate Navy Department, in 1798, that these frigates were completed for sea, and three others authorized; and the foundations of American sea power were laid as we began to develop our naval traditions and our naval experience.

None of these cases, as cited, is identical in every detail with the conditions we now face. But in all these cases, the principle involved is the same. In all, the control of the armed forces was entrusted to one man, who was responsible for the final decision in matters of general policy affecting both land and sea forces, or in matters affecting land, sea, and air forces. The idea of one-man decision was paramount. The idea of compelling agreement, of ending debate by the decision of that one man prevailed. This is what is now proposed to you. If you do it, you will produce the same results as has every other nation which has attempted it.

The other way of getting the services to work together as a team is the method of coordination. In this method, the services have military and civilian heads who must agree on broad policy decisions. The services have equal access to the head of the State and to those who control the public purse strings. Their cooperation is organized within an agency which provides machinery for facilitating agreement, for providing adequate information, and for putting joint decisions into effect. Within it, they are equal. Experience has something to say on this method, too. It is the method by which we won this war, for one thing. It is the method by which the British nation has won both this war and the last one. Its record is therefore one of successful accomplishment, in sharp contrast to the record of unification.

The St. Lawrence Waterway as Viewed by a Representative of the Railroads

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Friday, March 1, 1946

Mr. PLUMLEY. Mr. Speaker, under consent previously granted, I am extending my remarks and including an address by Hon. Clarence E. Cleveland, executive secretary of the Vermont State Railroads Association, Montpelier, Vt., delivered before the Morrisville Rotary Club, Morrisville, Vt., on the 27th day of February 1946:

ST. LAWRENCE WATERWAY AND POWER PROJECT

What is the St. Lawrence waterway and power project, sometimes called the Great Lakes-St. Lawrence project?

Please pardon me for being somewhat elementary at the outset, and for assuming that there may be at least some persons who have only a vague idea of what this proposal is all about. The St. Lawrence waterway is not a new discovery, or a new invention, or the young offspring of any current politician as some would wish you to believe.

At the present time there already exists a waterway from Lake Superior and Lake Michigan through Lake Huron, Lake St. Clair, Lake Erie, Lake Ontario, and thence down the St. Lawrence River to the Atlantic Ocean. There is now, and has been for 40 years, a channel and system of canals with a minimum depth of 14 feet in the St. Lawrence between the Lakes and Montreal.

The idea of deepening this water route and building locks and canals for larger vessels was dreamed of and romanced about centuries ago—even ever since the days when Canada was New France and the St. Lawrence River was viewed as the means of access to the interior of a continent which at the time was an undeveloped wilderness. Even the Welland Canal, which connects Lake Erie and Lake Ontario, was undertaken by Canada in 1824, nearly 125 years ago. At that time the Welland Canal was heralded as a first step in a general plan to convert the Great Lakes, to all intents and purposes, to a seacoast.

From time to time since 1909, a variety of interests have been persistently at work developing arguments in favor of the deepening and necessary construction to carry out this proposed scheme.

The movement for the creation of a deep waterway gained major impetus in 1919. In that year an amendment to the rivers and harbors act was passed requesting an investigation and report on the costs of improvement in the St. Lawrence between Montreal and Lake Ontario necessary to make the river navigable for oceangoing vessels. Since that time various other commissions, departments, and committees have made reports on the subject, both from navigation and power standpoints.

In 1931 the State of New York entered the picture by appointing the St. Lawrence Power Development Commission. On January 31, 1931, that commission reported in favor of a public power development at the International Section of the St. Lawrence River. The Power Authority of the State of New York was also created in 1931 by act of legislature, and is one of the leading present-day lobbyists for the proposal.

On July 18, 1932, a treaty between the United States, Canada, and Great Britain was signed to effectuate the project. It was then submitted to the United States Senate for ratification. Hearings and investigations took place from November 1932 to February 1933. From that point until March 1934 there were lengthy discussions in the Senate both for and against the St. Lawrence seaway project.

In the meantime on February 7, 1933, the New York Power Authority and the United States engineers recommended that the costs for which the United States would be responsible in connection with the development of the International Rapids section of the St. Lawrence River should be divided between the United States and the State of New York. New York's share was set at some $90,000,000. For this payment New York State was to have the right to utilize, for power development, all of the St. Lawrence River flow in the International Rapids section allocated to the United States by treaty, other than that required for navigation. The State of New York was also to receive title to the power works and lands upon which they were located and which might be necessary and convenient for their operation.

Finally on March 14, 1934, the treaty came to a vote in the United States Senate and was rejected. An analysis of the vote shows that all of our New England Senators were present and that only two voted in favor of it—Brown of New Hampshire and Gibson of Vermont. The record also shows that both of New York's Senators voted against the treaty. This treaty was never submitted to the Parliament of Canada for ratification.

Another treaty draft was offered to Canada by this country in 1938, but the Province of Ontario was cool to the proposal at the time. Then, with the coming of the European war, the Canadian attitude purportedly changed, and the whole St. Lawrence matter was revived in Washington.

By now you will see that the St. Lawrence project has resolved itself into a double-barreled implement, one barrel being the seaway and navigation feature, the other hydroelectric power development. Two barrels instead of one to shoot away hundreds of millions of United States dollars to be borrowed and added to the greatest public debt the world has ever known.

The treaty having failed on March 19, 1941, a so-called executive agreement between the United States and Canada was signed providing for the construction of the hydroelectric power facilities at the International Rapids section and for the completion of the essential links in the deep waterway, not later than December 31, 1948. This executive agreement, almost identical in form and substance with the 1932 treaty, was sent to Congress by Mr. Roosevelt on March 21, 1941. This executive agreement was a clever device to bypass the constitutional requirement that a treaty, to be valid, must receive a two-thirds affirmative vote by the Senate. Thereafter a bill was introduced in the House to validate the agreement and authorize the President to enter into an agreement with New York to turn over the United States' share of hydroelectric power to the New York Power Authority. This bill failed. In fact it never came to a vote.

There always has to be a lure connected with every questionable proposal of this type. At that time national defense was the crying need claimed by the proponents. They said we needed a secure haven in the Great Lakes for shipyards to build ships for war.

I recently came across a February 1924 issue of the National Geographic magazine devoted entirely to the Hawaiian Islands. I quote one sentence from it relating to Pearl Harbor. "With a depth of over 60 feet, an area of nearly 10 square miles, reached by a tortuous channel from the sea, and completely hiding all vessels within its haven from view toward the sea, it leaves nothing to be desired as a natural naval base." We haven't forgotten what happened at Pearl Harbor. Something similar could have happened in the Great Lakes. Even one bomb-damaged gate would bottle up every seagoing ship if not already bottled by 5 months of ice.

Another ghost story at the time was a threatened shortage-to-come of electricity for power and light to carry on the war effort. Well, history has disposed of that claim. We were never short of power during the war and never short of light except on occasions of man-made black-outs.

Another national-defense argument for the St. Lawrence project was that it would be needed in case of war because the railroads would not have the capacity to handle the transportation job. The events of the recent war settled that argument. The railroads not only carried the tonnage in summer, but through the winter of 1944–45, the worst winter from a transportation standpoint ever recorded in the Great Lakes region, they continued, month by month, to break all records for the delivery of export freight for war at the North Atlantic ports. This was at a time when the St. Lawrence was frozen hard and tight.

The proponents introduced new and similar authorization bills in the House and Senate in the Seventy-eighth Congress. One such bill was S. 1385, the Aiken bill. Hearings were conducted on this bill with a view to determining whether an agreement between the United States and Canada to undertake the project was of such a nature that it would in fact require a treaty. The weight of the testimony was that a treaty would be necessary and that the Executive agreement to which the Aiken bill sought to give congressional approval was obviously a subterfuge.

In December 1944 in the closing days of the Seventy-eighth Congress, in a final desperate move to obtain congressional consent for the St. Lawrence project, Senator AIKEN offered his bill as an amendment to the omnibus rivers and harbors bill which was then before the Senate. The Senate rejected AIKEN's amendment by a vote of 56 against and 25 for.

But the St. Lawrence seaway and power project proposal refuses to stay dead and buried. So again in the present Congress joint resolutions have been introduced in both Houses and are now pending providing for congressional consent to the Executive agreement of 1941. One more attempt, of course, to side-step a treaty.

When the "for national defense" claim for the seaway passed out, a new bait was needed by the proponents. "Jobs for the unemployed" during the reconversion period after the war seemed to be the next best theme song. We are in that period now and it is quite apparent that jobs are more plentiful than is unemployment. So now the only headliners which are left to the proponents seem to be the two old refrains, "cheap transportation" and "cheap power."

In some instances the savings on transportation claimed by the advocates have even exceeded the rates in effect. For example, it was once contended by proponents that savings on shipping wheat from Duluth to Montreal via the St. Lawrence seaway would amount to 8 cents per bushel. The actual cost of shipping this commodity from Duluth to Montreal, however, had only been 6 cents per bushel. Exaggerated savings figures have been arrived at, in many instances, because of failure to use the cheapest present routes in comparing shipping costs between existing transportation facilities and the proposed St. Lawrence route.

It is not contended, however, that the proposed St. Lawrence seaway would not offer a cheap mode of transportation for certain bulk commodities, but only during the summer months and further provided that speedy delivery of freight is not required. But it is extremely doubtful if these savings would be sufficiently large to justify the original expense of the project, together with upkeep costs and the damage done by the shift of business from established forms of transportation to the suggested new route.

From a navigation standpoint it is an undeniable fact that the St. Lawrence project, if completed, would be a "frozen asset" during many months of the year, owing to ice-bound conditions. A study of an actual record over a 5-year period indicates that the Great Lakes ports could be served by ocean-going ships only 58 percent of the time, or slightly less than 7 months of the year. This could only mean that other forms of transportation would necessarily have to maintain a stand-by capacity to take care of the St. Lawrence seaway traffic during more than 5 months of the year.

It has been claimed by the proponents that the seaway would effect low transportation costs on livestock feed from the West to the New England farmer. In operation at the present time is what is termed a "milling and transit privilege" which allows railroad cars which have originated in the West to be stopped off at manufacturing plants in New England and the grain processed and reforwarded at a normal charge of approximately $6.30 per car. If this type of operation were not possible, it would mean a local freight charge from the processing plants to the retail dealers throughout New England. Take, for example, Brattleboro, Vt., where the lowest possible rate out of a processing plant would be 11 cents per cwt., or $2.20 a ton, which would have to be added to the cost of feed before it reached the farmer.

The great grain breaking point in the East is Buffalo; next West, is Chicago. If grain should move into New England through the St. Lawrence waterway there would be no great breaking point where the railroads could absorb these shipments and there would be no milling and transit privilege. That would mean local freight charges, from some waterway port, throughout the entire New England States. This would add probably in the vicinity of 17 to 19 cents, instead of 11 cents per cwt., on grain products.

The lumber industry also operates on a break-transit rate similar to that which grain companies now use.

And furthermore, can railroads be expected to maintain stand-by facilities to carry grain, feed and other freight in this area during 5 months of the year when during the other 7 months it is carried on the St. Lawrence waterway?

Neither would the American farmer who grows grain profit from the St. Lawrence seaway. Export grain would be the chief American agricultural product to be shipped through the waterway. Even if a possible maximum saving of 3 cents a bushel were realized, this would be absorbed by the foreign buyer and vessel owner. An example of the price drop procedure operating in the European market was seen in 1929, when at the urgent request of President Hoover, rail rates from the Middle West to the Atlantic seaboard were reduced on the shipment of winter grain. At that time, the European market dropped its price offer by an equivalent amount, because Argentina wheat shippers met the competition. It is the European purchaser, not the American farmer, who would benefit from this possible 3-cent differential.

Let us take a brief look at the dazzling promise of cheap power for New England. Will hydroelectric power, if developed on the St. Lawrence River, ever be transmitted beyond the borders of New York to the New England States? New York State has always maintained the legal right to the use of the flow of water in the St. Lawrence along its boundary, subject only to the right of the Federal Government to control such waters for navigation purposes.

In accord with that claim, the Legislature of New York created its power authority, and restricted the sale of such power as might be allocable to the State of New York from that generated by a joint project constructed by the United States and Canada, for limited purposes wholly within the State of New York. That interpretation of the act is conceded by some seaway proponents, while some proponents even admit that the New York Power Authority Act will necessarily need to be amended to allow the transmission of this power beyond the borders of that State. Will the New York Legislature amend that act? Opposition to the project in most sections of New York State, including the large cities, is very determined, and it has been, and still is, being vigorously asserted. If the subject should be opened up in the New York Legislature, there is an excellent prospect that the legislature would not agree to amend the law so as to permit any State other than New York to obtain any portion of the power. And even if the New York law should be amended, can any stretch of imagination picture New York selling power developed from a $90,000,000 investment at cost?

The proponents admit that some sort of an arrangement will have to be worked out with New York on this point before power will be available to outside States. Would it not be good business practice to consummate such an arrangement with New York before the United States enters into an international contract with Canada to start this mammoth project? If it is to be the policy of the Federal Government that States other than New York are to share in this power, the rights of those States should be deter-

mined, fixed, and accepted, before we obligate the United States in the expenditure of hundreds of millions of dollars of borrowed money to complete this huge undertaking.

Visionary as this whole scheme is, let us for a moment envision that an agreement can be worked out whereby New York will share this power with the six New England States on a population basis, which would seem most fair. The 1940 census shows the total population of New York and New England to be 21,916,432. The population of the New England States alone is given as 8,437,290, or approximately 38.5 percent of the total area being considered. So consequently New England would be entitled to 38.5 percent of the capacity of the power plant to be built on the New York side of the river. The proponents choose to talk of this capacity in terms of 2,200,000 horsepower, which sounds larger than kilowatts, and is the combined development on both sides of the river. The average capacity of the New York plant is conceded to be 1,100,000 horsepower or 710,000 kilowatts. Thus, it would therefore follow that New England would, on a 38.5 percent basis, be allowed 273,350 kilowatts out of that New York capacity of 710,000 kilowatts.

As of November 1, 1945, the capacity of all generating plants located in New England was reported to be 3,195,561 kilowatts. Should the hypothetical 273,350 kilowatts from the St. Lawrence be added to the present New England capacity, we would arrive at a total figure of 3,469,911 kilowatt capacity, and going along another step, we find that the St. Lawrence contribution to New England would represent only approximately 7.87 percent of that total. And we should not overlook the tremendous power loss in attempting the transmission of electricity over such extremely long distances. This relatively small percentage of added capacity, if needed at all, would not be sufficient to affect rates or increase the use of electricity in New England. This would still hold even though it should be possible to generate and transmit electricity from the St. Lawrence to New England at a lower rate than now prevails, which seems to be in considerable doubt.

It has been said that the cost of developing power as proposed would be about $500 per kilowatt of capacity. If only one-half of this amount is to be charged to power, the cost per kilowatt of capacity will amount to about $250. Information indicates that steam-power capacity can be installed in the area proposed to be served by the St. Lawrence development for approximately $100 per kilowatt.

Prewar estimates as to the cost of the entire St. Lawrence project are presently of little value because of the decreased purchasing value of the American dollar. Even were this not so, such estimates are open to question in the light of the great disparity between estimated cost and final actual cost of other similar Government projects. For example, the Panama Canal, estimated to cost only $160,000,000, actually cost $375,000,000; the Welland Canal cost $128,000,000 instead of the estimated $114,000,000; the Chicago Drainage Canal, estimated to cost $16,000,000, finally cost $53,000,000.

A prewar estimate made by the Niagara Frontier Planning Board set the figure for the total cost of the St. Lawrence project at $1,220,588,000; Canada's share to be $597,367,000 and the United States share to be $623,221,000. The proponents here in the United States have cultivated the notion that with respect to cost it is a 50–50 proposition, with Canada footing half the bills. But there is a joker in it. Canada's past expenditures upon the Welland Canal of $131,900,000 are to be credited against her share of the new outlays of money. Thus, of the new outlays, much more than one-half comes from the United States; and, of course, the cost of improvement of United States harbor facilities on the Lakes is borne wholly by the United States.

At today's prices for material and labor, no one knows what the total cost would be. The proponents are now simply taking the attitude of "build it regardless of cost."

Let us now briefly summarize some of the losses likely to ensue if the seaway is completed. In all talk about the benefits from construction of the St. Lawrence channel, there is a disposition to overlook the fact that many individuals and many industries will lose.

The taxpayers will lose, since they would have to pay for a project which does not even contemplate any form of repayment for its use—even though that use for transportation is to be predominantly by foreign shipping.

The transportation industries—rail, waterway, and highway—and their employees, would lose. They would lose because the men and the facilities necessary to handle the tonnage during the 5 months or more when the St. Lawrence is blocked by ice, would have to stand by in unprofitable and jobless idleness during the half of the year when the waterway would be open.

The coal industry and the coal miners of the United States would lose much, if not most, of the present Canadian market for 17,000,000 tons of coal a year, which would be displaced by foreign coal brought across the Atlantic as ballast in ships coming into the St. Lawrence and Great Lakes for cargo.

Other producing industries of the United States would lose through intensified competition from the enlarged movement of foreign shipping, bringing into the United States foreign products manufactured, transported, and marketed under labor and other conditions with which the United States cannot compete. Foreign ships would not come in empty.

Seaports would lose through the diversion to the St. Lawrence route of shipping and traffic for which they have already provided, and are maintaining, ample facilities.

The Nation would lose by spending huge sums to establish a costly form of transportation which could exist only because the burdened taxpayers would provide and support it. It would, in addition, disrupt long-established and satisfactory commercial arrangements, would intensify transportation problems, would add to unemployment, and would cost all of us many times more than it might save some of us.

One of the battle cries of the proponents in respect to this project is "Every President since Woodrow Wilson has endorsed it"—or words to that effect. They have repeated that again and again—and again. Well, one of those same Chief Executives also endorsed the Passamaquoddy fiasco, if I remember correctly.

Here in Vermont it may well be recalled that in 1941 the legislature of the State, by resolution, in no uncertain terms expressed its disapproval of the seaway.

Again in 1944 the house of representatives, in special session, decisively defeated a resolution which was introduced in favor of the project.

The Iwo Jima Statue

REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. HAYS. Mr. Speaker, on November 10, 1945, the one hundred and seventieth anniversary of the founding of the United States Marine Corps, an interesting ceremony for the unveiling of the statue commemorating the raising of the flag on Iwo Jima was held in the city of Washington. The present location on Constitution Avenue is temporary, but efforts are now being made to provide a permanent location for this beautiful memorial.

The statue is the creation of Felix W. de Weldon, who was a member of the naval forces stationed at Patuxent Air Station at the time of the picture. The famous wire photo of Rosenthal's picture of the flag raising on Mount Suribachi reached the United States within 24 hours after the flag was raised, and when Capt. T. B. Clark, executive officer of the naval air station at Patuxent, saw the picture he called it to Mr. De Weldon's attention with this comment: "Here is something for you to do in sculpture. It is the greatest picture of the war."

The brilliant young artist started to work on it immediately and completed a model within another 24 hours. General Vandegrift and Admirals Jacobs and Denfeld viewed the model with enthusiasm. The three survivors of the battle who participated in the flag raising, Pfc Ira H. Hayes, Pfc Rene A. Gagnon, and John H. Bradley, pharmacist's mate second class, sat for their own likenesses. The pilot model was cast and presented to President Truman on June 4, 1945.

It was my privilege during the sculptor's progress on the heroic life-size model of the flag raising to visit him in his studio and to observe his work upon this significant memorial. The three survivors, with three other marines representing those who fell in battle, posed for the sculptor. For the faces of the three who were killed Mr. De Weldon used photographs furnished by the Marine Corps.

The base of the statue is an exact outline of the island of Iwo Jima. The statue is 36 feet high and weighs 20 tons. I am sure the Members will agree that it is an inspiring representation of one of the most important events of the war.

Shortly after the crucial battle of Iwo Jima, I introduced a resolution to change the name of the island to "the Marine's Island," and my action was inspired by the feeling which I know is shared by the membership, that in a certain sense the island had literally become the island of the marines, for they had fought for and secured it at terrific cost. I did not ask for a hearing upon the resolution, however, because it appeared at once that the name Iwo Jima had become deeply embedded in the minds of the people and in their language.

While the proposal to change the island's name was strongly supported at first as a fitting tribute to the marines, it became evident that there were more appropriate means of honoring those who participated in the battle. The organization of a voluntary committee of friends of the United States Marine Corps for the purpose of providing a permanent location for Mr. De Weldon's statue presents such an opportunity to the Nation. I would therefore strongly urge that official recognition be made of these efforts and that encouragement be

given to the raising of funds through voluntary subscription for the acquisition of the statue and its preservation in an attractive location in Washington City.

Mr. Speaker, I ask unanimous consent to extend my remarks and to include the addresses of Gen. Alexander A. Vandegrift and Mr. De Weldon at the unveiling of the statue.

The SPEAKER. Is there any objection to the request of the gentleman from Arkansas?

There was no objection.

The address of General Vandegrift follows:

Mr. Chairman, we in the Marine Corps are proud that the men represented in this statue here to be dedicated are marines. We are proud with the same pride that we take in our entire years of tradition of which this deed has become an immortal part. But we have no illusions. We know that this statue commemorates much in addition to the courage of the marines—much more than the capture of a dominant height on Iwo Jima. We know that its meaning encompasses the whole effort of the people of our Nation.

I believe it to be highly significant that we Americans do not honor the event memorialized here in terms of conquest of territory or the spoils of aggression. To us, it stands as a legacy far more lasting than any material thing taken from the enemy, far more universal than the acquisition of 8 square miles of territory. The five marines and a Navy corpsman who placed the flag atop Suribachi typified the unsurpassed gallantry of all the men of all of the services who caused our total victory. Their courage was from exactly the same cloth as that which smashed the German war machine in Europe and the Japanese in every theater of war in the Pacific. The men who raised the flag symbolized the sacrifice made throughout the ranks of our fighting men. Three of the six died in bitter combat of the next several days. Thousands like them in every theater of war fell in defense of their country, and in the trust that after victory their Nation would dedicate its might to the maintenance of the peace and security to which they dedicated their lives in total.

May this heroic statue serve to remind all who pass that we must keep the faith with the brave and the fallen. A successful Victory Loan will help to complete what those men began. An America strong in heart, in spirit, and in arms is our best assurance of preserving the freedom for which they fought. They have done their full part. The rest is up to us, their countrymen of this generation and other generations to come.

The address of Mr. de Weldon follows:

Mr. Chairman, General Vandergrift, honored guests, ladies and gentlemen:

The publication of the Associated Press photo of the United States marines raising our flag on Iwo Jima gripped the American imagination as no other war picture has done. Twenty-four hours after this picture appeared I had completed the initial sketch of the statue which you see. I was on duty at the Patuxent River Naval Air Station at the time and used my week-end liberty to complete the pilot model of the statue which I later had the honor to present to President Truman.

In this present work it was my privilege to have posing for me the three survivors of the heroic action which this statue symbolizes. Through the cooperation of the Marine Corps, it was possible to obtain pictures of the three men who gave their lives in this bitter fighting. I tried in every way to achieve accuracy and realism in re-creating their epic of American bravery. I have tried to create more than a statue, however—it is my hope that this work will remain at once as a symbol, not only of the bravery of our armed forces but of the relentless determination of our people to defend democracy against those who would deny the fundamental dignity of man.

This flag which we honor and under which we serve is the emblem of our unity, our power, our thought and purpose as a nation. It has no other character than that which we give it from generation to generation. The choices are ours. It floats in majestic silence above the hosts that execute those choices, whether in peace or in war. And yet, though silent, it speaks to us—speaks to us of the past, of the men and women who went before us, and of the records they wrote upon it. It has witnessed a great history, has floated on high—the symbol of great events and a great plan of life worked out by a great people.

The National Debt Gets a Lift

REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. LUDLOW. Mr. Speaker, the hearings of the Subcommittee on the Treasury and Post Office Departments appropriations, of which I have the honor to be chairman, have produced one notable result.

In the course of the hearings we elicited some testimony on the conscience fund. A conscience-stricken citizen read the testimony and sent me these two $10 bills without a word of explanation as to what was hurting his or her conscience. The conscience fund is a part of the general receipts of the Treasury, and I am sending these two bills to Secretary Vinson to be applied to the national debt.

By a singular coincidence this contribution comes from the State of Pennsylvania, ably represented in part by the gentleman from Pennsylvania [Mr. RICH], who so often arises and propounds with telling and incisive force the inquiry, "Where are you going to get the money?"

His question is partially answered by his fellow Pennsylvanian. If other Pennsylvanians who may be similarly burdened in mind and other citizens of other States with sensitive consciences, would follow suit the national debt might be whittled down considerably, although the debt has burgeoned forth into such proportions that, optimist as I am, I would hardly venture to predict that it could ever be entirely paid off in that way.

The conscience fund was first established in 1811 when the intake was $250. The American conscience has been working regularly ever since, except in 1848. Either the conduct of our people was perfect in that year or consciences were not in good working order as that was the only year since 1811 when there were no contributions to the fund. The smallest annual intake was $6 in 1827 and 1852. The largest was $118,117.71 in 1945. The $20 I am sending to Secretary Vinson will bring the total conscience contributions up to $910,884.83.

Surplus War Goods

REMARKS

OF

HON. WESLEY A. D'EWART

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. D'EWART. Mr. Speaker, the sale and disposal programs of the Surplus Property Administration and its present successor, the War Assets Corporation, have been and are today a complete and dismal failure so far as the people of the State of Montana are concerned, and I believe this is equally true of surrounding States.

During my recent visit to Montana I listened to complaints on this subject from the Governor of the State and almost all of the veterans, city officials, school officials, labor organizations, ranchers, and businessmen with whom I talked. Since I returned, the complaints have continued to flow in in my correspondence, and I am firmly convinced that they are justified and that the disposal program so far as we are concerned has failed utterly.

In mid-January after many of these protests had been brought to the attention of Surplus Property Administration officials, a disposal depot was established in Helena. We thought that would take care of some of our difficulties, since theretofore it had been necessary for Montanans to travel many hundreds of miles to Utah or Seattle or Denver to view or be present at the sale of surplus goods. Material had been moved from Montana to the coast, and our buyers, when they were fortunate enough to make a purchase, were forced to pay shipping charges back to Montana.

We thought the Montana depot would solve that problem. Instead, I have a telegram from Lieutenant Governor Eaton announcing the creation of a committee to try to secure some surplus goods for Montanans. He asks that we make whatever changes are necessary in the War Assets Corporation system to insure that veterans get the priority to which they are entitled.

I have a letter from a member of that committee, Herbert Kibler, the adjutant of the Montana Department of the American Legion, replying to my request for information concerning the depot at Helena. I read from this letter:

For your information, the only surplus at the depot which will be up for sale shortly is a great deal of oil and greases, some plate steel, enamel, and also about three or four portable electric welders.

Montana needs a lot of things besides greases and three or four electric welders.

As matters now stand—

Mr. Kibler continues—

anyone from Montana who desires to purchase any surplus is required to go to Se-

attle or down to California and take his chances on being able to purchase what he desires. In most instances, on his arrival, he finds that the surplus he might be interested in has all been disposed of, and what might be termed just plain junk is all that is left.

In my last conversation with Governor Ford, of Montana, he told me that the State of Montana had sent a man up and down the west coast to all the disposal centers in the area in an attempt to buy some of the many items which would be useful to, and are urgently needed by, various departments of the State government, including the hospitals and colleges. The State university system itself maintained a purchasing agent at one of the disposal centers. But at that time, and this is still true, so far as I know, the State of Montana has not been able to buy anything because local bidders and buyers of large lots took all available material.

I do not think an individual veteran has much chance of getting what he wants if the State purchasing agent in a tour of several States is unable to buy anything.

I believe that the War Assets Corporation should make it a policy to supply interior States with a fair share of available and useful goods, so that we may benefit from this program. It is apparent at present that coastal States and areas of heavy population are taking the cream of the surplus war goods. Some adjustment must be made in the priority arrangement so that the veteran really will have an opportunity to get some of these materials. An early solution to this problem is required if the people of Montana and other States in a similar position are to get any surplus goods.

Necessity for Further Price Control

REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. BIEMILLER. Mr. Speaker, over the week end I received a resolution from the Milwaukee County Board of Supervisors which I desire to read into the RECORD.

You will note that the resolution states the county supervisors are convinced that the great majority of the citizens of Milwaukee County want the OPA continued and want it to establish ceiling prices on home and building construction.

Some Members have come into the well of the House and solemnly proclaimed that the people overwhelmingly are opposed to price control and particularly to controls on the price of houses.

Mr. Speaker, I submit that the members of a county board are generally pretty close to the people. They know what the people are thinking. I believe that this resolution accurately reflects the mood of the American people respecting price control, and I commend it to those Members who so ardently assure us that the American people want price controls abolished.

Whereas, judging from articles appearing daily in the public press, there seems to be an ever-growing movement, particularly on the part of management and industry, to secure the abandonment of the Federal Office of Price Administration, which agency has during the war been so successful in maintaining price ceilings and preventing the inflation which marked the history of World War I; and

Whereas, in our judgment, continued vigorous enforcement of price ceilings by the Federal Government is the only force that can successfully prevent a postwar runaway inflation period that must ultimately result in great hardship to the working classes: Now, therefore, be it

Resolved, That the Milwaukee County Board of Supervisors by these presents record the conviction of the great majority of the citizens of this community that the Federal Office of Price Administration not only be continued but that it increase its vigilance in establishing ceiling prices not only upon the products of industry but upon home and building construction; and be it further

Resolved, That our representatives in Congress be urged to exert every influence to maintain the continued existence of this most essential Federal agency; and be it further

Resolved, That the county clerk be, and is hereby, directed to send a certified copy of this resolution to the Congressmen representing this county and the Senators representing the State of Wisconsin.

OFFICE OF THE COUNTY CLERK,
Milwaukee, Wis., February 28, 1946.

I hereby certify that the foregoing is a true and correct copy of a resolution adopted by the Board of Supervisors of Milwaukee County at an annual meeting of said board held on the 19th day of February 1946.

[SEAL] GEO. F. BREITBACH,
County Clerk.

While the World Goes Hungry

REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. ANDERSON of California. Mr. Speaker, while the world goes hungry and while fresh food crops rot in the fields, a jurisdictional dispute between the A. F. of L. and the CIO Cannery Workers Union in California has effectively tied up 98 food-processing plants in that State.

In a recent decision, the NLRB set aside a disputed election which was held last October for the purpose of selecting an exclusive bargaining agent for the cannery workers. In addition to setting aside the election, the Board stated that "none of the unions is entitled to an exclusive status as the bargaining agent after March 1." I have appealed to the Chairman of the NLRB and to the President to maintain the status quo that existed prior to March 1 until another election is held and an exclusive bargaining agent is selected. This appeal has been rejected.

Now comes a story from California to the effect that the United States Department of Labor Conciliation Service has declined to intervene in the jurisdictional dispute. A statement issued Saturday by the United States Labor Conciliation Commissioners read as follows:

The momentum of the forces involved has become such that the usual mediative procedures are not feasible—at least, until new and imperative factors emerge or are injected into the situation.

Mr. Speaker, immediate action by the President of the United States is imperative. Something must be done to save the farmers' investments and to insure the orderly harvesting and processing of California's fruit and vegetable crops that are so badly needed here in the United States and by the starving countries in Europe. I appeal to the President to invoke his full authority in order to bring peace to this troubled labor front.

Under leave to extend my remarks, I wish to include the following pertinent and timely editorial from the San Francisco Chronicle of March 1:

WHILE THE WORLD GOES HUNGRY

A few weeks back, the National Labor Relations Board penned some words which in the normal course of events are going to have an effect upon the entire world. Because the ramifications of these words are important to the California housewife, the Czechoslovak peasant, the Russian worker, and the French tradesman, they bear quoting.

Discussing last fall's challenged elections among the northern California cannery workers, the Board ruled that the results of the elections should be set aside. But the important words are these:

"While we view the record as requiring this result, we reach it with considerable reluctance, because it means that the employees will have no barganing representative to negotiate an exclusive collective agreement to cover the coming season, until a new election can be held, which may result in one of the rival unions being certified. The current AFL contract will expire on March 1 and, since the legal effect of the foregoing determination is to keep the question of representation pending before the Board, none of the unions is entitled to an exclusive status as the bargaining agent after that date."

BOYCOTT SCHEDULED FOR TODAY

Today is March 1. As of this date, the AFL Teamsters' Union has scheduled a boycott of northern California's canneries, which will close them up tighter than a drum. In the next 4 or 5 months, unless some settlement is reached, one-third of the Nation's annual crop of canned fruits and vegetables—the normal allotment of this prolific region—will rot in the fields. At a time when the United States has shouldered the burden of feeding a good part of the world, as well as its own people, the consternation will not be limited to Americans. Other, hungrier, peoples will turn to us with the same question: "Why?"

It will be the purpose of this editorial to reduce the answer to its simplest terms.

For the past 9 years, the AFL Cannery Workers' Union, an affiliate of the Teamsters' International, has had an exclusive bargaining contract with the canners of northern California. The current contract, of 1 year's duration, expires today.

Last fall the CIO Food, Tobacco, Agricultural and Allied Workers' Union of America, the "FTA," which had undertaken to organize the cannery workers, asked the NLRB to

hold an election to determine whether the majority of workers preferred the AFL or the CIO.

ELECTION RESULT IS VOIDED

On the basis of counted ballots, the CIO won a plurality by some 1,200 votes, but failed to win a majority. The AFL promptly challenged some 1,290 of the ballots, and the Labor Board declared the election null and void, and recommended another election be held at the next period of fullest employment in the industry—next July or August.

But the NLRB did not stop there in its decision. It went on to proclaim, in the words quoted above, that "in accordance with well-established principles" the employers had but two alternatives during the season just ahead—to bargain with all unions on an impartial basis, or to bargain with none.

The AFL, thus seeing its exclusive grip on the industry broken by board ruling without the benefit of a valid election, rebelled. The CIO, on the other hand, quite understandably hailed with joy this opportunity to get its foot in the door without the usual recourse to a formal election.

So the teamsters said in effect: "Extend our 9-year contract until such time as a new election is held, or we won't play."

And the CIO told the employers in effect: "You heard what the NLRB said—now abide by the ruling."

The employers, this time, are by no means alone in their role of innocent bystander caught in the middle. They have with them the farmers, who stand to lose the profits of a year's labor; the American public, which stands to lose a third of its fruit and vegetables for the year, and a few million hungry world citizens, who seem about to learn that the vaunted American food surplus which was to tide them through the next year is in large part a mirage.

DECISION WAS IMPRACTICAL

The neutrals who are charged with unraveling this knot like to dream of going back to the day the NLRB rendered its decision, and conjuring up a ruling which merely voided the election, without any added strings with regard to what the employers could or could not do by way of bargaining. That way, the AFL could have renewed its contract, the CIO could, had it desired, have challenged the legality of it, and the whole thing could have gone into extended litigation. In the middle of the litigation, the regular election could have been held as scheduled next summer, and the result would have rendered the litigation strictly academic anyway. Meanwhile, the produce would have been canned on schedule.

But that's just a pipe dream. What the conciliators have to face now is the problem of which alternative they can persuade the parties to accept—if any.

The teamsters' union could, if it chose, back down from its boycott. This would constitute a piece of labor statesmanship which would gain the union more in public esteem than it stands to lose in leaving the CIO's foot in the door.

CONCILIATORS ARE BAFFLED

The NLRB could, if it chose, modify its decision, even at this date, to leave the way open for litigation to take place while the crop is being canned.

Such action on the part of the Labor Board would involve loss of face, true, but the loss would be rather nominal. Its bureaucratic face is not in very good repair at this point anyway, considering that, through its stubborn administration of book rules, it has jockeyed a vital industry into a cul-de-sac which is currently baffling the best minds of the Conciliation Service. The NLRB muffed a golden opportunity for some bright labor statesmanship of its own when it failed to resist the temptation to write its own interpretation of the Wagner Act into its decision. The face it stands to lose in reversing itself now is trivial as compared with the amount of the same commodity it may relinquish if the pending mass crop rotting becomes a fact.

And, unfortunately, the NLRB's face is not the only factor at stake at this moment. The health of a few million Americans, and the lives of a few million unfortunates elsewhere in the world, demand consideration in this crisis.

The High Price of Price Control

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks, I submit herewith a very well-written article from the March issue of Nation's Business, written by that able and well known Washington correspondent, Lawrence Sullivan:

THE HIGH PRICE OF PRICE CONTROL

(By Lawrence Sullivan)

"Hi diddle, diddle, we're caught in the middle;
The wells of the market run dry—
The ceiling on prices produces a crisis
That leaves us with nothing to buy."

President Truman has referred to 1946 as "a year of decision." The trails we blaze on the reconversion road this year will determine the course of our national economy for perhaps a decade. Does reconversion mark a road toward resumption of competition and free enterprise, or a movement toward a permanent system of managed economy—an American adaptation, perhaps, of Europe's now prostrate systems of national socialism?

The big decision, say many leaders in both Congress and business, will come on price control. The present law expires at midnight June 30. President Truman has urged its extension. Will Congress concur?

Price control is the very essence of managed economy, or economic regimentation. If the Government is to control peacetime prices, it soon will discover—as it did in wartime—that it also must control production specifications, wages, raw materials standards, distribution margins.

"Price control saved America from a disastrous wartime inflation," say the friends of OPA.

"Price control is throttling reconversion, curtailing employment opportunities, demoralizing established business methods and practices," cry the defenders of the American enterprise system.

The debate is on.

Whatever may be said for OPA as a wartime agency, the pressing civilian needs of the reconversion period present a vastly different problem. In wartime, a policy which discouraged civilian production and consumption through inequitable pricing may have been justified in that it tended to divert materials and manpower to war goods. But precisely the opposite is needed in peacetime pricing. The American people today want goods. Any Federal control which stifles or limits production or distribution is subject to challenge.

LOW PRICES, FEW GOODS

Three committees of Congress already have heard segments of the story of the price of price control. The House Banking and Currency Committee took down some 1,300 printed pages of testimony last summer in connection with the extension of the Emergency Stabilization Act; the special Smith Committee Investigating the Executive Agencies has issued two reports on OPA; and the Senate Small Business Committee has documented more than 5,000 specific complaints from the business community on the general theme, How OPA cut my throat.

"The real preventive of inflation is production," the businessmen tell Congress. "Take OPA off our necks and let's get going."

"No," says the newly appointed Economic Stabilizer Bowles, in effect. "Price controls must not be removed until production is adequate."

But OPA tells manufacturers that their postwar prices must be related generally to their 1942 prices—despite the fact that industrial raw materials now are about 28 percent higher, and average straight-time hourly wages are up. Meanwhile, the weighted average of wholesale prices for manufactured products has risen only about 8 percent. This squeeze on operating margins, businessmen contend, has curtailed production, crippled normal distribution in many lines at both the wholesale and retail levels, introduced a new system of merchandizing best described as the "I know a guy" outlet.

Many fear that another year of price control would so disorganize and dislocate the normal pattern of our American economy that prolonged regimentation would appear perhaps irresistible.

Every major nation tried price control in World War II. But in most European countries, wartime price control was but an extension of the peacetime pattern of managed economy. In Germany, Russia, Italy, for instance, the pattern of dictatorship was the peacetime norm. Wartime price controls were merely another step along a familiar path. In America, however, price control was a new and alien thing—tolerated everywhere only as an emergency measure which, by implication at least, would be abandoned at the earliest moment possible.

Price control ran against the grain of America on many counts. Over large areas of business it diverted ingenuity and the skills of management from production to distribution. It introduced an era of trickery and border-line compliance in every avenue of marketing. Price ceilings tended in many lines to drive low-cost merchandise completely from the market; to divert essential allocated materials from staple civilian merchandise to price-free luxury goods; to undermine every natural impulse toward quality merchandise.

SHODDY DEALINGS

Consumer morale was shocked by an ever-spreading system of favoritism, behind-the-hand deals, tips and gratuities for scarce merchandise. The consumer soon lost his vaunted place as monarch of the market and became a pitiable thing, pleading for a chance to buy.

The result was a grevious distortion of the entire economy of the United States evasion, deception, substitution replaced the traditional American business standards of quality, fair dealing, and faithful service.

The American people want to get on the beam once more—the beam of maximum production, full employment, normal distribution, and competitive prices for honest merchandise. To do this, say those who have studied price control at close range since 1941, they must slam the door of history on an experiment which, in peacetime, has neither reason nor experience to recommend it.

Inferior products, through substitutions, dilution, or skimping, have been one notable result of price fixing in the reconversion period. The Smith committee's reports document scores of instances in which high-quality products of the prewar days were driven from the postwar market by ceiling prices lower than postwar production costs—only to be replaced in the course of a few

months by an inferior product officially ceilinged at a higher price.

CHEAP ROBE AT HIGHER PRICE

One long-established firm, the hearings disclose, sold a quality bathrobe recognized in the trade as a superior garment. OPA set the ceiling price at $3. The manufacturer could not make a profit at that price. But a new manufacturer who came in with no prewar cost experience then got a ceiling of $3.25 for his robe, with a poorly finished collar, careless seams, cheap binding, and a sleazy cord. With a higher price for an inferior item, the new producer can supply plenty of robes at a profit, and that is what the trade now gets. Meanwhile, the established and experienced producer of the quality product is ceilinged out of business.

A manufacturer of infants' dresses got a ceiling of $6.50 a dozen—too low to allow a profit. But a newcomer in the field got a ceiling of $10.50 for an inferior product.

In men's shirts, two different producers got ceilings of $3.50 and $3.55 per dozen for standard prewar garments. But a new starter in the field got a ceiling of $7.35 a dozen for a garment "made of white sheeting."

An established toy maker was ceilinged at $1.92 for a sturdy rubber-tired scooter; but a newcomer who used scrap metals exclusively got a ceiling of $3.75.

In women's apparel, the deterioration of quality at higher ticket price has been especially marked. In one case, a manufacturer sold a standard house dress for $1.30 in 1942. On the basis of 1945 costs he petitioned for a price of $2.18 for the same item. This was denied. But a new producer soon got a ceiling of $4.37 for a competing dress, "although better material was used in dresses selling for 79 cents in 1942."

A similar case was cited by Senator KENNETH S. WHERRY, of Nebraska, in a coast-to-coast broadcast. Standing before the microphone in New York, he exhibited to the studio audience two peach-colored slips. The first was designed to sell prewar at $1.95 retail. Now ceilinged below actual production cost, it had been driven from the market.

"So what happened?" the Senator demanded. "Another manufacturer makes a shoddy garment, calls it a new design, and is able to sell it for $3.95—and you can't tell the front from the back. That's the kind of sacks Chester Bowles is hanging on the women of America."

The Senator also exhibited a cotton party dress which he said had been priced at $76—"and it doesn't have 3 pounds of cotton in it."

QUALITY GETS POORER

A returned Army officer told the Senate Small Business Committee a similar story. He owns a chain of 15 variety stores in Georgia and Florida. Released from the service, he went to New York to buy baby dresses. But the company he sought had gone out of business. He placed an order with a new firm. A month later he got samples of the new product. The cloth was "not even suited for baby dresses, and the workmanship was the poorest." Yet the prices were much higher.

Like exhibits were presented in behalf of manufacturers, wholesalers and retailers in kitchen equipment, furniture, toys, handbags, shoes, and many other items. One long-established producer of shoe bags got a ceiling of $7.20 a dozen. As soon as his carry-over inventories of materials were exhausted he stopped production. But a new producer then got a ceiling of $13.50 a dozen.

Summarizing testimony covering hundreds of these cases, the National Retail Dry Goods Association said:

"Too often reliable manufacturers are not allowed reasonable ceilings for their honest merchandise, but newcomers can sell inferior goods for twice as much—with OPA's blessing. That is why the American housewife cannot find good, moderate-priced dresses in the market."

All these dislocations in civilian production and distribution in the past 6 months have, in the words of the October 22 report of the Smith committee:

"* * * retarded reconversion, prevented production, especially in low-priced commodities, restricted opportunity for full employment, and, at least in some instances, actually caused prices of cost-of-living commodities to rise."

BETTER SUPPLIES ANTICIPATED

It was natural for consumers to anticipate last August that the end of the war would bring a gradual and sustained improvement in retail supply straight across the board. No one expected normal supplies in 60 or 90 days; but everyone had a right to, and did, anticipate that the trend of improvement would be observed in practically every line by the year end. That expectation has been disappointed sadly. In many lines, particularly in textiles, wholesale and retail inventories are smaller today than at any time during the war.

Speaking for the National Association of Retail Clothiers, W. O. Swanson, of Omaha, told the Senate Small Business Committee:

"In my store today I have 5 percent of the suits that I normally have at this time of year. Overcoats are only slightly better. Our stock of heavy underwear—none. We get enough overalls to sell them for about 2 hours each month. Work gloves are almost extinct. Regular underwear is sold as soon as it comes in, so there is no inventory. Our situation is typical of men's stores, both large and small. In spite of promised relief, the situation is growing steadily worse."

INVENTORIES ARE EXTRA LOW

Mr. Swanson presented statistics covering a survey of 174 men's stores in Minnesota, North Dakota, South Dakota, Iowa, and Wisconsin. In June 1945 their stocks of suits were 28 percent below a year earlier, but by December suits on hand were 70 percent below a year ago. The June survey showed shirts 84 percent below a year ago, pajamas 87 percent below, underwear 63 percent below.

A survey of 77 men's stores showed that more than 50 percent of the customers were returning servicemen—and nearly 45 percent are walking into the stores and out again, unable to buy what they need.

Asked how OPA's maximum average price policy had affected retail supplies of clothing, Mr. Swanson said he believed it had diverted many textiles from staple to luxury items.

He estimated that, in 1946, about 7,000,000 men will be discharged from the services. They will require at least two suits each. On top of that 10,000,000 garments must be available for essential civilian demand. Right now the manufacturing industry is producing on the basis of less than 10,000,000 garments a year, and last year only 14,000,000 garments were produced.

"It has been almost a year since OPA announced its low-cost clothing program, which came out with a fanfare that it would cause a large volume of low- and medium-price merchandise to be in the men's stores."

OPA's cost-absorption principle, which requires wholesalers and retailers to absorb a large portion of price increases granted to manufacturers, already is limiting reemployment in the retail trade, the Senate hearings disclose.

RETAILERS ABSORB THE COST

In a detailed field study of the cost-absorption policy, the American Retail Federation listed 127 different price increases approved by OPA at the manufacturing level. But in 96 cases the retailer was required to absorb the entire price increase. This policy has pinched retail margins, until the incentive to a wider distribution of goods, in some lines, has been stifled.

The hold-the-line policy, as applied, attempted to hold the retail level at 1942, while permitting basic production costs to inch upward, through wage increases approved by the War Labor Board, and higher raw material costs generated by the price-support and Government-loan programs for agricultural products. As a general rule, OPA has required wholesalers and retailers to absorb most of all of these approved cost increases out of normal operating margins.

Cotton sheeting well illustrates the problem, which touches every major line found in the department stores, hardware stores, or general variety stores. In September 1941, before price control, the average retail markup on a standard bed sheet was roughly 30 percent. OPA advanced the retail ceiling on this item from $1.19 to $1.29, but in so doing advanced the manufacturer's ceiling from 83 cents to $1.23. As a result, the retailer's gross margin was squeezed from about 36 cents per sheet to 6 cents.

This theory of cost absorption, applied straight across the board, now clogs distribution in many lines. The fact that more than 250,000 retail establishments closed during the war is conclusive evidence, says the American Retail Federation, that the cost-absorption theory has held the line mainly by a process of slow death to normal distribution.

REASONABLE PRICES, MORE GOODS

All the evidence at hand appears to support the conclusion of the organized retailers that "where sound pricing requires upward revision, such adjustment is more economic and socially desirable than damming up recovery through inadequate distribution. * * * To stimulate employment, both in production and distribution, the price structure must be released from the rigid mold into which our wartime policy has frozen it."

Men's shirts virtually have disappeared from the shops in many cities. During the war, production allocations were calculated on the basis of 12,000,000 men in the military services. Half of these men now have been demobilized, but the Government's low-cost production schedules still are geared to the original civilian demand levels of 1943–44.

These basic production allocations in textiles are a joint operation of OPA and the Civilian Production Administration (formerly WPB), but the price ceilings and distribution margins fixed under wartime conditions still control every major segment of the cotton industry.

Instead of stimulating all-out production at profitable prices, this production price structure, by squeezing mill margins, actually puts a premium on restricted production. In many cases mill operators find from cost analysis that the less they produce the nearer they may hope to come to breaking even on the month.

But, although standard garments in shirting are rigidly ceilinged, novelty numbers move on easier margins, either because of new prices fixed on the basis of wartime costs or failure of the price regulations to extend to the so-called luxury items. As a result, all manner of sport shirts, work jackets, and trick blouses are available at $6 to $15 per garment.

BUTTER FAMINE CAUSED BY PRICES

Price dislocation alone has created a Nation-wide butter shortage during the past 3 months. When the butter subsidy of 5 cents a pound (paid to the creamery) was abandoned last fall, the ceiling price was advanced by approximately the same amount. The plan was to let the consumer pay the full cost of the butter. But at the same time, the ceiling was removed from all types of cream normally used in butter production. Result? The cream moved in a free market—to ice cream, whipping cream, fancy cheeses, candy, egg-nog mixes, cakes, pies, and a vastly expanded table use in millions of homes.

As cream prices swept upward in the free market, they soon passed the equivalent of the rigid butter ceiling. Thereafter virtually no cream was available for butter making. Butter simply disappeared from the market.

By early January 1946, the National Cooperative Milk Producers Federation expressed the fear that the creameries might be closed down because many people were buying butter in the form of cream at a price that equaled $1.25 to $1.50 a pound in terms of butter. A stampede demand developed for one-family kitchen churns.

The dairy industry took its case to Congress, with a vigorous demand that the butter ceiling be adjusted to alinement with the going price of cream. At that point Secretary of Agriculture Anderson estimated that the butter ceiling probably would need to be set ultimately near 75 or 80 cents a pound. If the butter drought continues 2 months longer, the final price necessary to bring butter back into normal distribution channels may reach $1 a pound. Why? Because the longer price control dislocates supply with faulty pricing, the greater will be the national shortage, and the higher, consequently, the new price level.

This whole operation has been repeated in other products—in meats, cotton textiles, flour, to name a few. In each case, OPA ceilinged the consumer product at wholesale and retail, but left the basic raw material in a practically free market, anchored only to a floating parity which moved steadily upward. In every product the point was reached ultimately at which the processor could not pay the Government support-price for the raw material and yet prepare it for market at a profit under the established OPA ceiling.

As the recent experience in butter demonstrates so forcefully, the pay-off comes when the subsidy is abandoned—as all will be by June 30, 1946. Then we shall see, in dollars and cents, how much the cost of living was stabilized and to what extent it was merely subsidized by the United States Treasury, in the alluring name of parity.

WOOL GROWERS LOSE MONEY

Costs are costs, and if production is to be maintained these new costs must be met in selling prices.

Congressman FRANK A. BARRETT, of Wyoming, our second ranking wool-producing State, charges that OPA has been responsible for "a drastic reduction in domestic wool production during each year of the war," despite the fact that our consumption almost doubled. He cited a report from the United States Tariff Commission in January 1945 estimating that, under OPA ceilings, domestic wool growers lost 10.8 cents a pound on their 1944 clip. The wool ceiling was fixed in 1941. Production costs have skyrocketed, but OPA refused a ceiling adjustment.

"The wool industry is well on the way to becoming one of the casualties of the war," Congressman BARRETT told the Smith committee. "Slowly but surely we have been forced to cut down our herds."

To stretch civilian wool allocations, a combination of OPA price orders and WPB production specifications, forced the manufacturer early in the war of some 700,000 yards of adulterated fabrics.

"Adulteration of wool textiles reached a new high in this country," Barrett told the committee. "But the buying public wouldn't take it. The goods remained on the shelves of the garment makers and the mills from 1942 until the end of 1944. Then UNRRA bought it for export."

Another case cited before the Senate Small Business Committee revolved around paint brushes. A New Jersey manufacturer had been fully occupied producing brushes on war priorities. In February 1944 he asked for a price increase to apply on civilian items, which he anticipated would be resumed by midyear. On August 7, 1944, he finally got a price. It took due account of the increased cost of bristles but made no allowances for higher costs on machine-turned handles. The new price was so unsatisfactory that the entire line was discontinued. As this line represented about 51 percent of the firm's peacetime business, its discontinuance has been a considerable factor in limiting postwar jobs in that area.

FAVOR OPA ELIMINATION

Six weeks after publication of the most recent report from the Smith committee on OPA, Congress still was being bombarded with telegrams from merchants in all parts of the country. Typical was the message from A. L. Killian, of Cedar Rapids, Iowa, as read to the Senate on December 10, 1945:

"We urgently recommend you investigate possibility of eliminating OPA in all phases except sugar, fats, and rent control. We have a strong feeling this would eliminate much shoddy merchandise made by fly-by-night manufacturers at ridiculously high prices approved by OPA. We are getting dribble shipments from old established firms while getting many offers by new firms we never heard of, with prices approximately double reputable firms.

"If legitimate manufacturers are turned loose to produce, competition will soon level prices off and quality will improve rapidly. Retailers and the public will revolt at excessive prices. Reputable stores and manufacturers will not cut their own throats for short-term profits.

"Unless we get immediate action of some kind to encourage production of dependable merchandise, scarcity of goods will become so acute that the situation will not be manageable."

Appeals of this general tenor reach Congress by the hundreds every day. They come chiefly from owners and managers of small businesses—those who simply can't stand the overhead imposed by OPA in compliance forms, inventory reports, and daily applications for merchandise quotas and allocations.

As a gesture of appeasement, OPA announces every month a list of commodities removed from wartime price control. The December list included such urgent civilian needs as domestically grown bamboo poles, advertising streamers made of coated fabrics, manhole covers, pneumatic life rafts, horse-race sulkies, racing motorcycles, and wooden cooperage dowels.

Such lists have been coming along periodically since August. They are the basis of OPA's claim that "wartime controls are being relaxed as fast as the supply situation will permit."

True, several thousand items have been removed from control; but in relative business volume all the freed items combined probably would not made a good trainload of business daily in the entire Nation.

Meanwhile, the techniques of permanent price control are being ever more deeply anchored—and perfected—in every basic line of production and distribution.

Maybe it can happen here.

PEACETIME BUSINESS NEEDED

In the final analysis, the Smith committee is concerned not a whit with the debate over the value of OPA as a wartime measure. Its interest is now centered on the problem of getting America back in stride for maximum production, full employment and normal distribution of goods. Its survey of reconversion price policies, as applied in scores of industries to thousands of items, led the committee to conclude:

"It is manifest that the effect of a continuation of too rigid price and administrative policies can prove seriously detrimental, not only to reconversion itself, but to the economy of the Nation and the utility of its currency."

That, in a word, means that OPA, instead of ameliorating the situation, is accused of actually generating the forces of inflation.

Winston Churchill on Communism

EXTENSION OF REMARKS
OF
HON. WILLIAM B. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. BARRY. Mr. Speaker, when Winston Churchill, the great British statesman, soldier, and scholar, speaks at Fulton, Mo., on world affairs tomorrow, I hope that he tells the world what he really thinks about Russia's world-wide policy since the end of the war. There is no one in my opinion who understands it so well when he described the Russian Government in 1931 and again in 1937 said:

But communism is not only a creed. It is a plan of campaign.

A Communist is not only the holder of certain opinions; he is the pledged adept of a well-thought-out means of endorsing them. The anatomy of a discontent and revolution has been studied in every phase and aspect, and a veritable drill book prepared in a scientific spirit for subverting all existing institutions. The method of enforcement is as much a part of the Communist faith as the doctrine itself. At first the time-honored principles of liberalism and democracy are involved to shelter the infant organism. Free speech, the right of public meeting, every form of lawful political agitation and constitutional right are paraded and asserted. Alliance is sought with every popular movement toward the left.

The creation of a mild liberal or socialist regime in some period of convulsion is the first milestone. But no sooner has this been created than it is to be overthrown. Woes and scarcity resulting from confusion must be exploited. Collisions, if possible attended with bloodshed, are to be arranged between the agents of the new government and the working people. Martyrs are to be manufactured. An apologetic attitude in the rulers should be turned to profit. Pacific propaganda may be made the mask of hatreds never before manifested among men. No faith need be, indeed may be, kept with non-Communists. Every act of good will, of tolerance, of conciliation, of mercy, of magnanimity on the part of governments or statesmen is to be utilized for their ruin. Then when the time is ripe and the moment opportune, every form of lethal violence from mob revolt to private assassination must be used without stint or compunction. The citadel will be stormed under the banners of liberty and democracy; and once the apparatus of power is in the hands of the brotherhood, all opposition, all contrary opinions must be extinguished by death. Democracy is but a tool to be used and afterward broken; liberty but a sentimental folly unworthy of the logician. The absolute rule of a self-chosen priesthood according to the dogmas it has learned by rote is to be imposed upon mankind without mitigation progressively forever. All this, set out in prosy textbooks, written also in blood in the history of several powerful nations, is the Communist's faith and purpose. To be forewarned should be to be forearmed!

Congress Still Listens

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. LEMKE. Mr. Speaker, am glad to include in my extension of remarks a recent editorial in the Williston Herald, published at Williston, N. Dak. The article shows that when constituents of Members of Congress appear before congressional committees they generally take home with them the impressions they receive and the action Congress takes in protecting their local interests.

Why should not all Members of Congress be interested in each and every locality in our Nation? We are 48 States but one Nation, and every part of every State is the concern of the Nation. I am glad that the citizens of Williston have formed so favorable an impression of the Congress of the United States.

I am especially glad because there are certain groups with foreign ideologies that have been busy trying to destroy the confidence that our people have in their Congress. I think that disease has about run its course, and the people are again beginning to realize that their protections from overzealous bureaus is in the Congress. Here follows the editorial which speaks for itself:

News coming out of Washington yesterday announcing that the Appropriations Committee in the House had for the second time attached a rider to the Garrison Dam appropriations which, in effect, limited pool operation of the reservoir to 1,830 feet, was most heartening to people of the Williston area.

Local backers of the pool limitation provision had even greater cause for jubilance over this announcement than when the House voted its initial restriction action in December.

It was then that some members of the State water commission charged Williston with deceit and treachery, indicating that a delegation had gone to Washington from here under cover of secrecy and secured support of their proposed action from North Dakota Congressmen, and slipped through the Lemke limitation amendment in some sort of an underhanded method. This in spite of the fact that Gov. Fred Aandahl and other members of the commission had been told by different Williston representatives, both privately and at a hearing in the State capitol, that they would carry their fight to Congress.

Particularly significant was recognition of the views of the Bureau of Reclamation, which from the beginning, was entirely sympathetic in support of the 1,830 pool level.

Heartening, too, was the possibility that the big Buford-Trenton irrigation project might finally be carried through to completion, and that the Williston project also constructed, together with a part of the Nesson unit south of Ray.

In western North Dakota is where irrigation is needed most; where the rainfall is most meager; and where farmers have manifested a desire to see it developed. Because of these factors, it has always seemed the height of folly to even gamble with a chance of destroying either projects already constructed and in operation or those already surveyed and approved for construction, as the 1,850-foot level most assuredly would do.

But above all else the news was heartening because it enlarges faith in our constitutional form of government.

If its cause is just, and it does not seek to deprive any other community or section of the State of its legally constituted rights, a community, though it be comparatively small and stand alone, failing to receive recognition by its own State authorities, can appeal to Congress and its voice will be heard.

There was a time when Williston stood alone in the controversy that has now become a topic of State-wide discussion.

But this was not for long. When it was learned that our people were in no manner registering opposition to a high dam, and only sought, for the security of our people, deferment in fixing the final pool level of Garrison Reservoir until experience was had in its operation, and asked that the ultimate determination of that level be left with the Congress of the United States, other communities over the State, recognizing the reasonableness of our contention, began rallying to our support.

Then when Congressmen LEMKE and ROBERTSON, who had stood solidly with us despite a bombardment of protests which the opposition had hurled at them in Washington, saw Minot and other larger communities and organizations enter the fight with us, they too continued to stand against all opposition, headed by the Governor, the "brass hats," and other dignitaries of the State. The fact that the committee has for the second time carried through with these two Congressmen indicates a feeling of confidence on the part of their colleagues which cannot help but add to their stature as real statesmen.

Heartening, too, is the fact that, in face of all the confident opposition and the big array of witnesses during this secend hearing, one of the largest and most important committee groups in Congress clung to its principle of giving ear to the "little fellow," and seeking to protect the rights of the common man.

Whatever may be the benefits to come from Garrison Dam, and to whatever remote portion of the State those benefits may reach. Williston wants to see every person, every community, get its fullest measure. We believe this can be accomplished without the necessity of surrendering benefits which our own people have already earned by sacrificial toil through the years.

And while political repercussions of one sort or another have been threatened from the present controversy, there should be a common ground somewhere, when tempers are cooled and conclusions based on tolerant thinking, where those who sincerely have the best interests of all the State at heart could meet, so that every section of the State could maintain its own individual era of progress and in turn contribute more bountifully to building a truly greater North Dakota.

Veterans' Housing Survey

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. MADDEN. Mr. Speaker, today I received from James S. DeLaurier, publisher of the Hammond (Ind.) Times, the result of a survey pertaining to veterans' housing conducted by that newspaper. These statistics have been carefully compiled through information-seeking coupons published in his daily newspaper, and cooperation was received from the chamber of commerce, real-estate boards, labor leaders, and Purdue University. In this great industrial area of the Calumet region, the following facts were revealed concerning the housing crisis as it affects the returning veteran and industrial workers generally:

First. Seventy percent of the questionnaires were answered by veterans of World War II.

Second. The survey estimates that the Calumet region will need approximately 15,000 homes in the next 2 years.

Third. Forty-seven percent are now renting, while 53 percent are housed with friends or relatives.

Fourth. Seventy-six percent of the veterans answering planned to build homes costing between four and seven thousand dollars, while 24 percent desire to rent.

Fifth. Thirty-eight percent of the veterans disclose they had from three hundred to eight hundred dollars as down payments and 62 percent disclose they had between one thousand and three thousand dollars for down payment.

Sixth. Sixty-eight percent could pay rentals between thirty and forty dollars per month and 32 percent from forty to fifty dollars per month.

Mr. DeLaurier stated that upon checking with the United States Employment Service offices, he found that during February far more veterans returned to the Calumet region than during January. Owing to the fact that the above survey was conducted during January, it is natural to presume that the housing situation will become more critical as the months pass.

On account of the outstanding railroad and water transportation facilities in this Indiana Calumet area, numerous industries will also move into this region which will further congest the housing situation.

The above information is extremely valuable to builders, contractors, and material men, especially in congested industrial areas so they may realize that the great demand during this emergency is for low-priced homes. The building industry will need the aid, assistance, and cooperation of our Government in solving this necessary reconversion problem.

Intervention in Internal Affairs of Spain

EXTENSION OF REMARKS
OF
HON. WILLIAM B. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. BARRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter

sent by me today to the Secretary of State:

MARCH 4, 1946.

Hon. JAMES F. BYRNES,
Secretary of State,
Department of State,
Washington, D. C.

DEAR MR. SECRETARY: Along with a great majority of my constituents, I wish to protest the State Department's policy of intervention in the internal affairs of Spain, as I believe it endangers world peace and is contrary to a long-established policy of this Nation. In my opinion, it is definitely in the interests of Russia rather than of the United States and is further Russian appeasement secretly agreed upon at Potsdam.

Would we as a nation tolerate any other power telling us that we were Fascists because the citizens of our Capital City are not allowed to vote, or that a number of our States have poll taxes which prevent Negroes and poor whites from voting, or would we tolerate any nation telling us what person we should elect as President? Of course, we would not; yet that is precisely the policy we are pursuing in both Argentina and Spain. I am firmly convinced that if Colonel Peron is elected in Argentina he can thank Mr. Spruille Braden of our State Department.

Franco is a military dictator and I certainly would not want to see him the head of our Nation. Military dictators, however, have existed in Spain and South America time and time again. He disclaims being a Fascist. The Falangists or Spanish Fascists have always been a small minority in Spain, despite all propaganda to the contrary.

These statements will, I am sure, be corroborated by our wartime Ambassador to Spain, Dr. Carlton J. H. Hayes, and our recent Ambassador, Mr. Armour.

How can we justify recognizing the Balkan nations and Poland and Yugoslavia where communistic stooges of Stalin are in control, and not recognize Spain where the Falangists are in a minority among the people and are a minority in Franco's cabinet. Is communism something different from fascism from the American point of view? If so, I would like to know what the fundamental differences are.

The facts are with respect to Spain that besides lip service, the Spanish Government gave very little to Hitler during the war. It sold raw materials to both sides, which it had a right to do, and finally, at the request of our Ambassador, cut off all supplies to Germany. The sole contribution in the way of troops was one token division and one air squadron which was sent to fight the Russians who lent aid to Franco's enemies during the civil war. The division was subsequently recalled at the request of our Ambassador Carlton Hayes.

Contrast Russia's behavior with that of Spain's during the same period. Stalin not only collaborated with Hitler in starting the war but with large armies invaded and seized half of Poland and a large section of Finland and the Baltic countries. In addition Stalin supplied Hitler's armies with raw materials and goods and cut off supplies to the Allies until the "wolf turned on the jackal" in July 1941.

If Russia's behavior is to be excused on the ground of expediency, so should Spain's which was far less able to cope with Hitler's threat of invasion than the Reds were.

The dominant group in the United front which Franco overthrew consisted chiefly of self-proclaimed Anarchists, Communists, Syndicalists and Socialists who during the Spanish civil war on a large scale destroyed churches, shot down and butchered unarmed priests and nuns by the thousands. That is the group that Stalin and his cohorts all over the world want to see restored to power in Spain. No one is so naive now as to believe that Stalin has any interest in promoting democracy in Spain.

It is my conviction that wittingly or unwittingly our policy of cooperating with Communist-Socialist dominated France, we are playing Stalin's game. If a monarchistic or truly democratic regime were established in Spain the Russia Communists and their agents all over the world would not be satisfied, and would continue their attacks on the new Spanish Government with the same intensity that they are now attacking the present regime.

When the Spanish picture is analyzed in cold light of realism, the only true reason that the communistic and left-wing elements are opposed to Franco is not because of his lack of love for democracy but because he defeated their plot to communize Spain when they thought that unfortunate country was in their grasp. As Winston Churchill, when he described communism and its methods in 1937, said:

"Is it not an exact account of the communistic plot which has plunged Spain into the present hideous welter against the desires of the overwhelming majority of Spaniards on both sides?"

Very truly yours,

WILLIAM B. BARRY,
Member of Congress.

Income-Tax Credit for Charity Practice of Physicians

EXTENSION OF REMARKS
OF
HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Current Comment for February 9, 1946:

INCOME-TAX CREDIT FOR CHARITY PRACTICE OF PHYSICIANS

The value of the services rendered annually by physicians of this country in the treatment of the indigent sick for which they receive no compensation has been estimated as in excess of $300,000,000. Recognition of this tremendous contribution made by physicians for the public good is reflected in a bill, H. R. 5296, introduced in the Congress January 30 by Representative CLARE BOOTHE LUCE, of Connecticut. The measure provides that physicians, surgeons, and dentists, commencing with the taxable year 1946, shall be allowed an additional credit as a deduction on their income tax equal in terms of percentages to that portion of their time each year which is devoted to charity, free clinic work, and public research work. The Commissioner of Internal Revenue will prescribe by regulation, it is contemplated, the method of computing such time and the proof which shall be required in substantiation.

At the time the bill was introduced Representative LUCE had inserted in the CONGRESSIONAL RECORD a statement embodying the justification for her sponsorship of this legislation. In connection with the many proposals being made for various kinds of governmental control of medicine, she said:

"None of these proposals is a logical development of the American system of recognizing, promoting, and rewarding individual choice and achievement. In our earlier history pioneer medicos were rewarded for their frequently ill-paid devotion by a very special place in the community, high respect from their fellow citizens and patients, and payment in lovingly prepared delicacies where cash was scarce. Those times have largely vanished. To become a doctor, a surgeon, a dentist now requires some 8 or 9 years of unremunerative and expensive schooling. Until he has completed all this, usually by the time he is 29 or 30, the doctor cannot even begin to earn his own bread and salt, much less begin to repay himself for the costs of learning his profession."

After referring to the fact that all reputable physicians give a considerable portion of their time to the treatment of patients who are unable to pay for the services in any way except by gratitude, the statement continues:

"Surveys as to the amount of these unpaid services indicate that the percentages range from around 30 to 45 of all treatments given. This is a direct contribution on the part of the physician, surgeon, or dentist to the public welfare. In addition are the hours spent without pay in public research work, on hospitals' boards, and on boards of charitable organizations. All this must be chalked up to professional devotion, since it results in no return and often requires the practitioner to lengthen his working day to 15 or 16 hours or more in times of epidemic. There are no limits possible on a doctor's working day."

Because of the facts so well set forth in her statement, Representative LUCE believes that the recognition contemplated by her bill is fully justified. This measure is pending before the House Committee on Ways and Means, where, it may be assumed, it will be given consideration by the committee in connection with its program to revise the income-tax law.

The Time Has Come for Plain Talk

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. RAINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Anniston (Ala.) Star of February 24. This is a timely and thought-provoking editorial on a subject of paramount concern:

THE TIME HAS COME FOR US TO TELL RUSSIA TO STOP THROWING HER BULKY WEIGHT AROUND

It may seem impertinent for a newspaper as small as the Anniston Star, published in a city as small as Anniston, Ala., to keep raising its voice with respect to the foreign relations of our Government. But we cannot forget the observation of an eastern sage who once said that "he who will not take heed of things far away will soon find trouble near at hand." And it is in appreciation of the eternal verities of that truism that we feel impelled every now and then to try to bring home to the consciousness of our readers the fact that unless we first settle our affairs in the world at large we cannot enjoy the blessings of peace and prosperity in our domestic economy.

We often have stated in recent years that our world has shrunk from the relative size of a grapefruit to that of an English walnut. And since this is true, we must realize that what we used to refer to as foreign news has now become local news in every city, town, and hamlet in the United States. Indeed, we have twice seen in our own time how a bomb thrown at an Austrian grand duke in the little Bosnian city of Sarajevo, how an Ital-

ian invasion of Ethiopia, a Spanish civil war, a German invasion of the Rhineland, Japanese invasion of Manchuria, and a pitched battle between Japs and Chinese at the Marco Polo bridge near Peking eventually changed the way of life of every individual American.

It should be patent to any thinking person, therefore, that we cannot fail, with impunity, to take heed of things far away. And it is pleasing to note that the brilliant young Congressman from our neighbor city of Gadsden, ALBERT RAINS, who has but recently returned from a tour of observation in Europe, agrees with our point of view. For in an interview with the Washington correspondent of the Birmingham News last Sunday he said:

"We can no longer feel as voters, as American citizens, in the light of our responsibility for world peace, that our main concern is with local affairs or event national domestic affairs, and that foreign affairs are the concern of the President, the State Department, and a few commentators.

"We may be proud that we are an idealistic Nation, a Nation which hates injustice and tyranny, but we must also guard against our greatest national weakness—the tendency to proclaim our ideals and then let other people carry them out.

"Because of our position of leadership, the economy of the world is of the utmost concern to this Nation. Wars are born of depressions. Hungry people are dangerous."

This is eternally true. And hence it becomes the duty of this richest Nation on the face of the earth to give unstinted support to UNRRA and to supplement the work of that great humanitarian agency by sending food and clothing to the starving peoples of the world through the medium of our manifold charitable organizations. It is not right, however, to send more to Italy, an enemy nation, than we send to China, a country which suffered through 14 long years in a war that was of vital concern to us.

Nor can we salve our consciences by merely sending food to the peoples of dispossessed nations. We have got to cease being a Nation of mere headline readers—a people who "cheer the victory parades and evade all responsibility toward the principles for which the war was fought." We have got to become a more studious, a better informed, a more alert people, to the end that we may never again have to waste our substance and sacrifice the lives of our best young men in the fighting of a defensive war for which we were not prepared. Indeed, until the world becomes civilized enough to settle its differences by means of legal process, we must remain able to implement our words with force against an aggressor nation anywhere in the world.

We would not now stigmatize Russia, our recent ally, as an aggressor. We sympathize with her desire for security; we fully understand the terrible price she has had to pay in order to maintain her territorial integrity and her way of life. But today she is throwing her bulky weight around in such a way as to impinge on the security of other friendly peoples, including the United States of America. She says she is being "encircled" by the so-called capitalist countries of the world, but unless we in turn become encircled it is high time that we call on her to halt before it is too late for us to do anything about it.

This paper does not believe that it is in the interest of world peace or of world trade that we should attempt to keep Russia permanently landlocked. Under international agreement she should have access to warm water. But when she not only attempts to dominate the Balkan States, but western Europe, the Scandinavian States, the Middle East, Turkey, and the Dardanelles, Greece and the Dodecanese, which would mean the destruction of Britain's lifeline to the Far East in the Mediterranean, it is enough to give pause to every thinking American.

Heretofore, the British Fleet has been a wall of protection for us in the North Atlantic, but such encirclement as Russia seems to envisage would reduce Britain to a second- or third-rate power, and we must decide now whether we want to trade off Britain and France for Russia. We have got to decide, too, if we are to be deprived of access to middle eastern oil by Russia's "peaceful" penetration and whether we are to be driven from the high seas by the superfleet that Stalin says he plans to build in the next 5 or 10 years.

It may even now be too late to recoup our loss in world prestige; for while Russia has been playing for world stakes, we here at home have been engaged in the precipitate demobilization of our armed forces and in a class war among ourselves, while the Congress has been wasting the people's time and money over more or less futile investigations, plus a filibuster that ought never to have been provoked. And business as usual seems to be our objective in spite of the fact that the war is not officially over.

Walter Lippmann makes the pertinent suggestion that we send our Pacific Fleet into the Atlantic for a visit to strategic places to let the world know that while we have all but destroyed our Army, our Navy is still a potent force. But right at the moment Russia is needling us as well as Britain in the Far East, and that is the part of the world where we have moral commitments going back as far as the time of John Hay.

And in spite of Russian propaganda, we should not retire from China until we know definitely just where Russia proposes to stop in her own program of expansion. Maybe our new military Ambassador to the Kremlin, Lt. Gen. Bedell Smith, can get the answer. At least, it is hoped that he will not pull any punches by way of letting Stalin know that we did not send him lend-lease for the purpose of giving him title in fee simple to all of the big round world.

Organization of Congress

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of March 4, 1946:

BRING CONGRESS UP TO DATE

The La Follette-Monroney committee, created last year to study the organization and operation of Congress and to recommend improvements, came out today with an admirable report.

The American people have been increasingly concerned over the evident inability of Congress to play, with maximum effectiveness, its proper role in our form of government. Their concern was reflected in a flood of suggestions to the committee. To all, the committee applied this simple test: "Will they strengthen Congress and enable it to do a better job?"

Congress will gain strength and ability to do an immensely better job if it adopts the La Follette-Monroney proposals. Here are some of the changes that would be made:

The unwieldy committees, with their overlappings and conflicts, would be greatly simplified. The Senate would have only 16 standing committees instead of 33; the House only 18 instead of 48. Each committee's jurisdiction would be clearly defined. Each would have a small, well-qualified staff of research experts, and no longer would have to depend on inevitably biased departments and bureaus of the executive branch for fact-and-figure information.

The Legislative Reference Service would be enlarged and strengthened to give skilled research assistance to individual Congressmen.

Each Senator and Representative would have an able, well-paid administrative assistant to look after the errand running and other nonlegislative work that now absorbs a huge part of the average Member's energy and time.

Congress could no longer approve appropriations without regard for Federal income. It would be required to keep the total of appropriations within anticipated revenue or, by record vote, to express itself in favor of increasing the public debt.

Congressional time would be used more effectively. A heavy burden of petty, detail work would be lifted, for instance, by giving the District of Columbia self-rule instead of requiring Congress to serve as Washington's city council.

Organized groups exerting pressure on Congress would be required to register themselves and their agents and to report lobbying expenditures.

The $10,000 salaries of Senators and Representatives would be raised to $15,000 a year.

Most Members of Congress will be enthusiastic about the proposals for higher pay, pensions, and more help for themselves. But there will be bitter opposition to other suggestions, especially those for reforming the committee systems and reducing their size. That would mean reducing the number of committee chairmen, and Senators and Representatives who have risen to these positions of power by long service do not, naturally, want to give them up. But the La Follette-Monroney report states a compelling reason:

"No adequate improvement in the organization of Congress can be undertaken or effected unless Congress first reorganizes its present obsolete and overlapping committee structure. This is the first and most important test of whether Congress is willing to strengthen itself and its organization to carry the tremendous work load that present-day governmental problems place upon it."

Production Subsidies in the Housing Program

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Baltimore Sun of March 3, 1946:

PRODUCTION SUBSIDIES IN THE HOUSING PROGRAM

President Truman has now hit squarely at one of the sticking points in the House debate on the Patman housing bill and the general emergency-housing program. It is that $600,000,000 worth of what the euphemistic Mr. Wilson W. Wyatt calls premiums, alias subsidies. These subsidies

would be paid to manufacturers of housing materials, including prefabricated elements, to get out the production. Critics of the subsidy plan say, with considerable justification, that subsidies are a form of economic opiate and, in principle, bad.

But there are some impressive things to be said on the other side of the debate at just this moment in history. Mr. Truman has just said some of them in his special letter to the Speaker of the House. They are being said at greater length and in impressive detail by Representative MIKE MONRONEY, of Oklahoma, in the House debate. The considerations raised by the Messrs. Truman and MONRONEY have already swung the National Association of Home Builders from vehement opposition to unqualified acceptance of the Wyatt subsidy program. For the home builders' association knows most poignantly what everybody else is aware of—that lack of materials is one of the big obstacles in the way to an all-out housing construction drive. Everybody agrees, too, that price ceilings help account for this production lack. Well, then, are we likely to get away from price ceilings? Probably not for some time. If we are not going to get away from price ceilings, something else must be done.

The only other thing that can be done, say the backers of the Wyatt plan, is to pay subsidies to manufacturers who can prove that their profit margins require this kind of help. Right here Mr. MONRONEY has some especially pertinent comment. For these are not the kind of subsidies which have been offered in the food line, says Mr. MONRONEY. These subsidies are more nearly comparable to the subsidies paid during the war to high-cost producers of certain needed metals, like copper.

The argument for this kind of producers' subsidies is rather different from the argument for the consumer's subsidies. The latter, frankly, are a way by which the Government can keep food prices down and so buy off pressure for higher wages and salaries. But the producers' subsidies are paid to high-cost marginal producers who might not be able to produce at all without them. As Mr. MONRONEY puts the issue, it is a question of paying subsidies to high-cost marginal producers, in order to get an additional volume of production; or rejecting subsidies, and just not getting the needed production. To boost ceilings to the point where these high-cost marginal producers could operate without subsidies would be, Mr. MONRONEY fears, to give the nonmarginal (the efficient) producers unduly large profits. The subsidy program permits both the nonsubsidized and the subsidized producers to make about the same normal rate of profit. Certainly the burden is on critics of the subsidy plan to show how production can be secured without subsidies if ceilings are to be continued. This is just what President Truman is suggesting.

Pay Increase for White-Collar Workers and Postal Employees

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1946

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Civil Service Committee and the Committee on the Post Office and Post Roads of the House of Representatives:

STATEMENT BEFORE THE CIVIL SERVICE COMMISSION

Commissioner Flemming, in his testimony Monday morning, pointed out that pay increases in industry range from 50 to 55 percent since January 1941, and that the wage board employees in the Government's navy yards will in all probability receive a total increase of approximately 54 percent.

These figures are sufficient justification, to my mind, for seeking an increase of 25 percent for the white-collar group of Government employees, instead of the 11 percent that would be granted under the terms of the Senate version of the pay bill originally introduced by Senator DOWNEY, or the 20 percent advocated by the Civil Service Commission. It seems to me definitely unfair that there should be discrimination against any group of employees, particularly against any group working for the United States Government.

Some persons contend that the pay scales of white-collar employees and those who work at the manual trades are not susceptible of comparison. With that view I cannot agree. Each man is an individual. Each man has the same elementary needs of food, clothing and shelter for himself and for his family. He has a right to expect to bring up his family in comfortable circumstances, and whether he works in one job or another makes little difference that I can see.

There was some years ago, when white-collar workers enjoyed more favorable conditions in comparison with manual workers than they do today, the attempt to divide these two groups by assurances to the white-collar man that his services were of much greater importance to society, and that he should not make common cause with the tradesman. The white-collar man was told that he had greater opportunities and, in general, a much more favorable position.

Today the white-collar man knows that this is not so; the tradesman's pay has increased considerably more than his own, and it is the white-collar man who now occupies the unfavorable position. It is not very comforting to him to be told now that he shouldn't expect as much as the tradesman.

I cannot see why there should be any distinction. It costs the white-collar man as much to live as the tradesman. Perhaps it costs him a little more, because he must wear good clothes on the job, whereas the tradesman wears working clothes that are less expensive and capable of enduring heavy wear.

Some men are trained to work with the hand and some to work with the brain. Some men can keep accounts, some men can operate a slide rule. There are differences in their equipment, and that is why they choose different types of jobs. But there is no real difference in them as human beings. They want the same sort of deal for their families, and they want that to be a square deal.

Mr. Flemmings' testimony brought out the point that the increase granted by the revised form of Senator DOWNEY's pay-increase bill, S. 1415, as it now stands, if combined with the increase granted by the Pay Act of 1945, just barely covers the increase in the cost of living since 1941.

But, as he also showed, pay in industry and in navy yards has gone considerably beyond that. The increase in living costs is generally accepted as 33 percent. Industry and navy yard pay increases run about 20 percent above that figure.

If S. 1415, with its 11-percent increase, just covers the rise in living costs, surely an additional 14-percent increase is not unreasonable. It would still leave a disparity between the pay of Government employees and the pay of industrial workers, and even of the Government's navy yard workers. The total increase would be about 47 percent, at most, instead of the 50 to 55 percent these groups of employees have received or are about to receive.

I believe that Uncle Sam should be a fair and reasonably generous employer. Certainly, there would be nothing lavish about granting to his white-collar employees a general increase 7 points below what he grants to tradesmen in his navy yards and 8 points below the going pay increase for industry. I think a 25-percent increase is the least this Government can, in good conscience, offer to the faithful men and women who have served it so devotedly during the war years.

Several months ago President Truman said the increase should be at least 20 percent. Chester Bowles, this week, said the same thing in his testimony on the pay bill. Other Government administrators have pointed out the urgent need of early and adequate salary increases and have told of their problems, when so many competent employees are leaving the service because of lack of opportunity.

The Government should at this time not only raise the real wage value of the basic rates under the classification act to a true cost of living level but it should also, as has been the custom in industry, preserve some of the wartime earnings of Government employees, in order that their purchasing power may be maintained on a high enough level so that they will not be placed at a disadvantage in comparison with other groups.

We have, it seems to me, a duty and an obligation to Government employees stronger than what we owe to the employees alone, though that is a very great obligation indeed. We have a duty and a responsibility to see that the Government service is maintained at a high standard, and that, in the long run, will not be possible if the men and women who would normally choose to enter it realize that they are going to be penalized if they do so.

In the interest of honest and efficient government, we must be fair to our Government employees. On the basis of the facts already revealed as to the nature and amount of pay increases in industry, where white-collar pay, as Mr. Bowles has stated, rose 34.7 percent during the war years, we cannot in fairness grant a pay increase of less than 25 percent to Government employees now.

STATEMENT BEFORE THE COMMITTEE ON THE POST OFFICE AND POST ROADS

Mr. Chairman and members, I am very happy to have this opportunity to appear before you today to speak in favor of the $500 increase for post-office employees. Some persons contend that the pay scale of the post-office employees and those who work at manual trades are not susceptible of comparison. With that view I cannot agree.

Each man is an individual. Each man has the same elementary needs for food, clothing, and shelter for himself and for his family. He has a right to expect to bring up his family in comfortable circumstances and whether he works in one job or another makes little difference that I can see.

In the interest of honest and efficient Government, we must be fair to our Government employees and again I urge this increase in salary for the postal employees to meet the high cost of living.

Justice for Postal Workers

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my re-

marks in the RECORD, I include the following editorial from the Binghamton (N. Y.) Press:

JUSTICE FOR POSTAL WORKERS

Postal workers are entitled to the liberalization in pay that they currently seek. In fact, if trained workers are to be retained and new workers recruited, a pay increase is mandatory.

Three years ago Congress gave these workers a temporary cost-of-living bonus of $300 a year. This expired last June and was replaced by a grant of $400 a year. But because of withholding taxes, larger deductions for retirement and return to a 40-hour week, the workers netted only an additional $1.69 a week. Two bills before Congress would provide $300 more a year.

What the workers want is $500, a figure that does not seem too high, inasmuch as the permanent increase of last summer was the first in 25 years. The postal workers seek liberalization of an entrance salary of $1,700 a year, an average of $2,500 after 9 years, and $3,000 after 26 years of service.

Although some thousands of postal workers are members of an organization affiliated with the A. F. of L., they cannot strike, nor have they inclination to do so. Channels of redress open to workers in private industry are closed to them. Congress must act.

An honored maxim of postal workers comes from Herodotus. It is: "Neither snow nor rain nor heat nor gloom of night stays these couriers from swift completion of their appointed rounds."

As the most faithful of public servants, and so recognized by the public they serve, they deserve generosity. So far they haven't obtained justice. Congress must heed their reasonable pleas for pay adjustment.

The Housing Shortage

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1946

Mr. WOODRUFF. Mr. Speaker, under permission to extend my remarks in the RECORD, I am enclosing a very comprehensive letter from a constituent in which he discusses the present building impasse. I commend this letter to the attention of every Member of the House and the Senate, the Members of which can profit thereby. At this time we have before us in the House of Representatives legislation which proposes to speed up the construction of housing for our people. We can well take a leaf out of the experience of this constituent, a veteran of the First World War and an experienced builder.

The letter follows:

Hon. ROY O. WOODRUFF,
House of Representatives,
Washington, D. C.

DEAR SIR: I have never written you before, and will try to make this letter brief, but conditions in the country have reached such a stage that I think people should let their Congressmen know how they feel about things, so I want to get in my 2 cents' worth.

I am a veteran of the First World War, and a builder by trade, the past few years have specialized in the designing and building of log cabins. My work was stopped by the war. Then I worked for the Ordnance as a civilian employee until the end of 1945. For years we have been planning on building a tourist resort of log cabins and have put all our savings into the project, but now it seems that new Government restrictions on building will kill our chances.

We all know there is a shortage of homes, but think they are going about it in the wrong manner. The bottlenecks have been shortages of material mostly, and we believe the present condition of the country is due to the antics of the labor unions and the New Deal, which has never solved anything yet. Instead of creating another czar, this time in the building industry, why wouldn't it be better to make materials available to all, and without restrictions on the use of that material?

If we have so much money that we can underwrite the British and Russian Empires why can't we use some of it, if necessary, to encourage increased production of building materials through subsidy for a few months, or until production catches up with demand? Our idea is to put reasonable price ceilings on materials, but lift all restrictions on the use of them. Then you will see some building; every builder will go to bat and we will get those homes we so badly need. But with more Government restrictions, I am afraid it will defeat the very purpose we are trying to achieve, more homes. No builder wants to have some dizzy New Dealer telling him how and when and where he can build, but make materials available to all, and at reasonable costs, and lift restrictions on their use and we will see those badly needed homes going up. Lumber, like a lot of other items, is too high. It could be brought down for the time being, by subsidy, until supply catches up with demand, then a builder will have some idea what his jobs will cost and can go ahead without fear. Everyone would benefit by getting homes at reasonable cost, and our money would be helping Americans first, instead of all the rest of the world. I have talked with a number of builders and men in business closely associated with the building business, and we all feel the same way about it—put reasonable price ceilings on materials to encourage their production, remove all restrictions on the use of building materials, making them available to everyone without priorities or other restrictions—then we will get homes.

As to the present labor situation, we are getting no where, and fast. The present labor policy is leading us straight for the worst kind of inflation and then depression. We must have drastic labor laws to pull the stinger out of the unions; their arrogance and selfishness and political power will ruin this country, and they must be curbed, or do we want to follow the path of France? France patterned its prewar government after our New Deal; we all know what happened to France. Labor unions are all right if kept in their place, but today they are misled (not led) by rotten thugs and gangster politicians, Communists, and other radicals, and we think Congress should do something about it, or we might as well hand the country over to them.

Our only hope now lies in Congress; it will be too long to wait till the 1948 election; too much damage is being done now, and we can be completely lost if we wait much longer.

As to the UNO, we don't think the permanent home of the UNO should be located in this country. Why have a supergovernment within our borders? It would mean a nest of international spies always within our borders, and since the sun never sets on the British Empire, why not use one of the many islands the British own, anywhere they might want, and use it for the home of the UNO, which I think will turn out to be just another dream and a debating society, sponsored by the Democrats. We can't legislate peace into the peoples of the world; it must be in their hearts and minds. Treaties are only scraps of paper when they want to make it so. We have seen how the various nations double-cross each other. Could we trust them because of a signed piece of paper? I don't trust Russia any more than I do the New Deal, and why should we underwrite Russia or England? Do we have to buy their good will? If so, we had better save our money and use it for America and Americans. Keep our defense forces intact, and let us not scrap our weapons as we did before. No treaty will enable us to get sudden production when we might need them again.

As to the OPA—it is getting to be a joke, but not a funny one. They have failed in their purpose; prices have gone up and still going up, and we think they should be eased out of existence very soon. Keep fair-price ceilings on certain things such as building materials, clothing, and perhaps a few other items, but for a short time only, so production will catch up with demand; then remove OPA and give the people of the country a chance to adjust themselves without Government interference. There might be some confusion to start with, but it will soon adjust itself. If certain things go too high, a boycott will take care of that, then later, after production is increased, competition will even up our keel. What we need is production, and more of it, and the removal of restrictions. Let us not socialize the building industry for another gang of bureaucrats. This is the finest country in the world. Let us keep it that way.

Very truly yours,

C. R. MARTIN.

Demobilization of Men Overseas

EXTENSION OF REMARKS
OF
HON. JAMES P. GEELAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. GEELAN. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a letter received under recent date from Mr. Clinton S. Golden, chairman, CIO Veterans Committee, in which he advised me that he was enclosing a copy of an open letter to the Congress of the United States, attention of the Honorable Mr. MAY, chairman of the House Military Affairs Committee, which letter was signed by Sgt. James H. Roof, Jr., and 110 other soldiers presently stationed in Seoul, Korea, which I also include in the RECORD:

OFFICE OF VETERANS COMMITTEE,
CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Washington, D. C., February 11, 1946.

MY DEAR CONGRESSMAN: Attached is a copy of a letter and petition signed by 111 soldiers of the American occupation forces in Korea and addressed to the Congress of the United States. It was sent to the CIO with the request that we endorse and forward it on to the Congress.

We are much gratified with this expression of confidence in our organization, and we are happy to comply with their wishes insofar as possible. We must point out, however, that the CIO believes replacements for the absolute minimum of our military needs can be met by voluntary enlistment if Army pay schedules are made attractive and if the outworn and undemocratic Army caste system is abolished.

Sincerely yours,

CLINTON S. GOLDEN,
Chairman, CIO Veterans Committee.

SEOUL, KOREA, *January 22, 1946.*

Mr. PHILIP MURRAY,
President, the Congress of Industrial Organizations, Washington, D. C.

DEAR SIR: You will find enclosed a copy of an "open letter to Congress." I am sending this letter to you because we soldiers are of the belief that your organization is the friend of the common man. We believe that your many millions of members can and will do all in your power to assist us in getting a square deal on the matter of serving in the armed forces of the United States. We know that you agree with us that this burden should not be placed on a few hundred thousand of us while all the rest of the men in our country are at home enjoying their homes and children.

We ask you to please endorse this letter and forward it on to Congress with the full weight of your committee behind it. We would also appreciate it very much if you would publish it in your union papers.

As one American citizen to another we will appreciate your every effort in our behalf.

Thanking you in advance, I remain,

Sincerely yours,

JAMES H. ROOF, Jr.,
First Sergeant, 38736500.

SEOUL, KOREA, *January 19, 1946.*

The Honorable Mr. MAY,
Chairman of the House Military Affairs Committee, House of Representatives.

AN OPEN LETTER TO THE CONGRESS OF THE UNITED STATES OF AMERICA

DEAR SIR: Undoubtedly you have received many letters of this nature. We American soldiers are often called chronic complainers, but we believe that we have a just cause. We still believe that we are American citizens, and we still believe in the democracy that our buddies fought and died for. But we feel that we are not getting a democratic American square deal on service in the Army from the standpoint of demobilization of men overseas, now that the war is over. The following are our reasons:

1. Why are men in the States being declared surplus and discharged, regardless of points, length of service, age, or dependents, while we who are overseas are told that we cannot be discharged or sent home because there are no replacements available?

2. We are told that there are 400,000 surplus men in the Pacific theater of operations. Why aren't the high-point men, combat men, men with 1 or more children, and over-age men screened out of the Pacific theater force and sent home at once? Are replacements necessary for surplus men?

3. Why are men over 37 years of age being discharged in the States and at the same time men over 37 years of age who are overseas are told that they will have to wait until they have reached their thirty-eighth birthday?

4. Why should the burden of occupation be forced on a few hundred thousand men who happened to be overseas at the end of the war?

5. Why is it necessary for any man to have to serve more than 18 months when our Nation has 140,000,000 people to draw from, and approximately half of that number are men?

6. Why is it necessary to occupy friendly nations such as Korea, China, the Philippines, India, Africa, and the Hawaiian Islands? Are we a world police force? We can understand the occupation of Japan and Germany, but not the rest of the world.

The following is what we want and think should be done. We are submitting this for your consideration and action:

1. Continue the present rate of demobilization until the goal of July 1, 1946, is reached, namely, 1,500,000 men as set by the War Department.

2. Pass necessary legislation to continue selective service in sufficient numbers to assure a sufficient number of replacements on the basis of a maximum length of service of 18 months for all drafted men.

3. Pass necessary legislation to make the Army as a career more attractive from an economic standpoint as compared with similar civilian activities. One hundred dollars a month minimum pay would make possible an Army of 3,000,000 or more by voluntary enlistments and the Army could select the best of manpower from the millions of applicants that would be available.

4. Set up a rotation system for overseas service so that no one drafted man would be forced to serve, against his will, more than 1 year overseas.

5. Set up a discharge system covering the following four categories for men drafted before VJ-day:

(1) Points based on months of service (make the point score accumulative, giving each man his point credits each and every month, based on double credit for each month overseas).

(2) Dependents (all men with more than one dependent drawing dependency benefits should be discharged at once if the man so desires.)

(3) Age (all men who have reached their thirty-fifth birthday should be discharged at once if the man so desires.)

(4) Maximum length of service of 18 months for all drafted men with the continual reduction of number of months of service of men now in the Army until the goal of 18 months is reached.

(5) A comparable system should be set up for all officers who were drafted prior to VJ-day based on the above criteria.

Mr. Congressman, is it the will of our people through the House of Congress that determines the laws and policies of our Government, or is it the will of the War Department through the House of Congress that dictates the laws and policies of our Government and people?

We feel that we are being reasonable—don't you? All that we ask is fair play. Is that asking too much?

What are you going to do about this problem, Mr. Congressman? Don't you think that there has been enough dilly-dallying already? When are you going to act?

We are writing this letter to you as American citizens and we expect to be treated as American citizens. Your cooperation will be appreciated and remembered.

Sincerely yours.

We, the undersigned do hereby endorse and approve the above letter in its entirety as representing our views and opinions and we believe that its contents represents the views of the majority of all American soldiers in Korea.

JAMES H. ROOF, Jr.,
First Sergeant, 38736500.
(Also signed by 110 other GI's.)

Protecting the Supreme Court

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. O'HARA. Mr. Speaker, I recently introduced in the House a bill, H. R. 5146, relating to the performance, by Federal judges, of services for the United States not related to their judicial duties.

Under leave to extend my remarks in the RECORD, I include the following excellent editorial which appeared in the Mankato Free Press, Mankato, Minn.:

PROTECTING THE SUPREME COURT

When the history of the troubled era through which we are passing is written by objective historians one of the strong, influential, and stable figures in American public life will probably prove to be Chief Justice Harlan Fiske Stone.

Chief Justice Stone took over as head of the Nation's highest judicial tribunal at a time when public respect and regard for the court had been rudely shaken by President Roosevelt's bitter attack on the "nine old men" and by his unsuccessful efforts to purge the Court and make it over to conform with his personal economic theories. Quietly but effectively through the years, Chief Justice Stone has been laboring to restore the court to that position of high dignity and esteem which it formerly has held, and which it always should hold, in the public mind.

One of his particular efforts has been to urge members of the court to refrain from undertaking other activities, from listening to the lure of active politics, from permitting their names to be used as possible candidates for other offices—even for the Presidency.

It is now known that President Roosevelt asked Chief Justice Stone to conduct the Pearl Harbor investigation. He refused on the ground that other men were available and that a member of the Court should not engage in such activities. Mr. Justice Roberts later accepted the invitation to serve. The action of Mr. Justice Jackson in serving for the United States in the war criminal trials at Nuremberg was disapproved by the Chief Justice and only recently he is known to have strongly opposed the possible resignation of Mr. Justice Douglas, to serve as Secretary of the Interior.

These actions do not merely stem from a high regard for the proprieties by the Chief Justice—they are founded on hard reality as well. Repeatedly recently justices have either been away from the Court, as Justice Jackson is now, or they have felt compelled to disqualify themselves for cases because of activities they had, outside the court, bearing on these cases. As a result, only eight justices consider a case; frequently 4 to 4 decisions result end then the case has to be argued over again; valuable time is lost both to the Court and to the litigants involved.

So serious has this situation become that Representative JOSEPH P. O'HARA of our own second district, has introduced a law to bar all Federal judges, Supreme Court justices included, from performing outside activities. Such legislation will unquestionably meet with the approval of Chief Justice Stone and of the public generally as well.

Outstanding Citizen

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. MARTIN of Iowa. Mr. Speaker, throughout World War II, I have made a very careful study of the service rendered by the newspapers of the First Iowa District to our boys and girls on the fighting fronts and in varied assignments all over

the world. Many of these newspapers have given outstanding service and it has been recognized by the men and women of the First Iowa District serving in the armed forces throughout the war; by the relatives of these service men and women; and by the entire community served by these papers.

One of the most outstanding examples of service of this kind was that given by John O'Donnell, of Davenport, Iowa, who conducted a weekly section in the Davenport (Iowa) Democrat under the title of "Dear Joe." Mr. O'Donnell's service was so outstanding that I placed in the CONGRESSIONAL RECORD on March 28, 1945, a very fitting description of his work, written by Mr. Hugh Harrison, managing editor of the Davenport (Iowa) Democrat.

The Lions Club of Davenport, on Thursday night, February 21, extended further highly deserved recognition to Mr. O'Donnell and paid tribute to him as the outstanding citizen of Davenport, Iowa, for the year 1945.

I am including here an editorial from the Davenport Democrat of Friday, February 22, which describes the tribute to Mr. O'Donnell:

OUTSTANDING CITIZEN

A representative gathering of citizens, men and women, some 400 in number, at the Masonic Temple, Thursday night, paid tribute to John O'Donnell as the outstanding citizen of Davenport for the year 1945. The event was sponsored by the Lions Club.

Hardly had the program started but John must have discovered he was among friends. Leading citizens of the community sounded praises of his splendid work in behalf of sports, as a contributor to the morale of the armed forces through his weekly "Dear Joe" letters in the Democrat, and as a newspaperman.

The "Dear Joe" pages started by Mr. O'Donnell in August 1942 contained a total of over 3,000,000 words. Letters were printed from GI's from 24 countries in the European war theaters, 28 islands in the Pacific, and 194 camps in the United States. It required much labor, and not a little patience on the part of Mr. O'Donnell to supervise this gigantic undertaking. Best yet, the idea originated in his fertile brain and was carried out successfully through his own personal endeavor.

John O'Donnell's work will stand out as one of the more notable achievements of the local war effort. It is well that it has been recorded in book form of permanency, and for reference by coming generations.

That Mr. O'Donnell's achievements are recognized and appreciated beyond his home town was made apparent at the testimonal dinner in the presence of Dr. Eddie Anderson, head football coach at the University of Iowa, who in his talk rated John as one of the outstanding sports authorities of the country.

All in all it was a wonderful occasion for Mr. O'Donnell and the pleasure was equally shared by the many guests who came to do him honor. Their high esteeem for the honoree was displayed in the enthusiastic ovation tendered him, and the hearty applause which greeted the speakers.

A good citizens, a worker, a loyal friend of the men and women in the armed forces, and a fine fellow in every way was the unanimous verdict given Mr. O'Donnell by the guests of the evening.

Well may John O'Donnell stand as Davenport's outstanding citizen. The title needs no apologies, for it is well deserved.

Resolutions of Jewish War Veterans, Department of Connecticut

EXTENSION OF REMARKS
OF
HON. JAMES P. GEELAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. GEELAN. Mr. Speaker, Under leave to extend my remarks in the RECORD, I include a copy of two resolutions adopted by the Jewish War Veterans of the United States, Department of Connecticut, at a meeting held in Meriden, Conn., on February 17, 1946:

Whereas the housing accommodations for returning veterans and for those veterans already attempting to adjust themselves to civilian life is progressively becoming more acute; and

Whereas the veteran by reason of lack of housing accommodation are finding it more and more difficult to return to a normal civilian status and consequent adjustments as a civilian; and

Whereas the situation is aggrieved by the housing needs of civilians: Now, therefore, be it

Resolved, That the Council of Administration of the Department of Connecticut of the Jewish War Veterans of the United States, in meeting assembled at Meriden, Conn., this 17th day of February, 1946, petition, through the Congressmen and Senators representing the State of Connecticut in the Congress of the United States, that every effort be made to place the full responsibility, control, and management of the housing and building of homes for veterans under the supervision of the Government of the United States by law; and be is further

Resolved, That a copy of this resolution be forwarded to each Representative of the State of Connecticut in the Congress of the United States for their attention and action.

Whereas the Fair Employment Practice Act has suffered defeat in the Senate; and

Whereas the passage of this act is in conformity with the democratic principles of this United States; and

Whereas the Fair Employment Practice Act is still in a House committee, where it will remain unless it is voted out of this committee: Now, therefore, be it

Resolved, That the Council of Administration of the Department of Connecticut of the Jewish War Veterans of the United States, in meeting assembled at Meriden, Conn., this 17th day of February, do hereby memorialize the Members of Congress that immediate consideration, commensurate with other pressing problems of Congress, be given to the passage of the Fair Employment Practice Act; and be it further

Resolved, That a copy of this resolution be forwarded to each Representative of the State of Connecticut in the Congress of the United States for their attention and action.

The Effect of War

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. WHITE. Mr. Speaker, in viewing the world situation many of us are wondering just what the people of this country gained in winning the war. It is interesting to read an analysis of the present situation written by Mr. Louis Fischer appearing in the Progressive, from which the following extracts are taken:

The First World War made pacifists of millions. The Second World War has made millions of pacifists who advocate militarism. They are pacifists and cynics and militarists; they say, war is waste; war is inevitable; prepare for war. The war has left one god: power.

Modern democracy is not a movement to achieve something; democracy is a way of life. Democracy is relaxation. The tensions are introduced by personal struggles for a living or for wealth or other successes.

Dictatorships function in a condition of permanent public mobilization. Totalitarian governments are always summoning their subjects to die. But the normal state of a democracy today is collective inaction.

Before democratic society bestirs itself to action it must be goaded by a Pearl Harbor or, as in England in September 1939, by a threat to a national existence, or by an economic depression. Truly national acts by the people of a democracy are rare.

The function of democracy is to protect the majority against a minority, to protect one minority against the other. This conduces to passivity. Democracy means checks and balances. They conduce to passivity.

Groups like trade-unions, cartels, manufacturers' associations, and various lobbies operate to defend or aggrandize themselves. The national community as a whole, the democracy, rarely operates as a unit except through its government, whose indecision, temporizing, and procrastination are the result of the balance between one force which pulls in one direction and another, sometimes almost equal, force which pulls in another direction.

The lag between politics and science merely confirms the dilemma of a free society. Scientists develop the atomic bomb according to the best methods the best brains can devise. But the disposal of the bomb in peacetime is not determined by what the best brains think; the decision is the sum total of innumerable interests, pressures, pulls, fears, lures, hopes. Science would long ago have abolished poverty, empires, and backward regions.

Democracy fears a very active efficient government: It might endanger freedom.

All these factors explain the retreat of the appeasing democracies in the face of aggressive dictatorships. They also explain the failure of democracies to solve internal problems.

The problem facing democracy is to achieve economic security and universal prosperity while retaining political freedom.

Who Is Selling America Short? Wall Street, Not Chester Bowles

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. SABATH. Mr. Speaker, for a long lifetime I have been saying that powerful and avaricious financial interests of Wall Street and the curb and commodity exchanges are a constant threat to economic stability and prosperity in our country.

Over the Columbia Broadcasting System last Tuesday a hardy journalist, Quincy Howe, said the same thing, and he said it so briefly and concisely that, under leave to extend my remarks in the RECORD, I wish to insert the full text of Mr. Howe's remarks as furnished to me by CBS.

Mr. Howe tells us why the National Association of Manufacturers is taking full page ads in big papers to advocate inflation. They can make money buying and selling stock; but the people lose, because their money buys less and less. And finally everybody loses. Nobody wants to keep businessmen from making a fair profit; but no one ought to want to let speculators rob us of our buying power through exorbitant profits.

Mr. HOWE. Who is selling America short? Wall Street, not Chester Bowles. Yesterday Mr. Bowles told a congressional committee he believed that the Government's new wage-price policy could hold the line against inflation.

Today the stock market went into a nose dive. Mr. Bowles urged Congress and the American people to continue farm subsidies, to keep the present price ceilings on rent, to stop inflation of real estate. And because Chester Bowles commands such wide popular support that most Americans want to follow his advice, Wall Street fears the worst.

Apparently the American people can stop inflation if they want to. Peace, it's terrible. Remember the stock market in wartime? Every time we lost a battle, every time the war seemed sure to continue indefinitely, the prices of common stocks went up. But when the Germans or the Japanese looked groggy, Wall Street would go through one of those dreadful "peace scares" and the prices of common stocks would go way down.

It's still the same story. A week ago the wave of strikes seemed sure to rise higher and higher. So did prices. The National Association of Manufacturers was taking out full page newspaper advertisements urging Congress to shake off what it called the shackles of price control. More than one of the men around Truman was urging just a "touch" of inflation.

And Mr. Bowles revealed today that young Henry Ford wanted permission to hike up the prices of Ford cars 55 percent. Yes, you heard me right—55 percent. Don't let anyone tell you that we all stand to lose if we get inflation. Not in the early stages anyway.

Of course about 85,000,000 suckers who bought war bonds will find themselves stuck with 75- or 50-cent dollars 10 years from now. Of course, 60,000,000 holders of life insurance policies will leave their families only half or three-quarters as much real money as they expected to leave, depending on how far the inflation goes.

People who depend on pensions, salaries, savings, and fixed incomes will lose out, too. But everybody does not lose. People who own common stock can sell that stock for more and more money as the inflation goes forward. Even though the money itself buys less and less. People who own real estate, people who own property of every kind, find themselves better and better off in terms of money. Inflation brings universal ruin only when the value of money drops to nothing at all. And that happens only if production falls, as it has in so many European countries today. The United States is another story.

Once we get something like full production, we shall not be short of goods. But if we get full production, plus, say, a 50-percent inflation the wealth we produce will not go to the people who have saved their money. It will go to the speculators and to the owners of our biggest industries.

The price of stocks on Wall Street reflects the mass emotions of speculators—large and small. But the price of stocks is the result, not the cause of inflation. The real inflationists are not the Wall Street plungers; the real inflationists are to be found among the men who own or control the biggest American industries.

And if prices go up 25 or 50 percent while the value of the dollar drops to 75 or 50 cents, they not only get a larger cash income, they get a larger share of the national income. While those Americans who put their trust in the dollar will be getting less.

The battle over inflation thus comes down to a battle for a redistribution of national income. And in that battle, those who oppose inflation represent the many, those who want inflation represent the few.

British Views on Loan

EXTENSION OF REMARKS
OF
HON. EMILY TAFT DOUGLAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mrs. DOUGLAS of Illinois. Mr. Speaker, under permission granted me to extend my remarks, I include an editorial from the Quincy (Ill.) Herald-Whig entitled "British Views on Loan":

BRITISH VIEWS ON LOAN

Opposition to the American $4,000,000,000 loan came from conservatives in both England and the United States. American opposition is based on doubt of British ability to repay and fear that if the loan is repaid it will be in goods detrimental to American industry. Some Britishers also question their country's solvency, but their principal objection lies in the danger to British industry. By importing American goods, even on American credit, Britain will work hardships on her own industries and labor, they say.

The 90 to 8 vote of approval in the House of Lords failed to show the extent of disapproval, since 60 members abstained from voting in silent opposition. These opponents argue that temporary inconvenience would be more than offset by long-range benefits of going it alone.

The American and British opponents of the loan have one thing in common. Both basically are nationalistic. They are willing to accept a certain degree of collaboration for peace, perhaps on the order of the old League of Nations, but are unwilling to go all out in lifting barriers from trade and pooling armaments for peace in full economic and diplomatic collaboration. They are willing, even eager, to return to the practice of unrestricted economic warfare of the type that has bred two destructive wars in a quarter century.

From the liberal point of view, all such things are experiments. The old system did not prevent wars. Perhaps the British loan won't help to turn the trick, but if it aids in developing world cooperation it will have been worth what it costs. Britain is in a state of economic collapse after years of war. She constitutes a mighty bulwark against invasion of this country by any European power. Trouble with England is vitually impossible. The United States holds hostages against trouble with the Empire.

The British Empire, long America's best customer, can resume that place only through economic strength. America doesn't need an export market immediately but soon our factories will be turning out more goods than the domestic needs will require.

Perhaps the loan advocates' best argument is insurance of peace through a better world. More people must have more advantages if wars are to be prevented. From the past we have learned that no nation can be prosperous if the rest of the world is in depression. The Bretton Woods monetary agreements is tied to the British loan. Its approval is considered one of the keystones of the United Nations Organization.

Four billion dollars is a great deal of money to risk. Yet the war just ended cost us 100 times that much and brought only death and destruction. Perhaps a friendly act costing 1 percent as much will bring more satisfactory results.

Veteran's Wife Pleading for Housing

EXTENSION OF REMARKS
OF
HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. ROWAN. Mr. Speaker, I submit herewith a letter from one of my constituents, who is the wife of a veteran:

CHICAGO, ILL., *February 22, 1946.*

DEAR MR. ROWAN: As the wife of a veteran, I am incensed at the opposition which has developed to the Wyatt housing program. The real-estate interest and home builders are the ones who will gain by the increased production of housing, but in their shortsightedness oppose this plan, as the big interests oppose every plan to better the lot of the human being.

I wish that rather than waiting for a vote on the floor (I'm confident you'll vote for the plan) that you would immediately devote every available minute to fighting for the Wyatt plan in all its aspects and against the pressure groups who oppose the plan.

The veterans—all the millions of them—and their families are watching you and your colleagues closely to see whether all the beautiful promises made during wartime mean anything.

Fight for the Wyatt housing plan!

Sincerely,

SHIRLEY G. GOULD
(Mrs. Joseph E.).

Labor Problems and Reemployment of Veterans

EXTENSION OF REMARKS
OF
HON. FREDERICK C. SMITH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include two editorials from the Telegraph-Forum, Bucyrus, Ohio, which are most timely. Every Member of Congress should read these articles:

[From the Telegraph-Forum of February 23 1946]

WHAT PRICE STRIKES?

If ever America was in a position which demanded reflection of its ways, that time is now. Today's wave of strikes is heading the Nation toward the crossroads of continued democracy, as it was inherited by today's

generation, and economic ruin. Unfortunately for the Nation, those who should do the reflecting are so engrossed in grabbing all that they can grab today that they are not allowing themselves to face the economic facts that face them and the rest of us. Today's willful strikers are closing their eyes to facts they themselves are creating, but they can't recognize them because they are being fed so much radical propaganda and such untruths as those put out recently by one union. Here is what it said: "GE and Westinghouse are engaged in a gigantic plot against you and us." It is not conceivable that the human mind could believe that two of the biggest industrial concerns in America would plot against their workers and their customers. Another from the same union: "Here's part of the plot against you (the public). Both GE and Westinghouse for months have withheld radios, refrigerators, washing machines, electric irons, and other needed electrical appliances from the market." Neither is it conceivable that the human mind could believe that an established industrial concern would withhold sales and deny business to itself.

Strikers out because they want to be out are being woefully misled by smooth tongues that are interested in membership totals and dues, but profess to be interested in the working people. That "interest" is not deep enough for them to make provision from union millions to keep strikers and their families. This alone is proof that they are not interested in the workers' welfare. When strikes continue week after week as they have here and in many other communities, local union leaders, or their representatives, go begging up and down the street and among the workers in working industrial plants to raise funds to feed strikers who are out of work only because they walked away from their jobs, jobs that are there for them to go back to, jobs that they could be working if the union leaders who misled them would abide by the constitutional right of every man to life, liberty, and the pursuit of happiness, which includes work.

What price strikes? A schoolboy knows that when nothing is coming in, nothing can go out. Strikers who refuse to work throw away income and when income is willfully denied one's self, so also is purchasing power. The powers behind strikes talk of "living wages," "more money," "decent pay," but do they explain to those who listen and obey how long it will take to make up what strikers lose during a strike that continues week after week.

The current wave of strikes started out to be a 30-percent pay raise proposition. What is being gotten varies, but it is not 30 percent. Once the current wave settles down, it can be expected that the radicals, whose interest in the worker should not be confused with their hatred for the "bosses," will come back for the rest. That could be about the time the present strikers are beginning to recover from the payless weeks of the present strikes, still no further ahead than if they had not struck and had received their old pay regularly during their weeks of idleness.

Meanwhile, what is going on? The companies have been forced to pay higher wages. Therefore, they have likewise been forced to charge more for their products. Around and around goes the cycle, higher wages, higher prices. In the end the strikers are no better off than they were. The rest of the people are worse off. Volume production keeps costs down. Free competition keeps prices down. Only by full production can the nation prosper and with it her workers. Strikes hit at the heart of these truths. Strikes and unreasonable demands upon industry strike at the heart of America. Who gains? The radicals who live, many lavishly, off of the workers' dues. Who loses? America. What price strikes?

[From the Telegraph-Forum of February 28, 1946]

TRUMAN ON VETS' JOBS

President Truman's appeal Monday to all employers to work with the Government in finding jobs for veterans is one of the biggest farces that has come out of Washington for a long time. In an appeal for veterans to have an opportunity to work out their own destiny, the President asserted that "they deserve that right and we are determined they shall have it."

These are the words of a man who for long has alined himself so solidly with the CIO that he either dares not or at least does not use Government pressure to help veterans work who want to work but who cannot do so because of the CIO's methods of enforcing its policies over and above those of the Constitution.

Truman pleads for jobs for veterans while veterans, some right here in Bucyrus, are willing and ready to go to work but cannot, not because there is no work but because the New Deal-backed CIO prohibits them to do so by closing entrance gates with pickets.

When the Truman administration adopted the policing of requiring an 18½ cents an hour wage increase, the administration tossed to the winds all semblance of collective bargaining. There can be no bargaining so long as the administration and the CIO are unitedly for only one wage increase. There is no flexibility. Both the administration and the union have said 18½ cents an hour or else. There is nothing to bargain. The issue is closed under such terms.

It is the duty of government to protect one person's, or any numbers of persons', right to work. The Truman administration has failed in this duty, here and in other communities. Truman lacks all semblance of judgment in making the request he made yesterday in the face of facts against his administration.

Statement of J. H. Leib

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by J. H. Leib, legislative director, Amvets, before the House District Committee on February 19, 1946:

Mr. Chairman and gentlemen, my name is J. H. Leib, I am the legislative director of the American Veterans of World War II, Amvets.

I come here to urge the immediate consideration by the Congress of H. R. 5229, and I will be very brief in presenting the position of my organization.

Amvets feels very strongly concerning this proposed legislation.

First, because of the possibility that it will put approximately 432 veterans to work.

Second, because it will correct a great injustice and, equally as important, it will play a significant part not only in building up the morale of the fire department, but it will encourage greater public service.

Mr. Chairman, it is estimated that two-thirds of a fireman's life is actually spent at work.

His home life is certainly not sound, nor is it secure.

Firemen now are obliged to work a 72-hour per week schedule.

Let me emphasize the injustice of their deplorable and amazing hours.

Their week-day shift commences at 8 a. m. and lasts until 6 p. m.—which amounts to 10 hours per day—6 days per week.

Their night shift begins at 6 p. m. straight through until 8 a. m., a total of 14 long and apprehensive hours.

With only two shifts these firemen work 60 hours day work and 84 hours night work.

Now let us take up their long and uncomfortable week ends.

On Friday the night shift goes to work at 6 p. m. until 8 a. m.

Then along comes the day shift.

They carry on from 8 a. m. Saturday morning until 8 a. m. Sunday morning, 24 long and bitter hours.

On top of this these same human beings must return to work at 6 p. m. Sunday—after putting in 24 hours—and carry on until 8 a. m. Monday.

This goes on and on.

We believe that this is man's inhumanity to man.

The organized strength of the Fire Department is now 940 men. There are between 20 to 30 vacancies.

Another shift would add approximately 432 veterans, since none but veterans are eligible for appointment under existing regulation.

At this point I would like to insert a newspaper clipping from the Washington Post, February 19, 1946, which shows the urgency for providing more jobs for veterans:

"More than a million veterans are now drawing idle pay." For the first time since the passage of the GI bill of rights, a year and a half ago, more than a million veterans are drawing $20 a week unemployment compensation.

"Veterans' Administration's latest figures show that as of the week ending February 9 readjustment allowances totaling $25,581,000 were paid to 1,035,995 former servicemen. The week previous 963,035 veterans received $23,786,000 in jobless benefits.

"Washington region figures for the week ended February 9 are as follows: District, 2,819 veterans received $74,000; Virginia, 8,865 veterans received $231,000; Maryland, 17,354 veterans received $369,000."

We respectfully request that this unfortunate predicament be corrected as soon as possible, through the adoption of H. R. 5229, which asks that the Fire Department be composed and operated by a three-platoon system, a system which now exists within the Police Department. They operate on an 8-hour shift, 48 hours per week, such as 8 a. m. to 4 p. m.; 4 p. m. to 12 p. m.; 12 p. m. to 8 a. m.

Finally, it is impossible to reconcile the fact that a fireman works these hardship hours and yet receives the same pay as given to District policemen, who, in turn, work shorter and more reasonable hours. Isn't the risk of a fireman equally as dangerous as that of a policeman?

It is about time that the Congress give these public servants a square deal. Everyone, industry and business and the professions, are urging a 40- to 48-hour week. Here is an opportunity to set an example. Thank you very much.

Congressional Wrecking Crew

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks, I include the

following editorial from the March 3, 1946, issue of the Chicago Sunday Times:

CONGRESSIONAL WRECKING CREW

If a group in Congress had refused to give the Government extraordinary powers to speed the construction of ships and tanks and airplanes during the war, public opinion would have cracked down on it.

Such a group, spurred by real estate and other lobbies, is trying to sabotage the Government's new plan to build 2,700,000 new homes in the next 2 years.

Right now the pressure of the lobbies is shown in the House of Representatives, where critical action will be taken in a few days. President Truman has become so alarmed over the strength of the pressure groups that he has sent a special letter to Speaker RAYBURN pleading for legislative assistance for his administration's measure. He asked Members of Congress to consider housing as an American issue—not a narrow party issue. And it is a major American issue, bigger than any party.

The mumbling, grumbling coalition of Republicans and southern Democrats in the lower House say the plan is socialism. They want housing as usual.

If, during the war, we had built airplanes as usual we never would have constructed the huge fleets that finally knocked out Hitler and Tojo.

HOUSING CRISIS IS WAR

Those who now want housing as usual fail to realize that we are locked in a desperate war against time and inertia. We must provide homes for our people and prevent the growing chaos of overcrowded communities. It's a major emergency.

The people of the local communities realize the seriousness of the situation.

Their sons and daughters returning from overseas, newly married and hoping to establish their own families, have no place to live.

The local representatives of the people of the community realize the seriousness of the situation.

Chicago's city council on Thursday took extraordinary action to speed construction of housing. It published an emergency housing code which took Chicago out of the strait-jacket of restrictions which for many years has prevented inexpensive, modern home building in the city limits.

The city council also approved the plan of Federal Housing Expediter Wilson W. Wyatt, even while that plan was under fire from the congressional wrecking crew.

BUILDERS BACK WYATT

The men who build houses realize the seriousness of the situation.

Officials of the building trades unions, long opposed to prefabricated dwellings, said they'd go along, too. The National Association of Home Builders, meeting here 7,000 strong, were at first opposed to Wyatt's plan to use $600,000,000 in Federal funds to spur construction of home-building material. This is one of the main bones of contention in Congress—the socialization feature.

After a heart-to-heart talk with Wyatt, who came here to emphasize the need for his plan, the builders reversed their attitude. They certainly are not Socialists. They are practical builders and contractors. They said the Nation's needs came first and resolved all their doubts in favor of Wyatt. They approved the Presidential order which makes Wyatt a virtual housing czar.

The President of the United States knows the seriousness of the situation.

During the week Mr. Truman emphasized the increasingly acute nature of the housing situation by an appeal to the Nation's people to share any available living facilities with homecoming veterans. He asked all churches and synagogues to form housing committees to find homes for men who are getting out of uniform.

The little group of willful men who oppose the growing tide of public opinion are of the "yes, but" variety. They agree there's a housing shortage. But they say there's no need to stimulate production by direct Government subsidy such as stimulated arms production during the war.

CONGRESSMEN OUT OF TOUCH

Those who are fighting price ceilings, who want controls taken off, who pooh-pooh the warning that inflation is a real and awful danger that could devastate our markets and our pocketbooks, are out of touch with the people.

The people know that Wyatt is right when he says we need to build 950,000 permanent private homes this year. That is more homes than were built in any other year in our history. But we need homes people can buy, homes in the lower brackets, costing about $6,000, and renting for $50 or less, depending on the locality. And we need to build them while keeping inflation under control.

The Home Builders Association found Building Expediter Wyatt a reasonable and convincing man. He puts the public need first, but he also demonstrates convincingly that serving the public is, in the long run, the most profitable and satisfactory course for everyone to take. That is a lesson many Members of Congress have yet to learn.

Mr. Wyatt's Conspiracy in Housing

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. SABATH. Mr. Speaker, heretofore I have made two speeches from the floor in which I have called attention to the tactics and activities of certain groups opposed to the housing bill, which will be found on page 1652 of the RECORD for February 26 and on page 1784 of the RECORD for February 28.

My attention has been called to an editorial in the Chicago Sun of Tuesday, February 26, entitled "Mr. Wyatt's 'Conspiracy' in Housing," which is timely and pertinent to the bill we have been debating with the inspired help of Western Union and the United States mails under a mass attack of propaganda from every branch of the real-estate, construction, and building-supply industries. Of all the editorial comments I have read, I believe this is the most concise and pointed, and I am inserting it in the RECORD. I hope the strong arguments given here will be heeded, and that the vote on the bill will not be further delayed and will be favorable.

I have observed and been subjected to many of these contemptible campaigns of high-powered pressure groups and lobbies; but the campaign against the housing bill exceeds in arrogance anything I have ever seen. It is deplorable, and should be resented by every fair-minded Member of this House, whether he is for or against the bill. I hope that the special committees of House and Senate on small business will take cognizance of this regimented assault on the integrity of legislative decisions and make a full investigation of the campaign against the housing bill.

I hope, too, that the lobby will take the advice of the Sun to enlist in Mr. Wyatt's "plot" to build more and lower-cost houses, and see that our citizens and ex-servicemen have a roof over their heads, such as the antagonists of the bill enjoy. Let me add that in addition to the inspired telegrams of opposition from self-serving interests, I have many messages, both telegrams and letters, from civic groups, organized labor, and servicemen's organizations urging and pleading for passage of the bill.

Mr. Speaker, I have just received a long and expensive telegram signed by the National Association of Retail Lumber Dealers, one of those I have received in opposition to the housing bill. They, like all similar groups, oppose the bill for their own benefit and selfish interest. Consumers, who will not share in industry's profits, and who dread every new bubble of inflation, want housing, and believe this bill is the most practicable concrete way of getting homes for hundreds of thousands of veterans, their families, and just plain citizens.

The editorial from the Chicago Sun follows:

MR. WYATT'S "CONSPIRACY" IN HOUSING

Wilson Wyatt, National Housing Administrator, has a missionary job to do in Chicago today. The National Association of Home Builders, whose convention he will address, is kicking against his program to build 2,700,000 homes in the next 2 years. One of its committees has denounced the program as "a conspiracy for socialized housing," and suggested that veterans be enlisted in a campaign against it. Mr. Wyatt must persuade the builders, instead, to build houses.

If it seems odd that the industry should be more interested in killing off the Wyatt program than in building the houses he asks, one must remember that this is an odd industry. Its front men have for years succeeded in putting their worst feet forward. Instead of buckling down to the job of producing more housing for less money, they have preferred to fight Government policies aimed at that goal. Instead of reviving and reorganizing a stagnant industry that has failed the people, they chose to conduct a rearguard action in defense of the status quo.

Do the builders realize what they are doing? Having failed to develop on their own initiative a flexible and progressive industry able to meet such a crisis as that of the present, they can sabotage the Government's efforts only at great risk to themselves. The veteran wants a house. He will not be impressed by hoarse cries of "socialized housing." Unless he gets a house, and fairly soon, he will demand socialization that is socialization.

Mr. Wyatt's program, of course, is far from that. In fact, he proposes to rescue the home-building industry from the dire position it now occupies. By the use of Government stimulants, as these tools were used in wartime, he seeks to obtain the needed production by private enterprise. If the builders know their own interests, they will accept his proposals gladly, and turn to with a will. A nation that is starved for homes is bound to prefer a Wyatt program for 2,700,000 houses to a private-enterprise plan for half that many.

The Wyatt program faces immediate peril in Congress, where the Patman bill to provide for price control and subsidies has been watered down by a House committee. The bill must be strengthened and passed if the real estate inflation is to be stopped and large-scale home production, both by conventional methods and prefabrication, is to be gotten under way.

The alternative is clear. Let real estate inflation continue, and most of the veterans will not be able to afford a home. Let costs mount, and the number of houses built will shrink far below the level of acute need. Let a slow and backward industry pursue its old insufficient ways, and we shall have another boom, another crash, another slump.

No, Mr. Wyatt is not leading a conspiracy of socialization. He is plotting for more and lower cost houses; scheming to remedy the deficiencies of an industry which has failed to remedy them itself; contriving ways to fulfill the national obligation in housing while leaving its production in private hands. In such a "plot" the home builders should enlist as willing conspirators.

Annual Farm Economic Conference

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the February 21, 1946, issue of the Story City Herald, Story City, Iowa:

CANNED GOODS

They had the annual farm economic conference in Des Moines last week. Great farm leaders were there and, as usual, scintillated with words worn threadbare through incessant use during the past quarter century.

Mordecai Ezekiel, of the Bureau of Agricultural Economics, solemnly declared, "The United States can't gain by keeping other nations poor." As if anybody ever believed we could. Ezekiel belongs to the bunch who have the notion we can get rich by giving other nations money with which to buy our stuff.

Professor Jesness, of the University of Minnesota, offered this gem of deep thinking: "Demand for farm products will be caused by a high level of employment and resulting consumer power." The professor was on safe ground; the demand for farm products will be there—employment or no employment. He probably meant the price would be higher.

Now hear this one enunciated by John Abbink, of the Foreign Trade Council: "The proposed loan of $4,000,000,000 to Britain would be advantageous to the United States even if never repaid." Advantageous to the importers, exporters, and ship owners, maybe.

Henry Wallace was present at the conference, of course. He played safe, too, by relieving himself of these three pragmatic statements:

"World trade is badly out of kilter after two world wars and a long depression." Henry, by the way, had charge of Uncle Sam's depression for eight solid years and didn't make much of an impression on it until the Second World War came along.

"For a good many things which we don't have we need imports at a reasonable cost." Trouble with Henry, he wants imports of things we do have: lower tariffs on farm products from South America and the junking of our rubber factories so we can import rubber from the East Indies.

"Unless we realize we are a part of the world market we are going to find ourselves again in the condition of the 20's and 30's." Henry's father and grandfather, and all the past generation, knew full well we are a part of the world market and tried earnestly to keep the world from using us as a dumping ground for slave labor. The result is we became the world's richest Nation before Henry was born. And it is noteworthy that the impoverished nations of the world made headway in proportion as we progressed: We bought their goods and they bought ours, on the fair and square basis of value received and value given, without hidden subsidies or bond issues to influence trade.

Foreign Loans

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

WESTERLY, R. I., *February 27, 1946.*

To the Congress of the United States of America, the Senate and House of Representatives, Washington, D. C., greeting:

Honorable fellow Americans, an American citizen, acting under the provision of the American bill of rights, takes this method of voicing his logical objection to any foreign loan such as proposed, being approved by the Congress or consummated by the action of any source other than by direct mandate of the citizens of the United States of America; and not then until the Congress of the United States of America has by official action first placed upon the statutes of the United States of America a suitable old-age pension consistent with the so-called American way of life.

The United States of America—the richest country in the world—must first take proper care of its own people before squandering its resources in foreign lands. Based on history in this regard, use of the word squandering does not seem out of place in my opinion. The Townsend plan, so-called, has not been approved by our Government because, it has been said, to do so would bankrupt the country, or words to this effect. If this be true, then it is inconsistent to consider loaning billions to foreign countries with no ample security other than a promise to pay back sometime within 50 or more years. If the United States of America can find billions for foreign countries, then surely it can find adequate funds for disbursement among our aged in the form of a pension consistent with the dignity of the richest Nation on earth. It is the aged today who in their youth, by toil of mind and body, have brought to the surface the riches of which we are prone to boast. Let us take care of our own first—then if there is any to spare we can consider foreign loans if it is really needed and they can give ample security that will compel repayment within a reasonable time; otherwise, no.

Let us pay more attention to American just rights and less to world political ambition. Uncle Sam needs your friendship now; don't let him down. It is respectfully requested that this communication be read to the Members of your respective Houses and incorporated in the CONGRESSIONAL RECORD.

Very sincerely yours,

ALFRED ROBERTS,

A Native-Born American Citizen Whose Forebears Were Settlers in the Sturdy State of Maine.

(NOTE.—Sent to Presiding Officer, House and Senate.)

Forty Years of Service in the House

REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. SABATH. Mr. Speaker, I rose with the purpose of answering the gentleman from Pennsylvania, but having learned during my short absence from the floor of the statement of the majority leader, the gentleman from Massachusetts [Mr. MCCORMACK], calling attention to the fact that today is the beginning of my fortieth year of service in this House, and of his words of praise, I cannot proceed until I have thanked the gentleman from Massachusetts.

Nor can I proceed without trying to express my gratification and appreciation for the generous applause and the spontaneous standing ovation you gentlemen have just now so graciously given me. It is a tribute and an honor for which I thank you. I hope I continue to merit and deserve your expression of friendship and good will, and the memory of this occasion will serve as an encouragement to me in my service to the Congress, to my district, and to my country.

The Packers and OPA

REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. SABATH. Now, Mr. Speaker, having expressed my deep and sincere gratification for this spontaneous ovation, I continue in my original purpose in rising. The gentleman from Pennsylvania [Mr. RICH] has called attention to the complaint of a packing house in his district complaining about OPA. I venture to say that that very packing house has made more money since 1941 than it ever did before price control was imposed, notwithstanding the wartime restrictions for the benefit of all of us.

Mr. RICH. Mr. Speaker, will the gentleman yield?

Mr. SABATH. I cannot yield, Mr. Speaker; I am sorry.

In this connection I wish to insert the text of a recent broadcast by Quincy Howe on that subject which speaks more plainly than I can. He points out that in the beginning of inflation property makes money, but in the end, when money becomes valueless, everybody loses. He blames the owners and managers of industry and speaks of the indefensible attitude of the National Association of Manufacturers in their current attacks on OPA.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The American Conscience Speaks

EXTENSION OF REMARKS
OF
HON. CARLOS P. ROMULO
RESIDENT COMMISSIONER OF THE PHILIPPINES TO THE UNITED STATES
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. ROMULO. Mr. Speaker, I call the attention of the Members of the House to an eloquent radio address on the future of the Philippines, delivered by the Honorable Paul V. McNutt, United States High Commissioner to the Philippines. Commissioner McNutt has just come back from Manila, where he spent 3 months observing the extent of the devastation wrought on my country by the grim vicissitudes of war. "The Philippines," he says, "are the wounded war veteran of the American community of peoples." He has seen, not only with his eyes, but with his heart, the dreadful wreckage of war in the Philippines.

In discussing the American obligation to the Filipino people, Commissioner McNutt speaks more forthrightly than would be proper for any Filipino spokesman. On the same subject, but with a different approach, I have spoken several times on the floor of the House. As Resident Commissioner of the Philippines, I am truly grateful to Commissioner McNutt for saying what it would have been in bad grace for me, as a Filipino, to say.

His speech could have been made only by an American. It is an expression of Americanism at its best. He bespeaks the American conscience. His timely and thought-provoking address follows:

The Philippines today are islands of confusion in a vast sea of unrest. That confusion is to a large extent made in America. We helped bring it about. So far we have not done much to resolve it.

The sea of unrest is the general unrest of the Orient, with more than a billion people striving and elbowing their way toward nationhood, in the direction of the twentieth century. In that troubled scene the Philippines should not be an area of confusion, but an area of order and certainty. We can make it so.

The confusion in the Philippines is the confusion of despair and frustration, of impatience and uncertainty. The islands have been brutally, criminally ravaged by war, by our war. The enemy blasted them in the first assault and captured them. We returned. In the process of liberation, and as a result of unbelievable Japanese brutality in defeat, the Philippines were damaged beyond description. Cities were laid waste, innocent people were burned out and slaughtered.

These are words, but there are facts to support them. I have just come from 3 months in the Philippines. I have never spent a more exciting 3 months. I have never spent an unhappier period in seeing what I had to see.

The islands are now a devastated land, burned over, blasted, shattered, and plundered. The beautiful city of Manila, Pearl of the Orient, has become an ugly scarecrow of a city, a shanty town, a crowded community of shacks and lean-tos, a graveyard of the skeletons of buildings.

But that is just the physical appearance. Much worse damage has been done to the Philippines as a nation. The national economy has been destroyed and wrecked. More than 95 percent of the total Philippine production before the war was for export—if you exclude rice and fish, both of which are locally consumed. More than 90 percent of the country's exports went to the United States. The big-four exports—sugar, hemp, coconut, and tobacco products, depended to a major extent on the existence of a tariff-free market in this country.

The Japanese shattered that Philippine economy. Sugar lands were ordered turned to cotton. Tobacco lands were left fallow. Coconut and hemp lands were ordered cultivated, but the orders went unheeded. The Filipinos wouldn't work for Japanese masters. Even at gun point the loyal Filipino millions offered quiet but immovable resistance.

Today there are no crops for export. There is almost no economy. The sources of income for local government have been virtually wiped out. The currency tied by law to the American dollar is sound, but values are unbelievably inflated. Communications among the 7,000 islands of the Philippines are still paralyzed.

The Commonwealth Government is helpless to move effectively toward rehabilitation. There is a bitterly divisive collaborationist issue. The nation is involved in a national political campaign. The people of the Philippines are waiting, with decreasing patience, for the United States to redeem its promises, to take the necessary steps to attack the paralysis which has frozen the economy of the country.

We made the Philippines a promise of independence, to be effective on July 4, 1946. We showered them, for 50 years, with brave words about democracy, about Western ideals. Those words were taken seriously. They were taught in the schools. They were practiced.

In the early months of our defense program, before the war, we exhorted the Philippines to produce more and more of the products we needed. We required them to ship it all to us, to stop shipments to other countries. They responded nobly. Then came the war.

The great mass of Filipinos resisted the invader. They fought the Japanese in a hundred different ways. There were 200,000 heroes on every island of the Philippines, who rose up from the fields and villages to fight back. Those men, and women, brought to the Japanese a nightmare of violent resistance which no other colonial people attempted. They made the occupation the most difficult job the Japanese faced in the Orient. They were heroes, every one of them, those guerrilas. They fought for their Philippines, and for their America, the America they had been taught to love, the giver of laws, the giver of freedom, the giver of democracy. Their story has not even been half told.

Because of those millions of resisting Filipinos, and because of those 200,000 heroic guerrillas, we have an obligation to the Philippines that extends beyond legal covenants, beyond promises, beyond independence. We have an obligation to reward the Philippines in full measure for the lives and property they lost, for the lives and property they saved us.

We have interests in the Philippines, too, American interests. I am not referring here to our commercial interests, which are important, and which make for jobs here at home. I am referring to our broader interests in the Orient and in the world, which are based upon our united determination to keep and maintain the peace. For this purpose, the United States has a special obligation in the Far East. In that part of the world, it is the armed might of the United States, actual and potential, which must be depended upon by the United Nations Organization to furnish the police power and the moral hindrance to would-be aggressors. For this purpose, we need bases in the Far East. And bases in the Far East mean bases in the Philippines. Those bases are not intended merely to protect the Philippines, nor the United States, but are primarily intended to give authority to the conscience of the world.

But arms alone are not enough. Atom bombs are not enough. We need the friendship and the confidence of the millions of people of the Orient. Based on that friendship and confidence, our armed strength becomes not menacing, but reassuring; not threatening, but promising.

The 18,000,000 people of the Philippines are our ambassadors in the Orient. The continuing faith of those Filipinos, men of brown skin but of western democratic mind, is a symbol to the entire Far East of our good will and democratic practice. We must not, we dare not, lose that faith. We cannot afford to destroy it by our own inaction.

Today there are pending on Capitol Hill two pieces of legislation, the Bell bill and the Tydings bill, which are designed to assist in the rehabilitation and reconstruction of the Philippines. Those bills have the support of President Truman. They are urgent, life-giving legislation for the Philippines. The Bell bill gives Philippine industry 28 years of preferential tariff; the Tydings bill authorizes appropriation of $450,000,000 for rebuilding public works and paying for war damages. The Philippines have been waiting for 5 months for this legislation. No positive rehabilitation can get under way without these two economic charters of recovery. Congress, I believe, is now ready to act. It will be a belated recognition, but it must be given in a hurry.

The fact of independence for the Philippines on July 4 does not reduce our obligation to these people. The Philippines are the wounded war veterans of the American community of peoples. We will have as much responsibility for them after July 4, 1946, as we, as individuals, would have for a wounded son after he has reached the age of 21.

For many years there will be a special relationship between the two countries and the two peoples. We will be obliged to help the Philippines regain their economic health for years to come. It is to our interest to do so, and to take such measures as are necessary to help the Philippines shake off the shackles of a feudalistic past. Only then can they become a modern, a free, and liberty-loving democracy, in accordance with the principles we have taught them for 50 years—an economic as well as political democracy. That is the job for tomorrow, the challenge to future Philippine-American relations.

Effect of Pending Strikes

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. REED of New York. Mr. Speaker, a recent editorial appeared in the Dunkirk Evening Observer, an excellent paper published in my home city, which points out the effect of the pending strikes on all parties concerned. The distinguished editor has made a careful analysis of the local situation resulting from the suspension of pay rolls, which gives a fair picture, I assume, of thousands of similar communities dependent upon industrial pay rolls.

Under unanimous consent, I include the editorial to which I have referred as a part of my remarks:

AN APPEAL

Let's go back to work.

The steel strike has been settled. Hundreds have gone back to work, but they may not remain at work very long. Unless the fabricators begin to use their steel the steel makers will again be out of work.

The strike issues in the main have been settled.

It remains to iron out the details.

But these details are cumbersome and complicated.

They involve decisions by Government departments already cluttered up with a great mass of requests.

To get prices fixed and apply the new formula may take weeks and weeks.

Meanwhile Dunkirk men and Dunkirk families are losing approximately $12,000 a day.

Your pay, whatever it is, has not been appearing for 6 weeks. It may not appear for 6 weeks longer. Can you afford that?

And you, Mr. Employer, what of your operations? Your overhead is running along. You are paying nonproductive office help—and you are getting nothing out of it. If this keeps going on, you are fairly certain to face a decided loss this year—a loss when there might be a handsome profit.

As the worker and the employer lose, the city also loses. Every other worker, every taxpayer, every businessman must take a share of the loss. It is a long, vicious, tiresome, disastrous circle.

Why not get together on a provisional basis, right now? Let whatever settlements or concessions there may be in the final settlement be retroactive to the date of returning to work.

Why wait for slow governmental departments?

Let's cut the loss—everybody's loss.

Let's meet now on this basis so that we can all be at work and happy by March 1.

This is an appeal, without prejudice, for the good of the city and everyone in it. Get together now.

Radio Broadcast by John Hurley

EXTENSION OF REMARKS

OF

HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt from NBC News Broadcast, February 24, 1946, read by John Hurley, NBC staff announcer:

Well, apparently there is nothing on tap in Congress this week that will touch off another filibuster, but it looks as though another one may be coming some time fairly soon. There's a move afoot to bring up the fair employment practices bill again, this time to the House floor. And that, you know, is the bill the southern Congressmen say they won't have any part of. It was killed off in the Senate not long ago, but it has supporters in the House, and they are busy thinking up a way to get it to the floor. The authority for this is HUGH DE LACY, the Washington Democrat, who is serving his first term in the House. This man DE LACY, by the way, has a pretty colorful background.

There is an unwritten law on Capitol Hill, you know, that a freshman Congressman is seen and not heard, sits quietly with hands in lap, being respectful to his elders. That doesn't impress DE LACY. He is not awed by his elders one bit. He speaks up to them whenever they need it, and that is usually when he thinks somebody is stepping on the toes of the little man.

DE LACY is a little man himself—except in size. He is tall and husky; looks as if he might be a day laborer, a ditch-digger, or a shipyard machinist. On the other hand, he looks and talks as if he might be a college professor. Well, at one time or another, during his 35 years, he has been all of those. He still holds his membership card in the machinist union; and he also holds a master's degree in English.

DE LACY's political thinking falls somewhere in that now-familiar zone "slightly left of center." His opponents—and he has picked up a lot since coming to Congress—say his thinking is more, much more, than slightly left of center. Some of them call him a Communist. DE LACY laughs.

He began acting like a freshman Congressman isn't supposed to act last fall when he stood up and said his piece about Patrick Hurley, our former Ambassador to China. Hurley, you remember, kicked off an explosion around town when he resigned and accused the State Department of wrecking our foreign policy in China. While the State Department was busy preparing a reply, DE LACY stepped up and beat them to the punch. He said it was Hurley, not the State Department, who wrecked our Chinese foreign policy. For his pains, he was called an upstart by a lot of people. But that's all right with him. Because, he says, the entire Hurley episode served a useful purpose. In the first place, it helped make the people conscious there is such an animal as United States policy in China. And, more concretely, it resulted in General Marshall going to China and real progress toward ending the Chinese civil war.

About this matter of public opinion, DE LACY has some very definite ideas. He thinks the people should speak up more, to make Congress do what they want. For instance, he says, if the people really want better social-security coverage, really want more unemployment compensation, if they sign enough petitions and write enough letters, they'll get it.

He says he and some other House Members are getting up a petition now to bring the fair-employment-practices bill to the House floor. That's the bill the southern Democrats talked to death in the Senate a couple of weeks ago. DE LACY calls the filibuster disgusting. And he also thinks the Senate played its hand wrong. The southerners, you remember, said they were willing to filibuster all summer if necessary, but he thinks that was a big bluff. He says the Senators who wanted the bill should have let the southerners go ahead and talk. Then, he says, the people would have got mad enough to do something about the spectacle of a Senate conducting no business and drawing a salary.

And speaking of salary, DE LACY never made very much money. Even when he had his white-collar job teaching in college he only made $110 a month. And at one time he and his wife were almost broke. Eighteen bucks, he says, between us. Now he has three daughters and a Congressman's salary. And still, he says, he's not saving as much as he did when he worked in the shipyard. He worked in the shipyard, by the way, all during the war, building destroyers. Even on the day of the primary election in 1944, he worked his 8 hours and kept on working right up until a couple of weeks before the general election in November.

The Totalitarian Trend

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. CARLSON. Mr. Speaker, under leave to extend my remarks, I am including an address made by Mr. Carroll B. Huntress, vice president of the Republic Coal & Coke Co., before the forum of free enterprise, at the Statler Hotel, Buffalo, N. Y., on February 28, 1946:

A meeting of agricultural, educational, industrial, and labor interests of New Jersey was held in Trenton last month. Discussion related, in part, to teaching of Americanism in the public schools. The meeting functioned through several panels in the forenoon and through a single gathering in the afternoon, when reports summarizing the morning sessions were received from duly chosen delegates of the panel sessions. At each of the panel meetings a Communist figured prominently in the debate, arguing vociferously for the "rights of the underdog" and frequently employing that much-abused phrase, "the underfed one-third." A friend whom I visited in Trenton a few days ago told of a conversation which he overheard, as the afternoon session was about to commence, at the entrance to the room where that meeting was to be held. A woman member of the trio of Communists said to her two associates, "We might as well leave now. We can't make any trouble in there."

As I look over this audience, I don't believe that woman or any of her ilk could make trouble here. But I cite this instance as a sample of what's going on and as evidence of the "confuse and divide" technique which threatens our very foundations. To such a statement as I have just made there is the conventional challenge of the parlor-pink to the effect that if our foundations are so weak as to be susceptible to such propaganda they are not worth saving. That type of individual would be the champion cry-baby when comes the revolution and we all eat strawberries, like them or not. It's insane, according to some folks, to talk about a revolution here, in the light of the small fraction of Communists. They contend it just couldn't happen here. Well, if most of us, with the courage of sheep, are going to remain unvocal, it certainly will happen here. As in Virgil's day, so now, "it never troubles a wolf how many the sheep be." All of us have likely read that letter Macaulay wrote 100 years ago, in which he made a startling prophecy. He predicted that in the twentieth century—and we're only about half through it—this country would be pillaged by barbarians even as Rome was destroyed. The difference, he said, would be that, whereas the destroyers of Rome were outside barbarians, the destroyers of America would be the people of our own country and the products of our own institutions. Fantastic as it may sound, it is much less fantastic than was the case a decade or so ago. Our present barbarians would reform defects of detail by universal confusion; cure illness by death. Riddance from a present evil is not a cure unless here is an all-around improvement in condition.

It is high time we advert to that ancient admonition, "Eternal vigilance is the price of liberty." A growing number of so-called good Americans, especially those afflicted with a psychopathic passion for security, actually

sneer at what they dub the antiquated doctrine expressed in that admonition. This indicates that the foundations of the Republic are weakening and unless there is at once a well-directed countermovement a totalitarian economy will follow. EVERETT DIRKSEN, an outstanding leader in the House of Representatives, delivered the annual address at this year's meeting of the New York State Bar Association. Communism on the March was his subject, and he spoke from the record of observations made on a recent round-the-world trip. The inroads that ideology has already made here call, he counseled, for a herculean effort in opposition.

No better illustration of the technique of the enemy could be had than is afforded by the Trenton, N. J., incident. And what is the underlying philosophy of those subversive forces? I was thrilled at a January meeting when the most Reverend J. Francis McIntyre, auxiliary bishop of New York, by a sharp attack on those forces which conspire to divide Americans, brought 400 diners to their feet in a spontaneous ovation. He said, "Integrity, courage in leadership, are the needs of our time." This is the spirit of America, which adheres to what has made our country great. Yet there are those who seek to change from our democratic principles of Washington and Jefferson to the so-called democracy of "confuse and divide." There is a well-organized effort to confuse democracy with communism. For instance, the New York Daily Worker, which George Sokolsky, eminent New York Sun columnist, styles, "The organ of an alien international conspiracy," invariably refers to the Communists and their friends as progressives. According to a New York Times editorial under date of February 6, "actually, affirmation has been made in Soviet practice and in the Soviet Constitution that a real democracy is compatible with a single political party, with only one list of candidates in an election, with a secret police and an unfree press." Let us remember, nevertheless, that western democracy cannot be a successful general practice unless it is based on a true general conviction. Democracy grows at one's own doorstep; that is, as a prerequisite for its effective advocacy there must be the root of democracy in our own lives. In some cases, the worms appear to have been busy at the root. On January 31, at Fort Devens, near Boston, Gen. Dwight D. Eisenhower called upon veterans to fight as hard for the peace as they had fought against the Axis. Here is what he said: "Attack everything anti-American now with as much vigor as you attacked the Germans and the Japs during the war. It's up to you to forestall any recurrence of any type of foreignism. You have an investment in the United States and the Star-Spangled Banner means a lot more to you now." General "Ike" is well aware of the dangerous trend—that's why he sounded the alarm. His reference to the investment which our soldiers have in the United States leads to the observation that in perhaps a larger sense than that implied in the title of the organization under whose auspices we meet today, every American has a precious investment to safeguard.

What is to be done about all this? you ask. Presumably, you have given serious thought to this general question, and you're attending this meeting in search of an intelligent answer. This statement by Daniel Webster furnishes the answer, "nothing will ruin this country if the people themselves will undertake its safety." In other words, the saving of the country from wrong thinking and wrong philosophies lies in the hands of the people themselves. As it stands today, a handful of collectivists can paralyze our country. Certainly, we are headed into stormy seas; and we cannot ride out the storm by squirting oil on the raging waters. The great middle group of our population must act. There are several organizations around which our forces should rally. An outstanding group, whose set of principles entitles it to loyal support on the part of those who believe that among human rights is the right to property, is the Investors League.

Your attendance reflects an interest in the preservation of the free enterprise system. Such an interest is timely, as Mark Sullivan, the distinguished analyst, pointed out in his January 1 column, where he wrote that "the fate of that system in the United States is a main issue for 1946." "This system is under attack," he said, "an attack in the rest of the world so successful that America is the only large country maintaining the system." The Marxians and their fellow travelers, in Buffalo as elsewhere, insinuate collectivism is better; but they cannot make a case on objective data, for the facts show that private capitalism is the most successful system the world has ever known. Consequently, they resort to the "confuse and divide" technique.

Previous to my Trenton visit, I had planned to confine my remarks to exposition of the uneconomic features of the St. Lawrence project. I now cite the support given to that project, including its espousal by the President, as proof of the trend away from the private-enterprise system. Both in its power aspects and in its transportation aspects the proposed St. Lawrence-Niagara development is thoroughly typical of a trend of governmental usurpation of the rights of citizens and of expropriation of the results of their enterprise. Unless that trend is reversed, destruction of a society of freemen and of the economy that flows from the vigor of free enterprise will follow. A great deal of the expropriation of private enterprise by Government becomes so much an accustomed thing that after a time we take it to be perfectly natural. Then it is easy for people to reason from what is assumed to be natural to making the same kind of process universal.

Most proponents of the St. Lawrence project give at least lip service to the free-enterprise system, while contending that our economy will be strengthened by this billion-dollar-plus scheme. Some advocates attempt to assure us that another TVA won't happen here, and call attention to the Federal-State accord whereby the latter would have the power distribution rights. Some observers, who are acquainted with governmental tactics in the TVA expansion program, believe that, should the project be developed, it wouldn't be many years before Washington ruled the St. Lawrence roost. If the left-wing philosophy which has such a powerful grip on our present economy prevails we know what to expect. As Hitler exposed his hand in Mein Kampf, so the left-wing crowd, speaking through Victor G. Reuther, chairman, postwar policy committee of the United Auto Workers, exposed their hand in the December 1945 issue of a magazine called Common Sense. In that issue Reuther advocated "the substitution of democratic social ownership for private monopoly ownership." Do you investors want democratic social ownership? And what does Mr. Reuther mean by the term "democratic"? He tells us in these words, "the forms of social ownership we propose to institute must, in the fashion of the cooperatives and the TVA, be absolutely democratic in character." That's the type of democracy which the St. Lawrence project would generate. Democratic social ownership, to employ Mr. Reuther's phrase, would soon overtake the railroads. It wouldn't be long before a governmental set-up would take over the electric utilities of the State of New York. Why not? It happened in Tennessee in the face of a stiff fight by a stalwart warrior, Wendell Willkie. The socialistic domination of distribution and customer relations in the Tennessee Valley is now complete. For instance, the United States, through the Electric Home and Farm Authority, has engaged in the sale of refrigerators, not only in the Tennessee Valley but throughout the Nation.

Let's take a look at the St. Lawrence scheme. No transportation medium available for use only 7 months in the year is sound. On the power phase of this project, which Vice President Matthew Woll, of the American Federation of Labor, calls a monstrosity, I would make a few observations. Most of the discussions of the St. Lawrence power development refer to a $93,375,000 expenditure by the State of New York as if that were the whole story. In an Albany dispatch to the New York Times, under date of February 2, we read: "Under the Federal-State accord, the State is to have the power distribution rights in return for payment of $93,375,000 toward the cost of the St. Lawrence development." The following entirely disregards all question of the necessary burdens which it is proposed to lay on the seaway. No question is here raised as to whether ancient cost estimates represent the postwar possibilities. It is believed that general observation answers that. Taking the figures appearing in the eighth annual report of the Power Authority of the State of New York for the year ended December 31, 1938, at their face value, we find that the $93,375,000 is just the opener and that the power authority itself projects an undertaking on its own basis of estimating of $604,030,000, or six and seven-tenths times the conversational cost of the public power project. And this eliminates all consideration of the general experience in such matters, namely, that the subsequent discovery of unexpected trifles runs to a substantial part of the original estimate.

This, however, is beside the point. The discussion of a $93,375,000 expenditure by the State of New York is flagrant deception. The protagonists of the scheme have fully in mind a vastly larger undertaking and have excellently put themselves in the position, if anything is ever said later as to their not having been frank, that whatever the conversations have been their published report has put all and sundry on notice as to the intent and extent of the project. This is chiseling on the grand scale. Now for the climax, depending, of course, on your point of view. Even when all of this is done, the power authority does not promise to effect an economy of more than one-tenth of a cent per kilowatt-hour at wholesale. Serious analysis would show this economy working really in reverse, in much greater degree.

The protagonists of the power development cheerfully assume that the people of New York State and the neighboring States can absorb a bunch of kilowatt-hours and thereby relieve all the ailments of man, from falling hair to fallen arches, taking in gastric ulcers en route. Granted that there are many things which electrical energy can do, given the means of employing it, the fact still remains that the user has to equip himself with the devices of utilization. The alleged economy of the St. Lawrence and the Niagara development is predicated on the assumption that residential consumers in upstate New York will use 3,000 kilowatt-hours a year each, and those in the metropolitan district 2,400 kilowatt-hours each per annum. It has been computed that this use could be accomplished by the installation of 1,600,000 refrigerators, 2,400,000 electric ranges, and 1,200,000 electric water heaters, the ranges and water heaters displacing coal and gas, to say nothing of birch, hickory, and maple from the farmers' woodlots. Maybe this is all very nice, but the residence consumers of the State would have to put up over one billion for these appliances, not to mention the reinforcement of house wiring to take on the heavy load of the electric ranges. This represents something like an investment of $300 per average family throughout the State. Quite apparently, the people

of the State are expected to serve the St. Lawrence development rather than the other way round. The protagonists apparently never heard "the Sabbath was made for man and not man for the Sabbath."

Respecting the ability of the average upstate domestic customer to consume electrical energy, estimated by the power authority of the State of New York at 3,000 kilowatt-hours per annum, let's look at the record in the Tennessee Valley. Domestic rates in that area have been made low by dint of phony cost allocations, tax and interest immunity, unpaid collateral services of government. Propaganda in the valley—federally paid for—has reached the heights of evangelistic fervor. The operations in the valley have been going on long enough to show what may be expected in comparable nonmetropolitan areas. TVA reports that for the 12 months ending with November 1945 the average domestic energy consumption through the systems, municipal and rural, served by TVA was 1,713 kilowatt-hours, which figure falls 1,287 kilowatt-hours below the estimate of the New York State Power Authority for upstate residential consumers.

There is considerable ballyhoo about the industrial growth that the proposed power development would generate. But those who prate of the importance to the industrial development of a region through creation of an abundance of power facilities, as if that were all that is involved, are definitely overlooking the major part of what it takes. The production-plant investment necessary for creating a useful job is generally estimated at $6,000 per worker. The investment per worker in power plant and transmission and distribution facilities is reckoned at $900. The production-plant investment is thus seen to be nearly seven times the investment in a first-class steam-power plant, along with facilities, for supplying an industrial job. This is not to say that the power costs are of no consequence. It is simply to underline that if the development of the power is by a process which casts a cloud over private enterprise the major part of the plant for employing the American worker is made more difficult to create, and it is further to say that it is economically easier to create a power plant than it is to create the industires that use its output.

There is no disposition here to quarrel with the taking over of private functions by government when it is really necessary, and certain processes of regulation and control may be justified; but the Government competition with which the railroads are now faced and which may make Government seizure inevitable is not justifiable. The threat of TVA competition forced the sale of electric-utility properties in Tennessee 7 years ago. We now hear demands that the Government take over the aluminum business, the steel business, and, pretty soon, there'll likely be renewed clamor for nationalization of the coal industry. We have seen the extreme in this sort of thing in Mr. Hitler's development of the "peoples' automobile." How can some of our Michigan friends say that can't happen here, in the light of the threat of the St. Lawrence project to private enterprise? Excuses can readily be contrived. They are as easily formed as are picket lines but are not nearly as solid. Public health is now being made an excuse for the governmental practice of medicine, and full employment is being made an excuse for the more extended hiring of its citizens by the superstate. And so on, ad nauseam.

The more we study this St. Lawrence-Niagara regional development idea the clearer we see its resemblance to the concept of the altruistic state, which is now being enlarged by intertwining with the concept of an altruistic industry. It's just another excuse for the extension of the "welfare state' where neither economy nor the public welfare warrants. And no suggestion has been advanced yet that the principal industry with which the St. Lawrence canal would compete, namely, the railroads, would enjoy tax-exemption along with the older type of philanthropic institutions. Definitely, the railroads would qualify as such, for they would be called upon to stand by for 7 months of the year in order to have their facilities available for the transportation of freight which the canal couldn't handle for the 5-month period when it is frozen. The issue of an ability-to-pay wage wouldn't long concern the railroads. Bankrupted, they would be taken over by the Government.

Only a Francis Bacon, with his rare talent for condensed prose, the distilled essence, could treat properly, in a limited period, of the sinister significance of this St. Lawrence scheme, with emphasis on the power phase. Once let the State get its hands on the power-distribution facilities of this country, and socialization of industry is right around the corner. That's the primary goal of the totalitarians. Their propaganda machines are vast, the operation subtle. Governments have traditionally bribed their citizens with bread and circuses into sacrificing their liberties. This movement resolves itself into an attempt to bribe the grain-raising Prairie States, the automobile-manufacturing States, with allegedly low-cost subsidized transportation; an attempt to bribe the States of New York and Vermont with allegedly low-cost subsidized power into sacrificing free enterprise. It was the wily Lenin who said the sure bait of communism to catch capitalism is that of immediate profit. That bait is now being dangled before the eyes of the great automobile corporations.

Our entire problem narrows down to this—how are we to make ourselves heard on these vital issues? The enemies of our type of democracy are throwing their weight around, with the recent result that our internal disorder was not far from chaos. The so-called minority groups bombard the Congress, motivated by knowledge that an extremely popular trait of not a few Members of that body is a consuming desire for longevity in office. Consequently, it is of paramount importance that the great middle group of Americans make known to Washington, and to State legislators as well, how they feel about the momentous questions of the day. We can function through a body such as the Investors League. This over-all observation is in order. We can function effectively over the long range only if we have a clear sense of ethics. An ethical conception must be pushed to the front, with the end result that service, not wealth, will be the standard of honor.

Godchaux Raps United States Rice Policy

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit a copy of a statement on rice by Hon. Frank A. Godchaux, Jr., president of the Louisiana State Rice Milling Co. of Louisiana, which was published in the New Orleans Times-Picayune, of date March 1, 1946:

GODCHAUX RAPS UNITED STATES RICE POLICY—SAYS LARGE PART OF CROP PRACTICALLY DESTROYED

BATON ROUGE, February 28.—Frank A. Godchaux, Jr., president of the Louisiana Rice Milling Co., said today that the Government practically destroyed a large portion of this year's rice crop, as far as domestic use is concerned, by basing the rough rice ceiling price on a moisture content so high that much of it became "stack-burned" in storage.

"The Government's vacillation first one way and then another is ample evidence," he said, "of a lack of clear policy and a lack of understanding of what they are doing to the industry and the country."

Godchaux' statement was made in a letter, released today, to J. H. McLaurin, president of the United States Wholesale Grocers' Association, on the current rice situation.

Godchaux also challenged the Department of Agriculture figures on rice distribution, and questioned the wisdom of the Government's policy of allocating this year's crop.

"Our only source of information on total rice shipments," Godchaux said, "is the Government's figures, and it is important to us, as well as to the Government, to have the truth. It is probably partly this lack of knowledge of what is going on in the rice industry that gives rise to unreasonable and uneconomical Government orders."

He said that at Government insistence, rice farmers, faced with rising demand and short labor supply, invested heavily in new rice growing and harvesting machinery, while mills adjusted their milling and storing equipment to the new combines.

Cutting down domestic consumption of rice and shifting demand to other foods, Godchaux said, "practically destroys the heavy investment that has been made in the rice industry. It is neither intelligent nor American for our Government to destroy investment that it has insisted on being made."

Godchaux concluded that "the only remedy we see for the mismanagement of this year's rice crop is to allow a reasonable portion of what top-grade rice remains to be shipped to the domestic trade before the Government set-aside."

Terminal Leave for Enlisted Men

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by J. H. Leib, national legislative director of American Veterans of World War II:

AMVETS URGE TERMINAL LEAVE FOR ENLISTED MEN

(By J. H. Leib, national legislative director, American Veterans of World War II)

On numerous occasions Amvets have emphatically stated their position relative to terminal leave in behalf of enlisted men who are being discharged from the armed forces.

Amvets have never been able to understand why the Congress approved Public Law 226, Seventy-ninth Congress, which provided terminal leave for commissioned personnel but which completely disregarded similar benefits to the GI's who carried the brunt throughout the war.

Amvets have protested this unfortunate and discriminatory legislation until we are blue in the face, yet the Congress steadfastly refuses to call open hearings or take up for immediate consideration pending bills which seek to grant enlisted personnel the same

consideration that was given to the greedy pressure groups located in the Pentagon Building and in the Navy Department.

This so-called vacation pay has already become a heavy burden upon the taxpayers of this Nation. Terminal rewards should never have been started in the first place, but since it is now the law of the land—for officers only—Congress should as a matter of fairness expedite legislation to enable men currently being discharged from the services to readjust and reorient themselves before seeking civilian employment.

The bill to grant terminal leave to officers was signed by the President on November 21, 1945—more than 3 months ago—and still nothing definite has been done for the enlisted men.

It appears that many Members of Congress are not fully informed regarding this situation.

Few seem to know that enlisted men are entitled to 30 days' furlough leave per year, but if they are for some reason unable to use up this time they automatically lose it. Under existing regulations it does not accumulate to their credit.

However, commissioned officers who receive the same 30-day leave are allowed to pile up this furlough time but not to exceed 120 days. In other words an officer who did not use his leave will receive his full pay and allowance for 4 months upon discharge.

Congress has many bills before it to correct this great injustice. If it is good policy to permit terminal leave with full pay for officers then why isn't it equally good policy to allow the same privileges to enlisted men on the same footing. Haven't they earned this consideration by their many sacrifices?

Not Unduly Exacting About Soviet Expansion

EXTENSION OF REMARKS
OF
HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mrs. LUCE. Mr. Speaker, many Americans have expressed a hope that with the establishment of the United Nations Security Council the era of unilateral and forcible expansion of the Soviet Empire would be replaced by an orderly process in which the desires of the peoples involved would be consulted and conformed to, as promised in the Atlantic Charter, the Moscow agreement, No. 1, and the Charter of the United Nations.

These same Americans have looked forward to a more vigorous policy on the part of their Government than that which was described by Secretary of State Byrnes last October as not being unduly exacting.

How far these hopes still are from fruition is very clearly summed up in the following article by Joseph and Stewart Alsop which appeared in the Washington Post on February 6, 1946:

NEW WORLD CONFLICT

(By Joseph and Stewart Alsop)

The cat is emerging from the bag. Reports from London at last clearly recognize that the basic problem of international relations is a rapidly developing conflict between the tired British imperialism, and the vigorous Russian imperialism or expansionism—you may choose whichever word you please. The future implications of this conflict are almost illimitable. They embrace, in truth, most of Europe and Asia.

An analysis of the conflict, area by area, is the only way to grasp the potential meaning of the over-all picture. After extensive consultation, such an analysis has been prepared, and is presented herewith:

The Middle and Far East are the areas where the conflict is at present most clearly visible, with the storm center, of course, in Iran. Essentially, the Iranian settlement reached by the United Nations is regarded as a Russian victory. The new Iranian Premier, Qavam, is a weak intriguer, on whom the Russians have a considerable hold. It is rumored in Tehran that Qavam will ask the Soviet puppet in Azerbaijan, Peshavari, to enter his government as Minister of Agriculture. The rebels in Azerbaijan have made great progress in consolidating their position, and recent State Department reports indicate the Iranian Government could no longer reestablish sovereignty over Azerbaijan, even if Soviet forces were withdrawn from the area.

Thus the Kremlin and the new regime at Tehran are now expected to reach an agreement, on the basis of the fait accompli, in the discussions authorized by the United Nations Security Council. But the vital point is that the Russians have already won the real prize—actual or potential control of the Iranian Government. This in turn gives them the power, when they so desire, either to cancel the Anglo-Persian oil concession, which provides the life fluid of the British Empire, or to move down to the Persian Gulf, or both.

The British can hardly protect themselves against these potential threats in Iran, except by proclaiming the independence under their control of Arabistan, where the oil concessions and gulf ports are located. And this would both compromise their position, by openly repeating the Russian tactics to which they have objected, and probably fail of its object in the long run. Meanwhile, in India, the situation is degenerating ominously, with a great famine expected to coincide with the climax of the embittered negotiations regarding Indian independence. Strengthened by their new base in Iran, the Russians are expected by the British to fish in the troubled Indian waters.

In the Mediterranean, the seriousness of the Anglo-Russian conflict is just coming into the open. The Russians want Tripolitania, the Dodecanese, concessions from Turkey which, if granted, would impair Turkish independence, and the expulsion of the British troops from Greece. Long ago Bevin accused the Soviets of wishing to "place themselves across the throat" of the British Empire because of their Mediterranean aspirations. Here again, the British position is inherently very weak. To counter full Russian pressure on Turkey, for example, the British would probably be forced to promise the Turks to fight by their side. As for Greece, the elections supervised by the British and ourselves may probably bring in a non-Communist government. Yet even the most optimistic British officials frankly doubt whether such a government can sustain itself after the scheduled withdrawal of British troops. The combined pressure of the EAM, from within, and the pressure from without of the Russian satellite governments in Albania, Bulgaria, and Yugoslavia (all of which have loud grievances against Greece) would be too strong.

Finally, in Europe itself, there is the possibility that the hunger and misery of the winter will bring in a Communist government in France, which would both make the talk of a western bloc ridiculous, and greatly simplify the task of the Communist parties in other European nations.

It is no wonder that Bevin talked with such brutal frankness to the United Nations Security Council. Among American policymakers there is no longer much doubt that the Soviets intend to press their advantages everywhere to the utmost. If they do this successfully, Britain will cease to be a major power. The crisis—and it is a major crisis—the outcome of which is likely to determine the pattern of the future—finds this country almost without a policy. At London, Byrnes purposely avoided discussions with the British which might have led to parallel action, in order to avoid rousing Russian suspicions. We are not ready to back the British, which would be a vast undertaking. Yet our policymakers view with intense dismay the changes in the world balance of power which would result from a complete Soviet success in the present contest with Britain. Thus far, those who make our policy have decided only to explain very clearly to the Russians that if their real desire is to upset the world balance of power in their favor, the United States will no longer be able to place its faith in the security machinery of the United Nations. What this may accomplish, still remains to be seen. One must add, of course, that it also remains to be seen whether the Russian intentions are as ambitious as the American State Department and the British Foreign Office now believe.

Terminal Leave

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, my bill to extend terminal leave to enlisted men and women of the armed forces is still in the Military Affairs Committee, and I am hopeful it will be reported out soon. In my opinion it is absolutely necessary that this bill be brought out on the floor of the House at the earliest opportunity so that the inequality inherent in the status of terminal leave can be done away with. If a terminal-leave bill is not recommended by the Military Affairs Committee soon, I shall place a discharge petition on the Clerk's desk and do my utmost to get the necessary 218 signatures to bring it before the Congress for debate and approval. Too much time has already been wasted on this measure. We cannot delay much longer.

The Power Authority of the State of New York Endorses Seaway Project

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. PITTENGER. Mr. Speaker, before World War II the opponents of the St. Lawrence seaway and power project championed delay because of governmental affairs being in bad condition, a depression was on, we had no need for the project under those conditions, and

so forth and so forth. With great eloquence the opponents pointed out the propriety of delay.

DELAY TACTICS OF OPPONENTS

When World War II commenced, the opponents changed the tune of their song and then they said that while World War II was going on, the project must be delayed because it might hinder the war effort. That same sort of excuse was used by everybody who wanted to prevent something being done. It worked. The project was delayed and many of its friends argued for delay alongside the railroads, the utilities, the eastern seaboard ports, John L. Lewis and other agencies and peoples who did not want to see the project undertaken.

When World War II terminated the opponents of the seaway project again came forward with a rather serious look on their faces, and this time they said there must be further delay. The war is over now, they have said, and we have changed conditions. The opponents said: "We must reexamine this matter. Conditions have changed in Canada. They have changed in the United States," and so forth. So the opponents of the project are back here now advocating delay even though the St. Lawrence project is just exactly the same as it was in 1934 and just the same as it was before World War II and after World War II. Not a single factor in relation to the seaway project has changed at all. The only thing new is the atomic bomb.

THE POWER AUTHORITY OF THE STATE OF NEW YORK

One, probably the only one, of our national agencies which has consistently and persistently advocated the building of the St. Lawrence seaway and power project is the State agency in New York known as the power authority. This was created by an act of the State legislature and has for its object the development of power on the St. Lawrence. The agency functions through trustees who are appointed by the Governor. The present officers are: Francis B. Wilby, chairman; Fred J. Freestone, vice chairman; George Stephens Reed, Maurice P. Davidson, Gerald V. Cruise, and Ralph Gunn Sucher, executive secretary and counsel.

I can testify, Mr. Speaker, to the fact that the Power Authority of the State of New York has kept alive the St. Lawrence project during the years when other considerations crowded it out of the minds of the American people. We owe this group of high-minded, able, and conscientious men a debt of gratitude for the faithful work they have done in connection with this matter. They have a national viewpoint. The bill in question provides for the development of power and navigation, hand in hand. Gen. Thomas Robins, of the War Department engineers, testified in 1941 that the development of power and navigation should be done concurrently and that the development of one should proceed together with the development of the other. The Power Authority of the State of New York has always stood by this position advocated by General Robins.

MAJ. GEN. FRANCIS B. WILBY URGES ST. LAWRENCE DEVELOPMENT

On February 20, 1946, Maj. Gen. Francis B. Wilby, United States Army, retired, chairman of the Power Authority of the State of New York, appeared before the subcommittee of the Senate Committee on Foreign Relations and testified on behalf of legislation to complete the project. I am sure that many Members of this House know General Wilby and are familiar with his 40 years' record as an officer in the Corps of Engineers of the United States Army. He was at the front as a combat officer in the First World War. While serving as Superintendent of the Military Academy at West Point he undertook an inspection tour of 35,000 miles which carried him to the principal theaters of World War II in 1944.

Between World War I and World War II, General Wilby was engaged as district engineer and divisional engineer on navigation, power, flood control, and irrigation projects, as well as river and harbor improvements. His work took him into many of our great river basins and coastal areas.

When Gov. Thomas E. Dewey appointed General Wilby to the Power Authority early in February 1945, he selected one of the most seasoned engineers in this country for that responsible post. General Wilby became chairman of the group on February 13, 1946, and last week he presented his views on the St. Lawrence project at the hearings now in progress. Because of the outstanding importance of his statements, coming as they do from a thoroughly qualified and experienced engineer, I ask leave to insert excerpts from General Wilby's testimony in the RECORD, which excerpts are as follows:

Mr. Chairman and gentlemen of the committee, last week I was appointed a trustee of the Power Authority of the State of New York and was elected chairman a few days before the opening of the hearings of your committee.

I am sure that you gentlemen are aware of the fact that the Governor of our State, the Honorable Thomas E. Dewey, is on record for the St. Lawrence seaway and power project. Before starting my statement on behalf of the Power Authority, I believe it is fitting that I quote from Governor Dewey's message to the legislature, January 3, 1945, in part as follows:

"After 20 years of discussion, the tremendous power potential of the St. Lawrence River still remains undeveloped. Its estimated 1,620,000 kilowatts would be the second largest project of its kind in this continent. Its beneficiaries would be the residents of this State and nearby areas.

"At the last session of the legislature, upon the recommendation of the State administration, resolutions were unanimously adopted declaring for the prompt development of the St. Lawrence River by measures which would provide low-cost power from these resources under the inalienable ownership of the people. * * *

"I recommend, therefore, that the State continue vigorously to assert its substantial rights and interests in the St. Lawrence development.

"For years I have advocated the completion of the St. Lawrence seaway and power project. During the past decade the means have been found and billions in Federal funds have been appropriated, to develop great rivers in other sections of the country, for power, navigation, flood control, irrigation and like purposes. The incomparable resources of the St. Lawrence River should no longer be wasted."

The Power Authority of the State of New York is here today to cooperate in the advancement of the St. Lawrence seaway and power project, and in the hearings of your subcommittee.

At the last congressional hearings, in 1941, we recommended approval of the United States-Canadian agreement of March 19, 1941, which is before you, and we support it now. We strongly favor the power development in the International Rapids section under the dual-purpose project covered by the agreement, including the completion of the navigation improvement. We also approve the essential features of the plans submitted by the Corps of Engineers, United States Army, to complete the entire development. We consider the cost estimates for the over-all project presented by the Corps as conservative and reliable, knowing that these figures are based upon thorough, on-site investigation. We also support wholeheartedly the maintenance of the Federal-State accord of February 7, 1933, on the power development in New York.

Any proposals we shall have to make to the subcommittee in reference to the legislation, Senate Joint Resolution 104, will be constructive recommendations, designed to strengthen, clarify, and perfect the terms of the resolution. I wish to place on the record now a request that we be permitted to submit such recommendations in the course of the hearings.

* * * * *

1. Low-cost power and low-cost transportation, such as the St. Lawrence development will provide, are essential to an expanding economy, sustained production and employment, and an increased volume of foreign trade for the United States in the postwar world. These are basis elements in any program to enable American industry, labor, and agriculture to prosper in the highly competitive conditions that follow the war.

2. The War Department, the Corps of Engineers, United States Army, Department of Agriculture, the United States Maritime Commission, and other agencies of the Federal Government charged with the duty of continuous studies of the transportation needs of this country recommended the completion of the St. Lawrence navigation improvement in 1941 and in 1944. The Power Authority accepts the findings and conclusions of such agencies that this project, when completed, will furnish exceptionally low-cost transportation. Far from diverting any measurable volume of tonnage from existing ports and railroads, the surveys of these agencies show the project will create new traffic, both domestic and foreign, in which existing port, shipping, and railroad facilities will share.

3. Engineering studies, independently made by the Power Authority from 1931 down to date, show that St. Lawrence power can be generated and transmitted to load centers throughout the State at delivered costs far below those of the most efficient steam plants now operating in New York or elsewhere. In the last year prior to the outbreak of the war in Europe, the Power Authority, on May 16, 1939, submitted to the Governor and the legislature the results of a coordination survey on electric power supply and requirements in New York State, based upon 4 years of technical studies.

4. In its coordination report, the power authority estimated that the St. Lawrence project would provide about 6,600,000,000 kilowatt-hours of energy anually at a cost of about 1 mill per kilowatt-hour. It was estimated in the report that, under the coordination plan recommended by the authority, power from the St. Lawrence, the

Niagara, and from existing and needed new steam plants, could be delivered at 80 percent load factor to large substations near Syracuse, Schenectady, Binghamton, and Poughkeepsie, and to a transmission loop interconnecting with the metropolitan area, at an average annual cost of 2.61 mills per kilowatt-hour. The report estimated annual savings from this plan, which included both St. Lawrence and Niagara power development, of about $27,770,000, as compared with the equivalent power supply from modern steam stations.

5. The coordination survey assumed that a 287,000-volt transmission system would be required to carry the large blocks of power at high tension potentially available from the St. Lawrence and the Niagara. Substantial economics in long-distance high-tension transmission have since been effected by the successful use of 230,000-volt lines in the Boneville-Grand Coulee, TVA, and other areas. Later studies undertaken by the Power Authority and a review of wartime improvements in the art of long-distance transmission indicate that the 1939 transmission estimates of the Authority were well within the range of actual costs.

6. We consider figures on cost of generation and transmission of St. Lawrence power submitted to this committee on February 18, 1946, by the Chairman of the Federal Power Commission, based upon studies by the Commission's staff, as equally conservative. These figures show that St. Lawrence energy can be produced at the site in New York at about 1.0 mill per kilowatt-hour, as compared with 1941 production costs ranging from 2.19 mills per kilowatt-hour to 4.24 mills per kilowatt-hour at the most efficient steam plants in New York. The Commission's studies further indicate that St. Lawrence power can be delivered throughout the State of New York and in nearby States at average costs of about 2.22 mills per kilowatt-hour, at 80 percent load factor. It will be noted that these estimates submitted by the Federal Power Commission fully confirm the results of the earlier detailed studies of the Power Authority.

7. The Power Authority concurs in findings of the Federal Power Commission that St. Lawrence power could be transmitted at low cost over a wide area, including all of New York State and parts of New England and the Middle Atlantic States. In 1941 the Power Authority supported the terms of the Mansfield bill (H. R. 5993) providing for "a widespread equitable disposition of the power to public agencies in other States, including counties, municipalities, public power districts, and rural electric cooperatives within economic transmission distances" of the St. Lawrence project. The Mansfield bill and the Pittenger-Aiken bills, H. R. 2280, S. 1385, Seventy-eighth Congress, contained identical provisions, and definitely allocated costs of $93,375,000 to be assumed by the Power Authority as the accredited agency of the State of New York in the ownership and operation of the project. These provisions were recommended by the State Department, the War Department, the Corps of Engineers, United States Army, the Commerce Department, the Federal Power Commission and other agencies in 1941 and 1944.

8. The Power Authority is convinced from its studies of power supply and requirements in New York and neighboring States in the Northeast that mutually beneficial arrangements could readily be made for the interchange of power, without artificial limitations imposed by State lines. Unquestionably, experience has shown that interconnections of power systems, such as exist in the Bonneville-Grand Coulee area, in the TVA area, and among other systems elsewhere, greatly increase the value and enhance the service of such systems and furnish needed security against break-downs.

9. While fully prepared to arrange for interchanges and interconnections with public agencies and rural electric cooperatives in neighboring States, the Power Authority is opposed to any weakening of the public safeguards contained in its own act, governing the sale and resale of St. Lawrence power.

10. All studies heretofore made by the Power Authority, as well as by the Federal Power Commission, have demonstrated that St. Lawrence power can readily be absorbed in the State of New York, even assuming no sales to public bodies in other States or interchanges with power systems in other States. New York State has had no major hydroelectric-power developments in 22 years, since the last units were installed at Niagara Falls in 1924. In the decade following World War I, hydro capacity in New York State generating plants increased by 564,815 kilowatts from the end of 1920 to the end of 1930. Over the same period, steam capacity in the State increased by 2,219,565 kilowatts, a total growth of capacity, including both hydro and steam, of 2,784,380 kilowatts. This growth over the 10 years following World War I was about three times the potential capacity of the St. Lawrence power development in New York.

11. Recent wartime experience in the production of aluminum furnishes a concrete example of the need for low cost hydroelectric power in New York State. The Defense Plant Corporation's aluminum plant, built by the Government at Massena, N. Y., near the site of the proposed power project, operated from June 1942 through January 1944, depending upon steam power transmitted long distances to the plant. Power costs at the Massena plant were the highest among all DPC aluminum plants in the United States, averaging 6.6 cents per pound in 1942, and 6.9 cents per pound in 1943. This compared with an average power cost at the Troutdale, Oreg., DPC plant, served with hydro power from Bonneville, of 2.1 cents per pound in 1942 and 1.9 cents per pound in 1943. In the report on the aluminum industry filed by the Attorney General September 19, 1945, Senate Document No. 4, Seventy-ninth Congress, first session, it was stated that the prospects for successful peacetime operation of this plant are excellent if and when the St. Lawrence hydro power project is built and that the completion of the seaway will make it possible to locate an alumina plant close by which will have ocean-port advantages and so be able to use foreign bauxites. Without low cost hydro power, the report stated, the plant cannot produce aluminum cheap enough to meet current prices and still leave a profit for the operator.

12. Today there is no reserve of developed hydro-electric power available in the Northeast. This has unquestionably limited the expansion of industry, while 4,000,000 domestic and small commercial consumers in New York State continue to pay relatively high rates. During the war, New York has been utilizing 220,000 kilowatts imported on short-term contracts from Canada. Under a temporary war permit, 12,500 cubic feet per second of additional water has been diverted and used at the Adams plant of the Niagara Falls Power Co. to provide 90,000 kilowatts. This power has been sold since January 1, 1945, under rates fixed by the New York Public Service Commission, at 1 mill per kilowatt-hour, to a limited group of industries at the site. Any new increments of low-cost power needed to replace these temporary supplies of hydro for New York State can come only from prompt development of the St. Lawrence.

* * * * *

PROGRAM FOR NEW YORK STATE POWER PROJECT PRESENTED AT PREVIOUS HEARINGS AND APPROVED BY THE HOUSE COMMITTEE

At the last congressional hearings on the pending United States-Canadian agreement held before the House Committee on Rivers and Harbors in the Seventy-seventh Congress, the Power Authority recommended the approval of the agreement, consistent with the fulfillment of the Federal-State accord on the New York power project.

In the course of the hearings, the Power Authority presented a summary of the program under which it is proposed to conduct the New York State power project, upon the approval of the pending United States-Canadian agreement, as follows:

"Among the broad principles which the Power Authority has advocated as a basis for future operation of the St. Lawrence power project in the public interest are the following:

"In the operation of the project and the disposition of the power generated therefrom—

"(1) No part of the United States' share of the water in the International Rapids section of the St. Lawrence River should be diverted for the benefit of any person or private corporation, nor should the use of any part of said water or the rights pertaining to said water be sold, leased, or otherwise alienated to any person or private corporation for the generation of hydroelectric power, nor should the power generating facilities be sold, leased, pledged, mortgaged, or otherwise alienated to any person or private corporation.

"(2) Full recognition should be given to the interests of national defense.

"(3) There should be made available and delivered without charge to the War Department so much power as shall be necessary in the judgment of said department for use in operation of all reservoirs, canals, locks, and other facilities in aid of navigation in the International Rapids section.

"(4) The project should be considered primarily for the benefit of the people as consumers of electricity, and particularly for the benefit of domestic and rural consumers, to whom it should be made available at the lowest possible rates and in such manner as to encourage increased domestic and rural use of electricity.

"(5) In disposing of the power generated by the project preference should be given to counties, municipalities, and public power districts; and provision should be made so that municipalities and other political subdivisions and public agencies, now or hereafter authorized by law to engage in the distribution of electric current, may secure a reasonable share of the power generated at the project.

"(6) In the event power is sold to any public agency, private company, or individual for resale, the contracts for the sale of such power should include adequate provisions for establishing resale rates, which should be fixed by the generating agency and which not only should provide for passing on to the electric consumer savings in costs of generation but also should be promotional in character, designed, insofar as reasonably possible, to result in periodic rate reductions. Such contracts must be for a period of time not exceeding 20 years, including renewals.

"(7) The power-generating agency should have due legal authority to construct, acquire, maintain, and operate substations and transmission lines for the purpose of serving the principal load centers within economic transmission distance of the project."

* * * * *

NEW YORK STATE POWER PROJECT APPROVED IN CONGRESSIONAL COMMITTEE REPORT AFTER HEARINGS ON PENDING AGREEMENT

In its report to the House (H. Doc. No. 1431, 77th Cong., 1st sess.) recommending approval of the pending United States-Canadian agreement and construction of the St. Lawrence project, the committee said in reference to the Federal-State accord provisions of the St. Lawrence project bill, section 2 (b), and the program presented by the Power Authority:

"The terms of section 2 (b) are consistent with previous action taken by the House and with the reports and recommendations of the public agencies of the Federal Government

and the State which have participated during the past decade in cooperative plans for the completion and conduct of the project in the International Rapids section of the St. Lawrence River.

"The joint resolution of the Corps of Engineers and the Power Authority, dated February 7, 1933, referred to in section 2 (b) of the bill, provides that in respect to the works to be constructed on the United States side of the boundary in the International Rapids section, the Power Authority shall assume the cost of the power works and one-half of the cost of the works common to navigation and power. This formula of cost allocation was approved by the House on April 26, 1933, in the adoption of House Joint Resolution No. 157, Seventy-third Congress, first session."

* * * * *

Resuming the discussion of the Mansfield bill, H. R. 5993, later reintroduced as the Pittenger-Aiken bill (H. R. 2280, S. 1385, 78th Cong.), the report continued:

"The allocation of costs approved by the House and the Federal-State accord embodied in House Joint Resolution 157, have continued to receive recognition from Federal and State authorities as an equitable basis for completion of the project. Since 1931 the State of New York has maintained the Power Authority as a public agency directed to cooperate with the Federal Government in plans for the improvement of the International Rapids section and, according to testimony before the committee, has expended $1,250,000 on engineering surveys, marketing studies, and other activities contributing to the advancement of the project.

"The Dominion of Canada and the Province of Ontario on March 19, 1941, entered into an agreement under which the Hydro-Electric Power Commission of the Province will undertake the operation and maintenance of the powerhouse on the Canadian side of the boundary and use the Canadian share of the water for the development of power. The Federal-State agreement to be executed subject to the approval of Congress and the State of New York contemplates similar provisions on the United States side."

The report of the committee referred to the "detailed plans for the conduct of the power project in accordance with established public power policies heretofore applied in other areas," adopted and presented by the trustees of the Power Authority at the hearings, and concluded:

"The successful experience of other State public power projects, many of which have been constructed with the use of Federal loans and grants, in extending rural electrification, serving defense needs, and supplying power to public bodies across State lines, is described in statements of Federal officials presented to the committee in the course of our extended consideration of the bill.

"It is the view of the committee that the cooperation of the Federal Government of the United States, the Dominion Government of Canada, the State of New York, and the Province of Ontario in plans and accords developed over the past decade for the improvement of the International Rapids section has been of the utmost value. We recommend that the basis be established for continued cooperation under a Federal-State accord pursuant to the terms of section 2 (b), as the best means of utilizing the resources of this international stream with maximum benefits to the public."

The power authority reaffirms the recommendations contained in the program it presented at the last congressional hearings, in support of the pending United States-Canadian agreement and the Federal-State accord, and concurs in the conclusions stated in the report of the congressional committee.

Consistent with these recommendations and with the statement of Governor Dewey on September 19, 1945, as concurred in by the President in his statements of September 26, 1945, and October 3, 1945, the power authority again urges the prompt enactment of enabling legislation to approve the pending United States-Canadian agreement, to authorize the completion of the St. Lawrence development, and to implement the Federal-State accord.

* * * * *

In connection with our formal statement, I hope I may be permitted to make a personal observation. Last month I completed over 40 years of service as an officer in the Corps of Engineers, United States Army, having divided my time between the military and the civilian work of the corps. It has been my privilege, serving with the corps, to work on multiple-purpose river projects and harbor improvements in many States of the Union. After such an experience, it would be impossible for me to take any other than a national view of the St. Lawrence development or to evaluate it from the angle of any sectional, local, or special interest. With the Army engineers, I have seen the locks and dams built, the powerhouses constructed and machines installed, and the flood-control works erected along our great inland waterways. On the Mississippi and the Ohio, we have seen the barges and towboats serving new commerce and handling tonnage created by such improvements. More recently, at West Point, I have observed with keen interest ocean cargo vessels plying up and down the improved channel of the Hudson that made Albany a seaport.

It is my conviction that any sound project which provides needed facilities for power, navigation, flood control, irrigation, or other beneficial public uses in one locality or region, expands the industry, the commerce, and the wealth of the whole Nation.

The comprehensive programs heretofore authorized by Congress to develop the latent natural resources of our rivers have, in my judgment, helped to make the United States the great country it is today. The improvements envisioned by Congress have paid for themselves many times over. They have contributed immeasurably to the development of our country and to the prosperity and enterprise of our people. In two World Wars, we have seen their tangible results in the productive power and industrial might of this Nation, mobilized behind our fighting men on the battle fronts.

I do not know of any project in this country that combines power benefits and navigation benefits, serving such populous, productive areas, to quite the degree that we find them in the St. Lawrence development. The project is so sound, from an engineering and economic standpoint, and so obviously in the interest of all our people, one marvels that it was not completed long ago. I have accepted my present assignment from the State of New York in the hope that we can help to finish the job and contribute to the prompt completion of this urgently needed public improvement.

The British Loan

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the following editorial which appeared in a recent issue of the Milwaukee Journal:

APPROVE LOAN TO BRITAIN

President Truman's request that Congress approve the proposed $3,750,000,000 loan to Britain was sure to run into much opposition.

Opponents charge that the loan is in reality a gift, because, they say, Britain will never pay it back. Or they say Britain doesn't need it. Or they say that it is a bribe to induce Britain to stop discriminating against American trade. Finally, they ask why the United States should help out Britain with American taxpayers' money.

We do not believe that the American taxpayer should help out Britain, just for Britain's sake. But we do believe, as President Truman tries to explain to Congress and the Nation, that the loan should be approved for the sake of America's own welfare. We are speaking of the direct effect that a British economic collapse would have on this country and the effect it would have on our efforts to restore the world to peaceful stability.

The best facts available indicate that Britain is in a state of great financial and industrial distress due to the ruinous cost of our common war against the Axis. So exhausted are her resources that she has to conserve every dollar by holding down imports. She must try desperately to get her export trade going, for, without exports, Britain cannot survive, cannot buy, will not consume American goods—and she has long been our best customer.

We do not know whether Britain will be able to pay back the loan, even on the generous terms which have been agreed upon by the negotiators between our two countries. There are some in Britain who fear she may not be able to repay. But in view of the reasons for this loan, it does not seem that the question of repayment should be the final factor. Just as we had to preserve Britain during the war, not for her sake but for ours, so we now have to prevent a financial failure that would shake to their very foundations the structures, like Bretton Woods, that we have set up to promote stability. It is as simple as that.

Those who express the fear that this loan will only lead to many loans to other countries—a total that might drain us too much financially—have a more cogent argument, one that does need attention.

There is, or could be, that possibility and we shall have to guard against it. The answer lies in applying to others the same yardstick we apply to Britain. Will it benefit us, directly or in furtherance of our objectives? If the answer is "Yes," and if the loan is reasonably within our means, we may want to make it; if not, we most certainly should deny it.

There is no danger if we will keep our hats on straight.

Bar Association to Vote on Race, Creed, Ancestry

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. DOYLE. Mr. Speaker, following is the text from the official ballot form of the Los Angeles Bar Association. It is self-explanatory:

BALLOT ON PROPOSED AMENDMENT TO ARTICLE III, SECTION 1 OF THE CONSTITUTION OF THE LOS ANGELES BAR ASSOCIATION

Article III, section 1 reads as follows:

"ARTICLE III

"*Membership*

"SECTION 1. Membership: Membership of the Association shall consist of active members, honorary members, nonresident members, and affiliated members, as those terms are hereinafter defined."

A petition has been filed with the secretary and presented to the board of trustees which proposes that article III, section 1 of the constitution of the Los Angeles Bar Association be amended by adding thereto the following sentence:

"Neither race, color, creed, nor national ancestry shall be a bar to membership."

The board has ordered that the proposed amendment be submitted to the members by written ballot. Arguments in support of, and in opposition to, the proposed amendment are enclosed herewith.

Shall the foregoing amendment to the constitution be adopted:

(To indicate your vote, mark (X) in the appropriate square. Yes ☐. No ☐.

Important: After voting, enclose your ballot in blank envelope provided and seal same. Enclose sealed envelope in addressed envelope and write your name on outside of addressed envelope in space provided therefor. All ballots must be in the hands of the secretary on or before 12 m., Monday, February 4, 1946.

Ballots of voters who fail to place their names on the envelopes addressed to the secretary will not be counted.

ARGUMENT IN SUPPORT OF AMENDMENT TO ARTICLE III, SECTION 1, OF THE CONSTITUTION OF THE LOS ANGELES BAR ASSOCIATION PROHIBITING REFUSAL OF MEMBERSHIP BY REASON OF RACE, COLOR, CREED, OR NATIONAL ANCESTRY

Negro lawyers are barred from membership in the Los Angeles Bar Association solely because of their race.

The proponents of this amendment seek to remove this bar of racial discrimination by an amendment to the constitution of the association.

Section 1 of article III of the constitution of the Los Angeles Bar Association now reads as follows:

"SECTION 1. Membership: Membership of the association shall consist of active members, honorary members, nonresident members, and affiliated members, as those terms are hereinafter defined."

It is proposed to amend the same by adding thereto the following sentence:

"Neither race, color, creed, nor national ancestry shall be a bar to membership."

It is not without embarrassment that the proponents of this amendment ask its adoption. By doing so there is, of course, an open confession that our professional association established to advance the science of jurisprudence; to promote the administration of justice; to encourage a thorough legal education; to maintain the honor and dignity of the profession of the law, and to cultivate social intercourse among its members (constitution, Los Angeles Bar Association, art. II, sec. 1), must needs amend its basic document to express affirmatively an ideal and essential of democracy.

Here, and in no other place, lies the embarrassment of the proponents.

Lest it be thought that the proponents have needlessly exposed the association to shame, the events leading up to this proposal must be stated.

The board of trustees candidly admits that it excludes Negroes from membership, solely because of their race. This policy of discrimination will be maintained, the board states, until a mandate is received from the membership requiring that this racial discrimination cease.

This racial discrimination is bottomed by the board upon the association's unbroken history of refusal of membership to Negro lawyers and upon certain language in article II, section 1, of the constitution of the association, quoted above.

Unhappily, this history of racial discrimination cannot be denied. The proponents wish that it could.

The proponents deny that the constitution of the association contains any language supporting this policy of racial discrimination.

They recognize, however, the reality that the board of trustees controls admissions to membership.

Opposition to this policy of racial discrimination has been expressed to the board and the view of the proponents that this policy is without support has been rejected.

The board has agreed to submit by mail this proposed amendment to the members by written ballot, accompanied by this argument and an argument to be submitted by those opposed.

Under article XI of the constitution the affirmative vote of a majority of the members voting shall be required for the adoption of the amendment.

The proponents respectively suggest that the merit of this amendment must be painfully obvious. No group of citizens should know better than lawyers the ideal of racial equality expressed in the Constitution of the United States, which they are sworn to uphold when they embark upon their professional careers. To deny to a Negro lawyer who is qualified, and the bar of this country has many, admission to membership in this professional group because of his color is to impose upon him an inferior, second-class citizenship. It is not a matter of tolerance or intolerance. It is a matter of justice or injustice. It involves democracy and that which is the enemy of democracy. Racial prejudice is always repugnant; it is doubly so when it is found in a democracy; that it should be found in a professional association of lawyers, as it is here, is nearly unbelievable.

The issue here has been centered on Negro lawyers. The proposed amendment, however, is broad enough to prohibit this racial discrimination directed against other groups entitled to practice law in this State.

If we are to be truly democratic, we cannot preach equality and deny it to millions of our fellow Americans. Much less can we, as lawyers, deny it to other lawyers, solely because of their race.

The proponents are confident that the members of the Los Angeles Bar Association will "Maintain the honor and dignity of the profession of the law" by voting for this amendment. In this, they will be supported by the historical concept of our profession as guardians of democracy.

This amendment is needed more for our dignity as human beings and lawyers than it is by those who are the victims of this unjust discrimination.

We respectfully solicit the vote and support of all members for this proposed amendment.

Daniel G. Marshall, M. B. Silberberg, James C. Sheppard, Ben S. Beery, David Tannenbaum, Charles E. Beardsley, Landon Morris, Martin J. Burke, Vincent C. Hickson.

ARGUMENT IN OPPOSITION TO THE PROPOSAL TO AMEND ARTICLE III, SECTION 1 OF THE CONSTITUTION OF THE LOS ANGELES BAR ASSOCIATION, WHICH AMENDMENT IF ADOPTED, WILL ADD THE FOLLOWING SENTENCE: "NEITHER RACE, COLOR, CREED NOR NATIONAL ANCESTRY SHALL BE A BAR TO MEMBERSHIP"

LOS ANGELES, CALIF., *January 3, 1946.*

The proposed amendment to the constitution of the Los Angeles Bar Association seeks to make lawyers of the colored races eligible to membership.

Since the organization of the association over 50 years ago, lawyers of the colored races have never been admitted to its membership. This consistent policy has been based upon considerations which go to the very existence of the association.

It has always been an important function of the association to bring its members together in frequent social gatherings attended not only by the men and women who compose its membership, but also by their friends and members of their families. As declared by its constitution, one of the association's purposes has been to cultivate social intercourse among its members. Realization of this social objective has contributed in very large measure to the growth and usefulness of the association. It is fair to assume that its membership has been built upon a justifiable expectation that this objective should receive continued recognition.

This social objective of the association is seriously and definitely threatened by the proposal to admit lawyers of the colored races to its membership. In many cases members would decline to attend functions thrown open to the colored races. Social contact between the races cannot be dictated. It is known that this proposal would be regarded by many of the association's present members as an attempt to dictate their social contacts, and would unquestionably lead to many resignations.

All of this involves no question of racial equality, and certainly no disparagement of the professional attainments of colored lawyers. The considerations involved are those reflected elsewhere in the restrictive membership qualifications of many clubs and organizations whose functions are social in character. These qualifications necessarily are based upon the personal preference of the membership.

Defeat of the proposed amendment would not deprive colored lawyers of an opportunity to engage in organization activities connected with their profession. They already have their own local bar organization; they are members of the State bar; and are eligible to membership in certain other bar organizations.

Fairness and any regard whatever for the future of the association demand that the problem presented by the proposed amendment be thoughtfully considered. So considered it will be seen that the problem is practical, not theoretical. If the proposed amendment were adopted we sincerely believe that it would be impossible as a practical matter for the association to function as in the past. The result would be dissension threatening ultimate disintegration of the association.

We urge that the amendment be defeated.

Critical Housing Shortage Caused Double Killing in Washington and Will Increase Divorces, Sociologists Says

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. PATMAN. Mr. Speaker, an article recently appeared in the Wash-

ington Post by Adelaide Kerr on the subject Double or Nothing's a Bad Housing Gamble. It is timely in view of the present housing shortage. It is as follows:

DOUBLE OR NOTHING'S A BAD HOUSING GAMBLE

(By Adelaide Kerr)

NEW YORK, February 23.—What is it like, "living double"—two or more families in one home or apartment?

"It's murder," the young lieutenant said.

He was standing in line at the Officers Service Committee headquarters, which helps veterans find living quarters. He represents one of a million American families which have doubled up. (Housing authorities say there may be 3,000,000 families doing it before the end of the year.)

"We've lived double all over this country," went on the lieutenant, glancing at his pretty, blue-eyed wife. "It just won't work. Either you have to give up everything you want or you have to keep battling for it all the time. They want to play the radio; you want it quiet. They want to get up at 6; you want to sleep late. You like your steak rare; they want it well done."

LEATHER LOVERS

"I'll never forget that steak," said his wife. "That's when we were living with in-laws of in-laws out in Illinois. One day she had a big juicy steak and she was going to fry it, of all things. I persuaded her to broil it, and it was fairly rare. Then the teen-age daughter said at table, 'O-o-o-h, I can't bear it. It's all bloody.' So her father scolded her and they had a family row and it was all supposed to be my fault.

"You can't ever seem to get it fixed. If you don't do your part, they don't like it. And if you do your part and do it well, somebody is likely to sniff that apparently you didn't like the way they did the same thing the last time.

"In one place where we were the daughter had a baby and she also had a job. So I tried to help by taking care of the baby. First thing I knew he was calling me 'mummy.' And his mother heard him one night and began to cry and said she guessed she didn't have a baby any more. So then her mother said, 'Shame on you. After all she has done for your child.' And then everybody cried."

IT CAN BE DONE

"Well," said the blonde Wave behind them, thoughtfully, "I certainly would not say living double is any picnic, but it can be made to work. My husband and I are sharing a two-room apartment with a friend and his wife and their baby, and we get along. Mary is a wonderful housekeeper and I am learning a lot from her."

A captain down the line joined in: "My wife and I are living with my mother and father in a four-room apartment. My mother just doesn't understand my wife and I'm in between.

"We're not foot-loose. I'm working to complete my bachelor of science in education and my wife is studying stenography to add to our income while I'm still in school. But my mother is terribly annoyed because we go to school nights and don't stay at home. I don't say my wife is perfect—she is too quick with an answer, maybe. We're not going to let this thing get away from us. We're going to keep it under control—I hope. But we're going to move just as fast as we can."

"I'm going to move too—if it's only to one room," said the frail wife of a naval lieutenant. "We are three families in a four-room apartment and the confusion is out of this world. We try to have community meals, but one of the wives won't do her share of cooking and dishwashing. And one of the men never comes to meals on time.

"The other wife is always washing things out and hanging them in the bathroom. She uses my powder and scatters it all over the place; she uses my curlers and breaks them. We've got to move; I don't care where."

"You'd better be careful where," said a former lieutenant who was suffering from combat fatigue. "That's what we did. My brothers and I and our wives were all living with our parents in a four-room apartment. My wife was going to have a baby, so I moved her. To a little dark room in a rooming house. The baby was born there. And now she's sick and the baby's sick and I can't take care of them or get the right food. My family blames me. I'm going crazy."

His voice broke and tears coursed down his face.

Mrs. Herbert Carlebach, head of the Officers Service Committee, took his arm and led him to her desk.

"It's the in-laws that drive them crazy," she explained as she gave him a cigarette. "They get along better with perfect strangers. They can't yell at them.

"We are going to feel the psychological effect of this housing shortage and doubling up for years to come. A new slum is being created in New York. It's the most dangerous family problem this country has to face."

Also appearing in the Washington Daily News, Saturday, March 2, 1946, was an article disclosing how the housing shortage caused a double killing. It is as follows:

DESPERATE HOUSE SHORTAGE LEADS TO DOUBLE KILLING

This is the story of a lonely, unhappy old man who "thought he was just in the way" and in a desperate fumble at escape left only tragedy behind him by killing his landlady and himself. It is also a sidelight on Washington's housing shortage, so desperate that the prospect of having no place to live could drive a grandfatherly roomer to commit murder.

Today Coroner A. Magruder MacDonald will perform an autopsy on 60-year-old James W. McConchie, roomer at 9 S Street NW., who shot Mrs. Mable Kirby, 40, three times in the back with an antique revolver as she stood by the kitchen sink—then put the gun muzzle in his mouth and fired a final shot. The only possible motive seen for the act was that he feared there would be no room for him when the Kirbys moved to smaller quarters.

FOUND BY DAUGHTER

The two were found dead on the kitchen floor of the row house at 6:15 p. m. yesterday by Mrs. Kirby's daughter, Evelyn, 20, a Wave, who returned from her office at the Navy Department to find the doors locked. She summoned next-door neighbors and together they peered through the kitchen window, where they saw the bodies lying only a few feet apart.

Thinking they were victims of gas, Miss Kirby turned in a fire alarm. Firemen and police found an old .38 caliber hammerless revolver lying between Mr. McConchie's outstretched legs.

An hour later Mrs. Kirby's husband, Horace O. Kirby, 42, stumbled on the tragedy. A plasterer, he had just returned from a 4-week job at Elkton, Va. His wife had been preparing chicken for his homecoming dinner when the old man's shots cut her down at the sink.

NOT MY WIFE, TOO

Struggling to control his emotions, the grief-stricken husband listened to the story.

"If the old man had to do it, why didn't he just kill himself—not my wife, too," he sobbed.

"I've got to be a man and take this," he said. "We've known the old man for years, and for 7 years he's lived with us. We were his only friends. We were just like children to him. Then this is how he repaid us."

He said he first met Mr. McConchie 22 years ago when they both lived in the same boarding house. Seven years ago the Kirbys took him in as a roomer and partially supported him. A former bid clerk for the District's purchasing department, Mr. McConchie drew a small retirement pension.

TOLD NEIGHBORS

"Recently the old man felt he was sort of in the way," Mr. Kirby said. "He went around telling the neighbors about it. We were planning to move to an apartment, but we never said we wouldn't take him with us. He was like a part of our family."

Police said the old man had $140 on his person, a notebook, watch, keys, and a bronze good-luck piece. Property was turned over to his son, Elmer McConchie, of 1845 Calvert Street N. W.

Five shots had been fired from the gun according to police. Apparently three had struck Mrs. Kirby, the fourth had gone wild and the fifth Mr. McConchie saved for himself.

Funeral arrangements for Mrs. Kirby have been postponed pending word from the Kirby's son, Harold Jr., 19, a signal man, second class, now stationed on Okinawa.

Recently appearing in the newspapers of the country was an article by a Harvard sociologist, Carle C. Zimmerman, on the subject of divorces caused by doubling up in homes. It is as follows:

DOUBLING UP WILL INCREASE DIVORCE, SOCIOLOGIST SAYS

CAMBRIDGE, MASS., March 1.—Doubling up of young married couples with their in-laws during the housing shortage will shoot the Nation's divorce rate skyward in the next 5 years, Harvard Sociologist Carle C. Zimmerman predicted today.

It's a case of too many cooks spoiling the family broth, as Professor Zimmerman sees it.

"Getting along in married life is tough enough without having others listen in or butt in on quarrels and disagreements," he said in an interview. "In a world that looks upon divorce as an easy and honorable remedy for marital ills, we may expect a tremendous upsurge of divorces as the immediate result of doubling up.

"The present rate of 275 divorces in every 1,000 marriages is high, but it will go much higher before 1951."

One of the Nation's foremost authorities on family sociology, Professor Zimmerman believes you can't have two "bosses"—either in the kitchen or at the shaving bowl. So he thinks the best advice to give young couples now living with in-laws is to move out as soon as housing is available.

"A couple would be better in a trailer or a Quonset hut by themselves than in a palace with their in-laws," he said, hastening to explain that he nursed no grudges against in-laws in general.

When there are plenty of homes again, the divorce rate will drop slightly, according to Professor Zimmerman.

But the in-laws themselves don't have to worry. Professor Zimmerman thinks it's a safe bet that the doubling-up process won't hurt them a bit.

"When a husband and wife have lived together long enough to become in-laws," he said, "they have a substantial handicap in that death-do-us-part race."

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the

RECORD, I wish to include the report of Joint Chiefs of Staff on the St. Lawrence project as presented by Under Secretary of State Dean Acheson before a subcommittee of the Senate Committee on Foreign Relations on February 18, 1946:

FEBRUARY 16, 1946.

The honorable the SECRETARY OF STATE.

DEAR MR. SECRETARY: In conformity with your request of November 5, 1945, the Joint Chiefs of Staff have examined the matter of the Great Lakes-St. Lawrence seaway and power projects and their effect on the national security.

The principal factors which influence the consideration of these projects in the interest of the national security are that, in the event of a national emergency, they would provide:

(a) Shipbuilding and ship-repair facilities, located in a relatively secure area, capable of expansion and of conversion for handling deep-sea vessels, which could be used to supplement coastal shipyards.

(b) An additional line of communication, navigable by ocean shipping, which could, by diversion of some cargo for overseas destinations, ease the strain during wartime on rail transportation and port facilities of the east and Gulf coasts. This seaway could also serve as a reserve route to be used in the event of interruption of other routes by enemy action.

(c) A large source of cheap, dependable power, which can be generated without the use of coal or other critical combustibles and without use of crowded rail or highway transportation facilities; this power would be available in an area which, during World War II was a power-deficit area.

The foregoing factors prompted the Secretaries of War and the Navy to support the projects in 1941 in the interests of national defense. In the light of the experiences of World War II, in which total mobilization became a near actuality, it is evident that the prospective increase in our war potential that would have been contributed by these projects, had they been completed, would have been of material assistance in prosecuting the war. It is probable that attainment of success in any future world conflict would require utilization of the ultimate production and transportation facilities of the United States and possibly Canada. The Joint Chiefs of Staff consider that it would be in the interests of national security to complete projects, such as these, which would have distinct military advantages and would materially increase the industrial and transportation potential of the United States.

Although the St. Lawrence Valley is a possible route for invasion of eastern North America, the Joint Chiefs of Staff consider that construction of the proposed works would not facilitate invasion by that route since the power plants, locks, and canals would readily be rendered unusuable in the event such action became necessary.

ROBERT P. PATTERSON,
Secretary of War.

Standardized Bearing Dimensions

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, occasionally an observation by spokesmen for various industries is significant because it calls attention both to a problem and to a solution of that problem, and incidentally reflects the possibilities of promoting trade generally by rather simple methods.

It seems to me that a recent statement by S. F. Wollmar, executive vice president of SKF Industries, Inc., was one of those.

He urged the Nation's motor and machine manufacturers to join a movement to standardize sizes of ball and roller bearings just as sizes of electric bulbs, tires, clothing, and shoes are standardized.

Mr. Wollmar said:

This standardization would reduce overall costs, speed delivery of bearings to prime reconversion centers, aid young industries, and broaden American participation in world reconstruction.

Ball- and roller-bearing manufacturers are now required to produce and stock as many as 40,000 sizes and makes of antifriction bearings and some of these products differ from others by the merest hair's breadth. If a uniform system of basic sizes were adopted, it might be possible to concentrate our capacity on turning out about 2,000 sizes of bearings. These would meet almost every industrial need without any sacrifice of quality.

I am inviting reconsideration of standardized bearing dimensions now while memory of war production experience is still fresh. Standards adopted as long as 25 years ago have been allowed to lapse because of the recent spectacular expansion of the machine industry.

The war emphasized the rapidity with which standardized bearings could be produced as well as the production difficulties that constantly plagued the output of nonstandard bearings.

Early standardization would be of particular benefit to such new industries as television and synthetic fabrics. Studies made by SKF engineers indicate that bearing standardization would result in speedier and more economical production and customer servicing for those industries. The engineers declare that an international standards agreement already reached will simplify the problem of rushing bearings for such desperately needed items as machine tools and other mechanical equipment to Britain, France, Belgium, Holland, and other members of the United Nations which use the same bearing standards.

Future foreign business of American manufacturers also would be helped by standardization. Potential customers in foreign nations would be much more likely to buy American equipment now and in the future if they know they can obtain standard-sized bearings and other parts with relative ease instead of having to wait weeks and months for specially fabricated replacement.

UNO Permanent Headquarters

EXTENSION OF REMARKS
OF
HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks on the subject of selection of a site for locating the permanent seat of the United Nations Organization, I call attention of my colleagues and constituents to the following press dispatch giving the official text of the resolution adopted by the General Assembly at its final London session:

TEXT OF UNO RESOLUTION ON PERMANENT HOME PLANS

LONDON, February 16.—Text of the resolution on the temporary and permanent homes of the United Nations Organization, as adopted by the General Assembly of the UNO here this week follows:

"The General Assembly resolves that:

"1. Permanent headquarters:

"(A) The permanent headquarters of the United Nations should be established in Westchester (New York) and/or Fairfield (Conn.) counties, near to New York City.

"(B) A headquarters commission shall proceed as soon as possible to the region mentioned in (A) above with a view to carrying out an exhaustive study thereof and making recommendations to the General Assembly in the second part of its first session (in September) regarding the exact location to be selected within the aforementioned general region.

"(C) The headquarters commission shall draw up plans based on the assumption that the United Nations will acquire approximately: (1) 2 square miles, (2) 5 square miles, (3) 10 square miles, (4) 20 square miles, (5) 40 square miles with details in each case of the approximate cost of acquiring the land and buildings within these areas.

"(D) The headquarters commission shall ascertain what measures the Federal, State, and county authorities in the United States are prepared to take in order to control development in the territory adjacent to the zone.

"ASSEMBLY TO DECIDE

"(E) On the basis of the information thus provided, the General Assembly at the second part of its first session shall make a final decision as to

"(1) The exact area required, and

"(2) The exact location of the permanent headquarters within the aforementioned Westchester-Fairfield region.

"(F) This resolution does not imply any financial commitments of the United States (other than the expenses of the headquarters commission) and does not impose any financial obligations on its members and the Assembly remains free to decide these questions at the second part of its first session according to article XVII, paragraphs 1 and 2, and article XVIII, paragraph 2 of the Charter.

"Interim headquarters: The interim headquarters of the United Nations should be located in New York City.

"(2) Headquarters commission:

"(a) A headquarters commission composed of representatives of Austria, Uruguay, China, France, Iraq, Netherlands, United Kingdom, USSR, and Yugoslavia shall be set up to carry out the tasks entrusted to it under the first part of this resolution regarding the permanent hearquarters.

"EXPERTS PROVIDED

"(b) The headquarters commission may be assisted by experts including planning engineers, lawyers, real-estate experts, financial advisers, and other appropriate experts who, at the request of the secretary general, shall be designated by the Government of the United States of America.

"(c) The secretary general shall consult with the headquarters commission or the experts assisting it, as he may deem necessary or appropriate, on problems which may arise in connection with the temporary installation of the various organs of the United Nations in the United States, the material arrangements for the holding of the second part of the first session of the General Assembly in September 1946, and the housing of the delegates, secretariate and other personnel who may be required to reside for

longer or shorter periods near the temporary headquarters of the organization.

"(d) The secretary general is authorized to pay the expenses of the members of and to compensate the experts attached to the headquarters commission on such basis and in such form as may appear to him most appropriate.

"(e) The headquarters commission shall submit its final report on all matters referred to it to the General Assembly at the second part of its first session.

"(f) The General Assembly during the course of the second part of its first session shall give consideration to the appointment of a planning commission of experts as recommended in chapter X, section 3, in the report of the preparatory commission."

Relief for Poland

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor for Saturday, March 2:

UNRRA STEP PUTS POLES IN ROLE OF PAWN

(By Edmund Stevens)

WARSAW, March 2.—The impending cut in the United Nations Relief and Rehabilitation Administration to Poland has raised the dire threat of starvation. The country that suffered more from the Nazi invaders in proportion to its size than any other is, thereby, faced with new heartbreaks, perhaps involving further reduction of its already depleted population and disruption of its recovery program.

The official UNRRA justification of the cut is that last summer's world wheat crop, and especially the European crop, was disappointing, whereas the prospects are poor for the current Argentinean crop as a result of drought. The Polish press and Polish public, however, have been quick to read into this wheat "reduction" political motives which top UNRRA officials here do not deny.

They freely and frankly admitted that the critical attitude in influential American and British circles toward the existing Polish regime may have influenced the UNRRA decision. In this connection, they mentioned British resentment that the Polish delegate to the United Nations General Assembly meeting in London, Zygmunt Modzelewski, had sided with Andrei Vishinsky, the chief Russian delegate, in the Security Council arguments.

The same officials also pointed out that certain other food-importing countries competing for a share of the world's wheat supply have more political influence, money, and propaganda machinery at their disposal than war-torn and impoverished Poland.

To the outside observer it would appear as if Poland's martyrized population is about to undergo a new ordeal for reasons that are largely, if not wholly, partisan. This, UNRRA officials in Warsaw openly acknowledge. They confirm that the results of such a cut may be disastrous, but add that they themselves are powerless to alter decisions reached in London and Washington. To give the full picture, it is important to recall that the Poles are bread-eating people, far more than are Americans, for example.

In normal times, the Polish wheat production fully covers its home consumption, leaving a margin for export. In its recovery from wartime devastation, Polish agriculture has been severely hampered by last summer's drought. Furthermore, the scant snowfall this winter renders the prospects for the coming crop not to encouraging.

Agricultural experts with whom I have talked envisage that the famine may further result in a shortage of seed grain for the spring sowing, thereby further delaying the day when Poland again will be able to feed its own population without outside aid.

The Poles complain that they are being left to starve, whereas, at least according to some reports, the Germans will be living in comparative comfort—with Allied help. Italy also will continue to receive its 600,000 tons of wheat monthly.

And so, some Poles here are asking: "Who won this war, anyway?"

Statement of Col. Philip F. La Follette on Universal Military Training

EXTENSION OF REMARKS
OF
HON. MERLIN HULL
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1946

Mr. HULL. Mr. Speaker, Col. Philip F. La Follette appeared before the Committee on Military Affairs in opposition to the proposal for universal military training in peacetime.

Colonel La Follette served three terms as Governor of Wisconsin. He is a veteran of the First World War, in which he rose to the rank of captain. Upon the declaration of war with Japan, he promptly proffered his services to his country. He went to Australia with our troops, where he was assigned to the staff of General MacArthur. He was a participant in all the campaigns from Australia to Japan. He was promoted from time to time to the rank of colonel. Recently he retired from the staff of General MacArthur and returned to his home at Madison, Wis.

Colonel La Follette long has been an earnest student in civilian life and in the Army which brings to him exceptional qualifications to speak on peacetime military training. His clear-cut statement before the Committee on Military Affairs is thorough and comprehensive. It is worthy of consideration by every Member of Congress.

The Capital Times, one of the prominent dailies of the Northwest, in its editorial comment upon his statement says:

We urge you to read his suggestions and proposals on conscription for they constitute an outstanding contribution to the discussion of one of the most vital issues before the American people today. They represent the thoughtful consideration and conclusions of a man who was in military counsels of the war and who has been able to relate his knowledge to the impact of technological advance on our military institutions.

Colonel La Follette makes clear that he approaches the conscription issue from the only rational grounds of discussion—national defense. Quite rightly he ignores the poppycock about military training bettering the health, morals, and education of American youth.

National defense in this atomic age, Colonel La Follette says, will best be served if we forget about conscription plans—even the watered-down proposal offered by the American Legion. He believes that a highly trained, well-paid volunteer Army will satisfactorily meet the needs of the Nation both from the standpoint of defense and carrying out our commitments in the rest of the world.

Eliminate the Army's caste system, increase the pay of enlisted men and their opportunities for promotion, and peacetime compulsory military training will not be needed for national defense. A volunteer Army will be sufficient.

The following was Colonel La Follette's statement before the Committee on Military Affairs:

Mr. Chairman, I was delighted to accept the invitation to appear because I am convinced that you are confronted with an issue whose determination is bound to have an enduring impact on the peace of the world, the security of America, and the survival of our cherished democracy.

I should like to make two points clear at the outset. In the first place, my argument, as will soon become clear, is directed against all versions of peacetime conscription, the new proposal by the American Legion no less than the original scheme of the War Department and President Truman. In the second place, I cannot in the time at my disposal deal with what I regard as the synthetic, or artificial type of argument in behalf of peacetime conscription—the arguments, for instance, that universal military service will develop the health of our youth, indoctrinate our young men with a moral discipline, provide them with job training, strengthen their characters, or provide a substitute for full employment. Arguments of this kind, it seems to me, have been adequately dealt with by the educators, clergymen, and others who have already appeared before you.

I approach the subject today exclusively as an issue of national defense—the defense of America from external aggression and the defense of our democracy from the internal assaults of those who are captivated by the short-cut methods of alien ideologies and the total militarism of foreign totalitarianisms.

The invasion of an American's liberty by universal military service is justified only when it is unmistakably clear that the Nation's security demands it. Our national security does not now demand it. On the contrary, universal military service is now almost completely out of date and its adoption would almost certainly lull us into a false sense of security, just as the Maginot line tricked the French into a complacency which proved their undoing 6 years ago.

Most of us can agree that in time of war conscription is the fairest and most equitable way of sharing the risks and hardships of combat. In time of peace, however, the duties of the average soldier are comparable to the recruitment of GI's than to policemen. There is no more reason to apply coercion to the recruitment of GI's than to policemen.

America needs a peacetime Army, both for overseas duty and to provide a powerful, swift, mobile, highly trained, perfectly equipped force to defend us against any threat of aggression.

But we are talking here not of sheer numbers, nor of size for the sake of size, but rather of a compact, highly specialized force of experts. We are talking here of a force of keen technicians thoroughly trained to master and keep abreast with the highly complicated instruments of modern warfare, rather than millions of conscripts rushed through a quickie course of calesthenics, close and extended order drill, and the other routines of a 1-year course under conscriptions.

Modern science is repealing many of the old laws of war which served so usefully in the past. The classical military injunctions have

become obsolete in the age in which a single atomic bomb can pulverize an entire battlefield. Some of those old military concepts become perilous folly in an age in which a rocket plane streaking through the sky with the speed of sound can blast to bits a transport vessel ploughing through the seas with 10,000 conscript foot soldiers.

Anyone who has looked with any imagination into that Pandora's box that military science has opened in recent years knows that the technical complexity of warfare will increase rather than diminish. We are determined, I hope—every one of us—to prevent the outbreak of another war. But since we must plan for any and every eventuality, we must accept the fact that more than anything else, we shall need high quality personnel for any future emergency.

One of the principal liabilities of winning wars is that too often outworn ideas remain in positions of power and the surviving hierarchy of military officers base their program of preparedness for the next war on the prevailing ideas of the last. The obsolescence in military thinking is as great as the obsolescence elsewhere in life. The Army's demand for universal military service is as out-of-date as the Pentagon Building itself, which, though built in the 1940's, is a horrible violation of the military principle of dispersal.

It is generally recognized today that after World War I the Allied High Command presented Germany with the basic necessities which produced the marauding blitz army of Hitler's Reich. By limiting Germany to an army of 100,000 men with 12-year enlistments, we gave the German Wehrmacht the incentive to pioneer new ideas for a highly skilled and trained army of technicians—an army which made ideas take the place of sheer numbers, an army which made fire power and mobility and science an easy conqueror of France's Maginot Line, conscript army, and textbook theories of warfare.

The striking forces in the late war were far more highly trained—with far greater specialization—than in World War I. It is certainly safe to assume that preparedness against another war will require even greater, rather than less specialized training for combat forces. That specialization, technical training, and carefully developed skills we can get only by working with a group of men who have volunteered for that purpose, and who have been attracted to that work by the realization that they are to become part of a regular army of free volunteers in the employ of a free people. They must know that they are to be treated as a valued, essential, and honorable part of our national life, and not as conscripts for a year of poorly paid training.

This, then, must be our goal—to build a democratic army of free men who have signed up to serve because the stakes are high enough, the rewards attractive enough, and the opportunities compelling enough.

And this brings me to the very heart of what I want to say today. Just as science working in the laboratory is revolutionizing the weapons of war, you of Congress must be revolutionary in the field in which you are supreme—the making of national policy.

I urge that Congress make the military service as attractive to volunteers as it has made the Federal civil service.

Concretely, I am proposing that in order to build a democratic defense force, rather than a conscript army, Congress do these things now:

1. Establish a minimum pay scale starting at $100 a month, plus the usual allowances, for privates, with a corresponding increase in scale for noncomissioned officers.

2. Provide a system of promotions from the ranks and a program of education and in-service training to enable GI's to qualify for advancement and to become trained technicians.

3. Strike at the military caste system by narrowing the difference in clothes, quarters, mess, legal rights, and social life between GI's and officers.

4. Improve the officer class by putting appointments to West Point (and Annapolis) on a civil-service basis and by putting peacetime promotions on a basis of competitive examinations.

Once we get over the horse-and-buggy notion that we cannot afford to compensate a regular standing Army adequate for our national needs, we shall find that men will enlist for service in the armed forces exactly as they do in any other department of Government service. The Government does not expect to employ clerks, stenographers, or other Federal employees at half the salaries paid in private business. Yet we offer a soldier today half the going rate of pay for a Wisconsin farmhand. If we compensate and reward the soldier at anything approaching a competitive standard, we shall have more volunteers than we need, and even more important, we shall enlist into our defense forces a type and quality of man that we need so vitally in building a democratic army.

I am well aware of the fact that it is not possible to eliminate all differences between officers and men and still have a disciplined army. I am convinced, however, that we can abolish many of the inflexible restrictions of the old Prussian caste system and still retain the basic discipline required. The American GI, if I am any judge, wants besides fair pay and decent living conditions, a feeling of significance, of belonging, of being appreciated, and an awareness that brains, ability, and industry will win him promotions.

Given this type of democratic program, America can build a powerful volunteer army, an army whose abilities and skills and training would repay us many, many times over the cost of training a vast conscript army of men whose 1 year in service would make them specialists only in griping.

I assume that no one is seriously proposing that we should base our preparedness on the theory that the United States is going to launch an unannounced blitz war on some nation in Europe or Asia. On the contrary, I take it that we all want this country in a position where if such a blitz were made against us, we would be able to repel it, and have ample time to put our country into high gear for war production. If this is our goal, then it is all the more reason why we should have available at all times a trained, skilled, perfectly equipped, quickly maneuverable force that can repel such an attack while we are harnessing our human and physical resources for whatever the duration might be.

Our national security does not require and our national income cannot finance both such a regular army of highly trained volunteers and a conscript army of masses of soldiers. Hence, we must choose. I choose the constantly available force of well-paid, well-trained volunteers who have had an opportunity to study and master what has truly become in our age of diabolical engines of destruction—the science of warfare.

The logic of the present and the lesson of the past seem to me to point decisively to the kind of volunteer army I have discussed as our national defense hope for the future. It is our defense not only against a possible external enemy but our bulwark, too, against the inroads of a militaristic fascism. One by one we seem to be embracing, in what we were pleased to call the arsenal of democracy, many of the very Fascist institutions against which we threw our men, money, and materials in World War II. We fought, among other reason, to wipe out the specter of permanent militarism. Are we now to embrace as our very own the monster we swore to destroy? I trust not.

There is another and far better course for us to pursue.

First, let us build and maintain a volunteer regular army fully adequate to repel any foreign invasion. Second, instead of embracing the major tenet of totalitarianism—military conscription—let us use our best leadership to lead all nations to outlaw universal military service. By so doing we will not only be keeping faith with our solemn declarations of purposes in World War II but we will be heading our own country, and perhaps the world, in the direction of a lasting peace.

Old-Age Pension Legislation Needed

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. PITTENGER. Mr. Speaker, recent announcement that the Ways and Means Committee of the House of Representatives would conduct hearings on proposed amendments to and changes in our social-security law is most important and in my way of thinking one of the major issues in our legislative program. This hearing, in my opinion, is long delayed. As we all know, legislation relating to raising money for old-age pensions is a revenue matter and is referred under the House rules to the Ways and Means Committee.

Several bills are pending and many amendments will no doubt be offered relating to this subject. Friends of our aged citizens have tried on many occasions to have proposed national old-age pension legislation considered either in the committee or in the House of Representatives. I am one of those Members who has consistently demanded that the administration and the social-security agency of the Government take steps to correct the present situation. Last week a number of Members signed petition No. 22 which will bring out for debate and amendment and change H. R. 4747 which deals with the question of old-age pension, and other matters. This petition was a discharge petition and, of course, requires 218 signatures. When that number of signatures is secured, the committee handling this legislation is then discharged from any further consideration of it, and then it comes before the House of Representatives.

I referred to the present situation and by that I mean the present method of having the States pay out old-age assistance and having the Federal Government appropriate an amount equal to the payment made by the State. This method has proven wholly inadequate. Our aged folks face a miserable existence under this program. You can hardly refer to the program without apologizing for it.

The second session of the Seventy-ninth Congress is well under way and in the remaining months of this session I hope the Congress will do something to improve the condition of our pension citizens who have been so long neglected.

The plight of our aged folks is perhaps worse today than at any time within the past quarter century. In the main they must live on a fixed income based on prewar levels. They are confronted with a 33-percent increase in living costs. Opportunities for employment are more restricted. Job preferences are given to returned veterans and younger workers. Technical advances, inventions, and modern production methods are fast eliminating the oldster from the field of employment. The number included in this class, 60 years of age and over, is about 10 percent of our population, or some thirteen and one-half million. This is more than we had in the armed forces at the peak of the war effort. It is estimated that at least 10,000,000 of this group are dependent in part or totally upon someone else for their existence. They pose a social and economic problem and this Congress must do something about it.

You say we have old-age assistance under social security, but who could honestly claim that the present old-age pension paid by the Government and States would keep body and soul together? They are so woefully inadequate that even the administrators of these pension funds admit that, at best, they only supplement private assistance and contributions.

Christian principles and American justice are shamefully violated so long as we force millions of our senior citizens to live in want and misery. They built this country and made possible the prosperity which we now enjoy. Certainly from our great bounty and limitless wealth this Congress can find ways and means of providing a decent living for our deserving aged. Is there a Member of Congress who would face his constituency and say that we do not have the funds or substance to meet this old-age emergency.

The kindest thing anyone can do is smile when the argument that we cannot afford this expense is advanced to defeat old age pension legislation. Right now the administration is considering a $4,000,000,000 loan to Great Britain. I am opposed to that loan but regardless of that, I wish someone would tell me why our people who are running the Government want to give away money to foreign countries and then neglect our own people. The example of wanting to do good to others can be multiplied in many different directions.

We can and must afford retirement to our elder citizens and relieve them from economic activity. With the rapid advances in technology it has become increasingly difficult to keep the older workers employed. They are the unwanted men in industry, the first to be discharged, the last to be hired. Rather than see workers pushed from the active labor force, hit or miss, the logical policy to follow is one of selection. A wise nation will specifically mark the older workers for retirement and clear the path for employment for younger men and women. We cannot afford the waste and social hazards of unemployed youth.

Already signs of unemployment appear on the horizon of the future. The wheels of industry are grinding out much needed peacetime products. Within a few short months, these emergency needs will have been supplied and industry will have adjusted itself to normal conditions. Then, we can reasonably expect the old law of supply and demand to assert itself in the labor market. There will be more job seekers than there are jobs and mass unemployment is not improbable. Real statesmanship requires that we anticipate this possible situation and take the proper steps to meet it now. One step in that direction is to retire the aged from gainful employment and thus provide a job for a younger person.

Our senior citizens have made their contribution to society and have earned their retirement. If their retirement is insured the whole process of business activity will be stabilized.

One War Is Enough

EXTENSION OF REMARKS
OF
HON. CHARLES R. SAVAGE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. SAVAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edgar L. Jones, from the February 1946 issue of the Atlantic Monthly. I think it is a very timely article and important, since Mr. Jones is a veteran. During his 40 months of war duty, Edgar L. Jones served for over a year with the British Eighth Army in north Africa; he served also as a merchant seaman, an Army historian, and for 7 months as the Atlantic correspondent in the far Pacific, where he was present at the assaults on Iwo Jima and Okinawa. Here is his box score of what the men he lived with really thought about military life and the promise, or threat, of peacetime conscription:

ONE WAR IS ENOUGH
(By Edgar L. Jones)

I

Probably I shall be tagged as a psychoneurotic veteran of too much bloodshed when I say that I get alternately fighting mad and cold sick inside whenever I hear people talk about the next war. I cannot understand how they can be resigned to the prospects of another global conflict so casual in their assumption that wars are inevitable, so damnably unaware of the consequences of their current complacency.

Has everyone in this country lost faith in peace? Here we stand at the threshold of what could be a new and better world, and our fainthearted citizenry insists upon locking backward and muttering that what has always been must be. Maybe the United Nations Organization will succeed in preventing further global conflicts, but the men from Missouri and 47 other States have to be shown. World peace, according to our self-acclaimed realists, is at best a heart-warming dream; common sense demands that we put our trust in bombs and battleships. So let us teach our youths, along with the new generations in Germany and Japan, that wars are wrong, but at the same time let us be practical and bring up our children to be good soldiers, just in case.

Cynical as most of us overseas were, I doubt if many of us seriously believed that people at home would start planning for the next war before we could get home and talk without censorship about this one. Although our hopes and fears for the future were varied, our common goal was most assuredly more than the elimination of a few world powers so that the remaining nations could square off for yet another war. Nor did we endure the half-life of a regimented military existence just to have people tell us that it is inevitable that our children will have to suffer similar bitter experiences.

We had a right, I think, to expect that in return for our services the global home front would give peace a fair trial. We made our various sacrifices to give our own and younger generations a chance to improve on the past, not to have the unchanging Old Guard take our victory from us and rebuild the world along their deadly prewar pattern of distrust, secrecy, and intrigue. We wanted peace, not a world divided into armed camps; permanent peace, not a short wait between wars. Many of us had to bomb, burn, and blast into oblivion an untold number of helpless victims of total war. Only a few of us are so unaware of our own war crimes that we can let it be said that we fought only to preserve the old way of life.

Surely the entire home front could not have suffered through 4 years of anguished waiting, dreading each incoming telegram, shuddering at each new invasion headline, and still consider war to be the only dependable solution to international controversies. Instead of viewing the rest of the world with suspicion and singling out the next enemy, there must be some Americans willing to rely upon the fact that millions of global citizens are as peace-loving as ourselves. Certainly we do not all believe that we can successfully talk peace at the point of a gun or bring up our children as conscientious civilians by first exposing them to military indoctrination, the very antithesis of education for democracy.

But if there are some Americans who want peace badly enough to give up their right to wage war, they are being outvoiced by our militant Old Guard, whose idea of a foreign policy is to keep the United States armed to the teeth and ever ready to challenge any country which disputes our world leadership. Regardless of the existence of personal misgivings, we, as a Nation, are placing our reliance not on international cooperation but upon the atomic bomb and the willingness of our boys to back our decisions with their lives. If it takes two to make a war, we are making certain that we are one of them.

I do not pretend to speak for all veterans. In the course of 40 months of war duty and five major battles I was only an ambulance driver, a merchant seaman, an Army historian, and a war correspondent, never a downright GI. Possibly the men who were subjected much more completely than I to the whims of militarism are now satisfied with their hollow victory, but I doubt it. I never met that fabulous character, Typical GI Joe, whose every thought and postwar desire was so well known to politicians and the writers of advertising copy. But I met a lot of other Joes, and my guess is that before long—and the sooner the better—the veteran serviceman is going to wake from his deep dreams of peace, a job, and a home and realize that his country has let him down, and badly.

Being a GI was a point of view, not a military classification, and the more thoroughly one was exposed to the waste, unfairness, senselessness, and horror of war, the more completely one substituted the serviceman's perspective for an anachronistic civilian way of thinking. The man in uniform stood apart from society and judged it, often too harshly, in the light of his own insecurity, the sacrifices which were demanded of him,

and the possibility that he was being played for a sucker. In varying degrees, depending upon a man's length of service, the GI perspective included bitter contempt for the home front's abysmal lack of understanding, its pleasures and comforts, and its nauseating capacity to talk in patriotic platitudes.

The fighting man was not a deep-thinking man, despite all the lofty sentiments attributed to him. He left the peace talk to the civilians who had the time and place for it. Having been maneuvered into a position where he had to kill or be killed, he did not trouble himself with pretenses that he was a crusader. He fought because his people at home expected him to fight, and he let them seek the necessary justification for his own ruthlessness. The most he wanted was to end the war, and all wars, as soon as possible, so that he could live in peace and let others, including his own children, live in peace. He expected the home front to share his aversion for war and to figure out a better way to settle future disputes.

Civilian Joe is too concerned at present with his personal problems of readjustment to get mad at what he habitually blasphemed in his uniformed days as home-front stupidity. He is still too dazed from being home and free again to be bluntly vocal. When the veteran does start talking back, this country is going to have its wartime illusions badly shattered.

Observers not subjected for long periods to the servicemen's barren existence were in no position to interpret accurately a GI's life, because they lacked the necessary perspective. Congressmen on fly-by-night overseas tours did not understand the men doing the fighting, nor did press representatives, with one notable exception. To a greater extent than any other civilian, Ernie Pyle saw the war from the GI point of view, and he hated it with GI thoroughness. But even Ernie found it difficult to sympathize with States-side soldiers and shore-based sailors who complained as bitterly as the dirtiest dogface about their lot in life while enjoying all the physical comforts which the infantrymen lacked.

The plain, unpublicized fact of the matter was that 9 out of 10 servicemen wanted nothing more to do with wars after their first week of basic training. Whether stationed in Washington or on a scrap of coral sand, the average GI considered himself to be the purposeless victim of malignant justice. As he so often remarked, "From where I stand, this whole thing stinks!" He hated everyone conceivably responsible for his misfortune, cursing out the home front as vehemently as the Japanese and the Germans. His special gripes, however, were reserved for the undemocratic, stupefying favor-ridden totalitarian nature of military life itself. He had no use for a system in which one class got the best of everything, and the other class got less than what was left.

II

We Americans have the dangerous tendency in our international thinking to take a holier-than-thou attitude toward other nations. We consider ourselves to be more noble and decent than other peoples, and consequently in a better position to decide what is right and wrong in the world. What kind of war do civilians suppose we fought, anyway? We shot prisoners in cold blood, wiped out hospitals, strafed lifeboats, killed or mistreated enemy civilians, finished off the enemy wounded, tossed the dying into a hole with the dead, and in the Pacific boiled the flesh off enemy skulls to make table ornaments for sweethearts, or carved their bones into letter openers. We topped off our saturation bombing and burning of enemy civilians by dropping atomic bombs on two nearly defenseless cities, thereby setting an all-time record for instantaneous mass slaughter.

As victors we are privileged to try our defeated opponents for their crimes against humanity; but we should be realistic enough to appreciate that if we were on trial for breaking international laws, we should be found guilty on a dozen counts. We fought a dishonorable war, because morality had a low priority in battle. The tougher the fighting, the less room for decency; and in Pacific contests we saw mankind reach the blackest depths of bestiality.

Not every American soldier, or even 1 percent of our troops, deliberately committed unwarranted atrocities, and the same might be said for the Germans and Japanese. The exigencies of war necessitated many so-called crimes, and the bulk of the rest could be blamed on the mental distortion which war produced. But we publicized every inhuman act of our opponents and censored any recognition of our own moral frailty in moments of desperation.

I have asked fighting men, for instance, why they, or actually, why we, regulated flame-throwers in such a way that enemy soldiers were set afire, to die slowly and painfully, rather than killed outright with a full blast of burning oil. Was it because they hated the enemy so thoroughly? The answer was invariably, "No, we don't hate those poor bastards particularly; we just hate the whole ——— mess and have to take it out on somebody." Possibly for the same reason, we mutilated the bodies of enemy dead, cutting off their ears and kicking out their gold teeth for souvenirs, and buried them with their testicles in their mouths, but such flagrant violations of all moral codes reach into still-unexplored realms of battle psychology.

It is not my intention either to excuse our late opponents or to discredit our own fighting men. I do, however, believe that all of us, not just the battle-enlightened GI's, should fully understand the horror and degradation of war before talking so casually of another one. War does horrible things to men, our own sons included. It demands the worst of a person and pays off in brutality and maladjustment. It has become so mechanical, inhuman, and crassly destructive that men lose all sense of personal responsibility for their actions. They fight without compassion, because that is the only way to fight a total war. To give just one illustration, I asked an infantry colonel whether he gave his battalion a prebattle lecture. The colonel replied approximately as follows:

"You can damn well bet I put 'em straight ahead of time, and they were the best damn outfit in the Philippines. I taught 'em ethics, fighting ethics. I taught 'em there were two kinds of ethics, one for us and one for the yellowbellies across the line. I taught 'em that the best way to kill a man was when he was lying down with his back up; the next best way was when he was sitting with his back toward ya; and the third best was when he was standing with his back toward ya. * * * Always shoot 'em in the back if possible; that's what I taught 'em, and there wasn't another battalion could touch 'em."

Among other things about modern warfare, I think the home front should also comprehend the full significance of the fact that a front-line soldier had a good chance of being killed in this war by his own side as well as by his opponents. Battle positions changed so rapidly that American soldiers were shelled by American artillery and warships, bombed and strafed by American planes, and machine-gunned by American tanks—not occasionally, but often. We also sank our own ships and shot down numbers of our own planes—how many no one knows, but the ship I was on in the invasion of Sicily knocked out four German planes and three of our own, which was considered a good average.

Peter Bowman summed up our victory to date in Beach Red, when he wrote, "Battle doesn't determine who is right. Only who is left." We destroyed Fascists, not fascism; men, not ideas. Our triumphs did not serve as evidence that democracy is best for the world, any more than Russian victories proved that communism is an ideal system for all mankind. Only through our peacetime efforts to abolish war and bring a larger measure of freedom and security to all peoples can we reveal to others that we are any better than our defeated opponents.

Today we stand on trial—we are either for peace or for war, and the rest of the world is prepared to move with us or against us. The burden of proof is on us; and our willingness to make peace, not our capacity to wage war, is the true measure of our good-neighborliness.

III

Peacetime conscription, no matter what euphemistic title we use for camouflage, is the mark of a belligerent. If we were to adopt such a course, we should be deliberately turning our backs on the peace for which we sacrificed so much and killed so many. We should be making it clear to all the world that the United States, formerly the champion of international accord, has lost faith in the principles underlying the United Nations Organization and hereafter places its reliance on its own military might. We should be double-crossing every GI who died for more than a mere triumph of arms, and robbing the living of their hard-earned dividends.

The majority of servicemen I met overseas and in camps scattered throughout this country, excluding members of the Regular Army and Navy, had in common four ideas pertaining to the peace: (1) they put up with military life because they had to, but they did not want it for their children; (2) they hoped for a better world, not the "old order of things"; (3) they were not certain what sort of a world peace organization we should have, but it was obvious that we had tried once to keep the peace alone and failed; (4) they were convinced that come hell or high water, the Army and Navy would put their own interests above all else, even the peace.

All the GI wants, in effect, is to have us give peace a chance, rather than to embark upon an out-and-out war program before the UNO has been given a reasonable trial. He is not sure of anything, but he has faith in the possibilities of a better world. He held on to that faith at Tarawa, Normandy, and Iwo Jima, where only death was a sure thing. To give us the chance to find some way other than reliance on men and munitions to keep the peace, he risked everything he held most precious. He now puts to shame all those of us who are so lacking in the courage of our convictions that we agree with President Truman when he says—

"Until we are sure that our peace machinery is functioning adequately, we must relentlessly preserve our superiority on land and sea and in the air. Until that time, we must also make sure that by planning—and by actual production—we have on hand at all times sufficient weapons of the latest nature and design with which to repel any sudden attack, and with which to launch an effective counterattack.

"That is the only way we can be sure—until we are sure that there is another way."

First get all set for another war, then talk peace—that is the policy of distrustful American militarists, and that is what the GI's mean by the old order of things. We already have the greatest military machine on earth, and the only one equipped to be aggressive on an amphibious, interhemispheric scale, but General Eisenhower assures us, on the basis of his familiarity with the leaders of other nations, that there exists no fear of

our motives in keeping ourselves strong. As a low-point friend of mine wrote from Manila, the general should tell that to the Russians, on whom our old guard has already declared war.

If other nations have no fear of our motives, they must have turned a deaf ear when Fleet Admiral Halsey told our Senate: "We want to win wars, and we want to fight them on enemy ground. That makes us all invasion-minded. That calls for an overseas movement as the first step in our air, ground, and sea offensive." But perhaps it is not fair of me to imply that the admiral was advocating conscription when he remarked that we were all invasion-minded, because actually he was arguing at the time against a single department of national defense. When the militarists talk conscription, they speak much more guardedly about national security, permanent peace, and a fine thing for our young men.

The advocates of conscription acknowledge that their bill must be passed soon or it will be defeated. They are trying to shove through Congress an unprecedented piece of militaristic legislation while wartime emotions still run high, because they know that their program cannot be justified by cool reason. The protraining campaigners have to hurry, because a few more congressional post-mortems like the Pearl Harbor investigation will cure the public's blind faith in the superior wisdom of its military leaders. The slogan, "We were unprepared before, we must never be unprepared again," looks sickly in the light of General Marshall's testimony that Hawaii had at least sufficient means so that it could have broken up the attack, so that it would have done only limited harm.

Even more damaging public disillusionment will come when the returning veteran takes time out to talk back to anyone who blithely assures him that military life is a grand experience for young men. The majority of the men in uniform hated the Army with a bitterness that made them want to take their misery out on anyone conceivably responsible for their plight. They wanted others to suffer as they suffered. Whenever universal military training was mentioned, they invariably said, "Good idea. Get the whole home front into this thing. Then maybe someone will appreciate what we have to go through."

This is at least a partial explanation of why supposedly representative polls have shown the GI to be currently in favor of a bill which obviously defeats his long-term campaign to end militarism at home and abroad—this, plus the more obvious fact that men in uniform were never free to talk openly on the subject of "why I hate the Army." If they did, they were quickly section-eighted out of the Army as constitutional psychopaths. When peace organizations requested that persons opposed to conscription be allowed to go abroad and present their side of the argument, the War Department said it could not be arranged. Nevertheless, persons favoring postwar compulsory training, including Edward N. Scheiberling, national commander of the American Legion, have been transported overseas to proselyte the GI's.

For 2 weeks the New York Selective Service headquarters polled the conscription sentiments of men being processed for discharge. The majority were in favor of compulsory teen-age training, as was to be expected, but those opposed (and only those opposed were requested to state their reasons) gave some revealing answers. The principal objections listed by slightly more than 2,000 GI's were, "not needed," "bad environment," "racial discrimination and favoritism," and "a volunteer Army and Navy would be enough." The first and last objections are self-evident, or soon will be. The second and third, however, touch closely upon the heart of GI gripes.

Los Angeles Daily News Talks Housing

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. DOYLE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I am pleased to insert in the RECORD this very timely editorial from the Los Angeles Daily News of Wednesday, February 27, 1946:

THE SHADOWS ON THE MAP

If Los Angeles is to rise soon to its postwar responsibilities, someone with a bold, clear voice, is going to have to say, "Folks, here are the obstacles, there are the goals. Let us now proceed to fight our way from here to there."

Take housing, for example. In the midst of acute need for 200,000 new homes, in the midst of unprecedented strains on local government, something certainly will have to be done to prevent a great city from becoming further confused in a planless centrifugation impelled by the housing shortage.

Probably what is needed, among other things, is a sweeping program of land assembly.

For to begin with, if 200,000 homes are to be built, the vast majority in the $5,000 to $6,000 price range, someone had better start asking, "Where are they to be built?"

A lot of people in Washington, as well as locally, have been getting hopped up over the prospect of millions of homes blossoming miraculously in the next 2 years from a streamlined building industry and an easy-to-pay mortgage system without bothering to glance at pegged-up land values and to ask themselves what such values imply.

It requires no gift of prophecy to foresee few low-cost homes being built on land which has trebled in price since Pearl Harbor.

In the second place, any dim-wit can guess that if such homes are built in any considerable quantity they'll be built far out on the fringes of the city, thereby increasing living costs for everyone.

Land price, therefore, is the crux of the housing problem. It's a far tougher nut to crack than labor and material shortages, restrictive practices in the building trades, antiquated, uneconomical building codes, or any of the half dozen other interrelated factors of the housing dilemma.

In 22 cities of the United States today—cities ranging in size from 50,000 to 4,000,000, and including Los Angeles—45 percent of total city area is vacant.

Much of this vacant area is in the central part of cities. Also in central metropolitan areas are extensive patches of blighted, squalid property.

Together the vacant areas and the blighted areas, both centrally located, form the shadows on the city's map.

Take a look, for example, at Los Angeles' 13 blighted regions, at its innumerable outcroppings of unused land—all within a radius of a few miles from the civic center.

Take a look at Chavez ravine, 10 minutes from the heart of downtown Los Angeles, a beautiful mountain area largely undeveloped and inaccessible. Take a look at Hazard Park, near the general hospital; take a look at the Mount Washington region or Boyle Heights.

Drive around the midtown section, from Sunset south to Pico, from Figueroa west to Vermont or Western, and count the vacant lots, the gray confusion of rundown houses and practically discarded business establishments.

It isn't a pretty sight, of course. It's all, in fact, a sort of dreary, wasteful, ghostly reminder of how private enterprise, hoping for past gains, has clung barnacle-like to scraps of land and mere sticks of houses while the dynamics of new enterprise have pushed outward to the city's perimeters many new real-estate developments, many new shopping centers.

Backwashes of time and hoarded hopes, the shadows on Los Angeles' broad face are scrofulous symbols of disorganized community growth.

They are shadows, moreover, to which all of us are daily paying tribute. A few yardsticks: A shrinking downtown percentage of retail sales, increased costs of transportation for commuters from outlying areas, increased costs to taxpayers for extending utilities and services to more and more outlying subdivisions.

In 1943 three square miles of Boyle Heights paid $207,825 in property taxes. But every taxpayer in the city helps pay the total bill of $485,511 for Boyle Heights' police protection, for its fire, health, library, parks, and playground services.

Shadows on the map are municipal deficits which have accrued through planlessness, technological change, the passage of time, and just plain greed and speculation.

Removing these blemishes is good economy for every man, woman, and child in Los Angeles. Making use of vacant land in the city's center for new homes is a clear imperative.

Under California's community redevelopment act of 1945, Los Angeles can now establish a land assembly agency. Unfortunately, the legislature, at its recent special session, ignored Gov. Earl Warren's twice-repeated request for a $10,000,000 appropriation to assist local communities in beginning the land assembly job authorized by the act.

As the housing crisis deepens from place to place—as its solution drags—events may well prove this failure to implement urban redevelopment will stand as the legislature's most tragic flop.

But local officials can still do something besides pout and pass sympathetic resolutions. With the sovereign tools at their disposal—condemnation, eminent domain, taxation, and public credit—they can still make a good start.

The key tool, however, is courage. Without it shadows are never dissolved.—R. E. G. H.

America's Position on Disputed World Problems

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 5, 1946

Mr. MAYBANK. Mr. President, on last Thursday night the distinguished Secretary of State, Hon. James F. Byrnes, at the dinner of the Overseas Press Club of America, held in the Waldorf-Astoria Hotel, New York City, delivered a timely, thoughtful, and significant address in which he outlined America's position on disputed world problems. I ask unanimous consent that the text of the address as published in the New York Times of March 1 be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are beginning to realize that the war is over. It is good to have sons, husbands, and

fathers home again. It is good to open a newspaper without fear of finding in the casualty lists the name of one near and dear to us.

But this is not wholly a time of celebration and rejoicing. As families in their homes on the farms and in the cities settle back from the dinner table to hear the boys tell of Normandy and Iwo Jima, there is an unspoken question in every mind. The question is what we can do to make certain that there will never be another war.

During the war our goal was clear. Our goal was victory. The problems of industrial and military mobilization, it is true, were problems of the first magnitude. Production bottlenecks often seemed unbreakable, transportation difficulties and manpower shortages insurmountable. On the fighting front, the combined land, sea, and air operations were heartbreaking in complexity.

These were hard tasks. Yet we were able to apply a yardstick to each proposal by asking a simple question: "Will it help to win the war?" The common goal of victory served to unite us and to give purpose and direction to our efforts.

Now that we have come into calmer waters, our relief and gratitude are mixed with uncertainty. Our goal now is permanent peace, and surely we seek it even more anxiously than we sought victory.

FINDS PEACE PATH DIFFICULT

The difficulty is that the path to permanent peace is not so easy to see and to follow as was the path to victory.

When an issue is presented, we ask, "Will it help to win the peace?" When the answer is slow to come or does not come at all, we grow uneasy and apprehensive.

While we may be in doubt about many things, there are certain basic propositions on which we are clear.

One is that a just and lasting peace is not the inevitable result of victory. Rather, victory has given us the opportunity to build such a peace. And our lives depend upon whether we make the most of this opportunity.

Another thing of which we are certain is that we Americans alone cannot determine whether the world will live in peace or perish in war. Peace depends quite as much upon others as it does upon us. No nation is the complete master of its fate. We are all bound together for better or for worse.

Because we know this, we have pinned our hopes to the banner of the United Nations. And we are not content simply to take our place in that organization. We realize that although the dreams of the world are lodged in it, the United Nations will fail unless its members give it life by their confidence and by their determination to make it work in concrete cases and in everyday affairs.

DISCUSSES LONDON MEETING

And so I wish to talk to you about the first meetings of the United Nations. What has been said in these meetings had been said as plainly and bluntly as anything I have heard said by responsible statesmen in any private conference.

These first meetings were intended only to establish the various organs of the United Nations. But so pressing were some of the problems presented to the Security Council that they had to be dealt with before there was a chance for the Council to adopt even provisional rules of procedure.

All was not calm and peaceful at the meetings in London. There was effort to use the United Nations to advance selfish national aims. But the clash of national interests and purposes which were reflected in the debates in London was very much like the clash of local and special interests which are reflected in our National and State Legislatures.

We may deprecate some of these clashes of interest. But when they exist, it is better that they should be publicly revealed. If these conflicts of interests did not appear in the forums of the United Nations, these forums would be detached from reality and in the long run turn out to be purposeless and futile.

ON MIDDLE EAST DEBATE

A most significant precedent was established when the Secuity Council finished its discussions of the complaint of the Syrian and Lebanese Governments requesting the withdrawal of French and British troops from their territories.

The Council did not take formal action because of a difference among the permanent members as to the form of the resolution. But no one questioned the general proposition that no state has the right to maintain its troops on the territory of another independent state without its consent, nor the application of this proposition to the pending case.

The particular form of resolution to this general effect which was presented by the United States representative, Mr. Edward R. Stettinius, was supported by most of the members of the Council. It failed of acceptance, however, because the Soviet Union vetoed it on the ground that it was not definite enough.

But the British and French Governments immediately announced that, notwithstanding the technical veto of the Soviet Union, they would act in accordance with the American resolution as it clearly represented the views of the Council.

This indicates that the mere legal veto by one of the permanent members of the Council does not in fact relieve any state, large or small, of its moral obligation to act in accordance with the purposes and principles of the Charter.

TELLS OF GOOD START

The United Nations got off to a good start. However, that does not mean it is an assured success. It simply means that the Charter will work if the peoples of the United Nations are determined to make it work. At times our Congress may make serious errors of omission and commission. Such errors are not the fault of the Congress as an institution. They are the fault of its Members or of their constituents who fail to measure up to their responsibilities.

So it is with the United Nations. It will succeed only as we, the peoples of the United Nations, measure up to our responsibilities.

I should be lacking in candor if I said to you that world conditions today are sound or reassuring. All around us there is suspicion and distrust, which in turn breeds suspicion and distrust.

Some suspicions are unfounded and unreasonable. Of some others, that cannot be said. That requires frank discussion between great powers of the things that give rise to suspicion. At the Moscow Conference there was such frank discussion. It was helpful. But the basis of some suspicions perist and prompts me to make some comments as to our position.

We have joined with our allies in the United Nations to put an end to war. We have covenanted not to use force except in the defense of law as embodied in the purposes and principles of the Charter. We intend to live up to that covenant.

But as a great power and as a permanent member of the Security Council we have a responsibility to use our influence to see that other powers live up to their covenant. And that responsibility we also intend to meet.

Unless the great powers are prepared to act in the defense of law, the United Nations cannot prevent war. We must make it clear in advance that we do intend to act to prevent aggression, making it clear at the same time that we will not use force for any other purpose.

The great powers are given special responsibilities because they have the strength to maintain peace, if they have the will to maintain peace. Their strength in relation to one another is such that no one of them can safely break the peace if the others stand united in defense of the Charter.

The present power relationships of the great states preclude the domination of the world by any one of them. Those power relationships cannot be substantially altered by the unilateral action of any one great state without profoundly disturbing the whole structure of the United Nations.

Therefore, if we are going to do our part to maintain peace in the world we must maintain our power to do so, and we must make it clear that we will stand united with other great states in defense of the Charter.

If we are to be a great power, we must act as a great power, not only in order to insure our own security but in order to preserve the peace of the world.

FOR MILITARY TRAINING

Much as we desire general disarmament and much as we are prepared to participate in a general reduction of armaments, we cannot be faithful to our obligations to ourselves and to the world if we alone disarm.

While it is not in accord with our traditions to maintain a large professional standing army, we must be able and ready to provide armed contingents that may be required on short notice. We must also have a trained citizenry able and ready to supplement those armed contingents without unnecessarily prolonged training.

That is why in the interest of peace we cannot allow our military establishment to be reduced below the point required to maintain a position commensurate with our responsibilities, and that is why we must have some form of universal military training.

Our power thus maintained cannot and will not be used for aggressive purposes. Our tradition as a peace-loving, law-abiding, democratic people should be an assurance that our force will not be used except in the defense of law. Our armed forces, except as they may be called into action by the Security Council, cannot be employed in war without the consent of the Congress. We need not fear their misuse unless we distrust the representatives of the people.

SEES NO CAUSE FOR WAR

I am convinced that there is no reason for war between any of the great powers. Their present power relationships and interests are such that none need or should feel insecure in relation to the others as long as each faithfully observes the purposes and principles of the Charter.

It is not enough for nations to declare they do not want to make war. Hitler said that. In a sense he meant it. He wanted the world to accept the domination of a totalitarian government under his direction. He wanted that without war if possible. He was determined to get it with war if necessary.

To banish war, nations must refrain from doing the things that lead to war.

It has never been the policy of the United States in its internal affairs or in its foreign relations to regard the status quo as sacrosanct. The essence of our democracy is our belief in life and growth and in the right of the people to shape and mold their own destiny.

It is not in our tradition to defend the dead hand of reaction or the tyranny of privilege. We did not fight against the Nazis and Fascists who turned back the clock of civilization in order that we might stop the clock of progress.

WANTS POSITIVE DIPLOMACY

Our diplomacy must not be negative and inert. It must be capable of adjustment and development in response to constantly changing circumstances. It must be marked by

creative ideas, constructive proposals, practical and forward-looking suggestions.

Though the status quo is not sacred and unchangeable, we cannot overlook a unilateral gnawing away at the status quo. The Charter forbids aggression and we cannot allow aggression to be accomplished by coercion or pressure or by subterfuge such as political infiltration.

When adjustments between States, large or small, are called for, we will frankly and fairly consider those adjustments on their merits and in the light of the common interests of all States, large and small, to maintain peace and security in a world based on the unity of all great powers and the dominance of none.

There are undoubtedly vitally important adjustments which will require our consideration. Some of these situations are delicate to deal with. I am convinced, however, that satisfactory solutions can be found if there is a stop to this maneuvering for strategic advantage all over the world and to the use of one adjustment as an entering wedge for further and undisclosed penetrations of power.

We must face the fact that to preserve the United Nations we cannot be indifferent—veto or no veto—to serious controversies between any of the great powers, because such controversies could affect the whole power relationship between all of the great powers.

The United States wish to maintain friendly relations with all nations and exclusive arrangements with no nation. Naturally, there are some problems which concern some nations much more than other nations. That is true in regard to many problems related to inter-American affairs. That is true in regard to the control of Germany and Japan.

AGAINST EXCLUSIVE BLOCS

In our relations with the other great powers there are many problems which concern two or three of us much more than the others of us. I see no objection to conferences between the Big Three or the Big Four or the Big Five.

Even conferences between ourselves and the Soviet Union alone, conferences between ourselves and Britain alone, or conferences between ourselves and France or China alone, can all help to further general accord among the great powers and peace with the smaller powers.

But in such conferences, so far as the United States is concerned, we will gang up against no state. We will do nothing to break the world into exclusive blocs or spheres of influence. In this atomic age we will not seek to divide a world which is one and indivisible.

We have openly, gladly, and wholeheartedly welcomed our Soviet ally as a great power, second to none in the family of the United Nations. We have approved many adjustments in her favor, and in the process resolved many serious doubts in her favor.

Only an inexcusable tragedy of errors could cause serious conflict between us in the future. Despite the differences in our way of life, our people admire and respect our allies and wish to continue to be friends and partners in a world of expanding freedom and rising standards of living.

But in the interest of world peace and in the interest of our common and traditional friendship we must make plain that the United States intends to defend the Charter.

Great powers as well as small powers have agreed under the United Nations Charter not to use force or the threat of force except in defense of law and the purposes and principles of the Charter.

We will not and we cannot stand aloof if force or the threat of force is used contrary to the purposes and principles of the Charter.

WOULD SPEED PEACEMAKING

We have no right to hold our troops in the territories of other sovereign states without their approval and consent freely given.

We must not unduly prolong the making of peace and continue to impose our troops upon small and impoverished states.

No power has a right to help itself to alleged enemy properties in liberated or ex-satellite countries before a reparation settlement has been agreed upon by the Allies. We have not and will not agree to any one power deciding for itself what it will take from these countries.

We must not conduct a war of nerves to achieve strategic ends.

We do not want to stumble and stagger into situations where no power intends war, but no power will be able to avert war.

We must not regard the drawing of attention to situations which might endanger the peace, as an affront to the nation or nations responsible to those situations.

It is quite possible that any nation may in good faith embark on a course of conduct without fully appreciating the effects of its conduct. We must all be willing to review our actions to preserve our common interests in the peace, which are so much more important to all of us than the differences which might divide us.

We must get back to conditions of peace. We must liquidate the terrible legacy which the war has left us We must return our armies to their homelands. We must eliminate the breeding grounds of suspicion and fear. We must not deceive ourselves or mislead our allies. To avoid trouble we must not allow situations to develop into incidents from which there is no retreat.

CALLS FOR PATIENCE NOW

We must live by the Charter. That is the only road to peace.

To live by the Charter requires good will and understanding on the part of all of us. We who had patience and gave confidence to one another in the most trying days of the war must have patience and give confidence to one another now.

No nation has a monopoly of virtue or of wisdom, and no nation has a right to act as if it had. Friendly nations should act as friendly nations.

Loose talk of the inevitability of war casts doubt on our own loyalty to the Charter and jeopardizes our most cherished freedoms both at home and abroad.

There are ideological differences in the world. There always have been. But in this world there is room for many people with varying views and many governments with varying systems. None of us can foresee the far-distant future and the ultimate shape of things to come. But we are bound together as part of a common civilization.

As we view the wreckage of the war, we must realize that the urgent tasks of reconstruction, the challenging tasks of creating higher standards of living for our people, should absorb all our constructive energies.

Great states and small states must work together to build a friendlier and happier world. If we fail to work together there can be no peace, no comfort, and little hope for any of us.

Salute to Jewish War Veterans of the United States Upon Their Golden Jubilee

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1946

Mr. CELLER. Mr. Speaker, the Jewish War Veterans of the United States, representing the fighting men of that faith who have fought in American wars, are celebrating their fiftieth anniversary this year. More than 900,000 Jews fought for America in the armed forces of the Nation in World Wars I and II. It is fitting and proper that their great contribution should be memorialized. The following editorial appeared on Sunday, February 24, in the New York Journal and American, Pittsburgh Sun-Telegraph, San Francisco Examiner, Chicago Herald American, Baltimore News-Post American, Boston Record-American Advertiser, Los Angeles Examiner, Detroit Times, Albany Times-Union, Seattle Post-Intelligencer, Milwaukee Sentinel, Los Angeles Herald and Express, San Francisco Call Bulletin, Oakland Post-Inquirer, San Antonio Light.

I recommend that all citizens read it:

FOR GOD AND COUNTRY

(By Harry H. Schlacht)

"May the children of the stock of Abraham, who dwell in this land, continue to merit and enjoy the good will of the other inhabitants, and there shall be none to make them afraid." (George Washington.)

America salutes the Jewish War Veterans of the United States on their golden jubilee.

It will be celebrated at Madison Square Garden, on March 4.

It will be staged in a cavalcade of patriotic splendor.

It will unfold the scroll of the fighting Jews for America.

The Jewish war veterans are dedicated—

To maintain true allegiance to the United States of America.

To foster and perpetuate the principles of Americanism.

To combat bigotry and instill the love of God and country.

To honor the memory of patriotic service of men of Jewish faith.

To inculcate the doctrines of liberty, equal rights, and justice to all.

Who does not know the stirring saga of that ancient race of God,

Whose immemorial feet the grapes of wrath have trod?

When has there ever been,

When will there ever be again,

An epic having equal power to stir the impulses of men?

The Jews are an ancient people whose spiritual riches were deposited in a literature in the form of the old Bible, revered the world over as an ageless repository of divine inspiration, and of the purest philosophy and wisdom.

They have nurtured a Moses and a Christ.

They were born in freedom and weaned on the teachings of the Ten Commandments.

They were comforted and sustained by the psalmists, and disciplined by the seers.

They were the couriers of the ethics of Abraham, the songs of David, and the prophecies of Jeremiah to all mankind.

The Jews have been a stalwart people, and their exhibitions of military valor and individual courage have won for them the world's plaudits.

The songs of Deborah burst forth with martial music.

The battle of Gideon is the battle of heroes.

The dauntlessness of Saul, Jonathan, and David testifies abundantly to the gallantry of the ancient sons of Israel.

They are intertwined with the evolution of civilization.

They have been sturdy champions of liberty in every age and in every clime.

They have enriched the world's literature and sciences.

They have never neglected any standard of principle, any mode of thought, or any concepts of philosophy in their grand march of achievements through the centuries.

Yet theirs has been a lonely river in the ocean of mankind.

All the mighty floods of human suffering have never caused it to overflow.

All the fires of cruelty heated in the furnace of bigotry have never caused it to dry up.

Its waves have rolled crimson for ages with the blood of its martyrs.

It is singularly refreshing to recall that the Jews greatly aided Columbus in the discovery of America.

His caravels were outfitted by Luis de Santangel, and his astronomical maps were drawn by Abraham Zacuta.

His ship's physician and surgeon were Bernal and Marco, and his interpreter was Louis de Torres, who was the first to tread American soil.

The Jews have played a glorious role in the development of American history since the birth of the Nation.

They were identified with our colonial growth and helped finance the Revolution.

They bore a gallant part under the leadership of Gen. George Washington.

They have fought in all the wars of the Republic.

Yes, they have won the highest commendation from every President of our country.

Let us call with pride the roll of those gallant defenders in our Nation's holy cause.

We see the Jews at Valley Forge, when the spirit of the American people hung low and only the stout of heart stood fast and constant by Washington.

Of the 3,000 Jews in all the colonies, four of them were lieutenant colonels, three majors, six captains and many in the ranks.

Be it noted that Lt. Col. Isaac Frank was aide-de-camp to General Washington.

Haym Salomon dedicated his entire fortune of $640,000 to the young Republic and later died impoverished.

We see them in the War of 1812.

It is inspiring to note that Uriah P. Levy, commander of the brig-of-war *Argus*, ran the British blockade and destroyed 21 British merchantmen.

With tongue and pen he succeeded in effecting the abolition of bodily punishment in the United States Navy, and died a commodore, then the Navy's highest rank.

We see them in the Mexican War, the fight for Texas, and in the Seminole wars.

Again the fighting Jews in action!

Again the healing Jew, in the person of Surg. Gen. David Deleon.

We see them rallying under the inspiration of Abraham Lincoln during the Civil War.

Of the 200,000 Jews in the United States, 10,000 saw active military service and seven received the Congressional Medal of Honor.

Frederick Knefler, of Indiana, rose to the rank of major general, and Edward S. Solomon was brigadier general.

It is interesting to observe that Lincoln named Leopold Newman, of New York, brigadier general while he lay dying of battle wounds received at Chancellorsville.

We see them also with William McKinley striking the shackles of bondage from a neighboring people and bringing forth an island republic.

America accepts the challenge of Spanish tyranny.

"Remember the Maine!"—Fifteen Jews were on that ill-fated battleship and Sgt. Maurice Joost, of California, was the first to fall in the attack on Manila.

Five thousand intrepid Jewish volunteers gladly answered the call of their President.

We see these gallant warriors with Woodrow Wilson fighting to make the world safe for democracy.

Two hundred and fifty thousand Jews were in uniform, constituting 5 percent of the fighting forces.

Ten thousand Jews held commissioned rank, and 1,100 Jews were cited for valor in action.

The greatest epic of courage ever to come out of that war—the exploits of the Lost Battalion—was a demonstration of conspicuous bravery.

We see them once more with Franklin Delano Roosevelt fighting to make democracy safe for the world.

First American penetration of German soil was made by the Third Armored Division, commanded by Maj. Gen. Maurice Rose, of Denver, who gave his life for his country.

First American assault boat to hit the shore of France on D-day was commanded by Lt. Abe Condiotti, of Brooklyn.

The first Japanese battleship sunk in the war was the *Haruna*, sent to the bottom by a plane piloted by Capt. Colin Kelly, whose bombardier was Sgt. Meyer Levin.

First American officer killed in the Philippines was Lt. Henry D. Mark, of Los Angeles.

First four-medal winner of the American Army in World War II was Lt. Morris Berenson, of Garfield, N. J.

And there are scores of Americans of Jewish faith whose names will live forever in the archives of our Government.

Travel where you may through American cemeteries on a thousand battlefields,

Travel where the delicate poppies carpet the earth with their rich red blossoms or in the glistening white stones rising above the flower-strewn mounds—

There you will see, side by side, one beneath the cross of Christianity and one beneath the star of David.

Jew and Christian pillowed in eternal glory!

Yes, they have fought, bled, worshipped and died together!

May the spirit of America be quickened and renewed.

May the strength that cometh from the hills descend upon us and guide us forever.

America! America!
God shed His grace on thee,
And crown thy good with brotherhood
From sea to shining sea.

Resolutions of Farmers Union Central Exchange, Inc.

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, the Farmers Union, one of the great farm organizations of the United States, operating particularly in the Northwestern States, is deeply concerned with the development of the United States, and particularly do its members feel that by the building of the St. Lawrence seaway, markets for farm products will be opened up to the internal part of the United States.

Under leave to extend my remarks, I include herewith resolutions adopted by the stockholders of Farmers Union Central Exchange, Inc., at its fifteenth annual meeting in February 1946:

The Farmers Union Central Exchange, a regional farm supply cooperative, doing business in the five Northwest States of Montana, North and South Dakota, Minnesota, and Wisconsin, comprised of 400 local cooperative companies with a membership of 150,000 farmers, assembled in annual convention at St. Paul, Minn., this 21st day of February 1946, does hereby adopt the following resolution:

The people of the United States are now faced with a problem of expansion of their economic life which would necessitate the obtaining of modern and economical transportation facilities in order to give the millions of farmers, workers, and businessmen, a wide opportunity to apply their skill and knowledge for the exploration of our vast natural and industrial resources and enhance the prosperity of the country as a whole.

The development of the St. Lawrence seaway project presents one of the ways of enlarging our transportation system to economically utilize our productive capacities by the stimulating of world and domestic trade through lower cost of transportation. It will stimulate the agricultural and industrial activities of the Great Lakes area which is the key region of the agriculture and industry of America.

We, the delegates, representing 150,000 Northwest farmer members of the Farmers Union Central Exchange, Inc., heartily endorse and recommend that every effort be made toward the immediate opening of the St. Lawrence deep waterway transportation which will give our land-locked Midwest an opportunity to expand its economic activities.

I, Madge I. Hughes, assistant secretary of Farmers Union Central Exchange, Inc., do hereby certify that the foregoing is a true copy of a resolution of the stockholders of said Farmers Union Central Exchange, Inc., duly adopted at the annual meeting of stockholders of the corporation the 21st day of February 1946.

In witness whereof I have hereunto set my hand and affixed the seal of said corporation this 1st day of March 1946.

MADGE I. HUGHES.

We unequivocally endorse the idea of price control and all price ceilings and of the general operation of the OPA during the war. We realize that there might have been mistakes made in the operations of these various programs but the over-all results achieved were of far greater benefit to the common man than the inconveniences caused.

We further recommend that these controls be maintained as long as is necessary to prevent undue inflation or serious maladjustments in our economic system.

We endorse the development of all the resources of the Missouri River and its tributaries through a Missouri Valley Authority patterned after the Tennessee Valley Authority. We urge speedy enactment of pending legislation to attain this end.

I, Madge I. Hughes, assistant secretary of Farmers Union Central Exchange, Inc., do hereby certify that the foregoing are true copies of resolutions adopted by the stockholders of said Farmers Union Central Exchange at their annual meeting on February 21, 1946.

In witness whereof, I hereunto set my hand and affix the seal of said corporation this 1st day of March 1946.

MADGE I. HUGHES.

We condemn monopolies and cartels as instruments of an economy of scarcity. The Antitrust Division of the United States Department of Justice has a case pending before a Federal jury in Chicago on American cheese, and the investigations conducted by the Antitrust Division in connection with this case and the indictment upon which this case is based point to monopolistic practices in the cheese industry.

A bill of particulars filed by the Antitrust Division in connection with this case contains definite evidence that the prices established on cheese on the Wisconsin Cheese Exchange are the result of collusion and previous agreements between dealers, and investigations show that most of the distribu-

tion of cheese is controlled by four large corporations: Therefore be it

Resolved, That the Farmers Union Central Exchange delegates assembled in the annual convention at St. Paul, Minn., this 21st day of February 1946 does commend and approve the efforts of the Antitrust Division of the United States Department of Justice on behalf of the farmers to stop monopolies in this country and particularly commends the Antitrust Division for its work on the above case and pledges its support and cooperation.

I, Madge I. Hughes, assistant secretary of Farmers Union Central Exchange, Inc., do hereby certify that the foregoing is a true copy of a resolution of the stockholders of said Farmers Union Central Exchange, Inc., duly adopted at the annual meeting of stockholders of the corporation the 21st day of February 1946.

In witness whereof, I have hereunto set my hand and affixed the seal of said corporation this 1st day of March 1946.

MADGE I. HUGHES.

One War Is Enough

EXTENSION OF REMARKS
OF

HON. CHARLES R. SAVAGE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. SAVAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to supplement the remarks I made on yesterday wherein I included chapters 1, 2, and 3 of an article by Edgar L. Jones from the February issue of the Atlantic Monthly. Under unanimous consent, I include chapters 4 and 5 of the same article, as follows:

IV

Army life was a bad environment, not only morally, but mentally and physically. It sapped a man's initiative, because his desire to put his talents to good use was thwarted repeatedly by the military classification and schools system. It discouraged free thinking, because a man was told what to do and when to do it, and was constantly reminded that the only way was the right, or traditional, way. It made him irresponsible, because the Army took care of everything; wasteful, because everything belonged to the Government; excessive, because a soldier always tried to jam as much pleasure as possible into what might be his last fling. It destroyed his personal sense of values, because a GI could not call even his soul his own.

The extreme distinction between officers and men was intolerable to most members of the lower-class bracket and embarrassing to many democratic junior officers. The autocratic, self-indulgent behavior of the boys with the brass irked the men who took the orders. The GI acknowledged that some distinction was necessary, but he could not understand how so little rank could entitle his "superiors" to so much: The best beds, the most appetizing food, the most leisure, the least restriction on pleasure, the only covered seats at outdoor movies, the right to go to the head of the line at the PX, and, above all else, the right to treat fellow Americans as servants and take it for granted that they had to obey.

The majority of officers were frustrated in turn by the small band of Academy-trained Regulars who would never give a Reservist an even break unless assured that their own positions were not threatened. The Reservists were the victims of empire-building Regulars who kept themselves surrounded by great numbers of unnecessary personnel in order to justify their rank or make a promotion for themselves possible. The Reservists were disgusted by the over-abundance of duplicate headquarters, each over-supplied with Regular Army "desk soldiers." They resented the system whereby they had most of the new ideas, but the Regulars got the credit, and those in the Navy were hardly surprised to learn at the end of the war that the Regulars had awarded themselves three and one-half times more decorations than were bestowed upon the Reserves.

The Army and Navy had every opportunity to strike a clean blow for democracy by setting an example in nondiscrimination against Negroes, but, instead, both services insisted upon racial segregation wherever and whenever possible. The Negro in "well run" military installations was not allowed to sleep in the same room with white men, eat at the same table, or attend the same churches. This was especially true in southern camps, where both services supported the local programs to "keep niggers in their place" in restaurants, theaters, busses, and railroad stations. When men like Joe Louis raised an objection, they were immediately transferred overseas or "up north." Except for a few "show units" of all-Negro personnel, our colored soldiers of democracy were restricted to the most menial tasks of stevedoring and cleaning the barracks of their white superiors.

One of the very few paratroop companies ever to go through training without a single man balking when it came his turn to jump was an all-Negro outfit; yet the Army made no effort to correct the rumor that Negroes were cowards. The outfit was not sent overseas, where its performance might have encouraged other Negroes to demand fighting assignments, but was shipped off to the Northwest to fight forest fires. The Navy was even more prejudiced against Negroes than the Army—witness its refusal to allow a small company of colored truck drivers to return home on one of its carriers because there was no segregation facilities on the flight deck.

Neither the Army nor the Navy made an honest effort to curb the dangerous rise of antilabor sentiments among our men in uniform, or anti-Jewish prejudices, or the whole distorted range of hatreds against the home front. Either through indifference or through malice aforethought, the military allowed the gap between GI's and civilians to widen to alarming proportions.

Directives out of Washington urged the Army and Navy to inculcate democratic ideals in our troops, but the orders were either disregarded by Regular officers, who consider a 1-hour-a-week orientation course to be pure fiddle-faddle, or were turned over to inept officers whose sterile lectures were guaranteed not to make a GI reason why. The military naturally could not teach human equality, or freedom of speech, or any other liberal idea which it could not let its disciples practice, and joined readily in Senator TAFT's preelection plan to bar from troop consumption all socio-political reading material.

No matter how the GI looked at it, he could see no foundation for the assertion that military training was "education for democracy." The essence of his training was "do what you're told to do and shut up," and that was a far cry from the civilian, or American, way of life. Nor did the GI, except in rare cases, learn what President Truman and others have called "skills useful in future civilian life." If he had, he would not have been so bitter about his "wasted years" in the service. The chief gripe of the majority of men in the armed forces was the fact that they were stuck in jobs they did not like and could not get out of doing.

For every thousand men, the Army needed 101 chauffeurs and mechanics, 45 cooks, bakers, and butchers, and 34 medical and dental technicians, all of whom were turned out in 6-week courses. If a man did not go into the service with one of these skills, he learned only enough to do a specific job, not to earn a postwar living. Likewise, a radar operator learned to read a radarscope, but not the principles of electronics; an aviation mechanic learned how to take an engine apart according to prescribed military methods, not the principles of internal combustion motors; and a yeoman learned military correspodence procedure, not how to write business letters. Whatever a man learned, thousands of others learned the same thing, so today those "skills" are a glut on the market.

V

Stripped of its window dressing, military training is education in the ways of violence, and little or nothing else. In reference to current plans to compel all our youth to serve time in a camp for conscriptees, I would go even further and say that the proposed training would not be technical preparedness for the next war, but merely a means of indoctrinating young men with militaristic ideas. It stands to reason, I believe, that anything a boy might learn about warfare in 1946, excluding the manual of arms, would be as ancient and unserviceable as the boy himself by 1960, or whenever the next war is supposed to take place. The weapons of the next war are now top secret, and if anyone is trained to use them, it will be members of the Regular Army and Navy.

It seems likely, at the time I am writing, that the War Department will drop its plea for a full year of continuous military training and try to settle for 4 months only, plus additional service in the National Guard or ROTC. This would be an open admission that the military lobby is not so much interested in the training as in the principle of keeping this country in a perpetual state of warmindedness. If the Army and Navy could extend into peacetime their war-won influence and prestige, as conscription would allow them to do, neither service need worry where its next appropriation is coming from. To the tune of "nothing is too good for our boys," the militarists would ride herd over Congressmen and taxpayers alike, justifying each new demand for money by renewing their grim warnings about the war just around the corner.

Considering the battle-tested greatness of some of our generals and admirals, I do not want it supposed that I accuse every man in a bestarred tunic of being the enemy of peace. Our generals fight wars; they do not start them. It is the military system, not always the leaders themselves, that represents democracy in reverse. Nevertheless, it is a general's job to exalt the fighting profession and to work untiringly for more guns, more planes, more bases, and more men in uniform. His first interest is the Army, and to his way of thinking, whatever is best for the Army is best for the country as a whole. While this was often the case in wartime, it does not follow that the professional soldier's plans for peace coincide with the best interests of the Nation. In matters as basic and controversial as conscription or disarmament, the most unselfishly devoted of our military leaders take a prejudiced stand.

Universal military training means more important posts for many of our military leaders, faced otherwise with shrinking commands; it means fat contracts for our manufacturers of food, clothing, shoes, trucks, medical supplies, and all the other equipment needed to outfit nearly 1,000,000 new conscriptees a year; it means Government endowment of military education programs for our universities; it means lucrative research projects for our industrial laboratories; and new members by the thousands for the American Legion. It means the self-perpetuation of the military machine as a new form of boondoggling to win profits and power for the few, while the taxpayer is burdened with

the costs of supporting both conscription and a standing force of between two and three million members of the Regular Army, Navy, Coast Guard, and Marines.

Worst of all, in my opinion, peacetime training provides a patriotic opportunity for the old guard to work on the minds of our youth before they have a chance to go to college or to learn to think for themselves. With teen-age orientation under the control of militant reactionaries, conscription would produce generation upon generation of narrow-minded, intolerant, red-baiting, labor-hating defenders of the status quo—or what the American Legion would term good Americans. The older ones among us in uniform saw what happened to the kids in this war, and we would not willingly have our own children become the mirrors of the military mind, which stands squarely for force, for the inevitability of armed conflicts, and for the principle that might makes right.

Reconversion of our thinking from a war to a peace basis would kill militarism in this country before it had a chance to spread any further. As it is, we are still looking at our military leaders through red-white-and-blue-colored glasses, and allowing them to sell us the most flagrant bill of mislabeled goods since prohibition was passed off as a national cure-all. The conscription barkers and next-war drum beaters are trying to put over military training as an antidote for everything from atomic nerves to unemployment. What Senator JOHNSON of Colorado, a member of the Senate Military Affairs Committee, has termed "the most un-American proposal of our time" is being heralded as an absolute essential for the defense of our country. With Prussian thoroughness, our militarists have even supplied us with an enemy, the Russians.

The greatest single barrier to the furtherance of world peace, regardless of General Eisenhower's statement to the contrary, is America's exclusive preparedness for another war. Were we to place our military might in a world trust fund, renouncing sole control over our atomic bombs and superdreadnoughts, it would obviate the necessity of any other country's building up defensive forces to match our own. Once the United States gives up its sovereign right to wage war in favor of a world peace-enforcement organization the rest of the world has no alternatives except to follow suit or be branded as a prospective belligerent. With our strength committed to an international tribunal, any country attempting to manufacture its own armaments would be instantly exposed as the enemy of peace and would be treated as such by all other nations. No country today is so self-sufficient that it could afford to stand alone.

Secretary of the Navy Forrestal told the Woodrum committee, "We are going to fight any international ruffian who attempts to impose his will on the world by force." Such an eminent authority notwithstanding, we cannot maintain world peace by ourselves. Except by stunting our national growth and sacrificing our youth and resources, we cannot settle the Pacific situation the next time the Asia for the Asiatics movement gets under way. We cannot do guard duty over the Balkan status quo, or protect democratic minorities in Spain, or guarantee Chilean sovereignty.

In order to be free to develop ourselves, we must rely on an international police force to take care of international ruffians. Instead of envisioning curselves in the role of benevolent world cops, we should be turning over our badges to international deputies of peace, who would relieve us of the responsibility of being constantly alerted for trouble. We should be working toward a united world, indivisible, with equal restraints and correspondingly equal liberties for all.

Strikes Don't Pay

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. WOODRUFF. Mr. Speaker, under unanimous consent, I offer for the RECORD an editorial from the Labor Digest, Indianapolis, Ind., published in behalf of labor:

STRIKES DON'T PAY

When the General Motors strike reached its one-hundredth day, employees had lost so much in wages that a minimum of 500 days of work—at the increase demanded—were required to recoup their losses. That is, according to arithmetic. Actually, in most cases, a much longer period would be required. The pay increase would have to be earned for 5 days to amount to 1 day's income at the old rate. (We have left out of consideration a half of 1 percent for the purpose of clarity.)

You can figure it, yourself. The CIO union is ready to settle for 19½ percent increase. That is about one-fifth of a day's pay. For every day lost then, 5 will have to be worked to catch back.

This writer shared a taxicab recently with a young woman and her 3 children, aged 2, 4, and 6. The 4-year-old prattled:

"We live in the country. On a farm."

His mother explained:

"We bought a little place out northwest of town. It isn't a farm but we have an orchard and garden. We think it's a better place for children than town. I managed to keep it while my husband was in service—with a little help from his folks. Now we can see our way ahead, if there isn't a strike. My husband is a streetcar man."

We had heard no rumbling of a trolley strike and said so. She shrugged.

"You never can tell nowadays. The union is talking of a strike. It makes me mad, and scares me, too. My father was a miner and we were a large family. That is why I hate John L. Lewis. Every April he had to call a strike.

"That meant we didn't have enough to eat all summer and I had to go to school in the fall in wornout clothes and without any of the things I needed. In the winter we could eat and try to catch up. Then in April Mr. Lewis had to have his strike again."

"Didn't you consider that your father was getting better wages on account of the union?" the writer asked.

"All I know is that when he was working we had enough to get along and to plan for the future, but Mr. Lewis always wrecked those plans. Now, if this union calls a strike, we may lose our little place. My husband gets from $50 to $80 a week, depending on overtime. I can plan on that, but I can't figure how long a strike will last."

General Motors strikers want more money. All workers will sympathize with that natural hope. But suppose they learn that the strike was timed not to serve their interests but to serve a political faction in the union's leadership. What will be the feelings of the strikers, their families, and the tens of thousands of other workers, not represented in the strike but displaced on account of it?

That it was badly timed from the workers viewpoint, all observers will agree. The resistance by employers would have been less determined and formidable if the union had waited until the tremendous postwar reconversion job had been accomplished, production begun, and actual proof of the car market's potentialities discovered. Every observer was agreed that a record-breaking sales volume was to be expected and hence record-breaking production and record-breaking employment. But no observer among the experts would venture an estimate in dollars and cents of the business ahead. The future was uncharted. Many factors would have to be seen in operation.

In the General Motors strike and all other current strikes—most of them precipitated by CIO unions which felt obligated to follow the UAW policy—work might have been continued on the old scale set under the War Labor Board, at least until this spring or summer.

There was no galloping horse in the situation. When negotiations were begun in the light of current experience, wage increases could have been sought on a retroactive basis. That would have meant that increases, eventually obtained, would have been dated from the time of union contract expiration or some other date agreed upon.

That would have been something. Workers and their families would have received handsome lump-sum payments even after being profitably employed all the time. They could have had new homes, new cars, new metal kitchens, new radios, and money in the bank.

Instead:

"We're wiped out," said one striker's wife. "We had nice savings before the strike. My husband and I both worked during the war. And we didn't spend our money in taverns or for luxuries. We felt pretty secure. Of course we have had some unexpected bills due to illness, but our main trouble has been more than 3 months of idleness. We're broke. The only way we're any better off than a lot of people I know who threw their money away during the war is that our credit is still good. But bills have to be paid eventually. We just feel what's the use trying to get ahead."

The strike of General Motors was called when it was for reasons that were reasons to UAW leaders but not to UAW members. Walter Reuther wanted a strike because it served his personal interests in a fight for union control. A union vice president in charge of General Motors locals, he was engaged in a feud with George Addis, UAW treasurer. Addis and R. J. Thomas, UAW president, had tried to ditch Reuther in a recent convention.

He needed the publicity of a strike in his own jurisdiction to build him up. He would like to replace Thomas and become the dictator of all automobile workers and eventually of all CIO unionists. His ambitions know no bounds.

And Walter Reuther is a Communist. He was trained in Moscow to carry on communistic propaganda in America. The Labor Digest has a letter, written by Walter Reuther and his brother, Victor, from Russia to relatives in this country in 1934. In it the Reuther boys described the Red paradise in Russia and reaffirmed their determination to make America communistic, too.

We have published this letter, not once, but twice, and Walter Reuther has not challenged its authority.

So, millions of Americans are suffering today because this otherwise unremarkable young man has mad ambitions.

Please remember that it is the Communist "line" to create discontent and turmoil in furtherance of their dream of revolution. Well-paid workers are not discontented, not potential recruits for revolution. Communists do not want workers well paid nor contented.

Strikes do not pay.

They do not pay workers; they do not pay investors; they do not pay the public.

Lincoln Day Address of Hon. Bourke B. Hickenlooper, of Iowa

EXTENSION OF REMARKS
OF
HON. WAYNE L. MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, March 5, 1946

Mr. MORSE. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a very able Lincoln Day address delivered in Portland, Oreg., by the distinguished junior Senator from Iowa [Mr. HICKENLOOPER]. I think this is one of the finest of all Lincoln Day addresses which it has been my pleasure to read.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It has been several years since I have had the privilege of visiting Portland and the State of Oregon. In fact, the last time I thrilled to the grandeur of your scenery and the fine hospitality of this beautiful city was in the summer of 1931, and I shall always remember the cordial hospitality of the people of Portland. Among other wonders of this city, I distinctly recall that the water in your reservoirs is so pure that it can be used in storage batteries without being distilled. Since that time I have met many of your citizens. I have had a very cordial friendship with your able Governor, Earl Snell, and during the past year I have enjoyed the friendship of, and have formed the highest regard for, your two very capable Senators, GUY CORDON and WAYNE MORSE. Their vigor and intelligence give unusual representation to Oregon. I can assure you from first-hand knowledge that the reputation and problems of the Oregon soft lamb and of the Klamath and other valleys of your fine State are firmly established and successfully defended not only in Washington, but throughout the Nation. I am certain that whenever Oregon lamb is mentioned, OPA shivers and takes to the storm cellars.

Today we observe the birthday of the founder of the Republican Party and one of history's greatest men. It is a tradition not alone for the United States, but for all mankind. Abraham Lincoln was one of the great men of all history because of his perception of human objectives and because of the fidelity with which he adhered to his convictions of human needs. He preserved, at a time when the great experiment of American self-government was in the balance, the principles of human rights upon which all systems of real freedom have been based.

The unfathomable depths of his soul have made if difficult for historians to agree upon many of his attributes. It is true that disagreement, as a rule, is on superficial characteristics but perhaps no student of Lincoln has ever really plumbed these depths or has ever been able to piece together all of the pattern of his nature. There is little dispute, however, about his capacity for understanding of and sympathy with his fellow man and his unalterable will to preserve the fundamental rights and opportunities of the individual. I think he was closer to the real heartbeat of a struggling young Nation, closer to its dreams and ambitions, more understanding of its problems than any other man who had assumed the office of President. His entire life was part and parcel of the frontiers of freedom and the veneer of sophistication never touched him. His origin was lowly indeed—even on a frontier where social graces were absent, and he was not confused by the rote and rule of academic education. He learned of life and of fundamental justice under the rules of the wilderness and of survival. He grew up as a part of that throbbing outer fringe of free men and women who found their freedom in the hardships which they themselves elected to endure. He saw justice established and enforced more often as a matter of instinctive human rights than as a result of written statutes, he learned at first hand of the tenacity with which free men and women secure and retain their personal rights.

His tremendous capacity for human understanding sustained him throughout all his life. It was the political and the administrative rock upon which he stood and which supported him in public life in spite of the buffetings by those with selfish ambition and in spite of vilification by little men who hate. When the destiny of the Union hung in the balance, he found strength in his clear understanding of the objectives and goals of America.

Perhaps as clear a statement of his concept of duty as he ever made was in his reply to Horace Greeley shortly after he assumed office in the midst of a great Civil War. The internal emotions of our country were in most dangerous confusion and the fundamental issues of American Government were beclouded by passion, prejudice, and emotional zeal. The fate of the Nation at that moment hung more on the leadership of the President than upon the strength of armies. No President has been more bitterly hated and vilified by a vocal minority than Lincoln, for a season, and no period in our history was more fraught with explosive disaster than the period in which he assumed the Presidency.

Slavery was the fuel which fanned the flame of dissension but slavery was not the basic issue, at least it was not the controlling issue in Lincoln's mind and history has verified the soundness of his position.

Horace Greeley, who seemed to have mistaken the limb of slavery for the trunk of our system, had attacked Lincoln repeatedly on the slavery question. Pressing him for a decision on this issue that was, of course, of great importance. Finally Lincoln wrote to Greeley in reply to one of Greeley's demands that Lincoln state what he would do about the question of slavery and with astounding clarity laid down his purpose. In this reply, he said:

"As to the policy I seem to be pursuing, as you say, I have not meant to leave anyone in doubt.

"I would save the Union. I would save it the shortest way under the Constitution. The sooner the national authority can be restored, the nearer the Union will be the Union as it was. If there be those who would not save the Union unless they could at the same time save slavery, I do not agree with them. If there be those who would not save the Union unless they could at the same time destroy slavery, I do not agree with them. My paramount object in this struggle is to save the Union, and is not either to save or to destroy slavery. If I could save the Union without freeing any slave, I would do it; if I could save it by freeing all the slaves, I would do it; and if I could save it by freeing some and leaving others alone, I would also do that. What I do about slavery and the colored race, I do because I believe it helps to save the Union, and what I forbear, I forbear because I do not believe it would help to save the Union. I shall do less whenever I shall believe what I am doing hurts the cause, and I shall do more whenever I shall believe doing more will help the cause."

No statesman ever outlined more clearly the public purposes which he proposed to accomplish nor adhered more faithfully to his public duty as he conceived it. His purpose was to save the Union and he intended to save the Union in spite of all obstacles, emotions, and confusion. He believed the Union should be saved because it was the greatest system of government for the freedom of people ever devised and he let no influence swerve him from this path.

As the pattern of his purpose became clear the love and respect of the American people increased. When he died the world mourned. His principles and the symbol of his life became dedicated to the Nation and his greatness was recognized by Secretary Seward who gently touched the great tired frame in death and reverently and truly said, "Now he belongs to the ages."

Lincoln does belong to the ages. He stands as the symbol of human hopes and individual freedom. He stands as the emblem of fidelity to his fellow man.

The Republican Party was founded by Lincoln and it has marched forward under the principles for which he stood. As a great party, it presided over the expansion of a new nation to new frontiers. It encouraged free enterprise and the development of the individual. It furnished fuel for the lamp of freedom by keeping government free and in the hands of people. It has fought autocracy and statism throughout its history and the great liberalization of social and human rights that have preserved and increased the dignity of the individual have been sponsored in States and in the Nation under Republican leadership and policies.

After the Civil War the great West was opened, transportation systems were built, the vast resources of our continent became available for use and opportunity became unlimited. In no other country was emphasis so placed upon the rights of humanity and the responsibility for one's brother as in our own country and we carried to the rest of the world our conception of progress and self-government. Dignity and responsibility in public office was accentuated and throughout the years of Republican administration emphasis was placed upon more opportunity for the individual and less control by the Federal Government.

Under this system we reached new heights of human comfort. We became the land of opportunity and hope.

We have been put to the test twice in the last 28 years and each time have proved beyond all doubt that free men and women in the free system of human enterprise can overcome systems of regimentation. In 1917 and 1918 and without long preparation the genius of our production both of labor and management astounded the world and produced the power to give victory in that war. Again in 1941 the genius of free enterprise in management and labor produced "impossible" results and tipped the scales in World War II for victory against the most highly orgagnized and well-prepared forces of slavery and destruction that the world has ever seen. These great accomplishments could not have occurred except for the foundations of freedom and of individual liberty that had been laid down in the years before, and most of these years had been Republican years.

The crisis facing us today is not financial alone, but threatens the very roots of our system. Forces are at work in our country, and have been at work for the past 13 years, in powerful places of Government, designing and scheming to change our system into a controlled and dictated economy that would destroy the fundamentals of free enterprise and individual responsibility.

When the New Deal went into power in 1933 it promptly broke all of the pledges it had made to the American people and set out to acquire power, to tax and spend, and thereby break down the accumulations of individuals and, in the words of one of its

mentors, Dr. Tugwell, "to make America over." The detailed prewar failure of the New Deal to reestablish sound economy is too well known for repetition here. The piling up of a peacetime national debt to nearly $50,000,000,000; the hysterical repeated cry of "emergency"; and the constant grasp for power through the creation of hundreds of bureaucratic agencies whereby appointed officials make their own laws, interpret them, and sit in judgment upon their violation; the servitude of the Congress to the President during that period, and the brazen assaults upon the last pillar of constitutional strength, the Supreme Court, were all weapons of confusion and change calculated to "make America over."

The public may not yet realize the ominous significance of bureaucratic government. It is only when the individual gets caught in the meshes of changing regulations, snooping, and arbitrary punishments for alleged infractions of unknown and often unavailable regulations, that the significance of government by men and not by laws is emphasized.

During the eight peacetime years of the New Deal these practices grew by enormous proportions. Except for the threat of war, before which we were solemnly promised by the highest authority that "your sons will not be sent to fight in foreign lands," the Nation would have completely repudiated the policies of the New Deal that were strangling us. The record proves beyond argument that after 8 years of these policies, the economic level had not been returned to that of the twenties; men had not been put back to work and dependency and poverty—in a land of plenty—were on the increase.

We did get into World War II, our armed forces fought with unsurpassed brilliance, families sacrificed their loved ones, and their money, and Republican blood flowed just as red as Democratic blood. In this fight for the principles of freedom, the armed forces of this country became the only place where it was not necessary to prove allegiance to the New Deal in order to get a Government job.

Our Nation fought this Global War to protect the opportunity and enterprise of America and to help establish its principles in other parts of the world. We have endured controls that are dictatorial, but necessary in war. We have suffered enormous casualties and we now have a national debt, a mortgage upon the future of those who fought, and of the generations to came, of nearly $300,000,000,000.

The share of every man, woman, and child in our Nation is $2,000. Every veteran who starts in life begins with that debt against his future earnings, and his wife has the same debt—and the babies born have the same debt. The man who labors and his wife and children have this debt, and it must be paid out of the future production and earnings of the people of the United States. Every American family of four owes $8,000.

Under our system the earnings of the individual create his freedom and independence and provide a means by which he can assume the responsibility for his own destiny. We want security in this country but we want security with freedom. Before the Civil War the Negro in the South had clothing, food, and shelter, but he was not free. He did have a substantial measure of security but he had no control over the fruits of his labor and he could not assume, or meet, any responsibility for his own advancement or progress. He was a slave with shelter, but the master took his earnings.

Today our debt and the demands of government, National and State, through taxation, command at least 40 percent of the earnings of America, and if national income should drop that percentage would increase because the obligation is a fixed charge. We have gone far down the road toward statism—statism of arbitrary rule, statism in which government is becoming the master of the enterprise and the freedom of the individual and is commanding more and more of that which he earns and dictates more and more how he shall earn it. If we should reach that 100 percent, then economic freedom will have been completely destroyed and we will have substituted for it full enslavement of the people to government.

There is only one certain way by which we can stop this headlong rush toward centralization and dominion of government; there is only one way by which we can assure the continued mastery of the people over government and halt the growing mastery of government over the people. That way is by the election of a Republican Congress and a Republican administration.

I say this is the only way because the New Deal and the administration have offered no solution to the existing economic confusion and political corruption other than more spending, more controls, and more concentration of government. Our Budget for next year has been proposed at around $35,000,000,000, and messiahs of the New Deal croak hoarsely that the failure of peacetime recovery in the thirties was because we did not spend enough money in deficit financing. Instead of deficit expenditures of $3,000,000,000 to $5,000,000,000 a year, they now say deficit spending of perhaps $40,000,000,000 per year is needed. They say that we did not have enough controls and that we need more. They say that free enterprise should be further shackled, ruled, and managed; they weakly explain the failure of their plans by saying that they did not plan enough; they brush aside as a bothersome irritant the fact that the American system of individual opportunity and freedom of the past 150 years built the most virile and productive economy the world has ever seen. They fight at every turn the attempts to reestablish these principles for the recovery of America.

We have won a military victory in this war and the organized forces of barbarism have been crushed, but if the sacrifices our people have made are justified we must win the war of reconversion and peace that is now upon us. The world is in terrible chaos—friend and enemy alike are starving, social and political systems are tottering. The opportunity—in fact, the obligation—is ours to lend a guiding hand and influence in the interest of humanity. But we cannot assert our full strength and influence so long as internal confusion of policy and economy continue here at home. Domestically we face the specter of inflation and the administration is doing nothing constructive to stop it; the administration is fumbling with policies that consistently contribute to this danger.

There is only one way to prevent further inflation and restore normal peacetime economy—that is maximum production and maximum use of our resources.

Government agencies, at the people's expense and in direct violation of law, are using millions of public money to flood this country with a vast propaganda, claiming that prices have been held down and that inflation has been prevented. Cost-of-living statistics have been published with abandon, many of which have been compiled on non-existent articles. The price curve of low-cost clothing and other goods may have gone up 33 percent but if there is none available one must buy luxury items as necessities. Subsidies from the Public Treasury, to the extent of billions of dollars, have been poured out under the false premise that these keep down the cost of living. Every dollar of subsidy, however, is added to the tax bill and must eventually be paid by us and by generations that did not incur the debt. There are those in Government who urge permanent controls. If they are established, production in this country will be further stifled—inflation and black markets will flourish as never before—full regimentation will result and both America and the world will be pushed backward.

Controls of prices and of the allocation and distribution of products is desirable during during the emergency period following the war, until production equals demand, but these controls shou'd not be those of strangulation. Policies that fix prices below the actual cost of production prevent production. No farmer, manufacturer or businessman can long stay in business if he is forced to sell either without a profit or below cost and labor suffers from unemployment. There are many businesses that have been able to sell at a profit, and that can produce and sell under present regulations at a modest profit now, but usually these are so-called big businesses having multiple lines of production in which they can absorb the price lost on one article from the profit made on another. Too often however, they stop the production of the unprofitable item and produce only the profitable items. Little business, upon whose products a price has been fixed by Government below the cost of production, cannot absorb these losses however, and therefore must either curtail production or go out of business; and little businesses have closed by the thousands in recent months. The propaganda has it that adjustments are made in these cases, but the fact is that Government policy through delays, incompetence, and some times by deliberate intention, fails to make these adjustments, and the public fails to get the goods. Production is now, and always has been, a matter of price and everyone knows that if labor and material costs are increased they must be reflected in prices. Free enterprise cannot exist when wages and material costs spiral upward, but final price is held rigidly to a prewar level below actual cost. It just simply won't work.

It is not necessary for prices to be permitted to run away. Controls can be exercised and maintained at one level as well as at another, but production cannot be secured when prices on many essentials are held at a level that will not permit the production and distribution of goods at a profit.

Much of this confusion has resulted directly either from the incompetence of public officials who write the policies or from the political ambitions of others who seek these controls as stepping stones for their own ambition and shortage of housing, textiles, machinery and countless other essentials can be traced directly to these stupid or calculated policies.

If we are to have recovery, the fumbling and uncertain policies of the present administration must be stopped—men of competence must be placed in administrative positions with a sympathetic determination to get the wheels of peace and industry going.

We have ample proof that being a political or social pal of the President is not an automatic qualification for high public office; that haling from a certain group in Missouri does not bring efficiency or solution to the problems that must be met and solved.

Our job is to reconvert America at the earliest possible moment to free enterprise and opportunity. We must, and will, meet the social problems. The Republican Party has met these problems in the past and has guided this country during its greatest progress and prosperity. The principles of collective bargaining for labor were established and developed by Republican administrations—State and national. Workmen's compensation, anti-child-labor laws, and a host of others were sponsored and passed in Republican States; the rights of the individuals were protected and free enterprise was developed as Republican policy. This will continue to be our job.

The prospects for the future are beyond belief if our system is unshackled and free

men and women in a free economy are permitted to exercise their genius. On the contrary, if statism becomes dominant and the economy of our country and of the individual is increasingly controlled by bureaucratic edict, this progress will be stifled and tomorrow's generations will suffer.

We need a restatement of the Bill of Rights, and we need an administrative Government in this country as fully committed to, as fully cognizant of, and as unswervingly determined to enforce these principles as was Abraham Lincoln, as were the signers of the Declaration of Independence, and as were the fathers of the Constitution. We need no theorists either from here or from abroad to remake our Nation and our system. We need courageous public officials who will, as a sacred duty and with understanding and competence, retain and strengthen the American system—the greatest system for human progress the world has ever seen.

In addition to domestic confusion, the administration has handled international affairs with timidity and uncertainty. Our Nation took the lead in sponsoring and establishing the United Nations Organization. With vigorous and sincere cooperation by the nations this can be the basis for future peace, but with that exception our foreign policy has been shrouded in mystery and suspicion. We find secret agreements continuing to crop up, even after repeated assurances that there are no secret agreements. We built vast installations throughout the world without receiving in return any assurance that we might use them in peacetime; we find members of the State Department making various and often conflicting declarations of policies that confuse the international picture. We see strange proposals to give up secrets of the atom bomb, possessed exclusively by us, before we have any assurances that the world will commit itself to peace and abandon the destruction of war.

Atomic energy and its awful power should be one of the strongest weapons for peace, but it will become the greatest threat to civilization if, without reliable and adequate assurances of peace, it is made available to those who promote war.

Our policies and obligations should be courageously adopted and vigorously stated, and we should not compromise on fundamental objectives upon which the destiny of tomorrow depends. Our freedoms must be secured, and the trade of the world must be free to flow. The people of the world should have their standards of income and living raised—not by donations, but through production and fair play. But above all we must follow a policy at home and abroad that will safeguard and preserve the standards and profits of a free America and a progressive, prosperous citizenry. Most of these responsibilities rest on administrative leadership; in order to obtain them we must have a change in administrative leadership.

The confusion and internal frustration of the administration in Washington has never been more apparent than now. When have we ever before seen a member of the President's Cabinet go before a committee of the Senate and blast the confirmation of a Presidential appointee to high office? When have we seen such a multitude of objections and criticism to other appointments as have occurred recently? When have we seen party henchmen and personal associates in such numbers, and without adequate qualification, proposed for and put in charge of vital Government agencies and functions? And when has the fate of our system been more at stake?

A great obligation rests upon us, all of us. We owe it to the man who labors and who is now subjected to autocratic control to a degree unequaled heretofore. He works or goes idle at the command of leaders, some of whom are sincere and some of whom are criminal racketeers. Many times their orders do not represent the will of the majority, but it all amounts to the same thing—they are regimentated, their freedom of action is controlled, and they and the public suffer. We owe an obligation to the service men and women of this country to maintain the right to work, free from tribute and free from dictation. We owe to the fathers and mothers of those who fought and those who died, the preservation of the system for which they sacrificed, and we owe an obligation to the men and women of the past whose courage and foresight won a wilderness for freedom on our eastern shores, and who spread that system westward over the prairies and plains and across the majestic mountains of the West until it touched the Pacific. The fruits of their sacrifices must not be lost. But perhaps greater than all responsibilities is our responsibility to the generations of tomorrow. Their heritage is in our keeping; the measure of their freedom, of their comfort, and their progress will be largely fixed by us these years and we must not shirk it. The generations of tomorrow will either condemn or praise us and we have it in our power to say which it will be.

Political government and policies control the destinies of man. They can shackle all freedoms as they have done in countries of the world within our own generation, or through eternal vigilance in protection of the sovereignty of man, they can keep clear the road to higher destinies.

We of the Republican Party have the great responsibility of protecting our system and of preserving it for ourselves and for the groping millions of the world who look to us for inspiration.

Let us again, with Lincoln, "highly resolve that this Nation * * * of the people, by the people, and for the people, shall not perish from the earth."

Dr. Edwin Walter Kemmerer

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. REED of New York. Mr. Speaker, I wish to take this opportunity to include as a part of my remarks the very fine tribute paid to Dr. Edwin Walter Kemmerer, one of the outstanding and most distinguished experts on monetary questions. I have had close contact with Dr. Kemmerer for many years and I deplore his sudden passing as a distinct personal loss, as well as a great loss to the Nation.

The tribute follows:

[From Monetary Notes, published by the Economists' National Committee on Monetary Policy]

DR. EDWIN WALTER KEMMERER

JUNE 29, 1875-DECEMBER 16, 1945

On December 16, Dr. Edwin Walter Kemmerer, president of this committee, passed away. Although he had experienced a heart attack during the late summer, he appeared to be on the road to recovery and shortly before his death had written this office expressing the hope and expectation of attending the coming annual meeting of our executive committee and officers in late January or early February.

The passing of Dr. Kemmerer deprives the committee and the country of the wise counsel of perhaps the most experienced scholar in the field of money that this Nation has produced in recent years, if not in its entire history. No other man has advised so many countries in monetary matters.

With a thorough knowledge of monetary history, he had a perspective that prevented him from being carried away either by love of novelty or by admiration of antiquity. He had the capacity for great patience; he knew how long it sometimes takes for economic forces to work themselves out to their logical conclusions; and he was remarkably tolerant of people with much less knowledge, perspective, and experience.

But in addition to his distinguished record as a teacher, a scholar, and a man of affairs in the monetary field, Dr. Kemmerer was a gentleman of the highest type. He was always kind, helpful, generous, and a splendid cooperator. He had the mellowness and the modesty of the intelligent and widely experienced man, and he had a delightful sense of humor. To have known and to have been associated with him intimately have been among the rare privileges of life.

The world has been made poorer by his passing, and the loss of his valuable counsel in monetary matters is something that this country could ill afford at any time, much less in times like these.

The following record from Who's Who (1944–45), reveals something of his attainments and public service:

"Born Scranton, Pa., June 29, 1875; s. Lorenzo Dow and Martha H. (Courtright) K.; A.B., Wesleyan U., 1899, LL.D., 1926; fellow in economics and finance, Cornell, 1899–1901, Ph.D., 1903; LL.D., Occidental Coll., 1928; Dr., honoris causa, Central U., Ecuador, also from all univs. of Bolivia, 1927; D.C.S., Oglethorpe Univ., 1933; D. Sc., Rutgers Univ., 1933; LL.D., Columbia Univ., 1935; m. Rachel Dickele, Dec. 24, 1901; children—Donald Lorenzo, Ruth. Instr. economics and history Purdue U., 1901–03; financial adviser to U.S. Philippine Commn., spl. reference to establishment gold standard in P.I., 1903; chief div. of currency, P.I., 1904–1906; asst. prof. polit. economy, 1906–09, prof. economics and finance, 1909–12, Cornell U.; professor economics and finance, Princeton U., 1912–28. Walker professor international finance, and director Internat. Finance Section, 1928–43, professor emeritus since June 1943; financial adviser to Govt. of Mexico, 1917, and to Government of Guatemala, 1919; chmn. Commn. of Am. Financial Advisers to Colombia, 1923. Mem. Kemmerer-Vissering Gold Standard Inquiry Commission for Union of South Africa, 1924–25; expert on currency and banking to Dawes Committee, 1925; chairman American Commn. of Financial Advisers to Chile, 1925; chmn. American Commn. of Financial Advisers to Poland, 1926, to Ecuador, 1926–27, to Bolivia, 1927; pres. Am. Commn. Financial Advisers to Colombia, 1930, to Peru, 1931; president American Commission, Financial Experts to China, 1929; joint chmn. Hines-Kemmerer Commn. to make econ. survey of Turkey, 1934; pres. Economists' Nat. Com. on Monetary Policy since 1937. Mng. editor Economic Bulletin, 1907–10. Contbr. magazines, Fellow Am. Statistical Assn., Am. Acad. of Arts and Sciences; mem. American Economic Association (president 1926), American Philos. Soc., Council on Foreign Relations. Awarded gold medal by Govt. of Colombia, for services to Colombia, 1923; Commander's Star, Order of Polonia Restituta, 1926; Order of Merit, First Class, Ecuador, 1927; Order of the Crown (Belgium), 1937. Trustee Wesleyan Univ. since 1936, Scranton-Keystone Junior College since 1935. Director U.S. and Foreign Securities Corp.; U.S. and Internat. Securities Corp.; Dividend Shares; Carriers and General; Bullock Fund; Am. and Foreign Power Co. Mem. Delta Kappa Epsilon, Phi

Beta Kappa. Mason. Clubs: Century, Bankers, Princeton; Nassau (Princeton); Blooming Grove Hunting and Fishing (Pa.); Bald Peak Colony (N.H.). The Housing Problem

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the Milwaukee Journal of March 1, 1946]

WHAT'S WRONG WITH HOUSING

Lots of things are wrong with housing and are slowing us down in the attempt to meet the present acute shortage. Take coal furnaces manufactured by a prominent firm in Milwaukee, for instance.

The head of the firm has ordered that no more coal furnaces be shipped for the present. More than 400 have piled up already in the warehouse. Production has been ordered slowed down, so as not to tax warehouse facilities.

Why aren't the furnaces being sold? Because, the firm maintains, the OPA price ceiling is so low that the company loses money on the furnaces. The more it sells, the more it loses. That's the explanation offered.

This country operates on a basis of industry that must make a profit to pay wages and taxes. We can't expect manufacturers to sell at a loss for any considerable length of time. We shouldn't try to force them to do so.

But builders want furnaces for houses for veterans, and for others needing their own shelter. What are we going to do? The OPA should immediately go to the bottom of cases like this. If the ceiling is too low, raise it to allow a fair profit. If the ceiling is O. K. and the manufacturer is wrong, let the OPA cry it from the housetops. It is up to the OPA to break such bottlenecks.

[From the Milwaukee Journal of March 2, 1946]

WHAT'S WRONG WITH HOUSING?

Yesterday we talked about one thing wrong with housing, citing the case of a local manufacturer who has ordered no more coal furnaces shipped because he claims the OPA ceiling is too low to allow him to make a profit.

There are lots of things wrong with housing. Take labor costs, for instance. The other day a builder who has had many years of experience in our community checked over labor costs on small houses just completed. He compared these figures with labor costs on identical houses built in 1941. What do you think he found?

The labor cost now is twice what it was 5 years ago. Wage rates haven't gone up anything like that. Some advances have been about 50 percent, but most increases have been much less, percentagewise. Why has the labor cost of the house doubled, then?

Well, there is a lot of inexperienced and incapable help, for one thing. There is a lot of turn-over. There are men, some of them returned veterans, who work a few days, then quit. They simply don't want to stick to a job. And there are a lot of workers who got so used to loafing in war plants that they just can't do a fair day's work for a fair day's pay.

Then there are some who know building-trades workers are in such demand that they don't have to work hard. They reason the boss won't fire them, because he can't afford to. Anyway, these loafers aren't hurting the boss very much. He can sell all the houses he can build right now. But the buyers of these houses will be cheated. They won't get their money's worth. It would be a good thing for the loafers to think this over—think it through. Many veterans are going to be cheated shamefully.

Nobody in the building trades can work himself out of a job the way things are now. Wages are the best ever. Employment is the steadiest in history and should be for a long time. Never was it more important that men building houses give an honest day's work for a good day's pay.

Many workmen are doing this. How about those who aren't joining in?

How Good Is Russia's Word?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Barnet Nover from the Washington Post of March 5, 1945:

HOW GOOD IS RUSSIA'S WORD?

(By Barnet Nover)

Long ago it became clear that when spokesmen of Soviet Russia employ such terms as "democracy" or "free press" or "self-government" or "free and unfettered elections" the meanings they give these words and phrases are frequently quite different from and sometimes the exact opposite of the meanings we give them.

For that reason the charitable view has been that Russia's failure to carry out what seemed to us the clear implications of certain of the agreements reached at Yalta, Potsdam, Moscow and other conferences was due not to bad faith but to uncertain language.

In this connection it was repeatedly said by those who had had dealings with the Russians that whenever they, and particularly their No. 1 man, Generalissimo Stalin, were induced to make a precise commitment that commitment was invariably and punctiliously carried out.

This charitable view of the way Russia carries out agreements needs pretty drastic correction in the face of what has been happening in Iran and Manchuria.

"Democracy," for instance, may be a vague term, vague enough at least by definition to make it possible for Pravda and the Moscow radio and Vgacheslav Molotov to claim that the governments in Rumania, Bulgaria, and Yugoslavia, not to mention Soviet Russia herself, are truly democratic.

But there cannot be any two-way interpretation of the term: "March 2, 1946." In the years since 1917 the Russians have carried out many revolutionary changes. With admirable restraint they have left the calendar and the multiplication table alone.

One and one are two in Russia as they are here. And in the Russian calendar as in ours March 2, 1946, was the second day of the third month of the year following the year numbered 1945, and no other day.

On January 29, 1942, Great Britain, Russia and Iran signed a treaty of alliance in which it was stipulated (art. 5) that:

"The forces of the Allied powers shall be withdrawn from Iranian territory not later than 6 months after all hostilities between the Allied powers and Germany and her associates have been suspended * * *."

The last of Germany's associates to give up the ghost was Japan. She surrendered unconditionally and formally on September 2, 1945. This meant that the withdrawal of Allied troops from Iran was to be completed by March 2, 1946.

Actually the reason for the presence of Allied troops in Iran disappeared after Germany's surrender in May 1945. That is why first Great Britain and later the United States sought to persuade Russia to clear out of Iran at an earlier date than the time fixed in the 1942 agreement.

The British proposal was made during the meeting of the Council of Foreign Ministers at London. Molotov's reply was haughty.

"I would like to tell you once again," he wrote Ernest Bevin, the British Foreign Secretary, "that in the case of the Soviet Government the question of withdrawing troops from Iran did not in general constitute a special problem inasmuch as there is a treaty which makes provision for it. I would ask you to bear in mind that the Soviet Government attaches exceptional importance to strict fulfillment of obligations undertaken."

Later, in reply to Secretary Byrnes' proposal that all foreign troops be removed from Iran by January 1, 1946, Molotov, after declaring that Russia "adheres unwaveringly" to the December 1, 1943, Declaration of Tehran in which Russia, Great Britain, and the United States promised to respect Iran's independence declared that:

"The declaration in question, however, does not affect questions of the number of Soviet armed forces on Iranian territory, just as it does not affect the question of the period of the stationing of Soviet troops in Iran. This latter is determined by * * * the Anglo-Soviet-Iranian tripartite treaty of 1942."

In this Soviet note reference was also made to the Russian-Iranian treaty of 1921 which provides for a temporary Russian occupation of Iranian territory in the event of other powers using Iran as a base for an attack on Russia. In his address to the United Nations Security Council, Andre Vishinsky, the Soviet Vice Foreign Minister, also mentioned this treaty.

It is, then, the Russian contention that Iran is being used as a base for an attack on the Soviet Union? Obviously such a contention is so nonsensical that even the Kremlin has not dared advance it. In fact all American and British troops have been withdrawn from Iran and the only troops still in occupation there are Russian troops.

Nonetheless, the circumstance that Russian spokesmen continue to cite the treaty of 1921 is ominous.

In Iran, as in Manchuria, a concrete, specific, and unequivocal pledge by Russia has proved to be without binding force.

The reason why Russian troops remain in Iran is that as long as these troops remain Russia has available a direct and immediate form of pressure on the Tehran government whose Premier is in Moscow negotiating a settlement.

The reason why Russian troops remain in Manchuria—they were to leave by February 1—is that the Kremlin wants to make Manchuria, China's richest region, the economic satrapy of the Soviet Union. In both cases Russian policy is sinister since it involves treating solemn pledges as scraps of paper.

A Letter From a Constituent

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a letter I have received from an Army lieutenant who at present is stationed in Germany and whose legal residence is in my congressional district:

FEBRUARY 8, 1946.

DEAR SIR: I am at present stationed near Frankfurt, Germany, and serving as a lieutenant with Military Intelligence of the United States Army. I have been discussing the reports about "starving Germans" with a rather large number of my friends and I find that they are very much of the same opinion as I am myself. We are deeply concerned about some of the remarks made by several Senators who profess so much concern about the "poor starving Germans." Neither I nor anyone I have talked to has seen any Germans starve in the United States zone of occupation. On the contrary, most of them seem well fed and the kids especially look very healthy. When one compares these kids here with the kids in France, Holland, and England—countries which I have seen—one is really shocked to see these German kids apparently so healthy and well fed. For 5 years the Germans have been systematically plundering other countries of Europe and have carried out Goering's orders, as recently brought out at the Nuernberg trial. "If anyone starves in Europe it will not be a German."

I am shocked that there is a movement on back home to help the people who have been responsible for so much misery. If we have any food to give away, and I guess we have, why not give it to the French, the Dutch, the British, the Greeks, the Italians, the Yugoslavs, etc., the people who suffered at the hands of the Germans? It made us mad to hear that the English people have to further tighten their belts and live on reduced rations while some people in the United States are formulating a plan to send even more food than we are already shipping to Germany.

I would not have written to you, sir, if there were not very many of us who felt the same way. In fact in the "mail call" or "B Bag" column of our newspaper, Stars and Stripes, sentiments similar to these expressed by me have appeared, a proof that many of my buddies over here think the same and feel the same way about it.

Sincerely,

LT. H. M. FLEISCH.

Injustice in Military Courts

EXTENSION OF REMARKS

OF

HON. WAYNE L. MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 5, 1946

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio script entitled "Injustice in Military Courts," prepared by Edwin F. Woodle, of Cleveland, Ohio, president of the Cuyahoga County Bar Association.

There being no objection, the script was ordered to be printed in the RECORD, as follows:

RADIO SCRIPT: INJUSTICE IN MILITARY COURTS

Question. Mr. Woodle, has your investigation of military courts indicated that they have been fairly and justly administered?

Answer. No; I am sorry to have to report that in a very large number of instances in both the Army and the Navy military courts have not been fairly and justly administered. Of course, this is not universally true, as there have been in places courts martial conducted in such a fashion that justice to the defendants undoubtedly resulted, but the number of cases in which the defendants were not fairly treated and in which they were not accorded the basic rights given to them under the Articles of War, and in which they were subjected to harsh and excessive punishment have beeen so numerous as to require some basic changes in the entire system.

Question. Do the Army and the Navy have a system of courts as we understand them in civilian life?

Answer. The system of justice in both the Army and the Navy is administered under regulations enacted by the Congress of the United States and embodied in manuals which are basically similar but not alike in all respects.

In the Army the manual is known as the Articles of War, and in the Navy it is known as Naval Courts and Boards. These manuals create what purport to be trial courts, but any resemblance between a court in civilian life and a court martial in military life is thoroughly deceptive. The various court-martial tribunals are appointed by commanding officers in this country and abroad to whom the War and the Navy Departments have assigned powers of appointment in their respective command areas.

In civilian life we recognize the tremendous importance of making certain that both judges and counsel be carefully trained and learned in the law before we entrust them with the authority of passing judgment upon their fellow men, or even with the responsibility of prosecuting or defending anyone accused of violating the law.

In military life, however, no such care or precaution is observed. In the first place, only officers are permitted to sit as members of a court martial or to participate as advocates for the prosecution or the defense.

In the second place, there is no standard or qualification with which a member of the court is required to comply. Here, as in every other phase of military justice, as you shall see, the entire matter is left to the uncontrolled discretion of the commanding officer.

It is true that article No. 4 of the Articles of War provides that "The appointing authority shall detail as members thereof those officers of the command who, in his opinion, are best qualified for the duty by reason of age, training, experience, and judicial temperament."

But the exercise of the commanding officer's opinion from the evidence at hand is, in most instances, governed by purely personal and arbitrary considerations, and apparently influenced more by propinquity and the expectation of results satisfactory to the commanding officer than by the qualifications suggested in the rule.

The prosecuting attorney is known as the trial judge advocate, but neither he, nor the defense counsel, nor even the one member of the court who is termed the "law member," is required to be a lawyer, or to have had any experience in the trial of lawsuits.

It is apparent, therefore, that the absence of a qualified court, and of trained and experienced counsel, cause any similarity between a court-martial and a civilian court to be purely one of form. And needless to say, it is the substance and not the form which is important.

Question. But, Mr. Woodle, these trials that you have been investigating are all over and done with. The war has ended. Most of our boys are coming home, and millions of them will soon be out of service. Can you suggest why this subject of court-martial proceedings should be of interest and importance to our radio audience and to the people of Ohio?

Answer. That question should not be difficult to answer. There are no people in the world in whom there can be found a more innate—a more finely developed sense of justice—than the American people.

Of course, we have no proprietary claim to justice in these United States. Nevertheless, in the comparatively short history of our country, many men have died and much blood has been spilled for the twin principles of liberty and of justice.

Is it not then a monstrous paradox that thousands of men, who fought in World War II that justice might be rendered to all peoples, became themselves the victims of a military system of justice which inflicted upon them needless, cruel and undeserved punishment?

This alone should be sufficient to rouse the interest and to enlist the sympathies of the people of Ohio. But there are other and equally important reasons.

The vast majority of men in the Army and the Navy who were convicted of offenses in trials by general court-martial have received, or will receive, in addition to the punishment of imprisonment, a dishonorable discharge from the service of their country.

Many of these men have proven themselves to be heroes, and have been so recognized by almost every type of award for valor that could be bestowed by their Government. Yet, these men, and all others who have received a dishonorable discharge, must be forced to carry with them this stigma for the balance of their lives.

One dishonorably discharged from the service of his country forfeits almost all rights as a citizen. Under the law as it now stands no clemency board, nor any member of the War or Navy Departments, can alter or in any way affect a dishonorable discharge of a serviceman.

There will be hundreds of such men among us in this State—thousands elsewhere throughout the country—who must rely upon what the people and the Congress of the United States will be willing to do to remove an otherwise lifelong stigma continuing long after they have served their appointed period of punishment.

There is an additional reason why this subject commands the attention of every citizen. The Army and the Navy are seeking, in Congress, the enactment of a law providing for universal military training.

Regardless of whether such a law is approved by any citizen or any Member of Congress, it is clear that there should be

no compulsory military training which would subject any boy or young man to the existing system of military justice.

Question. What have you found to be basically wrong with the present system?

Answer. The inherent faults of the system are so numerous that I can only highlight them here.

The first and the most important fault, and the one which pervades every phase of the proceeding from beginning to end is the unlimited power of the commanding officers. So long as that exists, mere changes in procedure will be of little help. Let me repeat what has been said on this subject by two men who are qualified to speak and are in a position to know what they are talking about.

One, Judge Elijah Adlow, of Boston, a former judge advocate of the Twenty-sixth Infantry Division in World War II, said:

"In substance the fate of GI Joe depends on one man—the commanding officer. He decides whether the soldier should be prosecuted. He appoints the court and the counsel. When the trial is over he approves, disapproves, or modifies the sentence of the court.

"There are pleadings and witnesses and counsel and arguments. But there is generally an amazing resemblance between the court's verdict and what the commanding officer wants done.

"The system is the personal property of the brass hats. Let a court make a decision other than that desired by the appointing authority and see what happens. Officers who have sat on courts and voted to acquit defendants have felt the resentment of the commanding officer in more ways than one. Defense counsel who have secured the acquittal of clients have been found more useful thereafter on other assignments."

Imagine, if you will, the kind of justice you might expect to receive in a criminal court in the State of Ohio if the prosecuting witness, who charged you with an offense, had absolute control over the personal careers of the judge and the jury.

Should you believe the picture is an exaggerated one, I assure you it is not. The situation has been well described in a statement made by Brig. Gen. H. C. Holdridge, recently retired, who was a graduate of West Point and a veteran of more than 30 years' service. He said:

"The primary cause for failure of military justice is that justice cannot be divorced from the commander, and the commander is not interested primarily in abstract justice but in military discipline. He is a law unto himself. Military justice is a function of command. The commander can, and frequently does, order charges preferred.

"The officer drawing the charges, the investigating officer, the members of the court, the staff judge advocate, and finally the prison officer, all are under the domination of the commander. He becomes accuser, judge, jury, court of appeals, and executioner. They live in the shadow of his approval or disapproval. Their own security is dependent upon his will. If he is a sadistic bully, and there are such, the results on the accused may be deplorable."

There are many instances which our investigation has brought to light in which the commanding officer has directed the verdict of the court even before the trial took place, and there are court members who have openly stated that it is their duty to find the defendant guilty whenever charges have been preferred by the commanding officer.

Is it possible to say that justice can be rendered by any court with such an attitude?

A second and cardinal weakness of the system is the failure of the trial record, which is prepared in connection with every court-martial trial, to disclose vital and prejudicial errors such as the influence exerted by the commanding officer upon the court, or the failure of the commanding officer or of the court itself to afford to the accused the safeguards purportedly guaranteed to him by the Articles of War.

If these errors had been committed, as is frequently the case, but the record fails to disclose the errors, then it is obvious that a review of the case by any number of reviewing authorities is of little value so far as the attainment of justice is concerned.

In discussing the administration of these courts, much emphasis has been placed by the War and Navy Departments upon the right of the defendants to select civil counsel, if they so desire, or to be furnished with counsel appointed by the court.

In practice, this rule is frequently a snare and a delusion. The evidence at hand is ample that counsel requested by the accused is seldom appointed; that defense counsel are generally, if not universally, untrained and incapable of properly representing the accused, and that while the prosecution is given all the time it desires to prepare its case, defense counsel, on the other hand, are appointed only shortly, if not immediately, before the trial, and given little, if any, time for preparation.

Examples have been uncovered in which the accused did not even meet his counsel until less than an hour before the trial, and consulted with his counsel all of 15 or 20 minutes in advance of the trial.

Another weakness is in the system of investigations which are required to precede the placing of every charge.

There are no permanent or especially qualified investigating officers. Although the investigation is presumed to be impartial, our inquiry discloses that the accused is seldom given equal treatment in the investigation, which has decidedly the aspect of a grand jury hearing.

Lack of knowledge, lack of experience, a desire to please the commanding officer, or just the desire to hurry through what is merely an extra duty, frequently result in hasty and unfair investigations and reports. Later, these reports play an important part in the disposition of the case.

Confinement of an accused, or even of a mere suspect, frequently lasts for weeks, and sometimes for months. In the meantime, he is provided with no defense counsel with whom he may confer, or from whom he may obtain necessary help, although important evidence in his favor may be destroyed and witnesses necessary to his defense killed, transferred, removed, or discharged. Under such circumstances, justice to the accused is not possible.

Question. Has there been any official recognition of this situation?

Answer. Yes, the earliest official recognition of which I am aware was given by the Cuyahoga County Bar Association, with headquarters in Cleveland. That association issued a report on August 22, 1945, critically reviewing the administration of military courts and urging a thorough congressional investigation as a preliminary to important changes in the laws governing such courts.

As more and more men have been released from service and have felt free to express themselves more instances of injustice have been revealed, so that the full impact and importance of the problem is gradually becoming known to the public.

On November 26, 1945, a resolution was introduced in the United States Senate by Senator WAYNE C. MORSE, of Oregon, providing for just such an investigation as that urged by the Cuyahoga County Bar Association. This resolution is now in the hands of the Judiciary Committee of the Senate, and has been applauded by many. However, the full truth will not be revealed without difficulty and not without the objections of our military leaders. On December 31, Senator MORSE charged that the Army and the Navy were trying to sidetrack his resolution. He said: "The Army and Navy don't want an investigation because they know it would show shocking injustices. It would disclose the tyrannical nature of the courts and the arbitrary procedures followed by them."

The problem has been recognized by the Army in the creation of a special Clemency Board charged with the task of reviewing the punishments meted out in some 35,000 general court-martial cases. But the authority of this Board is limited and restricted in many respects by the existing laws, and the Board, in any event, must proceed at the outset with the assumption of a guilt that is frequently contrary to fact.

Question. What can the people of Ohio do that will help to remedy the situation?

Answer. One big way to help is by openly expressing your opinion on the subject. The more opinions that are openly expressed the more public sentiment will be crystallized in support of needed changes in the law. An even more effective way, however, is to write directly to your Senator or Congressman. This method is in fact far more effective than most people would ever imagine, and it will help to make sure that these things do not happen again.

Lithuania and Liberty

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 5, 1946

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Lithuania and Liberty," written by Dr. W. Elmer Ekblaw, of Clark University, and published in the Worcester Daily Telegram of February 18, 1946.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LITHUANIA AND LIBERTY

(By Dr. W. Elmer Ekblaw, Clark University)

The Lithuanians in America's population have recently celebrated the twenty-eighth anniversary of their independent statehood following the First World War. By appropriate ceremonials they have recalled the opportunity for service, the vision of happiness in the promise of liberty, and the universal enthusiasm of their people, that February 16, 28 years ago, opened up for them on their political and cultural horizon. They have not only celebrated the anniversary of that glorious day, but they have reconsecrated themselves to the cause of freedom. They have resolved, more firmly than ever, to crusade courageously, unceasingly and faithfully for the restoration of that liberty, that independence of sovereignty, that bright promise of happiness and opportunity for service among the free nations of the world, which Lithuania deserves and which Russia has so treacherously and so unjustifiably wrested from her.

What of the Lithuanians in Lithuania? They dare not raise their voices in protest against the cruel fate they suffer, much less have they heart to do so, as they realize how wretched is their slavery, how cruel is their bondage, how merciless is the treatment that has become their lot under the Russian tyranny. They see little hope for the future. Betrayed by the Russian Government that deliberately and cynically violated every solemn treaty it made with their country—the Peace Pact of 1920, the Nonagression Act of 1926, and the Mutual Assistance Pact of 1939—the people have now no chance, no

strength, no power to resist the complete and ruthless Russification of their beloved land.

The political history of Lithuania for the last 6 years, albeit a record of patriotism, persistent effort for neutrality, and patient attempt to placate her two mighty enemies, Germany on the one hand, and Russia on the other, has been a sad story of delusion, despair, and final exploitation and subjugation first by one and then the other. Everything that Lithuania could honorably do to preserve her independence and integrity she did, but to no avail. A small land set between two wolfishly imperialist aggressors, she fell victim first to one and then the other, despite her determined and valiant struggle to retain her place among the free, sovereign nations. Since Russia's seizure of the little land, there has been no mercy, no justice, no salvation in sight for the Lithuanians. They are now a people in bondage, as bitter as any that ever befell any people, as savage and terrible as any that Babylon, or Rome, or any conqueror ever imposed upon any people.

The tide will turn. The day of reckoning will come—perhaps not so soon as the more hopeful Lithuanians would like, but surely. "The mills of God grind slowly, but they grind exceeding fine." The leaven of freedom is forever working. Tyranny cannot endure. Injustice cannot prevail. And so the faithful folk of Lithuanian stock in America, celebrating the anniversary of their former liberation and reasserting their right to freedom, restating their indubitable claims to justice, have sound reason for their faith, their hope.

God grant that America and Britain, and all the rest of the freedom-loving nations of the world, stand steadfast for the freedom and autonomy of the Baltic states and peoples, as they have so far done; grant that there may be no wavering in their support of the rights of such small nations to liberty, and sovereignty over their own land and folk.

All honor to the faith, the courage, the patience of the Lithuanians, who dare so heroically to assert their rights; may they regain them all.

A Vital Human Document

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article by Harry H. Schlacht which appeared in the Boston Daily Record, Boston, Mass., under date of March 4, 1946:

A VITAL HUMAN DOCUMENT
(By Harry H. Schlacht)

We have observed the one hundred and fifty-seventh annversary of our Federal Constitution.

It was on March 4, 1789, that the first session of the Federal Congress under the Constitution was held in Federal Hall, Wall and Nassau Streets, New York City.

God bless our Constitution.

It is a charter of our fundamental laws.

It is a living, vital, human document with a soul and a spirit.

It expresses the hopes and yearnings of the great heart of America for the life, liberty, and the pursuit of happiness of all her people.

It is the anchor of our safety and the bulwark of our security.

It is the mighty fortress of our liberties and institutions.

Its sublime philosophy was born and lived and practiced by men in past ages.

Its seeds were planted in Athens 25 centuries ago.

It continued its growth through the various governments of Rome.

It survived the persecutions and blighting influence of the Middle Ages.

It started to bloom with the Magna Carta and later with habeas corpus.

It finally came into full fruition in the definite provisions of our Constitution.

It was the inspiration of our early settlers.

It was the beacon light of Washington and the founding fathers.

It is the touchstone that illuminates the paths of future generations.

We have been devoted to our Constitution.

We know that wise men conceived it.

We know that strong men administered it.

We know that brave men fought for it.

We know that heroic men died for it.

There are some who refer sneeringly to our Constitution.

They say it is obsolete and outdated.

They say, "You can't eat the Constitution."

Our answer to this contemptible insult to our great charter of human rights is, "No, and neither can you eat the Ten Commandments nor the Sermon on the Mount."

If the time comes when the American people shall no longer be inspired by the teachings and admonitions of the two great tenets of the lowly Nazarene, the liquidation of our civilization will soon follow.

Let us now and evermore reaffirm our faith in our Constitution.

Let us rededicate ourselves to the task of ever preserving it.

Let us ever cherish our precious heritage.

Let us remember that our fighters for freedom gave life to it and their lives for it on all the flaming battle fronts.

Let there be a national observance of the Constitution's adoption as urged by the Hearst newspapers.

Let us heed the words of William Randolph Hearst to set aside a Constitution Day to give all American citizens an opportunity to make public declaration and demonstration of our reverence for the great document whose provisions protect our liberties and preserve our Republic.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of Saturday, March 2, 1946:

WATERWAY—A RUSSIAN SCHEME!

Now we've heard everything.

Even the St. Lawrence waterway project is a deep, dark Russian plot. Those wily Muscovites want it built so they can pour Russian coal into this country and put our miners and railroad workers out of jobs.

In all seriousness, this is what Thomas Kennedy, secretary-treasurer of the United Mine Workers of America, asserted before the Senate committee studying the seaway proposal.

"The seaway is right down the Russian alley and is made to order to tie into the Russian plan," he proclaimed.

We don't know which Russian plan Mr. Kennedy is speaking of. There have been so many. The last one we noted was Stalin's extended program to build the Soviet industrial economy to unheard of heights, a program that would take all the coal the Russians could mine for a long time.

If there has even been an American project, conceived by Americans for the benefit of Americans, it is the St. Lawrence waterway. The Russians have probably given as much thought to it as we have to the dredging program for the upper Volga River.

But at the moment there are people in this country who get the willies whenever Russia is mentioned. So hanging the Russian tag on the good old St. Lawrence project—which we've been talking about for a quarter century—might help defeat it. It must be admitted there is no trick the seaway enemies will not try.

Sh-h-h, don't tell anyone, but the Russians have other plans for the waterway. They are going to use it to flood us with vodka, and then bury us in caviar.

Grave Emergency Faces Nation—Newspaper Predicts That Selfish Bloc Will Picket Congress on Housing

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Press:

President Truman's bold and imaginative program to build 2,700,000 new houses in 1946 and 1947 will dump into the lap of Congress a problem that is sure to develop a great deal of opposition on some of its details.

Most likely point of controversy: the proposed ceiling on the selling price of building lots and all houses, new or old. Yet the wild inflation already disastrously developing in this field calls for drastic action of some kind.

The current inflation in real estate represents purely fictitious values, the result of excessive demand operating upon limited supply. In the end everybody suffers, for when the boom attains its peak, as it inevitably must, it becomes a bust in almost the same breath. The peak buyer loses his shirt, the mortgage holders lose theirs, taxing agencies reap empty tills. Only the fellow who sold at the peak has any profit, and 99 times out of a hundred, unless he gages the sale to the split second, he loses his gains by having to pay inflated prices for everything he buys. Real estate is usually the first to inflate and the first to bust.

With millions of ex-service people unable to find decent housing accommodations, or any whatsoever, decent or indecent, and with millions more still to be discharged, the housing situation has become an emergency matter with a capital E.

Many of the "lucky" ones are paying through the nose for what they can find, whether they buy or rent.

"Take care of them," said General MacArthur, speaking of the men who won the war, as Japan surrendered. The Nation has an obligation to discharge, not merely implied but implicit, in the GI bill of rights.

That hopeful measure hasn't been of much help to service people because inflated values and the next-to-impossibility of getting labor and materials have made a mockery of it in the field of housing.

Property owners will resent the fixing of ceilings on lots and houses. Real-estate interests will yammer about governmental interference in private enterprise. Constructors will fight proposed emphasis on prefabricated houses.

But after all is said and done a grave emergency faces the Nation, and Homeric remedies for desperate situations are provided by the public welfare clause of the Constitution. Selfish blocks will picket Congress, but if Congress is keeping its ear to the ground it will pay more attention to the distressed cries of the homeless than to the pressure groups, for once in its recent life.

The Housing Bill

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

WASHINGTON, D. C., *March 4, 1946.*
Hon. BEN F. JENSEN,
United States Congress,
Washington, D. C.:

In the last 24 hours, officials of the Government have issued a series of irresponsible statements. These statements are so general and so broad that it would take several days to answer them. The retail lumber dealers of the United States are at all times willing to discuss fairly the reasons and cures for the housing shortage. The retail dealers have either been deprived of a hearing or have been ignored on the few occasions that their views have been made known to administrative officials. We appeal once again for a chance to be heard on a nonpartisan basis. We do not want inflation, but we do want building materials and the immediate construction of homes for veterans. The retail lumber dealers do not believe that the Patman bill will accomplish these purposes. The Buffett amendment, if attached to the Wolcott substitute bill, will come closer than any legislative proposal that has been made to accomplish these ends. The Wolcott substitute without the Buffett amendment is not acceptable. If subsidies are required for any purpose we want to know how the money is going to be used to increase production of building materials and erection of homes before any endorsement can be given.

No one in the administrative departments or on the floor of Congress has justified the expenditure of $600,000,000 in subsidies and furthermore, no one in the executive departments and on the floor of the Congress has explained just how these subsidies are to be doled out. We honestly believe that the subsidy proposal is a substitute to relieve OPA of its responsibilities to grant on a selective basis reasonable price adjustments to manufacturers of building materials, and that it will create inequities which will further curtail production. The administration now has authority to make subsidy payments through RFC, therefore let the administration explain before the Appropriations Committee how much it needs and for what products. This is not a partisan issue. We represent 23,000 retail lumber dealers in the United States and these retail lumber dealers represent every possible shade of political thinking. This association has not and will not engage in politics. The members of this association are normally responsible for more than 75 percent of the individual homes constructed in the United States, and every one of the members of this association stands ready to appear before the administrative departments of the Government and before the committees of Congress to give the reasons for the housing shortage and to explain what measures are necessary to correct it. We believe that Mr. Patman's proposal will not accomplish its alleged purpose and that the veterans who are the next-door neighbors of the retail lumber dealers will soon find this out if this bill is passed.

NATIONAL RETAIL LUMBER
DEALERS ASSOCIATION,
H. R. NORTHRUP,
Secretary-Manager.

How Much Shall We Lend?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. REED of New York. Mr. Speaker, the total gross debt and contingent liabilities of the United States Government now totals $636,898,220,145.98. The total owed to the United States by foreign countries as of July 1, 1945, was $14,791,340,307.53. Great Britain presently owes us from previous war—World War I—a principal amount of $4,368,000,000 together with unpaid interest of $2,047,664,782.58, or a total now due the United States from Great Britain from transactions prior to World War II of $6,415,664,782.58. All of these debts are a crushing load that must eventually be borne by the taxpayers of the United States, if past experience is to be any guide to the future.

A billion dollars is difficult to realize or visualize. A homely illustration may give a faint idea of the magnitude of the present obligation which this generation and future generations must pay by the sweat of the brow. If a $1,000 bill were to be placed on the pavement alongside of the Empire State Building in New York, and then other $1,000 bills placed upon the first bill until the pile of $1,000 bills were as tall as the Empire State Building the pile of $1,000 bills would amount to $1,000,000,000. It may be the idea of the New Dealers, so adept in the repudiation of promises and in the making of promises which cannot be fulfilled, to finance the socialistic government of Great Britain. What an anomaly to ask a capitalist country to finance a socialistic program in an effort to prove that socialism is a success while its capitalistic supporter is a failure.

Under leave to extend my remarks in the Appendix of the RECORD, I ask unanimous consent to insert an editorial from the Wall Street Journal of March 5, 1946. The title of the editorial is: "How Much Shall We Lend?":

HOW MUCH SHALL WE LEND?

It is possible to construe the first public report of the National Advisory Council on International Monetary and Financial Problems, which President Truman approves, as an effort on the part of this Cabinet group to limit the American Government's foreign loans yet to be made to about $7,000,000,000. The chief questions the report puts before Congress are: (1) If the recommended loans are made, can the Government's lending stop there? (2) Will these "loans" in truth be loans or gifts?

To begin with, limitation as implied in the report applies only to transactions before June 30, 1947. Governmental intentions and policies beyond that date are left open. The Council and President Truman urge that Congress extend the $3,750,000,000 50-year credit to Great Britain but leave all other lending of the public funds to the Export-Import Bank, which would have authority to lend to a total of $4,750,000,000, of which loan resources Congress has already put $3,500,000,000 at its command. An additional lending authority of $1,250,000,000 for the Bank is requested. Its then permitted maximum of loans, together with the British credit, would come to $8,500,000,000.

In addition, the United States is committed to provide $2,570,000,000 of the working capital of the Monetary Fund and $3,175,000,000 of the capital of the International Bank, bringing existing and proposed commitments up to $14,425,000,000. Our subscriptions to Monetary Fund and International Bank are not immediately payable in full. The President's covering letter with the Council report treats $950,000,000 of the Fund contributions as a "noncash item," since it is to take the form of non-interest-bearing Treasury certificates. But the governors of the Fund may demand that these certificates be converted into dollar credits. Only 10 percent of the Bank's capital allotment is expected to be called for before June 30, 1947, but the remainder is a contingent liability.

The program of the Advisory Council and the President thus contemplates further loans, credits, and capital advances of roundly $13,000,000,000—the $14,425,000,000 above mentioned less the Export-Import Bank's commitments already made, which on December 31, 1945, amounted to $1,559,000,000. These loans and contributions would be made step by step during several coming years. In a different category is the Government's further expenditure through UNRRA of perhaps $1,000,000,000, yet this is also a draft upon the United States Treasury.

All these projected transactions mean purchasing power for the borrower nations, the larger part of which will be exercised in this country. The resulting stimulus to our export trade is emphasized; the Advisory Council says: "Only by the reestablishment of high levels of production and trade the world over can the United States be assured in future years of a sustained level of exports appropriate to the maintenance of high levels of domestic production and employment." But the Council does not neglect to stress political aspects of the program. It says, "Economic stability will foster peace" and speaks of "the main objective of the foreign economic policy of the United States, which is to lay the economic foundations of the peace."

Throughout the Advisory Council's report runs the assumption that contemplated loans are to be investments, on which interest shall be paid currently, the principal of which is eventually to be returned. It describes the Export-Import Bank as considering, among other things, "the capacity of the borrower to repay." It speaks of the time "when net repayment begins, whether this be in a few years or many decades from now." It says nothing about willingness or unwillingness of borrowers to repay, though these are to be mainly intergovernment transactions. Since the end of World War I we have seen governments repudiate their obligations to other governments; we now see them coming back to the same lender for new loans.

Loans of this sort are political transactions in more senses than one. When serv-

ice of a foreign loan imposes upon the people of the debtor nations an unwelcome degree of "austerity," a government which would fulfill the contract obligations can be deposed. Intergovernment loans made among belligerents during a war—such as our $41,000,000,000 of lend-lease assistance—are rightly regarded as the lenders' contributions to a common war effort. Postwar government borrowers will assuredly argue hereafter that lend-lease and loans after the fighting were the same in nature—that both were means to equality of sacrifice in the struggle to free mankind from tyranny. We have lately heard many Britons assert that the United States is at least $6,000,000,000 in arrears of its just share in the material sacrifice made by the United Kingdom alone.

So we had better ask ourselves some questions like these:

1. Can we suppose that any major part of the loans our Government may now extend will be repaid, or that such repayment as is made will not engender a sense of wanton injury of the weak by the strong?

2. Are we willing to donate the larger part or the whole of $13,000,000,000, or whatever the total may ultimately become, to assist the outside world in its economic rehabilitation?

3. Would the drain of the world's needs concentrated upon our resources, added to the drafts made upon them by the war, impair our long-term ability to play our needed part in expanded world trade while adequately meeting our domestic requirements?

4. Would the contemplated loans strengthen or weaken the will of other peoples to help themselves?

5. Is it wise and sound national policy to subsidize our export trades, if the contemplated loans will not surely serve the other purposes ascribed to them by their advocates?

We submit that at the root of these grave issues lies the fact that the proposed loans would be intergovernment transactions. We believe that the good and useful purposes which their proponents say they would serve would be better served by speeding up the International Bank, with special attention to its functions as guarantor of loans from private investors to credit-worthy private borrowers.

We think the record is clear that intergovernment loans in peacetimes serve neither peace nor economic progress.

Abuses in Veterans' Hospitals

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Inquirer of March 3, 1946:

VETERANS' ADMINISTRATION HOSPITAL ABUSES

Early last year Representative PHILBIN, of Massachusetts, made charges of inefficiency and callous treatment of veterans in veterans' hospitals. At that time the Veterans' Administration was still under the direction of Brigadier General Hines. Some of his defenders in Congress indignantly denied the Philbin charges.

Now a special veterans' subcommittee of the House has announced a series of findings after an investigation, and noteworthy among them is one that it found "some cases of beatings and mistreatment of patients in certain Veterans' Administration hospitals."

This is partly attributed to inefficient personnel and officials who formerly could not be removed except under elaborate processes; assignment of soldiers and other untrained personnel as hospital aides as a war emergency measure and a certain amount of "administrative inflexibility and complacency."

Without doubt there are "many loyal and hardworking staff members," as the committee says, who have done their best to cope with "an increasingly grave emergency and meet the needs of the sick and disabled." This is not a blanket accusation against faithful and conscientious workers, who are touched by the spectacle of brave soldiers who have suffered for their country's cause.

But the most adequate measures must be taken, especially in neuropsychiatric hospitals, to prevent a recurrence of such abuses. General Bradley should be given specific authority to hire and fire Veterans' Administration employees. The committee urges creation of an independent board of review to hear complaints relative to operation of hospitals and treatment accorded veterans. These and all other steps necessary should be taken without delay.

The Cost of Strikes

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of Thursday, February 28, 1946:

MORE ON THE COST OF STRIKES

The last 6 months has brought the most dramatic illustration of the cost of strikes that the country has seen in many years.

Figures compiled by the United States News, a privately published weekly on national affairs, show that in the first 6 months of "peace" 63,000,000 man-days of production were lost, $560,000,000 in direct wages were lost in struck industries, and unemployment caused in other industries (because of the strikes) cost many more millions. Unfilled orders run into billions, and loss of sales commissions runs into hundreds of millions.

In the auto strike, the company offered 13.5 cents an hour increase and the union agreed to accept 19.5 cents. The first 13 weeks of the strike cost each worker about $650. At 6 cents an hour—the differential in dispute—it would take the strikers 5 years and 3 months to make this up. In steel, the spread was less. The strike netted 3 cents an hour over what was offered. Even though the strike was brief, each worker will require 2½ years to make up the $195 that was lost.

Since September, electrical workers have lost 53 million dollars; bituminous coal workers, 30 millions; lumber and meat packers, 19 millions each; AFL machinists in the San Francisco bay area, 36 millions; glass industry workers, 9 millions.

The argument is sometimes made that this is unfair computation, because, even though the strikers lose money, there are other gains; also, that the total gains to all labor must be taken into consideration. Whatever may be said for these factors in ordinary times, in the present postwar reconversion period it is a pretty safe guess that the total loss from reconversion delay, in all industry in the country, far surpasses any gains that the strikes have brought or will bring to labor. Our national reconversion program has really been thrown out of gear—set back at least 3 months, says John D. Small, Administrator of Civilian Production, and our industrial production, he adds, has hit a new low since the spring of 1941, because of the strikes.

It is not suggested that employers were all angels, or that they do not bear some responsibility for the strikes. But the preponderance of evidence indicates that labor could have won pretty nearly a 15 percent increase across the board in the struck industries by bargaining to the limit without strikes.

Contrary to charges of some labor leaders, there is no evidence that industry generally took part in any conspiracy to smash the unions and reduce wages. Rather, it may be said that industry proposed, more than it had for some years, to assert what it conceived to be its rights in collective bargaining rather than accept, without bargaining, everything that labor demanded.

Substantial wage increases were expected by the public and were offered by management. It becomes increasingly clear that the union leadership which forced the disputes to a strike stage, with a few exceptions, was unwise, both for memberships involved and for the whole country, in this difficult reconversion period when we should have gone full speed ahead.

Look Who Is Wearing "Sockless Jerry's" Shoes

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from a Philadelphia paper of February 20, 1946:

LOOK WHO IS WEARING "SOCKLESS JERRY'S" SHOES

We can't tell for sure whether "Sockless Jerry" Simpson wore socks or not.

His opponents said he didn't.

But we do know where he stood on economics. "Sockless Jerry" was a political product of the post-Civil War period. He was a member of various minor parties—Greenback, Union Labor, People's Party. He was finally elected to Congress from Kansas. He was one of the phenomena William Allen White had in mind when he wrote his famous editorial, What's the Matter With Kansas?

Simpson was for inflation, for practically unlimited amounts of paper money. He wanted prices to go up, but fast.

We also know who has stepped into "Sockless Jerry's" economic shoes—the National Association of Manufacturers.

The NAM says it's against inflation.

But what it advocates is removal of all price controls on manufactured goods.

It wants prices to go up before they go down.

With price controls off, the NAM reasons, production would go up and prices would come down "within a reasonable time."

But the NAM doesn't say what it means by a "reasonable time." It doesn't say what would happen to the wage earner in the meantime.

And it doesn't say what would happen to the NAM members in the meantime. We know. They'd be making money faster than "Sockless Jerry" wanted the Government to run the printing presses—while the wage earner would have a hard time buying shoes.

We are glad that Chester Bowles, newly appointed Director of Economic Stabilization and former head of OPA, didn't miss those NAM ads.

He told the House Banking and Currency Committee on Monday that the NAM was an irresponsible pressure group. He asked the Congressmen to regard its argument against price controls with a cold and fishy eye.

He warned of inflation and the speculative fever and added: "The lobbyists and profiteers are licking their chops."

Bowles admitted that the administration had made mistakes in taking off wartime controls too fast.

He asked Congress to forget the NAM arguments, to extend the Price Control Act and the payment of subsidies beyond the present expiration date of June 30 this year.

If this is done, Bowles said, the Government's new Big Steel formula would merely be a bulge in a relatively narrow sector of the price line. It would affect chiefly metal goods, should have little effect on essential expenditures: rent, food, clothing.

Bowles has given Congress the choice—of following the arguments of the National Association of Manufacturers and thus inviting disastrous inflation, or of backing the OPA to give the wage earner a chance to buy the things he makes at a reasonable price.

If the NAM wins, we may all wind up sockless, because we can't afford to buy 'em.

Address of Hon. Philip J. Philbin, of Massachusetts, at Atlantic Union College, Lancaster, Mass.

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at Atlantic Union College, Lancaster, Mass., March 3, 1946:

It is with a deep sense of honor and privilege that I join with you tonight in welcoming back the patriotic and heroic service men and women of this community.

Let me compliment and congratulate your able and distinguished leader, President Jones, all the officials of the college, and each and every one of you here present, who have made this soul-stirring occasion so outstanding, and so successful.

Our first thought tonight should be and is to express to almighty God our profound gratitude for our deliverance from the terrible scourge of war and the return of our beloved sons and daughters to their homes, their families, their schools, and civilian pursuits.

Those who have served our country from this community and from the brethren of your group have made superlative contributions to the cause of liberty and democracy which we can never forget. We give them all our humble thanks, though in truth we can never possibly thank them for their valiant service. Their devotion, their loyalty, their courage, their fidelity are absolutely unexcelled. They have recorded a glorious and illustrious chapter in the history of noble deeds and patriotic sacrifice. Time does not permit me on this proud occasion, which we reserve primarily for expressions of gratitude and rejoicing at the safe return of our young friends, to deal fully with this subject, but I would be remiss in my duty as your Congressman, as your steadfast friend, and an ordinary lover of justice and truth, if I were not to make reference this evening to the special achievements of your young men.

These men devoted their abilities, offered their energies, and, in many cases, gave their lives to our cause. Remember, they did not take life, they saved it, and their deeds of heroism and valor were not exceeded by those of any other group.

These men, boys to us, served and worked on land, sea, and in the air, in every theater of war, on every world battle front. Though they moved in places of greatest danger, submitted themselves to the extremest hazards of war, they walked calmly and unafraid. They did not flinch in the face of death. They did not hesitate in the time of crisis. Armed for the most part only with first-aid kits they moved everywhere truly as agents of mercy to bind up the wounds of the suffering, to revive the stricken, to succor the helpless, and to comfort the dying. They relieved those who fell in battle, they rescued those who could not find a haven, and they restored those who were maimed, broken and scarred, cut, crushed and battered by the terrible weapons of modern scientific warfare. How many lives they saved no one will ever know, but thousands, yes, perhaps hundreds of thousands of American boys who were cruelly smitten by our desperate ruthless enemies will ever breathe a prayerful sigh of gratitude and everlasting appreciation for the merciful ministrations of the noble corpsmen of the Adventist group, who challenged death itself in every blazing corner of the earth where the war was waged, to salvage, to rescue, to heal, to relieve, and to restore to health and life the bleeding, pathetic victims of man's own insensate bestiality and hate.

These men did not carry a musket in their hands, they did not kill and slay and maim and wound their fellow man. They did not fire the great battle guns of the fleet or press the levers that dropped the deadly bombs from the air. Theirs was the work of mercy, theirs was one of the greatest contributions to our common war effort, theirs was a self-sacrificing devotion to country that was made without spilling one drop of human blood or the taking of a single life.

From these 12,000 or more Seventh-Day Adventists who rendered these priceless and magnificent services in the Army, the Navy, and Air Corps, some of the most heroic exploits of the war have come. Fearless and dauntless, courageous and unflinching to the very end, even to death itself, is it any wonder that the great Government of the United States, through our esteemed President, should have singled out one of these noble young heroes, Corp. Desmond T. Doss, Seventh-Day Adventist youth of Lynchburg, Va., to receive the Congressional Medal of Honor. Let me read you a part of his citation:

"Pfc Desmond T. Doss was a Company A man with the Three Hundred and Seventh Infantry Medical Detachment when the first battalion of that regiment assaulted a jagged escarpment 400 feet high on one of the Japanese islands on April 29, 1945.

"As our troops gained the summit, a heavy concentration of artillery, mortar, and machine-gun fire crashed into them, inflicting approximately 75 casualties and driving the others back. Private Doss refused to seek cover and remained in the fire-swept area with the many stricken, carrying them one by one to the edge of the escarpment and there lowering them on a rope-supported litter down the face of a cliff.

"On May 2, he again exposed himself to heavy rifle and mortar fire, in rescuing a wounded man 200 yards forward of the lines; and 2 days later he treated four men who had been cut down while assaulting a strongly defended cave, advancing through a shower of grenades to within 8 yards of enemy forces in a cave mouth, where he dressed his comrades' wounds before making four separate trips under fire to evacuate them to safety.

"On May 5, he unhesitatingly braved enemy shelling and small-arms fire to assist an artillery officer. He applied bandages, moved his patient to a spot that offered some protection from fire, and while shells fell close by, painstakingly administered plasma. Later that day, when an American was severely wounded by fire from a cave, Private Doss crawled to him where he had fallen 25 feet from the enemy position, rendered aid, and carried him 100 yards to safety while continually exposed to enemy fire.

"On May 21 in a night attack on high ground he remained in exposed territory while the rest of his company took cover, fearlessly risking the chance that he would be mistaken for an infiltrating Japanese and giving aid to the injured until he was himself seriously wounded in the legs by the explosion of a grenade. Rather than call another aid man from cover, he cared for his own injuries and waited 5 hours before litter bearers reached him and started carrying him to cover.

"The trio was caught in an enemy tank attack and Private Doss, seeing a more critically wounded man nearby, crawled off the litter and directed the bearers to give their first attention to the other man. Waiting the litter bearers' return, he was again struck, this time suffering a compound fracture of the arm. With magnificent fortitude he bound a rifle stock to his shattered arm as a splint and then crawled 300 yards over rough terrain to the aid station.

"Through his outstanding bravery and unflinching determination in the face of desperately dangerous conditions Private Doss saved the lives of many soldiers. His name became a symbol throughout the Seventy-seventh Infantry Division for outstanding gallantry far above and beyond the call of duty."

Think of it, my friends, think of the magnificent spirit of sacrifice, devotion, service and loyalty that moved this gallant young man. No human words can possibly portray his fearless attachment to duty, his high purpose to rescue and help his fellow men, his unceasing zeal in carrying out works of mercy. This is an unusual illustration indeed, but from my own knowledge of the official record of the service of your group, it typifies perhaps as well as anything else could, the unexcelled sacrifices that your boys have made to forward the cause of our country in the time of its greatest trial. I could go on and on to give examples of the exceptional work and service of our medical corpsmen, your medical corpsmen, who were never afraid to die—and many of them did die—and who never hesitated for a moment, no matter how great the hazard, to help their comrades. I may well say that so long as America can develop men imbued with the profound love of God and fellow man that animated these gallant corpsmen, the fountainhead of our liberty and freedom will be secure. Theirs was a triumph of the spiritual over the things of a materialistic world, over the most terrible engines of human destruction, over the most frightening events of war.

We can all learn a precious lesson from their devotion and unstinted sacrifice. But we must do more than that; we must give some practical expression to the great patriotism and idealism which they brought into the service of their country. We must so shape our future conduct and the conduct of the affairs of our Government that the immortal truths for which they made these immutable sacrifices, the immortal truths of justice, freedom, democracy, and faith may be preserved in our way of life and in our religious, political, social, and economic institutions. We must strive to bring into reality the lasting peace for which

they and their other noble comrades suffered to insure. We must work to end this insensate, periodic slaughter of our young men, to banish these hates, these prejudices, these loathings of the spirit and the mind, these greeds for power, these lusts for conquest and possessions—all the gross brutalizing tyrannies—which breed strife between human beings and nations.

We must ourselves be true to the immortal truths that are set forth in our religious teachings, Constitution, the right of our people to be free, to go their own way of life, and to practice and enjoy their conscientious beliefs and convictions and the worship and faith of their own choice. We do not seek to dictate to others free to choose, the kind of government they shall have. We ask that they shall "do unto others as they would have others do unto them." We ask that they join with us to stop this recurring butchery, bloodshed, and suffering which reduces mankind to the level of the jungle beast and which in this atomic age, if pursued to its logical end, will surely bring all civilization down in ruins.

Let us remember that the government is not our master, the state is not our master, but our servant. The government and the state must bring to us the blessings of democracy and not the cursed slavery of dictatorship. Let us keep all our institutions free and democratic, let us insure that the young men and women of this and future generations will not only be spared the horrors of war but will be accorded the blessings of peace, will be given the right to pursue their own chosen careers with the least possible interference by the state and without having pressed down on them the heavy burdens of militarism and regimentation.

We have just finished a great, costly, and bloody war. As yet, we have not brought all our boys back from that war, though we hope that time is close at hand. Let us put a stop to jingoistic, war-monging talk. Let us cease trying to regiment our young men into the very military patterns that they fought to destroy elsewhere. Let us be prepared for any eventuality and maintain an adequate national defense to guard our Nation from attack but let us work and strive for a peaceful democratic world where free nations will settle their disputes without resorting to force, death, and destruction.

We cannot be too vigilant in this work because militaristic movements are active and powerful, led sometimes by sincere patriotic groups.

To all intents and purposes an aroused public opinion springing spontaneously from the homes, churches, educational institutions, labor, and management groups and virtually every other segment of the American people has, for the time being at least, completely overwhelmed the peacetime draft, or universal military service.

The proposal for extension of Selective Service, that is, the wartime draft is equally objectionable to opponents of conscription. Like universal service, it would continue taking our young men into the armed forces by compulsion. It would continue taking them away from their homes, families, schools and jobs, breaking and interrupting their careers and regimenting them into military components in Army camps where they will be subject to all the undesirable conditions and temptations of that atmosphere.

In the main, there are three arguments for this proposal, in fact for both proposals. First, that they are necessary to furnish replacements for demobilized personnel. Secondly, that they are essential to our national defense, and thirdly, that the Army can discipline, train, educate and develop our young men better than their parents, their religious leaders and our American schools and colleges. With full respect to the proponents, to my mind, all these arguments are specious and untenable.

The present strength of the volunteer forces of Regular Army, Navy and Marine Corps is in the neighborhood of 1,000,000 men, and it is growing every day. Such a force is more than enough, if properly deployed—and there has been enough time since VJ-day for that—to perform all essential occupational duties and, together with the millions of highly trained, experienced veterans who have already been, or shortly wil be demobilized, to provide an adequate national defense in peacetime.

Of course, if we anticipate war in the immediate future, or the next few years, this force may not be sufficient. I do not believe that our Nation is presently in danger of war though we should be prepared for every eventuality. More than that, we should work to strengthen the instrumentalities of peace and to make war impossible. The draft moves in precisely the opposite direction. It pours oil on the smouldering fires of international unrest. The adoption of the draft, either by extending selective service, or by adopting universal conscription, will certainly excite the suspicion and distrust of other nations and certainly result in another mad competitive race of armies and armaments that would in every likelihood culminate in another, and probably the final, world war.

After all the pious words about the Atlantic Charter, self-determination for all nations, peace, justice, tolerance and decency which our Government has broadcast by every manner and means throughout the world during the past few years, this Nation ought to be ashamed of itself at this time to be setting the example to other nations, by conscription or otherwise, of starting another race in armies and armaments. In fact, if we still retain any faith whatsoever in our oft-repeated, widely disseminated war aims, it is our solemn duty to future generations of young Americans and to humanity itself to strive for peace, to furnish the strong, militant leadership necessary to secure lasting peace instead of working to set up the conditions and instruments that will inevitably lead to war.

Moreover, it is now evident that armies of the future, if we must have them, will not be trained along conventional military lines as foot soldiers and infantrymen. The atomic bomb has already reshaped and revolutionized future warfare. Basic training as the Army has known it during the recent war is obsolete. The soldier of the future, for the most part, must be a carefully trained and skilled technical specialist, schooled in the scientific laboratory and practiced in factory and industrial techniques. He must be equally at home in the air, on land, and on and under the sea. The real military effective of the future may well never smell the smoke of battle. From locations far removed from his objectives he will press buttons and exercise remote control over electrical and chemical devices and weapons that will spread havoc and destruction thousands of miles away. Such an army, such a national defense embracing coordinated naval and aviation units must be made up of a relatively small but hard striking, regular, professional highly mechanized force that can spring into action over a very broad front on a moment's notice.

Neither selective service nor the peacetime draft could ever furnish such a force because science is moving so fast that reserves trained under these programs would be outdated, and outdated almost as quickly as they could be trained. Few citizens would oppose voluntary training for our young men in National Guard, ROTC, and civilian defense and scientific academic work, but none of these activities should have compulsory features which are offensive to the American tradition and highly objectionable to most of our people.

Our boys fought and died to defeat militarism and not to adopt the basic patterns of military dictatorship in our own country.

Before we launch upon the building of large-scale provocative military establishments, the least we can do in the sacred name of those who have sacrificed so much for a decent future world is to intensify our efforts for peace. It is surely not only most appropriate but most urgent that we should try with all our energy sincerely through utilizing the UNO and all other agencies working for peace through international agreement to end military conscription throughout the world, outlaw the atomic bomb just as we outlawed poison gas, earnestly strive for the reduction of large armaments and use every other means available to us to put an end to the inhuman and periodic killing and maiming of our finest young men and spare the world the misery, suffering and social unrest that war always entails.

The least we can do, I repeat, and want to emphasize, before we set out on a program of militarization of our young men and economy is to make insistent and earnest appeals and efforts for peace. When other nations reject them and it should become evident to us that they are unwilling to act in good faith, that they insist on conscription and armaments to enforce policies of aggression, imperialism and totalitarian infiltration that will lead to war, it will then be time enough for us to consider the stark realities and the necessities of having to live in a world that will be turned into an armed camp.

Private first class Doss and his comrades of the Medical Corps and all their other comrades of the fighting fronts of every race and creed, through heroism and sacrifice have pointed out to us the path to peace. The least we can do as a people and as a nation is to live up to the great ideals, the lofty aspirations for which they fought, suffered and died. If we truly keep their sacrifices and sufferings in mind, if we have the same high purpose and the same warm faith, the same love of God, humanity and country that animated them, if we cling tenaciously to the fundamentals of freedom and democracy for the perpetuation of which unspeakable carnage has afflicted the whole world, we will rapidly move into a brighter day, a day of prosperity and peace for all our American people and for the world.

Philip Rudich

EXTENSION OF REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. HAND. Mr. Speaker, in the midst of all the grave industrial disputes which are having such a deplorable effect on the welfare of our country, it is my pleasure to speak briefly of a labor leader in my congressional district, who is doing an outstanding job.

Mr. Philip Rudich, the manager of south Jersey joint board, Amalgamated Clothing Workers of America, has brought to his present work a wealth of personal experience, as well as a calm and judicious temperament, which has proven highly beneficial to all of south Jersey. He has been a manual worker and he knows the workers' problems, but he likewise knows and appreciates the problems and difficulties of management.

He has been concerned with the welfare of the worker in the clothing industry since his early youth, when he was employed in Baltimore. He came to

my district in 1932, in the depths of depression, and has made a vast contribution to the welfare of working people and to industrial peace and good relationships.

Mr. Speaker, there has been no district in the United States with a better war record than mine. Industrial enterprise increased and prospered, and production was maintained efficiently and consistently, and still is. To this happy situation, the efforts of Phil Rudich have contributed in substantial measure.

He has become a real part of the community, and has been of help and assistance in many civic endeavors, especially in the wartime bond and material conservation drives.

That he is held in esteem and affection is evidenced by his fiftieth birthday celebration, which occurred on December 23, 1945, which, in most inclement weather, was attended by 800 friends from all walks of life and representing all shades of political opinion.

It is my pleasure to make this brief mention of his work and to hope that it will continue successfully in the future as it has in the past.

Lumber Dealer Asks for Price Control To Prevent Inflation

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. PATMAN. Mr. Speaker, during the past several weeks I have repeatedly expressed the view that the honest and legitimate real-estate men and lumber dealers of the country would refuse to support the efforts of the speculators to profiteer at the expense of the returning veterans. Today I received a letter from a lumber dealer who says that he would profit considerably if my bill were defeated, but he is strongly urging its passage because of his fear of inflation.

GREAT LAKES, ILL., *March 1, 1946.*
Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D. C.

DEAR MR. PATMAN: I have been following closely your efforts to put ceilings upon residential construction, both new and old. Two nights ago I had the privilege of hearing your discussion on the radio from Washington. As manager of a retail lumberyard with a large residential construction volume, as a real-estate operator, and as the owner of a construction company specializing in housing, I would like to take this opportunity to congratulate you on your understanding of the problems before us. I think it is undoubtedly necessary at this time to put in sensible price controls on an item that has reached a very dangerous point of inflation.

No doubt I would profit considerably if your bill were defeated, but I am strongly urging passage of it in order that what I see as inflation of tremendous proportions may be averted.

I also strongly urge that the program be administered directly by the Federal Housing Administration, with whom I have had considerable dealings. The vast knowledge they have accumulated of actual construction costs and methods will be the greatest contribution to the success of the measure in operation.

If I can be of any service to you at this or any other time, please do not hesitate to call on me. I expect to return to my home in Lufkin, Tex., upon discharge from the Navy within the next month.

Yours very truly,
ARTHUR TEMPLE, JR.,
S1c, Units 3 and 4, Building 1200, Disbursing Section; Duty, United States Navy Personnel Separation Center, Great Lakes, Ill.

Substandard Wages Paid in So-Called High-Wage Areas

EXTENSION OF REMARKS
OF
HON. JAMES P. GEELAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. GEELAN. Mr. Speaker, there is a widespread notion among people in this country, most of whom should be better informed, that substandard wages are paid only to workers in the Southern States or in a few isolated spots in this country. Actually, very low wages are paid to a proportion of workers in all parts of the country including those sections that are commonly supposed to be high-wage areas. You will find pockets as it were, of substandard wages in all parts of this country—North, South, East, and West. Actually, the only differences between certain regions insofar as wages is concerned, is the extent and severity of substandard wages in one place as compared to another. The entire Nation needs the protection of legislation which would amend the Fair Labor Standards Act and thus raise wages everywhere nearer to what may be considered an "American standard." To illustrate this point, I wish to reproduce herewith an editorial appearing in the Connecticut Vanguard in its January 1946 issue. I quote:

COMPANY CASE SHOWS MINIMUM-WAGE LAW NEED

We have a left-handed compliment to pay to a certain company. This firm has been running newspaper advertisements seeking female employees at 55 cents an hour. There are other firms around the State paying wages as low as this, but few have the courage to come right out in public and admit it. Congratulations to this company on its courage.

The vanguard is grateful to this company for helping the CIO to dispel the myth of high wages. The CIO is doing some work in this direction itself, but an employer with the frankness of this company can always do it better.

A contract, which includes the 55-cent rate, was recently negotiated with the company by the union of mine, mill, and smelter workers. No apology is due from the union. Before negotiations the minimum pay rate was 45 cents. What the union accomplished was an increase amounting to more than 22 percent. In addition, the union obtained the inclusion in the contract of a wage reopening clause, so that a further increase can be asked following settlement of the general wage drive in the area. In other words, the union is not through with the company.

But the union should not in the first place have had to fight for a wage raise from a paltry 45 cents an hour to a puny 55 cents. A minimum wage at a standard of decency should be a matter of law. It should be possible for unions to concentrate on raising pay standards above the minimums of decency and not be compelled to devote time to lifting pay levels out of the gutter.

If Congress would pass the Pepper amendment to the minimum-wage law a Federal floor under wages of 65 cents an hour would be established.

The CIO talks a good deal today about the need of a social conscience among industrial employers. This particular company's case seems to us to be a case in point. This firm is hiring women employees at 55 cents an hour, $22 a week, $1,144 a year—less deductions. The president of the company is paid $48,000 a year; the vice president receives $30,000; and the executive vice president, $26,979. Directors and five officers, including the afore-mentioned, receive a total of $140,979.

We can't help wondering how people like these feel about consigning their employees to substandard living when they themselves, out of the profits of the same industry, live so richly.

Letter of Ralph R. Todd, of Greensboro, N. C.

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a letter received from Mr. Ralph R. Todd, a veteran who has seen 3½ years of service, from Greensboro, N. C., outlining, in my opinion, sound suggestions:

GREENSBORO, N. C., *February 8, 1946.*
The Honorable CARL L. DURHAM,
Congressman, Sixth District North Carolina, House of Congress, Washington, D. C.

DEAR SIR: The writer has just returned from service after 3½ years, with 2 years in the ETO, and it was decided that many of us would write our Congressmen immediately upon our return and express our views in regard to certain matters—for what they are worth:

SECURITY

We feel we must have a strong Army in order to win the peace—troops for the Zone of Interior, occupation forces, and a strong commitment to back up UNO. If necessary to do so to maintain this security force, we should by all means continue the draft. However, a program should be instigated to sell these men going in now on the idea that the job they are doing is just as important as the job the men did during the war—that what we do now and the manner in which we do it is going to determine whether we have a long period of peace, or continue major wars at 10- to 20-year intervals.

FOREIGN POLICY

It is felt we should have a strong foreign policy, with the necessary force to back it up. There is already some talk about the State Department recognizing the forceful acquisition of the Baltics by Russia, which is definitely against point 6 of President

Truman's 12-point foreign policy and represents an appeasement policy which has already proven itself to be the road toward trouble. These European countries are today a seething mass of hatred—and will continue to be so as long as the major powers continue to play politics at the expense of the smaller powers. We have stated our policies in the form of the Atlantic Charter, the "four freedoms," and President Truman's foreign policy—so, let's follow through on our stated policies, whether it be in relation to the Baltics, Turkey, Iran, or any other countries, with the forces to back up our decisions. The powers we deal with today appreciate straight talk, and that's what we should give them.

UNRRA

The writer was ammunition officer throughout the entire war, and also worked as such for several months during the occupation. I have had an opportunity to work and discuss matters with hundreds of displaced persons. I have been in and out of the displaced persons camps. I have talked with numbers of my fellow officers who have been in charge of displaced persons' trains into Poland. I have discussed the matter with fellow officers in the military government. In short, I have studied the matter over a period of several months in the American occupied zone in Germany. It seems that a considerable number of people here have the mistaken idea that UNRRA is strictly a Jewish problem, which conception is quite wrong. These displaced persons are made up of refugees from the Nazis and from Russian-dominated countries; they are, for the most part, political refugees, and cannot be repatriated due to retaliation against them. Even President Roosevelt recognized this and stated that these people would not be forced back to areas where it has been proved that retaliation against them will amount to persecutions just as bad as the Nazis carried on. The plight of all these people is pitiful, and we should continue to help them to the extent of our ability, treating each and everyone on an equal basis—whether he be a Gentile, Jew, Pole, Baltic, Balkan—in all matters, food, housing, immigration privileges, etc., until the problem is settled. To do otherwise is inhumane and breeds for trouble.

FOOD FOR EUROPE

It is felt that everything possible must be done to keep the rest of the world from starving. Some of the people in Europe who were looking for the happy day for the Allies to win the war are already murmuring that "most anything is better than present conditions"—with children dying of malnutrition and others going hungry with bleak possibilities—these things make for restlessness and for trouble which breeds for fanatics like Hitler. We must help during this critical time until economic conditions begin to stabilize—if nothing else, strictly from a selfish standpoint.

INTELLIGENCE

With our world citizenship responsibilities and our security problems facing us as never before, we need in addition to our diplomatic corps and our consuls a corps of men throughout the world to report back to our State Department or some such central agency the trend of thinking of the men in the street—the bakers, local bankers, local merchants, and even local politicians, as well as to keep an eye on any war plants that may be set up in out-of-the-way areas. Experience has taught us that we get only a portion of the picture from exchange of viewpoints from our diplomats, who are told only what the respective governments want us to know. If our Government can keep abreast of the trend of thinking of the masses, utilize this information, and set policies accordingly, it is felt we could go a long way toward eliminating future conflicts.

It is hoped that out of the millions of men overseas who had an opportunity to study conditions and gather conclusions, that many of them will take the opportunity to pass these impressions to those responsible for setting up our policies—not as a member of a pressure group—or not with an ax to grind. If this is done and the impressions are channeled in the right directions, I feel a great deal will have been accomplished.

Thanking you, I remain,

Sincerely,

RALPH R. TODD.

Lithuania and Liberty

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein an article entitled "Lithuania and Liberty," by Dr. W. Elmer Ekblaw, of Clark University, Worcester, Mass., eminent scholar and public figure.

This article concisely sets forth the case of Lithuanian freedom and the urgent need for relieving that afflicted country and noble people of cruel oppression and unwelcome domination.

I urge our State Department to act at once through the use of good offices to liberate Lithuania and the other Baltic and Balkan states who are seeking their sovereignty and independence.

The article follows:

LITHUANIA AND LIBERTY

(By Dr. W. Elmer Ekblaw, Clark University)

The Lithuanians in America's population have recently celebrated the twenty-eighth anniversary of their independent statehood following the First World War. By appropriate ceremonials they have recalled the opportunity for service, the vision of happiness in the promise of liberty, and the universal enthusiasm of their people, that February 16, 28 years ago, opened up for them on their political and cultural horizon. They have not only celebrated the anniversary of that glorious day, but they have reconsecrated themselves to the cause of freedom. They have resolved more firmly than ever, to crusade courageously, unceasingly, and faithfully for the restoration of that liberty, that independence of sovereignty, that bright promise of happiness and opportunity for service among the free nations of the world, which Lithuania deserves and which Russia has so treacherously and so unjustifiably wrested from her.

What of the Lithuanians in Lithuania? They dare not raise their voices in protest against the cruel fate they suffer, much less have they heart to do so, as they realize how wretched is their slavery, how cruel is their bondage, how merciless is the treatment that has become their lot under the Russian tyranny. They see little hope for the future. Betrayed by the Russian Government that deliberately and cynically violated every solemn treaty it made with their country—the Peace Pact of 1920, the Nonaggression Act of 1926, and the Mutual Assistance Pact of 1939—the people have now no chance, no strength, no power to resist the complete and ruthless Russification of their beloved land.

The political history of Lithuania for the last 6 years, albeit a record of patriotism, persistent effort for neutrality, and patient attempt to placate her two mighty enemies, Germany on the one hand, and Russia on the other, has been a sad story of delusion, despair, and final exploitation and subjugation first by one and then the other. Everything that Lithuania could honorably do to preserve her independence and integrity she did, but to no avail. A small land set between two wolfishly imperialist aggressors, she fell victim first to one and then the other, despite her determined and valiant struggle to retain her place among the free, sovereign nations. Since Russia's seizure of the little land, there has been no mercy, no justice, no salvation in sight for the Lithuanians. They are now a people in bondage, as bitter as any that ever befell any people, as savage and terrible as any that Babylon, or Rome, or any conqueror ever imposed upon any people.

The tide will turn. The day of reckoning will come—perhaps not so soon as the more hopeful Lithuanians would like, but surely. "The mills of God grind slowly, but they grind exceeding fine." The leaven of freedom is forever working. Tyranny cannot endure. Injustice cannot prevail. And so the faithful folk of Lithuanian stock in America, celebrating the anniversary of their former liberation and reasserting their right to freedom, restating their indubitable claims to justice, have sound reason for their faith, their hope.

God grant that America and Britain, and all the rest of the freedom-loving nations of the world, stand steadfast for the freedom and autonomy of the Baltic States and peoples, as they have so far done; grant that there may be no wavering in their support of the rights of such small nations to liberty, and sovereignty over their own land and folk.

All honor to the faith, the courage, the patience of the Lithuanians, who dare so heroically to assert their rights; may they regain them all!

Clothing Workers Demand Passage of Housing Bill

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. PATMAN. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I should like to include the following statement from Jacob S. Potofsky, general secretary-treasurer of the Amalgamated Clothing Workers of America.

This organization represents 325,000 Americans, many of them veterans of World War II. I believe the Members would like to see that they have constituents who feel differently on the housing problem from the National Association of Real Estate Boards.

Hon. WRIGHT PATMAN,

Member of Congress,

Washington, D. C.:

Amalgamated Clothing Workers of America, representing 325,000 members and families, many of them veterans of this war, wholeheartedly support your housing bill and urge its passage without substitutes or crippling amendments. Veterans' housing shortage so critical that it will forever be a blot upon Congress if it fails to make low-cost materials

and housing available to them after their sacrifice to keep this country safe and free. American people will never understand Congressmen who would place private housing material and real-estate profits above essential needs of American heroes. We congratulate you on your fight and urge you to serve notice on your colleagues American people will never forget any failure to pass your splendid measure.

JACOB S. POTOFSKY,
General Secretary-Treasurer, Amalgamated Clothing Workers of America.

Vandenberg Policy Soundly Based

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. MUNDT. Mr. Speaker, ever since returning from Russia late last fall, I have been urging that the United States adopt and adhere to a realistic policy toward Russia exemplifying both firmness and friendliness in our Russo-American relations. Upon our return, the members of our subcommittee of the House Foreign Affairs Committee made such recommendations to President Truman, to the State Department, to the Congress, and to the country.

It is gratifying therefore, Mr. Speaker, to observe at long last that the administration seems to be veering toward a policy of firmness with Russia. Senator VANDENBERG in his historic report to the Senate last week apparently applied the prod which finally moved the State Department and the White House from the dream world in which they have been living. Following the address of the senior Michigan Senator, Secretary of State Byrnes in somewhat less definite and direct language emulated the example of Senator VANDENBERG and spoke up for American interests and American ideals. Still later, the chairman of the Senate Foreign Relations Committee echoed the same sentiments.

The reaction of the American press has been almost universally favorable to the positions outlined by Senators Vandenberg and Connally and by Secretary of State Byrnes. As an example, I call your attention to the following editorial from the Sioux Falls Daily Argus Leader, published in Sioux Falls, S. Dak.:

VANDENBERG POLICY SOUNDLY BASED

Among the significant speeches of the year in Congress was that by Senator ARTHUR VANDENBERG when he reported this week on his observations at London as an American delegate to the UNO meeting in London.

Out of his experience at the UNO session came the profound impression, he told his colleagues, that the time has come to deal firmly with Russia.

The United States and Russia, he believes, can live together in reasonable harmony. But, he insists, we must be ready (1) to speak as plainly as Russia does and (2) to sustain our purposes just as vigorously as Russia does hers.

Clearly, therefore, he does not advocate a policy of appeasement. Instead he is suggesting that we be firm and that we be articulate. He wants the United States to speak out and to insist that our policies command the position they merit.

Obviously he is not in sympathy with those who seem to be of the impression that we must soft-pedal our criticism of Russia and that we must retreat from our objectives to keep the Russian bear in good humor.

Senator VANDENBERG's ideas should command attention because of the experience from which he draws his deductions. He has been in London for the past 2 months attending the UNO deliberations where he has had an opportunity to deal with the Russians and to study with other nations the problems of the world. Because he is a competent and qualified observer, we should heed his recommendations.

Interesting, too, is the fact that his observations duplicate those given to the Sioux Falls Chamber of Commerce last December by Representative KARL MUNDT, of South Dakota, just after he had returned from a tour of Russia. He said then that we can get along with Russia but that we must be willing to speak out and to say "No" to that country when our ideals and circumstances so advise.

Mr. Speaker, Russia is a strong nation and she respects strength rather than vacillation. In her choice of friends among the family of nations she is attracted to those who say what they mean and mean what they say. In developing a pattern of international relations whereby Russia and America can jointly help preserve order, equity, and peace in the world, therefore, it is important that our American statesmen be both definite and firm. A continuation of the appeasement attitudes which have marred our dealings with Russia to date can lead only to disdain on the part of the Russians and disillusionment on the part of the rest of the world.

Housing Facilities for Veterans

EXTENSION OF REMARKS
OF
HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

DISABLED AMERICAN VETERANS,
TUCSON CHAPTER, NO. 4,
February 26, 1946.

Representative RICHARD HARLESS,
Representative from Arizona,
Washington, D. C.

DEAR MR. HARLESS: At a meeting of the Disabled American Veterans, Chapters 2, 4, and 8, representing a membership of 1,440, held on Friday, February 22, 1946, a motion was made that a resolution be sent to our Arizona delegates in Washington setting forth the plight of the World War II veteran in obtaining housing facilities in the city of Tucson.

"Be it resolved, That we, the Disabled American Veterans, request the proper governmental authorities come to Tucson and set up a housing program for World War II veterans similar to that projected for war workers during the years 1942 through 1945."

In explanation of the above resolution, we wish to cite the following facts:

1. That old residences now are selling on the average for about twice their 1940 value.

2. That World War II veterans are not getting a large enough percentage of the available building supplies, evidenced by the erection of many new warehouses, stores, and large homes far too expensive for the average veteran.

3. That many veterans are coming to southern Arizona for health reasons. We feel that it is a governmental obligation to make it possible for these men to be able to stay here in order to rehabilitate themselves in this advantageous climate.

Thanking you for any consideration you may give this matter, we are,

Respectfully yours,
EDWARD F. WEIL,
Commander, Chapter 4.
JOHN BLACKAZ,
Commander, Chapter 2.
R. GODDARD,
Vice Commander, Chapter 8.

Selling America by Short Wave

EXTENSION OF REMARKS
OF
HON. JAMES P. RICHARDS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. RICHARDS. Mr. Speaker, under leave to extend my remarks, I include a very pertinent and informative article by Richard L. Strout, carried in the Christian Science Monitor, on the subject of selling America by short wave:

SELLING AMERICA BY SHORT WAVE

(By Richard L. Strout)

WASHINGTON.—The State Department now broadcasts texts of important speeches and documents, and also news, to foreign countries. Whether this will continue depends on what disposition is made of the great governmental broadcasting plants leased, built, or acquired during the war.

The Associated Press recently decided not to let the State Department use its services as one of the sources of its news broadcasts to foreign nations, and the United Press followed suit. The AP and UP argued that the Government cannot engage in news broadcasting without creating the fear of propaganda.

The International News Service is continuing its service to the Government. At the same time the Associated Press continues to furnish its news to the British Broadcasting Corp., a quasi-governmental institution, and to Tass, the Russian Government news agency.

During the war, the OWI sent out extensive news, as did the Office of Inter-American Affairs. Now the State Department wants to continue the service, on a greatly reduced scale. The world, it says, is eager to hear about the United States. Britain and Russia are actively distributing news. The State Department would like three things: (1) Appointment of information officers at principal embassies and legations; (2) continuation of its present practice of distributing full texts of important statements and speeches, sent abroad by radio telegraph, and (3) some form of news broadcasts.

There are two sides to the argument. Against the service is the dislike of Government competing with private business, the fear of propaganda, the reluctance of the AP and UP to being connected with a Government enterprise which, they apprehend, may not only constitute propaganda itself, but may bring them under foreign suspicion of being Government organs. Carl W. Ackerman, dean of the Columbia School of Journalism,

supports their position, as does Edwin L. James, managing editor of the New York Times, who declares "there may arise a real issue of objectivity in the Government's news coverage, of a Presidential campaign, for instance."

The withdrawal of AP and UP will not, of itself, stop the State Department's broadcasts, though it may weaken its influence somewhat by clouding it with suspicion abroad. Ultimately, Congress will determine whether the State Department activity is continued by voting or withholding funds.

There seems no doubt that the world wants news about the United States. Also that some of the news it is getting, even in the most favorable countries, like Britain, is sketchy. Without official texts, for instance, it would be hard even for British editorial writers to comment satisfactorily on a Truman speech of which they may get 300 words by cable. In three areas, southeast Europe (including the Balkans), in the Middle East, and in southwest Asia, private American news agencies have few, if any, clients. If the State Department short-wave broadcasts end, British and Soviet broadcasts will have the field to themselves. American democracy won't have much voice.

"The greatest single need I found was for widespread dissemination of news and information concerning our country," Maury Maverick, retiring Chairman of the Smaller War Plants Corporation, said recently on returning from a tour of the Pacific.

"The outside world is eager for more knowledge of America," commented Herbert Agar, editor and historian, formerly connected with war news dissemination.

Ralph McGill, editor of the Atlanta Constitution, unpaid consultant to the State Department in setting up its information program, asserts that the State Department's broadcasts "are neither propaganda nor competition in the dissemination of news."

Recent debates in Parliament show no signs of dropping the B. B. C. overseas broadcasts. Among other things, officials say they are good-will factors in selling British goods abroad.

The question is literally still "in the air." The trade journal, Editor and Publisher, has asked the AP and UP to reconsider their action, while unsympathetic Time magazine asserts they are motivated by reasons which it calls obscurely mystical.

Strong arguments, perhaps, can be made on either side, at least as to methods. But over the need of telling the world about American democracy, there seems little disagreement.

The Housing Bill

EXTENSION OF REMARKS
OF
HON. EMILY TAFT DOUGLAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mrs. DOUGLAS of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two wires I have received, one from Mr. Ferd Kramer, president of the Metropolitan Housing Council of Chicago, and one from Mr. Louis Wirth, chairman of the Committee on the Chicago Housing Crisis, Chicago, Ill.:

CHICAGO, ILL., *March 4, 1946.*
Hon. EMILY TAFT DOUGLAS,
House of Representatives,
Washington, D. C.:

We consider passage of premium payment plan being voted on in Patman bill today key to accomplishment of entire Wyatt program. Veteran housing crisis in Chicago grows more desperate daily. Must have action. Urge you lend full support to passage of premium payment provision today and all other legislation needed to implement Wyatt program.

METROPOLITAN HOUSING
COUNCIL OF CHICAGO.
FRED KRAMER, *President.*

CHICAGO, ILL., *March 4, 1946.*
Hon. EMILY TAFT DOUGLAS,
Washington, D. C.:

Urge immediate enactment of entire program suggested by Administrator Wyatt. We vigorously protest against any crippling amendment or vetoing of premium payments since we regard them as essential to prevent inflationary price increases and for full mobilization of capacity to produce.

COMMITTEE ON THE
CHICAGO HOUSING CRISIS.
LOUIS WIRTH, *Chairman.*

The Housing Bill

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. ARNOLD. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I wish at this point to include the following remarks in opposition to the Patman bill, H. R. 4761, to amend the National Housing Act.

I have been wondering if this plan, the Patman bill, which proposes to give servicemen homes and about which we have been doing so much talking, will do the job.

Of course, we all want to see our servicemen have a place to live, but will this plan succeed? A plan conceived, I fear, mostly by inexperienced theorists, economists, and analysts, quite a few of whom have not even had any real business experience, say nothing about building or property experience—I mean by that statement properties other than their homes that they have rented, sold, or bought on the open market.

If this plan is adopted I think I can visualize what it will do to the small-town lumber and building-material dealers. The fabricators will get what meager supply of building material is available while the small-town markets and farmers—where houses are even scarcer in proportion than in the cities—cannot get materials for their servicemen.

Here are the materials that must be produced which are subject to distribution controls through priorities: lumber, concrete block, clay sewer pipe, structural clay tile, cast-iron soil pipe, cast-iron radiation, common brick, millwork, face brick, gypsum board, gypsum lath, and bathtubs. What has happened that all these essential building materials are lacking? Have we exhausted raw material supply? Or plant production? No.

Here, for example, is an instance of OPA action that has resulted in increased production. After 6 months' delay, OPA granted a 4 to 10 percent price adjustment that allowed 125 of 400 closed brick and tile plants to reopen. This price adjustment allowed these plants and 400 others that had been operating, to hire needed labor. As a result, in the next quarter, production rose 35 percent.

But in hardwood flooring, siding, plywood, millwork, and construction lumber, OPA clings to its wartime formulas. Instead, OPA follows the unrealistic policy of allowing premium prices to mills for producing lumber for such things as export to foreign countries and for items that were needed in wartime industries.

In 1925 a million homes were built by private industry, and homes will not be built now unless private industry builds them.

Will the housing expediter do like the War Production Board did during the war—flounder around until the President had to call in men with extensive business experience, such as Mr. Wilson, to get war materials produced and Mr. Jeffers to get rubber produced in sufficient supply? Is this a carefully camouflaged political scheme to get another huge Federal bureau going so there will be more votes for the fall election? I have been a Member of this body since January 1943 and have heard a lot of speeches by my colleagues on this floor condemning bureaus and bureaucrats. Now we reverse ourselves and endeavor to set up a bureau that will be one of the largest, if not the largest, yet established.

Why not let the Federal Works Agency handle this project if the Government must get deeper into the building business? The Public Buildings and Grounds Committee is in the building business and has had a chance to see and learn about the Federal Works Agency and its operation. It is staffed with men who have building experience; it is already going and could handle this Patman brainstorm, if the Government insists on getting in the building business and competing with private business.

As evidence of its ability to build houses, the Federal Works Agency in one operation, let contracts for 49,000 houses in 5 weeks' time and has actually built 90,000 houses, so if we must have a bureau dabbling in the building field why not call in the Federal Works Agency, which I am satisfied can do the job without increasing its personnel?

I think all that needs to be done to get houses going is to take the OPA off the necks of the manufacturers of building materials and the retail lumber and building-material dealers of the country. Everyone, I am sure, will agree with me that it took production to win the war—now at this stage of reconversion it will take production to win the economic and psychological peace, not only here in America but all over the world.

Comptroller Lindsay Warren says there are 10 agencies in Federal construction, 10 in materials and construction and now we have a plan before us to set up the biggest one yet.

The Patman bill is unsatisfactory and the Wolcott substitute, while it is an improvement, does not insure production and without production priorities will not be worth the paper on which they are written.

This bill should be sent back to committee and more extensive hearings held, then let us do everything possible in the way of removing restrictions in order to really start production of building materials.

Truman O. K.'s Program for 2,700,000 Homes for Vets

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from PM for February 7, 1946:

TRUMAN O. K.'S PROGRAM FOR 2,700,000 HOMES FOR VETS—PLAN TO COMPLETE $20,000,000,000 PROJECT IN 22 MONTHS

(By Gordon H. Cole)

WASHINGTON, February 7.—Wilson Wyatt, National Housing Administrator, has received White House approval on a new emergency housing program for construction of 2,700,000 new homes for veterans within the next 22 months, it was learned today.

Wyatt's program, aiming for an estimated $20,000,000,000 in new housing within 2 years, is the most ambitious home construction program ever attempted by the United States of America. The Nation's construction record, set in 1927, was just over 900,000 dwelling units built in a single year.

Announcement of Wyatt's program is expected within the next 24 hours.

TO GET PRIORITY

With the formal announcement, Wyatt is expected to order postponement of virtually all new commercial, industrial, and other deferrable construction until the veterans have been housed.

Instead of 400,000 new homes this year, proposed by Wyatt's predecessor, John B. Blandford, Wyatt is raising the Government's sights to shoot for 1,000,000 new homes by December 31, this year, and 1,700,000 additional homes by the end of 1947.

To fix such a goal, Wyatt has been forced to discard the old "building-as-usual" philosophy which has enfeebled earlier Government attempts to cope with the housing shortage. Conventional materials and conventional construction are expected to produce two-thirds of the new homes.

In addition, Wyatt is proposing substantial Federal subsidies to encourage the production of prefabricated and factory-built houses. Prefabricators are being asked to produce 825,000 new houses by the end of next year—a production record never even imagined by most prefabricators.

WYATT'S PROGRAM

Factory production is to be used, under Wyatt's program, to provide low-cost homes selling for less than $5,000. At present material prices, conventional contractors are virtually frozen out of this lowest price range and little competition is expected with regular builders.

Wyatt's program further provides:

Joint State and municipal operation of the program with city assistance to help the Federal Government keep nonessential building from eating up scarce materials.

Federal subsidies are to be paid material producers to absorb wage increases necessary to attract labor without raising the price to home owners.

Markets are to be guaranteed material producers. Premium payments will be considered for producers who raise output over the established quota.

The Government is to absorb undue risk in experimentation with new materials and new production methods.

Tax incentives are to be offered new firms who take exceptional risks in the use of war plants for the production of materials, parts, or completed homes.

A program has been worked out for recruiting and training 1,500,000 new building materials and building trades workers.

As an essential part of this program, Wyatt is renewing his request for price ceilings on new houses, old houses, and on vacant lots.

All new construction will be for veterans. Nonveteran families will be required to prove hardship to be entitled to new housing during this program.

To take care of the long-range housing needs of the Nation, Wyatt is urging enactment of the Wagner-Ellender-Taft housing bill, now pending in the Senate.

Some of the Fruits of Our War—Gleanings From 1 Day's Issue of a Washington Newspaper

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1946

Mr. WHITE. Mr. Speaker, under leave to extend my remarks, I include the following articles:

AMERICAN INVESTMENTS ABROAD TO REMAIN TANGLED FOR YEARS

(By Associated Press)

Under plans laid down at Potsdam, Germany will be stripped of its industrial war potential, and its manufacturing output for export will be limited to what the country must pay for imports essential to its domestic economy.

Industrial machinery beyond this basic core will be dismantled and, in most cases, be used as reparations to replace and rehabilitate industries looted or devastated by the Nazis throughout Europe.

Government officials said some of this machinery will be American owned. They estimated that American investments in Germany before the war totaled approximately $1,300,000,000.

OPPORTUNITY TO BUY

Under present plans, the American owners would be given first opportunity to purchase their own property, for use somewhere outside Germany, while retaining a claim for war damage against the Government. But this procedure has not received, as yet, the wholehearted approval of this Government.

(By Richard Cushing)

DAIREN, MANCHURIA, February 26 (Delayed).—This port city of Manchuria, occupied by Red Army troops, is considered by the Russians as their own personal property for the moment. From all indications, they are in a forceful condition to stay.

Full-dress Red Army maneuvers are being held over extensive areas of the rolling country to the north of Dairen.

The Russians have built tremendous military strength in Dairen, 30 miles from the big naval base at Port Arthur and clearly are seen to be taking a strong hold here.

CLOSE SURVEILLANCE

Official Soviet secret police are keeping foreigners under close surveillance.

Huge quantities of industrial machinery, I have been informed reliably, have been taken from Manchurian factories as booty of the Russians' 10-day war and shipped to Vladivostok. I was told that 80 percent of the equipment of the Anshan steelworks between Dairen and Mukden was put aboard 30 freighters which sailed for Vladivostok in a convoy last year.

(In a broadcast from Tientsin, China, monitored in San Francisco by the American Broadcasting Co., Frederick B. Opper, of ABC, said 20 of the 30 ships were Liberty ships lend-leased to Russia by the United States.)

Staff Sgt. Dick Wilkins, of New York, of the Army newspaper Stars and Stripes, Associated Press photographer Julian Wilson, of Louisville, Ky., and I rode into Dairen on Soviet trains yesterday.

Mile after mile we saw Red forces in military maneuvers. They employed tanks, mortars, and antiaircraft guns. American lease-lend tanks were in evidence.

BIG BATTERIES SEEN

As we neared Dairen we could see, on either side, fully equipped soldiers crawling across fields on their bellies in mock battle rows. Rows of surprisingly big antiaircraft batteries were being placed in strategic spots.

The Soviet commandant at Dairen, stocky Lt. Gen. George Kirilovitch Kostov, obviously was surprised by the arrival of American newsmen in this bristling garrison port.

He declared that we "were not in Manchuria," that our China theater credentials were invalid and that we definitely were out of place.

The general informed us we would be restricted to a hotel, guarded and dispatched to Mukden on the next train. Refusing to grant an interview, he suggested we remain in our rooms so our "security would not be endangered."

Today we were taken under arrest to the railroad station by three armed guards and put aboard a troop train.

Considerable mystery has surrounded the recent disappearance of several Dairen White Russians, one an interpreter for the Reds.

"White Russians aren't treated any too well by the Reds," I was informed.

"We don't like to work for the Soviets. You never know what will happen to you when they don't need you any more."

FIFTY THOUSAND RUSSIANS IN NAZI ARMY TURNED OVER TO SOVIET BY UNITED STATES

(By the Associated Press)

FRANKFURT, March 2.—The United States Army has turned over to Soviet Russia more than 50,000 men caught fighting for Germany who have been classified as Russian nationals.

Prisoner of war camps in the American zone are nearly empty of the Russians. It is explained here that under an agreement at Yalta the United States committed itself to turn over to the Soviet Union all Russian citizens who were captured in German uniforms, who were members of the Red Army and could not show discharges, or who were accused by Russia of voluntarily giving aid and comfort to the enemy.

This was to be done without regard to their personal wishes, and by force if necessary.

What awaits these men in Russian territory is not known here, but frenzied efforts by some of them to escape going there indicates that they do not contemplate the prospect with pleasure. At least 10 have committed suicide. Others wounded themselves and many have forcibly resisted attempts by their American captors to put them on trains headed for Russia.

Many of the suspects try to hide their nationality and the job of finding them among

millions of prisoners is difficult. Russian investigators scan the prisoner of war rosters and point out those they suspect. However, all suspects receive hearings from joint Russian-American screening boards.

Only about 700 of the suspects remain in the American zone.

MUKDEN, February 28 (Delayed).—Maj. Gen. Andrei Kovtounstankevitch, Soviet commandant in Mukden, told American correspondents today that Japanese prisoners of war in this area are being sent to Siberian camps instead of being repatriated.

The general said he did not know precisely where they were sent or for what purpose, only that they were disarmed and dispatched to Siberia by train.

The general had been asked whether the Japanese had been sent north as slave labor crews in the same manner Germans were employed in Russian reconstruction. He said he was surprised such a question could be asked.

(By the Associated Press)

NUERNBERG, March 2.—The International Military Tribunal in a closed session today deliberated the prosecution demand for a criminal judgment against six Nazi organizations—the SA (storm troopers), the SS (Elite Guard), the Leadership Corps, Gestapo, Reich Cabinet, and the high command and General Staff.

If the tribunal holds that the six organizations are criminal, the prosecution estimated that approximately 2,000,000 Germans might be liable to punishment. The defense said 7,000,000, including the turn-over in membership in the organizations, would be liable.

Labor's Responsibility

EXTENSION OF REMARKS
OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. AUCHINCLOSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a speech recently made by the Honorable John C. Knox, judge of the United States District Court for the Southern District of New York, on the subject of labor unrest, on February 28 before the One Hundred Club in New York City.

Judge Knox speaks with authority and commands the respect of every American citizen. No one, by the wildest stretch of the imagination, could call Judge Knox a labor-baiter. He is a sincere friend of labor and in this address he shows his concern about its irresponsible leadership. He approaches this subject in a calm, judicial manner with a background of definite experience in the settlement of labor disputes.

I endorse his views most heartily as being sound and thoroughly American and as representing the ideas of the true friends of labor, who look for a better understanding between industry and the workingman. There is no reason in the world why it shouldn't be brought about and men like Judge Knox contribute immeasurably to that end.

The speech follows:

My presence here tonight is due, I suppose, to the fact that recently I gave an interview to a newspaper reporter and was bold enough to suggest that disputes between capital and labor should be settled peacefully, rather than by gage of battle. That suggestion met with a response that is little short of amazing, and I am pleased that some of your members thought it worthy of discussion at a meeting of this organization.

You should understand at the outset that I make no pretense of being an expert upon labor's relationship with capital. I have, nevertheless, had some experience in dealing with labor unions. A few years ago, when the fur workers' union was dominated by Louis Lepke and Jacob Gurrah, I became acquainted with the brutalities that characterized their activities. Included among these were bombings, arson, stabbing, acid-throwing, and probably murder. After the conclusion of the trial in which these disorders were revealed, it was my privilege to send both of these ruffians to jail. Lepke, you may remember, was later convicted of homicide, and died in the electric chair.

It may also interest you to know that, over the past 10 years, I have arbitrated numerous disputes between unions and management. These arbitrations have had to do with numerous differences that had arisen between the electrical workers' union and New York newspapers—the typographical union and Newark newspapers—and, most recently, with a dispute between the Mutual Life Insurance Co. and its elevator operators.

In addition to this experience, I have been a Federal judge for almost 28 years. Within that time, and in the trial of a thousand lawsuits, I have come to know the processes by which involved and complicated questions between opposing litigants can be adjudicated peaceably, justly, and to the satisfaction of both of the parties and the public. Similar processes, in my judgment, can be made applicable to the labor troubles that have so long plagued the land in which we live. If there be merit in the thought that I indulge, it is high time that these processes be put into operation.

From the day on which Cain killed Abel, human beings have engaged in strife, controversy, and cavil. They will, I fear, continue to do so until the crack of doom. It, therefore, becomes a task of civilization, not alone to prevent wars among the nations of the world, but to see to it that capital, on one hand, and labor, on the other, shall be required to settle their controversies without breaches of the public peace.

TRIAL BY COMBAT

Once upon a time, in the days of William the Conqueror, subjects might, in resolving their disputes, resort to trial by battle. Each of the disputants could choose his champion, and these two, on a day appointed, would repair to a 60-foot square to engage in physical combat. They would be accompanied by scarlet-robed judges of the court of common pleas, as well as by sergeants of law. This meeting would take place at sunrise, and, upon proclamation that the court was in session, a knight would introduce the champions.

The gladiators would be dressed in armor with red sandals. Their limbs were bare below the knees and the elbows. Arming themselves with 4-foot batons, each of the contestants wearing four-cornered targets, the men would begin their battle. If one did not vanquish the other before sundown, they were required to fight until stars shone in the sky. When this occurred—and if the case were one between a tenant and his landlord—the tenant won his suit. This would follow, too, if the tenant's champion was the victor. However, if the tenant's champion went to his death, or turned craven, the landlord was entitled to judgment.

Thus, in a bygone day, lawsuits were tried. This procedure, without any semblance of right or justice about it, now seems uncivilized and ridiculous. And so it was. At the same time, it possessed one cardinal virtue: The gladiators fought each other and did not disturb the public peace.

But, here in America—when strikes and lock-outs occur—the combatants not only fight each other, but engage in mortal combat with you and with me. Moreover, their acts are condoned by law and excused by public authority. Let me illustrate:

A little more than 2 weeks ago this town was a beleaguered city. Due to a strike of some 3,000 men, 6,000,000 people, in almost zero weather, were cut off from their supply of fuel. Tugboats, it is true, had been taken over by the Government, but this, so far as the strikers were concerned, was an idle gesture. They disdained to work for the United States.

Rather than do so, the workers decided—for all they cared—that the aged, the infirm, the sick, and the young might freeze to death. Upon their refusal to work, what happened? Did the Government operate the boats? It did nothing of the kind.

What would it have done had 3,000 German or Japanese soldiers cut the supply line on which this city depends for comfort, health, and life itself? The Army and Navy of the United States would have come to our rescue, and we would have had our fuel in less time than it takes to tell the tale. But not so in this case. A labor union was involved, and the power and might of government—strong enough to bring Germany and Japan to their knees—suddenly lapsed into a state of impotence.

MERCHANTS PENALIZED

What then took place? A peaceful community was put under a regime that was nothing less than martial law. Business houses, places of amusement, public schools, and places of worship were told to close their doors, and they did. For this dislocation of normal city life the merchants of New York were penalized to the extent of millions upon millions of dollars. Immediately following this period of inconvenience, danger, and loss something happened. It was this:

On the next day the owners of the tugboats, together with their operatives, quickly decided that their dispute was one that might amicably be settled, and the siege of New York was lifted. Three arbitrators are now engaged in adjusting the differences that caused the strike. But when they make their decision who knows for certain that it will be enforced? The country's steelworkers failed to observe the terms of their contract. Other unions may, if they choose, do likewise. If so, we may again be subjected to a state of siege.

You should know, at this point, that I am heartily in favor of labor unions. Were it not for them, the workers in industry, due to the selfishness of management, would face a barren and unhappy future. Unionism has done much to dignify their callings, and to raise their standards of living. I devoutly hope these accomplishments will be both secured and bettered. I don't, however, subscribe to the idea that the rights of labor are superior to those of the public. In my judgment, both capital and labor should be required to subject themselves to the rigors of law and order and to the preservation of the public welfare.

COURTS OF PEACE

Now, in what I am about to say, I wish you to know that I am not opposed to the use of conciliation and arbitration in labor disputes. If these devices, or either of them, can be effectively employed to bring about and maintain harmonious relations between

management and workers, I say, "More power to them." But, when these methods fail to adjust differences, and when such failure threatens to subject the public to inconvenience, loss, and open disorder, some other medium of determining labor disputes should be available to either or both disputants.

Just as courts of law have superseded the gage of battle in the settlement of private quarrels, similar courts, in which labor controversies peacefully can be determined, should be established. If this were done, and if they were manned by upright, intelligent, fair-minded men, I firmly believe that before very long, both capital and labor would look upon them with confidence and respect. If so, we could be relieved of the economic and social losses that are now suffered by both management and labor, and most of all by the public.

Day in and day out, the court in which I sit is constantly deciding controversies quite as intricate and involved as any that were in issue in a labor dispute. Moreover, the litigants understand that each decision means what it says, and that it must be obeyed. The result is that the peace, order, and security of the community are, at all times, maintained. If this country is to thrive and prosper; if it is to be free and happy; if its integrity of government is to continue, we must devise a means by which capital, labor, and the public may live in peace.

In making approach to a solution of our present difficulties, we should constantly bear in mind that the right of a man to work is quite as precious as is the right to strike. Nevertheless, in the absence of union membership, thousands upon thousands of men are denied the privilege of earning a livelihood. I should imagine that, in their judgment, the freedoms about which we constantly prate and boast are little more than sounding brass or a tinkling cymbal.

And as we give thought to the man who wants to work and can't, we should also remember the union members who go on strike not because of their wish to do so but because they must. These men, I have reason to believe, can be counted by the thousands. If any of them dares criticize the leader who calls an unwarranted strike, he is a marked man from that day on. By one pretense or another, suspension or expulsion from the union is likely to be his portion.

PLIGHT OF THE WORKER

When this occurs, the worker will be deprived of his job and prevented from getting another. Indeed, luck will be his if he is not subjected to mayhem and torture. And yet, whatever happens to the worker, he is, from a practical standpoint, without the slightest chance of redress. Repressed in their utterances, dominated in their actions, and victimized frequently by officials who should give them protection, the lot of many of our workers has some of the characteristics that marked the slave laborers in Germany. These conditions should, and ultimately must, end.

For what reason, too, should this country tolerate the warfare that is waged over jurisdictional disputes between rival and competing unions? As the leaders of these unions engage their men in industrial strife; as factories close down, and men chafe in idleness, money ceases to circulate, machines grow rusty, consumer demand goes unsatisfied, women and children become hungry, and humanity is insufficiently clad. And all this in the name of union labor.

If our politicians, and many of our public officials, were forthright and spoke the truth, they would ascribe the blame for this situation to the men who, in their struggle for personal power and aggrandizement, are willing that industry should be prostrate; that people should starve, and that the country should finance the campaigns that some labor leaders fight against us.

Two days ago, this city was threatened with a strike of its transport workers—many of them civil-service employees of the municipality, and entitled to benefits not ordinarily available to the workers in private industry. And who was primarily responsible for that threat to our convenience and safety? That answer is easy. His name is Quill, and, what is more, he is a member of the Council of the city of New York.

Sworn to protect and defend the rights of the populace whose laws he helps to make, his loyalty to his union takes precedence over his allegiance to the public which elected him to office. Unless we are alert and ready to protect ourselves, it is entirely possible that union labor—a distinct minority of the population—will rule the majority. And, if this comes about, it will rule with a hand that is both hard and ruthless.

When labor unions countenance strife and disorder, and when, fearful of the loss of income and numerical strength, they tolerate racketeering upon the part of subordinate locals, it is high time that the public cease to listen to the emotional appeals with which labor dins our ears, and insist that, when labor speaks, it shall do so, not only with reasonableness and realism, but with a sense of its own responsibility to the public welfare.

Let us face the fact that if some of our leaders of labor be not curbed, they may, conceivably, wreck industry, destroy the capitalistic system, and change our form of government. Within my own courtroom, a communistic labor leader has declared that, if the court could not find the money with which to meet his demands, it would be well to permit the company, whose affairs were under administration, to be operated by its employees, who, he said, were the true owners of its property.

As between labor and government, as between capital and government; as between anybody and government, I stand for the authority of government—and the present form of government—over each and all of them!

It were well that all of us should now reach the conclusion that, if men are to be free, and if they are to enjoy the blessings of freedom, they should no longer toy with the thought that the ideology either of fascism or communism will give relief from the tribulation that afflicts us.

Lobbyists Attempting To Control Votes of Congress—Patman Charges Real-Estate Spokesmen With Attempting To Dupe Legitimate Builders

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. PATMAN. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I should like to include the script of a radio debate between myself and the able Congressman from California, Representative CARL HINSHAW, which was broadcast over WINX on Sunday, March 3, at 12:15 p. m., on a program entitled "Is Congress Doing the Job?"

Mr. HART. This is Ed Hart speaking to you from Washington. On January 3 President Truman told the people that we urgently need 5,000,000 additional homes now. It is clear, therefore, that this is an emergency problem which calls for an emergency method of solution. The administration forces in Congress were slow to act. Then one day the President's Housing Expediter, Mr. Wilson Wyatt, stated, in effect, that every day Congress fiddled 3,000 houses were never built. That statement burned white anger in the minds of the people who were looking in vain for a place to live.

Recently Congress began consideration of the housing bill—the Patman housing bill—an administration measure. One of our guests today is Representative WRIGHT PATMAN, Democrat, of Texas, author of that bill. He will present his case. Our other guest is Representative CARL HINSHAW, Republican, of California, who states most emphatically that he is not against a housing program, but that he does oppose the particular Patman-Wyatt-administration program.

Gentlemen, in your opinion has Congress been obstructing or aiding administrative efforts to do something about the scandalous housing shortage? Congressman PATMAN.

Mr. PATMAN. Mr. Hart, last November I offered the Congress a practical housing bill embodying the main features of President Truman's program. It had three objectives: First, to increase production of building materials through incentive price increases and premium payments to producers, in order to obtain the maximum volume of the lumber and brick we need. Second, to channel scarce building materials into homes for veterans. Third, to kill off inflationary speculation in existing homes until production starts.

My bill is simple—it is workable—but what has happened is unpardonable. I have a very high regard for Congressman HINSHAW, of California, my able, sincere opponent in this debate, and what I say is not personal, either as to him or any other individual.

I accuse the lobbyists of the speculative real-estate interests—the paid disciples of those who worship the great god greed—of working incessantly, spending thousands of dollars, to sabotage the efforts of Congress to provide homes for Americans, particularly veterans.

They are militantly on the job here on Capitol Hill in Washington, D. C. The veterans are being lulled to sleep, evidently, because many of these opponents are telling them that they are for the veterans. Yes; they are for them, but they oppose the only plan that is offered, and they do not propose any plan of their own to help the veterans get houses.

Not since the multi-million-dollar Wall Street lobby against the Holding Company Act of the mid thirties has Washington seen such an arrogant attempt to control the votes of Congress.

I accuse these lobbyists and their employers of attempting to profiteer out of the misery of the American people who cannot find a place to live.

I accuse them of organizing a campaign built on deliberate falsehood and innuendo. I already have requested the FBI to investigate one set of forged telegrams sent from Texas to Congressmen.

I accuse them of attempting to dupe legitimate builders with such statements as this: That this program to build more houses will put half the builders of the United States out of business.

I accuse them of urging Congressmen to stoop to personal vilification of public officials on the floor of the House because we wish to provide homes at a reasonable cost.

That is the major reason why the President's housing program is being delayed. However, there is another reason. The late President Roosevelt once said there were some "Yes, but—" men in Congress and elsewhere. Some of them still are with us. They are the men who give lip service to the veteran's cause, then sabotage our sincere efforts to help provide him a home. Congress will be doing a job if it avoids these things and passes this bill.

Mr. HART. Thank you, Mr. PATMAN. Now let's hear from Congressman HINSHAW.

Mr. HINSHAW. Well, Mr. Hart, I'm going to confine my remarks to the bill. Congress

has been working hard to assure the building of more homes, particularly for veterans, and Mr. PATMAN will agree that there is not one single Member of the House of Representatives who is not eager to assist in building as many houses as possibly can be built to meet the shortage. The Patman bill, in my judgment, would retard to slower than the present snail's pace the production of millions of houses. It would freeze the bad conditions that already exist in the housing industry and make them worse. It would create a further multiplication of the present confusion by adding a myriad of new regulations and barrels of red tape. That situation is bad enough now. What we need is to cut away the jungle of red tape so that we can see new houses.

Everyone knows that the one big bottleneck caused by that red tape, the one which is holding up home building, is the shortage of building materials. If Mr. PATMAN and his colleagues would concentrate on the most direct and effective method of producing and delivering more building materials and eliminate the unnecessary controls and red tape which are hampering builders, more homes would be built and the cost of building would be much less than it is now. The Patman bill, in my judgment, would delay building, and that is why I oppose it.

Mr. HART. Thank you, Mr. HINSHAW. You oppose the Patman bill because you see it holding up home building and adding to red tape more restrictions and confusion, while Mr. PATMAN sees passage of his bill as the step necessary for Congress to take to alleviate the tremendous housing shortage. Now I'm going to ask you: Is it really necessary to supplement the President's Executive order, which made Mr. Wilson Wyatt our Housing Expediter, with additional housing legislation? Why not let Mr. Wyatt do what he wants to do without further legislation, Mr. PATMAN?

Mr. PATMAN. One good reason, Mr. Hart, is that the Second War Powers Act expires June 30, and the power that he possesses now would expire June 30. Furthermore, he cannot stop speculative resales, which caused the speculation after World War I that was so ruinous, and he cannot break the bottlenecks in production or cut red tape, because he does not have the power under the Second War Powers Act. Therefore, this legislation is necessary.

Mr. HART. Do you want to comment on that, Mr. HINSHAW?

Mr. HINSHAW. The whole trouble with our economy today, Mr. Hart, is the multiplicity of conflicting controls and the efforts of the administration to play checkers with the complex factors which make up our economy.

Mr. HART. The next question is: Do you think it is advisable, as Mr. PATMAN suggests, in his bill, to put a ceiling price on existing houses, as he proposed in his original bill, Congressman HINSHAW?

Mr. HINSHAW. Mr. PATMAN's proposal was to place a ceiling on homes at the first price that the home was sold at after this bill that he proposes is passed. But I think that Mr. PATMAN's proposal is absurd. It would encourage fraudulent and inflationary sales. If any ceiling is established it should be based on an independent appraised value, made at the time of the sale. The true appraised value is the cost of reproducing the structure at the time of sale, less depreciation and obsolescence.

Mr. PATMAN. We are trying to get away from so much bureaucratic control and regimentation. Therefore, we have adopted a simple formula—not necessarily to fix the prices on the 29,000,000 existing homes, because if they are not sold during this emergency there will be no occasion for any price at all. Present owners, under this proposal, could sell their homes at any price they could get, but that price would remain the fixed price throughout the emergency.

The Washington Post has been carrying on a campaign in favor of this proposal, pointing out how fair and reasonable it is. It will just stop speculative resales, and the speculator is the only one, to my mind, who has a right to complain.

Mr. HART. Well, now, do you think you need the $600,000,000 a year in subsidies, which Mr. Wyatt calls premium payments, to make certain that homes are built at a reasonable cost?

Mr. PATMAN. Yes; I think so, because that is the only power that he will have to break these bottlenecks and cut the red tape. That method worked well during the war, when for 4 years the war workers and those of us here at home had a right to get these homes in a similar way.

Mr. HART. What do you think, sir?

Mr. HINSHAW. In my judgment, subsidies are not the things that are needed to get volume production of houses. We need first to cut out the strikes in basic industries and get back to work so that materials can be produced and put in motion; and then make judicious price-ceiling increases in the normally low-priced standard grade of building materials.

Mr. HART. Would this bill—the Patman bill—if it passes, be of practical benefit to the veteran? Would it actually help the veteran who is looking for a house?

Mr. HINSHAW. Of course, this bill won't benefit the veteran, or anybody else. Because with the load of red tape this bill would provide, the contractor couldn't possibly estimate in advance the cost of a home, and therefore he would be unwilling to guarantee a price. If he does guarantee a price, it would have to be high enough to cover the cost of all unforeseeable delays and probable idle labor costs. Of course, the Government wouldn't approve that price as a price ceiling, hence your reliable and substantial builder couldn't afford, and won't afford, to build.

Mr. PATMAN. I say that it will help the veteran, and I'll give you one illustration. These critical materials are being used now to build race tracks, saloons, honky-tonks, and everything else—commercial buildings which are not needed. This bill will channel those scarce materials into the building of homes—moderately priced homes—and give the veterans a preference, just like we gave the war workers preference during the war—give them a preference during the life of this bill, the next 18 months.

Mr. HART. All right. Now, here is the final question: There have been charges and counter charges that pressure has been brought to bear on Congress from outside sources in regard to this bill. What about this, gentlemen? Have you been subjected to outside pressure? Lobbying, to speak plainly.

Mr. PATMAN. The Crane Co., one of America's largest and most highly respected manufacturers of plumbing equipment, has been forced to cancel its membership in the Producers' Council because of the untruthful and sordid lobbying activities this council is conducting against this bill. The National Association of Real Estate Boards and its executive secretary, Mr. Herbert Nelson, has been conducting a very sordid and untruthful campaign against housing for veterans. Now that organization is offering a $30,000,000,000 bonus bill as an alternative—not a bonus to the veterans, but a bonus to the speculators and gougers.

Mr. HART. Do you want to comment on that, Mr. HINSHAW?

Mr. HINSHAW. I can only say this: If the prayers of the people who produce materials and build houses not to load this new batch of red tape on their backs is considered to be lobbying, then the answer is, of course, that they have been lobbying. Would you have these men, who are responsible for carrying out a building program, be silent when they know that this red tape will keep houses from being built?

Mr. HART. Gentlemen, in closing this debate I am going to quote once again from Mr. Truman's January 3 speech, when he said: "We must utilize the same imagination, the same determination, that back in 1941 enabled us to raise our sights to overcome the Nazi and Japanese military might."

With that imagination and determination we can mobilize our resources here at home to produce the housing we require. Gentlemen, is Congress going to help or hinder us in doing this job?

Draft Versus Voluntary Enlistment

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. SCHWABE of Oklahoma. Mr. Speaker, many of the servicemen, the returning veterans, and the people back home, including the parents of the boys subject to military draft, are becoming very much interested in the subject of draft versus voluntary enlistment.

The people are beginning to think and ask whether or not the Selective Service Act should be extended beyond the date at which it will soon expire unless the Congress provides for its extension. The public generally thinks the war is over and should be officially declared at an end. They are growing impatient because the President has not issued a proclamation officially terminating the war. They frequently say that if the President will not issue the proclamation, Congress should pass the necessary resolution to bring the war to an end. But the President has urged Congress not to pass any such resolution, and perhaps for that reason the several resolutions introduced along this line have not, as yet, been acted upon.

The people are anxious to know why more young men have not volunteered their services in the various military organizations. They are beginning to seek the reason for this hesitation and delay. Many of their questions are being answered by the men who were in uniform and some of whom are still in uniform. The people generally are convinced that enough boys would volunteer their services if they had confidence in what is told them by the heads of our military organizations. But the men just coming out of the service, and many of those who are still in the service, have told us of repeated instances, almost without number, where the boys were told almost anything to get them into the service, and, after they were once in, they found the promises or statements were unauthorized and would not be carried out, and were not carried out as the boys had been promised. This has shocked the faith of young men not only in military organizations, but to a great extent in our Government and in the administration of governmental affairs. This is a deplorable situation.

Perhaps most of the boys were led to believe that as soon as hostilities ceased, the 6-month period would begin to run, and that they could shed their uniforms and get back to civilian life, to home and loved ones, within 6 months after the

shooting was over. Now they find that they were taken into the armed forces for the duration and 6 months thereafter, but that the end of the duration and the beginning of the 6-month period have not been designated. They say one of the chief reasons for their not voluntarily enlisting now is that they are afraid that there may be another catch, and they are staying clear of such snares and pitfalls as far as they can.

It is the belief of many clear-thinking people, servicemen, veterans, and near relatives of the boys, that if confidence in government, confidence in the heads of our military organizations, could be restored, and if the boys could be assured that there will be no more unauthorized statements and promises made, and if they could rely upon what is told them at the time of their induction, an adequate volunteer army could be raised to take care of the situation which now confronts us. But nobody seems to know how many men we need, and no agreed and determined basis has been established; or, if it has, the public has not been so informed, and they want to know.

I quote from the following letter which I have just received from a man who has recently returned from the service. He has written me voluntarily his own reactions, which I think are indicative of the thinking of untold hundreds of our veterans and the boys still in the service, as well as that of their parents. I quote:

It came to my attention while I was overseas as an enlisted man in the United States Army that there was a bill before the Congress to grant enlisted men the same terminal leave privilege as officers now receive. Since I have not heard anything about the bill being passed I assume that the bill either has not been acted upon or has been defeated.

I do not think it is necessary to point out to you the injustice of the present situation regarding terminal leave. At present it is the lone privilege of the medieval hierarchy.

To take my own case for an example, after 3 years of service—23 months of it overseas—I had received one 9-day furlough. Had I been an officer at the time of my discharge I would have received a total of 81 days for terminal leave for which I would have received full pay and allowances. As it was, since I was not an officer and a gentleman, I received only my mustering-out pay besides my regular pay.

The situation which I have described to you is not only an injustice but is un-American as well, since it grants a privilege to the few and denies it to the many.

I have heard, since my return to the United States last month, that both the Army and the Congress were disappointed because enlistments in the Regular Army had not been as large as they would like; but if you ask any enlisted man or former enlisted man you will get any number of reasons. To put it briefly very few men desire to serve in a medieval hierarchy after being taught democracy since his birth.

I would like for you to inform me as to the bill in question, as to whether it has been acted upon, or if it has been defeated.

The following letter is from an intelligent constitutent of mine, a prominent physician:

Due to the disturbing conditions at home and abroad, I am writing to express my views regarding the way our Army is planning to continue the drafting of our young boys after May 16.

Mr. SCHWABE, in time of war I was in full accord on drafting, but since the war is over I am absolutely against drafting our young boys away from their school and college.

In my opinion, if the Army life was made more attractive there would be plenty of volunteers to guard our surplus property and control our enemy country. Of the number of people I have talked to, I am sure there are hundreds in my locality who feel as I do about this matter.

I am quoting two paragraphs of Cedric Foster's broadcast of January 17:

"First, let the President, as Commander in Chief, investigate demobilization and tell the people exactly what he recommends as a total number for the armed forces. Then let him estimate how long it will be before volunteers can take over the job of guarding surplus property and controlling enemy countries. Then let him impress upon Army leadership that a volunteer Army can only be raised if the leadership of the professional army recognizes that * * * its present actions will be the determining factor * * * the factor in the decision of every citizen to enlist in an army to become a professional. There will be thousands upon thousands who will enlist if the pay is attractive, if the chance for advancement on the basis of merit is accorded, if the opportunity for education is given. There will be many who will enlist if the present unwarranted line of demarcation between officer and enlisted personnel is out—to use a Navy phrase, at 'position one easy' instead of always being at 'call to quarters.'

"This kind of army will keep the people's pledge as it will be a people's volunteer army. They'll keep the pledge to those who died and there were men who died. I saw them—not in Europe, because I wasn't there. But I saw them in the Pacific. I saw them dropped into the sea from the decks of an aircraft carrier. I saw them—infantrymen—buried in the red, steaming sand and in the cold, clammy mud of the Philippines. They were the life and blood of America—life given and blood shed—that all citizens of this land could live in security. Under their crosses and beneath the waves, their spirits are calling today. God forbid that we fail to heed their cries of anguish."

Mr. Speaker, Congress should approach the subject of extending the draft or the Selective Service Act with the idea of requiring our military forces to pursue their business in the American way. There is no more reason why straightforward, forthright, honest, and dependable statement of conditions should not be made to our boys in the service than those who enter into contracts pertaining to private associations and business affairs. Nor is there any excuse for our not paying our boys in uniform amounts commensurate with the service performed, taking into consideration the compensation that is paid in other departments of government and by private industry. The boys should be afforded opportunity for their mental and physical development, educational privileges, while they are in the service—particularly while in the armies of occupation. These matters have been neglected, woefully, and the people resent it. We know that time hangs heavily on the hands of those constituting the armies of occupation and in many other branches of service, when we are not engaged in war. This time can be profitably and advantageously employed, if we have the interest of the boys at heart and if they be not placed under arbitrary, autocratic, un-American, and medieval military disciplinary regulations and routines, as set forth by the authors of the above letters, and as revealed by the expressions of the boys returning from the service.

The Easiest Thing To Sell Us

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Concord Daily Monitor, Concord, N. H., of February 28, 1946, entitled "The Easiest Thing To Sell Us":

THE EASIEST THING TO SELL US

The proposed loan to Great Britain has had hard going, and now the French want to get in on the gravy. Their bid for something in excess of $2,000,000,000 has been a natural result of consideration of a loan to the British. And there will be other such requests from other nations so long as Uncle Sam loans money which must first be borrowed from the American people.

One of the international agreements was concerned with the creation of an international bank, to which this Nation pledged the largest contribution of working capital. It was to be the business of this bank to keep international credits and the currency of the many nations in as sound a condition as possible. Now it would seem that what Great Britain and France are asking is that the United States compete with this international bank.

In addition to chipping in generously to the capital of the international bank, and being asked to advance billions to Great Britain and France direct, this country is also charged with the business of providing relief for the unclothed and unfed peoples of Europe. The latter task is frankly recognized as one of charity, and is being handled on an international basis by UNRRA, an international agency. But it is the United States which must supply the bulk of the material relief.

The United States can be and is charitable. But there is slight call for it to be soft-hearted in matters of national finance. When it starts making loans to other nations it is soft-hearted, no matter what reasons the administration may give.

Suppose this country decided its own financial condition wasn't too good (and it isn't federally) and that instead of continuing deficit budgets it would borrow the difference between what it can raise in taxes and what it wants to spend from some other nation. What would be the attitude of the American people? They would protest vigorously. They would do either one of two things—demand that Federal expenditures be kept within income or loan the Government the money, instead of letting it go abroad for it.

What manner of pride is it which permits the British and the French to seek to tap Uncle Sam for billions? As a matter of fact the people of those nations do have pride in the matter and have indicated their dissatisfaction with the proposals of their governments. But the governments, like our own, are bent upon spending more money than there is, and more credit than is sound, now. The sounder procedure of concentration upon production and balanced budgets

and lessened inflation no longer appeals to political leaders in the western world.

This Nation may be relatively well off, but it can't raise the status of other nations by merely loaning them money. It can help them most by trading with them and by encouraging their industrialization. If we buy some of their products, they can buy some of our machinery and improve their production capacity, both for home consumption and for world commerce.

Theoretically that is the way in which the other nations propose to pay off any loans we make to them, but experience shows that we'll never collect the loans because we won't buy enough of their products. This fact should be recognized by us. It is recognized by the other nations, though they say nothing about it to us. They realize it is easier to sell us the idea of a loan to them than it is to market their products here, even though they have products which they can produce more economically than we can produce them, and we in turn have other products which they need and can't produce at all or can't produce so reasonably as we can.

If we are strong and the other nations weak, they aren't going to be made stronger by weakening us. That is just the old story of the rotten apple in the barrel causing all the good apples to rot.

Washington's Homeless Children

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt of an article from the Washington Star:

WASHINGTON'S HOMELESS CHILDREN

If you don't believe there are homeless children in Washington, try advertising an apartment for rent with a note that you have no objections to them.

Mrs. John W. Hall inserted an advertisement in the Star yesterday offering to share her home at 3619 Eighteenth Street NE., with another couple.

"We have no objections to children," she wrote. "We like them."

Her telephone began to ring at 11 a. m., the minute the first edition hit the street. Mrs. Hall and her husband, an employee of the Government Printing Office, personally interviewed 26 couples. After selecting the winner they turned down 37 additional requests.

One caller had been interned by the Japanese. At least, he said, the Japanese provided sleeping quarters for his child. The Polish Embassy called, seeking accommodations for an attaché. An Army captain identified himself as a Congressional Medal of Honor winner. The Germans didn't scare him, but the housing shortage has made him a nervous wreck, he said.

"We didn't want to turn anyone down," Mrs. Hall said. "They came with pictures of their children. They brought them along. At one point there were 20 persons in our living room. They all were nice people and desperate. We wanted to give everyone a chance before deciding."

Mrs. Hall knew what they were up against because she had gone through a similar experience when her husband went to work at Wright Field, Ohio, during the war. The family finally had to buy a house there. A few months later Mr. Hall was transferred to California. Arriving in Sacramento with two small daughters after 8 days on the road, the Halls couldn't even get into a tourist camp. They managed to buy a house that afternoon.

She had a hard decision to make yesterday, but finally Mrs. Hall selected Mr. and Mrs. Bernice Wood and their 3-year-old daughter, Mary. The father, a discharged serviceman, was the first caller and said he obtained the first copy of the Star that came out.

"Mary sold herself," Mrs. Hall said. "She had blond ringlets all over her head. My little girls are blond, but they don't have any curls."

Mrs. Hall's daughters, Linda, 3½, and Anne Margaret, 4½, took one look at Mary and said:

"Mama, you did get us the baby sister we asked for."

But at 10 p. m. the telephone still was ringing. A distraught father said his family would be sleeping on the street if something wasn't done. Mrs. Hall promised to tell the story in hopes that other families with extra rooms would help out.

Homes for Veterans

EXTENSION OF REMARKS
OF
HON. FRED A. HARTLEY, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. HARTLEY. Mr. Speaker, Representative PETERSON of Florida and I have introduced a bill which deals with one of the Nation's greatest responsibilities to its veterans—the responsibility of tangible encouragement and assistance in securing a home.

Veterans have wearied through years of endurance with barracks and Quonset huts. The Nation cannot discharge its responsibility, or fulfill its promises, to them by providing civilian barracks restyled as veterans' housing. Real homes—the kind the veteran wants, whether in the country or in the cities—and only real homes can meet this need. The veteran can get this kind of home, and he can get it most quickly if our enormous productive capacity is turned loose to supply it.

During past periods of readjustment following years of war it has been a tradition of the Government of the United States to grant some form of homestead assistance to its veterans. The obligation of the Nation to assist its veterans in meeting this basic human requirement was never as great as at present. We are no longer a frontier country with a vast public domain to parcel out, but this fact does not remove the present urgency for homestead assistance. Rather, the need for this traditional evidence of the Nation's gratitude is more pressing than ever before in our history.

The Servicemen's Readjustment Act of 1944 is surely a conscientious attempt to provide a wide range of necessary and proper benefits to the veteran. In the field of education, particularly, it provides direct and tangible assistance which, to the veteran who chooses to use it to its full extent, can reach a monetary value to the veteran, and an actual outlay by the Federal Government of approximately $7,000. This is not a loan to be repaid, but takes the form of a direct grant.

Assistance toward home ownership provided by this measure, on the other hand, is confined principally to guarantee of a loan which must be repaid. In the final analysis, this particular benefit simply permits the veteran to delay payment of the normal down payment, or, in other words, to go 100 percent into debt for a home. In my judgment, Mr. President, the divergent character of these two benefits constitutes inequity.

Thus far, 948,000 veterans have applied for educational aid, and 688,000 of them have been declared eligible. In contrast to this only 64,000 veterans have been able to utilize the home-loan provision of the act. This clearly reveals that there is inadequacy in the legislation, and I believe that it is the particular inadequacy which I have pointed out.

The full value of the grant for educational purposes cannot be realized by a large group of veterans who must devote their principal time and energies to the support of their families. The purpose of the bill I am now introducing is to equalize these benefits to some extent, by providing for homestead assistance grants to veterans who cannot take full advantage of the educational benefits of the Servicemen's Readjustment Act of 1944 and who are willing to waive educational benefits of that act to an extent equivalent to the amount of the homestead grant provided.

This bill seeks to provide homestead assistance grants based on length of the veteran's service in World War II, with a minimum grant of $500 for veterans with 6 months service or less. The amount of the grant would be increased by $50 for each additional month of service, and there is a provision that no grant could exceed $2,500. The veteran would apply for the grant to the nearest office of the Veterans' Administration and would file with his application a legal and general description of the property he wishes to purchase. The Veterans Administration would check the application, and if it found the value of the property reasonably in accord with the purchase price, would issue the grant in the form of a certificate of credit which could be negotiated only to sellers or mortgagees of land and improvements in lieu of cash.

The bill is based on the belief that the veteran himself, rather than someone in Washington brooding over census reports, knows what kind of home is best for him. Consequently, it defines the kind of homestead which can be purchased with the aid of a grant as "property including land and permanent building, that is, a single-family residence, part of a multifamily structure, a residence in a cooperative or mutual housing development, or a building containing a family dwelling to be used as the principal place of residence of the veteran."

In order that there be no temptation to speculate by quick sale for profit after purchase with a grant, the bill provides that upon receipt of the grant the veteran shall issue to the Veterans' Administration a non-interest-bearing personal

note in the amount of the grant. One-fifth of the face value of this note would become due each year for 5 years on the anniversary date of issuance of the grant. Each of these five annual obligations would be canceled on the respective anniversary dates upon presentation by the veteran of an affidavit affirming that he has continued to retain the property as his home during the preceding year.

In the event of sale of the property during the 5-year period required to establish full homestead rights, the uncanceled portion of the full note would be payable to the Veterans' Administration. For example, if a veteran sold his homestead 2 years after purchase he would have received two annual cancellations each amounting to one-fifth of the full amount of the note. Within 30 days after sale, and upon notice of sale to the Veterans' Administration, the remaining three-fifths of the amount of the note would be payable. However, if the veteran purchases another home, in the same or different locality, the remaining uncanceled portion of the original homestead grant could be applied to the purchase of the second homestead, and canceled in three annual cancellations.

The bill contains other safeguards and provisions for such contingencies as death or disappearance of the veteran, destruction of the property, foreclosure, and failure to comply with provisions of the proposed act. In order to make the homestead assistance benefit equally available to all veterans, the bill provides that the grant may be issued and applied toward indebtedness against any homestead of a veteran of World War II, provided that such indebtedness shall have been incurred subsequent to the date of the veteran's entry into the active military or naval service.

Like other homestead assistance measures that the Congress has provided in the past, this proposal recognizes a disparity in economic conditions between the time the war emergency began and the time of the veterans' return to civil life. It recognizes that home costs have increased approximately 10 percent per year during the war period, and that in consequence of this the veteran finds himself at a serious disadvantage in entering the present market to purchase a homestead. He needs help from his Government if he is to compete on equal terms with others for available homes. Priorities in the purchase of new homes will not help him overcome the general rise in price level which has occurred while he was away from home in the service of his country.

Let me point out here that in giving help to the veterans for education, there was no attempt to revamp the costs of education to make it available to veterans. Our assistance was direct to the veteran.

Before us now are proposals which seek to distort the entire economy of the Nation to create an artificial price level to benefit the veteran. It is urged that this be accomplished by the kind of rigid restriction, regulation, and economic tinkering which can only give war-time scarcity a new lease on life by introducing countless delays in the production process for establishment of new ceiling prices, approved costs, operating regulations, and official procedures. We are asked to support a cumbersome scheme of uninvited and unwelcome subsidies to producers—subsidies which can stifle normal competition by paying Government premiums to marginal producers. In the name of the veteran we are asked to take a long step toward the kind of excess in governmental control which the veteran was called upon to fight.

Clearly this perversive emphasis on severity of control and upon intrusive governmental participation in production will put the break on our productive mechanism. We desperately need something that can reach over toward the accelerator. I am convinced, Mr. Speaker, that this bill, accompanied by discernment and realism in adjusting OPA controls, can give a thumping push to the accelerator for home production, and thereby provide veterans with the kind of homes they really want with a minimum of delay.

Shocked

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. SCHWABE of Oklahoma. Mr. Speaker, much interest is being manifested today in the thinking of our servicemen and veterans. It is high time we observe what their attitude is with reference to how well we may have kept or may now be keeping the faith at home while they were protecting it abroad.

These boys were not in a position to plan affairs at home. They did not have time to think very seriously about what was going on here while they were so absorbed in the heat of the campaigns overseas. There seems to have been an utter failure on the part of many who stayed at home to assume the responsibility of keeping this Government American—the America that these boys were told it was before they left. No one seems to have planned for housing the boys who were in uniform. A little foresight would have suggested that they would need homes when they were discharged from the service. They need clothing and a lot of other things that they are now wanting and to which they are unquestionably entitled. Apparently we were not prepared for the war, and it is as apparent we are not prepared for peacetime operations. The boys know they have been let down in this respect.

While they were gone certain internal conditions developed which they do not like and which forthright Americans do not like. Ideologies of foreign extraction have become too much in evidence. The boys are shocked to get home and find that conditions at home are not what they were told they were fighting this war for abroad. They are not going to be satisfied with doles and subsidies and a lot of cheap political lip service. They want economic freedom and equality of opportunity, not hampered and not restricted by bureaucracy and bureaucrats. Yes they are shocked and they may shock others before long.

In this connection I am pleased to quote the following editorial from the Tulsa Tribune, of Tulsa, Okla., entitled:

"SHOCKED!"

(By Richard Lloyd Jones)

President Truman lends his autograph to broadcast a public appeal to the youth of America urging them to enlist in the United States Army and as an inducement he cites wages for a soldier service which any leader of organized labor would look upon with scorn. And there are two lessons in this.

First. Mr. Truman, as President of the American people, is not advocating a soldier pay that is commensurate with the soldier's service. The second lesson is that the labor racketeers who dominate this timid government at Washington have a contempt for the country which President Truman asks our youths to serve.

Our Congressmen, through Mr. Truman and without his demurrer, offer $50 a month for a private, $12 a week, less than $2 a day. If the boys who hire out for that are sent into foreign fields in armies of occupation they will learn the worth of the land which they serve.

We sing "Land of the free and home of the brave," but we don't mean it any more. In our national and State capitols we have few defenders of free men now.

Look at the shameful spectacle in the great city of New York. The people elected a leader. Recently this mayor went cringing to a labor racketeer to plead, to beg pretty pleas that this labor racketeer be considerate enough of the people not to freeze all their activities, tie up the town. "Fooey on the mayor," said the racketeer, and he tied up the town. What has happened to this "Land of the free and home of the brave"?

This country was made by men who believed that every man should be a free man, should have the right to work without the consent of some grafting racketeer, without paying fees and extortion to a hijacker who robs men of their freedom. And what does our Government do in the face of this tyranny? Most of our United States Senators are against freedom now. Our President does not defend the constitutional rights of free men. He asks our youths to respond to his call to the colors for a paltry pay while he does not fight for our freedoms here at home.

William S. Power, an American soldier boy from Pittsburgh, Pa., who has just returned from 3½ years of European war, is shocked at what he finds when he returns to this "Land of the free and home of the brave." Through the pages of the St. Louis Globe-Democrat he unburdens his outraged soldier's soul. That brave boy puts to shame every cowardly Congressman and the White House itself. Billy Power, of Pittsburgh, is the free man who fought for the freedoms our government at home has let be lost. Let Billy Power speak:

"This power strike that paralyzed my home town (the Pittsburgh I used to brag so much about during my 3½ years in the Army) was the last straw. Here's a letter I've wanted to write ever since arriving back in the States last month. Can there be such fools in such a paradise? Can there be such discontents amid such plenty? Can there be such self-pitiers among the recipients of so many blessings?

"This is the United States of America. This is the land that each and every European I've ever talked to would give 10 years of his life to live in. This is the land of unlimited opportunity and personal liberty. This is the land that recognizes no barriers of caste and class, race and religion. This is the

land among lands, the Nation among nations, the most blessed of the blest. This is the United States of America.

"America, to the foreigners, is a dream, a legend, the eighth wonder of the civilized world. Yet all of this passes blissfully over the heads of the average American citizen. All of this, even when it is realized, is calmly, smugly, and matter-of-factly accepted. All of this everything means nothing.

"Personal liberty and unrestricted personal opportunity? Some Americans will throw it away by becoming a 'serial number' in a gigantic, strictly regimented union—another pawn, another number, another nobody.

"Democracy? Some Americans will take totalitarianism if there's an extra temporary dime an hour in it for them.

"Money, money, money * * * gripe, gripe, gripe * * * strike, strike, strike. Personal freedom, personal liberty, personal independence, and spiritual and moral values are chucked overboard for that dime. Certainly there's power in a mass; if a man likes to be a hunk of mass rather than John Jones, independent individual who makes his own decisions.

"When are some Americans going to appreciate the blessings they have instead of complaining about the luxuries they lack? When are some Americans going to think in terms of putting something into a business instead of taking something out of it? When are some Americans going to concentrate on working for what they get instead of striking for what they want?

"The psychological catch phrase, 'living wage,' is a mockery and a joke to any soldier who has come back from where they really have it tough. A 'living wage' in almost every other country under the sun means soup and potatoes for the kids and a couple of black-market American Army OD shirts and trousers for the old man.

"A 'living wage' anywhere else but in America means that the father of the family earns enough dough to put some cheap clothes on his children's backs and some bread in their stomachs.

"A living wage in any and every sense of the term signifies an absence of luxuries. And what is a luxury? A luxury is a gas stove as compared to a wood stove; an electric iron as compared to a flat iron; a refrigerator as compared to an ice box. A luxury is a sewing machine, a radio set, a telephone—red meat on the table, an extra suit of clothes in the closet, an automobile. A luxury is that which is over and above the bare necessities of life.

"There have been plenty of luxuries in the past for Americans. There are a lot of luxuries right now. There can be countless more in the future. There can be enough luxuries for everyone who is willing to work for them. This is America, the land of plenty—remember?

"There's plenty of material, plenty of food, plenty of everything for everybody in America. It's ripe to be picked instead of picketed, begging to be developed and blushing with shame at being neglected.

"Americans will never get this abundance by self-pity, belligerence, and indolence. Americans will never obtain their plenty by watching clocks, measuring pay envelopes, and kicking each other in the teeth. They'll get a higher standard of living in the future in the same way that they got it in the past—the only way—by working, toiling, and producing those things they need and want.

"It's a crying shame to see Americans who sabotage the unlimited opportunities for comforts and luxuries that lie before them."

So speaks a soldier who sacrificed to do his duty while we at home failed in our duty to keep the freedoms he fought for.

Best Location in the Nation

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mrs. BOLTON. Mr. Speaker, under the leave granted me to extend my remarks I wish to insert in the RECORD an editorial which recently appeared in the Cleveland Plain Dealer.

Each of us has pride in the respective communities we represent. We of Cleveland feel we have much to offer to industry and to individuals. We firmly believe we have the "best location in the Nation" as Mr. Frank J. Ryan of the Cleveland Electric Illuminating Co. so aptly put it.

BEST LOCATION IN THE NATION

The campaign of the Cleveland Electric Illuminating Co. to attract new industries to the territory it serves in northeastern Ohio deserves the commendation and support of all groups who live and work in this area—private citizens, governmental bodies, and business and labor organizations.

The Illuminating Co. is not the sole conductor of the drive to publicize the advantages of the Cleveland area as the site for new industries and the expansion of established ones. But its national advertising campaign under the slogan "Best location in the Nation" has attracted national attention to the factors which make northeastern Ohio a desirable location for the production and distribution of manufactured articles.

Moreover, it offers a location engineering service to companies contemplating expansion. That this service has proved helpful is shown by the fact that many new industries have taken advantage of it before deciding to locate here.

Recently Frank J. Ryan, assistant to the president of the Illuminating Co., told the Cleveland Rotary Club that during 1945 more than 50 companies made commitments for industrial expansion in this area, and that their plans involve expenditures in excess of $100,000,000 and job opportunities for at least twenty-two thousand five hundred. Commitments for expansion that will equal or exceed those obtained in 1945 are now in prospect for 1946.

"Here in the Cleveland area," said Ryan, "it is the pay rolls and profits earned in industry that support our homes and schools, our clubs and hospitals and churches, our stores and theaters, and other commercial enterprises.

"Everything we have in this area in the way of purchasing power, standard of living, comfort and culture derives basically from our industries. As industry develops here and industrial production, pay rolls, and profits increase, everyone shares directly or indirectly in the benefits."

In its advertising campaign the Illuminating Co. stresses Cleveland's geographical location as one of the principal factors which make Cleveland desirable for production and distribution. Within 500 miles of Cleveland there are 75,000,000 people and most of the major markets of North America.

The company also emphasizes the area's transportation facilities, the adequacy and low rates of electric power, the supply of manpower and labor skills, accessibility to raw materials, availability of parts and supplies, financial, business, and industrial services, favorable tax structure, unlimited fresh water supply, desirable plant locations and excellent living and cultural environment.

It is clear that Cleveland has something to sell and that every Clevelander has a personal stake in the promotion of Cleveland's industrial progress and prosperity.

Majority of Newspapers Against Case Bill

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. ENGLE of California. Mr. Speaker, the newspapers of this country represent a substantial segment of public opinion and are usually well informed on public issues. In addition, the newspapers generally have not been notably favorable to organized labor. A recent survey of newspaper opinion, however, which appeared in the United States News of February 15, 1946, indicates that the so-called Case labor dispute bill has the unqualified endorsement of relatively few of the Nation's editors and that a far greater number warn against hastily considered labor legislation and believe that the bill is too drastic—particularly the provision for court injunction against violence. I wish to include in my remarks the summary of newspaper opinion referred to and also an editorial from the Christian Science Monitor of February 26, 1946, entitled "Worse Than Forgotten," and also an editorial from Labor under date of March 2, 1946, quoting a warning against the bill in Business Week:

[From the United States News]

STRIKE CONTROLS IN HOUSE BILL—PRESS REACTION

The Case labor disputes bill, passed last week by the House, has the unqualified endorsement of relatively few of the Nation's editors. A far greater number, who warn against hastily considered labor legislation, believe parts of the bill too drastic, particularly the provision for court injunctions against violence. Intervention in major disputes by a Federal mediation board and equal penalties on both sides for contract violation are more widely approved.

Terming the legislation "long overdue," the Troy (N. Y.) Record (Republican) considers its provisions "mild enough" and says that authorization for injunctions against violence "is but endorsing the most elementary principles of justice."

The Christian Science Monitor (Independent) opposes precipitate action on this "extremely delicate problem." Conceding that "what the Case bill sets out to do will meet little argument," the Monitor observes that, while maintenance of the status quo during negotiations, as provided, "sounds logical and reasonable," nevertheless "veteran mediators and arbiters * * * warn against such restraints." The injunction weapon, it believes, has been abused by industry in the past and "warrants the most cautious approach."

Although foreseeing that application of such a "drastic" law "might bring about the bloodiest area in labor's history in this country," the New London (Conn.) Evening Day (Independent-Republican) argues that

"something, surely, has got to be done to end the present ruinous strike tendency," and it won't be done by "harmless" legislation.

The Youngstown (Ohio) Vindicator (Independent-Democrat), however, calls the bill "dishonest" and says "its matter as well as its intent is bad." Among the objections raised is that "it would put the Government in the very middle of all disputes, whereas the aim should be to keep it out of them." This newspaper says that "Congress cannot pass broad legislation in time to do any good in the current strikes" and that it should "pass some such limited measure as the President's fact-finding plan and then settle down to deliberate, careful study of permanent legislation."

The Wall Street Journal (Independent) sees a "serious risk that a half-baked statute, added to the present jumble of law and emergency regulations, would only aggravate existing labor disputes," and believes that "the whole structure of Federal labor law badly needs overhauling." It argues, too, that violence and intimidation "are already illegal under most local police laws. Whether their prohibition by Federal law would be better enforced is a wide-open question."

"The trouble with the Case bill," say the Washington (D. C.) Post (Independent), "is that a number of sound objectives have been tangled up with extreme and unworkable provisions. It needs * * * pruning and revision" by a congressional committee.

But the Washington (D. C.) Star (Independent) believes that passage of the bill serves the purpose of getting some effective legislation * * * started through the mill, even though there is room for doubt as to the wisdom of some of it.

Not denying that some provisions of the Case bill are extreme, the Indianapolis (Ind.) News (Independent-Republican) describes it as "aimed at violence and irresponsibility," not at the right to strike. "Furthermore," it continues, "the bill avoids the pitfall of compulsory arbitration" and so "is preferable, even from labor's standpoint, to President Truman's fact-finding procedure."

But the Chicago (Ill.) Journal of Commerce (Independent) opposes it on the ground that "mediation of the type proposed * * * turns out to be compulsion." Calling for revision of the Wagner Act, this newspaper believes that then "the next step should be for the Government to wtihdraw to the side lines."

The Baltimore (Md.) Sun (independent Democratic) calls the measure "moderate * * * as far as its explicit provisions go." But it considers substitution of "a kind of Federal policing" for local authority to prevent violence "grave in all its implications." The Sun also objects to "Mr. CASE's apparent assumption that a union is a firm and tangible legal entity, as responsible * * * as is a corporation." A deeper objection, it adds, is that the bill attempts "to pile on top of a series of special privileges another series of limitations on those special privileges." It questions "whether the wiser course would not be simply to repeal the special privileges in whole or in part."

The Case bill is "a mixture of good and bad," in the opinion of the New York Times (independent), which disapproves legislating "without careful study on a matter of this importance." But this paper sees "a demand in the country and in Congress * * * for 'action' in the present labor crisis," and it suggests three steps in the immediate situation: Repeal of the Smith-Connally Act, then passage as a stopgap of the Wagner Act amendments passed by the House in 1940 and buried in a Senate committee, and, finally, appointment of "a commission of experts to propose a well-rounded program of permanent Federal labor legislation."

[From the Christian Science Monitor of February 26, 1946]

WORSE THAN "FORGOTTEN"

In contrast to the commendable mediation machinery set up by the Case bill, there are several provisions in the measure which the Senate is likely to scrutinize with a questioning eye. One of them contains the definition of workers classed under management and as such denied the status of "employees" under the Wagner Act.

Among workers whom the bill would bar from unions are those "whose duties include the computation of the pay of other employees"—in other words, timekeepers and pay-roll clerks. Now, by common knowledge, such clerical employees appear to be typical members of that "white collar" group which benefit neither from salaries on any true managerial level nor from the kind of pay rates which vigorous unions have gained for the production worker. To bar such people from the right to organize and to bargain collectively would seem to discriminate against a portion of the "forgotten" public the Case bill purports to protect.

[From Labor]

LET'S SIT DOWN AND REASON TOGETHER—"BUSINESS WEEK" WARNS THAT THE CASE BILL IS LIKELY TO BOOMERANG; BOSSES VIOLATE CONTRACTS TWICE AS OFTEN AS UNIONS!

Business Week, as its name indicates, is printed primarily for businessmen. It endeavors, and with a reasonable amount of success, to give them advice which is worthwhile. Appreciating that "labor relations" are playing an increasingly important role in the lives of employers, the editors of Business Week devote one page of their magazine to The Labor Angle.

In their latest issue, they discussed the Case bill, that extraordinary piece of anti-labor legislation which the erudite gentleman from South Dakota, who proudly proclaims the many institutions of learning he has attended, succeeded in putting through the House, with the aid of certain Southern Democrats, commonly and somewhat irreverently referred to as "the sweatshop brigade" meaning that they are always on the side of the employer who pays the lowest wages.

The gentleman from South Dakota and his sweatshop friends had quite a celebration when they passed the Case bill, but Business Week is not so sure about its alleged virtues. It fears the mountain has labored and brought forth another Smith-Connally Act.

Business Week has its eye on section 10 of the Case bill. This provides penalties for the violation of contracts between unions and employers.

"Management has rather generally assumed that these contract-breaking walkouts are all there is to the responsibility problem and that penalties for contract-breaching will bother only the unions," says Business Week, and it adds, with considerable emphasis: "This is far from the truth."

It points out that when violations of contracts go to arbitration, the decision is against the employer in about two out of three instances.

"Therefore, if any penalties are to be imposed on either party who violates a labor contract or—as is also being suggested—if certain rights are taken away from the party acting contrary to the contract, the employer much more often than the union would be in jeopardy."

Business Week suggests that if management wishes "to avoid the sad experience of the Smith-Connally Act," then "business must leave off the easy way of thinking in slogans and really get down to bedrock facts on the responsibility problem."

This is all very interesting. How often have we been told that unions do not respect their contract obligations? Most of us know that is not true, and now we have a business magazine warning businessmen that if responsibility is enforced impartially against unions and managements, the record, so far made, shows that management will be the victim in two cases out of three.

Republicans Need More Sense

EXTENSION OF REMARKS
OF
HON. JOHN W. GWYNNE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. GWYNNE of Iowa. Mr. Speaker, in accordance with permission heretofore granted, I am including as part of these remarks an editorial from the Northwood Anchor of Northwood, Iowa.

The editorial is as follows:

REPUBLICANS NEED MORE SENSE

Some of the national leaders of the Republican party are advising that the rank and file membership, including prospective candidates for office, return to its original principles. It is sound advice. If the New Deal is a good thing, join it. If it isn't, then quit trying to outdeal it by matching or exceeding its extravagant pledges of which many have never been and never will be redeemed.

A new deal, in gamblers' parlance, never guaranteed a square deal, and a square deal, after all, is enough encouragement for any independent, self-reliant man or woman. Those who clamor for more than that want a crooked deal—the cards stacked to favor some more than others. If the Republican Party continues to seek votes on that kind of platform it deserves further defeat.

Smart people do not try to beat the other fellow's game. If they think it has something in it that leads to good results they play it as the rules provide. If the same smart people think the game is not what it pretends to be they show it up by proposing a better one—not by proposing to put more bounce in the action by adding a fifth ace and playing jacks and deuces wild.

Open Letter

EXTENSION OF REMARKS
OF
HON. PAUL STEWART
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. STEWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following open letter from the Spiro (Okla.) Times:

OPEN LETTER TO OUR HIRED MEN IN WASHINGTON

DEAR SIRS: Remember us? We are the farmers. We are the fellows who furnish all your food and pay a very large part of your salaries. We are those ragged fellows whose wives have sewed patches on the patches on the patches on our overalls. We are the chaps who have fixed our old machinery until there is nothing left to fix.

We are even running out of haywire to tie busted tools together.

We are the fellows who are now organizing as rapidly as possible for the purpose of shutting off the grub supply of all strike-bound parts of the country until production of tools, machinery, overalls, and the goods we so badly need again gets under way.

You are down there at Washington because a lot of us voted for you. We expected you to do a little looking after our interests. So far we have noticed no such effort on your part.

If you would stir your stumps and quit filibustering and otherwise behaving like a bunch of clowns, you could get production started without our having to carry out a food stoppage. But you'd better get busy—or we will.

When you find your mail cluttered up with copies of this letter mailed in by our members and friends, better pay a little attention—or you may be wondering what hit you next time you come up for election. And if you want to beat us to the job of getting production started, better move fast. It is later than you think.

The PHEASANT.

Address of Winston Churchill

REMARKS
OF
HON. E. E. COX
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. COX. Mr. Speaker, the address that the great Winston Churchill made at Fulton, Mo., on yesterday, in addition to electrifying the entire world, should carry hope to the hearts of peoples of good will everywhere.

That Russia is actually now appropriating to her own use the contribution that we made to the winning of the war just closed must be recognized by everyone. That she intends to spread out her power and, if possible, to communize the entire world, cannot be doubted.

Mr. Speaker, I ask unanimous consent to extend my remarks by inserting the address of Mr. Churchill, notwithstanding the fact that it costs $140, according to a statement furnished by the Public Printer.

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

Mr. RANKIN. Reserving the right to object, Mr. Speaker, and I shall not object, Winston Churchill rendered a great service to civilization yesterday, and I am glad the gentleman is putting his speech in the RECORD.

We may not agree with everything Mr. Churchill said, but his argument against communism is simply unanswerable.

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

There was no objection.

(The matter referred to is as follows:)

I am glad to come to Westminster College this afternoon and am complimented that you should give me a degree. The name "Westminster" is somehow familiar to me. I seem to have heard of it before. Indeed it was at Westminister that I received a very large part of my education in politics, dialectic, rhetoric, and one or two other things.

It is also an honor, perhaps almost unique, for a private visitor to be introduced to an academic audience by the President of the United States. Amid his heavy burdens, duties, and responsibilities—unsought but not recoiled from—the President has traveled a thousand miles to dignify and magnify our meeting here today and give me an opportunity of addressing this kindred Nation, as well as my own countrymen across the ocean and perhaps some other countries too. The President has told you that it is his wish, as I am sure it is yours, that I should have full liberty to give my true and faithful counsel in these anxious and baffling times. I shall certainly avail myself of this freedom and feel the more right to do so because any private ambitions I may have cherished in my younger days have been satisfied beyond my wildest dreams.

Let me, however, make it clear that I have no official mission or status of any kind and that I speak only for myself. I can, therefore, allow my mind, with the experience of a lifetime, to play over the problems which beset us on the morrow of our absolute victory in arms; and try to make sure that what has been gained with so much sacrifice and suffering shall be preserved for the future glory and safety of mankind.

The United States stands at this time at the pinnacle of world power. It is a solemn moment for the American democracy. With primacy in power is also joined an awe-inspiring accountability to the future. As you look around you, you feel not only the sense of duty done but also feel anxiety lest you fall below the level of achievement. Opportunity is here now, clear and shining, for both our countries. To reject it or ignore it or fritter it away will bring upon us all the long reproaches of the after-time. It is necessary that constancy of mind, persistency of purpose, and the grand simplicity of decision shall guide and rule the conduct of the English-speaking peoples in peace as they did in war. We must and I believe we shall prove ourselves equal to this severe requirement.

When American military men approach some serious situation they are wont to write at the head of their directive the words "Over-all strategic concept." There is wisdom in this as it leads to clarity of thought. What, then, is the over-all strategic concept which we should inscribe today? It is nothing less than the safety and welfare, the freedom and progress of all the homes and families of all the men and women in all the lands. And here I speak particularly of the myriad cottages or apartment homes where the wage earner strives amid the accidents and difficulties of life to guard his wife and children from privation and bring the family up in the fear of the Lord or upon ethical conceptions which often play their potent part.

MUST SHIELD HOMES

To give security to these countless homes they must be shielded from the two gaunt marauders—war and tyranny. We all know the frightful disturbance in which the ordinary family is plunged when the curse of war swoops down upon the breadwinner and those for whom he works and contrives. The awful ruin of Europe, with all its vanished glories, and of large parts of Asia, glares in our eyes. When the designs of wicked men or the aggressive urge of mighty states dissolve, over large areas, the frame of civilized society, humble folk are confronted with difficulties with which they cannot cope. For them all is distorted, broken, or even ground to pulp.

When I stand here this quiet afternoon I shudder to visualize what is actually happening to millions now and what is going to happen in this period when famine stalks the earth. None can compute what has been called "the unestimated sum of human pain." Our supreme task and duty is to guard the homes of the common people from the horrors and miseries of another war. We are all agreed on that.

Our American military colleagues, after having proclaimed the "over-all strategic concept" and computed all available resources, always proceed to the next stop, namely, the method. Here again there is widespread agreement. A world organization has already been erected for the prime purpose of preventing war. United Nations, the successor of the League of Nations, with the decisive addition of the United States and all that that means, is already at work. We must make sure that its work is fruitful, that it is a reality and not a sham, that it is a force for action and not merely a frothing of words, that it is a true temple of peace in which the shields of many nations can some day be hung and not merely a cockpit in a tower of Babel. Before we cast away the solid assurances of national armaments for self-preservation, we must be certain that our temple is built, not upon shifting sands or quagmires, but upon the rock. Anyone with his eyes open can see that our path will be difficult and also long, but if we persevere together as we did in the two World Wars—though not, alas, in the interval between them—I cannot doubt that we shall achieve our common purpose in the end.

I have, however, a definite and practical proposal to make for action. Courts and magistrates cannot function without sheriffs and constables. The United Nations Organization must immediately begin to be equipped with an international armed force. In such a matter we can only go step by step; but we must begin now. I propose that each of the powers and states should be invited to dedicate a certain number of air squadrons to the service of the world organization. These squadrons would be trained and prepared in their own countries but would move around in rotation from one country to another. They would wear the uniform of their own countries with different badges. They would not be required to act against their own nation but in other respects they would be directed by the world organization. This might be started on a modest scale and a grow as confidence grew. I wished to see this done after the First World War and trust it may be done forthwith.

It would nevertheless be wrong and imprudent to entrust the secret knowledge or experience of the atomic bomb, which the United States, Great Britain, and Canada now share, to the world organization, while it is still in its infancy. It would be criminal madness to cast it adrift in this still agitated and ununited world. No one in any country has slept less well in their beds because this knowledge and the method and the raw materials to apply it are at present largely retained in American hands. I do not believe we should all have slept so soundly had the positions been reversed and some Communist or neo-Fascist state monopolized, for the time being, these dread agencies. The fear of them alone might easily have been used to enforce totalitarian systems upon the free democratic world, with consequences appalling to human imagination.

God has willed that this shall not be, and we have at least a breathing space before this peril has to be encountered, and even then, if no effort is spared, we should still possess so formidable a superiority as to impose effective deterrents upon its employment or threat of employment by others. Ultimately when the essential brother of man is truly embodied and expressed in a world organization, these powers may be confided to it.

I now come to the second danger which threatens the cottage home and ordinary

people, namely tyranny. We cannot be blind to the fact that the liberties enjoyed by individual citizens throughout the United States and British Empire are not valid in a considerable number of countries, some of which are very powerful. In these states control is enforced upon the common people by various kinds of all-embracing police governments, to a degree which is overwhelming and contrary to every principle of democracy. The power of the state is exercised without restraint, either by dictators or by compact obligarchies operating through a privileged party and a political police. It is not our duty at this time, when difficulties are so numerous, to interfere forcibly in the internal affairs of countries whom we have not conquered in war, but we must never cease to proclaim in fearless tones the great principles of freedom and the rights of man, which are the joint inheritance of the English-speaking world and which, through Magna Carta, the Bill of Rights, the habeas corpus, trial by jury, and the English common law find their famous expression in the Declaration of Independence.

All this means that the people of any country have the right and should have the power, by constitutional action, by free, unfettered elections, with secret ballot, to choose or change the character or form of government under which they dwell, that freedom of speech and thought should reign, that courts of justice, independent of the executive, unbiased by any party, should administer laws which have received the broad assent of large majorities or are consecrated by time and custom. Here are the title deeds of freedom, which should lie in every cottage home. Here is the message of the British and American peoples to mankind. Let us preach what we practice and practice what we preach.

POVERTY IS AHEAD

I have now stated the two great dangers which menace the homes of the people. I have not yet spoken of poverty and privation, which are in many cases the prevailing anxiety, but if the dangers of war and tyranny are removed, there is no doubt that science and cooperation can bring, in the next few years, to the world, newly taught in the hard school of war, an expansion of material well-being beyond anything that has yet occurred in human experience.

Now, at this sad, breathless, moment, we are plunged in the hunger and distress which are the aftermath of our stupendous struggle; but this will pass and may pass quickly, and there is no reason except human folly or subhuman crime which should deny to all the nations, the inauguration and enjoyment of an age of plenty. I have often used words which I learned 50 years ago from a great Irish-American orator, Mr. Bourke Cockran: "There is enough for all. The earth is a generous mother; she will provide in plentiful abundance food for all her children if they will but cultivate her soil in justice and in peace."

So far we are evidently in full agreement. Now, while still pursuing the method of realizing our over-all strategic concept, I come to the crux of what I have traveled here to say. Neither the sure prevention of war, nor the continuous rise of world organization, will be gained without what I have called the fraternal association of the English-speaking peoples. This means a special relationship between the British Commonwealth and Empire and the United States. This is no time for generalities. I will venture to be precise.

Fraternal association requires not only the growing friendship and mutual understanding between our two vast but kindred systems of society but the continuance of the intimate relationships between our military advisers, leading to common study of potential dangers, similarity of weapons and manuals of instruction and interchange of officers and cadets at colleges. It should carry with it the continuance of the present facilities for mutual security by the joint use of all naval and Air Force bases in the possession of either country all over the world. This would perhaps double the mobility of the American Navy and Air Force. It would greatly expand that of the British Empire forces and it might well lead, if and as the world calms down, to important financial savings. Already we use together a large number of islands; more may well be entrusted to our joint care in the near future.

The United States already has a permanent defense agreement with the Dominion of Canada, which is so devotedly attached to the British Commonwealth and Empire. This agreement is more effective than many of those which have often been made under formal alliances. This principle should be extended to all the British Commonwealths with full reciprocity. Thus, whatever happens, and thus only, we shall be secure ourselves and able to work together for the high and simple causes that are dear to us and bode no ill to any. Eventually there may come the principle of common citizenship but that we may be content to leave to destiny, whose outstretched arm so many of us can clearly see.

There is, however, an important question we must ask ourselves. Would a special relationship between the United States and the British Commonwealth be inconsistent with our overriding loyalties to the world organization? I reply that on the contrary, it is probably the only means by which that organization will achieve its full stature and strength. There are already the special United States relations with Canada and between the United States and the South American republics. We also have our 20 years' treaty of collaboration and mutual assistance with Soviet Russia. I agree with Mr. Bevin that it might well be a 50-year treaty. We have an alliance with Portugal unbroken since 1384. None of these clash with the general interest of a world agreement. On the contrary they help it. "In my Father's house are many mansions." Special associations between members of the United Nations which have no aggressive point against any other country, which harbor no design incompatible with the Charter of the United Nations, far from being harmful, are beneficial and, as I believe, indispensable.

MUST BUILD TEMPLES

I spoke earlier of the temple of peace. Workmen from all countries must build that temple. If two of the workmen know each other particularly well and are old friends, if their families are intermingled and if they have faith in each other's purpose, hope in each other's future and charity toward each other's shortcomings, to quote some good words I read here the other day, why cannot they work together at the common task as friends and partners? Why cannot they share their tools and thus increase each others' working powers? Indeed they must do so or else the temple may not be built, or, being built, it may collapse, and we shall all be proved unteachable and have to go and try to learn again for a third time, in a school of war, incomparably more rigorous than that from which we have just been released.

The Dark Ages may return, the Stone Age may return on the gleaming wings of science, and what might now shower immeasurable material blessings upon mankind, may even bring about its total destruction. Beware, I say; time may be short. Do not let us take the course of letting events drift along till it is too late. If there is to be a fraternal asscciation of the kind I have described, with all the extra strength and security which both our countries can derive from it, let us make sure that that great fact is known to the world, and that it plays its part in steadying and stabilizing the foundations of peace. Prevention is better than cure.

A shadow has fallen upon the scenes so lately lighted by the Allied victory. Nobody knows what Soviet Russia and its Communist international organization intends to do in the immediate future, or what are the limits, if any, to their expansive and proselytizing tendencies. I have a strong admiration and regard for the valiant Russian people and for my wartime comrade, Marshal Stalin. There is sympathy and good will in Britain—and I doubt not here also—toward the peoples of all the Russias and a resolve to persevere through many differences and rebuffs in establishing lasting friendships.

We understand the Russian need to be secure on her western frontiers from all renewal of German aggression. We welcome her to her rightful place among the leading nations of the world. Above all, we welcome constant, frequent, and growing contacts between the Russian people and our own people on both sides of the Atlantic. It is my duty, however, to place before you certain facts about the present position in Europe.

From Stettin in the Baltic to Trieste in the Adriatic, an iron curtain has descended across the continent. Behind that line lie all the capitals of the ancient states of central and eastern Europe. Warsaw, Berlin, Prague, Vienna, Budapest, Belgrade, Bucharest, and Sofia, all these famous cities and the populations around them lie in the Soviet sphere and all are subject, in one form or another, not only to Soviet influence but to a very high and increasing measure of control from Moscow. Athens alone, with its immortal glories, is free to decide its future at an election under British, American, and French observation.

NO DEMOCRACY EXISTS

The Russian-dominated Polish Government has been encouraged to make enormous and wrongful inroads upon Germany, and mass expulsions of millions of Germans on a scale grievous and undreamed of are now taking place. The Communist parties, which were very small in all these eastern states of Europe, have been raised to preeminence and power far beyond their numbers and are seeking everywhere to obtain totalitarian control. Police governments are prevailing in nearly every case, and so far, except in Czechoslovakia, there is no true democracy.

Turkey and Persia are both profoundly alarmed and disturbed at the claims which are made upon them and at the pressure being exerted by the Moscow government. An attempt is being made by the Russians in Berlin to build up a quasi-Communist party in their zone of occupied Germany by showing special favors to groups of left-wing German leaders. At the end of the fighting last June, the American and British Armies withdrew westward, in accordance with an earlier agreement, to a depth at some points of 150 miles on a front of nearly 400 miles, to allow the Russians to occupy this vast expanse of territory which the western democracies had conquered.

If now the Soviet Government tries, by separate action, to build up a pro-Communist Germany in their areas, this will cause new serious difficulties in the British and American zones, and will give the defeated Germans the power of putting themselves up to auction between the Soviets and the western democracies. Whatever conclusions may be drawn from these facts—and facts they are—this is certainly not the liberated Europe we fought to build up. Nor is it one which contains the essentials of permanent peace.

In front of the iron curtain which lies across Europe are other causes for anxiety. In Italy the Communist Party is seriously hampered by having to support the Com-

munist-trained Marshal Tito's claims to former Italian territory at the head of the Adriatic. Nevertheless, the future of Italy hangs in the balance. Again, one cannot imagine a regenerated Europe without a strong France. All my public life I have worked for a strong France and I never lost faith in her destiny, even in the darkest hours. I will not lose faith now.

GROWING CHALLENGE

However, in a great number of countries, far from the Russian frontiers and throughout the world. Communist fifth columns are established and work in complete unity and absolute obedience to the directions they receive from the Communist center. Except in the British Commonwealth, and in the United States, where communism is in its infancy, the Communist parties or fifth columns constitute a growing challenge and peril to Christian civilization. These are somber facts for anyone to have to recite on the morrow of a victory gained by so much splendid comradeship in arms and in the cause of freedom and democracy, and we should be most unwise not to face them squarely while time remains.

The outlook is also anxious in the Far East and especially in Manchuria. The agreement which was made at Yalta, to which I was a party, was extremely favorable to Soviet Russia, but it was made at a time when no one could say that the German war might not extend all through the summer and autumn of 1945 and when the Japanese war was expected to last for a further 18 months from the end of the German war. In this country you are all so well informed about the Far East and such devoted friends of China that I do not need to expatiate on the situation there.

I have felt bound to portray the shadow which, alike in the West and in the East, falls upon the world. I was a minister at the time of the Versailles Treaty and a close friend of Mr. Lloyd George. I did not myself agree with many things that were done, but I have a very strong impression in my mind of that situation, and I find it painful to contrast it with that which prevails now. In those days there were high hopes and unbounded confidence that the wars were over, and that the League of Nations would become all-powerful. I do not see or feel the same confidence or even the same hopes in the haggard world at this time.

On the other hand, I repulse the idea that a new war is inevitable, still more that it is imminent. It is because I am so sure that our fortunes are in our own hands and that we hold the power to save the future, that I feel the duty to speak out now that I have an occasion to do so. I do not believe that Soviet Russia desires war. What they desire is the fruits of war and the indefinite expansion of their power and doctrines. But what we have to consider here today while time remains, is the permanent prevention of war and the establishment of conditions of freedom and democracy as rapidly as possible in all countries.

Our difficulties and dangers will not be removed by closing our eyes to them; they will not be removed by mere waiting to see what happens; nor will they be relieved by a policy of appeasement. What is needed is a settlement, and the longer this is delayed, the more difficult it will be and the greater our dangers will become. From what I have seen of our Russian friends and allies during the war, I am convinced that there is nothing they admire so much as strength, and there is nothing for which they have less respect than for military weakness. For that reason the old doctrine of a balance of power is unsound. We cannot afford, if we can help it, to work on narrow margins, offering temptations to a trial of strength. If the western democracies stand together in strict adherence to the principles of the United Nations Charter, their influence for furthering these principles will be immense and no one is likely to molest them. If, however, they become divided or falter in their duty, and if these all-important years are allowed to slip away, then indeed catastrophe may overwhelm us all.

Last time I saw it all coming, and cried aloud to my own fellow countrymen and to the world, but no one paid any attention. Up till the year 1933 or even 1935, Germany might have been saved from the awful fate which has overtaken her and we might all have been spared the miseries Hitler let loose upon mankind.

There never was a war in all history easier to prevent by timely action than the one which has just desolated such great areas of the globe. It could have been prevented without the firing of a single shot, and Germany might be powerful, prosperous, and honored today, but no one would listen and one by one we were all sucked into the awful whirlpool.

We surely must not let that happen again. This can only be achieved by reaching now, in 1946, a good understanding on all points with Russia under the general authority of the United Nations and by the maintenance of that good understanding through many peaceful years, by the world instrument, supported by the whole strength of the English-speaking world and all its connections.

Let no man underrate the abiding power of the British Empire and Commonwealth. Because you see the 46,000,000 in our island harassed about their food supply, of which they only grow one-half, even in wartime, or because we have difficulty in restarting our industries and export trade after 6 years of passionate war effort, do not suppose that we shall not come through these dark years of privations as we have come through the glorious years of agony, or that half a century from now, you will not see seventy or eighty millions of Britons spread about the world and united in defense of our traditions, our way of life, and of the world causes we and you espouse. If the population of the English-speaking Commonwealth be added to that of the United States, with all that such cooperation implies in the air, on the sea, and in science and industry, there will be no quivering, precarious balance of power to offer its temptation to ambition or adventure. On the contrary there will be an overwhelming assurance of security. If we adhere faithfully to the Charter of the United Nations and walk forward in sedate and sober strength, seeking no one's land or treasure, or seeking to lay no arbitrary control on the thoughts of men, if all British moral and material forces and convictions are joined with your own in fraternal association, the high roads of the future will be clear, not only for us but for all, not only for our time but for a century to come.

U. S. S. "Arkansas"

REMARKS

OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. NORRELL. Mr. Speaker, in news releases from the Navy Department regarding the forthcoming atomic bomb tests to be carried out in the Pacific area, it was some weeks ago learned that the U. S. S. *Arkansas*, the dowager of the fleet, which has come through two world wars undamaged, would be among those vessels to be used in the test.

The U. S. S. *Arkansas*, the third ship to be so named, had her keel laid January 25, 1910, and was built by the New York Shipbuilding Co. at a cost of $4,675,000 for hull and machinery. With an over-all length of 562 feet, a normal displacement of 27,900 tons, and a speed of 21 knots, she has an allowed complement of 1,057 enlisted men. She was launched January 14, 1911, having been christened by Miss Mary Louise Macon, of Helena, Ark., daughter of Representative Robert M. Macon, and commissioned on September 17, 1912, under the command of Capt. Roy C. Smith.

Principal engagements in which she has participated in her illustrious career include the intervention at Vera Cruz in April 1914; service with Division 9 in July of 1918, in which she battled submarines in the North Atlantic and was later present at the internment of the German Fleet in the Firth of Forth on November 21, 1918. She did convoy duty in the North Atlantic in 1941–42, convoy duty in North Africa in 1943, and assisted in the Allied landings off the coast of Normandy in June 1944, and at Iwo Jima in February, 1945. Her service record includes escort duty to the U. S. S. *Washington* bearing President Wilson to Brest, France, December 1918; flagship of Admiral Benson, Chief of Naval Operations, on his return from the Peace Conference; flagship of Commander Scouting Fleet for Vice Adm. Arthur L. Willard; detailed for a number of years to midshipmen of the Naval Academy on their summer cruises.

The present Chief of the Bureau of Naval Personnel was an ensign on the U. S. S. *Arkansas* at the time of her commissioning. Gen. A. A. Vandegrift, Commandant of the Marine Corps, has also served aboard her.

The people of Arkansas, speaking through their Governor and members of the Arkansas delegation in Congress, desiring that the ship be given into custody of the State as a memorial, requested that the Navy Department give consideration to sparing her from the atomic tests. It was expected to sail her up the Mississippi River to Helena, or into the Arkansas River to the vicinity of Little Rock. In view of the sentiment we attached to the vessel, and speaking as chairman of our delegation in the House, I expressed the hope to the Secretary of Navy that it would be found possible to give custody of the ship to the State of Arkansas.

The Secretary replied that the Navy's choice of vessels for use in the test had been reduced to a matter of military necessity and availability, and that it was regretted that such ships as the U. S. S. *Arkansas*, which had served with distinction in our Navy for so many years, cannot be spared and exhibited as memorials. It was felt that the ship could render one last distinguished service to her Navy and country, as a result of which our armed forces would be supplied vitally needed information to be gained from the tests.

Our people are now reconciled to such use of the ship, with the realization of the necessity for the use of vessels of various sizes and strengths. We consider that the notable part which the U. S. S. *Arkansas* has played in naval annals of

the United States is becomingly highlighted in this final role of a splendid ship.

If she survives this final test it is our hope, as the Navy has indicated, that the U. S. S. *Arkansas* may be transferred to the State for which she is named as a remembrance of a gallant lady.

Un-American Activities

REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. THOMAS of New Jersey. Mr. Speaker, attacks against the Un-American Activities Committee follow the same pattern as did the attacks against the old Dies committee. It is one smear after another. The purpose being to purge out of existence a congressional committee which attempts to preserve the American form of government and the American way of life. There is, however, a ludicrous side, as evidenced recently in a Communist sheet entitled "In Fact," Gebrge Seldes, editor, the March 4, 1946, copy of which I hold in my hand. On the right-hand side of the front page, George Seldes states: "Whereas the Dies committee refused to fight fascism," and yet on the left-hand side of the same page, is an article which states in part, and I quote:

> Last February, Gen. Van Horn Moseley, who has been exposed by the Dies committee as having Fascist leanings.

George Seldes, on the masthead of In Fact, claims that his paper is an antidote for falsehood in the daily press. If this is so, then which of Seldes' statements is antidote and which is false?

In the same connection, it is interesting to learn something about George Seldes, editor of In Fact. His complete record is as follows:

George Seldes is the ace smear artist of the American Communists. Among all the so-called intellectuals or professionals who have attached themselves to the Communist movement, Seldes is unquestionably the most perfidious in his smearing.

Seldes is a journalist of sorts. In the early post-War I years he was expelled from several European countries, including Russia and Italy. From Berlin he wrote some of the most hair-raising dispatches on the Communist world plot. In those days he was as acrimonious in his ravings against the Communists as he is now acrimonious on their behalf. About 1936 George Seldes went over to the Communists—lock, stock, and barrel. In these 9 years he has been affiliated with scores of Communist enterprises. He easily ranks as one of the country's leading Communists, as this rather exhaustive account of his Communist activities and connections will attempt to show.

American Committee for Protection of Foreign Born: Seldes was a sponsor of this auxiliary of the Communist Party in 1941.

American Committee to Save Refugees: Seldes was a sponsor of this Communist enterprise in October 1941.

American Council on Soviet Relations: Seldes signed a manifesto urging an American declaration of war on Finland under the auspices of this Corliss Lamont-headed Communist-front organization.

American Friends of Spanish Democracy: In 1937 this outfit was one of the Communist Party's auxiliaries for Spain. Seldes was among those affiliated with the organization.

American Investor's Union: In 1939, George Seldes was a member of the board of directors of this Communist organization. The organization sprang from the efforts of Bernard J. Reis and Consumers Union to harass business enterprise.

American Peace Mobilization: Seldes was a member of the national council of the American Peace Mobilization, the seditious Communist front organization which expressed the party line in the days of the Stalin-Hitler pact.

Artists' Front To Win the War: In the days of the American Peace Mobilization, the Communists were bitterly isolationist—George Seldes included. Stalin was not then involved in the war. After Hitler's invasion of Russia, many of the same American Communists and Communist fellow travelers expressed their new line in a front which was known as the Artists' Front to Win the War. George Seldes was a sponsor of this latter organization, and was among those Communists who used this set-up to scream for a second front.

Citizens Committee for Harry Bridges: Seldes was a member of this obviously Communist front. Virginia Gardner, now Washington representative of the New Masses and Daily Worker, was its executive secretary.

Committee to Defend America by Keeping Out of War: This was another of the Communist fronts which operated during the days of the Stalin-Hitler pact. Seldes was in this, too.

Conference on Constitutional Liberties in America: This Communist gathering was held in Washington, D. C., June 7–9, 1940, in the middle of the period of the Stalin-Hitler pact. Seldes, the ever-present Communist sponsor, was among its supporters.

Consumers Union: This Communist front, headed by Arthur Kallet, whose party name was "Edward Adams," had Seldes as one of its original sponsors—1936.

Coordinating Committee to Lift the Embargo: This committee was a subsidiary of North American Committee to Aid Spanish Democracy, and included George Seldes as one of its sponsors.

Emergency Peace Mobilization: Seldes sponsored this parent of the American Peace Mobilization, chief Communist front of the Stalin-Hitler friendship era.

Equality: This was a Communist-line magazine which appeared in 1939–40 and to which George Seldes was a contributor.

Frontier Films: This organization was one of the many Communist excursions into the film field. George Seldes was a member of its advisory board.

Friday: This was another of the Communist-line periodicals which came and went. George Seldes was one of its endorsers.

Friends of the Abraham Lincoln Brigade: The Abraham Lincoln Brigade was composed of at least 60 percent Communist Party members, according to the testimony of Earl Browder. George Seldes was among those who were affiliated with the Friends of the Abraham Lincoln Brigade.

League of American Writers: Attorney General Francis Biddle described this organization as subversive. Seldes was one of the signers of the call to its fourth congress.

National Committee for People's Rights: George Seldes was a member of this Communist-front organization which Attorney General Biddle described as subversive.

National Emergency Conference: Seldes was among the signers of the call to this conference. It was a Communist gathering which met on May 13, 1939.

National Emergency Conference for Democratic Rights: This Communist-front organization was the direct successor to the American League for Peace and Democracy (which dissolved in February 1940). George Seldes was a member of its board of sponsors.

National Federation for Constitutional Liberties: One of the most important of all the Communist-front organizations of recent years. Seldes was affiliated with it in the defense of Communist Party leader Sam Darcy—real name Dardeck.

New Masses letter to the President: This was one of the rankest of defenses for the illegal and subversive activities of the Communists during the period of the Stalin-Hitler pact. Seldes was a signer of the letter.

New York Peace Association: Early in 1940 the Communists organized numerous local groups to express the party line of isolationism in keeping with the Stalin-Hitler pact. The New York Peace Association was one such group. Seldes was one of its sponsors.

Open letter for closer cooperation with the Soviet Union: In September 1939 a group of outstanding Communists and Communist fellow travelers issued this open letter. George Seldes was among the signers.

Soviet Russia Today: Among the contributors to this organ of Communist propaganda was George Seldes—November 1938, page 9.

Spanish defense committees: Seldes was one of the supporters of the Campaign to Aid International Volunteers, a Communist front to support the Loyalist cause in Spain.

Statement by American progressives on the Moscow trials: Stooges of the American Communists signed this statement, among them being George Seldes.

United American Spanish Aid Committee: Seldes was on the executive board of this Communist front.

United States Week: A Communist-line magazine of which Seldes was a contributing editor.

American Farmers Vigilante Committee

REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. CURTIS. Mr. Speaker, for too many years high New Deal officials have promoted labor-management strife. This reached an all-time high when the President of the United States stated over the radio that we could raise wages without raising prices. Of course, that statement is incorrect, it never has been done, wages and prices go up and down together. The President's speech was an invitation to strike.

More than 6 months has elapsed since the war ended, but we have had no production of goods because of the strife and confusion emanating from the New Deal. I have before me a letter from the American Farmers Vigilante Committee and the resolutions which they have adopted, reading as follows:

AMERICAN FARMERS
VIGILANTE COMMITTEE,
Edgar, Nebr., March 1, 1946.

Hon. CARL CURTIS,
Washington, D. C.

DEAR SIR: On behalf of our membership and affiliated organizations, representing more than 22,000 farmers, we are sending you the resolutions passed at our last meeting.

We respectfully request that you read these resolutions to the House of Representatives, as we feel that the Congress of the United States can, if it will, make it unnecessary for us to further complicate the business of reconversion.

Sincerely,

V. HUBERT JOHNSON,
President.

Be it resolved, That labor and industry by their present bickering and refusal to settle their differences and get back to the job of producing vitally needed goods, tools, and machinery, are doing the Nation grave damage; be it further

Resolved, That we do not believe the Nation can be restored to normalcy and prosperity by refusing to work—but, if that is the way the rest of the Nation insists upon trying to do the job, we farmers will help.

Therefore, if the present intolerable situation is not soon remedied, and the goods we need provided with all possible speed, we will take the following action:

First. Appeal to all farmers to join our members and affiliates in withholding from the market all farm produce until the wheels of industry again begin to roll.

Second. If such withholding of produce does not bring the desired results, we will appeal to all farmers to seed only enough of their land to take care of themselves. This action, we realize would not only shut off the foundation of foodstuff, but so wreck the reservoir from which that fountain springs, that nothing could be done about it until another seeding time. That would be a catastrophe, and we will advocate such action only as a last resort.

We hope our fellow citizens in other walks of life will not press us that far; but we have held the bag long enough, if the rest can quit producing, so can we. We ask that Congress and all American citizens give this serious thought, as planting time will soon be upon us; be it

Resolved, That the price of farm produce should be increased in the same proportion as the wages of labor, and the cost of industries' finished product—and that this organization will strive in every way possible to bring about such an adjustment; be it

Resolved, That the farmers of the Nation, being vitally concerned, should have a seat at the conference table whenever labor and capital sit down with Government; be it further

Resolved, That this organization will work toward this end and insist that the farmer who occupies their seat represent all the farmers of America, not just one of the many farm groups now apparently engaged in keeping the Nation's farmers divided; be it

Resolved, That we are opposed to payment from taxes of unemployment compensation to men who will not work, or who are prevented from working by strike action; be it

Resolved, That we are opposed on principle to subsidies, which are only a method of financing a person or business by public taxation. If any business cannot endure without a hand-out from the Public Treasury, it is bankrupt, and it either should be liquidated or allowed to adjust its prices; be it

Resolved, That the farmer is facing a new crop year under enough handicaps without being further hampered by the drafting of young farmers. We demand that this evil be stopped, by declaration upon the part of President Truman that the war is officially ended; be it

Resolved, That copies of this and of all other resolutions adopted at this meeting be made and sent to Senators BUTLER and WHERRY, of Nebraska, and also to Nebraska Members of the House of Representatives with the request that they be read upon the floors of both Houses of Congress.

James F. Scanlon

REMARKS
OF
HON. EMMET O'NEAL
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. O'NEAL. Mr. Speaker, on December 1, 1915, James F. Scanlon began 30 years of service with the legislative branch of the Federal Government, and on February 16, 1918, he transferred to the Appropriations Committee of the House of Representatives, and has remained there ever since. He came to Washington, as a young man, with the Honorable Swagar Sherley, a former chairman of the Appropriations Committee. Jim Scanlon is still a young man, after these long years of service, and in my opinion he will always have a youthful spirit, abounding in energy and love of life. If there is a job to be done, even now, he can wear down any colaborer in the vineyard; if there is fun to be had, he can outlast the most youthful; if there is a service to be rendered, he will be there when the others have gone.

When I first came to Washington, a verdant inexperienced Congressman, I landed on the Appropriations Committee and Jim Scanlon spread a protecting wing around me. He tendered me his friendship in a true Irish way, with a reservation of the right to give me the devil if I ever needed it. He exercised that right on more than one occasion. I am grateful to him for the beneficent frankness he used to correct the error of my ways. Whenever a friend or constituent from Louisville came to Washington, I would take him in to see my friend, Jim Scanlon, and he would extend himself in according to me great praise for my so-called accomplishments. Of course they were exaggerated by the kindly, genial, and imaginative good will of a true son of Erin. His kindliness, his friendship, his advice, and his ability developed in me a deep affection, which could never be lessened by his frank disapproval of me at other times.

Jim Scanlon made a fine and abiding contribution to his country in his daily devotion to duty. His careful analyses of problems before the Appropriations Committee, his intelligent suggestions as to corrections of the work of the committee, here and there, his common sense, his 100-percent Americanism, his loyalty, his fearlessness, and all that goes to make up the man, have left their imprint on the future of this country, and upon those, particularly, who have served on the Appropriations Committee. Like others, I will hold a lasting respect and devotion for him. His contribution to his country cannot be fully told. May he live long and enjoy the reward of duty well done.

The Appropriations Committee adopted a resolution, born of friendship, admiration, and respect of the individual members of the committee, with which I would like to close this brief and inadequate tribute to my friend, Jim Scanlon:

Resolution in tribute to our retiring administrative clerk, Mr. James F. Scanlon

Whereas the official active-duty connection of Mr. James F. Scanlon with the Committee on Appropriations of the United States House of Representatives voluntarily will terminate on November 30, 1945, after a period of continuous service beginning on February 16, 1918; and

Whereas Mr. Scanlon's entire period of service has been one of unsurpassed loyalty and devotion to duty, and of successive contributions to the efficient, intelligent, and orderly procedures and accomplishments of the Committee on Appropriations, and hence the House of Representatives and the Congress; and

Whereas Mr. Scanlon's fine personal qualities, companionableness, and unselfish devotion to duty, and his everreadiness to aid, counsel, and advise, have won for him the enduring admiration, affection, and esteem of every member of the Committee on Appropriations: Therefore be it

Resolved, That the members of the Committee on Appropriations, individually and collectively, wholeheartedly share in the preceding expressions and join in a declaration of their everlasting gratitude for the splendid service Mr. Scanlon has rendered, and in extending to him their earnest wish that his life ahead may be long and bountifully strewn with God's richest blessings;

Resolved, further, That a copy of this resolution be spread upon the records of the committee and that the original signed copy thereof be transmitted to Mr. Scanlon.

Adopted by the committee November 26, 1945, and subscribed to by each of the following Members thereof:

CLARENCE CANNON, Missouri, chairman; CLIFTON A. WOODRUM, Virginia; LOUIS LUDLOW, Indiana; MALCOLM C. TARVER, Georgia; JED JOHNSON, Oklahoma; J. BUELL SNYDER, Pennsylvania; EMMET

O'NEAL, Kentucky; LOUIS C. RABAUT, Michigan; JOHN H. KERR, North Carolina; GEORGE H. MAHON, Texas; HARRY R. SHEPPARD, California; BUTLER B. HARE, South Carolina; ALBERT THOMAS, Texas; JOE HENDRICKS, Florida; MICHAEL J. KIRWAN, Ohio; JOHN M. COFFEE, Washington; W. F. NORRELL, Arkansas; ALBERT GORE, Tennessee; JAMIE L. WHITTEN, Mississippi; THOMAS J. O'BRIEN, Illinois; JAMES M. CURLEY, Massachusetts; THOMAS D'ALESANDRO, JR., Maryland; GEORGE W. ANDREWS, Alabama; JOHN J. ROONEY, New York; HERMAN P. KOPPLEMANN, Connecticut; JOHN TABER, New York; RICHARD B. WIGGLESWORTH, Massachusetts; CHARLES A. PLUMLEY, Vermont; EVERETT M. DIRKSEN, Illinois; ALBERT J. ENGEL, Michigan; KARL STEFAN, Nebraska; FRANCIS H. CASE, South Dakota; FRANK B. KEEFE, Wisconsin; NOBLE J. JOHNSON, Indiana; ROBERT F. JONES, Ohio; BEN F. JENSEN, Iowa; H. CARL ANDERSEN, Minnesota; HENRY C. DWORSHAK, Idaho; WALTER C. PLOESER, Missouri; HARVE TIBBOTT, Pennsylvania; WALT HORAN, Washington; DEAN M. GILLESPIE, Colorado; GORDON CANFIELD, New Jersey.

Reply to James Roosevelt

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. RANKIN. Mr. Speaker, an Associated Press article of February 28, tells us that James Roosevelt, son of the former President, has assumed the position of national director of political organization for the Independent Citizens Committee of the Arts, Sciences, and Professions.

This article quotes him as assuming to speak for the Democratic Party, bidding for all the left-wing liberals and saying that "the other side can have BILBO and RANKIN, of Mississippi." Poor Jimmie, he may not know it, but he is no longer in a position to speak for the Democratic Party. He has now joined the Communists.

This Independent Citizens Committee of the Arts, Sciences, and Professions is one of the rankest Communist-front organizations in the whole country.

According to Samuel Sillen of the Communist Daily Worker, the official Communist organ in the United States, this organization changed its name in December of 1944 from the Independent Voters Committee to the Independent Citizens Committee of the Arts, Sciences, and Professions. Investigation reveals that this organization today includes many sincere liberals who have been misled into joining it. Probably that is how Jimmie got hooked.

However, the core of this organization is composed of a group of admitted Communists and a long list of fellow travelers, who have given their support to Communist-front organizations dedicated to one or more of the following purposes:

First. Defense of the Communist Party and its members.

Second. Support of Communist publications.

Third. Support of the Soviet Union and its foreign policy.

Fourth. Support of special campaigns under Communist initiative.

Everyone knows that the Communist Party is dedicated to the overthrow of this Government, as will appear from the following statement made by its present leader, William Z. Foster, in accepting the nomination for President of the Communist Party in the United States. Here is Mr. Foster's exact words which he admitted under oath before the Committee on Un-American Activities:

> No Communist, no matter how many votes he should secure in a national election, could, even if he would, become President of the present Government. When a Communist heads a Government of the United States (and that day will come just as surely as the sun rises), that Government will not be a capitalistic government, but a Soviet government, and behind this government will stand the Red Army to enforce the dictatorship of the proletariat.

Documentary evidence to prove the Communist affiliation of the organizations which I name is available.

The New Masses, a well-known organ of the Communist movement in the United States, had this to say of this group:

> Every lover of a richer life will welcome the new Independent Citizens Committee of the Arts, Sciences, and Professions headed by Jo Davidson, prominent sculptor.

Jo Davidson, chairman of this newly formed group, sponsored the Congress of American Soviet Friendship, which was cited as a Communist front on March 29, 1944, by the Special House Committee on Un-American Activities. Mr. Davidson also signed a statement in honor of George Dimitroff, former head of the Communist International and one of the bloodiest revolutionists the world has ever known.

Treasurer of the group is Frederick March, who sponsored the Congress of American Soviet Friendship and seven other Communist front organizations. Mr. March was identified as a member of the Communist Party by a party member who testified under oath before the Tenney Fact Finding Committee of the State of California.

Chairman of the finance committee is Herman Schumlin, who, on April 13, 1940, defended public school teachers in New York charged with Communist activities, signed a statement for release of Sam Darcy, Communist Party organizer, sponsored the committee defending William Schneiderman, a Communist organizer, sponsored tribute to Ferdinant Smith, Communist maritime union leader and one of the leaders in the recently exposed Communist sponsored dock strike in New York City.

During the days of the Hitler-Stalin pact, Mr. Schumlin signed a protest against what he called the war hysteria of the administration.

He was also a member of the executive committee of the so-called American Friends of the Chinese People, a Communist-front organization, together with Philip Jaffee, alias J. W. Phillips, who was recently convicted of securing State Department secrets illegally. Other Communist-front activities include membership in and support of the Joint Anti-Fascist Refugee Committee and executive board of the American League for Peace and Democracy, another well-known Communist-front organization.

Other Communist-front supporters of the Independent Citizens Committee of the Arts, Sciences, and Professions include Louis Adamic, who is affiliated with 25 Communist fronts; William Rose Benet, 16 Communist fronts; Ernest P. Boss, 7 Communist fronts; Langston Hughes, 49; Canada Lee, 3; Max Lerner, 26; Martin Popper, 3; Paul Robeson, 34; Edward G. Robinson, 2; Orson Welles, 14; Mary McLeod Bethune (colored), 39; Aaron Copland, 22; Philip Evergood, 13; Henry Pratt Fairchild, 40; Walter Rautenstrauch, 45; Viljalmur Stefanson, 32; Marc Connelly, 6; Norman Corwin, 7; Lillian Hellman, 40; and Harlow Shapley, 11.

The above are merely typical of the group. The following sponsors of this Communist-front committee have from time to time written for the two chief Communist organs in the country, the Communist Daily Worker and the New Masses: Louis Adamic, Howard Fast, Philip Evergood, Langston Hughes, Raphael Soyer, Viljalmur Stefanson, Paul Robeson. Other well-known Communist-front sponsors associated with this committee include John Howard Lawson, leading Communist agitator in the film colony; Louis Calhern, of Actors Equity; John T. McMannus, Alonzo F. Meyers, John P. Peters, Earl Robinson, Dr. Gregory Zilborg, and Johannes Steele, recently sponsored by the Communist Party in New York City to fill a vacancy in this House.

The Washington branch of the Independent Citizens Committee of the Arts, Sciences, and Professions gave domicile and direction to the youthful Federation of Atomic Scientists, who adopted as their platform a plea to release atomic secrets to Russia, stating: "We—United States—cannot afford the luxury of adopting legislation putting atomic bomb controls on a national basis."

They want us to give it to the Communists of the world so they can use it to destroy our Christian civilization.

I bring these facts to your attention, because many of the sponsors of this so-called Independent Citizens Committee of the Arts, Sciences, and Professions have also been in the past, and are today, endorsers, sponsors, and officers of other pro-Communist groups, chiefly in the cultural field.

On August 10, 11, and 12 of 1945, the New York State convention of the Communist Political Association held secret sessions at Manhattan. At this, as at a previous convention, held in July of the same year, Mr. Earl Browder was dethroned at the direction of the master voice from Moscow, and the former IWW

leader of the First World War, William Z. Foster, became the new head of the Communist Party, pledged to return to class hate and industrial warfare as directed by Jacques Duclos, who had recently returned from Moscow to take up the reins of the Communist Party in France.

During this convention June Hoffman, of the cultural section of the Communist Party, addressed the members, saying:

We built the Independent Citizens Committee of the Arts, Sciences, and Professions. It is a great political weapon.

I am sure that Jimmie Roosevelt did not realize when he joined up with this gang that he would be one of the tools of this great political weapon of the Communist Party.

I have before me a letter from one of the former members of this organization in New York City who was misled into joining them.

This letter is addressed to the Committee on Un-American Activities, and is as follows:

You may already have had your attention drawn to the Independent Citizens Committee of the Arts, Sciences, and Professions, headquarters at Hotel Astor in New York City, as a possible front for Soviet anti-American activities. As one who in an art organization has had ample opportunity to observe the methods and psychology of the Communist, I urge you to do what is possible to control them.

You undoubtedly know that the artistic and educated workers in general have been especially hard hit by rising costs of living with only sporadic rises in earning power. You also know the use which was made in Russia of these idealistic and impractical people. The combination makes them rather an obvious group to be made use of by the Soviet in their fifth-column activities. These people need protection.

I, like several of my friends, joined the organization early before the end of the war. The avowed policy was to back the war effort and then to do what was possible to further the arts, sciences, and professions during the difficult employment era that was expected after the war was over. This avowed purpose has been gradually all but eliminated. Several times a week, in spite of the fact that I sent in my resignation last October, I received orders as to my political activities, who to vote for, what to write my Congressman, to join picket lines, etc. The direction has become increasingly obvious. Strong literature was sent out in favor of Davis, the Negro (Communist) who wanted to organize a colored Communist nation in the South. * * * The latest told us to write Congress to back a bill suppressing your committee. It is a tome rather than any one activity that leads me—and some of my most intelligent friends—to believe as we do.

I think America has proved during the war that she believes in democracy. I believe that most of those now working along Communist lines do not realize to what they are exposing themselves. I feel therefore, that your attention should be strongly directed toward this committee.

Therefore Mr. Speaker, instead of Jimmie Roosevelt trying to read decent Democrats out of the party from his point of vantage in a Communist-front organization, I would suggest that he get back on the beam himself, that he return to the Democratic fold himself, and then, as the Saviour once said:

"Go and sin no more."

Government Commitments for Agricultural Purposes

EXTENSION OF REMARKS

OF

HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. HERTER. Mr. Speaker, for some time I have been trying to find a condensed statement showing in intelligible form the various commitments that have been made by this Government with respect to the agriculture of the Nation. To my amazement I discovered that no such summary existed in the Department of Agriculture, and I therefore asked the Secretary of Agriculture to prepare such a statement for me.

The figures in the financial tables require very careful analysis inasmuch as there are recoverable capital obligations and expenditures for the purchase of resaleable commodities which somewhat confuse the picture. Nevertheless, these tables indicate the tremendous size of Government expenditures for the benefit of agriculture, some of which, such as the subsidy payments, must obviously be reduced or eliminated in the near future.

The statement follows:

SUMMARY OF LEGISLATION RELATING TO PROGRAMS FOR THE BENEFIT OF AGRICULTURE

SOIL CONSERVATION AND RELATED ACTIVITIES

Soil Conservation Service: The Secretary of Agriculture was directed by sections 1 to 6 of the Soil Conservation and Domestic Allotment Act, as amended (16 U. S. C. 590a-590f), to create the Soil Conservation Service, and he was authorized to carry out through this Service a broad program for the control and prevention of soil erosion by research, methods of cultivation, furnishing of financial or other aid, and acquisition of lands when necessary to carry out such purposes.

Agricultural Adjustment programs (AAA): The agricultural conservation programs authorized by sections 7 to 17, inclusive, of the Soil Conservation and Domestic Allotment Act, as amended (16 U. S. C. 590g-590q), direct the Secretary of Agriculture to make payments and grants of other aid to agricultural producers for the purposes of preservation and improvement of soil fertility, promotion of the economic use and conservation of land, diminution of exploitation, and wasteful and unscientific use of national soil resources, the protection of rivers and harbors against the results of soil erosion in aid of maintaining the navigability of waters and water courses and in aid of flood control, and reestablishment at as rapid a rate as the Secretary of Agriculture determines to be practicable and in the general public interest of the ratio between the purchasing power of the net income per person on farms and that of the income per person not on farms that prevailed during the 5-year period August 1909 to July 1914, inclusive, and the maintenance of such ratio. Section 15 of the act (16 U. S. C. 590o) authorizes an appropriation of $500,000,000 a fiscal year to enable the Secretary to make such payments and grants of aid.

Sugar programs and payments: Section 301 of the Sugar Act of 1937, as amended (7 U. S. C. 1131), authorizes the Secretary of Agriculture to make payments with respect to sugar or liquid sugar commercially recoverable from the sugar beets or sugarcane grown on a farm for the extraction of sugar or liquid sugar provided growers comply with certain conditions relating to child labor, farm wages, and soil conservation, among others.

Land conservation and utilization (submarginal lands): A program of land conservation and land utilization providing, among other purposes, assistance in controlling soil erosion and preserving natural resources is authorized by title III of the Bankhead-Jones Farm Tenant Act, as amended (7 U. S. C. 1010–1013). In connection with such program, the Secretary's powers include that of acquiring and retiring from cultivation, lands that are submarginal or not primarily suitable for cultivation, and he is authorized to protect, improve, develop, and administer such acquired lands.

Water conservation and utilization: Conservation and utilization projects for the purpose of stabilizing water supply are authorized by the act of August 11, 1939, as amended (16 U. S. C. 590y–590z–10) (Case-Wheeler). Construction, operation, and maintenance of water projects by the Government with cost thereof to be reimbursed by the water users under various conditions is provided by such authority.

Flood control: The Flood Control Acts of 1936, 1938, and 1944, as amended and supplemented (33 U. S. C. 701a et seq.) conferred various functions on the Secretary of Agriculture with respect to making surveys and carrying out measures on watersheds for run-off and water-flow retardation and soil-erosion prevention in aid of flood control. The Secretary is authorized to carry out programs for the same purpose on 11 designated river basins or watersheds in accordance with reports submitted by the Department and approved by Congress.

SUBSIDY, PRICE SUPPORT, AND RELATED PROGRAMS

Subsidies, general: Subsidies on agricultural commodities are authorized by the Stabilization Act of 1942, as amended (50 U. S. C. App. 968), and section 2 (e) of the Stabilization Act of 1944, as amended (50 U. S. C. App. 902 (e)). Section 2 (e) prohibits payment of subsidies after June 30, 1945, unless money has been appropriated by Congress for such purposes. Section 3 of the act of April 12, 1945 (59 Stat. 50 (Public Law 30, 79th Cong.)), makes the foregoing inapplicable to the operations of the Commodity Credit Corporation for the fiscal year ending June 30, 1946, and limits the amounts which may be spent in subsidy programs. The act of July 31, 1945 (59 Stat. 506 (Public Law 164, 79th Cong.)), increased the amounts authorized to be expended by the Corporation pursuant to section 3 of the act of April 12, 1945, with respect to livestock and livestock products, wheat and wheat products, and butterfat and butter.

Price support, basic commodities: Price support of basic commodities is provided by section 8 of the Stabilization Act of 1942 (50 U. S. C. App. 968), as amended by section 2(4 of the Stabilization Extension Act of 1944 (58 Stat. 632, 643), as amended by section 37 of the Surplus Property Act of 1944 (58 Stat. 765, 784), and further authority is contained in section 302 of the Agricultural Adjustment Act of 1938, as amended (7 U. S. C. 1302), authorized loans on agricultural commodities by the Commodity Credit Corporation, and the act of July 28, 1945 (59 Stat. 506 (Public Law 108, 79th Cong.)).

Price support, other commodities: Price support authority for so-called Steagall commodities, those for which an expansion of production for war purposes is necessary, is provided by section 4 of the act of July 1, 1941, as amended (15 U. S. C. 713a-8 (a)).

Price support, other commodities: Price support for agricultural commodities, other than basic and Steagall commodities, is authorized by section 4 (b) of the act of July 1, 1941, as amended (15 U. S. C. 713a-8 (b)),

under which it is declared to be the policy that lending and purchase operations of the Department of Agriculture shall be carried out so as to bring the price and income of the producers of nonbasic agricultural commodities to a fair parity relationship with the basic and the Steagall commodities to the extent that funds are available for such operations with respect to basic and Steagall commodities and the ability of producers to bring supplies into line with demand.

Lend-Lease appropriation: Price support operations are incidentally affected by the provisions of section 201 (d) of the Defense Aid Appropriation Act, 1946, 59 Stat. 412 (Public Law 132, 79th Congress), which earmarked $500,000,000 of lend-lease funds for the procurement of agricultural commodities and foods produced in anticipation of lend-lease needs for expenditure for the postwar price support of agriculture.

Indirect price support (disposal of commodities): Indirect price support is effected by certain laws relating to the disposal of Government owned and controlled stocks of agricultural commodities, the laws which regulate marketing (the Agricultural Marketing Agreement Act of 1937, as amended, 7 U. S. C. 671–674 and 608c), and imposition of marketing quotas (Agricultural Adjustment Act of 1938, 7 U. S. C. 1311–1375), and those encouraging the consumption of agricultural commodities (sec. 32 of the act of August 24, 1935, as amended, 7 U. S. C. 612c). Restrictions on the disposal of Government owned and controlled stocks at less than parity prices have been included in the annual Department of Agriculture appropriation acts for some years. The restrictions applicable to the Commodity Credit Corporation are, by section 21 of the Surplus Property Act of 1944 (58 Stat. 775), made applicable to the disposition of surplus farm commodities by any Federal agency. Such restrictions have been carried over for a period of 2 years after the war by the act of April 12, 1945, 59 Stat. 50 (Public Law 30, 79th Cong.). Section 2 of the act removes, for a period of 2 years after the war, the restrictions regarding prices and quantities imposed by section 381 (c) of the Agricultural Adjustment Act of 1938 (7 U. S. C. 1381 (c)), on the sales of pledged cotton by the Commodity Credit Corporation.

Parity guaranties and export bounties: Authorizations which involve expenditures with respect to parity guaranties and export bounties, in addition to those previously cited regarding price support operations, are to be found in section 21 of the Surplus Property Act of 1944, which provides that commodities may be sold at less than current prevailing market prices, or less than prices applicable to sales of commodities by the Commodity Credit Corporation when such sales are for export only.

Exportation and domestic consumption (sec. 32 programs): Further parity guaranties and export bounties are incident to programs to encourage exportation and domestic consumption of agricultural products authorized by section 32 of the act of August 24, 1935, as amended (7 U. S. C. 612c). The Secretary of Agriculture is authorized to use funds made available under such section to encourage exportation of agricultural commodities by the payment of benefits in connection with such exportation or by payments to producers in connection with the production of that part of any agricultural commodity required for domestic consumption, encourage the domestic consumption of agricultural commodities by diverting them by the payment of benefits or indemnities or by other means from the normal channels of trade, or by increasing their utilization through benefits, indemnities, donations, or by other means, among persons in low-income groups, and reestablishing farmers' purchasing power by making payments in connection with the normal production of any agricultural commodity for domestic consumption.

Parity payments: Payments to producers of certain commodities to obtain parity prices are authorized by section 303 of the Agricultural Adjustment Act of 1938, as amended (7 U. S. C. 1303). Such act authorizes and directs the Secretary, if and when appropriations are made therefor, to make payments to producers of corn, wheat, cotton, rice, or tobacco, on their normal production of such commodities in amounts which, together with the proceeds thereof, will provide a return to such producers which is as nearly equal to parity prices as the funds so made available will permit. Appropriations were not made for this purpose for either the 1945 or 1946 fiscal years.

LOAN ACTIVITIES

Farm Credit Administration

The Farm Credit Administration resulted from a consolidation of farm-loan agencies by Executive Order No. 6084, March 27, 1933.

Federal land banks, joint stock land banks, and national farm loan associations: The Federal Farm Loan Act, as amended (12 U. S. C. 641–1012) authorized the establishment of Federal land banks, joint stock land banks, and national farm loan associations under the supervision of the Farm Credit Administration for the purpose of making agricultural credit available to farmers on long-term mortgage loans.

Federal Farm Mortgage Corporation: The Federal Farm Mortgage Corporation Act of January 31, 1934, as amended (12 U. S. C. 1020–1020h), authorized the establishment of the Federal Farm Mortgage Corporation with a capital of $200,000,000, subscribed by the Governor on behalf of the United States. The corporation was authorized, with the approval of the Secretary of the Treasury, to issue bonds in an aggregate amount not exceeding $2,000,000,000, guaranteed by the United States. It is further authorized to purchase consolidated farm loan bonds, to make loans to Federal land banks and joint stock land banks, and to invest in mortgage loans made under the authority of the act of May 12, 1933, as amended (7 U. S. C. 1016–1020).

Federal intermediate credit banks: The Federal intermediate credit banks were authorized to be established by the Agricultural Credit Acts of 1923, as amended (12 U. S. C. 1021–1129). Such institutions act as a bank of discount to supply short-term funds required by production credit associations, private financing institutions which make loans to farmers, and farmer cooperatives.

Regional and Central Bank for Cooperatives: Regional banks for cooperatives were authorized to be established in each of the 12 farm-credit districts, and a central bank for cooperatives was also authorized by the Farm Credit Act of 1933, as amended (12 U. S. C. 1134–1138f). Such banks are authorized to make, in addition to loans to banks created under the Farm Credit Act of 1933, as amended, loans to cooperative associations and stabilization corporations established under the Agricultural Marketing Act, as as amended (12 U. S. C. 1141–1141j).

Production credit corporations and production credit associations: Production credit corporations and production credit associations were authorized to be created by the Farm Credit Act of 1933, as amended (12 U. S. C. 1131–1131i). The Production Credit Corporation supervises local production credit associations, which make short-term loans to finance all types of farm operations, including loans to farmers for the purpose of enabling them to make home alterations, repairs, and improvements, and loans to oyster planters.

Regional agricultural credit corporations: Regional agricultural credit corporations were authorized to be established by the Emergency Relief and Construction Act of 1932, as amended (12 U. S. C. 1148–1148d). Such corporations are empowered to make loans to farmers and stockmen, the proceeds of which are to be used for an agricultural purpose, including crop production, or for the raising, breeding, fattening or marketing of livestock.

Emergency crop and feed loans: Emergency crop and feed loans are authorized by the act of January 29, 1937, as amended (12 U. S. C. 1020i–1020o). Such loans may be made to farmers for fallowing, planting, cultivation, production or harvesting of crops, supplies incident thereto, feed for livestock or for any of such purposes.

Cooperative associations and stabilization corporations (Agricultural Marketing Revolving Fund): The Agricultural Marketing Act, as amended (12 U. S. C. 1141–1141j), authorized the establishment of a revolving fund to be used in connection with loans to cooperative associations and stabilization corporations when such loans promote the effective merchandising of agricultural commodities so that the industry of agriculture will be placed on a basis of economic equality with other industries, and to that end to protect, control, and stabilize the currents of interstate and foreign commerce in the marketing of agricultural commodities and their food products. The Farm Credit Administration is authorized to promote education in the principles and practices of cooperative marketing, to encourage the organization, improvement in methods, and development of effective cooperative associations, and to keep advised and make reports as to crop prices, experience, prospects, supply and demand, at home and abroad.

Cooperative Marketing Division: In addition to lending activities, the establishment of a division of cooperative marketing was authorized by the Cooperative Marketing Act of July 2, 1926 (7 U. S. C. 451–457). Such Division is authorized to render service to associations of producers of agricultural products, and federations and subsidiaries thereof, engaged in the cooperative marketing of agricultural products, the cooperative purchasing of farm supplies, credit, financing, insurance, and other cooperative activities.

Farm Security Administration

Farm ownership loans: The Bankhead-Jones Farm Tenant Act of July 22, 1937 (7 U. S. C. 1000–1006, 1014–1029), authorizes the Secretary of Agriculture to make loans so as to enable farm tenants, farm laborers and sharecroppers and other persons to acquire farms constituting efficient farm-management units. Funds appropriated for making tenant purchase loans are distributed between the several States and Territories on the basis of farm population and the prevalence of tenancy. An appropriation of not to exceed $50,000,000 for each fiscal year after 1939, is authorized by the act. The Department of Agriculture Appropriation Act, 1946, Public Law 52, Seventy-ninth Congress, made available $50,000,000 but earmarked $25,000,000 for loans to veterans without regard to the customary allocation between the States.

Rehabilitation loans: Rural rehabilitation loans are made pursuant to the authority of the annual Department of Agriculture appropriation acts. Such loans are made to needy low-income farm families who are unable to secure credit from any other source at comparable rates to purchase feed, seed, livestock, farm equipment, and other farm and home supplies.

Water storage and utilization: Facilities for water storage and utilization in arid and semiarid areas are authorized by the act of August 28, 1937 (16 U. S. C. 590r–590x, 590z–5). The Secretary of Agriculture is authorized to formulate a program of projects for the con-

struction and maintenance of water-storage or utilization facilities and to furnish financial or other aid in connection with the development of water facilities. Financial aid has been in the form of loans to groups unable to secure credit elsewhere.

Flood restoration: Flood restoration loans are made and servicing of prior flood loans is done pursuant to the authority contained in Public Law 82, Seventy-ninth Congress. Such loans are made to farmers who have suffered flood damage to their farms in the calendar year 1945.

Rural Electrification Administration

Electric power and equipment: The Rural Electrification Administration is authorized by the Rural Electrification Act of 1936, as amended (7 U. S. C. 901–915), to lend money for the purpose of financing the construction and operation of generating plants, electric transmission and distribution lines and systems for the furnishing of electric energy to persons in rural areas who are not receiving central station service and the wiring of the premises of persons in rural areas and the acquisition and installation of electrical and pumping appliances and equipment.

PAYMENTS TO STATES

Extension service

Agricultural extension activities: Cooperative agricultural extension work for the giving of instruction and practical demonstrations in agriculture and home economics through land-grant colleges, extension agents and farm people in cooperation with the Department of Agriculture and payments to States of grants for such extension activites are authorized by the following statutes:

1. Smith-Lever Act of May 8, 1914 (7 U. S. C. 341–343, 344–348).
2. Capper-Ketcham Act of May 22, 1928 (7 U. S. C. 343a, b).
3. Bankhead-Jones Act of June 29, 1935 (title II, sec. 21, U. S. C. 343).
4. Act of April 24, 1939 (7 U. S. C. 343c–1).

The provisions of these statutes were extended to the Territory of Alaska by the act of February 23, 1929 (7 U. S. C. 386c), and the act of June 20, 1936 (7 U. S. C. 343e); to the Territory of Hawaii by the act of May 16, 1928 (7 U. S. C. 386–386b), and the act of June 29, 1935 (7 U. S. C. 343d); and to Puerto Rico by the act of March 4, 1931, as amended (7 U. S. C. 386d-f), and the act of August 28, 1937 (7 U. S. C. 343f-g).

Experiment stations

State agricultural experiment stations: Research, experiments, and investigations at agricultural experiment stations bearing directly on the agricultural industry of the United States relating to plants and animals, diseases and remedies for same, crop rotation, use of plants, trees, grasses, fertilizers, analysis of soils and waters, production, manufacture, preparation, use, distribution, and marketing of agricultural products and scientific researches for the establishment of a permanent agricultural industry and the development and improvement of rural home and rural life together with payments to the States for carrying out such activities are authorized by the following statutes:

1. Hatch Act of March 2, 1887 (7 U. S. C. 362, 363, 378).
2. Adams Act of March 16, 1906 (7 U. S. C. 369).
3. Purnell Act of February 24, 1925 (7 U. S. C. 370).
4. Bankhead-Jones Act of June 29, 1935, title I, section 2, as amended (7 U. S. C. 427a–427g).

The provisions of these statutes were extended to the Territory of Alaska by the act of February 23, 1929 (7 U. S. C. 386c), and the act of June 20, 1936 (7 U. S. C. 369a), to the Territory of Hawaii by the act of May 16, 1928 (7 U. S. C. 386–386b), and to Puerto Rico by the act of March 4, 1931, as amended (7 U. S. C. 386d–f).

Crop insurance

The Federal Crop Insurance Act, as amended (7 U. S. C. 1501–1519), authorizes and empowers the Federal Crop Insurance Corporation, beginning with the 1945 crops, to insure producers of wheat, cotton, and flax, against loss in yields due to unavoidable causes. The corporation is also authorized to insure producers of certain other crops on an experimental basis for a period of 3 years. Experimental programs are applicable only to corn and tobacco for 1945 and 1946.

Summary of obligations by major programs, U. S. Department of Agriculture, fiscal years 1945–47 [1]

[These obligations do not represent the net cost to the Government, since there are offsetting recoveries such as collections of principal and interest on loans, receipts from sale of commodities, and crop-insurance-premium collections]

Program	Obligations, 1945	Estimated obligations, 1946	Estimated obligations, 1947
1. Soil-conservation and related programs:			
Soil-conservation operations and research	$29,378,265	$34,503,500	$38,078,000
Agricultural conservation program (principally payments to farmers)	335,325,830	328,235,216	269,341,098
Conditional payments under the Sugar Act	52,452,391	48,428,532	54,966,715
Land utilization and retirement of submarginal land	1,482,535	1,371,200	1,598,000
Water-conservation and utilization projects (Wheeler-Case program)	866,185	1,138,749	1,131,000
Flood-control program	164,269	1,065,017	5,167,435
Total, soil conservation and related programs	419,669,475	414,742,314	370,282,248
2. Subsidy, price-support, and related programs:			
Commodity Credit Corporation. (See also loans, item 3 (a) below.) [2] Includes such programs as dairy production, feed wheat, and other subsidy programs; soybean, cotton, wool, and other price-support purchases, and wheat, tobacco, sugar, and other supply purchases of basic commodities [3]	2,307,833,483	2,590,000,000	(4)
Programs under sec. 32, act of Aug. 24, 1935 (7 U. S. C. 612c) for purchase of agricultural commodities for distribution through State welfare agencies, diversion of agricultural commodities to byproducts and new uses, encouragement of exportation of agricultural commodities, school-lunch and milk programs, and related expenses	66,124,906	114,960,992	[5] 205,787,241
Total, subsidy, price-support, and related programs	2,373,958,389	2,704,960,992

Summary of obligations by major programs, U. S. Department of Agriculture, fiscal years 1945–47 [1]—Continued

[These obligations do not represent the net cost to the Government, since there are offsetting recoveries such as collections of principal and interest on loans, receipts from sale of commodities, and crop-insurance-premium collections]

Program	Obligations, 1945	Estimated obligations, 1946	Estimated obligations, 1947
5. Crop insurance:			
Indemnities paid, Federal Crop Insurance Corporation [2]	$492,551	$13,823,950	[4]
Administrative expenses, Federal Crop Insurance Corporation	2,772,970	8,304,900	[4]
Total, crop insurance	3,265,521	22,128,850	
6. Forestry: National forest protection and management, fighting forest fires, forest research, farm and other private forestry cooperation, forest roads and trails, and related activities	41,322,187	48,966,698	$82,709,193
7. Marketing services and regulatory activities: Meat inspection, crop and livestock estimates, market news service, inspection and grading of farm products, regulatory, and other related activities	18,546,565	19,010,549	21,139,762
8. Crop, livestock, food, and related research: Investigations in animal and plant production, breeding and improvement, in methods of controlling diseases and insect pests, in agricultural chemistry, and in food, textiles, and home economics; soil, fertilizer, and agricultural engineering studies; and agricultural economic investigations	20,107,426	21,525,986	23,739,058
9. Control of insect pests and plant and animal diseases: Eradication of tuberculosis and Bang's disease; control of insect pests and plant diseases, including emergency outbreaks and white-pine blister rust; inspection and quarantine of plants and animals, etc	14,087,413	15,658,886	18,996,548
10. Special war items not classified above:			
Emergency Rubber Project	4,138,875	3,866,500	250,000
Salaries and expenses, War Food Administration	25,335,133	11,000,691	
Farm Labor Supply Program	27,400,042	24,140,962	[10] 8,393,455
Total, special war items not classified above	57,174,050	39,008,153	8,643,455
Grand total, foregoing items	4,785,424,416	5,046,456,618	
BY SOURCES OF FUNDS			
Appropriations	719,349,035	773,689,682	826,640,253
Loan authorizations (RFC funds)	104,338,554	318,385,786	367,500,000
Capital funds (Commodity Credit Corporation, Federal Crop Insurance Corporation, and institutions supervised by Farm Credit Administration)	3,961,736,827	3,954,381,150	[4]
Total	4,785,424,416	5,046,456,618	

[1] Excludes obligations against trust funds, reimbursements, and transfers and allocations from other agencies.
[2] Financed with corporation funds.
[3] Exclusive of purchases under the General Commodities Purchase program, principally for Lend-Lease and UNRRA operations, amounting to $1,311,048,900 in 1945, and $210,000,000 (estimated) in 1946. This program includes only non-basic commodities.
[4] Budget estimates of obligations for 1947 for wholly owned Government corporations are now being prepared pursuant to the Government Corporation Control Act, approved Dec. 6, 1945, and will be furnished as soon as they are available.
[5] Includes estimated reappropriation of $88,000,000 of unused balances of prior year funds.
[6] Decrease reflects assumptions that (1) Land Bank Commissioner lending authority, which expires June 30, 1946, will not be extended, (2) no change in present lending limit (65 percent of normal agricultural value), and (3) Federal land banks will close only a small proportion of loans presently being closed jointly by Federal land banks and Land Bank Commissioner.
[7] Does not include any amounts or wholly owned Government corporations for the reason stated in footnote 4 above.
[8] Financed with funds borrowed from RFC.
[9] Represents payments relating to 1943 and prior crop year programs. Operation of the Federal Crop Insurance program was reinstated by Public Law 551, approved Dec. 23, 1944.
[10] Represents estimated funds available for first half of fiscal year. Appropriation for this program is made on a calendar year basis.

Prepared by Office of Budget and Finance, Budgetary Reporting and Statistics Section, Feb. 21, 1946.

For the OPA To Be Continued It Should Also Be Improved

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. MUNDT. Mr. Speaker, I am one of those who has always voted for the establishment and implementation of the Office of Price Administration. At the same time, I realize that in some instances it has gone to excess and its field representatives have at times engaged in activities smacking strongly of gestapo methods. Now is the time, while we are considering the necessity of extending OPA powers for another 6 months or 1 year, to write in constructive improvements to the basic legislation authorizing the OPA.

In this connection, Mr. Speaker, I take this means of calling to the attention of the Banking and Currency Committee, which is now considering the OPA extension legislation, the following recommendations which have come to my office from many of the merchants and business people of South Dakota.

I believe these recommendations merit the careful consideration of the committee. I commend them to the study and analysis of the Banking and Currency Committee:

In considering the future status of OPA (if it is to be continued) we merchants of South Dakota respectfully submit the following five-point memorandum for consideration in making this agency function more effectively and more satisfactorily:

1. Prices should be raised on low-run merchandise to compensate for added costs since establishment of the base period price.

2. The additional cost should be paid by the consumer and cannot and should not be partially absorbed by the distributors, whether wholesale or retail.

3. Net profits, under no pretext, should be considered a factor in arriving at price in attempts to gain greater production. (Some OPA representatives contend that since most retailers have made a profit in the past 3 years they can afford to absorb additional costs now.)

4. There should be no publicity for noncompliance allegations until after it has been proven that a violation exists and has been definitely proven fraudulent in intent.

5. The Office of Price Administration and its representatives should be helpful in preventing and correcting misunderstandings and errors that may arise in their multitude of orders to the distributors and retailers rather than seeking means of injuring the retailer by their present methods of investigation (sometimes called "gestapo" methods) which seriously injure the morale and effectiveness of the merchant in the large job he has to do.

We believe that a greatly increased production, facilitated by the above suggestions, would soon tend to decrease prices, the natural law of supply and demand would become effective and competition in the sale of merchandise would end the need for the Office of Price Administration.

Franco Must Go!

EXTENSION OF REMARKS
OF
HON. CHARLES R. SAVAGE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. SAVAGE. Mr. Speaker, getting fascism out of government is like getting thistles out of your field. You have to destroy the roots or it will sprout and grow again.

Franco has stated that he will not step down voluntarily, and why should we expect that he would? He murdered many thousands of Spanish people to get that job, and he is still butchering them to keep it; but the declaration from London, Paris, and Washington is an important step in the right direction.

Therefore, under leave to extend my remarks, I include this fine editorial from the Washington Post of March 6, 1946:

FRANCO MUST GO!

The three-power declaration regarding the Franco regime, issued simultaneously in Paris, Washington, and London, is in several particulars disappointingly vague in language. It also suffers from being not so much a clear-cut program of common action by Great Britain, the United States, and France as a verbal appeal to the Spanish people to rid themselves of their dictator. Given the armed power which Generalissimo Franco commands, this may be a practical impossibility. Nonetheless, the three-power declaration sounds the doom of the Spanish dictatorship. For it is difficult to believe that the three democracies will permit El Caudillo to defy them and perpetuate in a vital corner of Europe a regime which for so long played the enemy's game.

In view of Franco's record, now laid bare by the State Department, the Allies have every reason and every justification for forcing Franco to get out. The charge that any pressure on him would be contrary to the

doctrine of nonintervention is nonsensical in the circumstances of Franco's complicity. It has become dangerous in view of the atomic bomb. The atomic bomb and the presence in the world of dictators create a potentially explosive situation we cannot ignore for a moment. As Dr. Harold C. Urey, Nobel prize winner and one of the men responsible for the development of the bomb, pointed out in New York the other day: "The atom bomb is characteristic of a tyrant's weapon. It is just the weapon that would enable a dictator to sit firmly in his seat and no one could do anything about it."

Actually the three-power declaration on Spain does not contemplate direct intervention—not yet. Indeed, it denies any such intent. It says, and quite rightly, that the "Spanish people themselves must in the long run work out their own destiny." It expresses the hope that "leading patriotic and liberal-minded Spaniards may soon find means to bring about a peaceful withdrawal of Franco, the abolition of the Falange, and the establishment of an interim or caretaker government under which the Spanish people may have an opportunity freely to determine the type of government they wish to have and to choose their leaders." The one positive note struck by the three-power declaration in this connection is that once such an interim government is set up it would be recognized. This recognition would include the taking of practical economic measures by the Allies to assist Spain in her reconstruction.

Franco has now declared flatly that the three-power declaration will not cause him to budge. And as long as he continues to have the support of the Spanish Army, it is hard to see how the Spanish people, no matter how violently they may detest him, can force him out. Accordingly, the three-power declaration cannot be regarded as the final word on the subject, but merely a step in the direction of a goal—the elimination of the Fascist regime in Spain—which it is to the interests of the Spanish people and of the rest of the free world to achieve.

The Rumpus About Tie-in Sales of Liquor

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. CELLER. Mr. Speaker, I have noticed with amusement the activities of officials of the Alcohol Tax Unit in their campaign to punish liquor dealers for so-called tie-in sales. I yield to none in my high regard for the Chief of the Unit, but, I believe, that his present tactics show a misguided zeal in the public interest. He might as well try to destroy sin or change human nature. He might as well try to milk a ram.

Tie-in sales abound in all business, and are the rule, not the exception. When you go into a haberdashery, either at Independence, Mo., or in Washington, D. C., and try to buy a white shirt, you will find that they are not on display. They are under the counter. You ask for them and you are told finally that you can have one but in addition must buy a patterned or colored shirt. No governmental agency seeks to stop such a tie-in sale nor could any Government agency do so.

If a housewife goes to her grocer for sugar, she expects to be sold, in addition, fresh vegetables or canned fruit. That is perfectly legitimate, although sugar may be rationed. The druggist will try to sell you perfume when you buy Carter's Little Liver Pills or a tooth brush with tooth paste.

No one complains about the dairyman who ties in milk with cheese. In the past, in order to get Ford passenger cars, every Ford dealer was compelled to take a quota of tractors and to subscribe to the Dearborn Independent as well. It has always been the policy of General Motors and all standard motorcar manufacturers to insist that their dealers buy slow-moving models in order to get their fair share of regular up-to-date passenger cars. Over the radio soap is tied-in with all sorts of gadgets. Send 10 box tops of hinky-dink breakfast food and get a toy baby carriage with 50 cents. Or send in 100 wrappers of bubble gum and get a collapsible swimming pool. But let the liquor dealer couple whisky with wine or rum or gin and there is holy war.

What is wrong about it? Frankly the practice of tie-in is as old as the first trading post. Why should the liquor men be deprived of a method of sales promotion which is not frowned upon in any other industry.

Whisky—American and Scotch—is scarce, due to the alcohol holidays, both here and abroad. In order to procure whisky, dealers demand that wine or gin or rum or cordials or other slow sellers be purchased. That makes hard liquor harder to get. Maybe the WCTU favors that.

This tie-in practice does not increase consumption of whisky. The scarcity continues. It may be far better to induce the sale of the lighter and less alcoholic beverages like wine or cordials.

We are told that the public suffers. That is just eye wash. The public may suffer—but only because it cannot get what it wants, whisky in large quantities. That is not due to the tie-in sale. The retailer who has on his shelves the extra wine or brandy, allegedly tied in with whisky, will naturally want to move said wine or brandy. He will reduce the price of the brandy and wine to encourage greater sale and eliminates sales resistance. The regular price of the brandy may be $4 per bottle. It is now reduced to $1.99. The public saves thereby over $2.

Certainly the retailers have not suffered. They were never more prosperous. They dare not complain.

Liquor is or is not a legitimate product. The ATU treats it as illegitimate in its "tied-in" sale elimination campaign—a campaign conducted with more vigor than sense.

Its inspectors might, to better advantage, hunt in other fields.

In cases where a commodity like butter or sugar is scarce, the public is induced to buy or use less. It should be so with whisky. Why should not the ATU come out with slogans to induce the public to do with less or do without whisky during the shortage. It might take a leaf out of the book of the War Food Administration which placards the Nation with lessons on food conservation. Instead of a constructive campaign to discourage any abuses and to encourage moderation, it goes on a rampage making "sinners" out of dealers who follow the practice obtaining in all other lines of legitimate business. It seizes upon an archaic, obscure provision of the statute to base its complaints. That statute was devised in preprohibition days to discourage distributors from owning retailer outlets. It was then a case of "tied houses" with no relation to "tie-in" sales.

Congress never gave the ATU the power it now presumes to exercise. The court will soon determine that. I admire the puritanical spirit of the ATU. But its witch hunting will only get it the labor for its pains.

Housing as Usual

EXTENSION OF REMARKS

OF

HON. CHARLES R. SAVAGE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. SAVAGE. Mr. Speaker, it is seldom that you ever find an editorial that is more straightforward, and explains the exact issue any more clearly than this editorial from the Washington Post of March 6, 1946, regarding the housing bill that we are now considering on the floor of the House.

Therefore, under leave to extend my remarks, I include the above-mentioned editorial:

HOUSING AS USUAL

The House of Representatives on Friday treated the Nation to a demonstration of capricious irresponsibility. Acting through a fraction of its membership, a coalition of 161 Republicans and southern Democrats, it cut the heart out of the President's program of housing for veterans. A mere 92 Congressmen, with not a single Republican among them, filed down the aisle to support the premium payments for expansion of building material production without which, as Housing Administrator Wilson Wyatt clearly warned, we cannot provide the homes needed for veterans. The rest of the House slunk away—no doubt in shame. And those who had the hardihood to stay lacked the courage to be named and counted.

The intellectual content of the debate on the housing program was no less disheartening than the outcome. In place of homes in which to rear their families, veterans were given enough empty piety to nauseate them for the whole balance of their lives. For example, in response to Representative MONRONEY's sober exposition of the need for subsidies, Representative BREHM delivered himself of the following rhetoric: "I ask the gentleman, did our early pioneers in industry receive subsidies in their effort which resulted in America becoming the greatest Nation on earth? No subsidies were paid to those early pioneers, and yet we have outstripped the world in both new and old industrial production and material."

Of course, the answer Mr. BREHM so promptly gave himself is as erroneous as his

question is irrelevant. Industry in America has had subsidies in the form of a protective tariff ever since its inception. Moreover, as Representative STARKEY put it: "We have given subsidies to all big business in the form of carry-backs and carry-forwards. They holler to high heaven when we talk of subsidies that will go to the common man. * * * We made provisions for ship purchasers buying ships. * * * We have helped the railroads, we have helped insurance companies, we have helped importers and exporters with legislation. That all cost the taxpayers money. But when it comes to taking a few dollars out of the Treasury and spreading it out among all of the people, we holler that it is contrary to our form of government." He might have added that some of Mr. EBERHM'S constituents who happen to be farmers get subsidies for what they grow.

Let us hope that the Senate tackles this urgent issue with less sycophancy and more common sense. We face an emergency. In the next 2 years the country must construct a minimum of 2,700,000 new dwelling units for the men coming out of uniform and their families. It cannot be done by the technique of housing as usual. During the war emergency, extraordinary powers and methods and incentives were employed to speed the production of planes and ships and tanks. We knew that business as usual would not serve. And we did not bow down before the bugbear of socialism or yield to the pressure of importunate lobbies. The same sort of daring and resolution is necessary to meet the housing crisis of today.

A Letter to Pandit Nehru, of India—Demands Made Upon the British Cabinet Ministers to India That Independence Be Granted and That a Constituent Assembly Be Set Up, To Be Followed by a Caretaker Government

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I include the following letter:

MARCH 6, 1946.

PANDIT JAWAHARLAL NEHRU,
Anand Bhwan, Allahabad, India.

MY DEAR PANDIT NEHRU: I want you to know that there is a strong, healthy opinion in the United States which deeply sympathizes with India's aspirations for freedom. The sentiment is growing in the United States that there should be a final settlement that will put an end to British rule. We liberals in the United States have followed with interest the elections recently held and we confidently hope that your party, the National Congress Party, will receive an overwhelming popular mandate as the chosen representative to deliver India from British misrule. We are as disturbed as you that the Moslems desire independent Pakistan, which would comprise three provinces in the northwest and two in the northeast. Naturally, the British Raj takes advantage of this division in the ranks of Indians and wishes to use it as a pretense for a postponement of Indian independence. It is the usual dodge of the British—"divide et impera." To us it seems unthinkable to have two free Indias—Hindustan and Pakistan. In the United States we fought a bitter Civil War to prevent the setting up of two independent sovereignties.

We thoroughly agree with you that first and foremost, Britain must recognize India as an independent country and, secondly, agree to the setting up of a constituent assembly, having full authority to frame a constitution for India. Freedom must come first and that will act as a solvent for all internal difficulties. However, the same arguments advanced against Indian independence, on the grounds of divisive factors existing between Hindus and Moslems, were advanced because of the political, religious, and economic differences which existed in our original Thirteen Colonies. But once independence was achieved, the 13 different countries, as it were, united and became the United States of America.

We also sympathize with your views that "the easiest and fairest way to proceed is not to deal with parties as such, or with religious or other groupings, but with the provincial legislatures, after they are elected."

To the 11 provincial assemblies would be referred the convocation of the constituent assembly as well as the formulation of a new central government to function as a caretaker government until the constitution can be adopted. It is well that the newly elected provincial legislatures have the dominant voices in deciding these two momentous questions. As you so cogently state it, the 11 legislatures could select delegates from among its members to set up a preliminary conference. This conference would develop a constitution. Similarly, in America we set up a Constitutional Assembly to hammer out on the anvil of discussion our own Constitution.

It may be that the Moslems will not agree but surely the Hindu and Moslem leaders of India have sufficient wisdom to accept some sort of proposition within the framework of your plan which would be palatable to them. If they do not agree, it seems evident that the Congress Party will prevail in 8 of the 11 Provinces and in the remaining 3 the Congress Party will have a strong voice. If all reasonable efforts fail to bring the Moslem League into line and one or more of the Moslem areas wish to secede, they can do so. I am confident that eventually sober judgment will prevail and they will come back into the new Indian Federation. It is utterly inconceivable that there can be a successful Moslem movement. It would be likened to the tail wagging the dog. The economic and political problems involved would be insurmountable and eventually any enthusiasm for Pakistan would evaporate.

The sooner the British Labor Government realizes the need for the setting up of a constituent assembly, after the declaration of independence, the better. It is hoped that Viceroy Wavell and the Cabinet Ministers now in India, First Lord of the Admiralty A. V. Alexander, Lord Pethick-Lawrence, secretary of state for India, and Sir Stafford Cripps, chairman of the board of trade, will see the light in this regard. Britain cannot repeat the mistake of the first Cripps offer. It dare not again "give a postdated check on a tottering bank." Unless the British Labor Government shows good faith, it will continue to lose caste in America. I state this despite recent criticism of the supposed apathy on the part of many Americans. Thousands and thousands of us are on your side of this issue and want the aims and aspirations of the Indian people realized. Their plight is no wit different than our own in 1776. Instinctively and traditionally, Americans are deeply distrustful of all aspects of colonialism, and such a policy is despised. Many silently sit in critical judgment, although it would be far better if they were articulate and persuaded to express their views fully.

We never doubt for one moment that you will continue in your magnificent struggle for a free India. We recognize with you that the independence of India is indispensable to the peace of the world. Specifically, the settlement of the Indian problem is essential to any semblance of stability in Asia. In such stability the United States has a tremendous stake. Even if we were devoid of more compelling reasons, which we are not, an enlightened self-interest demands that Americans support you and your followers. We shall continue to maintain that Britain must surrender the governmental power to the Indian people, and, specifically, to those representatives which the Indian people will choose themselves. We firmly agree with you, likewise, that once the paramount question of independence is settled, then the internal difficulties, which now seem insurmountable, will melt away as the snow in springtime.

Sincerely yours,

EMANUEL CELLER,
Representative, Fifteenth Congressional District, Brooklyn, N. Y.

Telegram to the Secretary of State

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mrs. LUCE. Mr. Speaker, under leave to revise and extend my remarks, I include therein a copy of a telegram to the Honorable James F. Byrnes, Secretary of State:

MARCH 4, 1946.

Mr. JAMES F. BYRNES,
Secretary of State, Department of State, Washington, D. C.

MR. SECRETARY: According to reliable press reports, Generalissimo Franco has condemned to death for conspiracy against his Government three women, Maria Teresa Toral, Mercedes Gomez, and Isabel Sanz. The last two are trade-union members. Maria Teresa Toral at 33 years of age is, according to information received by us, one of Spain's outstanding scientists. During the last years of the Republic she worked in Spain's Institute of Chemistry and Physics, originally set up by the Rockefeller Foundation. After Franco's entry into Madrid she was divested of her degrees and arrested. In 1941 she was released to continue scientific studies in the Institute Ibis, where she worked with Spain's well-known scientist, Moles. There are those who consider her the Lisa Meitner of Spain. Six months ago she was arrested again and condemned to the firing squad in the immediate future. Mr. Secretary, we urge you to press Generalissimo Franco for a stay of this execution and also to point out to him that the shooting of this brilliant young woman will alienate further the sympathy of many Americans for his regime. We sent a cable this morning to Generalissimo Franco, which we trust he will receive. We quote that cable:

"Generalissimo FRANCISCO FRANCO,
"Madrid:

"As women, as democratic legislators, and as Christians, we speak for many American women who are horrified at the news of the announced execution of Maria Teresa Toral. Whatever her reputed offense against your government, we feel that it would be a far greater crime against womanhood if she were to be executed, and this could not fail further to alienate American public opinion, for there is an increasing revulsion in all Christian and democratic countries against regimes that seek to justify their existence as being bulwarks against totalitarianism and godlessness only to indulge themselves in brutal totalitarian police state acts."

Mr. Secretary, we hope you will inform us as soon as possible of the success of your efforts in this matter.

Sincerely yours,

CLARE BOOTHE LUCE,
Military Affairs Committee.
EDITH NOURSE ROGERS,
Foreign Affairs Committee.
MARGARET CHASE SMITH,
Naval Affairs Committee.
EMILY TAFT DOUGLAS,
Foreign Affairs Committee.
HELEN GAHAGAN DOUGLAS,
Foreign Affairs Committee.
CHASE GOING WOODHOUSE,
Banking and Currency Committee.

Challenge to Congress

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of the House the following editorial and news story which appeared in the Washington Post on March 5, 1946:

CHALLENGE TO CONGRESS

Hope for continuation of virile democracy in America took a spurt upward yesterday with the release of the report of the La Follette-Monroney committee on the organization of Congress. In our opinion, it is one of the best reports ever brought out by a congressional committee. With broad strokes of statesmanship, it sketches a bold and progressive plan for the restoration of Congress as an efficient and responsible policymaking body for the Nation. Citizens aware of the need for buttressing our democratic system at this vital point will read the document with a mingled sense of surprise and thanksgiving.

The feeling of surprise will spring from the fact that six Members of the Senate and six Members of the House have been able to agree unanimously, with only occasionally personal dissents on minor points, on such a sweeping program of reform. Students of Congress on the outside have recommended most of the improvements contained in the committee's report. But this call upon Congress to set its house in order comes from within. It reflects a new awareness in Congress of its loss of prestige and power because of its own obsolete methods and organization. It is an omen of the happiest sort for the restoration of Congress to the position of authority, respect, and importance that it should always occupy.

The sense of thankfulness will spring from the very large measure of the committee's achievement. It is no mere shuffling of offices or boost in expenses that the La Follette-Monroney committee suggests. Rather it is a comprehensive adjustment of our democratic system to the age in which we are living. "We have been guided," the report accurately says, "by what Justice Holmes called 'the felt necessities of the time.'" The committee properly addressed itself to "a grave constitutional crisis * * * in which the fate of representative government itself is at stake."

The first of the "felt necessities" which it proposes to meet is the demand for a new committee system. Following the suggestions of Senator La Follette, the committee suggests reduction of the heterogeneous conglomeration of 33 Senate committees to 16 streamlined legislative study groups with well-defined jurisdiction. The tangle of 48 House committees would be reduced, in accord with Representative Wadsworth's plan, to 18. Committee assignments for each legislator would thus be reduced; overlapping would be eliminated; expert assistance would be provided; special committees would be eliminated and supervisory and investigative functions would be assigned to each regular committee within its own field. Regular meetings days would be fixed; testimony would be digested to save time, and members of Congress would be given a chance to explain their bills instead of having most of them go directly into the discard.

No less important are the proposed policy committees which are intended to take the place of existing steering committees which "seldom meet and never steer." Majority and minority policy committees would be elected at the beginning of each new Congress by the majority and minority conferences. Their purpose would be to bring cohesion and leadership into the legislative picture. The majority policy committees would constitute a formal council to meet regularly with the President for the formulation of national policies to be enacted into legislation. This is, as we have frequently urged in recent years, a sensible method of making our system of divided powers function more smoothly. It is so eminently desirable in these days of rapidly moving events and momentous national issues that we can scarcely imagine any responsible opposition to it.

Additional plans are concerned with strengthening fiscal controls, registration of lobbyists, increasing congressional salaries to $15,000 a year, opening of the Federal retirement system to Congressmen, and making more efficient use of Congressmen's time. In this latter connection there is a strong recommendation for self-government for the District of Columbia which should warm the hearts of local suffrage advocates. Only a few of the more urgent reforms, such as reorientation of the House Rules Committee, are left out. Even in this instance the proposed policy committee could be expected to put the rules tyrants in their place.

The report as a whole is an inspiring call to Congress to rise to the larger challenge thrust upon it both by our grave world responsibilities and by the new tempo of events. In our opinion, it becomes an essential chart of the pattern that American Government must follow if the best in our way of life is to be preserved.

(By Robert C. Albright)

A comprehensive face-lifting program for Congress yesterday was recommended by the La Follette-Monroney Joint Committee on Congressional Organization.

Complete overhauling of the spreading congressional committee system capped a list of 37 recommendations to meet the felt necessities of the time.

Forty-eight House standing committees would be reorganized down to 18. Similar mergers would cut the Senate total from 33 to 16. The new committees would keep close tab on corresponding Government agencies. No new special investigating groups would be created.

MANY PROPOSALS MADE

Other proposals for bringing Congress up to date ranged all the way from registration of lobbyists to over-all congressional Budget control to check deficit spending in peacetime. Congressional leadership would be formalized in majority and minority policy committees. House and Senate majority policy committees would form a new Legislative-Executive Council, maintaining constant liaison with the executive branch.

Sweetening some of the less popular reforms were improved staffing and research for Members, an increase in Members' salaries from $10,000 to $15,000 a year, inclusion of legislators in the Federal retirement system on a contributory basis, and a 50-percent salary increase for elected Capitol officials.

The report, representing more than a year of study, was filed simultaneously in House and Senate. Some of the findings faced rocky going in a Congress inured to old methods, but the initial reception was good.

MUST DEVISE PLAN

Senator ROBERT M. LA FOLLETTE, Jr. (Progressive, Wisconsin), and Representative A. S. MIKE MONRONEY (Democrat, Oklahoma), chairman and vice chairman, respectively, of the 12-man joint group, must now find a way to get the plan before Congress in concrete legislation.

Congress, in setting up the joint group more than a year ago, gave it no legislative authority.

One novel fiscal-control feature of the report outlines a system under which Congress will fix its own spending totals at the start of each session, and stay within them under a budget-balancing arrangement of its own.

Within 60 days after each session opens, the revenue and appropriations committees of both Houses would sponsor a concurrent resolution setting over-all Federal income and expenditures for the coming fiscal year.

If the spending total exceeded estimated Federal revenue, Congress would take a roll call vote on authorizing the additional Federal debt. Should appropriations later exceed the approved Budget figure, all appropriations (except those of a permanent nature) would be reduced by a uniform percentage, to keep within the over-all limit. The result would be a sort of compulsory budget-balancing check by Congress each year.

Seniority rules in both Chambers were untouched by the report, the committee disagreeing on (1) a better method of selecting committee chairmen and (2) modifying the broad powers of the House Rules Committee.

The joint group was not empowered to bring in recommendations on two other widely debated reforms—limitation of Senate debate and congressional "question periods" for examining department heads.

The report termed reorganization of the present "obsolete and overlapping" committee structure the No. 1 problem and real test of congressional willingness to strengthen itself.

INCREASED DUTIES URGED

Besides trimming down the number of committees, the report recommended increased responsibilities for each with every Member of Congress having membership on one of the reorganized groups.

Monthly docket days would be set aside so that Members would be assured of hearings on every bill introduced. Records would be kept of committee attendance and a record of the votes would be printed in the CONGRESSIONAL RECORD. Committee chairmen would be required to repoft promptly all bills approved, and seek a rule to bring them to the floor.

Other recommendations:

1. Conference committees would be limited to differences in fact between the two Houses. Items on which both Houses have reached agreement could not be changed in conference.

2. An understandable digest of a bill would have to accompany every committee report, together with reasons for passage, the national interest involved, the cost and the distribution of any benefits.

WANT FOUR EXPERTS

3. Four staff experts, exempt from discharge for "political reasons," would be assigned to each of the regular committees. Present clerical personnel would be retained up to six per committee. Two each would be available for committee-connected work in the offices of the chairman and ranking minority member.

4. The office of legislative counsel would be expanded, with its appropriations increased from $90,000 to $150,000 a year for the next 2 years, and further increases later.

5. The Congressional Library's legislative reference service also would be expanded to supply skilled research for Members and a pool of experts for committees. Appropriations would be increased to $650,000 for the 1948 fiscal year, and to $750,000 thereafter.

6. An $8,000-a-year administrative assistant for every Senator and Congressman to assume nonlegislative duties, freeing Members for more time on national legislation.

7. An Office of Congressional Personnel, under a $10,000-a-year director, to establish and maintain a modern and uniform personnel system for all service employees of the Capitol.

8. A stenographic pool from which Senators and House Members would augment their own staffs during "busy seasons."

NO SECRET HEARINGS

9. Executive or secret hearings on appropriation bills would be abolished. House and Senate Appropriations Committees, after hearings in public, would have to file their reports 3 days in advance of floor consideration. Four qualified staff assistants would be assigned to each Appropriations subcommittee.

10. An annual General Accounting Office audit of each Government agency would be required, together with a report on administrative performance and operations of each agency.

11. Legislative "riders" on appropriation bills would be barred in the future, as would limiting amendments having the effect of legislation. The Comptroller General would survey so-called limitations on appropriations, ferret out those that cost more than they save.

12. To save Members time, Congress would delegate authority to the Federal courts and to the Court of Claims to hear and settle claims against the Government. Set periods of congressional recess would be determined, and Congress would experiment with alternate 3 days each for committee meetings and Chamber sessions. Self-rule for the District, reported elsewhere in this paper, was likewise recommended as a congressional time saver.

13. Organized groups lobbying for or against legislation required to register each session with the House clerk and Senate secretary. They would have to file itemized quarterly statements under oath on all amounts spent to influence legislation.

14. Congressional salary increase to $15,000, effective in the Eightieth Congress (January 3, 1947), and taxable on the same basis and with the same allowable deduction, as business and professional returns.

RETIREMENT PAY OFFERED

15. Optional permission for Members of Congress to join the civil-service retirement and disability system, on a contributory basis of 6 percent of base pay. To be eligible for an annuity a member must have served at least 6 years and have reached the age of 62. Members could purchase credit for prior service at the Government rate provided in the Civil Service Retirement Act.

16. A 50-percent salary raise for elected officers of the Senate and House, and a 50-percent increase in annual appropriations to the office of the Vice President and the office of the Speaker, the proposed director of congressional personnel in addition would recommend equitable readjustments in present salaries paid employees in the offices of the Senate secretary, House clerk, sergeants at arms, doorkeepers, and the Speaker's table.

17. Remodeling of the Chambers of both Houses to provide improved acoustics and seating facilities in House and Senate caucus rooms. Expansion of Senate and House restaurant facilities to reduce crowding. Reassignment of Capitol space to provide ample facilities for joint committees and conference committees. Improved school and housing facilities for House and Senate pages.

18. Improved presentation of the daily program in the CONGRESSIONAL RECORD. The RECORD would report not only the regular legislative sessions but also scheduled committee hearings and a brief résumé of the previous day's congressional activities.

MANY FEAR OUTCOME

The committee reported "a widespread congressional and public belief that a grave constitutional crisis exists in which the fate of representative government itself is at stake."

"Public affairs are now handled by a host of administrative agencies headed by nonelected officials with only casual oversight by Congress," it said. "The course of events has created a breach between Government and the people."

"Behind our inherited constitutional pattern a new political order has arisen which constitutes a basic change in the Federal design. Meanwhile, government by administration is the object of group pressures which weaken its protection of the public interest. Under these conditions, it was believed, the time is ripe for Congress to reconsider its role in the American scheme of government and to modernize its organization and procedures."

SET-UP OF CONGRESS COMMITTEES

Here are the new, consolidated Senate and House committees proposed by the Joint Congressional Reorganization Committee, followed by existing groups whose functions they would absorb:

SENATE

1. Agriculture—Agriculture and forestry.
2. Appropriations—Appropriations.
3. Rules and Administration—Audit and control, enrolled bills, library, printing, privileges and elections, rules.
4. Banking and Currency—Banking and currency.
5. Finance—Finance.
6. Labor and Public Welfare—Education and labor, finance (social-security jurisdiction).
7. Claims*—Claims.
8. Interior, Natural Resources and Public Works—Commerce, Indian affairs, interoceanic canals, irrigation and reclamation, mines and mining, public buildings and grounds, public lands and surveys, territories and insular affairs.
9. Civil Service—Civil service, postoffices and post roads.
10. District of Columbia*—District of Columbia.
11. Expenditures in the Executive Departments—Expenditures in Executive Departments.
12. Armed Services—Military affairs and Naval affairs.
13. Veterans Affairs—Pensions, finance (veterans jurisdiction).
14. Interstate Commerce—Interstate commerce, manufacturers.
15. Foreign Relations—Foreign relations.
16. Judiciary—Patents, immigration, judiciary.

(*) To be abolished if approval is given recommendations for District of Columbia self-government and judicial or

(*) To be abolished if approval is given recommendations for District of Columbia self-government and judicial or administrative settlement of claims.

HOUSE

1. Agriculture—Agriculture.
2. Appropriations—Appropriations.
3. Expenditures in the Executive Departments—Expenditures in executive department.
4. Banking and Currency—Banking and currency; coinage, weights and measures.
5. Civil Service—Civil service, census, postoffices and post roads, District of Columbia.
6. Public Works—Flood control, public buildings and grounds, rivers and harbors.
7. Judiciary—Judiciary, patents, revision of the laws, immigration and naturalization.
8. Interstate and Foreign Commerce.
9. Labor—Labor, education.
10. Merchant Marine and Fisheries—Merchant marine and fisheries.
11. Foreign Affairs—Foreign affairs.
12. Veterans' Affairs—Pensions, invalid pensions, World War veterans' legislation.
13. Armed Services—Military affairs; Naval affairs.
14. Public Lands—Public lands, territories, irrigation and reclamation, mines and mining, insular affairs, Indian affairs.
15. Ways and Means—Ways and means.
16. Rules—Rules.
17. House Administration—Accounts, disposition of executive papers, enrolled bills, library, memorials, printing.
18. Un-American Activities—Un-American activities.

Abolished outright would be the committees on election of President, Vice President and Representatives in Congress, election No. 1, No. 2 and No. 3, and the Claims and War Claims Committees.

World Federation

EXTENSION OF REMARKS
OF
HON. WALTER K. GRANGER
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD an open letter by Mr. F. R. Windegger, chairman of the Missouri State Committee for World Federation:

DECEMBER 17, 1945.

Mr. FRANCIS H. RUSSELL,
Chief, Division of Public Liaison,
Department of State, Washington, D. C.

DEAR MR. RUSSELL: This letter is not written from desire nor with pleasure, but from necessity. The necessity arises out of receipt of your form "Ready Letter," with rubber stamp date of December 7, regarding world government proposals which have reached the Department of State. When that Bureau, which is supposed to be the servant of the people, writes letters purporting to tell the people how they should think on matters vital to their very existence, it confirms the timely warning given us by Emery Reeves in his book, The Anatomy of Peace, that our present policies lead logically and inevitably to totalitarianism. Therefore, we think your letter requires an answer in frank and unmistakable language.

The first paragraph of your letter is gratifying in that it states: "Owing to the large volume of letters arriving in the Department on this subject, it is impossible to make a personal reply to each letter." This is concrete evidence that "We, the People" are not only thinking, but acting. While the situation you mention is gratifying, it is by no means surprising to those of us who for years have taken an active part in explaining to the people the price of world peace. Possibly the news has not yet arrived at the "Ivory Towers," that according to a National Opinion Research Center release of December 2, 1945, 54 percent of all American civilians expressed more confidence in the control of the atomic bomb by world government than

by the Security Council of the United Nations as presently constituted. Those starry-eyed dreamers, who think that after 2,000 years of failures we can, in this atomic age, make a gentlemen's agreement keep peace in the world, and refuse to consider a plan which has been successful in our own country for over 150 years, should hesitate to smear the 54 percent as "perfectionists," who can best be described as those people who do not believe in making the same mistake "again and again and again."

We doubt if the Division of Public Liaison is acquainted with the fact that on December 6, 1945, the House of Representatives of the State of Missouri, with only two dissenting votes, passed the resolution favoring world federation which has become internationally known as the Humber resolution from the name of its author, Robert Lee Humber, who originally had it introduced and passed by the legislature of his native State, North Carolina, on March 13, 1941, and which same resolution has been adopted by 12 other States, the last being Florida on May 3 of this year. This apparent lack of knowledge of the thinking and action of the people suggests the possibility that the Division of Public Liaison is a one-way street, in which event it is time its name should be changed to Division of Propaganda. Such a suspicion is heightened by your letter.

The second paragraph of your letter, in diplomatic language, endeavors to condition the recipient for the third and last paragraphs, which contain the meat of the letter.

You say in the third paragraph:

"I hope you will agree that, no matter what any citizen believes about the ultimate form of international organization, his first task is to assist as far as he can in bringing into full and effective operation the organization projected in the Charter of the United Nations. As you know, organization under the Charter is not intended to be immutable, and it is to be hoped that under it the United Nations will move steadily in the direction of the strengthening of the authority of its organs. When the President urged prompt approval of the Charter upon the Senate, he stated that the Charter was not a static treaty and that it could and would be improved just as our own Constitution has been improved."

It is apparently not realized in the State Department that the American people knew instinctively that for political reasons it might be necessary to adopt the Dumbarton Oaks proposals into a charter for the benefit of those who came in late. These late arrivals, of course, included many members of the Foreign Relations Committee of the United States Senate, as well as the technicians in the State Department, who were still thinking in terms of 1918. We, who took an active part in favor of adoption of the San Francisco Charter, worked on that basis, hoping that the San Francisco Charter could be developed into a world government, even though our founding fathers over 150 years ago found it necessary to scrap the Articles of Confederation and institute a real Government based on law by the adoption of a Constitution. In this connection, we remember very clearly being told that the Charter "* * * would be improved just as our own Constitution has been improved," but we also realized that the Charter is not a Constitution but merely a so-called gentlemen's agreement which can be and always has been broken at will by any of the high contracting parties, when they thought it served their national interest.

But since San Francisco, the atomic bomb has fallen. In the words of Norman Cousins, "The need for world government was clear long before August 6, 1945, but Hiroshima and Nagasaki raised that need to such dimensions that it can no longer be ignored." Or, as Freda Kirchwey has so aptly expressed the effect of the atomic bomb, "In the space of a day the world security organization grew from childhood to senility. Now it must be replaced."

In your last paragraph you say:

"Individuals who continually reexamine the premises upon which international relations are founded will make a contribution to political development in the same way that free and intelligent criticism has always contributed to the development of government everywhere. Your contribution today will be especially valuable to the extent that it points to the need of effective international action now through the processes envisaged by the charter."

It is this "papa knows best" attitude which we resent. It may be necessary to approach world government through the United Nations Organization when it is finally set up. Before San Francisco, a high official of the State Department stated frankly, "The idea of a superstate never entered our heads in connection with Dumbarton Oaks." Nobody wants an all-powerful superstate, but this time we hope the American representatives will have their minds full of world federation when they go to the organization meeting of the UNO. What thinking people want, and what they are trying to tell you in no uncertain terms, is that at the first session of the United Nations Organization, the first utterance should be, "Gentlemen, I propose we unite." This proposal should come from the American representatives, since we are, for the moment, the leading nation of the world and the originators of the only form of government for the world which is appropriate and vitally essential for world peace—federation. Again, in the words of Norman Cousins:

"After the Charter was drafted, even its warmest advocates did not claim that it was equipped to cope with war or the threat of war. But it was felt that time might work to the advantage of the United Nations—time in which to build up the habit of peace; time in which to strengthen and implement the Charter so that it might someday take the form of a real and durable world structure. But the time factor has been reversed. Time no longer works for peace. Time today works against peace."

It is very evident from your letter of December 7 that the technicians in the State Department and highly vocal members of the Foreign Relations Committee of the United States Senate fail to realize that time is running out and, therefore, the atomic bomb has made it impossible, impractical, and fatal to give the Charter time and see if it won't work.

Since reading the President's statement of December 15 on China, "The Government of the United States holds that peace and prosperity of the world in this new and unexplored era ahead depend on the ability of the sovereign nations to combine for collective security in the United Nations Organization." We have been wondering what he means by combine. If he means unite, then we could be sure he realizes the nature of the new and unexplored era, which dawned over Hiroshima on August 6. All the people know now is that sovereign nations make wars in which the people suffer and die.

What we need is for the technicians in the State Department to sacrifice their pride of authorship in the Dumbarton Oaks proposal for the good of mankind; and with the other bad advisers around the President to step aside and permit the President to listen to the voice of the people who are waiting for him to implement the inspiration given him at the time of his "Republic of the World" speech at Kansas City on June 28, 1945.

Original copy of this letter is being sent to the President with the earnest hope that the Secretariat will permit him to read it.

Sincerely,

F. R. VON WINDEGGER,
Chairman, Missouri State Committee for World Federation.

Control of the Atomic Bomb

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hanson W. Baldwin from the New York Times of March 6, 1946:

CONTROL OF ATOMIC BOMB IMPERATIVE—DISCLOSURES OF PRACTICES IN CANADIAN ESPIONAGE CASE BRING ISSUE MORE SHARPLY INTO FOCUS HERE

(By Hanson W. Baldwin)

The Canadian spy case brings to sharp focus the entire problem of atomic energy legislation in this country.

The espionage so far revealed is serious in its nature and particularly in its consequences, and is likely to become much more so with future revelations. However, we should not confuse the issue by talk of ethics or by name-calling or emotionalism. The Russians have done in Canada only what every other nation, in this world of power politics, has done and is doing—and must do—if it is to survive in the atomic age. They did it with a considerable degree of amateurish naïveté, but the important and the somewhat shocking fact is not that the Russians procured secret information, nor the manner in which they procured it, but that Canadian and British nationals in positions of authority and trust chose to violate the responsibilities and the duties of their offices for the benefit of a foreign power.

LOYALTY IS REAL ISSUE

It is this stage of the investigation that merits the greatest consideration and attention. If men or women in public office in this country or Canada find themselves bemused or confused by the doctrines of communism, or torn by a double allegiance, they have no place in public office. And for those who, while professing public allegiance and fidelity to one set of principles and one nation, privately pay obeisance to another, there can be nothing but contempt.

All this does not mean that there should be a "Red probe" or a witch hunt. That, unfortunately, may be one of the more serious consequences of the Canadian case. Already, there is considerable pressure to tighten up the provisions of the Espionage Act—an act which is now, if anything, too broad. We must make haste slowly; otherwise there is grave danger that civil liberties may be disregarded and the principles we stand for in this country brought to naught.

But the Canadian case makes more imperative than ever before the necessity for a rapid consideration by Congress of legislation for the national control of atomic energy—and the establishment as soon as possible, by UNO of international controls.

The first atomic bomb was dropped on Hiroshima on August 6, 7 months ago. In that interval extensive hearings have been held by Senator BRIEN MCMAHON'S atomic energy committee, and various bills have been framed, but no final congressional action has been taken.

The hearings have shown a major split between military and scientific opinion as to the desirable type of legislation. The McMahon bill, which emphasizes complete civilian control of atomic energy policy making and libertlizes, as far as possible, public information about atomic energy, is greatly favored by the scientists. It is on the whole

a good bill and compensates for the dangerous features of the military-sponsored May-Johnson bills.

But in one respect it is clearly deficient and puts the cart before the horse. Until and unless the world agrees to outlawing the use of atomic energy in war and puts teeth in such an agreement by setting up (if that be possible) an airtight international inspection system, this country must continue to develop atomic energy for military purposes and our military men must be represented on any commission that controls atomic energy.

MILITARY POWER INVOLVED

Today atomic energy is military power and nothing more, and to bar the military from representation on a policy-making-control commission, as the scientists would do, is to set up virtually an entirely new department of war, separate from, and outside of, the War and Navy Departments. It makes no sense. As long as atomic energy is to be used for military purposes in the world our military must have a hand in it or our own national defense will be hopelessly crippled.

Of course, in any atomic-energy-control legislation that is passed the principle of civilian preeminence and civilian control over the military—fundamental to our type of Government—must be upheld, and secrecy restrictions must be liberalized as much as possible. Otherwise we shall defeat our own purposes—the preservation of democracy and the fostering of scientific research.

There must be, in other words, in any acceptable legislation a reconciliation of conflicting ideas and aspirations.

This the scientists on the one hand and the military on the other seem to have lost sight of. Peace, and the ideal, is never gained by an easy road; no simplified approach will do.

Many of the physical scientists—suddenly, since Hiroshima, become social and political scientists—have not indicated any great understanding of this fact. They are out to reform the world overnight, for they have had an understandably guilty conscience since their creation by a Frankenstein monster. But the world will not be made over in their image by losing sight of reality. Yet in their zeal too many of the scientific pronouncements seem to have lost sight of the kind of world we live in.

This attitude, this understandable fear of what tomorrow holds, this attempt to "gild" the present, has undoubtedly helped to lead to the kind of rationalization that perhaps served to justify—in their own minds—the acts of the Canadian and British citizens who gave secrets to the Russians.

It should give all of us—scientists, public, legislators and military—cause to stop and think. We must retain our ideals for international organization and work for them. And we must lend more than lip service.

After the Atomic Energy Commission of UNO has been established and is at work we must be prepared to offer one or more definite concessions:

1. Destruction of the atomic bombs already manufactured.

2. Halting of production of atomic bombs for a certain period while the commission deliberates.

3. Agreement to outlaw atomic energy in war and to turn over to UNO, or to destroy our atomic factories, if a satisfactory control system on an international basis can be set up, and provided UNO can be strengthened to meet these tremendous responsibilities.

But it would serve no point now to give Russia atomic bombs, or to tell her all the details of how to make them, and we are, indeed, blind optimists if we think the Russians would interpret this as anything but a naive gesture.

Our ideals and aspirations will be badly served if we lose sight of the fact that the millennium is not here and that we must still live in the mud and dross of today.

Bill To Permit Steamship Companies To Operate Aviation Routes, Especially To Meet Foreign Competition—Maritime Commission Empowered To Act

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. CELLER. Mr. Speaker, the Civil Aeronautics Board has set its face against a unified sea-air service in the cases of overseas transport, holding that each form of transportation must be independently managed and controlled. It defends its position by maintaining that such is and was the "congressional intent." Nothing is further from the truth.

The policy of the United States transportation has never been declared to be one of rigid separation in management and control of modes of transportation. A review of the hearings and the subsequent acts of Congress, such as the Interstate Commerce Act, the Motor Vehicle Act, the Merchant Marine Act of 1936, and the Civil Aeronautics Act, reveal no such intent on the part of Congress.

Principal railroads are engaged in some form of motor transportation. Where it serves the public interest, carriers by water operate highway carriers and railroads operate steamships. The Merchant Marine Act of 1936, section 212, authorized and directed the Maritime Commission "to study and cooperate with vessel owners in devising means by which there may be constructed by or with the aid of the United States express liner or superliner vessels comparable to those of other nations, especially with a view to their use in national emergency and the use with or in lieu of such vessels of transoceanic aircraft service."

Why a theory of separateness in overseas transportation should now be applied to the detriment of our postwar foreign trade, I fail to see. Other countries are prepared to offer a complete sea-air service. Only recently, the House of Commons approved the British White Paper which discards the "single chosen instrument" practice for the establishment of three main air transport corporations, one of which operating between the United Kingdom and South America will be controlled and operated by steamship lines. If the Civil Aeronautics Board policy prevails, we are obviously at a competitive disadvantage in dealing with foreign trade conditions such as custom regulations, money exchange, immigration, public health quarantine, and sources of traffic. Coordinated sea-air services of other countries will, as a consequence, be able to offer lower fares and shipping rates to travelers and shippers. This becomes more evident when goods are to be shipped to or received from the interiors of the trading countries.

If the United States is to attain and maintain its rightful place in foreign trade and in world transportation, the ruling against unified sea-air service must be reversed. It must be remembered that the Civil Aeronautics Board is an administrative and not a policy-making body.

However, since the Civil Aeronautics Board stubbornly holds to its unjustifiable position, Congress must act. The CAB cannot stand in the way of progress and it must be bypassed. Time is of the essence. Foreign merchant marine companies are supplementing their overseas routes by air transportation and they will soon crowd out our native companies. Therefore, I have this day offered a bill correcting this intolerable situation. It would empower the Maritime Commission with authority to grant franchises, after public hearing, to United States marine transport companies for maintenance and operation of supplemental aviation routes on foreign soil.

The bill follows:

A bill to amend the Merchant Marine Act, 1936, as amended, with respect to air transportation by marine transportation and shipping companies

Be it enacted, etc., That Title II of the Merchant Marine Act, 1936, as amended, is amended by adding at the end thereof a new subtitle as follows:

"SUBTITLE—AIR TRANSPORTATION

"SEC. 241. (a) Notwithstanding any other provision of law, any marine transportation and shipping company may engage in overseas air transportation or foreign air transportation, or both, if there is in force a certificate issued by the Commission authorizing such company to engage in such air transportation.

"(b) Application for a certificate shall be made in writing to the Commission and shall be so verified, shall be in such form and contain such information, and shall be accompanied by such proof of service upon such interested parties, as the Commission shall by regulations require.

"(c) Upon the filing of any such application the Commission shall give public notice thereof by posting a copy of such application in the office of the Secretary of the Commission, and shall give notice thereof by such other means to such persons as the Commission may by regulations prescribe. Any interested person may file with the Commission a protest or memorandum of opposition to or in support of the issuance of the certificate applied for. A public hearing shall be held on such application if the applicant, or any person having a substantial interest in the proceeding, shall so request within such time as the Commission shall by regulations provide, and the Commission shall dispose of such application as speedily as possible.

"(d) The Commission shall issue a certificate authorizing the whole or any part of the air transportation covered by application if it finds that the applicant is fit, willing, and able to perform such transportation properly and that such transportation is required by the public convenience and necessity; otherwise such application shall be denied.

"SEC. 242. (a) Each certificate issued under this subtitle shall specify the terminal points and intermediate points, if any, between which, or if such specification is impracticable, the area or areas within which, the holder thereof is authorized to engage in air transportation and the service to be rendered; and there shall be attached to the exercise of the privileges granted by the certificate such reasonable terms, conditions, and limitations as the public interest may require. No term, condition, or limitation of a certificate shall restrict the right of the holder thereof to add to or change schedules, equipment, accommodations, and facilities for performing the authorized transportation

and service as the development of the business and the demands of the public shall require. The holder of a certificate shall not be deemed to have violated any term, condition, or limitation thereof by landing or taking off during an emergency at a point not named in its certificate or by operating in an emergency, under regulations which may be prescribed by the Commission, between terminal and intermediate points other than those specified in its certificate. The holder of a certificate may make charter trips or perform any special service without regard to the points named in such certificate, under regulations prescribed by the Commission.

"(b) Each certificate shall be effective from the date specified therein and shall continue in effect until suspended or revoked as hereinafter provided, or until the Commission shall certify that operation thereunder has ceased: *Provided*, That if any service authorized by a certificate is not inaugurated within such period, not less than 90 days, after the date of the authorization as shall be fixed by the Commission, or if, for a period of 90 days or such other period as may be designated by the Commission, such service is not operated, the Commission may by order, after notice and opportunity for hearing, direct that such certificate shall thereupon cease to be effective to the extent of such service.

"(c) No certificate issued under this subtitle may be transferred unless such transfer is approved by the Commission and by the Civil Aeronautics Board as being consistent with the public interest.

"(d) No certificate issued under this subtitle shall confer any proprietary, property, or exclusive right in the use of any air space, civil airway, airport, or air navigation facility.

"SEC. 243. The Commission, upon petition or complaint or upon its own initiative, after notice and opportunity for hearing, may by order alter, amend, modify, or suspend any such certificate in whole or in part if the public convenience and necessity so require, or may revoke any such certificate in whole or in part for intentional failure to comply with any term, condition, or limitation of such certificate: *Provided*, That no such certificate shall be revoked unless the holder thereof fails to comply, within a reasonable time to be fixed by the Commission, with an order of the Commission commanding obedience to the term, condition, or limitation found by the Commission to be violated. Any interested person may file with the Commission a protest or memorandum in support of or in opposition to such alteration, amendment, modification, suspension, or revocation of a certificate.

"SEC. 244. No holder of any such certificate shall abandon any route or part thereof for which a certificate has been issued by the Commission, unless, upon the application of such holder, after notice and opportunity for hearing, the Commission shall find such abandonment to be in the public interest. Any interested person may file with the Commission a protest or memorandum of opposition to or in support of any such abandonment. The Commission may, by regulations or otherwise, authorize temporary suspension of service to such extent as may be in the public interest.

"SEC. 245. So far as is consistent with the provisions of this subtitle, the holder of any certificate issued under this subtitle, and the overseas air transportation and foreign air transportation engaged in by such holder shall be subject to all applicable provisions of the Civil Aeronautics Act of 1938, as amended.

"SEC. 246. As used in this subtitle—

"(1) The term 'Commission' means the United States Maritime Commission.

"(2) The term 'marine transportation and shipping company' means any common carrier by water subject to regulation with respect to its rates, fares, and charges under the Shipping Act, 1916, as amended.

"(3) The terms 'overseas air transportation' and 'foreign air transportation' shall have the meaning assigned to such terms in the Civil Aeronautics Act of 1938, as amended."

Let's Have Prices That Tell the Truth

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. REES of Kansas. Mr. Speaker, I am including as a part of my remarks today an editorial that appeared in a recent issue of the Country Gentleman, entitled "Let's Have Prices That Tell the Truth." I commend the reading of this editorial. It calls attention to the fact that subsidies, after all, are paid for the benefit of consumers. Such being the case, they ought to know what the subsidies are, and who really benefits by reason of such payments.

The editorial follows:

LET'S HAVE PRICES THAT TELL THE TRUTH

If food subsidies are to be continued beyond June 30, as the administration asks, Country Gentleman makes this suggestion to Congress: Put them on an honest basis. They are primarily subsidies for the benefit of consumers. Let them be paid then at the actual point of benefit and allow farm prices to move freely, at least up to where they will reflect the true market value.

As it is now, we do not have prices that tell the truth. They present a false front to both consumer and producer. A part of the real price is concealed from the consumer because the Government pays it. This was admitted by the President, when he calculated in his message to Congress that a removal of subsidies would cause a rise of 3 to 5 cents a pound in average retail prices of meat, 12 cents a pound for butter, 1 to 2 cents a quart for milk, and 1 cent a loaf for bread.

A tangle of prices and subsidies deprives farmers of any accurate measurement of the value of their products. They are left without the guidance in their operations that the market normally affords them. The unsettled cattle-feeding situation is an example of the results. Meanwhile, farmers are kept under an uncertainty—which ought not to be imposed on the Nation's most willing producers—as to what will happen when subsidies are removed from their price structure. If subsidies were placed where they belong and farm prices allowed to fill up the gap this uncertainty would be lessened. Devising a method of transferring these food subsidies to those who really enjoy them should not be beyond the powers of official Washington.

Also, if consumers need these subsidies to help with their cost of living, we should see that they get the most out of them. Let us pay the subsidies for purchases of the most healthful, body-building foods. They can be made to contribute in this way to the development of a more nutritious national diet and stronger, better-fed people.

But the most important reason for bringing food subsidies out into the open, so that all can see what they are and who is getting them, is that this is the honest policy. All of us want to be proud of the American Government, and to feel that it sets a standard of being aboveboard in all its dealings. Food subsidies, as they are now set up, do not square with such a standard. If Congress renews them, it should make them honest.

Amvets Urge Automobiles for War Amputees

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I desire to include the following correspondence and a petition signed by 350 amputees at Walter Reed Hospital, also a clipping that appeared in the Washington Daily News:

[From the Washington Daily News of March 6, 1946]

CROWD DANGERS STIR AMPUTEES TO SEEK CARS FROM GOVERNMENT

"A girl brushed by me and I just toppled." That happened to Pfc Ralph Broitman, 21, who lost one leg in the European theater of operations, in the Eighth Avenue subway in New York where he had gone on furlough to see his parents and try out the artificial leg in normal transportation.

Mr. Broitman is a member of the war amputees car committee who will present today to the Veterans' Affairs Committee of Congress a petition signed by 350 leg amputees of Walter Reed Hospital asking that each veteran so handicapped be given a car to offset the tremendous disadvantage he finds in not being able to get around easily.

"We are not asking for charity," says Pfc Frank W. Monico, chairman of the committee, "but we do feel an artificial leg is not enough. We can't get about if it's snowy. We too easily lose our balance in a crowded bus or tram.

"And we just can't climb hills," the amputees with Private first class Monico chorused.

"Financially, most of us can't afford a car," continued Chairman Monico, "but that is the only device that will give us an equal chance with others."

"Yes; if I had a car I could go on with the work I prepared myself to do before the war," Pfc Norman Raines said. "I've studied to be a psychiatric social worker, and I could finish the course if I had a car so that I could do the supervised field work required. Without a car, I couldn't do that kind of work."

The drive for cars for leg amputees is sponsored by Amvets.

FEBRUARY 28, 1946.

Gen. OMAR N. BRADLEY,
Veterans' Administration,
Washington, D. C.

DEAR GENERAL BRADLEY: Amvets is launching a movement to obtain specially made vehicles for amputees either through Government purchase or through the patriotic cooperation of automobile manufacturers. We would appreciate very much learning the position of the Veterans' Administration in regard to this matter.

We are contacting individual manufacturers to see if we can secure these automobiles at a reduced cost and we wonder whether or not you will cooperate with us in submitting legislation to Congress in order

that the Government may secure these vehicles for those who are now permanently disabled.

Your early attention will be appreciated.

Very truly yours,

JOSEPH LEIB,
National Legislative Director.

Letter sent to following automobile companies: Dodge Motor Co., Studebaker Corp., General Motors Corp., Ford Motor Co., Kaiser-Frazer Co.:

MARCH 2, 1946.

GENTLEMEN: Amvets are launching a movement to obtain specially made vehicles for amputees. We have contacted Members of Congress and the Veterans' Administration for support in this endeavor in behalf of those who have lost part of their body in defense of their country. In this endeavor we need the patriotic cooperation of all automobile manufacturers and we trust that your company will take an active interest in this worthy cause.

We are extremely anxious to know how far your company could go in making these cars available to the thousands of disabled veterans. Also advise as to approximate price and whether or not your company has engaged in any research along these lines.

Trusting that we shall hear from you as soon as possible and with many thanks, I am,

Very truly yours,

JOSEPH LEIB,
National Legislative Director.

WAR AMPUTEES CAR COMMITTEE,
ARMY MEDICAL CENTER,
WALTER REED HOSPITAL,
Washington, D. C.

The Army has given us a prosthesis to prepare us for civilian life. We, however, feel that this hasn't proven adequate to place us on an equal basis with the able-bodied, because of:

1. Weather hazards (snow and mud).
2. Public crowds (pushing and shoving).
3. Prosthesis break-down.
4. Terrain (difficulty in climbing hills, etc.).
5. Transportation difficulty (subways, busses, trolleys).

We, the undersigned, are therefore resolved: That every veteran, who because of war-inflicted injuries, is seriously hampered in walking, in order that he may compete on a basis relatively equal to those who are not so handicapped, be supplied an automobile by the Government.

Frank W. Monico, chairman; Thomas N. McKenna, New York; Kenneth L. Colbert, Indiana; Thomas Allison, Pennsylvania; John H. Zundel, Ohio; Echmund C. Anschutz, New York; Harold L. Frank, Pennsylvania; James Mullary, New York; John D. Hull, Maryland; Sidney Schuman, Washington, D. C.; Patrick T. Byrne, Joseph F. Seesman, James J. Burke, New York; Roy F. Russo, Ohio; Howard Bland, Kentucky; Charles H. Rossman, New Jersey; Earl V. Walls, Jr., Pennsylvania; Harry W. Hinebaugh, Jr., Washington, D. C.; Charles C. Bochanis, Connecticut; Joseph E. Kuspul, New Jersey; John J. Kellery, Massachusetts; George Skalski, Warren Huffman, West Virginia; Grant G. Sullivan, Kentucky; Cecil G. Gough, Jr., Maryland; William Kettler, Ohio; Joseph F. Stork, Pennsylvania; Angus W. Rose, Virginia; Odis L. Warren, Oklahoma; Harry W. Wilt, David A. Kent, New Jersey; George E. Hayden, Illinois; Harvey L. Scharf, New York; John Wagner, Pennsylvania; Edward H. Patterson, John A. Milone, New York; Joseph C. Megatis, Pennsylvania; Jacob Davis, Massachusetts; Louis G. Hall, New York; Nicholas J. Larusso, New Jersey; Stanley E. Swizenski, Vito Romeo, New York; Ralph Knauf, Pennsylvania; George Everett, Massachusetts; John Humphreys, New Jersey; Walter E. Dillion, Jr., New York; Wallace P. Hayes Would Keep Hands Off Spain

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Sun:

HAYES WOULD KEEP HANDS OFF SPAIN

PEORIA, ILL., March 5.—Carleton J. Hayes, historian and United States Ambassador to Spain from 1942 to 1945 advised last night: "I would leave Spain to the Spaniards and patiently trust them to bring about their own evolution."

His remarks, at a forum meeting sponsored by a Catholic Te Deum group, came after a simultaneous announcement by the

United States, France, and Great Britain that expressed hope for a peaceful withdrawal of Franco and establishment of an interim government.

Hayes said that when President Roosevelt sent him to Spain in 1942 his instructions were in accordance with traditional American foreign policy.

"But now," he said, "we seem to be following a new line which says we must virtually invade a country in order to hold democratic elections."

The former Ambassador said that Spain was "at least indirectly helpful to us in winning the war" and declared:

"Now Spain is being charged with being pro-Axis. Personally I think the charge is unjust, untrue, and contrary to the facts."

Hayes said that Spain during the war permitted 1,200 Americans to pass through the country while German submarine men were being interned. He stated that passage also was allowed to 25,000 Frenchmen on their way to join Free French forces, and to 7,000 refugees of all nations.

"I think it is about time," Hayes said, "we realize that Russia and the United States don't mean the same thing when they say democratic elections."

Toledo's Income Tax

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of March 6, 1946:

TOLEDO'S INCOME TAX

Imposition by Toledo, Ohio, of a city income tax again focuses attention upon the growing evil of multiple taxation. The need for a better coordination of Federal, State, and local taxes has long been felt and plans for eliminating tax conflicts have been constantly studied. During the war such problems were shoved into the background. But now many cities are confronted by the necessity of finding new sources of revenue to take care of enlarged population and to make up for delayed repairs, expansion, and improvements in municipal services that had to be postponed because of the war.

The cost of such undertakings will be high, compared to prewar standards, owing to the interim rise in prices of materials and labor, and these will have to be financed from local sources of revenue.

In turning to the income tax to meet its revenue needs Toledo is not breaking new ground, for Philadelphia already has a personal earned-income tax and New York City seriously considered adopting an income tax when relief needs were pressing. The Toledo tax is unique, however, because it applies to corporate as well as individual incomes and profits—and covers nonresidents to the extent that their incomes originate in the city.

The administrative difficulties of this sort of localized taxation are sufficient to condemn it, even if there were no other reason for objecting to it. But there are other and more serious grounds for opposing municipal encroachments on the income-tax field. The addition of State income tax levies to the heavy burden of Federal income taxation has already given rise to serious problems. If the precedent set by Toledo, located in a State that does not levy personal income taxes, were to be followed generally, many taxpayers would find themselves subject to triple taxation of incomes. The need for some over-all agreement that would prevent excessive reliance upon a single source of revenue is clearly indicated.

The Farmer

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. HOFFMAN. Mr. Speaker, when it has been impossible to comply with the requests of individuals, groups, and organizations that support be given to and appropriations voted to carry out programs in which they were especially interested, charges that I am a reactionary have frequently followed.

The fact that the United States Treasury is not only empty, but shortly will be $300,000,000,000 in the red, that the money would have to be borrowed and eventually repaid, in large part by the returning veterans and their descendants, and that the program tended toward socialism or statism, seemed to make no impression upon those who were disappointed.

That my reasons for opposing New Deal policies which, in my judgment, would eventually destroy our way of life, the independence of our people and our economic security, are sound, receives support from the following editorial, clipped from the March 3, 1946, issue of the Grand Rapids Herald, published at Grand Rapids, Mich., Frank Sparks, editor:

WARNING TO THE FARMER

The other day there came to the desk of this editor an editorial from the Barre (Vt.) Daily Times. It is so sound and so full of meaning and warning that we are printing it herewith.

"HOW SOCIALISM REACHES THE FARMS

"A recent Associated Press dispatch from London occupied a space of 23 lines. Probably not one person in a thousand read it. And yet it conveyed an omnious message.

"The item said Minister of Agriculture Tom Williams told British farmers over the radio that failure to cooperate in the labor government's planned agriculture program might mean confiscation of their land. He said that the Government's policy is intended 'to insure that land is properly farmed, managed, and equipped.' He warned that, as a last resort, land would be taken, at a valuation, from farmers and landowners 'who failed to play their part. * * * We must have the power to control, and we shall seek legislative authority from Parliament to serve compulsory directions.'

"British farmers are warned that if Britain's new Socialist government has its way, farmers will raise what it says, when it says, and where it says, or lose their land.

"It has pointed out that here in the United States, under our program of Federal socialization of electric power, carried on largely under the guise of flood control, irrigation, navigation, etc., the next logical step would be socialization of land. If Government, at the taxpayers' expense, is to furnish electric power, which is virtually the smallest item in the family budget, why should it allow vast areas of land which produce the staff of life, to be farmed for private profit, especially when it spends billions of public funds to reclaim or irrigate it?

"The people of the United States who sanction Government-owned business in our country, are setting the stage for a socialized government to take over the land.

"Once socialism is established, the farmer, with his private ownership of land, is the most vulnerable to attack, for he raises the crops without which life cannot exist."

Please remember, when you ask for and receive appropriations of Federal money, it is only a part, and frequently but a small part, of the dollar you pay to the tax collector, for much of your tax dollar is used for administrative expense.

And do not forget that, when Federal funds are given, either to the individual or the municipality, Federal regulation and supervision follow, and, if we do not watch our step, we will wake up some day to learn that very few of our activities are within our own control.

Farmers will not only be told when and what and how much to plant, but they will be told when and where and for how much to sell; and businessmen and industrialists will have the already burdensome and expensive Federal regulations extended.

The freedom of the individual to carry on his own activities in his own way, heretofore so greatly prized, will have vanished.

Hon. Clare Boothe Luce

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks, I want to call the attention of Members to an article by Miss Elena Saveloff-Savelkoff, an American citizen of Russian ancestry, giving tribute to our colleague from Connecticut, the Honorable CLARE BOOTHE LUCE.

No Member of this House has done more to maintain the honorable American tradition of providing a haven for the politically oppressed than has Mrs. LUCE in her two terms among us. Right now there are pending in committee two bills introduced by her for this noble purpose: One, the House Concurrent Resolution No. 109, to legitimatize and give a regular status to all stateless persons who are now in any area occupied by any armed forces of a United Nation; and, two, H. R. 4725, a bill to authorize the admission of three Russian nationals, now in the United States, who fear that their return to the Soviet Union will result in death or perpetual imprisonment because of their political beliefs.

This type of action seems to me the best example of giving practical effect to basic American principles.

The article follows:

THOUGHTS OF THE MOMENT

(By L. M. Saveloff-Savelkoff)

I dedicate this verse to the Member of Congress, the Honorable CLARE LUCE, who has

conserved the humane sentiments of pity and compassion towards our neighbor, so rare in these times:

"We do not sing our songs,
Nor do our lips smile any longer.
Our eyes gaze sadly into the distance—
At the vanished past.
The wound of our heart aches rebelliously,
And tears tremble on our lashes
But do not fall."

—*Elena Saveloff.*

The unusual means of conducting contemporary wars, accompanied by untold horrors, have influenced the psychology of mankind in an evil way.

The merciless destruction of cities, under the ruins of which perished tens and hundreds of thousands of peaceful inhabitants composed, in the majority, of old men, women, and innocent children, have choked and exterminated in mankind its spiritual qualities which differentiate it from the animal world. Pity, mercy, and compassion have disappeared and have been replaced by indifference toward one's neighbors and utter heartlessness.

Stricken by the lack of faith, mankind turned away from its Creator and His Son and repudiated the great commandments of Christ which call for love of God and neighbor. It abandoned the path shown by Christ and turned in the direction of materialism and its fellow-travelers—faithlessness and egotism. The result of this change is noticeable at present and humanity has returned to the distant times of the Old Testament and its commandments, "eye for eye and tooth for tooth." Yet even this was not sufficient—now they want two eyes and two teeth for one eye and one tooth. Mankind, having repudiated the great commandment to love one's neighbor, is closing its eyes to the horrors taking place in the world and through this promotes the rule by force and terror. Yet at the same time and at every opportunity it utters lofty pronouncements regarding liberty and the rights of man, which remain but empty words because the actions contradict the words.

We see that humanity was not satisfied with victory and the destruction of the military might of the enemy. It has imposed on the vanquished nations conditions which make existence practically impossible, and death by starvation is awaiting many. We also notice that several countries in the east of western Europe have been turned over to a nation ruled by a godless power, where reign total license and terror. We know what has happened in these countries where so much blood has been shed and the turning over of these countries has been effected without the consent of their inhabitants, which fact contradicts the lofty principles found in various charters of freedom.

There is yet another painful question for us Russian-Americans to answer—it is the problem of the unfortunate Russian people who have fled from their native land where rules the bloody license of the godless and criminal non-Russian power. They fled to the countries where they hoped to find protection and refuge, but, unfortunately, they were mistaken, because, in spite of the lofty principles proclaimed by the said countries, these people were forcibly turned over to the Bolsheviks, in whose kingdom sure torture and death awaited them. Some of them preferred suicide to returning to their native land. Yet even these suicides failed to awaken in humanity the feelings of pity and compassion.

Suddenly in the midst of general silence and indifference a woman's voice was heard calling men to have mercy and compassion. This voice belonged to a Member of Congress, the Honorable CLARE LUCE, Representative from the State of Connecticut, who raised it in defense of several unfortunate Russians who were being forcibly deported to Europe to be handed over to the Bolsheviks. One of these men tried to commit suicide because he knew that mockery, torture, and violent death were their lot, which fact must have been known to those who gave the deportation orders. Will Mrs. LUCE's appeal to mercy and justice find a response at this time? But she did not stop at uttering mere words, she brought up the Russian question before Congress, which fact should always be remembered by us Russians, and we also should treasure the name of this woman who lifted up her voice in the midst of complete indifference and heartlessness in the defense of defenseless Russians who were left to their fate by the cruel world.

All this brings to our mind the words spoken by another woman (Elena Saveloff) pertaining to the present predicament of the people of Russia:

"Being strangers amidst the world's banquet
We pass on—denizens of another world.
Although we are of this earth,
There is no place for us here.
The past illumines our life
And shines before us in the darkness
Like a luminous vision."

American citizens of Russian descent, do not forget the name of the great American citizen, CLARE BOOTHE LUCE.

The Lumber Shortage

EXTENSION OF REMARKS
OF
HON. DUDLEY G. ROE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. ROE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose a letter, published in the Baltimore Sun a few days ago, showing how the OPA is stifling the production of our desperately needed material for housing construction as a result of its absurd, foolish restrictions, and regulations.

The letter follows:

To the EDITOR OF THE SUN:

SIR: The fundamental reason for the shortage of building materials is the OPA. The average price for timbers is approximately $50 f. o. b. mill, yet if the mill remanufactures these timbers into smaller sizes each succeeding operation nets him less and less until he gets to 2-inch plank, which averages approximately $35. To manufacture this 2-inch plank it has been necessary for him to expend considerable money in labor and overhead and depreciation; yet he must take $15 per thousand less. I ask you: Does this make sense?

This same mill can ship these timbers to a milling-in-transit mill and it can remanufacture these timbers and place a charge up to approximately $18 per thousand. Yet the mill which has the equipment and should do this work is unable to do so because of the OPA ceiling.

We must all admit dry lumber is proper to put into a house. There are a number of better mills which have the facilities for kiln-drying their product yet today are unable to do so because OPA will not allow them sufficient margin to cover this cost, with the result these mills are forced to ship their stock green from the saw.

Recently the west coast mills made an advance of about 15 cents per hour to labor, which amounted to approximately 18 percent. They were told by OPA they could not get an increase in their prices until they had operated for 6 months, and 25 percent of the industry showed a loss.

Until OPA is drastically curtailed or eliminated entirely there is not a chance for improvement.

GEORGE A. MEYLS, Jr.

BALTIMORE, *February 21.*

Constructive Labor-Management Legislation

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. VOORHIS of California. Mr. Speaker, it is gratifying indeed to me to be able to include with my remarks herewith the text of an article written by the Reverend Benjamin L. Masse, in the March 2 issue of the great Catholic magazine, America.

Father Masse in this article assumes that H. R. 5328, the bill which I offered in the House as a substitute for the Case bill, has been enacted into law and traces the course of a labor dispute as it would be handled under those circumstances.

Needless to say I am still hoping that legislation of this sort can be passed by the Congress and that I believe most earnestly that the results if this were done would be very much as forecast by Father Masse.

The article follows:

THE LAW THAT WASN'T THERE

(By Benjamin L. Masse)

This is pure fantasy about a law that doesn't exist and an industrial dispute that never happened.

The law that doesn't exist (H. R. 5328) was sponsored by Representative JERRY VOORHIS, of California, and was rejected by the House of Representatives during the hectic debate on the Case bill.

The dispute that never happened arose when the nonexistent International Union of Grocery Clerks demanded a wage increase which involved the possibility of a strike. Had it been called, it would have shut down the entire retail and wholesale grocery business in the United States.

The steps that led to the happy ending of this imaginary dispute—an ending that was at least endurable both to the union and to the National Food Association, the employers' bargaining agent—were the following:

1. On November 15 the union notified the association that it was not prepared to renew the existing contract when it expired on January 1 unless straight hourly wage rates were increased a flat 10 percent. Five days later the parties agreed to begin conferences in Washington, D. C., on December 1. This willingness on both sides to enter negotiations revealed a mutual desire to abide by the provisions of the Voorhis Act, which specified that, in industries affecting commerce, both labor and management should exert every reasonable effort to make and maintain agreement without strikes or lockouts.

2. After 4 weeks of negotiations the parties were unable to reach an agreement. The association offered a 5-percent raise, but the union adhered to its original demand. The press began to speculate on the possibility of a strike in the key business of food distribution.

3. On January 2 the union and the association, conscious of their public responsibility and realizing their inability to reach an agreement, invited the Administrator of the "Conciliation and Mediation Division" of the Department of Labor to intervene. (If the parties to the dispute had not acted the Administrator would have intervened on his own initiative, since the controversy threatened an "immediate and substantial interruption to the free flow of commerce.") The effect of this intervention was to freeze existing rates of pay, hours, and conditions of employment until 5 days after the Administrator had notified the parties that his efforts to effect a peaceful settlement had failed. The union was free to strike, but it did not do so, since a strike would have gained absolutely nothing for the membership. Once the "Conciliation and Mediation Division" had taken over, the Voorhis Act stipulated that, except both parties agreed, no changes could be made in the old contract.

4. After six busy days, the Administrator had to confess the failure of efforts to mediate the dispute. Accordingly, after reviewing the danger to the public of a stoppage in their industry, he suggested that the parties agree to "final and conclusive" arbitration. Both the union and the association refused, but, if they had accepted, jurisdiction in the dispute, according to the Voorhis Act, would have shifted to the United States Board of Arbitration. (This is an independent agency, headed by three members, in the executive branch of the Government. Upon the request of both parties to an industrial dispute, it cooperates in selecting an arbitration board from its roster of skilled arbitrators. The award of this board is filed with a Federal district court which, unless a petition to impeach the decision is made by one or both the parties to the dispute, enters final and conclusive judgment.)

5. After the failure of mediation and conciliation and the refusal of the union and the association to agree to arbitration, the Administrator informed the Secretary of Labor of the fact. This was on January 8. The latter, ascertaining that the controversy was of such a nature as seriously to affect the national public interest, certified the matter to the President. Three days after this notification, the President appointed a fact-finding board to investigate the dispute, draw up a report of findings of fact, and make recommendations. Twenty days after the board was set up, on February 1, its report was in the hands of the President. The board recommended a blanket increase of 6 cents an hour, retroactive to January 1. Both parties, fearful of arousing an adverse public reaction, agreed to accept the compromise.

During the deliberations of the fact-finding board, business had continued without interruption. Although the union had been free to strike during this time, it did not do so. There was little point in striking since, during the 20 days the board was sifting the facts, and for 5 days after its report was given the President, the parties were forbidden by law to make any change, except by agreement, "in rates of pay, hours, or conditions of employment in effect prior to the time the controversy arose."

With the signing of the contract, the public felt assured that there would be no stoppage for the rest of the year in the essential business of food distribution. True, the union and the association, unable yet to forget old suspicions and still learning to live together cooperatively and constructively, were unable to agree on an arbitration clause which would have provided for the peaceful settlement of all grievances. But there was widespread confidence that any dispute likely to rise would be referred to one of the adjustment panels established by the United States Board of Arbitration under the Voorhis Act. The panels are quasi-judicial agencies standing between parties to industrial disputes and the regular courts. To them can be referred any unsettled grievance, or even a difference of opinion over the interpretation or application of the collective-bargaining agreement. If the decision of the adjustment panel is subsequently approved by the United States Board of Arbitration, it can be enforced in the Federal courts. Assured of relatively speedy and inexpensive justice, there is no great urge, either on the part of labor or management, to provoke a stoppage over these contractual issues.

In the short time the Voorhis Act has been on the books—in the pleasant world of fantasy, I mean—there have been a few major strikes and a number of small ones. But more frequently than in the past industrial disputes are being settled in an orderly and peaceful way. Anyhow, the act was not intended to outlaw strikes, since only a totalitarian government can do away with strikes completely. The most encouraging aspect of the situation is the great change in the attitude of labor and management. When the bill was before Congress, not a single leader of labor or industry spoke in its favor. Most of them were adamant in their opposition to anything like it, and predicted the most dire consequences if such legislation should be passed. If you were to talk to them now, they would admit, privately at least, that their fears had been somewhat exaggerated. Only a few of them would confess a willingness to return to the "good old days."

The act isn't perfect by any means, and it will probably be amended as time goes on. But there are fewer strikes these days—and the public loves it.

Address of Most Rev. Lawrence J. Sheehan

EXTENSION OF REMARKS
OF
HON. THOMAS D'ALESANDRO, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a recent address made in Baltimore by the Most Reverend Lawrence J. Sheehan, auxiliary bishop of Baltimore and Washington:

In returning to take up residence in Baltimore after more than 25 years, I am conscious mainly of two things. First, there is the comfortable feeling of returning to the home of my childhood and youth. And, secondly, there is the consciousness of walking back into an atmosphere where the traditions of the past have been kept vividly alive.

This evening I should like to speak to you briefly about some of those traditions which are particularly dear to us. For I have a deep conviction that if the American people are to remain a great nation, and particularly if they are to grow in greatness, they must turn increasingly to those traditions in which their true greatness is rooted.

In the first place I believe we should all bear in mind that no nation on earth has nobler civic traditions than these United States. Those traditions have been fixed for all time chiefly by our two great leaders, Washington and Lincoln. Deep reverence for God and His sacred law, belief in God's Providence, and the conviction that on these things depend all that is worth while in our civic life: love of liberty, a sense of justice, and a deep devotion to all our fellow men—these are the traditions we have inherited. Please God, these are the traditions we shall preserve and pass on to generations yet to come.

In all the Union there is no State which has nobler traditions than Maryland. Those traditions had their origin in the high purposes of George and Cecil Calvert. Betrayed for a time in colonial days, they were revived at the birth of our Nation and of our State and passed on to us by men like Charles Carroll of Carrollton, his cousin Daniel, and their worthy compeers. From that day to this no State has been so tenacious of its finest traditions as the free State of Maryland.

And the traditions of Maryland as a State center are, for the most part, in Baltimore. I am well aware, of course, that there are in the State other communities of greater antiquity; and I am also well aware that the love of tradition so deeply rooted in the people of Maryland has kept the capital of the State in Annapolis. But for all of that, since the formation of the Union, the heart of Maryland has been Baltimore. And the people of Baltimore share with the people of the whole State their love and reverence for the good things which have come down from ancient days.

This evening, however, I am thinking particularly of the traditions of the Catholic Church in Baltimore. Those traditions were set by our first bishop and archbishop, John Carroll, the true father of the Catholic Church in the United States. Schooled in the privations and adversity caused by the penal laws of the colony, Carroll was eminently fitted to establish the traditions by which we live. Forced by those laws to seek with his cousin Charles a Catholic education in Europe, he chose the priesthood as his vocation in life and entered the Society of Jesus. Hardly had he been successfully launched on his career of teaching when the tyrannical governments of Europe caused the suppression of the society to which he had given himself. Returning to his native Maryland he found that he was not allowed to have even a public chapel for his priestly work among his 10,000 or more Catholic fellow colonists. Therefore, when the movement for freedom was taking shape it is little wonder that Carroll threw the weight of his not inconsiderable influence on the side of liberty; and, once freedom had been established, the new Government found no more ardent supporter than he.

Two things stand out in the life of John Carroll: First, his great love of the church and his uncompromising loyalty to the Holy See; and, second, his ardent devotion to his country and his equally uncompromising loyalty to the civil government. And he, perhaps, more than anyone else in our history, has shown that not only is fealty to the church compatible with true patriotism and whole-hearted support of our national Government, but also that from true religion sound civil government receives its surest and most effective support.

The traditions established by Carroll have inspired and guided his successors. Neill, Mareschal, Whitfield, Eccleston, Kenrick, Spaulding, and Baily trod faithfully in the path he had marked out. Cardinal Gibbons became in his age the symbol of all that John Carroll had stood for in his. And today our present beloved archbishop stands as a worthy and fearless successor in that noble line.

To none in all that line do these archdioceses owe more than to Archbishop Curley. Since first he came among us he has made his very special care the development of the parochial school system. During the almost 25 years of his archiepiscopate the number of schools has increased from 125 to 189; the number of pupils has risen from 35,865 to 64,637. Two great diocesan high schools for girls have been established, and plans have been made, property secured, and funds gathered for two for boys. Nor have other phases of religious life been slighted. The number of new parishes has everywhere kept

pace with the increasing population. The magnificent new seminary at Roland Park was primarily the result of his zeal and inspiration. The retreat movement for men and women has been brought into being and has continued to flourish. The Catholic charities in both major cities have been developed, systematized, and liberally supported. The steady and rapid progress of the church throughout both archdioceses stands a magnificent monument to a great archbishop of broad vision, high purpose, and unflagging zeal.

That his present visual impairment should deprive him of the satisfaction of actually seeing all his plans brought to full fruition is the source of deep sorrow to all of us. But the great patience with which he bears this cross and the heroic fortitude with which he continues to direct his great work fills us, his subjects, with the determination to see to it that, with God's help, his plans are carried out to completion. The prayer of all of us is that God may spare him for many years to guide and inspire us.

To become associated even in a minor capacity with this noble procession of ecclesiastics is a priceless honor and a holy privilege. In taking up my position in Baltimore as an auxiliary bishop in these archdioceses I pledge myself to the great work and to the sacred traditions we have inherited.

Subsidies Make for Inflation

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. SMITH of Wisconsin. Mr. Speaker, Mr. Robert Bliss, editor of the Janesville (Wis.) Gazette, has written a most interesting editorial entitled "This Is the Way We Buy Prosperity." He very ably analyzes the subsidy situation and concludes that the Government is operating on a false basis when it attempts to maintain high standards artificially by the use of taxpayers' money. We are headed for trouble, and those of us who have been in this House for some time appreciate that situation. It is time to call a halt.

Mr. Speaker, under leave to revise and extend my remarks, I include the editorial in question:

THIS IS THE WAY WE BUY PROSPERITY

Americans are being duped into a coma, resting on the fallacy that purchasing power can be maintained simply by pegging prices on the one hand and raising wages on the other. Supposedly, because we have limited some prices and allowed wages to increase, we are in the midst of a boom era.

The most obvious hole in the argument is that we are not producing, for America's phenomenal high standard of living and miraculous war production grew out of our characteristic use of machines and our historic ability for hard work, for team work.

Something has happened since VE-day. There has been a let-down. Folks don't want to work. Men and women refuse good jobs. Strikes have played a vital role in this stagnation.

Meanwhile we go merrily on our way, insisting upon a higher standard of living, refusing to face realities. We'd rather pay taxes for subsidies than to pay prices for goods that would relieve us of taxes.

We balk at higher prices for butter and other foods, yet we are willing that the Government tax us for money which in turn is paid to the farmer in lieu of higher prices for his produce.

In simple terms it's like this: Suppose butter were raised 14 cents per pound. That would raise the ceiling from 54 cents to 68 cents. We are paying about that much now, but it's all under cover. Our Government is paying the farmer a subsidy (Government aid so that he won't lose money) instead of allowing him a higher price for cream that goes into butter. But the farmer is paying part of these tax dollars too—part of the aid he gets back from the Government.

Now, we pay upward of 54 cents a pound for butter. What the farmer gets for his cream is equal to about 68 cents a pound for retail butter. We and the farmer are paying that 14 cents in taxes.

Government subsidies mean Government aids in the form of payments made by the Government to the farmer—he gets a check periodically.

The farmer wants farm subsidies stopped. He's more of a realist than most of us. Butter and other food prices would rise, of course, and we know what effect that would have on wage demands.

But there are other subsidies, too. We have plenty of ships for a big merchant marine—freighters which carry out exports and imports. But those freighters are manned by sailors who are paid much more than sailors of other nations. Competition from those foreign nations will begin to squeeze before long, after the United States sells 5,000 surplus ships. We must either subsidize our shipowners or give up our sea trade to others. Our standard of living in this country is too high to compete.

Then there are metals subsidies. We don't want the mining companies to lose money or pay less in wages, so we contribute taxes to the Government to pay the mine operators part of their costs—for copper, zinc, and lead.

In other words, we are on a false basis today. With our high taxes we are keeping the high standards up artificially. We are due for a fall, and the bottom will drop out in a catastrophe that will make the 1930 depression look small, unless we get to work and produce.

The only way America became great was by its phenomenal production under the free enterprise system, with capital and labor working for greater efficiency, streamlined manufacture, higher quality, greater quantity at lower cost per unit. Advertising played a vital role in creating more and richer markets for our goods. With new machines we produce more with less work, shorter hours, and at higher pay. But that all comes from research, work, production, and high volume of sales.

We are heading for trouble unless Americans everywhere compromise their differences now and dig in. Production and more production is the sole answer to lower prices, high employment and wages. In addition, we must have a government that will balance the budget, trim expenses, and clear the way for labor and management to work together.

President Urged To Clean Up Mess

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. DWORSHAK. Mr. Speaker, it is encouraging to know that many Americans today are giving thoughtful consideration to national and international problems. One of my constituents has sent me a letter, with a request that I present it to President Truman and read it before the House. Because of the significance of the views expressed therein, I insert in the CONGRESSIONAL RECORD the following letter from Mr. Fred J. Lohmeyer, of Idaho Falls, Idaho:

IDAHO FALLS, IDAHO, *February 20, 1946.*

Mr. HARRY TRUMAN,
President of United States,
White House, Washington, D. C.

DEAR SIR: I have observed quite carefully the effect of your policies upon our country and I am frank to say that there are a number of things of which I disapprove. It is vital to you and to us that some of these policies be changed at once.

One of the most important changes you must make is to quit letting a few supposedly important people lead you around and tell you what to do. Don't forget that you are in office to do the best you can for all the people, not just to cater to a few who have special axes to grind. Sometimes I wonder whether you take orders from us or the generals and the admirals. The generals want to take every boy by the collar and shove him into the Army whether he likes it or not. You want the same. The generals want a big army to frighten the world into submission (you call it cooperation). You want the same. The generals and the international corporations want to divide the world up for profit and are sponsoring a system of power politics and colonial exploitation all over the world. You want the same.

You never got these ideas from the rank and file of the people, Mr. President; you got them from the power politicians, the generals and the admirals, and the international money changers.

To make matters worse, you are even letting England lead you around. England needs money to continue her imperialism and shoot down the Greeks and the Indonesians, and you agree. I say let England pay what she owes us and to quit kicking people around in Greece and Indonesia before we lend her any more money. But perhaps you won't listen to me because Attlee and Lord Beaverbrook are telling you what to do.

I approve of your fact-finding board in principle but you should have representatives of labor on the board, also. How can the rights of labor be preserved if there is no one from labor on the board? We can be certain no one is going to champion labor's case unless labor is represented on the board.

It is imperative that you do something at once to unsnarl the major labor disputes and get men back to work. If something isn't done right away to get these problems solved, we are going into an economic tail spin which may end in panic and eventual revolution. I pray to God that you will have enough backbone to call all these people in and thresh out the labor and capital dispute and get the workers back on the job.

Now, there is another matter which is very important to those of us who believe in God and realize the value of prayer. To the best of my knowledge no session of the United Nations Organization has ever been opened with prayer or even with the slightest reference to a Supreme Being.

I feel there are few things more important than for all delegates present to enter upon their duties with prayerful hearts and in the light of divine guidance. Most of the weaknesses of the UNO arise from the fact that the member nations are not guided by the teachings of Christ. Why then should not at least a few minutes each day be devoted to prayer or some other appropriate religious observance? We know that you are not in sole control of such things but your influ-

ence could go far toward correcting this mistake.

Now in conclusion let me reemphasize the importance of serving the people rather than the few who are grinding special axes at your expense. You will have to decide whether this is a Government of the people, by the people, and for the people, or a Government of the few, by the few, and for the few. Let me warn you, you may deceive the people for a while but in the long run the people will find out what you are doing and throw you out of office.

I say either clean up the mess in Washington or resign and give some one else a chance to clean it up.

Sincerely yours,

FRED J. LOHMEYER.

Where Does the Money Come From?

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. BIEMILLER. Mr. Speaker, I desire to include with my remarks an editorial from the Milwaukee Journal raising some very pertinent questions about the activities of the so-called National Physicians Committee for the Extension of Medical Service. It is high time that the financial resources of this group were brought into public view. The Milwaukee Journal has rendered a great public service in publishing this editorial:

THE DRUG-STORE HANDOUT

Some Milwaukee drug stores recently have been distributing to their customers little pamphlets attacking "political medicine," or, more specifically, President Truman's plan for extension of social security to cover general distribution of medical care, and the Wagner-Murray-Dingell bill of 1945 which would effectuate that plan.

Now a great many Americans entertain serious doubts about the Truman plan and the Wagner-Murray-Dingell plan. Questions can be raised whether the bill's objective of improvement in the medical care for large areas and large segments of the population would offset the more conspicuous dangers. And any citizen has a right to express his opposition to the plan—in the open and with full disclosure as to who is behind his talk.

We think the thousands of customers who are receiving this little yellow pamphlet have a right to know whose money is paying for it. It bears the name of the National Physicians' Committee for the Extension of Medical Service—a committee that is itself up to its neck in a political campaign to sway public opinion on the medical care question. It boasts that in the 1942 congressional campaign it established committees in 390 of a possible 425 congressional districts and contacted 800 candidates. It estimates that out of 435 Congressmen elected it had 300 pledged to be for the program the doctors advocate; or, to say it another way, to be against any program the doctors don't want. Talk about mixing politics and medicine. Thousands upon thousands of dollars must have been spent by this committee.

Where does all the money come from? The charge has been freely made that some of the larger chunks come from the big American drug manufacturers and suppliers who are most anxious to curry favor with the doctors and who have a big financial stake in promoting use of trademarked medicines. We do not say that is true. But we do think the question ought to be answered. Maybe a good place to begin to ask questions would be over the drug-store counter, as the druggist does his chore for the doctors—or for somebody else.

Extension of Price Control Act

EXTENSION OF REMARKS

OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by John D. Small, Administrator, Civilian Production Administration, before the House Banking and Currency Committee on the extension of the Emergency Price Control Act, Tuesday, March 5, 1946:

Mr. Chairman and Members of the Committee, today, as we cope with the aftereffects of the war and try to solve the many difficult problems that confront us, I am glad to have the opportunity to tell you my views on the continuance of price control.

I believe that the fight against inflation is one of the most important we are waging today. Right at the outset I want to make it clear that I continue to stand with those who believe it would be disastrous to our economy to let prices run wild during this period of scarcity, as I fear they would if controls were removed at this time. Last December I testified at considerable length before the Senate Small Business Committee on the need for a continuation of price control. I am of the same opinion today.

The situation is explosive. Enormous demands far exceeding supplies have created great pressures which if unchecked would lead to sky-rocketing prices. I believe that most thinking people, including both those in industry and out of industry, are convinced that these pressures must be checked.

I believe it is equally clear that we must not only hold prices within bounds but at the same time, and just as importantly, we must get production up because that is our only chance to stop inflation. Production, all-out, sustained maximum production, is the only real cure for inflation, just as it is for unemployment.

Our country stands today at an extremely critical juncture. The public welfare and the future prosperity of the Nation depends upon (1) prompt settlement of the strikes; (2) prompt resumption and expansion of production; and (3) avoidance of additional major work stoppages.

THE RECORD OF THE PAST

Inflationary conditions today are comparable to, but far more powerful than, those existing at the end of World War I.

Our experiences after World War I were disastrous. As we look back, the causes and effects of the violent inflation and subsequent deflation that followed the last war seem very clear.

To lift price control now would, in my opinion, inevitably recreate the same cycle of inflation and deflation that we had in 1919–20—disaster and ruin for thousands upon thousands of businesses—the majority of them small firms.

I would like to refer you to two charts (attached) taken from a report to the Senate Committee on Banking and Currency and dated September 1, 1945.

These charts show quite clearly what happened after the last war and what can easily happen again unless we have learned our lesson and unless we, as a country, are determined not to let it happen again.

THE INFLATIONARY FACTORS WHICH MAKE IT NECESSARY FOR US TO CONTROL PRICES

In my opinion, the most important inflationary factors present in our economy which require that we control prices are the following:

1. The enormous volume of liquid assets currently held by business units and by the consuming public, a part of which is the enormous volume of money in circulation; and the volume is now greater than the total public debt at its peak in 1919.

2. The increasing wage scales, which mean increasing buying power in the public's hands.

3. The large volume of deferred demand for housing, non-Federal public works, consumers' durable goods, clothing, and other items and the related demand for industrial plant and equipment.

4. The heavy foreign demand for American products for relief and rehabilitation and for commerce. The latter would be increased by proposed foreign loans.

5. Industry's requirements for replenishment of inventories to get into civilian production; the urgent need to fill up with goods all distributing channels—the pipe lines from factory to consumers.

6. The continuing budgetary deficit of the Federal Government.

All of these six factors create demands but on the supply side we have:

7. A volume of production now far below demands and even under the best of circumstances unable to catch up with demands for many months.

All of the above factors were present after World War I and help to explain the speculative boom of 1919–20, but owing to the greater length of and more productive effort required in World War II, they are now potentially much more explosive than in 1919–20.

It seems to me that in the face of these inflationary factors, we must for the immediate future continue to control prices in those areas where demand greatly exceeds current supply.

But we must at the same time recognize that price control does not eliminate inflationary pressures, it merely holds them in check. Balancing the Budget would eliminate one important inflationary pressure, but all-out sustained production is the only way that most of the pressure can be removed, and inflationary pressures must be removed if we are to get back to a stable economy.

WHAT ARE OUR PROSPECTS OF GETTING PRODUCTION UP?

I believe that they are excellent!

Obviously we cannot do it overnight, but in a few short months we can make a tremendous lot of progress.

Probably the best indication of our productive possibilities is given by our actual production during the war. That story is too well known to warrant repetition here. I think I should point out that between 1939 and 1944 we expanded manufacturing capacity by over one-third, even after allowance for the fact that some proportion of the additional plant will turn out to be of little peacetime value. And when it is recalled that we were not operating our industrial plant at capacity in 1939, it is evident that we have the plant and equipment to form the basis for a very sizable increase in production. In addition, the war has necessitated the training in industrial methods of millions of previously unskilled workers. It also forced the adoption of many revolutionary technical advances, many of which can be adapted to peacetime production.

Any doubts that have been expressed as to our ability to achieve as high a level of production in peacetime as we achieved during

the war because of the inflationary elements that were inherent in war activity is to my mind more than offset by the fact that during the war almost 13,000,000 of our youngest and most productive workers (almost one-quarter of our labor force) and tens of billions of dollars of plant and equipment were withdrawn from productive activity and devoted to destructive purposes.

The return to productive activity of the men in the services and the conversion to peacetime use of the plant devoted to war production can more than offset the inflationary factors that existed during the war. If we then find that our plant is still inadequate, we can build more. If the labor supply is short, we can increase the efficiency of the labor we have through improved technology and mass production. In short, we have the plant, the raw materials, the labor and the industrial know-how necessary to regain and eventually exceed the record levels of war production.

Production, immediate all-out production, is the principal need at the present time. The more goods we get on the shelves the sooner the dangers of inflation will be overcome. All-out sustained production means that a maximum number of workers will be employed and that the dangers of widespread unemployment and of consequent needless human suffering will be dissipated. But production of this scale can be attained only if we have a substantial measure of industrial peace; if both management and labor have the will to work to produce in volume; and if all of us are guided by common sense, rather than by emotions, in dealing with the industrial problems that confront us individually and from day to day.

RECOMMENDATIONS

I recommend that action be taken by the Congress at an early date extending the price-control legislation for a year beyond June 30, 1946. I believe that the psychological effect of knowing that the act is going to be extended is of utmost importance to our economy.

Undoubtedly the possibilities of the removal of price controls, or of priority and allocation controls, as of some fixed preannounced future date, all contribute to the pressures that encourage producers and manufacturers to accumulate materials and supplies and hold them until that date arrives, rather than to release them at this time for the civilian market where they are greatly needed to facilitate speedy and orderly reconversion. I believe, therefore, that one of the greatest contributions that Congress can make toward the speeding of reconversion and the improvement of supplies available to civilians is to announce well in advance of the expiration date of current laws, the policy that these laws will be continued for the critical months of the transition period.

Housing Subsidies

EXTENSION OF REMARKS
OF
HON. EUGENE WORLEY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. WORLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

PERRYTON, TEX., *March 5, 1945.*

Hon. GENE WORLEY,
House of Representatives,
Washington, D. C.:

Perryton American Legion voted unanimously to back the Patman bill, Government subsidy for GI housing. It is our humble opinion as the GI bill now stands regarding housing that it is like a reaper standing in a field of golden grain without motive power to direct its effort it stands useless. Let's get the motive power. We ask that this be recorded in the CONGRESSIONAL RECORD.

Send all available material on above.

WALTER LAMASTER,
Chairman, Housing Committee.

Continuation of Price Control

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony before the Banking and Currency Committee, United States House of Representatives, by Ralph E. Flanders, February 28, 1946:

For the record, I am Ralph E. Flanders, president of the Federal Reserve Bank of Boston, chairman of Jones & Lamson Machine Co., of Springfield, Vt., and chairman of the research committee of the Committee for Economic Development. In the last-named capacity my associates and I have been working for more than a year studying the problem of how to restore an economy free of direct price and production controls, which will at the same time be safeguarded against both inflation and depression.

Last April the CED research committee published a statement of national policy on the subject of the removal of wartime controls. We were fortunate enough at that time to foresee some of the problems which we are now facing. I should like to read a few short paragraphs from that statement:

"As the CED has stated, the objectives are high consumption, high production, and high employment.

"It is assumed, also, that our objective is to attain these within the framework of a vigorous and expanding economy in which the great volume of jobs will be provided by free private enterprise.

"The committee believes that these objectives will best be served by the ending of all wartime controls as soon as the emergency needs for them have ended.

"At the same time, it must be very clear that no control should be removed at a time when its removal would jeopardize * * * the successful transition to a healthy peacetime economy.

"On some controls—production controls for example—action must not wait beyond the period of need for war production if high civilian production and employment are to be reached at the earliest possible moment. Other controls, notably those affecting prices, may have even an increased importance for a period after production controls are ended. They will be our chief protection against inflationary pressures in the transition period while production is being expanded, inventory pipe lines filled, and excess demand induced by wartime savings is being worked off. Since it will be wise to remove some controls promptly after war production needs are satisfied, there is sure to be a demand for the unwise early removal of others which can perhaps serve their greatest usefulness after actual fighting has stopped."

I shall not discuss the specific recommendations made last spring, as they have already been presented to your committee by another member of the CED research committee. I shall be happy to supply you with copies of the recommendations in full, however, if you wish them.

More recently the research staff of the CED has been preparing a report entitled "Jobs and Markets," addressed to the problem which your committee is now considering—how to restore free markets in the transition while preventing inflation and depression. The recommendations of this report are the independent findings of the economists who make up our staff. They do not necessarily represent the views of the businessmen on the CED research committee or its board of trustees. I do recommend the report, however, as a thoughtful and balanced analysis, worthy of your careful attention. The report will be publicly released tomorrow and copies have been distributed to the members of your committee.

The report urges the need for a comprehensive program to achieve three objectives:

A. To expand rapidly to a high level of production and employment.

B. To prevent a major rise in the general level of prices.

C. To eliminate price control as soon as it ceases to be essential for the achievement of high employment and stable prices.

It is the conclusion of the research staff:

1. That price control authority should be extended to June 30, 1947, and terminated on that date, except in the field of rents.

2. That, for the period of its extension, administrative operations of the price-control authority should be speeded up, price-control standards should be raised moderately, and a vigorous policy should be followed in suspending controls.

3. That a policy which consists merely of the extension of price-control authority is not enough. The staff urges the prompt adoption of fiscal and monetary policies which will bring demand into balance with supply at high levels of employment and which will permit the termination of price control at an early date without inflation.

Specific proposals for carrying out this program are presented in the research report which has been distributed to you. I shall not go into them further but shall turn instead to my personal observations.

In view, two issues about price control are easily disposed of:

First, price-control authority will be needed beyond June 30, 1946.

Second, price control must not be permanently or indefinitely continued. Its definite and early termination must be assured.

We now see on every hand the evidence of extreme inflationary pressure. Incomes are high, the public has an enormous amount of money, and the demands pent up during the war are great. Although supplies for civilians are increasing, the public still wants to buy more of almost everything than is now being produced. Without price ceilings, the prices of many commodities would now be skyrocketing under the pressure of excess demand. We look forward to a further expansion of production, and we must do everything we can to hasten this expansion. But it is not at all clear that foreseeable production increases will eliminate, or even appreciably narrow, the excess of demand. Expanding production will bring higher incomes, increased bank credit and general optimism. It might conceivably increase rather than decrease inflationary pressure, particularly for goods in scant supply and under price control.

I need not elaborate before this committee the evils of inflation. Certainly every group in this Nation—including the business community—would reap irreparable loss from such a price increase as followed the last war, to say nothing of more extreme possibilities. For some months price control will be an indispensable protection against runaway prices. We must not abandon it prematurely.

But the evils of indefinitely continuing price control would be even greater than the

evils of eliminating it too soon. Our economy runs on prices. Prices determine who produces what and how much he earns for producing it. The authority to control prices cannot be centrally administered for any sustained period without inefficiency, inequity, break-down of respect for law, and, most important, serious danger to our personal and political freedoms. I think there is no likelihood that the American people will embrace regimentation willingly. But there is a risk that in default of proper policy we will reluctantly accept more and more controls as the only alternative to real economic ills. We do not want to be confronted a year from now with the choice which faces us today—inflation or price control. It will take positive action to escape that dilemma.

I shall return later in this statement to the question of getting rid of price control rapidly without inflation. First, I wish to make certain recommendations about the kind of price control that should and can be continued for a limited period. Price control at present is unworkable and unfair. We must look for legislative standards and administrative procedures which will operate quickly, without impending production or creating major inequities and at the same time will prevent a serious increase in the general level of prices. Perfection cannot be expected in any of these regards. But I believe that some changes can be made that will greatly improve the transition functioning of price control.

My recommendations are not intended as a reflection on the OPA staff. The members of that staff with whom I have come in contact have been conscientious and hard-working. For 4 years they administered a wartime law under wartime conditions with great success. Since VJ-day numerous steps have been taken to reconvert price control to transition needs. Congress should hasten that reconversion process by restating in new terms the objectives, standards, and general procedures of price control.

The major goal of my recommendations is to speed up and simplify price control. The most common and most serious criticism of OPA is that it acts too slowly to meet the needs of a rapidly changing peacetime economy. The pace of reconversion has been rapid; it would have been even faster if price determinations could have been obtained from OPA more quickly. It seems probable that the stabilization order recently announced by the President will result in a greatly increased number of applications for price adjustment, thus materially increasing delay.

1. AUTOMATIC PRICING

The establishment of ceiling prices would be speeded and simplified if the responsibility for price determination were shifted as far as practicable to the individual businesses concerned. A business would compute its own ceilings, pursuant to legislative standards and OPA regulations, and subject to review and enforcement by the OPA. The prices so computed would automatically become effective unless disapproved by OPA within a specified short time period and OPA would retain the right of revising these prices subsequently. I realize that there are many cases where this procedure will not work—for instance where uniform prices must be set for the product of numerous sellers. But a similar procedure is being used now in certain fields—notably for small and new firms in the reconversion industries. What I propose is the extension of a device already found practicable. Such self-pricing procedures could safely be applied now to firms seeking price relief under the "general rescue" provisions, which authorize price increases to a break-even level. They could also be made available to most, if not all, reconverting firms. I suggest that the use of self-pricing procedures be extended by legislation over as broad an area as now seems practicable and that OPA be directed to apply the system elsewhere as rapidly as it becomes feasible to do so.

There is an instructive precedent for this course in our experience with contract settlement. In order to avoid interminable delays in settling $50,000,000,000 of contracts by the usual method of checks and counterchecks the Congress authorized a streamlined procedure. A large part of the work is done by the contractors themselves under a uniform formula and subject to prompt review and final settlement. The speedy settlement of contracts has been a major aid to reconversion. I am certain that the cases of fraud or evasion are infinitesimal and the great gain has been well worth the slight risk on this score.

2. USE OF ACTUAL COSTS

In one respect the President's recent stabilization order appears to me to represent a backward step. Sec. 2 (b) of Executive Order 9697, setting forth the new policy, provides, in essence, that price adjustments shall be such as in the judgment of the Price Administrator will be sufficient to enable the industry, unless operating at temporary low volume, to earn an average rate of profit during the ensuing 12 months equal to the rate of return on net worth during its base period. In other words the Price Administration is to estimate for a full year ahead, how such rapidly varying factors as changing labor and materials costs, changes in productivity and changes in volume of operations will combine to yield a return on net worth equal to that of the prewar period 1936–39.

I submit that this is an impossible task. As chairman of an established company with good operating records, I have had some personal experience with the problems of estimating future costs. I know from my own experience of the many pitfalls and errors inherent in any such estimating process, particularly when applied to a period as uncertain as the year immediately ahead. The danger is only partly that the OPA estimates may be wrong. Any procedure will involve some errors. But the forecasting procedure is certain to involve a maximum of delay and interminable, unresolvable disputes.

I urge that the legislation now being considered provide that price determination be placed on the basis of actual operating experience at the earliest practicable date. To escape the influence of low-operating volume upon costs—in other words, to eliminate the so-called bulge costs—costs of the highly abnormal early change-over period should be disregarded. Our research staff has suggested that for all industries other than reconversion industries the first quarter of 1946 and all subsequent quarters should be considered to be quarters of normal-operating experience, and that for reconversion industries the second quarter of 1946 and all subsequent quarters should be so considered. This seems to me a reasonable recommendation and I suggest it for consideration by your committee. Exceptions to the use of first-quarter experience might be permitted where costs were distorted by strikes or other impediments to production. It should be remembered that prices so established are subject to review in case they should subsequently be found inappropriate.

3. A VIGOROUS POLICY OF SUSPENSION OF PRICE CEILINGS AND DECONTROL

Price control should be trimmed down progressively to those critical areas that would otherwise threaten price increases of overall significance. This is important as a way of freeing the economy from unnecessary controls as quickly as possible. But I should like particularly to emphasize the importance of sloughing off controls as a means of permitting OPA to concentrate on doing a quicker and better job in the essential areas. To control the prices of every one of the millions of commodities at every stage of production in the American economy was a Herculean task even in wartime. To do this at all successfully during the next year will be an impossible task. And in my view such all-inclusive control is unnecessary, if our objective is to prevent a major increase in the general level of prices and particularly those cost-of-living prices most likely to set off a price-wage spiral. The administrative capacities of the OPA, however great, are not infinite. They should be focused on the crucial problems.

Progress in suspending ceilings has been less than I had hoped. Production delays resulting from labor-management disputes, and the development of a pervasive excess of demand has, of course, limited the opportunities for suspension of ceilings thus far. As we proceed into 1946, however, and if we limit the general excess of demand, there will be a growing number of areas in which supply is in near balance with demand. Price ceilings should be suspended promptly when such a near balance is achieved. Ceilings should also be suspended on commodities which do not materially affect living costs and which do not threaten seriously to divert manpower or materials required for essential production—particularly if these areas present complex administrative problems, as many of them do.

A considerable number of dime-store items and luxury goods have already been decontrolled. I think that with a realistic notion of what is a necessity, the area of luxury goods eligible for decontrol could be significantly widened. Also we need to go further in suspending ceilings on components used in the manufacture of end products still under control. This would do much to remove bottlenecks which are insignificant price-wise but serious from the standpoint of production.

I know that a dozen plausible arguments can be made against any specific proposal for suspending ceilings. The concept of universal, precise and efficient control of prices has much theoretical appeal. But in fact universal control and efficient control cannot be achieved together. There is never a perfectly safe time to remove a ceiling. Every decontrol action involves risks of a crisis of one kind or another. However, those who look at each case as an isolated problem may not appreciate the risks of not decontrolling—the danger that the whole price-control system will collapse of its own weight or that production will be strangled by inflexible controls. We need a policy of "calculated risks"—of balancing the risks of decontrolling too soon in particular cases against the general risks of holding all controls too long.

It is extremely difficult to establish a legislative formula for decontrol, in view of the numerous, varied and rapidly changing situations which we shall face during the coming months. I believe that it is possible and desirable, however, to write into the pending legislation general standards, such as those set forth above, for the guidance and direction of the Price Administrator. I believe it would be helpful also to establish a responsible official within the price-control agency, acting under the general direction of the Administrator, whose primary responsibility it would be to conduct a continuous review to select ceilings for suspension and to plan the simplification and liquidation of price control generally. A similar device apparently worked effectively in the case of the War Production Board.

Basically, the speed and scope of decontrol will depend upon our success in creating conditions which permit the suspension of ceilings. If we allow inflationary demand to continue and if production continues to be retarded, the scope of decontrol will be narrow. But with vigorous measures to control excess demand and price

and other policies to stimulate production we can create a wide area in which ceilings can safely be suspended.

4. LIBERALIZED STANDARDS FOR PRICE RELIEF

The general standards used by OPA in considering applications for price increases, while not inappropriate for wartime, are not appropriate for peace. The present base period, ordinarily the rate of earnings before taxes to net worth during 1936–39, includes at least two definitely depressed years, and even the best years were not good. Moreover, corporation taxes are now much higher than in the base period, so that the present standard implies profits after taxes considerably below the 1936–39 ratio to net worth. Today, with profitable war business gone, with business risks increased, and with wage rates rising, many industries may be forced to profit levels which are unfairly low and which will not provide adequate incentives to enterprise—especially new enterprise.

I suggest that the earnings standard—now, generally speaking, the rate earned on net worth before taxes during 1936–39—be raised by about one-third. Any one of several devices could be used to achieve this purpose. I suggest also that the product standard now employed by OPA—which now permits particular product prices of industries producing more than one product to be raised whenever average ceiling prices fail to cover average manufacturing costs—be changed to cover average total costs (including overhead).

These liberalizations would not guarantee to each firm the profits which it might expect in normal prosperity. They are minimum standards. They will protect firms against being squeezed far below the level of profits which the great bulk of firms might reasonably expect to exceed in normally prosperous times.

Modifications along lines I have suggested should make it possible to live with price control during the period of its continuation. Even with the changes suggested, however, we must still rid ourselves of price control as soon as it is practicable to do so. The question is not whether price control should be abolished, but when.

After careful consideration, I believe that we should extend price-control authority, simplified and streamlined, as earlier suggested, until the spring of 1947. It should then be terminated finally and completely, except for rent controls. Rent control, because of the time required to provide an adequate supply of housing, may need to be continued for a somewhat longer period.

In all candor I would not object to any termination date between March 31 and June 1, 1947. The important thing is that we fix now and with certainty the date of final termination.

I believe that extension of price-control authority until March 31, 1947, is necessary to allow a reasonable time for high employment to be reached and a near balance between supply and demand to be achieved. If we should reach this point earlier price control can and should be terminated by Executive order. I believe, further, that the terminal date should be set some time before June 30, 1947, in order to make clear to all that what has been done is not merely to extend controls for another year but to set once and for all the date for its elimination. The point I make here is mainly psychological, but it is important.

The final termination of price-control authority must not be made contingent on prior achievement of balance between supply and demand at high employment. Such a policy would be an invitation to drift into a position where we are always confronted with a choice between price control and runaway inflation. We must accept responsibility for preventing inflation without price control.

The time to begin to act on this responsibility is now. Price control must first be supplemented and then supplanted by anti-inflation measures which do not restrict the full and free operation of the American productive system. In the traditional governmental functions of taxation, public expenditure, and monetary control we can find the necessary tools. But we must focus policies in these fields on preventing inflation and depression if we are to emerge from the transition with an expanding and unregimented economy.

More specifically, the Congress and the administration should plan to balance the Federal Budget in the fiscal year 1946–47 and if possible run a budget surplus. This is the time to eliminate every Federal expenditure that is not absolutely necessary and to postpone every project that is postponable. Any unnecessary expenditure today is a reckless addition of fuel to the inflationary fire. The Government should be prepared to generate a substantial budget surplus if inflationary pressure continues strong at high employment levels.

We should give up all thought of further tax reductions as long as the present excess of demand continues. Now is no time to lower taxes, much as we should all like to do so. Moreover, we should remember that tax revision is not a one-way street. If present inflationary forces strengthen, taxes may have to be raised.

Finally, we must act promptly to restrain excessive credit expansion. We should be careful, of course, that adequate credit is available to meet the needs of new and expanding businesses. But we are sitting on a powder keg. Existing machinery and policy cannot prevent a great expansion of our already huge cash supply. As matters stand, the limits to monetary expansion are hopelessly remote.

Both the existing large money supply and the possibility of great expansion flow from the sale of Government bonds to the banks during the war. Bank deposits—the public's money—increased step by step with the increase in bank holdings of governments. And under present policy the banks can obtain the reserve basis for further credit expansion by selling their Government securities to the Federal Reserve. The process of money expansion via bank purchase of governments can still go on, although the total Government debt is decreasing. It is imperative that measures be taken to bring this expansion under control. Monetary policy must be enlisted in the battle against inflation.

In brief summary, then, I urge both the temporary extension and the definite termination of price control. These are equally important—the temporary extension to avoid inflation, the prompt and definite termination to restore free markets. Neither is simply a matter of renewing or not renewing the act which is now on the statute books.

I do not think that business can live with price control in its present form for another year. We must modify it so that it can live and be lived with. It should be liberalized and streamlined to reduce delays, inequities and obstacles to production. Four changes are needed:

1. Extend the area of automatic, self-assigned pricing with OPA review.

2. Base prices on actual costs, not forecasts.

3. Vigorously and positively seek out the areas in which ceilings may be suspended.

4. Raise the standards for price relief to prevent profit squeezes which deter production and discriminate against enterprise.

To terminate price control we should start now to remove the conditions which make price control indispensable today. I have recommended that price control should be continued until the spring of 1947 and that there should be no renewal, except for rents. With that as the cut-off period, we should use monetary and fiscal measures to achieve a balance of demand and supply. We cannot simultaneously and consistently be against inflation, against price control and in favor of low taxes, Government deficits, and easy money. When stable prices and free markets are the objective, strict Government economy, steep taxes, and monetary restriction are not too high a price.

Compulsory Peacetime Military Training

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by John Deschner, representative of the national conference of the Methodist Youth Fellowship, before the House Military Affairs Committee on February 21, 1946:

The national conference of the Methodist Youth Fellowship, which I represent, is the national representative governing body of the Methodist Youth Fellowship, our national organization for Methodist young people and students which has a constituency of approximately 2,000,000 young people. My appearance before this committee was directed by an official action of the national conference, which has since 1943 been giving consideration to the problems of compulsory peacetime military training. My statement represents officially and unanimously adopted resolutions of the national conference of the Methodist Youth Fellowship, and not my views only.

A word of explanation: We want to speak to you as Christians as well as Americans. We believe that the Christian's response to God cannot be made in a vacuum, but must be made in society. We have tried to see the good represented in both sides of this question, and our testimony before you is a part of our Christian response to God.

Our conclusions on the issue of compulsory peacetime military training are as follows:

1. It is not wise at this time to register so conclusively our lack of faith in the United Nations Organization.

2. We question some of the effects of compulsory peacetime military training upon individuals, and their implications for general peacetime education.

3. We feel that compulsory peacetime military training will have unfortunate effects upon recruitment to the ministry to the profound concern of the Youth Fellowship and the church at large.

Let me expand these:

First. We are under the imperative need for world government, not only as the most effective protection against a war of annihilation, but to prove that the demands of justice in a new age can be met by a mankind politically mature enough to give and receive justice. We would be overly idealistic, it is true, to blindly trust the world government that exists to do this job. But we will be unrealistic if we refuse to give the United Nations Organization a chance to test itself, since it is the only instrument of collective security we possess, and it is now more dangerous than ever to despair of collective security. Christians, perhaps more than others, are sensitive to the nature of trust. To receive trust, trust must be given. Looking at the great amount of suspicion we have aroused in the only nations who could fight us in the next war with our handling of the

secret of atomic bomb manufacture, and seeing this fact against the background of the new and increased great power status of the United States, it is no understatement to say that our decisions concerning collective security are decisive. We have taken great initiative in breeding suspicion. We must take initiative in dispelling it. The logic from here is clear: It is our duty to do everything in our power to aid the success of the United Nations Organization. Embarking on a policy at this time which will be universally understood as our belief that the UNO cannot protect us from another war can only add more ice to already chilly international relations and make more impossible the task of the new world government. The time may possibly come when the UNO will have proved to the world that its difficulties are insurmountable and that the world is doomed to international anarchy and national defense. Then it will be time to consider the problem of conscription and other means of defense. But at this time, when world government is trying to muster every bit of support and strength, the proposals under consideration are out of place because of the inevitable undertones their passage will have in the capitals of the world. Therefore, we, as Christians, demand that cooperation be given a fair trial. Thus we declare our opposition to the proposals under consideration.

Second. If compulsory peacetime military training is not absolutely necessary at this time, it is difficult to justify some of the effects which would accompany it. I can only name a few by way of example. There is the danger of subjecting 18-year-olds to a year's indoctrination before they can enter the liberating tradition of learning which our universities preserve. There is also the danger of forcing young men into a situation where the normal social controls on moral behavior are notoriously more relaxed than upon the university campus. If a system of ROTC training is contemplated, there is the inherent discrimination against the small college (often a church college) which would not have an ROTC system. These threats and dangers must necessarily be sustained in the necessities of war. But in a situation where it is not clear that such sacrifices are imperative, we claim that the costs in human values are too high to justify compulsory peacetime military training.

Third. We would like to say how adoption of these proposals is likely to affect the concrete interests of our youth movement and church. A study quoted by Dr. Mark May, of Yale University, in volume III of his authoritative work, The Education of American Ministers, shows that the best age for decision to enter the ministry is between 17 and 20. Thirty-nine and six-tenths percent of men in seminaries decided for the ministry at this age. This fact is to be expected for the influence of these years on the choice of vocation is well known. The study goes on to point out that the three most important factors in order of their importance are: (1) home and parents, (2) church and minister, (3) denominational young people's organizations, conferences, camps, and summer projects. To take a young man away from the influences which are most likely to impel him to decide to be a minister at the precise time when he is most likely to so decide will have profound effects on our recruitment to the ministry. The situation is made all the more urgent by the peculiar character of the Methodist ministry at this time. A study made for the Methodist General Conference of 1944 by Dr. Murray H. Leiffer, director of social research at Garrett Biblical Institute, shows that the present age distribution of men in the effective ministry of our church is definitely weighted toward the older years and that while the size of our church has almost doubled since 1915, the rate of ministerial recruitment has showed a marked downward trend. For example, in the present 5-year period, 1943–47, it is estimated on the basis of mortality rates and other known factors that 3,275 men will be lost to the effective ministry. But in the last 5-year period, 1938–42, only 2,284 were recruited. This would indicate that we are replacing about two-thirds of the ministers we lose. Thus, with the church facing a crisis already in the recruitment of its ministry, the passage of the proposed bill can only accentuate the crisis. This situation has caused and will be cause for much concern in our church. Millions of Christians are vitally concerned with the state of the church. You may be sure that this effect of the adoption of a system of compulsory peacetime military training will be regretted and deplored by many of our members.

Why am I, a student, speaking of such matters? Because the ministry of our church includes the ministry to students and youth, and because recruitment to the ministry is a major concern of our youth movement. We submit these matters, therefore, to your attention. In being responsible to God, we must oppose compulsory peacetime military training because its high costs in international trust, in individual personality, and in the future of the ministry of the church are at this time unjustified.

A Patriotic Advertisement

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. WHITE. Mr. Speaker, as a measure of public sentiment concerning the proposed British loan there is inserted herewith the copy of an advertisement financed by a Wisconsin company appearing in a great daily newspaper:

ATTENTION, AMERICAN MOTHERS AND FATHERS: DON'T SELL OUR CHILDREN INTO THE SLAVERY OF DEBT

After the First World War England owed every voter in the United States about $500. No interest or principal has ever been repaid. Now England's debt to every voter in the United States amounts to about $3,000. Are we bankrupting ourselves for the benefit of Europe?

England controls over one-half of the world, but she does not even tax her colonies as much as we are taxing ourselves. Why should we loan her money which she can raise herself? When the tax rate in England and in England's colonies gets higher than in the United States we can consider lending money to her. But, even then, should England have priority over any other country?

On February 12, 1946, Canada loaned another $100,000,000 of credit to the Netherlands. Why doesn't she loan money to England?

Unpaid loans have always led to bankruptcy. We certainly owe it to our children to keep this country from going bankrupt. Dictators can only prosper in a bankrupt nation. We must not put ourselves in the same position as the countries of Europe.

WE MUST NOT BANKRUPT OUR CHILDREN FOR ANYONE

It is up to us, who think of our children's prosperity, to do everything in our power to make their lives as secure as possible.

WE AMERICANS MUST DICTATE OUR POLICY, NOT FOREIGNERS

Congress today has a very serious responsibility. We must help guide the thoughts of our Government.

This is your last chance! If our country comes first with you, protest these loans by writing your Congressman now.

Respectfully,

ALUMINUM SPECIALTY CO.,
W. E. SPINDLER, *President.*

Too Much Money

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. WHITE. Mr. Speaker, in considering the difficulty many of us are experiencing in getting the things we need when money is so plentiful, I have given expression to my views in a letter to an old friend which is submitted herewith:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON COINAGE,
WEIGHTS, AND MEASURES,
Washington, D. C., March 4, 1946.

Mr. J. H. EBY,
Spokane, Wash.

DEAR EBY: As you know, your letters are always welcome. It is discouraging to learn that prices are climbing so high and working such a hardship on people who have reached the age of retirement and must live on their savings.

If you were here this Saturday afternoon, when the girls are gone, and I am mulling over the accumulated mail—we would go out and get in the car, parked down here by the front door of the House Office Building and go some place, maybe to Hogate's and order a couple of mariner's platters and some good beer and see what we would get on the platter. I'll bet we would get a nice stack of shrimp salad and a pile of fried scallops and a few fried oysters and some deviled something or other baked on a half shell, with a nice backlog of fresh fried filet of sole under a heap of french fried potatoes, with a substantial portion of good cabbage salad, only there would be such a crowd we would have to wait quite a while for our turn to get in and then we could set back and talk about these high prices and the OPA.

Of course, I held out against the plans that got us into all of this but then, when you take 10,000,000 young fellows out of the factories and off the farms and have to dig up the food to feed them, and then send them about the world to smash up the means of production, it is a wonder we have got anything to eat at all—and now, when most of these lads that went to war are back who wants to work? When they have got all this money in their pockets and there is $29,000,000,000 of perfectly good paper money in circulation?

You know that a young man that is in the money cannot be expected to drop things and monkey with anything as common as feeding pigs and milking cows or raising potatoes and garden truck. Most of our boys have progressed beyond that stage in this country. All we have got to do now is to increase Government payments all around and live above this farm work business. It seems some of us never did think much of the hayseeds, anyway.

Of course, I like to farm and put up all our own eats and live on the things that grow on the farm—with plenty of good smoked hams and bacon in the smokehouse, with jars of packed butter, churned right on the place, and crocks of water-glassed eggs setting on the shelves in the cellar for winter, with a good barrel of kraut and bins full of apples,

pears, potatoes, beets and things like that with a pit of cabbage covered over outside and one or two good winter milk cows to keep us in milk and cream until the dairy herd freshens in the spring.

It's kind of comforting when Thanksgiving day rolls around and the table is loaded down with good things to eat to see the plump, roast turkey, with celery, mashed potatoes, mince pies made of good apples, meat and cider, all produced right on the farm. Shucks, what's the use paying all this money on a little old restaurant check for the things you can have on the farm, right at home, for nothing—if you are not too high toned to work. Only the city boys and the fellows out of the Army ain't used to living that way, and besides, how can you expect a man to want to work when his pockets are full of money.

When a man isn't on a farm and willing to take care of things this high price business is kind of hard on a fellow, 'specially when he has worked good and hard all his life for everything he got and now has reached the age where he has to make his savings provide all the things he must have to live.

Ever since coming to Washington, I've been battling to prevent the very thing that is giving us so much trouble now: by trying to get a plan through that would keep things steady, a plan that would give this country a sound, adequate, workable money system and the elimination of artificial monopolies by passing laws that would protect business and foster free enterprise; to give the people engaged in all our industries a square deal. Let's hope that we can work out and adopt plans that will protect business and industry and thereby bring prices into equitable adjustment.

Sincerely,

COMPTON I. WHITE, M. C.

Tennessean Answers Full-Page Advertisement of National Association of Manufacturers

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. PATMAN. Mr. Speaker, I am inserting herewith an editorial from a Tennessean, answering a full-page advertisement run by the National Association of Manufacturers, entitled "Road To Price Chaos." It is as follows:

Those who read the National Association of Manufacturers' advertisement in yesterday's issue of this paper will agree that the association makes economics simple. In fact, a little too simple, like learning to fly in one easy lesson, or reducing without diet, exercise, or drugs.

The NAM explanation is too simple to be misunderstood. Price controls cause inflation. Get rid of Chester Bowles, the OPA, and the stabilization program and, presto, inflation is gone. And why do such controls cause inflation? "Because price controls in controls hindered the production of goods in The reader is not supposed to ask if price controls hindered the production of goods in wartime—when we had more food, steel, tires, gasoline, textiles, and other goods produced than ever before. Least of all is he supposed to wonder if this is really peacetime, with reconversion still incomplete and millions of men still in the armed forces.

The NAM states one incontestable fact, "business cannot live by producing at a loss." And what is the reader to conclude from that? Why price ceilings are causing losses, but the reader recalls that business did not suffer under price ceilings during the war. Indeed, it made more money than ever before. Under the Government's price formula, a reasonable profit is assured each industry. This formula does not underwrite profits for the submarginal or marginal producer, to be sure; but it is to be recalled that in any peacetime year there are many producers who do not make profit. Even in 1929, the peak peace year of production, almost 40 percent of American corporations reported no taxable net earnings.

Mr. Bowles calls up some data not mentioned in the NAM advertisement. American industry, on the whole, is in an extremely favorable profit position, as attested by 1943 corporation tax data. Only 15 percent of it is materially affected by the transition from war to peace and that segment is being taken care of in Government price and tax plans. The other 85 percent was in clover in 1945 and has every reason to be in clover in 1946 as the result of unlimited consumer demands and the diminishing costs of mass production.

The NAM does not bother itself with such factual data as Mr. Bowles deals in. Not when it has such a beautiful theory as the following: "Remove price controls on manufactured goods and production will step up fast. Goods will then pour into the market and, within a reasonable time, prices will adjust themselves naturally—they always have—in line with the real worth of things."

Real Homes or Realty Speculation

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the current issue of the Democrat:

REAL HOMES OR REALTY SPECULATION?

Critics of the administration's plan to get 2,700,000 new houses built by the end of 1947 complain that the program is too drastic.

Of course it is drastic. So are the hardships being endured by several million American veterans who can't find a decent place for themselves and their families to live.

You can't face up to a major crisis like the present housing shortage without drastic action.

In 1933, with our economy practically down for the count, drastic action was taken. As a result, the country got back on its feet. But the business-as-usual boys screamed to high heaven.

In 1941 and 1942 we took drastic action to gear the country for war production. By all-out effort we threw such a weight of men and materials at our enemies that we literally blasted them to kingdom come. But again the business-as-usual crowd yelled that they were being hurt.

Now the same calamity chorus is at it again. Lobbyists are swarming over Capitol Hill like termites, chewing away at the props of the plan that the President and Housing Administrator Wyatt have set up to relieve the home shortage. Republicans in Congress are lined up almost solidly against the program. If they cannot kill it outright, they are determined to delay it and cripple it with as many weakening amendments as possible.

The Wyatt plan is an across-the-board program. It strikes realistically at every angle of the problem, which is the only way a quick and effective job can be done.

It involves incentive payments to get production moving swiftly. It stimulates use of new materials and methods in an industry whose techniques are as outmoded as a buggy whip would be on a 1946 Buick. It provides Government aid in financing home mortgages.

It diverts scarce materials from nonessential commercial construction into low-cost homes that the people will be able to afford. And it protects home buyers from runaway increases in already inflated real estate prices.

Every day the program is delayed means 3,000 fewer houses built this year.

The alternative to the Wyatt plan is coddling of special interests—and continued shortage of houses. The choice is between quick, drastic action and prolonged drastic hardship.

Most shameful spectacle of all is the fight of the real estate interests against ceiling prices on houses.

These interests—according to their spokesmen—are not concerned because ceiling prices would cut into the enormous profits they hope to get as a result of the desperate need for shelter. Heaven forbid! It is the poor veteran they are worried about. If a veteran buys a house in 1946 they want to protect his right to sell it at a profit in 1947.

What veterans want is a roof over their heads now—not a chance to speculate. Few veterans can afford the prices that are being asked for houses now, let alone the prices that will be imposed if the real estate business has its way.

What makes the crocodile tears of the housing speculators particularly disgusting is the fact that the price boom they are so eager to set off would inevitably be followed by a collapse in values. Then every veteran who had managed somehow or other to get hold of a piece of property would be left holding the bag.

Allocation of Steel by CPA

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

DETROIT, MICH., *March 6, 1946.*

JACK SMALL,
Chairman, Civilian
Production Administration,
Social Security Building,
Washington, D. C.:

Steel industry is refusing to supply steel to the Kaiser-Frazer Corp. If steel companies continue taking this attitude then I strongly urge that allocations be made by CPA to automobile companies, including Kaiser-Frazer until there is sufficient for everyone to buy on the open market. What is to prevent CPA from using its war powers and allocating steel which would normally have gone to GM to companies such as Kaiser-Frazer where it can be used immediately? Press release from your office shows evidence of flagrant violation by companies of inventory limitations. What is CPA doing to enforce its rulings?

R. J. THOMAS,
President, UAW-CIO.

Statement of A. Jerd Bayless, of Canton, Ohio

EXTENSION OF REMARKS
OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by A. Jerd Bayless, director of the Lincoln High School Band, of Canton, Ohio:

CANTON, OHIO, *February 15, 1946.*

To the Canton City Board of Education, Jesse H. Mason, Superintendent of Schools:

There has come to my attention a matter which, in my opinion, has a direct and important bearing upon the public-school system of the city of Canton and which, therefore, should be worthy of consideration by all Cantonians connected with the public schools, including the students and parents. Although the matter concerns itself specifically with policies governing the department of instrumental music, the principle involved would seem to me to be influential in determining the policies of all departments in the system.

Kindly bear in mind that this report, aside from laying down certain pertinent facts, is an expression of purely personal opinion. It has been drawn up for the sole purpose of laying before the school authorities and others who may be interested, a personal point of view which may be considered when formulating final decisions.

As director of instrumental music at Lincoln High School, I have been held responsible for conducting the department as efficiently as possible and at the same time always acting within the bounds of the policies set by the board of education. In the carrying out of my assignment, I therefore consider myself directly responsible only to the proper school officials and the board of education.

The department of instrumental music at Lincoln High School embodies the concert band, marching band, B band, and orchestra. The so-called pit band, pit orchestra, and dance band, are not separate and distinct from these groups, but are merely segments or sections of them. They have been created for the purpose of giving talented and interested students an opportunity for additional supplementary training in instrumental music, exactly as a science teacher might assign a group of worthy and ambitious youngsters supplementary work on a related scientific project.

The so-called dance band is just such a related supplementary project in the instrumental department and, as such, is as truly a part of the department as is the concert band or orchestra. It was created for the simple reason that there happened to be enough talented and interested boys and girls in the department, who expressed a desire for training in playing standard dance music, to make the carrying-through of such a project feasible and practical from an educational point of view. It is therefore a genuine educational program.

In training young people in anything there must be an incentive for study and practice if the training program is to be effective. In music, obviously, this incentive lies in practical application of the art or, in other words, public performance. A marching band could not be created in the absence of opportunities of halftime performances and/or street parading, any more than a football team can be created in the absence of a schedule of games. The concert band cannot exist without concerts at which to play. Indeed, public performance, or practical application, not only is vital to the success of the training program, but is, just as surely, an integral part of it. What enjoyment the audience receives from a halftime show, an athletic contest, or a band concert, is really, from the educator's point of view, incidental. What is of primary importance, educationally speaking, is the fact that these boys and girls are receiving some amount of practical experience in a subject which happens to interest them, and this under the sponsorship of the board of education, and paid for with the taxpayer's dollar. This, I maintain, is as it should be, and as it must be, if we are to continue to boast of a worthy system of public education.

As heretofore implied, the dance band project at Lincoln High School is simply a course of training in this type of music, laid out for those interested and capable. Logically, the dance band without a dance to play for would be like a football team without an opponent. This problem has heretofore at Lincoln been met by means of the various class parties and school-held social functions. Following the logic expressed above, it can truthfully be stated that, from the director's standpoint, what pleasure the dancers get from the performance of the school dance band is purely incidental. As far as the director is concerned, he is merely giving the boys and girls of the organization training relative to the project. Indeed, it may be well considered as part of the regular classroom or laboratory work, and analogous to a 6 weeks' test in history, or a special assignment in English.

This supplementary training in dance-music study and performance has been carried on at Lincoln High School for some time. Similar training is now being inaugurated at McKinley and Lehman High Schools. Timken Vocational High School carries it on to a very limited extent. Whether such a project should be carried through in any given school is up to the judgment of the particular director involved, since only he is qualified to decide whether or not the talent, interest, and available time is such as to warrant such a project. The important point is that, as of this date, and to the best of my knowledge, the carrying on of such a project is within the bounds of school policy as set by the board of education.

In light of the above you will be interested in knowing that on the evening of February 12, 1946, a representative of the local musicians' union called on me at my home for the purpose of discussing certain problems which were arising regarding school-dance activities. During the course of the conference he set forth the following points:

1. The union is perturbed because of the fact that the Lincoln dance band is playing for the school class parties; especially since the idea seems now to be spreading to other schools, notably Lehman and McKinley.

2. The union seeks our cooperation to the extent that our dance band will refrain from playing for these class parties, except by possible occasional special permission of the union. The union will, in return, cooperate with the school by allowing us to play for certain functions.

3. Should we refuse to cooperate in the matter the union would be forced to employ certain clubs as a means of retaliation; notably the suspension of high-school students from union membership, the levying of fines, and the blacklisting of all functions emanating from Lincoln High School, even though said functions might be held outside the school.

4. The musicians' union claimed to be supported in its contention by organized labor of Canton.

This, in short, is the sum and substance of the union case as stated by this representative. A theme of cooperate or expect measures of retaliation permeated the entire interview.

I laid my side of the case before him much as I have done in this report, emphasizing especially the following points:

1. The dance band is not a separate organization set up for the purpose of furnishing music for class dance parties, but, rather, comprises a program of training which is set up as a regular course in the department.

2. The actual playing for a class party is nothing more or less than classroom activity for the students in this group.

3. To the best of my knowledge I am conducting the instrumental music department well within the bounds of the policies set by the board of education. Any change in my program would have to be brought about through a direct order emanating from my employer, namely, the Canton Board of Education.

Therefore the final decision rests with the board. As a teacher in a public school I am directly responsible only to this group, which represents not an individual, nor a labor group, but rather represents the school-supporting public. As a teacher in a public school, furthermore, I shall continue to refuse to heed the dictates of any individual or group, except when such dictates are received by me through the board of education or its officers.

Finally, as a public-school teacher, I am not authorized to make any decisions regarding school policy. The following remarks are, therefore, merely expressions of personal opinion, to be taken for what they are worth, and come from one whose primary interest lies in the training of school boys and girls.

1. If the musicians' union can forbid the dance band from playing for class parties it can, by the same token, forbid the marching band from appearing at football games, or the orchestra from playing at class plays. These are all established courses of training carried on by the department.

2. If individuals or groups, whose primary purpose or intent does not lie in public education, can tell the schools what they can and cannot do, within the classroom, the traditional concept of free public education is indeed in jeopardy.

3. This actual "dance-band problem" is, when considered in comparison with the school system as a whole, rather minute. However, the principle of the issue involved, and the question emanating therefrom, becomes serious. The whole question, it would seem to me, resolves itself to this: Shall we, as parents, as taxpayers, and as people interested in the educational welfare of our youth, tolerate any outside interference in the regular classroom activity carried on within the confines of these tax-supported institutions?

4. My personal answer to this is, of course, "no." My whole argument in the case is based on my contention that, in the specific case of our dance-band activity, the local musicians' union is tampering with and impeding the efficiency of regular classroom work. It is interfering with a program of training which is maintained and supported by a taxpaying public, and not by union assessments.

Respectfully submitted,

A. JERD BAYLESS,
Director, Lincoln High School Band, Canton, Ohio.

We, the undersigned, have read the above report in its entirety. We agree thoroughly with the philosophies and opinions expressed and, unless ordered otherwise by the board of education, intend to operate our respective departments according to identical trends of thought.

ROBERT D. STUMP,
Director, McKinley High School Band, Canton, Ohio.

SAM L. BELL,
Director, Lehman High School Band, Canton, Ohio.

Loan to Great Britain

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CONRAD'S,
La Crosse, Wis., March 4, 1946.
Hon. WILLIAM H. STEVENSON,
House of Representatives,
Washington, D. C.

DEAR SIR: Recently I read one of your news letters which you sent to a friend of mine, and may I congratulate you on your stand toward a loan to Britain.

I'm an ex-GI and naturally very much interested and concerned about the pending housing legislation. The situation is acute, as you know, and I think I speak for the average GI when I say he is understanding and tolerant toward his present plight, as he is accepting the condition as an aftermath of the war. However, the phase he is most concerned and distressed by is the bickering that has resulted from pressure by lobbyists and certain money interests.

At the present, we GI's are looking to our Representatives and hope you won't be taken in and sell us short. We are counting on men like you because we have seen what faulty government and greed have done to other countries. Therefore, today more than ever before, we are politically minded and determined to practice our democratic rights.

Sincerely yours,

S. WEINBERGER.

Speech of Winston Churchill

EXTENSION OF REMARKS
OF
HON. ELLIS E. PATTERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. PATTERSON. Mr. Speaker, yesterday, after an introduction by our President, Mr. Churchill made a speech which is a mockery of all the great war speeches he made extolling the benefits of Big Three unity. His proposal to set up an Anglo-American bloc blows into oblivion all his fine-sounding phrases during the war.

We have all hoped and prayed that the United Nations Organization could be made to function effectively to insure world peace. We no sooner put the breath of hope and life into this essential ideal for mankind, when the theory of balance of power is brought forth in the heart of America by a war leader who presumably once wanted to end war for all time.

The game of balance of power has always brought war to this earth. The history of the past 2,000 years has proven conclusively that when nation was set up against nation—or one bloc of nations against another bloc of nations—war was always the inevitable result. I am opposed to the formation of any blocs, any spheres of imperialistic power, whether they be in the form of British imperialism, Russian imperialism, or American imperialism. All must be opposed if we are to save the world from another terrible war.

It is incredible to me that the Tory representative from Great Britain used the heart of the United States as a platform for the reactionary proposal to set up one power with another, with only one possible objective: creating a bloc against a third power. History has proven the insanity of this. The destructive potential of atomic power has already demonstrated how disastrous another war can be.

Therefore, we must face the fact now that if the United Nations Organization is going to be subverted into rival and power-hungry blocs instead of nations working together for peace for all time, the future we face will see mankind obliterated by the atomic bombs of hatred, envy, and greed.

Standardization of Bearing Dimensions

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, the latest step in the American march toward standardization of sizes—a trend which has made the manufacture and distribution of virtually everything we use more efficient—is being taken in the field of ball and roller bearings which now are as essential to daily living as automobile tires and radio tubes.

While the matter of standardization of boundary dimensions of bearings may seem unimportant to the average man, S. F. Wollmar, an official of the SKF Industries, Inc., Philadelphia, points out that our whole machine-age economy moves on antifriction bearings.

Some of these bearings are the minute ones in sensitive aircraft instruments, some the modest sizes used in vacuum cleaners and other household appliances, and some the 4-foot, 9,000 pounders used in high-speed rolling mills which squeeze out sheet aluminum and steel for automobiles and airplanes.

Lack of standardization, Wollmar says, requires the bearing industry to produce and stock up to 40,000 different sizes and makes of ball and roller bearings, many of which vary in size by less than a hairsbreadth.

This number could be reduced, Wollmar believes, by nearly 38,000 with resulting benefits in speedier production of urgently needed industrial and consumer goods for use at home and abroad.

While ball and roller bearings look simple, and are usually one of the smallest component parts of every machine, or motor that moves, they are actually one of the most difficult parts to make, since their dimensions must often be held to one ten-thousandth of an inch, equivalent to splitting a hair into 30 equal parts, Wollmar points out. Thus, even the most minute changes in dimensions can mean the changing over of as many as 150 extremely complicated tools and gages used in bearing manufacture.

The benefits of standardization, Wollmar declares, would have even more widespread effect on the everyday lives of Americans than did the standardization of the sizes of such things as electric bulbs and sockets, automobile tires, railroad tracks, hairpins, and a host of other products made by different companies to standard sizes, even though quality may vary according to price.

Not only do most electrical household appliances use antifriction bearings, but all of the tools to make parts for these devices use ball or roller bearings, he points out.

If manufacturers and designers of all types of machines and motors would adopt a more uniform system of boundary dimensions for the bearings used in their products, Wollmar says, the bearing industry would be able to supply the demand, and, through the elimination of frequent and expensive change-overs on bearing-making machinery, be able to deliver even higher quality bearings more efficiently and economically to the consumer.

Even those manufacturers whose machines require hand-tailored bearings would automatically benefit from standardization of ball and roller bearings, Wollmar emphasizes, explaining that in the unusual cases where exceptional speed and tolerance would require special dimensions, the anti-friction-bearing industry's research and development engineers could readily solve these special problems with the least divergence from established standards.

With bearings hidden away in prosaic grease so long, it took a war to remind us of their importance. Indeed, one of the first morale films the Army motion-picture division produced for showing in our war plants told the story of bearings. It dramatized the fact that everywhere a wheel or a shaft turns, bearings are essential. Without them, our industrial civilization could not exist.

Housing

EXTENSION OF REMARKS
OF
HON. PHILIP A. TRAYNOR
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. TRAYNOR. Mr. Speaker, it is very interesting for me to hear the Members of this House discuss the building of Houses for the veterans when I know the background and vocations of the Members of this House.

I will enumerate their occupations before and in some cases the present and past means of livelihood. This is a resumé of the membership of the Seventy-seventh Congress: 224 lawyers, 169 businessmen, 4 farmers, 3 dentists, 5 medical doctors, 1 veterinarian, and 1 pharmacist. And I believe that it has

not changed very much in this, the Seventy-ninth Congress, and the only group that I would look for builders would be in the business group, and the word "business" to me can include almost anbody, in any line of endeavor. The 4 farmers could build barns or sheds, if they had a handy hatchet and sawman. While I am a dentist by profession, I am also a pioneer builder and owner of apartment houses in Wilmington, Del.

The building regulations for apartments call for brick, stone, and concrete; wood floors, and iron fire escapes. The discussion so far has been on the prices for finished houses of six or eight rooms, at a price of $6,000 to $8,000. No talk about the cost per cubic foot for various construction of brick, cinder, or concrete block or frame work, covered with asbestos or wood shingle or German siding. Your bath and kitchen fixtures, and heating and plumbing plans can vary in quality and prices. Your outside grading, walks and, of course, a garage for one or two cars is also to be figured. Then when you think you have arrived at an approximate cost, add 10 to 20 percent for extras.

I was the first builder to put oil burners in apartment houses in Delaware, 33 years ago, which were changed to coal by Mr. Ickes' suggestion or orders. In 1 month after changing, I was told it would be better if the oil was used. I am still wondering who is right. Where do all of these specialists come from? I am going to vote for this bill, a substitute may not be as good for the veterans.

Ceiling Prices on Live Cattle

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following court decision from the Federal District of Oregon:

BOWLES, ADMINISTRATOR, OFFICE OF PRICE ADMINISTRATION, V. BEN LEVY, DOING BUSINESS AS CENTRAL MARKET, CIVIL NO. 2756 AND FOUR OTHER CASES: NOS. 2785, CIVIL; 2787, CIVIL; 2788, CIVIL; AND 2824, CIVIL—DISTRICT COURT, DISTRICT OF OREGON, FEBRUARY 20, 1946

OPA actions for injunctions to enforce compliance with Maximum Price Regulation No. 574, which establishes ceiling prices to be paid for live cattle. The regulation, based on 30-day reporting periods, requires estimated live weight and grade to conform to dressed weight and grade, after applying certain formulas.

Injunctions to issue.[1]

William B. Wetherall, regional chief, Food Enforcement Division, of San Francisco, Calif.; F. E. Wagner and James M. Blackford, district enforcement attorneys, Cecelia P. Gallagher, enforcement attorney; Victor E. Harr and J. Robert Patterson, assistant United States attorneys, of Portland, Oreg., for the plaintiff.

Cake, Jaureguy & Tooze (Herbert C. Hardy and Ralph H. Cake, of counsel), all of Portland, Oreg., for the defendants.

McColloch, district judge.

I accept the contention of defendants as proven that the regulation is unworkable in this area. It has been shown that violations are unavoidable. No evidence was offered to the contrary.

But the question remains whether I may deny OPA an injunction in any case where a regulation exists and violation of the regulation is shown. All of my instincts say that should not be enough, that the equities should be open to inquiry in every case.[2]

Hecht Co. v. *Bowles* (321 U. S. 321) ruled that an injunction need not be issued where a defendant was honestly endeavoring to comply and could in time comply. But here the defendants, while honestly endeavoring to comply, cannot at all times and under all conditions be certain that their operations will, at the end of every 30 days reporting period, "be in compliance" under the formula.

The regulation itself cannot be assailed in this proceeding. Section 204 (d) of the Price Control Act prohibits that. It compels the courts to treat a regulation as valid, even though they know it to be invalid.

Assuming, therefore, as Congress has commanded, that the regulation is valid, must an equity court issue an injunction, even though it is clear that future violations are bound to occur, regardless of the good faith and earnest efforts of the defendants to avoid violations?

In other times, I would have thought there could be but one answer to this question, but the decisions in this circuit have so completely shorn the district judges of discretion in OPA cases, I must conclude that equity is compelled to act in this field, even though there be not equity—that an injunction must issue, even though it is known at the time of the issuance that nonwillful violations are bound to occur.[3]

This is a strange situation, previously unknown to our law, and it could not arise except for the vise [4] that section 204 (d) puts on the courts, coupled with the appellate decisions referred to, which take away that discretionary powers normally allowable to trial courts.

Because I have no choice, I will therefore issue the requested injunctions, expressly reserving, however, the question of their enforceability, for I am yet to be persuaded that an equity court can punish conduct that contains no ingredient of evil.

CLAUDE MCCOLLOCH,
Judge.

[1] The regulation has been contested in 26 cases, mostly unreported, before 10 district judges. Judge Hulem makes a good statement of the difficulties arising under the regulation in *Bowles* v. *Albert Glauser, Inc.* (61 F. Supp. 426). There are other local problems that will be stated in the findings in the instant case.

[2] It seems not generally understood among agency attorneys that when the Government enters the courts as a litigant, its standing, with few exceptions, not pertinent here, is the same as a private litigant (28 Am. Jur. p. 342).

[3] It should be plain that the results of this pincer is to destroy the judicial character of the courts. It makes them mere vassals.

[4] *Case* v. *Bowles* and *Hulbert* v. *Twin Falls County, Idaho*, decided in the Supreme Court February 4, 1946, will repay study. The vise may be loosening. *Bowles* v. *Case* (9 Cir., 149 F. 2d 777); *Soundview Pulp Co.* v. *Taylor* (150 P. 2d 839); *Twin Falls County* v. *Hulbert* (156 P. 2d 319).

[5] See the remarks of the Chief Justice at the argument in *Hecht Co.* v. *Bowles* (321 U. S. 321 (1944), reported in the United States Law Week for February 8, 1944 (12 LW sec. 3, 3257).

This is one of twenty or more cases that have been filed throughout the Western States to combat, it is said, the rising price of beef cattle. My recollection of a number of years in the range country is that prices of cattle always rise at this time of the year, before the new grass starts. Be that as it may, this has been selected as a test case, and I should think it would be an excellent case to take to the United States Supreme Court to find out whether the courts have become mere rubber stamps for executive action.

Single Power Unit Supplies Major Utilities for Home—New Invention Cuts Cost of Home Construction

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. PATMAN. Mr. Speaker, much has been said about the high cost of homes in this day and age. One aspect of the building situation that has been almost completely overlooked in these discussions has been the advancement in technology, utilizing mass production, which will reduce many of these original costs, and yet provide the optimum of modern equipment.

Under permission to extend my remarks in the CONGRESSIONAL RECORD, I should like to include an article from one of America's most widely recognized authorities on housing design and construction. This magazine is the Architectural Forum. In its February 1946 issue it devoted an unusually large part of the issue to this invention, as follows:

Since the day plumbing moved indoors, the house-building industry has recognized the economy of closely grouped utilities. Back-to-back kitchens and bathrooms have always been the hallmark of penny-wise builders. During the past 15 years many a forward looking designer has gone still further, developed for prefabrication a so-called mechanical core containing all or most of a house's utilities. While some of these ideas reached the mock-up stage, none went into production. Not until this month will the industry preview the first mass-produced mechanical core when the Ingersoll utility unit is unveiled simultaneously at the annual convention of the National Association of Home Builders in Chicago and at the manufacturers' 12-house proving ground at Kalamazoo, Mich.

Produced by Ingersoll Steel & Disc Division of Borg-Warner Corp., the utility unit is comprised of two major parts: (1) a factory fabricated core containing furnace, water heater, plumbing, and electrical circuits and (2) the fixtures which normally appear in any well-equipped kitchen, laundry, and bathroom but which are integral parts of this smartly designed unit.

Introduction of the utility unit is a good thing for the building industry. It holds significance for most every branch:

For the builder it means easier, more rapid construction and lower costs.

For the architect it provides an economical factory-made design for part of the house, yet allows him a free hand in the arrangement of the house's major elements.

For the lender it means the writing of larger mortgages covering several built-in kitchen and laundry fixtures which heretofore, as movable accessories, have ordinarily been financed by the relatively high-cost, short-term loans of commercial banks.

For the prefabricator of houses who is willing to subcontract his utilities, it may be

the solution to one of his knottiest problems. (One leader in the field has already seen it this way, has placed an order with Ingersoll.)

For building labor and particularly its plumbers, the new unit with its factory assembled core offers only the possibility of more construction through lower costs. (However, the manufacturer is using A. F. of L. plumbers in the factory production of the core, offering them the benefits of year-round employment.)

For the dealer alone the new product means nothing—it will be sold direct from manufacturer to builder.

For the industry as a whole, currently beset by soaring costs, Ingersoll's efforts to lower the cost of house utilities are welcome. Original goal was to produce the package of utilities at a price 20 percent below the cost of buying and assembling comparable equipment in the conventional manner. Certainly, some saving was to be expected, reflecting those which Ingersoll will effect through the manufacture of many of the unit's parts, through the purchase in wholesale lots of the other parts, through mass production of the unit's core, through the economies inherent in the compact design of the unit (less piping, shorter wiring circuits, etc.) and, finally, through a streamlined sales policy. Although final pricing will depend on raw material costs and other factors prevailing at the start of production, the standard model of the utility unit shown on these pages has been tentatively tagged at $1,300 f. o. b. Kalamazoo.

How much of the promised savings will be passed on to the house-buying public remains to be seen. However, the house buyer is guaranteed smaller monthly payments, since all of the unit's component fixtures, including clothes washer and refrigerator, are, when assembled, integral parts of the unit and the house, and their cost may therefore be spread out thin over the term of the mortgage.

PRODUCTION WILL HIT STRIDE THIS SUMMER; BIG BUILDERS WILL BENEFIT FIRST

Although eager for such economies, the industry and the public must wait. Like everything else being produced by reconverted industry, Ingersoll's new product cannot be delivered immediately. Eventually, three or four B–W plants may be retooled for its production, but the one being retooled today will not start mass production before spring. However, Ingersoll hopes that this Kalamazoo plant will be turning out 500 units a month by midsummer, has yet his production sights on a target of 6,000 units for 1946.

Chances are that all of this year's output will go to large-scale builders, for the company's policy for the present is to accept only orders for 50 or more units. There are several good reasons for this: (1) Such builders are in a better position to bargain with labor. (2) Concentration of sales in groups of at least 50 will simplify the complicated problem of servicing them. (3) Mass sales and deliveries will facilitate mass production and permit lower costs. Sometime in the future smaller builders may enter the market, order as few as one at a time. Then, through his builder, the individual who is building a house may also order his utility unit.

Most of the credit for the development of the packaged utility equipment goes to Roy C. Ingersoll and a few others. Among these were Industrial Designer Donald Deskey whom Ingersoll retained last May to assist in the design, production, and promotion of the new product. Deskey Associates had already conceived a prefabricated utility package similar in many respects to Ingersoll's. So, the design of the utility unit is the result of the threefold collaboration of Architect Lankton, Ingersoll's engineers, and Deskey's designers headed by Partner Leonard Keller, director of the product-design division.

To field test the design and operation of the utility unit, to demonstrate its flexibility and to create a full scale showroom for the new merchandise, Ingersoll last summer commissioned eight architects to design 12 houses of various styles, sizes, and costs, then built them in Kalamazoo. The project has also proved to be a much headlined introduction to Ingersoll's grand promotional campaign. In these days of slim pickings, the mere completion of 12 new houses would make headlines anywhere; designed, as they are, by some of the country's leading architects, these 12 will command Nation-wide attention. Never before have there been built side by side the houses of such experts as Dow, Harris, Keck, Stone, Stubbins, Wills, and Yost. Less known but most familiar with the utility unit, Architect Lankton designed three more.

All these purposes and promotional advantages were in the minds of publicity-wise Donald Deskey Associates when they suggested such an architectural project to Ingersoll. While Deskey was selecting the big-name architects, Ingersoll purchased 10 acres in a partially developed section of Kalamazoo, appointed a construction superintendent from his staff of engineers and designated local Miller Davis Co. as general contractor. Deskey had no difficulty lining up his architects at a flat fee of $2,000 each. At the same time Landscape Architect Michael Rapuano, of the firm of Clark, Rapuano and Holleran, was commissioned to develop the site plan, locate the houses, and beautify the scrubby lots.

Major requirement given the architects was that they "demonstrate the flexibility of small house design around a utility core" and that they "publicize the utility unit by presenting it in houses designed with broad consumer appeal and sales potential." Each architect was instructed not to exceed a certain sales price based upon an average cost per cubic foot which put the houses within the prewar $4,000 to $8,500 bracket.

When completed this month, the houses will be rented to Ingersoll employees, including President Ingersoll's son Robert, works manager of the company's Kalamazoo plant. Other tenants who are particularly well qualified to study the operation of the houses and their utility units are Ingersoll's chief engineer and his home economics expert.

While these tests are under way, the houses will be used to a limited extent as a show room in which the utility units will be demonstrated to invited builders. However, most builders will have already seen the new product and its application in the Kalamazoo houses, for the manufacturer is devoting 7,200 square feet of floor space to a comprehensive display at this month's convention of the National Association of Home Builders at Chicago. There the Nation's leading house builders will see elaborately detailed models of the Kalamazoo houses, walk around a full-size installation of the utility unit, examine an exploded display of its component parts and take away with them a brochure showing use of the unit in 38 additional house designs.

Builders who miss the Chicago debut may soon see a similar demonstration in their own localities, for Ingersoll now contemplates putting the show on the road. And, before long, they will be able to see the real thing, for builders throughout the country will soon be moving utility units into their new houses. Even prior to the opening of the Chicago and Kalamazoo displays, Ingersoll had a sizable backlog of orders from large-scale builders who have been sold by the utility unit's advance publicity.

The houses shown are among the very first of the postwar crop. This fact alone gives them unusual significance; but they happen also to be good designs, noteworthy for their intelligence, honesty, and realism. They were conceived while the war was still raging and begun as soon as it was finished. They thus necessarily reflect the grim realities of building today. But that they exist at all is a tribute to Ralph Gulley who—as head of Deskey's Architectural Division—had the task of integrating and coordinating the work of the many specialists involved.[1] The houses as finished reflect this process. At every stage of their development they were reviewed by the Deskey office, by Ingersoll's purchasing department and production men. Many of the changes which resulted were aimed at better adapting the houses to their lots and relating them to each other. Other modifications were sometimes involved. Reviewing the original designs, Mr. Ingersoll suggested that "the group as a whole should stick closer to the middle of the road if we are to meet the preferences of a large enough number of people to 'sell' the houses and the unit." At the same time, however, it was wisely suggested that each design include "some unique feature which would attract attention and serve as a talking point for publicity."

Never for a moment losing sight of the fact that it was the small house which offered the largest potential market for his unit, Ingersoll kept the houses small—they range in size from 6,200 to 16,400 cubic feet, and would cost from $4,650 to $12,300 to duplicate based on an average estimated cost of about 75 cents per cubic foot. Since they are designed for national publicity, they wisely cover a wide range of geographic considerations and stylistic preferences. The various installations of the unit were deliberately varied: some burn oil, others gas; heating capacity varies widely;[2] they use various methods of distributing the heated air, including George Fred Keck's radiant floor system; all four variations of the standard unit's plan are demonstrated; one unit is on the second floor and one unit is expanded with auxiliary equipment to form a custom kitchen.

Despite these variations, however, the houses have many qualities in common—not least of which is the ease with which they absorb Mr. Ingersoll's new utility unit. On that count, he can consider his experiment already successful. For all the houses prove that the unit neither limits the designer's imagination nor freezes the floor plan of his houses.

[1] Other personnel of the Deskey Associates who have been responsible for important phases of the development program are: Frank S. Bache, construction and research; Clifford B. Curtis, architect, architectural coordinator; Dwight LaBarre, product design engineering; Harold E. Leeds, architecture and house models; Walter H. Smith, house decorating and furnishings. Deskey's consultants were: A. Lawrence Kocher, architect; Prof. Richard M. Bennett, Yale School of Architecture; Dr. Elaine Knowles, home economist, Teachers College, Columbia University.

[2] Heat loss computations in the 12 houses range from 32,290 B. t. u. to 101,105 B. t. u., with all estimates based on a temperature of 10° Fahrenheit and a 10 mile-per-hour wind.

Letter From Frederick C. Schmidt

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, it has rarely been my practice to introduce letters into the CON-

GRESSIONAL RECORD which come to me from constituents. I feel this letter which I ask unanimous consent to introduce into the CONGRESSIONAL RECORD to be one of the most remarkable documents that has ever come to my desk.

Certainly it is a most fundamental thing and touches the very heart of the national question with which this Congress labors today. I urge that every reader of the CONGRESSIONAL RECORD, and particularly the Members of Congress, read this letter signed by Frederick C. Schmidt, of Kongsberg, N. Dak.:

KONGSBERG, N. DAK., *February 28, 1946.*
The Honorable CHARLES R. ROBERTSON,
Washington, D. C.

DEAR CONGRESSMAN: I'm a farmer, or trying to be, after serving 3½ years in Uncle Sam's Navy. I had to sell my machinery and rent my land when the draft took me and now I can't get any replacements so have to stand like a beggar at my dad's door. This is bad enough but to stand here and watch the almost childish goings-on in Washington is too much.

What is the matter? Why doesn't somebody grab the bull by the horns and get rolling? Why are these strikes permitted to go on in a mad rush toward either anarchy or Communism? How many men actually belong to these unions and want these strikes? Not the majority, I'm sure. Since when does a man have to ask somebody or pay for the right to work? But behind all this stands our Government supporting lock-outs and labor trouble with its ridiculous price-fixing schemes and the OPA.

The word was "to hold the line" but who is breaking through in the greatest game of power politics ever heard of? Labor, or more aptly, labor racketeers. Of course, the blame does not all lie there but OPA can certainly claim the lion's share. Yes, OPA and those advocates of price fixing and Government control who are nothing but Communists under the skin and are out to abolish our system of free and competitive enterprise.

I ask you: What's the use of more economical methods or mass production or any other fruits of our competitive system if a man, or business, cannot thereby increase his profits and better his income? We might all just as well go back to the Stone Age if Government is going to stand there and tell a man how to do everything. Government should act as mediator and conciliator but not as owner and operator and as the over-all "big boss."

We need production and we won't get it until the shackles imposed by dictatorial Government are removed. If the line is to be held then hold it or else let it go evenly all around and none of this: here-but-not-there stuff.

As to peacetime conscription, I am unalterably opposed to it. To lessen the period of service or change the age doesn't change the principle a doggone bit. What place has conscription in a democracy among freemen? I thought we just fought a war to get rid of just such things—or was it to free others but enslave ourselves? It's nothing but the effort of power-minded men to hold themselves up by holding somebody else down.

Why isn't the service made attractive and decent enough so a respectable man can join up without apologizing? Why does a man have to assume the status of a salaried convict to be in the service? I know; I was there. Abolish special privileges for officers with its caste system and reconstitute the service on the order of the plan proposed by former Brig. Gen. H. C. Holdridge.

I am opposed to the British gift-loan because who made us Santa Claus for the rest of the world and Britain isn't a democracy anyhow and never gave anybody any freedom until she had to and besides, who comes first: The British or American veterans?

I do not ask for any gift or bonus from our Government; in fact, I believe these gifts and doles are breaking down the moral fiber of our country. All I ask is that we be offered as a loan what is being given to foreigners, namely, money at 1½-percent interest.

This get-something-for-nothing attitude, fostered by the Roosevelt administration, is mainly responsible right now for all these strikes. People got the idea that they can eat without working and OPA and Government certainly do nothing to disprove that theory.

Another thing is this atomic bomb. "Turn it over to a civilian commission," they say. What for? Do we intend to hand over to the rest of the world all our other military secrets? There is just as much sense in the former as the latter or vice versa. Or don't we trust ourselves with so powerful a weapon? I can well believe so when I see all the stirring we are doing in Spain and Argentina. There will be just one result in that—we'll have made some more enemies.

Thanking you for your kind attention, and hoping that for once you have a clear-cut statement of a citizen's views, I am,

Sincerely yours,
FREDERICK C. SCHMIDT.

P. S.—Would like to include here my idea of the solution to the labor-management problem.

I have often wondered why business doesn't organize on a profit-sharing basis with the employees as partners and shareholders in the company. I know this has been done in several instances and I've never heard of labor trouble in these companies. This system simply eliminates the two camps of labor and management, making one of the whole works. Profit for one is gain for the other, making common cause and interest. Labor racketeers have tough sledding in such a set-up.

Can an Isolationist Change His Spots?

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. PLUMLEY. Mr. Speaker, under unanimous consent heretofore granted, I am extending my remarks by including an article which appeared in the Christian Science Monitor of recent date, entitled "State of the Nation."

I would like to call attention to and emphasize what Mr. Roscoe Drummond, chief of the Washington bureau of the Christian Science Monitor, has to say with respect to the trend toward isolationism. There is a great deal of truth in what Senator WARREN R. AUSTIN, of Vermont, is quoted as having said with respect to the "undertow pulling the United States back to isolationism and extreme nationalism." The truth of that statement is evidenced by the correspondence which crosses my desk and by the position taken by a great many people who ought to know better.

The truth of it is, as somebody has well said:

No man can lift himself up by pulling at his bootstraps. The leopard cannot change his spots nor the Ethiopian his skin. Nor can a man change his own innate nature. Nor can one man change the nature of any other.

The failure to learn this physiological fact is responsible for the failure of many reform measures that have been devised by men and governments. Human nature, whatever it is defined to be, is stamped upon the very fabric and constitution of every man when he is born. He inherits it from his ancestors, as the leopard does his spots and the Ethiopian his skin. The fact that the Ethiopian maiden camouflages her skin with cosmetics does not change the real nature of the skin. A person may change his conduct, and often does, but that does not change his human nature.

As long as human beings retain their human nature they would save themselves and disappoint both God and man.

If professional reform organizations and civil authorities could ever learn that it is impossible for human beings to change human nature they would save themselves much grief and disappointment.

We ought to know by this time that we cannot legislate to change human nature.

So, Mr. Speaker, I am including the article to which I have referred, which reads as follows:

STATE OF THE NATION

(By Roscoe Drummond)

WASHINGTON.—In the United States Congress today there are politicians who are toying and tampering with the Nation's security.

No one expects or necessarily wants Congress to do everything which the administration recommends, even in the nonpolitical field of national security. But when Congress does virtually nothing which the administration asks in behalf of the armed services—and keeps on doing nothing—it's time to look around for the reason. It's politics, politics, politics; no matter how you spell it, it's politics.

Three vital issues of military policy remain unresolved, and one of the controlling reasons is that Congress has its eye stolidly fixed on the coming elections. It doesn't want to waft the slightest disturbing breath over the electorate; it doesn't want to do anything controversial which might affect a single vote; let other decisions wait, and while they wait America grows weaker as the world grows more troubled. The issues which are thus delayed are these:

1. Extension of the Selective Service Act so that the United States Army will have sufficient men—until they can be obtained by voluntary recruitment—to carry out the Nation's long-term occupation tasks in Germany and Japan and adequately garrison its outlying defense bases.

2. Enactment of a universal military-training program so that the United States will at all times have quickly available an adequate reserve of trained forces to help meet any emergency.

3. A decision on whether the Nation's armed services will be strengthened or weakened by being administratively merged into a single department of national defense, as urged by the President.

Obviously there can be an honest divergence of judgment over these proposed measures, but when nothing positive is being done about any of them, a simple difference of opinion is hardly an adequate explanation. A definite decision one way or the other—and Congress doesn't even want to do this because action either way might offend a voter somewhere—is better than delay and default.

Several questions need to be pondered thoughtfully before any of these three measures of national security are rejected.

Will a weak America or a strong America contribute most to keeping the world at

peace? After World War I, the United States rejected military training, dismantled its Army, sunk a lot of its Navy. Did American military weakness in the thirties discourage or abet World War II?

Are we certain that any future aggression will be a push-button push-over? Or must we, until the carefully calculated possibilities of atomic energy are clear, do whatever is presently necessary, including military training, to be ready for future military needs? Can we safely risk the Nation's security on even the best guesses as to what future aggression might be like? Don't we need to keep one foot on the ground while both eyes are on the horizon of natural scientific development?

Must we not either publicly revise our military commitments—such as the long-term occupation of Germany and Japan—or decisively equip our armed forces with the means to carry out those commitments?

Senator WARREN R. AUSTIN of Vermont, who has reason to know what he is talking about, recently wrote to a friend: "I feel a tremendous undertow pulling the United States back to isolation and extreme nationalism. It seems more difficult now than it was during the war to overcome this undertow. Yet, it must be surmounted."

There is ample evidence to support Senator AUSTIN's appraisal. The Congressmen who were most isolationist before the war are today the most active in opposing measures to give the Nation the military strength to do its share in maintaining the peace.

Few people really believe that America intends or wants to go back on its world commitments, but the undertow of isolation needs to be understood to be met. It is the kind of undertow which, with deep insight into the workings of the human mind, Paul once advised the Romans about:

"For the good that I would I do not: but the evil which I would not, that I do.

"I find then a law, that when I would do good, evil is present with me." (Romans 7:19, 21.)

Paul's insight and advice is pertinent today because the undertow of isolation in Congress is simply an attempt to reverse the constructive, nonpartisan decisions Congress already has made in behalf of world peace and America's role in maintaining it.

Hon. George F. Rogers, of New York, Offers Bill To Provide for National Health and Productive Power of the People of the United States by Clarifying the Laws Pertaining to Hospital Treatment, Medical Care, 74 Veterans' Hospitals and 6 Diagnostic Research and Proving Centers and a Medical Flying Corps for Disabled Veterans and High-Altitude Research

EXTENSION OF REMARKS

OF

HON. GEORGE F. ROGERS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. ROGERS of New York. Mr. Speaker, seldom do I take the time of the House to present matters of grave concern to the Nation, for we have those outstanding Members on both sides of the aisle who are authorities and highly qualified to present the arguments for or against any given issue.

But the events of time have necessitated that any Member of the House who can assist in law making that will prevent total chaos in our Nation step forward and speak his mind, as it now seems that only in this way can we all more or less assist each other in formulating ideas which may be the means of checking inevitable disaster.

America will soon have furnished 20,000,000 men and women in the service of both world wars the means or excuse for dissatisfaction and unrest, not mentioning the ideal psychological environment for human misbehavior. Naturally; we do not purposely engage in wars to cause these conditions, but wars do have the very unfortunate habit of bringing in its wake home-front disasters.

I regret to say that of late I have been plagued with one persistent question which, without a doubt, has been asked every Member of Congress. Letters, telephone calls and wires have continually been hounding me with urgent requests for an answer to this vital question: "When can I get into a veterans' hospital for treatment? Why must I wait until I develop a fatal disease before the veterans' hospitals can accommodate me with a bed?"

It is not for me to say that, in the past, veterans of wars have been treated in hospitals which were unfit even for those who were paying a debt back to society for some crime they had committed. Records show, without a question of doubt, that this Government, regardless of blame, did foster a system of veteran hospitalization which caused great controversy and shock to the people of this Nation.

It is also true that steps and measures were taken to correct the evils of the last Veterans' Administration by this new Administration and that, with proper guidance and help from an intelligent Congress the veterans of this late war will not have to go begging for hospitalization.

This has the earmarks of digging up an old dead, "lame duck." However, it may well serve to prove that opinions of certain well-meaning groups sometimes are the direct cause of chaos. During the crisis of World War I hospitalization, the Federal Board of Hospitalization in the Bureau of the Budget entertained the philosophy that the peak of veterans' hospitalization would be about 1957. Meaning to say that at middle age the veteran would fail in health, and only then should he be treated. This also means that this Government is of the opinion that prevention of health failure is of no importance and that only at death's door should we begin to treat disease. Perhaps it is, then, no wonder that we have such a shortage of medical science and care for our economy. If this philosophy is to be used again, and from the reports I have received it is indicated that it will, then again shall we hear the cries of inadequate hospital care of our national heroes.

Gen. Omar N. Bradley testified in substance to the committees of Congress, quote:

They say the peak of hospitalization will be reached about 1970.

This again means that only when our veteran is stricken with a fatal disease, will he be able to reach a veterans' hospital bed.

It is my sincere hope and wish that every veteran of this war, after having been treated so marvelously by the Army and Navy medical personnel, will never require urgent hospitalization. However, since this is just a wish and there is and will be more so an urgent need for veterans' hospitalization, I am now asking this Congress to face the issue with facts and reality and to pass legislation now, which will once and for all take care of this most vital need—the first charge of the Nation.

These are the facts: In spite of the precautionary measures by the selective-service medical examiners to isolate medically unfit inductees, it is estimated, according to the medical disability discharges, that approximately one million and a half veterans have broken down in health, due to the rigors of war. There is no way of knowing the extent of future break-downs among the millions of other veterans now discharged, serving and going to serve. We must be prepared for any eventuality and this preparedness means that we must build now the system of hospitals and medical corps needed to operate them to take care of at least 300,000 bedridden veterans at one time, all the time.

It is common knowledge that an ounce of prevention is worth a pound of cure, so why should we not admit that it is wiser to prevent total disability by correcting minor ills which, in the past, have not been cause enough for warranting a bed for this so-called minor ailment. The Army and Navy carry out the policy of treating diseases in their early stages in order not only to send a human out into the civil world again in good health but mainly to put back into the Treasury money that would have gone out for total disability. It is strange that no other branch of this same Government has the foresight to visualize this gigantic but simple method of high finance: Save a human today and save the Treasury pay.

I do not want to draw swords with the wonderful medical advisers to our Government officials, or whoever else puts the ideas through that have been the stand-by of the Veterans' Administration's function, but I do want to wake up some of my colleagues to the fact that complication has replaced simplicity and that the result has been chaos, not only in veterans' affairs but also in other national affairs.

In this reference, I mean to say that right after the last war it took Edward Hines, a civilian lumberman and builder from Maywood, Ill., to take his old speedway apart and use the materials to build what is today the outstanding show place of the Veterans' Administration. Why is it necessary that a civilian must set the example for such a wonderful Government as ours to follow?

If I thought that my colleagues were lending a deaf ear, I would call upon another Edward Hines to build a bigger and better veterans' hospital for our well deserving veterans. But since we all know that the public is clamoring for righteousness in behalf of the returning veteran, we will not find it necessary to

ask for charity, or have to pay later for someone else's idea.

The World War Veterans' Act of 1924, as amended, provides for hospitalization of honorably discharged veterans, even though their disability may not be due to service. This means that every veteran has the right to seek a bed in a veterans' hospital, regardless of the nature of his illness, and law demands that this bed be provided, if available. Under such a law, we appear, on the surface, to have taken care of the veteran while, beneath the surface, we are Indian givers.

Since the President himself admitted to Congress that the service men and women were used to adequate medical care in the service and that they would expect the same continuous care in civilian life, then it follows that this adequate care must have its start in the Veterans' Administration. This adequate care must come from the constitutional representatives of the people. I have statistics in my files which prove beyond a doubt that we, the Government, must build at least 200,000 hospital beds throughout this Nation. The appropriation of over $448,000,000 for veterans' hospitals, since passage of the G. I. bill, is a start in the right direction. Without additional substantial appropriations, the proper management of these funds and a law to carry out a definite program, it is possible that billions will be spent without achieving maximum health promotion.

I, therefore, wish now to introduce an all-inclusive bill which will provide for the immediate additional construction of hospitals with bed capacity of 57,000. Also the building of the necessary associated branches of medical service to make the Veterans' Administration a complete medical center within itself. This medical center will have its own research laboratories, medical flying corps for quick transportation of serums, equipment, and patients from one specialty to another. Also, this bill will provide the Veterans' Administration with fact-finding proving centers to determine the merits of healing arts which heretofore have not been considered.

There shall be freedom of medicine in the Veterans' Administration under this bill of rights. No veteran shall be deprived of his medical treatment if he desires his choice of physician.

Since Gen. Omar N. Bradley has asked for an expression of our intentions and disposition of veterans' affairs, it is high time that we lay bare some facts, figures, and start the ball rolling that will provide the necessary law and funds which will expedite these pressing matters.

The greater part of the research necessary to the formulation of this bill has been done by the Victors Adjustment Organization, Inc., a national research group, through its president, Mr. Straude E. Wiseman, of Indiana. Mr. Wiseman has been actively interested in veterans' affairs ever since the close of World War I and was for 6 years with the Veterans' Administration at Hines, Ill., an assistant to the manager of that facility, the finest in the Administration.

The crying need for an over-all inclusive program to meet the health needs of our huge influx of new veterans is only sharpened by the light of Mr. Wiseman's research and his knowledge of the money and health which was wasted beyond recovery by the slowness with which the needs of World War I veterans was met. Something has already been accomplished, of that we are well aware, but we have not made our plans big enough to meet the need and they are not being acted upon with enough dispatch. The Congress must prove to the people of the Nation it is able to completely care for the health of its victors.

In an address at Chicago at the national convention of the American Legion on September 19, 1944, Henry Ford 2d said in speaking of the days following World War II:

> They will be days when we must concentrate all our combined efforts on the rehabilitation of our men returning from service. They will be days when everything must take second place to help these men regain physical health and their mental happiness.

Need I tell you those days are here?

Ten Homeless GI's Look to Congress for Help

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. PATMAN. Mr. Speaker, today I received a telegram from 10 war veterans in Fort Dix, N. J. This telegram contains only 16 words—probably because these boys do not have the money to spend for five- and six-hundred-word telegrams to us, such as those we receive from the National Association of Real Estate Boards—but these 16 words, in their stark simplicity, express far better than the thousands of euphoneous phrases the desperate need of our returning youngsters for houses.

For the benefit of the Members I should like to include in the CONGRESSIONAL RECORD what 10 homeless GI's have to say:

FORT DIX, N. J.

Congressman PATMAN:

We fought for decent homes. Don't let business as usual lobbyists take them away from us.

TEN HOMELESS GI's.

Farm Crisis in New Jersey

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. CANFIELD. Mr. Speaker, no group of our American people are more patriotic than our New Jersey farmers. They have never failed our Republic in time of peace or war. Their contribution to victory in World War II has been outstanding.

Today New Jersey's farmers are worried and they have cause to be. It is because of the feed shortage for farm animals and the situation is now so serious that poultrymen are disposing of an unwarranted number of laying fowls and the State milk authorities report milk production has been reduced to an alarming degree. The New Jersey Farm Bureau, which called the crisis to the attention of the Secretary of Agriculture several weeks ago, complains no action has been taken looking to relief and he contends quite properly the northeast area should not be called upon to do more than its share in the world food-relief program.

I know Mr. Anderson, who heads the Department of Agriculture and I cannot help but believe he will respond at once to the appeals of our State's farmers, granting them every possible relief. He knows the whole northeast area and, in fact, the entire country, has a tremendous stake in this matter.

I present communications I have received this week. They describe the picture in detail.

TRENTON, N. J., *March 1, 1946.*

Hon. GORDON CANFIELD,
House Office Building,
Washington, D. C.:

Feed situation in New Jersey critical. Unusual heavy liquidation of chickens now taking place. We have presented our case to Secretary Anderson but after 3 weeks of conferring we can't see that any progress is being made in the solution of the problem. We need your help now. Detailed statement follows.

H. W. VOORHEES,
President, New Jersey Farm Bureau.

NEW JERSEY FARM BUREAU,
Trenton, N. J., March 1, 1946.

Hon. GORDON CANFIELD,
House Offie Building,
Washington, D. C.

DEAR CONGRESSMAN CANFIELD: The alarming shortage of feed for farm animals constitutes a serious threat to the northeastern dairy and poultry industries and to future supply of fresh milk and eggs for consumption in this area. At a meeting of the Northeastern Governors' Feed Committee, held on February 11 in New York City, representatives from Maine to Maryland reported that commercial feed supplies in the northeast were inadequate and would be almost exhausted in from 15 to 30 days.

Feed manufacturers and local dealers report that they are unable to purchase more than a small part of essential ingredients now being used because price ceilings make it more profitable for Midwest farmers to feed grain to hogs than to sell it as grain. It is true also that with corn prices at ceiling since October, it has been largely impossible to purchase corn except in a black market. Unless this situation is remedied promptly the northeastern dairy and poultry industries will bear the brunt of a necessary reduction in the numbers of livestock and poultry.

At a recent meeting of New Jersey feed manufacturers and dealers held in Trenton it was pointed out that the situation here in the State is very serious. Dealers reported their inability to fill orders for the poultrymen and stated that in some sections of the State serious liquidation of flocks was already taking place. Recent letters from farmers in different sections of the State indicate this to be true.

Recently, Governor Edge appointed a feed committee to consider this matter. Certain recommendations were made by this committee and also by the New Jersey feed manufacturers and dealers. These recommendations as to how the feed situation might be improved were called to the attention of Under Secretary Hutson on February 14, and were again called to Secretary Anderson's attention on February 19. It was obvious from both of these conferences that the Department of Agriculture appreciates the seriousness of the situation but apparently they are at a loss as to how it might be corrected.

On February 18, Gov. Walter E. Edge wired Secretary of Agriculture Anderson, as follows:

"On February 14 the northeastern governors' feed committee placed before Under Secretary of Agriculture Hutson the critical feed situation in this area and found him in substantial agreement with its appraisal of the existing situation. Accordingly, I urge that early steps be taken to bring about an equitable distribution of feed and thus prevent the inevitable large-scale liquidation of livestock and poultry in the Northeast. If such liquidation should occur, this large segment of our population would be faced with a serious shortage of essential foods for months to come."

To date, no action has been taken by the authorities which would in any way relieve the situation here in New Jersey. We have tried every possible means through regular channels to accomplish this. We feel now that we must call on you for help. It is my understanding that similar action is being taken in all of the Northeastern States. I believe that the congressional delegation from these States is being approached to the end that they are acquainted with the situation and in hopes that they can do something to help relieve it.

I appreciate that this is a very brief statement concerning this very serious problem. There is no question in our minds, however, that unless something is done soon we, here in the Northeast, will have to liquidate our cows and chickens to an extent far in excess of other areas of the country. We are willing, in view of present feed shortages and particularly in view of the situation in Europe, to do our part in the liquidation but we do not feel that we should be asked to do more than other areas.

I want to impress on you the fact that this matter is serious and I am in hopes that you can assist in making available a larger supply of feed for the New Jersey farmers, at once.

Very truly yours,

HERBERT W. VOORHEES,
President.

NEW BRUNSWICK, N. J., *March 4, 1946.*

Hon. GORDON CANFIELD,
Washington, D. C.:

Critical shortage of feed will force New Jersey poultrymen to dispose of an unwarranted number of laying fowls and greatly curtail raising of replacement stock. Governor's feed committee has placed facts before Secretary Anderson without results. We look to you for help. We need it.

C. T. DARBY,
President, New Jersey State Poultry Association.

TRENTON, N. J., *March 4, 1946.*

Hon. GORDON CANFIELD,
House Office Building, Washington, D. C.:

Feed situation in New Jersey most critical. Those in authority in Washington apparently unable to do anything about it. Already reducing milk production to an alarming degree. Can you help?

ARTHUR F. FORAN,
Director of Milk Control.

Atlanta Newspaper Charges Selfish Interests Attempting To Scuttle Veterans' Housing Program

---

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. PATMAN. Mr. Speaker, the Atlanta Constitution long has been known as one of the most objective journals of the deep South.

For the benefit of those Members who might have been deceived by the propaganda barrage directed against our veterans' housing program by the real-estate speculators, I should like to include in the CONGRESSIONAL RECORD an editorial published by that newspaper on March 1:

BLOCKING THE HOUSING PROGRAM

The President's housing program had rough going in the House of Representatives yesterday.

All indications are that selfish interests are at work to scuttle the entire effort to provide low-cost homes for veterans.

Despite the fact that each day's delay is costing the Nation 3,000 urgently needed additional housing units, Congress continues to bicker and dawdle.

The housing measure currently under discussion, authored by the able Texan, Representative PATMAN, would merely authorize Federal Housing Administrator Wilson Wyatt to continue the priority system whereby available materials are channeled into low-cost houses for veterans.

Yet it is being indiscriminately attacked as communistic, bureaucratic, and dictatorial and is the target of as vicious an organized pressure campaign as has recently been seen on Capitol Hill.

One can only hope the Nation's homeless veterans are taking careful note of the identity of those who are blocking action on the only positive housing program yet offered. One trusts they will find it convenient, in coming elections, to inquire of those who so vehemently oppose the President's plan why they have not a single alternative proposal to submit.

The Nation has an obligation to the millions of men who laid down their peacetime pursuits to bear arms in defense of our liberties.

They must be provided housing in the quickest, most practical manner. Those who, for their own selfish motives, are delaying the only plausible program to accomplish this should be called to account for their actions.

"Let Us Begin Afresh"

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. LUDLOW. Mr. Speaker, the war with its tragic and sternly realistic episodes has developed some of the finest poetry in the entire history of literature. In the midst of his exacting duties as a private first class, in Europe, Jack H. Monninger of Indianapolis has written a poem which I think is worthy of being preserved in the CONGRESSIONAL RECORD. It is as follows:

LET US BEGIN AFRESH

Let us bow our heads in shame, but keep
within our hearts the flame,
That makes our victories truly great.
As nations fall, as nations rise, let's show the
world that we surmise
The truth, that still shall guide our fate.
And if we falter on our way because of
wounds received in fray,
Let us fear not, for we are men of men.

Let us lift our heads with pride, and in our
fellow men confide,
That they might reach their weakened goals.
And like the blast that shook our world, so
peace could again be unfurled
We now must forge ahead with self control.
And if we are engulfed by fear and shirk
because our fate is near,
Let us begin afresh, and battle to the end.

Let us hear the Voice we seek, Yes we are
strong, but we are weak,
For we are fearing men of gathered mass.
If evils in our hearts still burn, we ask for
aid to help us spurn
This element, that tends to haunt us till the
last.
And if, in seeking for the light we lose our
way on darkest night,
Let us repent, and dawn shall come again.

Let us again regain our waste and send it
forth so all might taste
Our good, though long it has been dead.
And if our fears and wounds and faiths,
still cannot make us contemplate,
Then we are lost, the same as those we have
misled.
And if we know just why we fail, let us again
retrace our trail,
For we are men of men. "Let us begin
afresh."

—*Jack Harris Monniger.*

Our Silly Food Subsidies

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. MASON. Mr. Speaker, the good judgment and sound common sense contained in the following editorial taken from the Chicago Tribune of Monday, March 4, 1946, concerning our present silly policy of providing food subsidies, is so applicable and pertinent to subsidies in general, and to the school-lunch subsidy and the proposed housing subsidy in particular, that I commend it to the thoughtful consideration of my colleagues in the House:

BONUS FOR HEAVY EATING

Every month the Government pays $5 of the average family's grocery bill. The remittance isn't made to the housewife or the grocer, but the payment is made just the same. The way it works is that the Treasury sends some money to the flour millers and directs them to credit enough on every barrel of flour to reduce the price of a loaf

of bread by a penny. The sugar people get their checks so that the consumer saves a cent a pound. The dairy people get a contribution of about a cent for each quart of milk. Other payments on behalf of each family are made for meat, cheese, and some other things.

The Government calls these subsidy payments. At the end of a year they amount to about $2,000,000,000. That would average $60 a family or $5 a month. To get one's full share it is necessary to eat just the things the Government helps to pay for. In general, vegetarians are out of luck. Those who are on a breadless reducing diet are out a penny on every loaf they don't eat. Citizens who are so desperately ill that they cannot eat anything receive no consideration. To get the most out of the subsidy system, you must buy only the articles on which the bounty is paid, and at the table let yourself go with this rule as a guide: The more you buy and the more you eat, the more you save.

Playing favorites among the victuals does not become a government. A sick man ought to have as much consideration as a well one. The fair way to pass around this $2,000,000,000 is to divide up the money, and let the consumer who likes spinach eat spinach, without cutting off his benefit payment. Let the ration board hand out a crisp new $5 bill to each housewife every Monday morning. The cost to the Treasury would be exactly the same as at present. The benefit to the average family would be the same.

Of course, if the Government distributed the subsidy to the consumer to enable him to pay full price, instead of to the producer to enable him to sell at a cut price, nobody could pretend any longer that subsidy payments are necessary to prevent inflation. Anyone capable of a moment's sustained concentration would realize that subsidies are about the most inflationary elements in the whole economy. It is no more inflationary to give the consumer the money directly than to give it to somebody else to pass along.

Selling food below cost has had consequences that could have been foreseen. Despite record production in 1945, supplies are so much reduced that the President is organizing a famine emergency committee, whose object is to get people to eat less and waste less. An administration which pays a premium on eating, and then appeals to people to eat less is silly beyond all belief. Mr. Hoover will have rendered the country another great service if he enables Mr. Truman to understand this.

Farmers Union of California

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. ANDERSON of California. Mr. Speaker, it is with considerable personal gratification that I learn that the California division of the Farmers Union has severed its relationship with the National Farmers Union. It has been apparent to me for many years that the policies of the National Farmers Union, under the leadership of James G. Patton, were not compatible with the policies of the California division of this farm group. The following communications which I have just received from California are self explanatory, and I commend them to the attention of my colleagues:

To Officers, Executive Committee, and Members of the Annual Convention of the National Farmers Union, Meeting at Topeka, Kans., March 4, 5, and 6, 1946:

There sometimes comes a time in the history of all men and organizations when, through lack of understanding of one another's problems, disagreement on policies, and assumption of authority neither warranted nor authorized, it appears best for all parties to dissolve the ties that have bound them, terminating all mutual obligation.

The members of the California division of the Farmers Union are very conscious of and believers in the principle that "all men are created equal, that they are endowed by their Creator with certain inalienable rights, and among these are life, liberty, and the pursuit of happiness."

It now appears that the officials of the National Farmers Union, denying these principles, have during the past few years departed so far from the original objectives and precepts of the founding of the National Farmers Union that it would be contrary to all sense of reason, self-respect, and retention of our liberties, for our California union to remain affiliated with the national union.

Particularly do we point out the denial of the right of California by the national union officials to:

1. Decide for itself a position on the American-Mexican treaty.

2. To state its opinion on the 160-acre land ownership limitation in the Central Valley water project.

3. The right of selection of its own members with whom they work and associate.

4. The right to support cooperative enterprises of their own choosing.

5. The right to have their State officials carry out projects and represent principles that have been inaugurated and determined upon in membership meetings, arrived at after free and open debate.

6. Although frequently requested to do so, not once has any of the national officers visited with the California union. However, they have had time to come to California more than once and meet with groups hostile to the California union, even to the extent of interesting paid employees of the Federal Government.

7. Last, the right to state their beliefs whom the national president associates himself in an executive capacity with groups that many of our members believe are working against our American form of government.

Not being able to acknowledge the authority of the national union to dictate to the California union in the above regard:

We, the officers and members of the executive committee, meeting in Newman, Calif., on Washington's birthday, 1946, do hereby present and relinquish to the National Farmers Union convention assembled in session at Topeka, Kans., March 4, 5, and 6, 1946, our charter and do in every way proclaim our independence of and disassociation from what is known as the National Farmers Union.

Furthermore, we request the delegates and members of said gathering, by suitable resolution, to consummate such action.

We part bearing in mind a very pleasant and useful association with the officers and rank and file of the national and of the several State farms unions over a period of almost half a century.

As we have in the past, we intend to continue to be of service to California agriculture. Any time in the future our policies and views should parallel as to the needs of the California farmer, you can count on our wholehearted cooperation and support.

Respectfully submitted to the national convention.

Fred Talbot, Fred Hassler, M. N. Parsons, Joe Aguiar, L. W. Armstrong, Wm. Grothman, Ben Arnhold, Carl Visman, R. V. Garrod, Tony Ferreira, Myrtle Talbot.

On February 14, 1946, James G. Patton, president of the National Farmers Union, suspended the charter of the California Farmers Union. This action was approved by the national board. These charges are not substantiated by facts, consequently, Fred Talbot, chairman of the State executive committee, called this committee in session on February 22. The committee unanimously placed themselves on record as believing agriculture could be better served by the State union withdrawing from the National. This has been done. As a short résumé of the charges against the California union on which action was purportedly based, and the State answer thereto, would be interesting to our members, we present the following statement of national union charges.

1. California accuses the national president of accepting prominent places in the CIO-PAC.

Answer: California got that information from a paper published in another State, and merely discussed it. James G. Patton was vice president of the PAC.

2. Accuses the California union of stating the national union policies were radical and communistic.

Answer: California merely stated what was reported in the national paper.

3. Hostile to family type farming.

Answer: California is and always has been favorable to the American type family farm, but is in opposition to collectivism as applied to farming.

4. Opposing the American-Mexican water treaty.

Answer: Before Boulder Dam was completed, Mexico annually got 750,000 acre-feet of water from the Colorado River. Under the new treaty with a more even distribution over the year, America grants Mexico 1,800,000 acre-feet annually from the Colorado. Mexico, however, gives to Texas 350,000 acre-feet per annum from a tributary of the Rio Grande, which water Mexicans never have and could not use. So, all told, Mexico gets 1,800,000 acre-feet annually, originating in the United States. Texas gets 350,000 acre-feet of water from Mexican territory. The California union did oppose that treaty. Patton favored it.

5. The State union an appendage of the State president.

Answer: False, because the State president always carried out the policies of its members as expressed at their annual meetings.

5A. Accuses California of opposing the 160-acre limitation on land ownership under the Central Valley water project.

Answer: This is an effort to regulate farm acreage by bureaucratic rulings, a very vicious procedure.

6. California had less than 1,000 bona fide members.

Answer: What is a bona fide member? Oklahoma was one time down to 220. As long as the $500 per year was accepted by the national union, that has always, up to now, been sufficient to retain a charter.

7. Refused to take in persons eligible for membership or authorize organization of local unions.

Answer: California differs with the national in regard to eligibility. California never refused any eligibles according to the California union standards.

8. Frustrated all advances for growth in order to operate as the personal appendage of the State president.

Answer: Refer back to No. 5.

9. Abandoned fundamental objectives of the national union.

Answer: If what the national paper prints are the fundamental objectives of the national union most California members cannot subscribe to them. California members believe it is the national union that has abandoned the Farmers' Union principles, not California.

10. Have openly and publicly urged applicants for membership to join other unions and organizations.

Answer: Entirely false, this accusation is based on the statement very properly asked, "Why do you wish to affiliate with the Farmers' Union?" Upon the answer to this question to a large degree depends acceptance of applicant.

11. Abandoned by word and deed paragraph 2 in the charter and in its constitution, article II.

Answer: This applies to membership qualifications. No one yet has been admitted to our California union who did not believe in a Supreme Being and whose major financial interests were that of farming.

R. V. GARROD.

Dangerous Medicine

EXTENSION OF REMARKS

OF

HON. FRANK FELLOWS

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. FELLOWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bangor (Maine) Daily News of March 4, 1946:

DANGEROUS MEDICINE

"Hold all prices to the prescribed line and you hold back inflation."

Three times a week, administration broadcasters tell the public that, by radio. Almost every day, administration spokesmen say it in print. Not Mr. Bowles—he limits his appeal to rent, food, and clothes—but a whole host of lesser fry.

What do they mean?

Surely, they are deceived. And so, surely, they are deceiving.

Four factors cause inflation:

(a) An abnormal growth of purchasing power;

(b) Such wage-increases as augment that power and, at the same time, augment both production-costs and consumption-demand;

(c) Abnormal demand, or need, for commodities;

(d) A production that is abnormally below demand.

Just now, the country's ready-money supply, "hand-money," is greater than it was at the start of World War II, almost three times greater than in 1929. "With all that cash to spend," people ask, "why worry?"

Here's why:

Because the increase isn't an increase in real wealth. Because, instead, it is the result of Government bond issues, which raised the Government debt to grotesque proportions. Because, while we face a budget that inflationarily threatens an actual deficit larger than the prewar deficit, the Treasury can hold down interest rates only by inflationary processes.

The Presidential formula for wage raises without price raises—though Mr. Truman compromises somewhat in such matters as steel—is really a formula for inflation. It merely increases a purchasing power which, relative to services and commodities, was already too great.

Necessarily, during the war, production of lasting commodities was nearly zero. Result: The demand for them today is more than just abnormal; it is practically unprecedented. Now price control over the manufacture of new commodities—replacements—is dangerously keeping production far below demand.

Teachers of political economy must be curious as to what inspired idiot started the administration's evidently sincere belief that we cannot have inflation if prices are kept at a given level. For the belief, as formulated by those Government spokesmen, is simply not true.

Explanation of Vote on Housing Bill Will Be Demanded by Homeless Ex-Servicemen and Citizens

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. SABATH. Mr. Speaker, notwithstanding the adoption of several amendments to the GI housing bill which has greatly weakened some of its provisions, I shall reluctantly vote for it on final passage. I shall do so in the hope that the body on the other side of the Capitol will restore the provisions of the bill or by further amendment will bring its effect and purpose in line with the original recommendations of that constructive and far-seeing official, Mr. Wilson Wyatt, Housing Expediter, upon whose shoulders the President has thrust the burden of relieving the critical situation facing our homeless ex-servicemen and citizens of our country.

It is to be deplored that these crippling amendments have been adopted by a nearly unanimous vote of the Republicans with the aid of the votes of some reactionary Democrats. It is inconceivable that they should vote against the establishment of price ceilings on building materials and supplies and a limitation on the cost of construction of homes which would insure the building of a home within the financial means of our ex-servicemen and citizens who are practically homeless. They are living today in crowded quarters, in rooms without adequate or proper facilities, in converted apartments, attics, and basements, under double-up arrangements, all of which do not lend to decent or healthy living. Yet in the face of these existing conditions, which are bound to grow worse with the return of additional hundreds of thousands of veterans, we find, as I have stated, the Republicans voting almost en bloc with some reactionary Democrats in denying them the relief which they so imperatively need. It appears to me that they are more interested in the builders, material suppliers, and the real-estate operators than in the ex-servicemen and those of our citizenry who are without a roof over their heads.

One cannot come to any other conclusion than that these groups, supported by one of the worst organized lobbies I have ever observed in my long years of service, have selfishly opposed the limiting provisions of the bill in order to derive a still greater profit at the expense of our ex-servicemen and citizens.

I again express the hope, Mr. Speaker, that the other body will so amend the bill as to prevent gouging by selfish groups and that a real opportunity will be afforded to our homeless ex-servicemen and citizens in this acute emergency to obtain decent homes at a reasonable cost.

What Is the Legion?

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. CHIPERFIELD. Mr. Speaker, as a member of the American Legion, I noted with a great deal of interest an article appearing in the American Legion magazine entitled "What Is the Legion?" by Chief Justice Robert G. Simmons, supreme court, State of Nebraska, and former Member of this body.

I feel his remarks are worthy of wide publicity and therefore have asked to have them extended in the CONGRESSIONAL RECORD:

WHAT IS THE LEGION?

We of another war sometimes are asked, "What is the American Legion?" The American Legion is not a club, although many of its posts operate clubhouses. It is not a fraternal organization, although it offers the fellowship of comrades in arms. The Legion is a service organization. It is the trustee of a sacred responsibility and power. The beneficiaries of this trust own the Legion. It belongs to those men and women who bear on their bodies and minds the marks of the price they have paid for love of country. It belongs to the father and mother, the widow and the orphans of those for whom there can be no homecoming. It belongs to those sons and daughters of ours who yet serve America in the far-flung spaces of the world. It belongs to every man and woman of America who has honorably served his Nation in the armed forces. While it serves its membership and those who were of the armed forces, it also has a primary concern in the future of America. It has offered and will continue to offer leadership in those causes that promote the well-being of the Nation. It seeks the cooperation and help of every citizen. It belongs to the Nation. Those who own it are the beneficiaries of its service and its strength. Through it we who served America in times of war continue to serve it and each other in time of peace.

Science and Our Future

EXTENSION OF REMARKS

OF

HON. J. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1946

Mr. JOHNSON of California. Mr. Speaker, on March 5, 1946, it was my

privilege to be present at a dinner in honor of 40 winners of the fifth annual science talent search competing for the Westinghouse science scholarships.

I was lucky enough to be invited because David Dill Cudaback, 17, of Napa, Calif., and a son of one of my constituents, was one of the winners.

The war gave a great impetus to science and the development and use of the atomic bomb dramatized science and focused attention on the part it can play in destruction and, by way of contrast, what it can do to help us in peace. These young scientists, who were the best out of thousands who competed, typify for us the scientists of the future. They are eager, bright, and ambitious young Americans who are anxious to contribute their talents to the development of a better civilization. We hope their talents will never be used or required for destructive purposes or for that legalized murder we call war. They do not want this to happen. We hope that the statesmen of the world—who this very hour are making decisions and developing policies that may develop a world of law and peace—will make their dream of a world of peace and happiness come true.

Dr. E. U. Condon, Director of the National Bureau of Standards, and a noted scientist, delivered a most inspiring speech at this meeting, which I am including in these remarks:

We are met here tonight to do honor, not only to the 40 boys and girls who are the winners in the fifth annual science talent search but also to the thousands of boys and girls throughout our land and throughout the world, who are our hope for the scientific development of the future. You 40 are bright boys and girls. You are therefore intelligent enough to realize that you are fortunate. You know that there are plenty more of equal promise and enthusiasm back home where you come from. You know that your presence here does not mean that you are already made as scientists. You know that it simply means that you have shown yourselves worthy of the support and encouragement which Westinghouse science scholarships afford.

And you know that with this support you accept a responsibility to work for maximum self-development as creative scientists and good citizens.

The future of science in the world, indeed, need give us no concern if in every land the boys and girls of eager intelligence comparable to yours will be sought out and given the opportunities for growth which await you. I have no fears for the future if we entrust it to free, inquiring, critical minds such as yours.

But, my young friends, there are quite a few of your elders gathered here tonight, and there are some things I want to say to them. The people of my generation and those who are my elders have made quite a sorry mess of the world in which you are going to have to live. I want to talk to them about some things we need to do right away—in the next few years—to make amends as best we can while you are acquiring the background knowledge and technique with which you will make your contributions to science in the future.

Millions are dead, millions more are homeless, hungry, and shivering at the end of the worst war in man's history. In America we have been more fortunate, although even here we have war-born difficulties; there is, for instance, a serious shortage of women's stockings made of a particularly favored synthetic fiber.

The war's destruction far exceeds that of any catastrophe yet known. The war ended with the application of a new weapon that is a thousand times more frightful than the weapons which produced most of the war's frightfulness. And already we have responsible statements from scientists who made this development, that bombs a thousand times more powerful than those already used are capable of being made in the near future. There are men living who know how to make a single bomb whose destructiveness is equal to a million 10-ton block busters. One such bomb, dropped on Washington or any other major city, may be expected to wipe out its population, to destroy its buildings utterly, and to render the site uninhabitable due to poisoning by radioactive materials.

In the face of this situation, people react essentially in one of two ways. The first kind say, "It's just another weapon. Mankind learned to adapt to the longbow, and the crossbow, and the B–29. We have always had wars." An extreme expression of this kind is found in a speech by Prof. Leslie A. White, of the anthropology department of the University of Michigan, delivered in Philadelphia last December. He says, "As for the extermination of the human race as a consequence of hurling atomic thunderbolts, this, too, may be admitted as a possibility, and all we can say is that if it is to come it will come." This is indeed a rather coldly hopeless, fatalistic expression. Professor White further says, "Extravagant expressions of horror will not alter the course of events."

There is a certain rhetorical trick here in that in our language, "extravagant" connotes exaggeratedly inaccurate and thus emotionally detracts from the serious warnings which responsibile physcists are trying to give us. Now, I would agree that expressions of horror alone will not alter the course of events. But I insist that if we look at what civilization has suffered in World War II, even before the atom bomb, and couple it with the picture of a war with plentiful use of the old-fashioned one-hoss shay atom bombs, and further with the picture of a war with both sides equipped with the really potent 1950 models—then, I say, no expression of horror of which our hearts are capable can be exaggerated or extravagant. I say we need not and should not fatalistically await death, reading papers to an academic society meeting in a museum in Philadelphia.

The second kind of people react differently. We say, this is the end. Mankind has brought down suffering and death on its head, spiritual values have been destroyed, hatreds have been nourished and developed into great social cancers by war, and the war fears and the war suspicions and divisions among men.

This has been going on since the beginning of time and will surely destroy us all if we let it continue. This second kind of people say simply that this must stop. We say there is such a thing as progress toward a higher level of development. With all the stumbling and fumbling, we see an upward trend throughout human history. We read the lesson of history to be that men can go forward together, and that men can progress to new freedoms, and new areas of social adjustment.

We see that man's growing mastery over the forces of nature also serves to amplify the magnitude of the social crises which confront him. Centuries ago, wars were local affairs. However terrible, they affected only relatively small sectors of civilization. But the last two major wars were world wars in a true sense. Their damage literally affected everyone. We face a situation in which a future world war, employing atom bombs, in rockets guided by radio, and many other marvels of man's perverted ingenuity, will achieve a destructiveness thousands of times greater than ever achieved before. The magnitude of the crisis is such that we must soberly think of the choice as being between drifting into a war which will lead to the destruction of civilization, leaving a remnant of stunned, confused, poverty-stricken, frightened men and women amid the ruins—or a wholesome healthy development of a united mankind, using its intelligence cooperatively for the good of all.

I beg of you, cast in your lot with the persons of the second kind—the people who believe there is a possibility that men throughout the world can live in freedom and justice, in love and good will, that they can devote their full energies to constructive application of the rational thinking to call science to the arts of peace. In asking you to join with us, I make no promise of certain security. I only promise hope, and tell you that the other way leads to certain doom. If we try to establish the brotherhood of man on earth we may fail, but if we do not even try we shall surely fail, and what an unbearable load of guilt our consciences will then have to carry.

So much for the generalities of the situation in which we find ourselves. Now, if I may, I would like to comment a little more specifically on the immediate choices which lie before us.

We must assert ourselves in every kind of agency of world cooperation toward positive wholesome working together for human welfare. This means the fullest kind of active support to the efforts of peoples everywhere to go forward, in political and economic freedom, to the highest level of educational, scientific and cultural achievement. This means specifically support to UNO, UNRRA, and UNESCO, and whatever other such activities lie ahead.

We must particularly seek to bring about closer working relationships with our friends and allies, the Russians. Russia and the United States are today the most powerful nations in the world so unless we can get along together, there is no hope for peace. We must seek to recapture something of the feeling of joy and pride we had in being on their side, after Stalingrad and during their long, arduous drive to push the Nazi war machine out of their devastated lands. We must welcome their scientists to our laboratories, as they have welcomed ours to theirs, and extend the base of scientific cooperation with this great people. Of course, we must behave this way toward the scientists of all nations—I only mention Russia because she is right now the target of attack by those irresponsible, who think she would be a suitable adversary in the next world war.

We must regain for all scientists that freedom from military domination which is so necessary if science is to be used for peaceful ends. With nazism not wholly exterminated, we must have scientists contributing to the development of our tools of war, since, God forbid, we may, if all else fails, have to use them. But the scientific life of the country must not be subordinated to, nor derive its chief support from, the military.

This is essential in the interests of the military themselves. Because the scientific spirit is so completely opposite to the military spirit, science simply will not go forward under domination. Nowadays men must work together in large organizations. It is characteristic of the military organization that operations are planned and directed from the top, with the details executed by men below, by persons who unquestioningly and obediently respond to the orders given them from above. The flow of original thinking is from the top to the bottom. I conceive just the opposite to be true in a properly administered scientific organization. The function of a scientific director is to set up working conditions where the lowliest novitiate is put in touch with all the problems in his field and encouraged to worry about them and to come out creatively with

new ideas and results. He is the sole judge of what knowledge he needs in order to work effectively on his problem. The flow of original thinking in this case is mainly from the bottom to the top.

Every worker must have access to the whole story because no one can foresee which scientist will have the truly creative idea. And each scientist must be free to discuss his ideas, while in the formative state, with his colleagues anywhere, for it is from the working together of many minds that new science comes.

In contrasting the military and scientific, I do not wish to imply that one is wholly wrong and the other wholly right. Just as I do not recommend the military procedure for the conduct of scientific research, neither would I want our safety to depend on the outcome of a battle in which the scientific method of free discussion, independent thinking and mutual criticism was followed by all the captains and lieutenants on the battlefield. Military operations and scientific research are two quite different kinds of human activity and neither should be subordinated to the other.

Of course my reason for stressing this point is that right now we are confronted in America with a situation in which scientists are being held very strictly under military domination, to the severe detriment of our scientific development and the development of wholesome international relations.

What is going on? Prominent scientists are denied the privilege of traveling abroad. Physicists are not allowed to discuss certain areas of their science with each other, even as between individuals working on closely related phases of the same subject. They can only communicate through official channels, involving censorship of their communications by Army officers without knowledge and so without competence. Information essential to understanding is being denied to students in our universities, so that, if this situation were to continue, the young students we honor here tonight will get from their professors only a watered-down Army-approved version of the laws of nature.

In this connection one is reminded of the Holy Scriptures where, in the eighteenth verse of the eighth chapter of Ecclesiastes, we read:

"Wisdom is better than weapons of war; but one sinner destroyeth much good."

The laws of nature, some seem to think, are ours exclusively, and that we can keep others from learning by locking up what we have learned in the laboratory and not telling it to our allies. Later they will learn what we know and more besides, which, because of our unfriendly behavior, we cannot expect them to tell us. In the course of time, because of such provocations, we are allies no more—we start as friends and end as snarling, suspicious neighbors.

It is sinister indeed how one evil step leads to another. Having created an air of suspicion and mistrust, there will be persons among us who think other nations can know nothing except what is learned by espionage. So, when other countries make atom bombs, perhaps much better than those we have, these persons will cry "treason" at our scientists, for they will find it inconceivable that another country could make a bomb in any other way except by aid from Americans.

Let us cast this isolationist, chauvinist poison from our minds before we corrode our hearts and arouse suspicions of our motives in the minds of the decent peoples of the world. Let us cooperate wholeheartedly with the other nations of the world to agree to use atomic energy only for peaceful purposes and to set up an inspection system to enforce such agreement. The United Nations Assembly has unanimously voted to establish an atomic energy commission to draw up such a plan. In face of the frightfulness of atomic warfare, it is inconceivable to me that any nation will refuse to participate in a program of international cooperation and inspection. Yet, much public discussion, and even more private conversation, is based upon the assumption of such a refusal. We must push forward with all possible speed in order to find out where we stand in the world today so that it is no longer possible for different groups and different nations to base their thinking and their planning upon different hypotheses. I am confident that if we do this the outcome will be world friendship and cooperation, and not atomic war and the destruction of civilization.

In closing I would like again to quote Scripture, this time the New Testament, seventeenth verse of the eighth chapter of Luke:

"For nothing is secret, that shall not be made manifest, neither anything hid, that shall not be made known and come abroad."

Finally, I want to read to you from a poem by Elizabeth Barrett Browning, called, "The Truth Is Whole":

"Use is the aim of Science! give again
A golden sentence to the faithful pen—
Dwell not on parts! For parts contract the mind;
And knowledge still is useless when confined,
The yearning soul, enclosed in narrow bound
May be ingenious, but is ne'er profound:
Spoiled of its strength, the fettered thought grows tame;
And want of air extinguishes the flame!"

My young friends, do not be depressed by my remarks. Go on, work hard, enjoy to the fullest the expanding view and the communion with nature which your study of science will bring—the while, I hope, we others shall join together in healing war's wounds, and making the kind of world in which your talents can have free play to develop wholesome applications to human welfare for all the peoples of the world.

Apathetic and Pathetic

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1946

Mr. REED of New York. Mr. Speaker, once during a great crisis, it was said: "When the educated, industrious, temperate, thrifty citizens are as prompt and zealous and unfailing in duty as the ignorant and venal and mischievous, or when it is clear they cannot be roused to their duty, then, but not until then, if ignorance and corruption always carry the day, there can be no honest question that this Government has failed. But, let us not be deceived. While good men sit at home, not knowing that there is anything to be done, nor caring to know, half persuaded that this Republic is the contemptible rule of a mob and secretly longing for some splendid and vigorous despotism, then remember that it is not a government mastered by ignorance; it is a government betrayed by intelligence."

I hope those who believe in liberty and its preservation, and who boast of their education and intelligence, will read and digest the editorial which I am inserting by unanimous consent as a part of my remarks:

APATHETIC AND PATHETIC

Concerning Premier Stalin's Russia and its international conduct, there are a great many puzzling aspects. To us the most puzzling is not rooted in Russia. It grows in America. It can be expressed in the form of a question: Why should anybody expect Stalin to do anything different than he is doing? If any surprise at all is due, it is in the fact that Stalin, being what he is and having the opportunity that he has, should be even as moderate as he has been.

The opportunity is that a ruthless man believing in the law of force has no opposition. And he has none because the only nation in the world around which could rally a decent respect to the opinions of mankind is losing its faith. It is becoming ashamed of its traditions. The light of freedom for the individual which has heartened men for a century and a half flickers and burns low in a fetid atmosphere from which the sustaining oxygen has been drained.

Try this if you will. Go into any group—the more prosperous and fashionable the better the test—and speak of the "self-evident truth" that "all men are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness." Say to this group that "to secure these rights governments are instituted among men."

We venture that you will be startled by the number of people, particularly younger people, who do not know that you are quoting the Declaration of Independence. And of those who know, a large number will not agree with the philosophy expressed. And of those who agree—and this is the most tragic thing—many will not have the courage to say so.

Perhaps the dominant attitude was summed up by a young man who would probably think of himself as an intellectual. He said:

"Only a few people in the Bible Belt believe those things now."

Or listen to the young minister of the gospel who came to his office sneering at those who "operate in a vacuum of idealism."

We gave our Government encouragement—it did not need much—to connive with Stalin. In the criminal decision of Yalta an American President accepted secret agreements which bartered thousands of human beings and which, if carried out, will send thousands more to exile and death.

We did that and a chorus of writers and commentators defaulted their obligation to ask questions and said that Yalta was good. They said Stalin was a man of his word. He would not grab territory. He would not suppress the churches. He would cease to send his agitators into every corner of the world. He would not use his military power to force on other peoples his own social and political system. Each of those things he has done. Some illusionists, who said he would not, now have the decency to acknowledge disillusion. They suggest that we shake an admonitory finger at Stalin.

That is a ludicrous suggestion. Does anyone imagine that Stalin is such a fool that he thinks we can or will oppose his armed might with ours? And if we are not ready to do that, what other means of opposition have we? We have none, for we besmirched our own moral precepts. We have dropped our faith and stand grotesquely naked.

Yet we tell other peoples of the world how they must act. We have abandoned the tradition that peoples have the right to work out their own destiny.

We denounce a Colonel Peron, of Argentina, as a dictator and a bad man suspected of aggression, and, therefore, he must not rule that unhappy Republic. He certainly is those things. But who is the United States to denounce the man that the people of his country apparently have chosen in a free election and to condemn any other government for cooperating with dictators? The fact is that Colonel Peron helped himself to power by borrowing more than one page from the book of the New Deal.

But Colonel Peron and General Franco, another unsavory character, ruling Spain, are, we say, corrupt. Furthermore, they suppress the rights of the people. They poison the wells of free information. They certainly do those things.

Let us see what government it is that hurls these accusations of corruption and extralegal sanctions.

It is a government where the family and the friends of a President could use their prestige to enrich themselves and those who publicly protested are denounced. It is a government against which, for the first time in history, Americans fear to speak. It is a government which is spending the people's money on a bureaucracy with which men abhor contact, because resistance means reprisals. The system has the expected results. Many businesses feel that they must have a friend at court, and so some who have official access are paid as "advisers." There was a time when we called such men lobbyists and investigated them. Now they are appointed to high office.

Looking at our record of connivance with dictators and looking at our domestic scene, is it any wonder that the people of Argentina decided that Colonel Peron might be the lesser of two evils?

And while we condemn the dictators for suppressing and distorting the free flow of information, our own State Department proposes a plan to blanket the world with propaganda.

Why should Stalin take us and our pious protestations seriously? Why should he give us any attention at all? He knows what is happening and he knows that we are treading the path to his philosophy and his orbit. He thinks he has only to wait—and he may be right.

We have told the world about "four freedoms" but the number of men who live under the heel of dictatorship is greater, not less. We have not stood for freedom. We are in the thick of the game of power politics. We are in it in Europe and in Asia, and we have imported it to the American Continent. It is Stalin's game and of course we do it badly.

There are men not afraid to speak out. One is John Foster Dulles who dares speak, and knows whereof he speaks. We quote:

"I am afraid we have got very few friends in the world today. There was a time when we had more friends than any other people of the world. Today we have influence because of our production capacity, because people are trying to get the physical things we produce. I do not detect any real friendship on the part of other peoples. This leaves us in a dangerous and vulnerable position; one which we should do our utmost to correct."

A man's standing in his community is a projection of his own character. A nation's standing in the world is a projection of its domestic life.

What we see at home is a condition where public trust is openly accepted as an avenue to private gain; where a government is so steeped in propaganda lies that it must give the wrong reasons for its policies; where in the name of freedom the citizen is being handcuffed to rules of a troupe of brilliant pygmies who write the prescription for a fuller life on an adding machine; where debt is prosperity and thrift a social crime; where it can be asserted that there exists a "moral right" to steal and bribe; where men shout free enterprise and then seek better and bigger government subsidies; where women leaving black markets stop to sign petitions for continuation of price control; where groups demanding, "When do we get ours?" no longer whisper but shout and where officials no longer consider it necessary to conceal that they are the creatures of these groups.

Is it any wonder that in our international relations we cannot combat the assertion that black is white and that the goal of human freedom is the slave state?

Is it any wonder that Mr. Dulles laments the lack of those policies, "expressive of the righteous faith of the best in America?"

We are apathetic: We are rapidly growing pathetic.

First New Jersey Farm Loan to Staff Sgt. Andrew William Sinclair, Jr.

EXTENSION OF REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1946

Mr. HAND. Mr. Speaker, in the early part of this year, I had the pleasure to present to Staff Sgt. Andrew William Sinclair, Jr., an FSA check for $6,500 which enabled him to buy a farm. I am advised that this was the first farm loan of its kind made in New Jersey, and I am particularly proud that it was done in Cumberland County in my district.

Sergeant Sinclair waded ashore on the Normandy Beach on D-day, one of the first of our men to invade the continent of Europe. He is a holder of the Bronze Star in addition to many other citations for meritorious service. He is now back with his family as millions of other boys are, and trying to catch up with civilian life.

Mr. Speaker, this loan will enable him to catch up because it was made on a businesslike basis. A committee of local farmers appraised the value of this farm, as well as the ability of Sinclair to operate it. It is no service to veterans to help them get something that they cannot afford, or to do something they will not be able to do, but a businesslike appraisal such as was given in connection with this loan is a method which assures a reasonable chance for the future.

The fact that this loan in my district was the first loan granted in New Jersey is not accidental. Mr. F. Rene Gossiaux, the Farm Security Administration supervisor, has both his brain and his heart in this work. This agency is trying to do a job for our returned soldiers that might well be a model for other agencies of Government.

Polish Cardinals

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1946

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Marquis Childs, that appeared in the Chicago Daily Times, on the creation of the 32 new cardinals of recent date. This article deals with the most colorful career of Adam Stephen Cardinal Sapieha, who was Archbishop of Crakow, Poland, when he was elevated to the College of Cardinals:

POLISH CARDINALS

(By Marquis Childs)

WASHINGTON.—With all the columns and columns of news about the creation of the 32 new cardinals, there has been scarcely any mention of one of the most remarkable prelates to receive the scarlet biretta of a prince of the church.

That is Adam Stephen Cardinal Sapieha, who was archbishop of Crakow in Poland when he was selected for elevation to the College of Cardinals. Cardinal Sapieha comes of an old and aristocratic Polish family. For generations the Sapiehas have figured in Poland's troubled and tragic history.

The new cardinal has lived up to family tradition. Remaining in Poland through the German occupation, he became one of the heroic figures in the underground resistance to Nazi barbarism. Through his courage and his persistence in trying to help victims of the Nazis, he won a wide popular following. He never yielded to the threats or the persuasions of the invaders.

In popular esteem, Cardinal Sapieha's position is in marked contrast to that of August Cardinal Hlond, of Poland. Hlond fled from the cardinal's palace in Warsaw as the Germans invaded his country. He took refuge in France and was there when France fell.

For a time, Cardinal Hlond's whereabouts were a mystery. It was not known whether he was a prisoner of the Nazis or had been given his freedom. Just after Allied forces crossed the Rhine last year, he was found in a Westphalian monastery.

With fighting still going on in Poland and eastern Europe, Hlond went to the Vatican, where he remained until he decided to return to Warsaw. His welcome was not exactly warm, if only because his conduct during the war had been in such contrast to that of Sapieha.

Not long after his return, Cardinal Hlond delivered several sharp attacks on the Polish Provisional Government. The government did not respond in any way. A little later, the cardinal preached a sermon against racial hatred and racial persecution which he had been urged to do as part of the effort to check the forays of armed bands which continued to pillage and loot in outlying districts.

While it may have no significance Cardinal Hlond was not present at the history-making consistory when the new cardinals were created. He was not a witness at the ceremony at which Poland's Sapieha, in whose family there have been many temporal princes, became a prince of the church.

Attacking the Vatican and the new cardinals, Soviet propagandists included the name of Sapieha of Poland. This is not likely to do the new cardinal any harm in his native land. He has won a secure position in a country which is overwhelmingly Catholic.

The Poles have always been a highly individualistic people. That helps to explain why their history has been so troubled through the centuries. The Nazi conquest and occupation and the terrible fighting which led up to liberation destroyed most of their cities and took millions of lives. But all of this could not, as events are beginning to make clear, destroy the Polish character.

The contemporary judgment of Poland as a satellite of her great neighbor, Russia, is too hasty. There are still an estimated 200,000 Soviet troops in Poland. Others are constantly in transit to and from Germany.

While the new government has brought some improvement, conditions remain chaotic.

Veterans' Benefits

EXTENSION OF REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1946

Mr. HAND. Mr. Speaker, within the last 3 weeks I have introduced two bills which, in my opinion, are definitely needed by veterans, and which they are entitled to have promptly considered and passed. The first is a bill to grant benefits in lieu of accumulated leave; and the second is a bill to provide service credit for veterans under the Social Security Act.

The accumulated-leave bill—H. R. 5637—is one of a large number of quite similar bills introduced by Members interested in this legislation. I prefer the language of my bill to that of some of the other bills that have been introduced, but I am prepared to support any bill that will properly accomplish this purpose that the Military Affairs Committee will report.

A few days after the introduction of this bill I was greatly encouraged to hear the statement made on the floor that the subcommittee was about ready to report such legislation favorably. I again urge that the full committee report legislation as soon as possible because that has already been greatly delayed. I do not overlook the fact that this measure will be costly, but similar benefits have been granted to officers, and there is no just reason to discriminate against the men. A copy of H. R. 5637 follows:

A bill to grant to enlisted personnel of the armed forces certain benefits in lieu of accumulated leave

Be it enacted, etc., That (a) effective as of December 7, 1941, each enlisted member of the armed forces of the United States shall be considered, for the purposes of this act, as being entitled to leave at the rate of 2½ days for each month during the war-service period. Such leave, less the leave actually received and used prior to discharge or release from active duty in such armed forces, may be accumulated, and each individual entitled thereto under this act shall be entitled upon discharge or release from active duty to receive, in a lump sum, pay and allowance covering such accumulated leave.

(b) The pay and allowances referred to in subsection (a) shall be computed at the rate of the pay and allowances which the individual was receiving immediately prior to discharge or release from active duty.

(c) In the case of enlisted personnel discharged or released from active duty prior to the date of enactment of this act, such lump-sum payment shall be made only if application therefor is made within 90 days after the date of enactment of this act. In the case of an individual discharged or released from active duty in the Army such application shall be made to the Secretary of War, and in the case of an individual discharged or released from active duty in any other branch of the armed forces application shall be made to the Secretary of the Navy.

(d) For purposes of the operation of this act with respect to any particular individual the term "war-service period" means the period beginning with the date of commencement of such individual's active service in the armed forces of the United States, or December 7, 1941, whichever is later, and ending 6 months after the date of the termination of hostilities in the present war, as proclaimed by the President, or the date of such individual's discharge or release from active duty, whichever is earlier.

(e) This act shall not apply to members of the armed forces who have served less than 90 days, nor to such members who have been dishonorably discharged.

Mr. Speaker, with respect to social-security credits, this is a very important matter which I think has largely been overlooked. I want to illustrate what I hope to accomplish by this bill. H. R. 5487 is a special amendment to title II of the Social Security Act to preserve the status of veterans whose rights or their survivors' rights would otherwise suffer irretrievable damage. It is a bill which can be interpolated into the present law without interfering in the slightest degree with the law as it now stands. Out of close to 12,000,000 men in the armed services it is likely that about 80 percent of them had continuous accumulating credits or interrupted credits of wages paid. Through happenings beyond their control, from the moment they left employment to enter the service these wage credits ceased.

Under the provisions of title II, which takes care of old-age and survivors insurance and is administered by the Federal Government alone, wage credits determine the insurance status, taken together with other determining factors in the eligibility requirements which have been set up.

In the case of the service man or woman three things could happen upon his death. If he had a widow surviving with children under 18 years of age, if her husband's wage records met the requirements, she and the children would be entitled to monthly insurance until the last child attained 18. If she had no children, she would be entitled to a lump-sum settlement and later on if she did not remarry, at age 65 she would be entitled to monthly insurance the rest of her life. The third instance is the provision for dependent parents upon an unmarried son or daughter when the parents are 65. The taking place of the above payments all depend on the status of the wage record. The eligibility depends on quarters of coverage accumulated. A quarter of coverage is defined as a 3-month calendar period in which at least $50 in wages or salary has been paid. It might all be made in 1 day or evenly earned throughout the 3 months. To find out whether or not the person has an insurable status we take one-half of the elapsed quarters since January 1, 1937. Since 9 years have elapsed, that means 108 months. Dividing this by 3-month periods—which constitute a quarter—we obtain 36 quarters. Applying the rule by taking one-half of these elapsed quarters, we obtain 18 which is the number of quarters required at the present moment. One exception to this is in the case of a veteran under 22, who will need only six quarters. The other exception is with men well over 65. Once the eligibility is determined, then the amount depends on the average monthly wage. So it will now be clearly seen how important this proposed amendment is. It not only will have much to do with eligibility but also with the amount received. Going back to 1940 from September 16 on, means 21 quarters of coverage and in some cases 22 quarters and almost $10,000 of wages at the moment. The bill limits these wage credits to 180 days after termination of hostilities as proclaimed by the President, a declaration which has not yet taken place. At the same time that this bill takes care of eligibility, it also takes care of wages. A matter of $10,000 or more, whether it be now or at age 65, will make a very material difference in arriving at the average monthly wage of a workingman, upon which the amount of his monthly insurance, as well as that of his wife, or of his wife and children, depend, if he dies before attaining age 65. Of course, many veterans early gave their lives, in which case this bill would not mean so much; but still it would be considerable. In fact it means that veterans who had an uninterrupted wage record previous to induction and have served continuously would attain a permanently insured status upon discharge, albeit the monthly amount might be small. It, therefore, would be highly desirable to continue work until 65.

As before mentioned, there is no reason in the world to wait for any other changes, as this bill if enacted at once, as it surely should be, having been long overdue, would not in the least disturb any part of the present act as amended August 14, 1939.

The Ways and Means Committee is now considering amendments to title II, and I have asked the committee to carefully consider this bill. A copy of H. R. 5487 follows:

A bill to provide for a service credit for veterans for purposes of title II of the Social Security Act

Be it enacted, etc., That, effective as of September 16, 1940, title II of the Social Security Act (relating to old-age and survivors insurance benefits) is amended by inserting at the end thereof a new section reading as follows:

CREDIT FOR SERVICE IN ARMED FORCES

SEC. 210. (a) For the purposes of this title a veteran shall be deemed to have been paid, during the period of his active military or naval service occurring after September 16, 1940, and not after the expiration of 180 days from the date proclaimed by the President as the date of the termination of hostilities in the present war, remuneration for employment at the rate of $160 per month.

(b) In the case of any veteran who died prior to the enactment of this section, and who was not a fully or currently insured individual at the time of such death, the 2-year period within which proof of dependency and support must be filed under subsection (f) (1) (B) of section 202, and the 2-year period within which application must be filed under subsection (g) of that section, shall begin to run from the date of enactment of this section.

(c) For the purposes of this section—

(1) The term "veteran" means any individual who served in the active military or naval service of the United States at any time after September 16, 1940, and who either died in such service or was discharged or released from active duty.

(2) The term "active military or naval service" in the case of any individual means active service in the Army or Navy of the United States, the United States Marine Corps, the United States Coast Guard, or any of their respective components but does

not include (A) service pursuant to enlistment or reenlistment after June 1, 1945, in the Regular Military Establishment or after February 1, 1945, and in the Regular Naval Establishment, or (B) service with respect to which such individual is entitled to a credit, based on military or naval service, under the Railroad Retirement Act of 1937, as amended, or laws relating to the retirement of officers of the United States Army, Navy, Marine Corps, or Coast Guard, unless such individual elects, in accordance with regulations prescribed by the President, to waive the benefits of such credit.

(d) There is authorized to be appropriated to the trust fund amounts equal to the taxes which would have been payable by employees and employers, under the Federal Insurance Contributions Act, as amended, if the amount deemed for purposes of this section to have been paid as remuneration for employment had been actually paid as remuneration for employment.

The Housing Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM W. LINK

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1946

Mr. LINK. Mr. Speaker, today the National Housing Act which provides for a Housing Expediter and which defines his powers was passed by the House.

I voted for this act on the final passage—not because it will do all the things that we tried to have it do—but because of the set-up that now exists in the House, I felt that this was the only measure that could be passed.

In my estimation, removing subsidies which would have controlled prices on building materials seems to be the first step along the road to inflation. Taking off price controls on old buildings is another step in the same direction; however, the present set-up in the House being what it is today—a better bill could not be passed at this time.

I hope that our friends in the Senate will do a better job than was done in the House.

A Veteran Asks the President Some Questions

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. PHILLIPS. Mr. Speaker, under leave to extend my remarks, I include a letter from one of the partners in a small meat market and grocery in my district. I place the following in the CONGRESSIONAL RECORD. The original letter is addressed to the President of the United States.

Here is a letter from one of two brothers, both just returned from service in World War II. They have been given the market by their father, who opened it 23 years ago. It is entirely a family affair—the two brothers, a sister, the father.

Yet, for over a month that little market has been picketed by the A. F. of L. Butchers and Meat Cutters Union, demanding that the brothers sign a contract with them. With whom would they contract? With the members of the family? Who would be forced into the union? The sister? The father?

The brothers have very properly said they cannot sign a contract. So the picketing goes on. One day there were 15 picketeers. That is one picket for each 2 feet of store frontage. I do not need to tell you, Mr. Speaker, that this case has aroused the people of the community in which the market is located. What good will is being created for organized labor by such incidents? If local leaders lack intelligence to handle such local problems, why is not something done about it by the national leaders of the A. F. of L.?

Unfortunately, the case is not unique. A short time ago, those of us who live on the other side of the river, were unable to buy certain specialized bakery products, made by a small family bakery, because another A. F. of L. affiliate, was demanding that this little bakery run only by the baker and his wife, unionize itself. The owner himself drove the truck. The demand carried with it the threat that if the baker did not sign a contract with the union, then no grocery store could sell his product, because no driver, for other bakery products, would deliver to that store. That particular argument was finally settled, not by the baker giving in to the methods indicated, but by an agreement between the grocers and the union that the products, if sold in the stores, would not be displayed with other bakery goods. Those delivered by drivers belonging to the union, are displayed on the baked goods shelves; this baker's goods are to be found in the refrigerator.

So far as I know, the picketing of the little family market, in Fullerton, is still going on. Certainly, the two returned veterans show no signs of any intention to yield to the threats nor to the picketing. They didn't fight for 3 years each in defense of the liberties of the peoples of various nations of the world, to come back home and surrender their own liberties quite so easily.

I commend the thoughtful reading of this letter to every Member of the Congress, and particularly to every Member of the Senate, which now has before it the consideration of a bill to arrange for the settlement of labor disputes by agreement and by arbitration, and for the elimination of such incidents as this one, which do nobody any good, employer, employee, labor union, or consumer.

The letter follows:

ROQUET'S MARKET,
Anaheim, Calif., February 18, 1946.

HARRY S. TRUMAN,
President of the United States,
The White House, Washington, D. C.

DEAR MR. TRUMAN: My brother La Verne and I jointly own and operate a little neighborhood store in Anaheim, Calif. About 2 months ago we both were in the Army. I served for 3 years and 9 months; La Verne was in a little less than 3 years. We both wore sergeant's stripes when we were discharged.

Today, marching up and down in front of our store—it only has a 30-foot frontage—are pickets, members of the A. F. of L. Butchers and Meat Cutters Union, Local 551. They have been there since January 9, and there is no let-up in sight because La Verne and I refuse to sign a contract with them.

First, let me explain that our store is strictly a family affair. La Verne runs the meat market, as he did before entering the service; I run the grocery department. We have working with us our father, Octave Roquet, and our sister Ferne. That constitutes the hired help. The store is not new in Anaheim; my father greeted the first customers 23 years ago, and we have been operating here in this town ever since. It was while La Verne and I were in the Army that my father decided to turn the store over to us upon our discharge.

One day, a week or so ago, there were 15 pickets parading in front of our store. Mr. Truman, that's one picket for every 2 feet of store frontage. They have promised to continue their marching in front of our store until we sign a contract. That means they are going to be there a long time, because there isn't going to be any contract. In the meantime, no union truck driver will deliver us merchandise, and if the pickets are successful in their plan, no meat, milk, bread, or other staples will be brought to us.

Now then, Mr. Truman, in view of the situation I have outlined above, there are certain questions that La Verne and I would like answered. After all, we were in the Army because we thought we were fighting for, among other things, the rights of individuals to do business free from fear and from the necessity of paying tribute to anyone.

First, Mr. Truman, we would like to know whether or not there is any kind of relief to be expected from the economic strangulation exerted upon us by the union?

Is it to be the national policy that small businessmen must become a part and parcel of unionism in order to operate?

Must a family such as ours submit to extortion before we can receive the goods necessary to line our shelves?

Is it necessary that we let some group of men who have no financial or other interest in our enterprise dictate to us as to when we may open and close our doors?

Must we pay tribute to an organization in order to conduct a business?

Is there any difference between this kind of pressure and the tactics of gangsters who once forced many businessmen to pay for "protection" from mob violence?

Is this the sort of thing that the late President Roosevelt and Mr. Churchill had in mind when they adopted the "four freedoms?"

My brother and I had something else in mind when we entered the Army, you can be sure of that. And, so did a few million other young men. We weren't in the Army to protect the gangsters and the racketeers—not by a long shot. We were in the Army because we thought we were helping protect the American way of life—we thought the war was being fought to eliminate dictators and the rule-by-force systems.

For us, apparently, the fight is not over and we don't like it. So far as we can see, there is only one answer—somewhere along the line we've been handed a beautiful double cross.

Mr. Truman, Roquet's Market is just a little pebble in a rather small pool, in fact, we are so small that we have no printed letterheads. But even so, we feel that we have a right to expect protection from our Government.

What do you think, Mr. Truman?

We know you are an extremely busy man, but we do hope you will find time to answer our questions.

Sincerely,

R. O. ROQUET.

Veterans' Housing

EXTENSION OF REMARKS
OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. ANGELL. Mr. Speaker, the bill we are now considering, H. R. 4761, introduced by the gentleman from Texas [Mr. PATMAN], seeks to amend the National Housing Act by adding thereto a new title relating to the prevention of speculation and excessive profits in the sale of houses and to insure the availability of real estate for housing purposes at fair and reasonable prices. The objective back of the bill is to make available at the earliest possible moment housing accommodations not only for veterans but for other distressed cases. During the war all of our facilities and manpower were devoted to the prosecution of the war and as a result there was practically no construction for residential purposes. With the war over, our servicemen being mustered out, and with the increased population and need for new homes, this problem of residential housing becomes one of the first magnitude. Many of the older homes are now becoming uninhabitable by reason of age and lack of upkeep—all of which only adds to the seriousness of the problem. Thousands of veterans find it impossible to find housing accommodations of any sort. Mr. Speaker, I, for one, am willing to go the full limit in providing any and all legislation needed to solve this problem and make available as soon as possible homes for purchase or rent by veterans as well as other hardship cases.

One of the fundamental requirements which we must adhere to is to provide homes within the price ranges which would enable veterans to purchase or rent a home. It was hoped that homes could be provided at price ranges, not exceeding $6,000 as a maximum, and at a monthly rental of not more than $50. With the high cost of building materials and labor, it is not certain that homes can be made available within this price range. Before the war five-room cottage-type homes with modern equipment and facilities could have been provided for $3,500 to $4,000. That day seems to have passed. We must not, in seeking to solve this problem, foist upon the veterans synthetic houses of the glorified chicken-coop type, which are not only an eyesore to the neighborhood in which they are erected, but which would be a fraud upon the veteran. These homes of synthetic materials, many of which were constructed during the war, are wholly unsuited for permanent housing for veterans and I, for one, will not support any legislation which seeks to inflict upon the veteran that type of housing.

In mapping a program for veterans' housing, we must insure against speculation and excessive profits which would burden the veterans with costs and mortgage indebtedness far exceeding the real value of homes purchased. The United States is a Nation of home owners. More than any other nation we have, in the past, developed home ownership and by reason thereof, are in a position to successfully solve this problem by making building materials and finances available for all who seek to build or rent a home. In doing so, we should make full utilization of all existing facilities and industries as well as firms and individuals heretofore or now engaged in home building. We should not adopt a program which would make it impossible to utilize the experience, investment and know-how of our builders. Mr. Speaker, this bill with existing amendments, will:

First. Create an Office of Housing Stabilization, to be headed by a director.

Second. Continue for a year beyond June 30 next the authority for wartime priorities and allocation of scarce building materials into homes for veterans.

Third. Establish a preference for veterans in the purchase or rental of new houses.

Fourth. Authorize the director to halt or check the export of lumber as long as scarcities exist in the United States.

Fifth. Increase Government home mortgage loan authority by $1,000,000,000.

Sixth. Grant to the director broad authority to direct other Government agencies in respect to building materials and housing.

Proposing to expedite the construction of sufficient housing at fair and equitable prices, this bill would authorize the President to appoint, either within an existing agency or as an independent officer of the Government, a Housing Expediter who would formulate plans and programs to provide an increasing supply of housing accommodations; issue orders and directives on policy to other agencies; recommend enactment of legislation to the President; and consult and cooperate with Federal, State and local agencies, industries, labor, and other groups. Functions, powers, and duties now vested in the Office of War Mobilization and Reconversion which are necessary to enable the Expediter to carry out the provisions of the bill would be transferred to the Expediter and would not expire with the War Mobilization and Reconversion Act. The emergency powers of the Federal agencies would be exercised to alleviate the housing emergency.

The Expediter may allocate materials or provide priorities as such allocation or priority becomes necessary, and particularly he will consider the factors in low-cost and low-rent housing needed for satisfying the requirements of World War II veterans. He may forbid the export of lumber or materials to foreign countries. Provision is made for penalties for infringement and for appropriations as may be necessary. All provisions of the bill and regulations thereunder will terminate on June 30, 1947, unless Congress declares its termination earlier.

The National Housing Act is amended to make the provisions of title VI apply specifically to veterans. The amendments will provide: First, increase in the maximum amount of principal obligations of insured mortgages from $1,800,000,000 to $2,800,000,000, and the President may approve an aggregate amount of $3,800,000,000; second, the maximum allowable principal obligation of each mortgage may be increased by the Administrator within certain prescribed limits; third, the rate of maximum interest on an acceptable mortgage is changed from 6 to 4 percent; and, fourth, veterans are given a preference or priority instead of war workers.

The additional authority granted by this bill, together with existing powers already held by the Expediter, will, it is believed, enable him to inaugurate and bring to a successful conclusion a program that will make homes available for veterans and others within the limits of the building materials and manpower available. The success or failure of the housing program will depend upon the Expediter.

Mr. Speaker, in connection with this problem I want to call to your attention the serious bottlenecks that exist in my district in Oregon and in the Northwest generally with respect to the production of lumber products. My State produces more lumber than any other State in the Union. At the present time, owing to the various restrictions imposed upon the industry, it is impossible for lumber manufacturers to supply the lumber and wood products needed for housing construction. By reason of these restrictions, much of the lumber that would ordinarily go into house construction is being exported. It has just come to my attention that lumber will shortly begin moving from Willamette Valley, Oreg., mills for export to China. This movement will extend over a period of from 4 to 5 months and I am informed there will be 10 carloads per day for 30 days; 15 per day for 45 days; and 20 per day for the rest of the period. The 25,000,000 feet will be in timbers of 6 by 8-inch and 14 by 14-inch size. The reports of the West Coast Lumbermen's Association disclose that during the first 5 weeks of 1946, production amounted to 519,369,000 board feet as against 736,071,000 in the comparable period of last year, or 29 percent less production. The January production was only 71.7 percent of the 1942–45 average. At the end of January the industry had unfillec orders of 702,728,000 board feet and stocks on hand totaled only 391,706,000 board feet. We cannot build houses for veterans or anyone else without lumber and other building material. It is a mistake for Federal officials to believe that by the passage of a bill and without removing the bottlenecks and restrictions on production, they will be able to build houses. The restrictions now blocking and holding back lumber production, and particularly lumber of the sizes and quality needed in home construction, must be removed before we can make any headway in supplying homes for veterans.

As long as Federal officials in charge of this program refuse to make adequate price adjustments to permit lumber manufacturers to produce the kind and type of lumber needed for home construction at a price that would permit them to meet their expenses without loss,

there will be little lumber produced of the kind and quality needed. As long as higher prices can be secured for unfinished or dimension sizes, the supply will go into that type of lumber.

Many lumber mills are shut down throughout the country as a result of this policy of the Federal Government and its failure to make proper regulations which would enable the lumber mills to produce the kind of lumber needed. I am just in receipt of a telegram from the Jones Lumber Co., an old, reliable concern in my district, which states that if the new proposed regulation restricting the amount of lumber a mill can sell to its own yards is put into effect, it will be compelled to shut down completely. The telegram to which I refer is as follows:

PORTLAND, OREG., *March 4, 1946.*

Hon. HOMER D. ANGELL,
Washington, D. C.:

We are reliably informed that OPA will through new restrictive regulations limit the amount of lumber a mill can sell to its own yard or yards on the basis of what is sold to its yard in 1941; this new regulation to be effective about March 15. This is not price control; this is bureaucratic regimentation and manipulation. Who benefits from such regulations? It does not lessen prices to consumers; it merely says that a mill-owned-or-operated retail yard cannot expand or do any more business than it did in 1941 while other yards can double and treble their business. If this new regulation becomes effective you may expect us to shut down completely and not manufacture at all. Is this America? Do you want more lumber produced or do you want us to reduce our production to where it was in 1859 when we first started?

JONES LUMBER CO.

Mr. Speaker, I trust that this legislation, giving full authority to the Expediter to carry forward a building program and to channel building materials into home construction for veterans and hardship cases, with full authority to adjust prices and prevent speculation and excessive profits will be enacted into a law without delay, and that the Expediter will go forward with the program.

Address of Barnet Nover

EXTENSION OF REMARKS
OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mrs. LUCE. Mr. Speaker, today many proponents of international comity either overemphasize or underrate the damage done to good relations by the unilateral acts and declarations of the Soviet Union.

It is, therefore, all the more necessary to call attention to such well-balanced and soundly based appraisals of the present world situation as the following address given by Mr. Barnet Nover, of the Washington Post, at the convocation exercises of the University of Buffalo on February 22, 1946:

More than 9 months have now elapsed since Germany's unconditional surrender and more than 6 months have gone by since imperial Japan gave up the ghost. In the world we live in, in the extraordinarily disturbed era that men of my generation grew up in, there has never been any sharp line of demarcation between war and peace. The Second World War began, though so many were tragically blind to the fact, long before a single shot was fired. There is no longer any organized, large-scale fighting going on anywhere in the world. But peace is still a dream awaiting fulfillment. I say this not merely because peace has not yet been formally proclaimed and because, so far, only one minor peace treaty, that with Siam, has been signed by the Allies. Nor do I say it in any spirit of pessimism. The most hopeful fact of our times is that we no longer assume as we did during the years between Armistice and Armaggedon, that peace is merely an absence of fighting. It is no more that than beauty is merely the absence of ugliness or virtue merely the absence of vice. The most hopeful fact of our times is that people—people of every nation and every race and every creed—now realize, as they have never done before, that peace is not and cannot be the automatic consequence of victory.

All that victory can do is to help clear the ground of the most obvious obstructions so that in due course we can begin to build on a sound foundation of mutual trust, a truly durable house of peace. What is obviously required is a long sustained and continuously cooperative effort by all the nations of the world and particularly by the great powers, an effort that involves an endless process of mutual adjustment among the victors and between the victors and the vanquished.

We have begun to discover that, with the best will in the world, this process of adjustment is not easy and can be disappointingly slow. There have been, as there were bound to be, many false starts, innumerable set-backs. The other day, for my own edification, I drew up a list of the problems regarding which two or more great powers have been at loggerheads during the past year and, for that matter, still are. Leaving out incidental issues, I found that there had been no fewer than 20 such problems, each of them the subject of a more or less heated controversy. They have involved such specific issues as the nature of the postwar political systems in Poland, Hungary, Austria, Rumania, Bulgaria, Yugoslavia, and Italy; the manner in which the postwar settlements with Germany's former satellites are to be drawn up and the terms of those settlements; the future of China, Korea, and Iran; the future of the Dardanelles; the degree of authority and power to be vested in the United Nations Organization and the manner of that organization's functioning; the disposition of Italy's colonies; the relationship between colonial powers and dependent peoples; the all-important question of what is to be done with Germany, and the equally important question of what safeguards are to be drawn up regarding the future use of atomic energy.

None of these problems are unsolvable. Some are in process of solution, at least on a tentative and temporary basis. For better or worse, erstwhile differences among the Great Powers, particularly the Big Three, regarding the governments of certain of the succession states and some of the Balkan countries have been adjusted. A compromise was reached at Moscow, and it may prove to be a workable compromise, regarding the method of drawing up the peace settlements with former Axis satellites. The first steps have been taken to investigate the problem of atomic energy as a problem in international relations and there is no more vital problem than that since, it is no exaggeration to say, the future of mankind depends on what is done about it. The greatest achievement of the past year, next to the achievement of victory, of course, was the writing of the Charter of the United Nations and that Charter's ratification by 51 nations and the setting up, a little more than a month ago, of the United Nations Organization.

It is true that at London there was more of the bull ring than the town meeting in the role thrust upon the UNO. A great many problems were fought over in the Security Council and the General Assembly. None of these problems was actually solved as a result of the vehement debates in which, significantly enough, the principal antagonists were almost invariably the representatives of Great Britain and the Soviet Union. In the old days such undiplomatic language as Mr. Vishinsky shouted at Mr. Bevin and as Mr. Bevin shrieked back at Mr. Vishinsky would have caused the guns to go off by themselves. The first meeting of the UNO had no such tragic outcome. The Bevin-Vishinsky altercations did not add anything either to the gaiety or to the peace of mind of nations—and we could all stand a little more gaiety and greater peace of mind. Yet the debates in the Council cannot be said to have made matters worse. While they underlined the fact—it has not been a secret for some time—that Anglo-Russian relations are far from good and are not getting better, those exchanges between Mr. Vishinsky and Mr. Bevin made it clear that Russia, like the rest of us, believes that UNO is an instrumentality which can be used to advance her particular national interests and cannot, therefore, be ignored. There is promise in that attitude and also a danger. The UNO cannot merely be the sounding board for a lot of international caterwauling but must become, if it is to fulfill its primary function, the place where international differences are adjusted and the work of the world advanced. But for the moment the discussions at London and the fact that, violent as they were, they did not break up the United Nations Organization, have tended to ease one of the great fears recurrently felt in Washington.

That fear is that Russia's role after the Second World War would duplicate the role of the United States after the First World War, with the eastern colossus retreating into the same kind of isolation as the western colossus had done a quarter of a century earlier. When Cordell Hull returned from Moscow in November 1943, one of his most applauded accomplishments was that he had secured Russia's signature to a statement of principle in which was embodied the pledge to set up a new world organization to keep the peace. Later Russia took part in the Dumbarton Oaks discussions. Yet on the eve of the San Francisco Conference, last April, the fear that Russia would stay away from that conference or would limit its role to that of observer was so widespread that there was a great sigh of relief when Molotov arrived.

Russia did take part and from beginning to end a very active part in the San Francisco Conference, as I can testify. But again, last November, there was an upsurge of the old fear with the result that one of the prime purposes of Secretary Byrnes' late mission to Moscow was to insure that Russia would not play possum when the UNO met. Of course, Russia didn't play possum. Her role at London was the familiar role of the bear.

My own belief is that the recurrent fear that Russia might withdraw from UNO and retreat into isolation is based both on a misconception of what isolationism really involves in the world of today and a misunderstanding of Russia's diplomatic strategy. We think we know what isolationism is because that is what we practiced, or thought we practiced, in the years between the World Wars and for a century and more before that. But our isolationism was based on the belief that, being flanked, east and west, by two broad oceans and, north and south, by two weak and friendly nations, we were invulnerable to attack and, therefore, that the way to

insure peace for ourselves was through a policy of passivity.

The Russians have never shared that belief. Russia has been invaded five times in the last 130 years. She was invaded by Napoleon who got as far as Moscow. She was invaded by the Kaiser. She was the victim of multiple Allied interventions in 1918. In 1919 a Polish army came close to the gates of Kiev. Most recently and most vividly remembered there was the Nazi invasion, with German troops sweeping across Russia to the Volga.

The Russians are perfectly well aware that their geographical position has not made them invulnerable to attack from without. Yet Russia's rulers are not yet prepared to accept and act upon the thesis that there is no such thing any longer as a strategic frontier. We now live in an age of atomic power, an age of very long-range planes that can fly nonstop from Tokyo to Washington, an age of self-propelled and guided missiles which, in a few years, may have been developed to the point where it will be possible to launch them in one continent against a target located in another. The Russians, I am certain, are perfectly well aware of these grim facts of life. But that has not stopped them from expanding Russia's borders outward and surrounding the Soviet Union with a chain of satellite, buffer states.

But that is only one aspect of Russian policy. There is also the policy, recently enunciated by Generalissimo Stalin, of making Russia in 10 or 15 years the greatest industrial nation on earth. This ambition in itself need constitute no danger to the world. Under certain circumstances it can be a blessing. But if the purpose of Russia's industrial expansion proves to be, as many suspect Stalin intends it to be, not the improvement of the standard of living of the Russian people but the building up of Russia's military might, it can be a very real danger indeed.

Still another and related aspect of Russian policy is to be found in her diplomatic maneuvering. This brings me back to Russia's relations to the UNO and the recurrent fears I have already mentioned that Russia would retreat into aloofness.

The one clear aspect of Russian foreign policy which the events of the last few years have demonstrated is that Russia will not stay out of but is determined to join every combination of powers that might conceivably be employed against her; if possible, to dominate such a combination or at least exercise a veto over its activities; or if she cannot join the combination, do everything possible to prevent it from coming into being; or, if it has come into being, to break it up. That is why Russia has fought vigorously and so far successfully to prevent the establishment of the so-called western European bloc which has so many advocates in Great Britain, France, Belgium and the Netherlands. By the same token, Russia joined the United Nations but insisted that the Charter include a veto provision through which it is possible for Russia to block any action she deems injurious to her interests or destructive of her freedom of action.

All this, it seems to me, adds up to the fact that the policy which Russia has been pursuing is a policy of isolationism, not isolationism in the passive American sense but isolationism of a peculiarly dynamic variety. For the opposite of isolationism is not merely participation in world affairs but participation on the basis of the belief that the world is a community in which the safety and welfare of one is and must be the concern of all, on the basis of rules which govern the relation of men in society.

I have dwelt at this length on Russian foreign policy because Russia happens to be one of the two countries—the other, of course, being the United States—that holds the key to the future. So far as the United States is concerned, I don't believe there can be the slightest doubt that the policy of isolationism as it was preached and practiced in the twenties and thirties has gone the way of the crinoline and the old horse car. There are still a few unreconstructed isolationists left in the Senate and outside, notably in a few newspaper offices. But they have about the same relationship to the great current of feeling that kept this country from playing its part in the past that a cigar-store Indian in an antique shop has to the late Sitting Bull. There are many more who now belong in the category of partially reconstructed isolationists. They have not really changed their minds but only their votes and not always those. They are the ones who having put themselves on record in favor of the United Nations Charter, cast their ballots against the Bretton Woods agreement, voted against extension of the Reciprocal Trade Agreements Act, held up the appropriations for UNRRA, and have been shouting loudest for absolute American sovereignty over the Pacific islands we had conquered from Japan. The same breed of mavericks will be found, I'm afraid, in dangerously large numbers in the ranks of those shouting to high heaven against the loan to Britain.

I feel pretty confident that, in the final show-down, the British loan proposal will be ratified. But if the backsliders and the die-hard isolationists and the economic nationalists in Congress have their way and the loan is rejected, the consequences of such a development would certainly, in my opinion, be disastrous both to us and to the rest of the world. Unless we do our part, and it must of necessity be an important part, in the task of world reconstruction, and unless we do all we can to widen the area of unhampered and unrestricted world trade—and both of these aims are basic in the British loan—our anticipated industrial boom will have just about the same lasting qualities as did the boom of the 1920's. And that era of illusory prosperity, as you all know, ended in the worst crash this country has ever experienced.

We have become accustomed to the idea that peace is indivisible. Yet it is equally true that prosperity, too, is indivisible. To deal with the political ills that afflict the nations of the world without taking measures to improve the world's economic lot is like trying to walk one-legged on a slippery street in a 50-mile gale. It cannot easily be done if it can be done at all.

Yet, as I've said, I'm not too gloomy about the ultimate fate of the British loan. It represents only one of many aspects of our shift from isolationism to active participation in world affairs. Not only did we play a prominent part in the events leading up to the signing of the United Nations Charter and the setting up of the United Nations Organization, but we played a prominent part, too, at the Bretton Woods monetary conference, in the setting up of UNRRA, in helping draw up, at Chicago and Bermuda, an agreement laying down the basic principles regarding the regulation of international air traffic. We participated in the two food conferences that led to the creation of the world food organization and in the United Nations Educational Conference.

It is conceivable that world government which so many wise and able men feel has become an absolute necessity in this day of atomic energy may come about not through any sudden and dramatic abdication of sovereignty by the nations of the world, great and small, but through the slow and steady multiplication of cooperative international agencies having to do not with high politics but with the more humdrum and day-to-day matters of health and food and education and aviation and finance and labor standards, and so on. Here again Russia casts a dark shadow. Russia has been conspicuously absent from most of those conferences. Her representative was present at the Atlantic City meeting at which UNRRA came into being. But Russia's role in UNRRA is that of beneficiary rather than contributor. She was also represented at Bretton Woods. But so far Russia is the only great power that has not ratified the Bretton Woods agreement.

As I say, world government may grow from the multiplication of those agencies performing so much useful work in the international sphere. But that process is bound to be slow and we cannot depend on it. Nor can we depend alone on the UNO. I believe very strongly in the UNO.

At San Francisco last spring I saw the Charter being hammered out word by word, line by line, paragraph by paragraph. I have no illusions about it. The UNO though primarily intended to be a peace-enforcing agency is least capable of carrying out that great function among the many lesser functions it has. It can only enforce peace if there is among all the great powers the will to keep the peace. And if there is that will the danger of war will be nonexistent.

Whether there is that will can depend to a frightening extent on the United States, on us. We have twice demonstrated in the course of the last 30 years that any nation that arouses our wrath courts disaster. Even if Generalissimo Stalin's latest 5-year plans are carried out on schedule and in accordance with the Kremlin's blueprint we shall remain for some time the Nation with the most powerful industrial machine, the most impressive technology, the greatest latent war potential on earth.

Potential power is not actual power. We were potentially as strong in the years between the wars as we proved to be after Dunkerque and Pearl Harbor. But Germany and Japan for years thumbed their noses at us and added injury to insult because they did not believe we could mobilize our power with sufficient speed to make that power effective against them.

Is history repeating itself? We sought in eastern Europe and the Balkans to see that the pledges of the Atlantic Charter, the promise of the "four freedoms" were made a reality. How many of the "four freedoms" are being respected in Yugoslavia or Bulgaria today?

We made a tremendous effort over a period of many months and with great patience to bring about a stable equilibrium in the Far East where our interests and Russian interests impinge on each other more directly than anywhere else. In the name of amity between two of our great wartime allies we persuaded China to turn back the clock and grant Russia strategic bases and railroad rights in Manchuria, bases and rights which Russia had originally acquired under the czars. Has it profited us anything? Has it profited China? The answer so far, certainly, cannot be given in the affirmative. We fought a war to destroy fascism, and in Argentina, in the hemisphere of the "good neighbor," fascism has taken new root. We sought to play the role of mediator between Russia and Britain in all the arena where those two powers are in latent conflict. Can we point to one question, whether it is Iran or the Dardanelles or Greece or in the Adriatic, where our mediation has up to now resulted in any conclusive results?

There is no nation in the world to which the other nations look more yearningly for leadership than they do the United States. They view us without a sense of fear and in a mood of admiration. We represent to them—they are not as conscious of all our faults and shortcomings as we are—the citadel of human rights and human dignity, the repository of freedom. But many of those nations who look to us for leadership are beginning to wonder whether we have the capacity to lead. That king of France who marched up the hill only to march down again didn't do a more thorough job of rapidly reversing his course than we did after

VJ-day. Our once magnificent and impressive military force has been dissipated. The war for us was over when the fighting ended. But wars are never over until the causes that produced them have really been eradicated. Can we say that the causes that produced the last war—fascism, militarism, unrestricted national sovereignty, international anarchy—have now all disappeared? We are still strong—potentially. And we have the atomic bomb. Oh, yes; we have the atomic bomb. But that atomic bomb by revolutionizing the nature of war has made us more rather than less vulnerable. It is a weapon that, so far as we are concerned, is 5-percent asset and 95-percent liability. The atom bomb has only magnified our responsibility without adding to our influence. That influence can only be regained and maintained if in this disordered world we live in we stand firm, unshaken and unshakable for justice among nations, great and small, powerful and weak, for freedom to know and to speak and to worship, for law and law observance. But the voice we raise in the world on behalf of those principles that are the warp and woof of our traditions will be a thin voice indeed, it will not be heard and it will command no respect unless we are strong.

What I have just said is not new but very old. It was said long ago by an old-fashioned, Eighteenth Century gentleman, a great soldier, a great statesman who, like us, knew what it was to live through a cycle of wars and domestic turmoil and international confusion, a man who loved liberty so much that he was willing to sacrifice everything he had to achieve it.

"There is nothing," wrote George Washington to James McHenry in 1782, "there is nothing which will so soon produce a speedy and honorable peace as a state of preparation for war, and we must either do this, or lay our account for a patched-up inglorious peace, after all the toil, blood, and treasure we have spent. This has been my uniform opinion, a doctrine I have endeavored, amidst the torrent of expectation of an approaching peace, to inculcate; the event, I am sure, will justify me in it."

That phrase, "a state of preparation for war" that Washington used rings harshly and ominously in our ears. It no longer fits in with realities of our times, even if it did with those of Washington. To prepare for war now is to prepare for total destruction, world suicide. You cannot in this day and age even safely employ the word defense. There is not now, there may never be any real defense against the atomic bomb except a state of total peace. But whatever words we use the fact remains that there is as yet no substitute in international affairs for power. It is no longer possible in this day and age, as it was in Washington's and it was not easy then, to employ that power solely to achieve security for one's own Nation. The frontiers of peace are today as wide as the world. The fears that plague us by day, the terrors that beset us by night, are merely a reflection of the sovereign fact that for better, for worse, for richer, for poorer, the world in Wendell Willkie's phrase is really one world.

"The establishment of our new Government," wrote Washington in 1790, "seemed to be the last great experiment for promoting human happiness by reasonable compact in a civil society. It was to be, in the first instance, in a considerable degree a government of accommodation as well as a government of laws."

If we are to have peace in the world, the world, too, must be governed by accommodation but also by laws.

As I said at the beginning I do not despair of the present situation. As we look around the world so many aspects of it remind us of the world as described in Genesis, a world without form, and void; and with darkness upon the face of the deep. Only this time it is up to mankind itself, it is up to all of us, to carry out the divine admonition that was both prayer and promise.

Let there be light.

The Housing Bill

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. KING. Mr. Speaker, the House of Representatives yesterday refused to do its part in alleviating the critical housing shortage confronting the veteran, by rejecting the Wyatt proposal as incorporated in the proposed Monroney amendment to the Patman bill. It is difficult to see how the required building materials for a goal of approximately 3,000,000 homes for veterans in the next 2 years can be produced without the incentive or premium payments requested by the President and his able Housing Administrator, Mr. Wyatt. I regret that the majority of House Members did not support this proposal—its passage was vital to the welfare of our returned and still returning soldiers.

One Hundredth Anniversary of Iowa Statehood

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1946

Mr. LECOMPTE. Mr. Speaker, Members of Congress will be interested to know that the State of Iowa is this year celebrating the one hundredth anniversary of statehood. Iowa was admitted to the Union of States by an act of Congress on December 28, 1846, and became the twenty-ninth State. The State of Iowa thus became one of the important States carved out of the Louisiana Purchase Territory and was the first State so admitted in which human bondage was prohibited.

Down through the years Iowa has had a glorious history. Her sons have taken part in all the wars prosecuted by this country since statehood and in World War II there were 250,000 Iowa men and women in the armed services. Of course, a great many made the supreme sacrifice for the defense of the Republic.

The Post Office Department assured me some months ago that a memorial postage stamp in the denomination of 3 cents in commemoration of statehood for Iowa will be put out by the Post Office Department some time this year.

The Iowa Centennial Committee, appointed by the Governor of the State, has endorsed unanimously a suggestion of Charles M. Fouts, a high-school student of Albia, Iowa, for a design of the postage stamp. The design suggested by this young man is a reproduction of a large picture in the Iowa State Capitol Building entitled "Westward," which depicts the immigration of citizens into the great Mississippi Valley territory and the hardships and privations that these pioneers suffered in establishing homes and free government in the Middle West.

Under unanimous consent to extend my remarks, I include a copy of a resolution adopted by the Howard Cessna Post, No. 136, of the American Legion, Department of Iowa, located at Albia, Iowa, as follows:

Whereas it has come to the attention of the Howard Cessna Post, No. 136, American Legion, Department of Iowa, located at Albia, Iowa, that one Charles M. Fouts, a student in our local high school, has been singularly honored by having had accepted a letter and design for a commemorative stamp of the one hundredth anniversary of Iowa as a State; and

Whereas we of the local American Legion feel that we should be in neglect of duty were we to pass the opportunity to sponsor and encourage the proper authorities in Washington, D. C., to use this design for said commemorative stamp: Now, therefore, be it

Resolved, That Howard Cessna Post, No. 136, American Legion, Department of Iowa, go on record by asking our Representatives in Washington, D. C., to put forth every effort at their command to further and obtain for the State of Iowa and especially said Charles M. Fouts the design presented to the proper committee and copies of this resolution be sent to Senator BOURKE B. HICKENLOOPER and Representatives KARL M. LECOMPTE and JAMES DOLLIVER, and also copies spread upon the records of Howard Cessna Post, No. 136, Albia, Iowa, American Legion, Department of Iowa.

Passed and adopted this 4th day of March A. D. 1946.

C. ALBERT LEWIS,
Commander.
RUSSELL LANCIAL,
Adjutant.

Wages, Prices, and Production

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1946

Mr. BREHM. Mr. Speaker, the following editorial from the March 9 edition of the Pittsburgh Courier so splendidly states the issue, as I believe it to be, that it seems apropos to insert it in the RECORD in the hope that it might help stabilize and coordinate the thinking of those of us who are really trying to be liberal in our thinking without going off the deep end.

This editorial is truly sound American philosophy:

WAGES, PRICES, AND PRODUCTION

As the country seems to be emerging from the epidemic of strikes designed to gain wage increases, and successful in most instances, it is significant that these increases are being accompanied by a rise in prices of all necessities.

Steel has gone up, meat has gone up and there have been and will be price increases all

along the line, while at the same time workers have lost hundreds of millions of dollars in wages.

In numerous instances striking workers have spent all of their war savings and cashed in all their war bonds to make ends meet during the work stoppages.

This indicates that much of the wage increases won will not prove to be real increases because the cost of life's necessities will keep pace with them.

Real wages can be increased without any increase in wages if prices go down, and this is brought about most speedily by increased production which places more consumer goods on the market.

Another way to increase real wages is to reduce taxation by cutting the expense of Federal, State, and municipal government, and at the same time to curb monopolistic practices.

This can be done by intelligent political action which can be exercised in the coming congressional elections, and by pressure on the legislators in the Federal and State capitals without expensive and wasteful work stoppages which often increase prices by cutting production.

Too many Americans came to believe during the depression and post-depression years that the Federal Government possessed some sort of inexhaustible cornucopia dispensing money and all the good things of life in an endless stream, and that any politician promising this boon could make good his promise.

Slowly the more intelligent citizens are learning that government produces nothing but laws and regulations, and that only increased economic production can increase real wages and so truly contribute to the improved well-being of the Nation.

Not only must there be the right to work, but there must be a realization that only through thrift and industry, and the curbing of monopolistic practices, can the Nation prosper.

School Lunches—A Must

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1946

Mr. FLANNAGAN. Mr Speaker, under leave to extend my remarks in the RECORD, I include therein an address I delivered over CBS network, Station WTOP here in Washington, Tuesday evening, March 5, 1946:

The school-lunch program is a must program because it conserves our greatest asset, our American children.

The Federal Government spends millions of dollars each year on soil conservation, and it is money well spent, because it guarantees to the future abundant food and fiber. It spends millions each year on the conservation of our natural resources, so they will last down through the years to serve our people, and this also is money well spent. It also spends millions each year conserving the health of our livestock, treating cattle for the hoof-and-mouth disease, blackleg, ticks, cows for Bang's disease, hogs for cholera, and so forth, and more millions developing foods to make cattle and hogs put on more weight, cows give more milk, chickens lay more eggs, and so forth. Now, I am not against these expenditures. I think that they are wise. But as I have voted for them year in and year out, I sometimes wonder if we are not more considerate of the health and diet of our livestock than we are about the health and diet of our children. Is it not about time we gave a little more consideration to the conservation of our children, so they will grow and develop, physically and mentally, into real American men and women, strong in body and mind, and capable of carrying on and preserving our God-given institutions of freedom, liberty, and equality? What do you think you fathers and mothers of America?

While I do not minimize the importance of the school lunch to agriculture, because I know from experience that it has been a great help in disposing of surpluses, as well as increasing the consumption of food, I would hate to think that I am so neglectful of the welfare of our boys and girls that my sole motivating cause for being for the program was consideration for the farmers. Surely the welfare of our children should not depend upon whether the farmer has, or has not, a surplus. The big thing—the controlling thing in the program, is furnishing underprivileged and undernourished American boys and girls a wholesome, nutritious meal, so they will develop mentally and physically into strong American men and women.

That many of our boys and girls are not being given the proper food is beyond cavil. Dr. Parran, the Surgeon General, testified before the committee hearing the school-lunch bill that dietary studies of school children in various parts of the United States, both urban and rural, showed many school children's diets grossly deficient—in some instances as high as 90 percent deficient. General Hershey, head of the Selective Service, stated that studies made by his office showed that 70 percent of the children who had a fair or poor nutritional diet 10 or 12 years ago were rejected. The study also showed that about 40 percent of all of those called under the draft were rejected, and that the great cause of the physical and mental defects upon which rejections were based was lack of proper nutritive diet during childhood.

Such a showing, my friends, presents a national problem, and it is right and proper for the Federal Government to step in and assist in bringing about the needed corrections.

The school-lunch program is not a new idea. Progressive, far-seeing men and women in many sections of our country years ago realized the need of the child for a hot nutritious school lunch, and through local efforts, chiefly through the efforts of the parent-teachers' associations and local civic clubs, put in school lunches in their local schools. Because the program was sound and people soon discovered a marked improvement, physically and mentally, in the children given the hot, nutritious lunch, it grew, and today has been embraced by schools in every State in the Union. The Federal Government stepped in the picture some 12 years ago as a relief measure. Then in 1935 the Agricultural Department, in order to assist in removing farm surpluses, commenced distributing surplus food products to the schools. Then in 1943, WPA having been abolished and war demands consuming all farm surpluses, thus doing away with all Federal aid to the lunch program, the Congress stepped in and authorized, through language in an appropriation act, that $50,000,000 of what is known as section 32 money, be turned over to the War Food Administrator to be used in aiding the school-lunch program through cash indemnities. This arrangement has been carried on since, from year to year, as no basic legislation has ever been enacted. What the present legislation does is to set up a permanent program by basic legislation.

Of our 208,235 public schools in the United States, last year some 48,000 schools operated a lunch program, serving lunches to some 8,200,000 children. In addition there are many public and private schools operating outside the program, serving lunches to some five or six million children. Hence, the over-all picture is this: Some fifty to sixty thousand schools are serving schoo lunches to some ten or twelve million boys and girls. In addition, some 1,000 child-care centers are serving hot lunches to some 75,000 children.

The school-lunch program has been approved by both the House and the Senate and is now in conference. I hope the conferees, within the next few days, will agree upon a program, and that the program as finally agreed upon will give like treatment to the boys and girls in both public and private schools. The need of the child is the controlling consideration, and this need is as great in the private schools as it is in the public schools.

Mr. WORCESTER. Why are Federal funds needed in school-lunch programs?

Mr. FLANNAGAN. Primarily because many of the schools, without Federal aid, would be unable to operate a lunch program. There are thousands of schools in America located in poor sections. The children in these sections come from poor homes where the earning capacity of the breadwinner is not sufficient to provide the child with a hot, nutritious, noonday lunch. Without Federal assistance very few, if any, of the schools in such areas would be able to provide the school children with noonday lunches. Take away Federal assistance and you take away the lunch from the child most in need of a nutritious noonday meal.

Mr. WORCESTER. Is there a wide variation in school-lunch activities in different parts of the country?

Mr. FLANNAGAN. Yes; and this variation in lunch activities is largely due to lack of proper financing. In some sections where the lunch program has not been inaugurated, the trouble, of course, is lack of interest and appreciation, which, I am happy to state, is rapidly disappearing. As those in these sections begin to realize what the hot lunch means to the child they are demanding the lunch program.

The type of lunch varies in the different schools. Three types of lunch are served—grades A, B, and C. Grade A lunch is a complete nutritious meal, the cost to the child varying from 10 to 25 cents per lunch, the average being around 12 cents. This lunch furnishes the child from one-third to one-half its daily nutritional requirements. Type B lunch, while incomplete, furnishes the child with 20 to 25 percent of its daily nutritive requirements, and costs from 5 to 15 cents, the average cost being around 8 cents. Type C lunch consists of one-half pint of milk, and the cost varies from 1 to 2 cents.

As the program develops and the people become educated to the value of a hot, nutritious lunch to the child, it is hoped that all schools can put in the complete noonday meal.

Mr. WORCESTER. Why consider food needs of only school-age children? Aren't any non-school-age children in need of similar aid?

Mr. FLANNAGAN. While all children, regardless of age, need a hot, nutritious lunch, those too young to go to school have a fair chance of getting a hot noonday meal at home. It is imperative, however, for the school child in order to properly develop physically and mentally to have, at least, one nutritious meal. I agree, however, that many non-school-age children are going without proper diet, and I hope the day will soon come when every American child has at least enough of the right kind of food to eat.

Mr. WORCESTER. What specific advantages are there in Federal aid for school lunches?

Mr. FLANNAGAN. Mr. Worcester, there are so many advantages that I cannot begin to enumerate them this evening. For instance, under the bill the Federal Government is charged with setting up the standards for a nutritious lunch, and the school, before they can secure Federal funds, must meet the standards. This is all-important in that it sets the standard and assures the child a nutritious lunch. It would be foolishness

simply to provide the child with food without regard to its nutritional value. If the child were left free in the matter, in all probability it would select food that would do it very little, if any, good. Then, too, when the Federal Government comes in and pilots the way it becomes possible for every school in the land to embrace the program. Moreover, Federal aid lends permanency to the program.

Mr. WORCESTER. What are the possible aids to agriculture in the school-lunch program?

Mr. FLANNAGAN. Aside from being an outlet for farm products in surplus, aside from the enormous market for food, the program at present supplies (last year agricultural products valued at $89,547,160 went into the program), the greatest value of the program to the farmers is this: It will furnish instruction in the principles of nutrition, which will bring about an increased consumption of farm products. The example that is set in furnishing the children nutritious food and instruction in nutrition will not be forgotten by the children when they go home, nor will it be forgotten by them when they grow up and have families of their own. It is a proven fact that children go home and tell their parents about the kind of food they have in their school lunches and that the information they have carried home has brought about a marked improvement in those homes, as far as quantity and quality of food consumed is concerned.

Mr. WORCESTER. What is done when local requests for Federal funds exceed the appropriation?

Mr. FLANNAGAN. Federal funds are apportioned to the States on the basis of school population and need. If any State fails to match its apportioned funds that part not matched is reapportioned, and in that way many of the local requests you speak of are met. Of course, if all the States match Federal funds, in which case there are no funds left to reapportion, the local schools will simply have to do the best they can. In most of the cases, however, you will find the local interest so great that the funds are readily supplied from local sources.

Justice for Poland

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1946

Mr. CLASON. Mr. Speaker, I am pleased to bring to the attention of the Members of Congress statements broadcast over Station WSPR in Springfield on February 17, 1946.

The first speech dealing with "Justice for Poland" was delivered by Senator LEVERETT SALTONSTALL, of Massachusetts. The second speech was delivered by Judge Napoleon J. Vigeant, of Chicopee, Mass.

These broadcasts in behalf of Poland are arranged by the Polish-American Congress, Inc., and they are listened to by an ever-increasing group of the citizens of western Massachusetts:

ADDRESS OF HON. LEVERETT SALTONSTALL, OF MASSACHUSETTS

Friends of Poland, when Dr. Smolczynski invited me to join you in your Sunday broadcast on this Polish hour I wrote him that I did not expect to be in Springfield in the near future, so he asked me to prepare a little statement and read it so that it could be transcribed to you. I am happy to do so.

I have the greatest admiration for the citizens of Poland and those of Polish descent in other countries throughout the world. Theirs is a great heritage of fredom, and their courage and their will to fight to the bitter end to maintain that heritage have been an inspiration to all of us. The Atlantic Charter and other conferences had raised the hopes of every freedom-loving citizen. The Potsdam agreement lent encouragement for every person who fought or worked for the freedom of peoples everywhere. But neither that agreement nor the conference at Yalta was consummated in a way to encourage the friends of free Poland. I for one cannot put my stamp of approval on much of the treatment accorded Poland. The people of that country still suffer. They have not yet felt that sense of justice and love which they expected and deserved. I would like this morning to point out to you a hope. It may be a faint hope but yet it may become a real one. That hope lies in the United Nations Organization which is about to become a reality. All of us must have faith in its purposes, in its ideals, and its promises. Article 14 of that agreement is the article which I would like to quote to you. It was the article which the United Nations delegation at San Francisco was so insistent to have included. I feel it may give a special encouragement to Polish citizens. It says:

"The General Assembly may recommend measures for the peaceful adjustment of any situation, regardless of origin, which it deems likely to impair the general welfare of friendly relations among nations, including situations resulting from a violation of the provisions of the present charter setting forth the purposes and principles of the United Nations."

Free discussion in the General Assembly of the United Nations gives encouragement that ultimate correction of the present wrongs and the attainment of the desired justice and the spirit of freedom may be obtained. I agree that this hope is no guaranty but I feel that it is toward the end in which we can place some justification. It is at least the goal towards which the lovers of the Polish people who realize what they have stood and fought for can work with firmness and determination. Let us strive as Lincoln said "in the right as we see the right," to bring the full measure of freedom, prosperity and happiness to the gallant Polish people beside whose boys many of our own sons have fought and died in the past 3 years. In the meantime our Government in the United States must do its part never to force the involuntary repatriation of Polish citizens who do not want to go back to their homes. Up to the present time we have not exerted ourselves to the fullest extent. We must do all we can through speedy mail and parcel post to permit citizens of Polish descent in this country to help and keep in touch with their loved ones in Poland. Have we done all that we can to see that this has been carried out? I think not. If we want the world to believe that we are champions of liberty and democracy, fairness, and decency, we must show by our actions that we have the courage of champions and are willing to help, not by words only but by deed—for deeds speak louder than words. With God's help on this Sunday afternoon we may take encouragement for the future of Poland, and I for one join with you in praying that truth, justice, and security of living may in the not too distant future again prevail in a free and glorious Poland.

ADDRESS OF HON. NAPOLEON J. VIGEANT, THE PRESIDING JUSTICE OF THE DISTRICT COURT OF CHICOPEE, MASS.

Ladies and gentlemen, the Atlantic Charter, referred to by my good friend Senator SALTONSTALL, is that set of principles proclaimed by our country to the world, for which we were willing to fight the Second World War, and for which we were willing to make sacrifices, not only of our material wealth, but also of our blood. The other Allied Nations subscribed to those principles, and the Atlantic Charter became the Magna Carta of our combined effort to crush nazistic totalitarianism. Poland, the ever-living symbol of those principles, did not need to subscribe to them, for she had already lived them, and fought and died for them.

Poland's valiant stand against Hitler's conquering hordes inspired our country to the enunciation of those principles, but when the fortunes of war turned against Hitler, we gradually abandoned them, one by one, and, although we still rendered lip service to its pronouncements, we are now turning to power politics of might against right, and we are forsaking one country after another in eastern Europe into the bondage of another aspiring, ambitious nation.

For the best evidence of our changed attitude, let us look at the plight of Poland. Here is the sixth largest country in Europe, with a prewar population of 35,000,000 people, with a recorded history of 1,000 years, firmly attached to Christianity and western culture, now deprived of her freedom, her independence, and her constitutional government.

Poland was the first country that opposed Hitler. Attacked by German armies from the west, and Russian armies from the east, Poland became the victim of two greedy aggressors working in agreement, one with the other. They divided the overpowered country, and entered upon a planned program of plundering the nation, deporting its people, and destroying every vestige of culture and advancement, and causing untold hardship and suffering.

After the falling out between Hitler and Stalin, Poland became the battleground of the strongest armies in Europe, bent on destroying everything that stood in the path of either of them. The Germans moved into Soviet Russia, and when they were finally pushed back, in a large measure due to American assistance, Soviet Russia claimed half of the unfortunate country that she had already been given by Hitler when they had been partners in crime.

When the Polish constitutional government in exile refused to sign an agreement condoning this conduct, Soviet Russia severed diplomatic relations, and imposed on the remaining half of Poland its own puppet communistic regime, which was eager and willing for its maintenance in power, to sign away any part of Poland that was directed by Moscow. To placate the western allies, and to make a show of adherence to the principles of the Atlantic Charter, an insignificant number of Polish democrats were added to the Polish puppet government, gaining for that regime official recognition of it by the United States and Great Britain. The edicts of the communistic majority of that regime will be enforced by the Russian Army, garrisoned in every larger city of Poland, and the Russian secret police will take care of any organized opposition by deportation to Siberia or immediate liquidation.

Are we fulfilling our obligations to the trusting nations of Europe who expected us to be champions of liberty and democracy? What will be the result of our inconsistent foreign policy of continued appeasement of Russia? It is hard to prophesy, as the future is covered with a heavy veil.

Many people are of the opinion that in every country deprived of freedom and independence the democratic elements that confided in us, that had faith in us and in our pronouncements, now hate us bitterly and wait only to act for themselves, to throw off the yoke of Russian bondage. It is inevitable that another world war will ensue.

By placing most of Europe under Soviet domination, we are adding to its power and

building up a military colossus that will outnumber us in available military strength because of the resources of the whole of Europe and most of Asia at its disposal. It follows that such a domination of Europe will result in the still stronger infiltration of communistic ideology into the continents of North and South America, causing many disturbances and strifes on our own soil.

We are creating a commercial giant nurtured in regimented industry and finance that in the not too far distant future will enter upon an undreamed-of competition with us in all of the markets of the world.

It is, therefore, in our own self-interest that we be concerned with the plight of Poland, for there can be no lasting and durable peace for the world without justice for Poland.

Collection of Lincoln Relics

EXTENSION OF REMARKS
OF

HON. HUBERT S. ELLIS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1946

Mr. ELLIS. Mr. Speaker, today I submit to my colleagues a most interesting story written by Bethel D. Swint and published in the Point Pleasant Register, Point Pleasant, W. Va.

The article should be of interest principally because it concerns the great Lincoln; and, further, it concerns Col. Kellian V. Whaley, a former Member of this House, who was closely associated with Lincoln. Colonel Whaley was a Member of this body, serving two terms, 1863–65.

The Fourth Congressional District, which I have the honor of representing, was a part of the district represented by Colonel Whaley, and all the persons involved in this story are closely associated with my section of the country.

Mrs. Swint and John G. Aten, Jr., reside in Point Pleasant.

The article follows:

VALUABLE COLLECTION OF LINCOLN RELICS OWNED BY JOHN ATEN, JR.

(By Bethel D. Swint)

John Aten, Jr., deputy to his father, John Aten, county clerk of Mason County, is the proud possessor of the remarkable Whaley-Aten collection of relics directly connected with President Abraham Lincoln. Mr. Aten himself is a recognized authority on matters relating to the great President's life.

Lincoln—the hero, the schoolboy idol who rose as a meteor from dull obscurity to the highest position in the land—may seem to be ceasing as an inspiration in this day when hard work is a doubtful virtue and the path to success is not always the same one trod by the leaders of other days. But he has not ceased to be interesting.

The items in the Whaley-Aten collection give one a clear picture of many of the events which were transpiring when John Aten, Jr.'s grandfather, Col. Kellian V. Whaley, a native of New York, was in the Nation's eye as a Congressman during Lincoln's administration. Colonel Whaley lived in Wayne County before and during the Civil War in 1861, and after West Virginia became a State he served two terms in Congress, 1863 and 1865.

The Lincoln relics owned by the Atens were handed down by Colonel Whaley. He and Lincoln became close friends when the latter was beginning the practice of law in Galesburg, Ill., and Colonel Whaley was a school teacher in that town. That was before they went to Washington. Colonel Whaley, who was the father of Mrs. Waldo E. Allen, of this city, and Mrs. Estella M. Sands, of Maurietta, Calif., had a distinguished military record. His son, the late Carlyle Whaley, died here last year.

Included in the collection is a black crepe-shrouded gold-braided shoulder badge which Colonel Whaley wore as a member of the congressional delegation which followed the remains of Lincoln to the burial place at Springfield, Ill. The transportation ticket which entitled Colonel Whaley to ride on the funeral train, and which was signed by E. D. Townsend, then Assistant Adjutant General, is also in the collection. Included also is a black-bordered card of admission to the East Room of the White House when the martyred President's body lay in state, April 19, 1865.

The President and Mrs. Lincoln invited the Whaleys to the White House March 1, 1864. The Lincolns must have kept rather late hours for the time set for the guests was from 9 to 12 o'clock.

Invitations to inauguration ceremonies were elaborate affairs in those days. The invitation sent to Colonel Whaley and his family for the inauguration of Lincoln March 4, 1865, was signed by more than 50 "managers."

A Brady photograph of the President, which was given to Colonel Whaley by Lincoln himself, is quite distinct and shows the Great Emancipator as a man not quite so homely as he has sometimes been pictured.

Other items in the collection include a picture of Lt. Gen. Ulysses S. Grant and a handwritten invitation to a social affair given by the Grants at the Douglas Rowe, April 6, 1865. The Atens own a picture of the entire Congress taken at the time Colonel Whaley was a Member of that august body. An invitation from Secretary of the Treasury Salmon P. Chase and Miss Chase, presumably his sister and official hostess, is among the momentoes.

Wyatt Smith, of Your Friends and Mine column, recently wrote that "Colonel Whaley was an ardent unionist whose feelings for his one-time enemies never notably abated. He did not look with favor upon the suit of William H. Fry, of Buffalo, W. Va., for the hand of Mollie Whaley, his daughter." Fry had been a Confederate soldier.

After leaving Congress, Colonel Whaley became a United States collector of revenue on the Texas border. While he was gone, ex-Confederate William H. Fry successfully wooed and won Mollie Whaley. The couple were married in Point Pleasant in the house now the home of Mrs. W. R. Gunn and Dr. and Mrs. Neil Gunn on River Street, July 27, 1869. The Reverend Stephen Vaught, a Methodist minister and father of W. H. Vaught, of 908 Main Street, performed the ceremony.

R. P. B. Smith, county clerk of Mason County, wired Colonel Whaley of the marriage. Colonel Whaley and his son-in-law were said to have never been reconciled, but Mrs. Fry visited her father before he died. Their daughter, Nellie, is Mrs. John Aten, Sr. Their other children were Henry K. Fry and Bertha Fry, who was the wife of John E. Armstrong (both deceased); Mrs. Frank Shafer, of Cincinnati, Ohio, and Mrs. Arthur Henry, of Weston.

Great-grandchildren of Colonel Whaley residing here are Charles M. Fry, Mrs. Carl G. Gardner, Mrs. Okey Blagg, Mrs. Lena Carr, and John Aten, Jr.

The Atens have a copy of an issue of the New York Morning Herald of April 15, 1865, which carried well-written accounts of the shooting of Mr. Lincoln the evening of April 14, and the fatal wounding of Frederick Seward, Secretary of State by the assassin who stole into his apartment on the pretext of bringing medicine from the druggist. The Herald worked against a news deadline that was the last word. A bulletin said the President died at 22 minutes past 7 o'clock the morning of the fifteenth, and the paper went to press at 7:30 o'clock.

A newspaper worker couldn't recist further notations about the 4-page copy of the old Herald, which carried the news of Lincoln's death, the beginning of Sherman's march out of Goldsboro, Ga., and a few other items on the front page. The entire inside 2 pages were devoted to advertising Kitchel's Liniment, with the exception of one-half the editorial column which was devoted to Lincoln's death.

Included in the interesting collection, but not connected with Lincoln, is a copy of Volume 1, No. 1, of the New York Herald, published in New York City on May 6, 1835 by James Gordon Bennett & Co. Among the items on its pages is a dispatch showing Great Britain and Russia at sword's point over the Dardanelles.

Items of the collection were displayed at the Jamestown Exhibition in 1907.

The whole world has arrived at more or less settled opinions as regards the high qualities of human nature and responsible leadership in public life and towering above all who have gone before stands the figure of Abraham Lincoln.

Public Welfare Act of 1946

EXTENSION OF REMARKS
OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1946

Mr. FORAND. Mr. Speaker, I introduced on yesterday H. R. 5686, a bill entitled the Public Welfare Act of 1946. This bill provides for the public welfare through grants to the States for assistance for needy individuals and for welfare services. It proposes to amend the Social Security Act in order to achieve two purposes: First, that the States may be enabled to meet actual need wherever it exists, and second, that the Federal Government may deal with the States on a unified rather than piecemeal basis in the welfare field.

This proposal is based on the principle that while the actual administration of welfare programs is the responsibility of the States and localities, the Federal Government has a clear-cut responsibility to give leadership on a national basis and to extend financial aid to the States in a joint campaign against insecurity, poverty and their resultant social evils. This bill has been prepared after consultation with those who administer such programs. It incorporates the recommendations of the American Public Welfare Association, an organization of State and local public-welfare agencies, welfare officials, board members, and workers. It reflects the results of 10 years' experience in administering the present welfare provisions of the Social Security Act.

The social security program approaches the problem of insecurity in two ways. First, through the social insurance programs, both old-age and survivors' insurance and unemployment compensation, it undertakes to prevent dependency by assuring individuals a cash pay-

ment to compensate them for loss of earning power due to unemployment or old age or, in the case of premature death, to assure their survivors a regular benefit payment. Payments under the insurance program are based on contributions made to an insurance fund by the worker and in his behalf by his employer and are, in effect, a form of savings to which he is entitled because of an equity interest regardless of his personal circumstances. The insurance system represents, to my mind, the ideal way of helping individuals to protect themselves against the predictable hazards of modern economic life. I favor its extension to the entire working population of the country. I favor also the liberalization of benefits so that they will be adequate to provide the basic needs of the average person.

It must be recognized, however, that it will be many years before even an expanded or liberalized social insurance program can provide the maximum protection to the bulk of our population. The Social Security Act, as enacted in 1935 and subsequently amended in 1939, recognized the responsibility of the Federal Government to assist the States in meeting the needs of certain groups, namely, the aged, the blind, and dependent children, on an assistance basis. Moreover, it recognized that there are related needs for health, child welfare, and vocational rehabilitation services in which the Federal Government had a responsibility to assist the States. The second approach of the social security program was, therefore, to underpin the insurances with grants to the States for assistance and for services.

Today we are confronted with a situation in which both phases of the social security program should be strengthened if the needs of the country in this critical postwar period are to be met. The bill which I have introduced deals with the assistance and welfare service phase of the program but in no way represents an alternative to the proposals for insurance liberalization which are covered by other measures.

The Public Welfare Act of 1946 is directed toward meeting the actual needs of millions of people in this country. These people are either already out of the labor market because of age, disability, or widowhood and can therefore never hope to benefit from an insurance program which is based on employment, or they are among the 21,000,000 working people not now covered by the OASI program who, even were the coverage of the program to be extended, cannot hope to receive full benefits for many years to come, or they are those who cannot support themselves fully on the present low level of benefit payments. It is my conviction that even while we work toward a complete and comprehensive insurance system we must simultaneously make it possible for the States to meet the want that is actually on our doorstep today. Obviously, as the insurance program expands, the assistance program and the charge against general revenues which it represents will automatically decline. I want to make it very clear that while I propose a comprehensive assistance program which will place a floor under poverty and want for all people, I do so in the clear expectation that numerically it will be a diminishing program as the insurance program expands.

The basic purpose of the bill is to assist the States and to provide the leadership of a common program to the end that no person in the country need go hungry for want of public aid and that, where needed, welfare services may be made available to alleviate or prevent poverty, to minimize its resultant social evils, and to promote the welfare of those who cannot protect themselves, especially children. The bill proposes to achieve these ends in the following ways:

First. It would make it possible for the Federal Government to assist the States in meeting need whatever its cause. It would leave to the States the option as to whether they wished to continue the present categories of old-age assistance, aid to dependent children and aid to the blind or whether they preferred to provide for these groups as part of a comprehensive assistance program. Provisions would have to be made for these three groups as a condition of receiving Federal funds and no State could exclude any otherwise eligible person because of residence or citizenship requirement. It would make it possible to assist all needy children not in institutions, including those in foster homes.

Second. It would assist the States to provide on a more nearly adequate basis for the actual requirements of needy individuals and families. It would do this in three ways. First, it would extend a higher percentage of Federal financial aid to the poorer States and thus rectify the present situation whereby under an even sharing of costs by the Federal Government and the States, the States that need it most receive the least in Federal aid. Second, it would permit the States to determine the amount of assistance needed in a particular case and authorize the Federal Government to meet its share of the cost without the present maximum limitations of $20 a month each on old-age assistance and aid to the blind and the miserably inadequate present limitation on aid to dependent children of $9 a month for the first child, $6 a month for other children, and nothing for the mother or responsible relative. In the third place, it would require the States to so allocate funds within the States as to meet in full the needs of eligible individuals on the basis of standards determined by the States.

Third. It assists the States to meet more adequately the needs of those who require medical care by authorizing direct payment to doctors, institutions, and other agencies furnishing such care to the needy and by permitting those adults who require medical care voluntarily to reside in public as well as private institutions without loss of their cash assistance. The high incidence of disability and chronic illness among those who require assistance, especially the aged, makes this an important provision. It is intended to meet an actual current need and is not put forward as a substitute for any other measures to meet the health needs of the population as a whole.

Fourth. It extends the area of Federal financial aid to services as well as assistance, recognizing that the needs of children and many of the needs of adults require something more than cash assistance. The war years have demonstrated as never before, and we see the continued need reflected in postwar conditions, that a Nation which neglects the welfare of its children and families pays a heavy price in delinquency, maladjustment, and ultimate dependency. The bill would permit the Federal Government to match State expenditure for social services on the same basis as assistance.

Fifth. The bill would require unified administration of federally aided welfare programs at all levels of government—local, State, and Federal. Under the present hodgepodge situation in many States and localities a needy individual finds himself shunted from office to office in a vain effort to find the answer to his needs. At the same time the State welfare departments, in trying to work out a unified and comprehensive approach to the welfare needs of their own States find themselves increasingly hampered by the necessity, imposed by the present Social Security Act, of dealing with two Federal agencies, namely the Social Security Board in the Federal Security Agency and the Children's Bureau in the Labor Department, on two programs as inseparable as assistance and child welfare services. This bill therefore proposes placing the administrative responsibility in what appears the logical welfare agency of the Federal Government, the Federal Security Agency. Should action be taken under the Reorganization Act or other legislative enactment to transfer the Children's Bureau or its child welfare functions to the Federal Security Agency it would, of course, be up to the Federal Security Administrator to relate its welfare functions to the unified administration of welfare services provided by this bill. It is felt that the proposal of this bill will serve the best interests of children as well as adults by recognizing that the welfare needs of children must be met as a whole, not piecemeal, and by further recognizing that the welfare of children is inextricably tied up with that of the family.

Bring Congress Up to Date

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. KEFAUVER. Mr. Speaker, we should all be very grateful to the La Follette-Monroney committee for the painstaking study it has made of Congress and of the ways Congress can be brought up to date. Let us hope that the recommendations of the committee will be followed up with bills and resolutions to put them into effect. Typical of the editorial commendation of the work and report of the committee is the editorial

which appeared in the Memphis Press-Scimitar of March 4, 1946, which is as follows:

BRING CONGRESS UP TO DATE

The La Follette-Monroney committee, created last year to study the organization and operation of Congress and to recommend improvements, came out today with an admirable report.

The American people have been increasingly concerned over the evident inability of Congress to play, with maximum effectiveness, its proper role in our form of government. Their concern was reflected in a flood of suggestions to the committee. To all, the committee applied this simple test: "Will they strengthen Congress and enable it to do a better job?"

Congress will gain strength and ability to do an immensely better job if it adopts the La Follette-Monroney proposals. Here are some of the changes that would be made:

The unwieldy committees with their overlappings and conflicts, would be greatly simplified. The Senate would have only 16 standing committees instead of 33; the House only 18 instead of 48. Each committee's jurisdiction would be clearly defined. Each would have a small, well-qualified staff of research experts, and no longer would have to depend on inevitably biased departments and bureaus of the executive branch for fact-and-figure information.

The legislative reference service would be enlarged and strengthened to give skilled research assistance to individual Congressmen.

Each Senator and Representative would have an able, well-paid administrative assistant to look after the errand-running and other nonlegislative work that now absorbs a huge part of the average Member's energy and time.

Congress could no longer approve appropriations without regard for Federal income. It would be required to keep the total of appropriations within anticipated revenue or, by record vote, to express itself in favor of increasing the public debt. Committee hearings on spending bills would have to be public, instead of secret, as they are now. And all Members would have longer opportunity to study appropriations before voting on them.

Congressional time would be used more effectively. A heavy burden of petty, detail work would be lifted—for instance, by giving the District of Columbia self-rule instead of requiring Congress to serve as Washington's city council.

Organized groups exerting pressure on Congress would be required to register themselves and their agents, and to report lobbying expenditures.

The $10,000 salaries of Senators and Representatives would be raised to $15,000 a year. And Members would be permitted to contribute to the Federal retirement system and become eligible to annuity payments from it after serving at least 6 years and reaching age 62.

Most Members of Congress will be enthusiastic about the proposals for higher pay, pensions, and more help for themselves. But there will be bitter opposition to other suggestions—especially those for reforming the committee systems and reducing their size. That would mean reducing the number of committee chairmen, and Senators and Representatives who have risen to these positions of power by long service do not, naturally, want to give them up. But the La Follette-Monroney report states a compelling reason:

"No adequate improvement in the organization of Congress can be undertaken or effected unless Congress first reorganizes its present obsolete and overlapping committee structure. This is the first and most important test of whether Congress is willing to strengthen itself and its organization to carry the tremendous work load that present-day governmental problems place upon it."

Housing Stabilization

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. VORYS of Ohio. Mr. Speaker, I am willing to vote for this so-called Patman bill in its present form, but I believe it would be far better to send it back to the committee to be reconsidered and rewritten, and shall therefore vote to have it recommitted for this purpose.

I want to do anything I can to help produce more housing at fair prices for war veterans, but I am not going to be stampeded by high-pressure propaganda into voting for measures that will produce more Government controls, more bureaucrats, more confusion, but no more houses. There has been a lot of talk about the selfish, short-sighted lobbying against certain features of the original Patman bill, but I have never seen anything to compare with the pressure and power of the lobbying in favor of certain features in the original Patman bill. We have eliminated subsidies for producers of building materials. I believe it is selfish and short-sighted for us to load part of this year's housing bill onto our children by piling it on top of the national debt. We have eliminated price ceilings on existing houses. I believe it is selfish to ask the Government to clamp down on present home owners for the benefit of would-be home owners. This is also short-sighted, for the sheer burden of attempting to fix ceilings on 29,000,000 houses, built at different times and under all sorts of conditions would create a bureaucratic mess that would make it practically impossible to buy or sell an old house.

The Patman bill now provides for a housing expediter, for maximum sale prices on new houses, for allocation, priorities, and pricing of building materials, for veterans' preference in buying and renting, for financing the construction and purchase of low-price houses at 90 percent of the appraisal value. Under efficient administration these provisions should go far in producing houses for veterans at reasonable prices. I am willing to vote for them.

On the other hand, there is nothing left of the original Patman bill except the title and part of the purpose clause; President Truman says that the heart has been taken out of the bill; his housing expert, Mr. Wyatt, says that the House has scuttled his house program. I think this bill should be sent back to the committee which considered it, so that we may find out whether the President and Mr. Wyatt were in earnest in their vicious criticism of the House action or whether they were merely preparing an advance alibi for the failure of a program they knew was unworkable. There may be mistakes and inconsistencies in the present bill, which was put together on the floor of Congress by means of amendments. I believe this bill should be rewritten in committee before it goes to the Senate. That is why I shall vote for its recommittal. On the other hand, I am willing to vote for this bill as it is rather than to make no attempt to aid in the housing situation.

Certain things, however, are clear. You cannot build a single house by passing a law. No Government administrator is going to build a single house, although he may prevent the building of many. Houses are going to be built by American contractors and workmen, and the law must be administered so as to encourage them to build. I hope, for the sake of the homeless, that this administration shows more appreciation of these fundamental truths in the future than it has to date.

I should also like to sound a note of warning to every World War II veteran. There has been so much political talk about the so-called Patman bill and housing legislation that some of it may be used to persuade veterans that they have a great opportunity, in fact, a duty to buy the homes that are offered this year. Every veteran should remember that this year he will buy a house on an inflated postwar market, and should think a long time before he ties himself down to years of payments on a home purchased under such conditions. No one has yet been able to suggest a law that will eliminate this condition. Certainly the proposed Wyatt program would not do it. Therefore, every veteran should beware of Government propaganda and real-estate salesmen's talk, and if he buys a home this year or next do it with his eyes open, remembering that Congress cannot pass a miracle and that he may be paying on his 1946 Wyatt dream house for a long, long time.

The Veteran and Surplus Property

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 7, 1946

Mr. KEFAUVER. Mr. Speaker, all of us are interested in the problem of assisting veterans in procuring surplus Government materials. Under leave to extend my remarks, I am including a letter from Lt. Comdr. B. A. Crisman, in which he discusses the present situation, and gives several constructive suggestions for its betterment:

JANUARY 28, 1946.

Hon. ESTES KEFAUVER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN KEFAUVER: Since Congress has demonstrated a willingness to as-

sist the veterans, I thought that you would be interested in the following facts regarding difficulties of the veterans in procuring surplus Government materials.

Since my duties are involved in closing excess naval bases and facilities in the Eighth Naval District, I am often confronted by a veteran with the question of procedures for procuring surplus Government properties. Many of the ex-servicemen are becoming quite bitter with the red tape and the useless efforts they have exerted in an attempt to obtain materials for their new business. This is distressing, and is believed not to be the intention of Congress to make such materials difficult to procure.

Several reasons seem to be the cause for this as far as I can see. One of the reasons is that the veterans do not fully understand the complicated procedure to follow in order to obtain this material. The separation centers are distributing information which is believed complete and adequate regarding the buying of surplus properties. Enclosed is a copy of the instructions which are given to servicemen as they are separated at the separation center, New Orleans, La., where I am now stationed. Now you can see this is quite an awkward and complicated process.

The second reason for veterans having difficulty is that they are often directed to the Reconstruction Finance Corporation, which is a selling agent for surplus properties. The Reconstruction Finance Corporation is interested in selling large quantities of material and, therefore, are not particularly interested in single or small quantities of items. With this policy the veteran is often ignored or given a disinterested answer to his inquiry. A particular incident of this was witnessed in Oklahoma City when a sergeant was kept waiting for an undue length of time and finally given an inadequate answer to his inquiry for purchase of surplus properties.

Another reason for difficulty in purchasing surplus materials is that information regarding the availability of material is not made public or properly advertised in order that the veteran buyer knows of its availability. Often a veteran is in the market for certain items, such as tires, automobiles, and kitchen equipment which he has not known was available for purchase until an announcement was made in the local paper regarding the sale of 900 trucks or 7 tons of tires by the Reconstruction Finance Corporation to some large purchaser.

There are probably other reasons for the veteran to be discouraged in purchasing these materials, but these three seem to be the most outstanding that I witnessed.

It is believed to be of interest to Government and armed services to make these purchases easier for the veterans because the ex-servicemen are very conscious at this time of Federal Government expenditures and procedures. Many men have been in the service several years under wartime conditions when expenditure of materials, equipment, and funds were not necessarily a consideration.

It is suggested that an agency be established or that one which is already established be assigned a mission to facilitate small purchases by qualified veterans and that the procedure for such purchases be somewhat simplified. This agency should have available lists of surplus materials of all types.

A veteran should be able to approach this agency with a request for certain material. The agency would determine if he is qualified to purchase the material; then it should locate the material for him and permit personal inspection by the veteran. The surplus material should be sold at market prices or less. The object of this agency should not be to get the highest price for the materials as it is with the Reconstruction Finance Corporation, but to distribute such materials as required by veterans at reasonable prices.

It is realized that the purchase of surplus material is quite a complicated procedure; however, since the veteran has been told that such material would be available to him upon his application and since many have witnessed extravagant uses of materials, particularly overseas, and during the war, they feel that their meager requirements could be satisfied if the administration of the selling agencies was efficient.

Many more urgent problems are now pressing Congress, but any consideration that can be given this situation would be appreciated by all ex-servicemen, I am sure.

It seems that I shall be required to wait until September for my release. I thank you for your prompt action on my personal problem and am assured that everything possible has been done.

Sincerely,

BRYAN A. CRISMAN.

Labor Relations in Sweden

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1946

Mr. JUDD. Mr. Speaker, frequent reference is made, in discussions and books on the subject of labor relations, to the successful handling of labor relations in Sweden. The Swedish plan is often referred to as a model plan.

The American Swedish News Exchange, Inc., located at 630 Fifth Avenue, New York, issued a news letter December 17, 1945, dealing with the subject. It was reproduced, with permission, by the Associated Industries of Minneapolis in its news letter of February 21, 1945.

Under leave to extend my remarks, I include it herewith because I believe it will be helpful to all who are seeking better labor relations in our own country:

LABOR RELATIONS IN SWEDEN

SYSTEMATIZED COLLECTIVE BARGAINING APPROVED BY BOTH LABOR AND MANAGEMENT

"A balance of power between employers' and workers' organizations undoubtedly constitutes a strong guaranty against misuse of the weapon of open conflict," writes Arnold Sölven, legal counsel for the Swedish Trades Union Federation. "It forces the leaders on both sides carefully to evaluate and weigh ends and means, aims and possibilities. It is indeed no sure guaranty of labor peace * * *. But through the organizational balance of power, open trials of strength in the Swedish labor market have increasingly assumed the character of ultima ratio, the last way out, only employed after all the possibilities of reaching a peaceful solution by process of negotiation and mediation are exhausted."

An equally favorable employer opinion of this bargaining system with national organizations on both sides has been noted by an American observer[1] who writes: "The great majority of Swedish employers no longer regard unions and collective contracts as necessary evils, but actually prefer them to verbal agreement with individual workers." He says he has the assurance of the leaders of the Swedish Employers' Federation on this point, also of many other persons in a position to judge the consensus of employer opinion.

COMPULSORY ARBITRATION OF LABOR DISPUTES OPPOSED

The aim both of employers and workers throughout the history of collective bargaining in Sweden has been to maintain the contractual basis and avoid compulsory government arbitration. Arnold Sölven points out, in regard to the factors leading to the formulation of the so-called basic agreement (huvudavtalet) between the employer and worker organizations, that "it was clear to the central organizations on both sides that a stiff and obstructive system of compulsory regulation was inevitable unless the contracting parties themselves took measures to render public action to assure labor peace superfluous." That was during the 1930's, when as a result of constantly increasing pressure for compulsory regulation of labor disputes, a joint management-labor committee sat for 2½ years before the basic agreement was finally arrived at. The proposals for compulsory regulation, it should be noted, were mostly of a political nature, not originating from either management or labor. Nor were they supported by parliamentary committees, the attitude generally being taken that the settlement of interest disputes[2] was a matter for negotiation between the parties concerned. Consequently the only provision in the labor relations statutes in Sweden absolutely prohibiting coercive action in the form of strike, lock-out, blockade, etc., refers to the interpretation and application of collective agreements. A special court, known as the labor court, has been set up for settling disputes of this nature, and no employers or workers bound by a collective agreement may take action to settle them on their own behalf, being liable to penalty if they do.

LABOR STATUTES MAINLY A CODIFICATION OF EXISTING PRACTICE

An interesting aspect both of the basic agreement and the legislation governing labor relations is that they represent a codification of existing practice rather than the introduction of any essentially new procedure. The provision in the collective-agreement law of 1928, for instance, prohibiting strikes and lock-outs in interpretational disputes was already included in most national agreements. Similarly, the section of the law providing that one party to an agreement may be held liable to damages by the other for evasion of responsibilities is no more than a statutory confirmation of a previous Supreme Court decision.

The setting up of the labor court, on the other hand, even though it was constituted on similar lines to the already-existing working hours court (Arbetsrädet), was in fact a new step. At first strongly opposed on the workers' side, this court has come to be accepted, albeit with reservations, by the unions, which have in fact initiated by far the largest number of cases handled by it. This seeming paradox is explained by Norgren by the fact that it is generally the employer who decides, in the first instance, how the provisions of an agreement shall be interpreted and applied. The employers, while opposed to compulsory arbitration in interest conflicts, favored mandatory adjudication of interpretational disputes. According to Norgren, they argued that under the previously existing arrangement "it was too difficult for them to get redress when the unions failed to live up to agreement obligations,

[1] Paul H. Norgren, the Swedish Collective Bargaining System. Cambridge, Mass., 1940. Harvard University Press.

[2] i. e. disputes concerning the setting of wages and conditions of work, as opposed to interpretations of contracts arrived at by collective bargaining, which come under the heading of jural disputes and as such are regulated by law.

and that the only way to insure observance was through explicit legislation, properly implemented."

After the collective-agreement law, the next statute concerning labor relations, adopted in 1935, made it obligatory to give warning of a contemplated strike or lock-out. The motivation was to avoid coercive measures that were ill-considered or due to misunderstanding. Seven days' notice have to be served to the opposite party and also the local government mediator, and the reason for the action has to be stated. According to a clause later included in the basic agreement between the employer and labor organizations, an employer has also to give warning of dismissal of a worker to the trade-union representative in the plant. The clause also provides for immediate consultation in the matter if demanded by either the employer or the union. It only applies in the case of workers who have been employed at least a year, however, and excludes workers employed for a definitely limited period.

RIGHT OF EMPLOYER TO RUN BUSINESS HIS OWN WAY RECOGNIZED

In general the right of the employer to engage and dismiss workers at his own discretion is, however, recognized both in the statutes and in worker-management agreements. Thus a provision in the basic agreement, stipulating negotiation regarding cases of dismissal if the union desires it, clearly states that in judging the case the dependence of the business on the workers' efficiency and suitability shall be taken into account, as well as the rightful interest of the workers in security of employment. It may be noted, too, that the majority of dismissal cases brought into the labor court have gone against the workers. This tendency was somewhat curbed, however, by the passing in 1936 of the law establishing the right of workers to form associations and bargain with employers. The employer's freedom to dismiss workers now only applies if it does not infringe on this right.

The law was introduced, not so much to establish this right for the manual workers, for whom it already existed contractually, as to extend it to foremen, office workers, etc., whose attempts to organize had been strongly opposed by management. This law prohibits any setting aside or limiting of the right of association, even by mutual agreement. The one exception concerns foremen: if a collective agreement includes a clause to the effect that foremen may not be members of the same union as the employees under them, the employer has the right to demand that the clause be observed.

STATUTORY PROCEDURES FOR FORCING RECALCITRANT PARTY TO NEGOTIATE

The right to bargain is secured by the provision in the law of 1936 obliging one party to negotiate at the demand of the other. A party refusing to negotiate, however, cannot be directly forced to do so. Either application must be made to the Government mediator, who will place himself at disposition if requested either by the employer or a union organization which includes at least half of the affected workers, or the appointment of a neutral chairman by the Board of Social Affairs (Socialstyrelsen) may be demanded. The latter course involves a process of registration of the union's central organization with the board, by which not only the union but also the employer are bound to observe labor peace during the negotiations. If no solution can be arrived at under a neutral chairman, an arbitration board may be set up, although without either party being obliged to accept its proposals. In case of refusal, the arbitration board's proposals may be made public at the request of one of the parties. Not until the negotiation process has thus been completed may coercive action be taken, and then only with regard to the dispute which has been the subject of the negotiations.

PUBLIC MEDIATOR REQUIRED TO INTERVENE IN BARGAINING DEADLOCKS

Public mediation in labor disputes in Sweden dates back to 1906. The present law, dividing the country into seven mediation districts, was adopted in 1920. This law makes it the duty of the public mediators to follow closely all bargaining developments within their districts and be always ready to assist in settling disputes and generally act so that work stoppages may be avoided. The mediator himself has to judge when to intervene in any dispute in order to persuade the parties to refrain from coercive action until negotiations have taken place.

The parties to the dispute are legally obliged to enter negotiations at the mediator's request, and also to produce documented proposals for solution of the matter in question. If one of the parties ignores the request pressure can be applied by the mediator reporting the case to the labor court, which has the power to force the party to negotiate by imposing fines. It should be noted, however, that the mediator may not take this step at his own initiative, but only on the request of one of the disputing parties. It may be noted further that on account of the fact that collective contracts are in force everywhere the services of the mediators are in practice mainly required toward the end of the period of the contract's validity. Agreements generally run from 1 to 2 years, with 3 months' notice of cancellation. If no such notice is given the old agreement remains in force for an additional year, or such time as may be specifically stated.

The mediation process is not obligatory. If both parties want neutral direction of their negotiations by someone other than the public mediator they can either agree on a neutral chairman or else make a joint application to the board of social affairs for the appointment of such a chairman. If they fail to arrive at an agreement under a mediator the only remaining resort is arbitration, which, however, is not a means of forcing settlement, either, unless both parties have agreed that the outcome shall be binding. Arbitration may also be resorted to in disputes over the interpretation of collective agreements, which would otherwise be brought before the labor court.

INTERPRETATIONAL DISPUTES SETTLED SPEEDILY BY LABOR COURTS

The labor court was set up in 1928 in order to provide a means of settling disputes over the interpretation of collective agreements more speedily than was possible in the ordinary courts. The section of the collective agreement law making agreements legally enforceable provided the basis of this second law, enacted simultaneously. The court may not adjudicate any interest disputes, even if both parties desired it, and further may only handle disputes concerning work contracts insofar as the contracts are regulated by collective agreement. Otherwise such cases are adjudicated by the regular courts. If, as is generally the case, negotiation in any dispute is stipulated in the collective agreement, the matter may not be brought before the labor court until it has taken place, unless it appears that negotiation has been rendered impossible by causes beyond the plaintiff's control.

The labor court consists of a chairman and six members, of whom two are nominated by the Government and two each by the employer and labor organizations. It convenes one day each week, hearing four cases. Both parties to the dispute must present their points of view in writing a week in advance, in order that the judges may acquaint themselves with the facts before the hearings, which are thus kept within the allotted time of 1 hour. Written verdicts are generally produced within 2 weeks after the hearings. A large number of the court's decisions have been unanimous, which Norgren points out may have been a reason for the changed attitude of the workers, knowing as they do in such cases, that their own representatives have concurred in verdicts which have gone against them.

LABOR PEACE DURING AGREEMENT PERIOD PRACTICALLY GUARANTEED

The aim of the law on collective agreements and the labor court is to prevent work stoppages during the period covered by agreements. Consequently the law prohibits coercive action during such period on account of disputes as to the validity or meaning of a contract, or as to whether some action is in conflict with the agreement itself or the collective agreement law. The provisions of the law may further not be nullified by collusion between the parties. The law also includes a direct prohibition against taking coercive action to bring about a change in the agreement or to affect conditions of work after the agreement has expired. Apart from this there is no provision against action to force a settlement of a pure interest dispute even during the life of an agreement; such disputes may sometimes arise if, for instance, owing to the introduction of new machinery or new methods, the basis on which piecework has been calculated is upset, and there is no stipulation in the agreement as to what shall be done in such cases.

Norgren notes in this connection that "limitations on the introduction of labor-saving machinery are almost totally absent in Swedish collective contracts; and in practice there has been little opposition to innovations by the workers." If there is any stipulation regarding such in the agreement, it generally merely states that piece rates may be changed by negotiation.

CURTAILMENT OF BARGAINING FREEDOM A THREAT TO DEMOCRACY ITSELF

Another American observer[3] quotes Sölven to the effect that interest disputes can only be avoided by removing their basic cause, namely, the opposition of economic interests between capital and labor. Sölven makes clear that "under our present economic system, the problem must be limited to the question of smoothing out this opposition as far as possible." This, and no more, is what the Swedish system for regulating labor relations tries to do.[4] The Government investigation committee which produced the famous Mammoth Report in 1935 showed that legislation to curb the unions would inevitably lead to state intervention in the whole field of business.

It was to avoid this very development that the two and a half year joint deliberations of management and labor at Saltsjöbaden, which resulted in the basic agreement, took place. Of this agreement Arnold Solven says: "It may be asserted without exaggeration that the basic agreement is epoch making in Swedish labor peace policy. * * * Events in the world have made it clear that the freedom and right of self-determination enjoyed by the two parties to the labor market in our country * * * are enjoyed exclusively by reason of the democratic form of government. Fully conscious of this, the parties have aimed at eliminating, through the agreement, any possibilities of attack on industrial freedom of action, which at the same time would constitute a threat to the democratic order."

---

[4] In the years 1936–38 disputes which were settled by negotiation covered respectively 99, 91, and 94 percent of the workers involved.

Statement of C. Arthur Moore, of Greenwich, Conn.

EXTENSION OF REMARKS
OF
HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1946

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks, I include a statement made by a prominent citizen of the town of Greenwich, Mr. C. Arthur Moore, on the selection of Greenwich as a part of the proposed site of the permanent United Nations Organization headquarters:

When I heard the fantastic news of the UNO land grab I thought of it, naturally, as an attack on my home and the homes of my neighbors. And I decided that that point of view, while natural, was so personal that I could properly say nothing on the subject which could or would affect others.

But as the days have gone by and my mind was cleared of the mists of personal feelings, other more seriously important aspects of this matter came to me, aspects very, very serious to all Americans—aspects affecting our very form of government and the safety of every American.

The long ago disposal of the Kurile Islands to Russia, kept secret for so long, even months after the end of the Japanese war, started my train of thinking which finally brought this UNO grab into proper focus. The Kuriles were never American territory. But they were our spoils of war, won from the enemy by the lives of our enlisted men of our Army and Navy. And, though this war just ended had demonstrated they were vitally important to our national safety, they were secretly given away to the only power which could best use them against us, and given away long ago and secretly.

It was interesting that this deal on the Kuriles was made public right at the time the UNO deal came up. They are so similar in many ways. The one is a precedent for the other. The second, the UNO deal, will be another precedent for what folly and what further rape of American rights and American citizenship?

It is doubtful if the most powerful dictator in the world would have attempted to do what someone—unauthorized by any legal action of the American people—attempted to do, actually did, in the UNO matter. But it is certain that the most powerful of dictators would have had too much good sense, too much feeling of national dignity to have ever done what was attempted in the case of UNO.

Treason is a serious crime. Yet what is it, but treason, for any unauthorized servant of the American people (elected or appointed) to attempt to alienate American territory, to give American territory out of American hands into the hands of any alien authority?

Someone or some committee of Americans must have told the members of UNO that that organization could have any part of this country, in any part of this country that a committee of UNO might decide upon. Otherwise, it seems impossible that the members of UNO would have been so blatantly and bare-facedly foolish as to do what was made public in selecting the so-called Stamford area for UNO.

What other rights or property of Americans has already been secretly given away to foreign powers? What rights and properties of ours are being given away right now, in secret, or will be given away tomorrow if this UNO deal is allowed to become an accomplished fact? And how many bigger rapes of the American people will be put over with the Kuriles deal and this UNO deal as established precedents?

No equality in the world among nations is fostered by such deals as the UNO excepting the equality among all other nations in the world to move in on the United States to take what we have got. And as we at this moment appear to have far more than anyone else and everyone else wants what we have the result of the UNO grab as a precedent appears to be mighty dangerous to all of us.

There seems to be a hypocritical and sadly successful effort of publicity experts of the UNO to imply that the success of UNO depends greatly on securing the large amount of land in the selected place for the UNO site. Of course, this is completely untrue. And that it is untrue ought to be publicized as widely as the false idea that this site (or any other site) is vital to the success of UNO.

But the underlying American stupidity, if not the traitorous scheming, of Americans with other members of UNO is shown most clearly by the way the whole thing was attempted. American officials acting as Americans and with the welfare and success of UNO in mind would have, it appears to me, studied what was the minimum UNO would need as a start, adequate until the success of UNO had been demonstrated by time. This modest but adequate plan could then be fitted into many spots, free of congestion, climatically good, and not too valuable, not in any place likely to block natural growth and development of anything American.

Guests usually live in the room assigned to them by the host. And the UNO remains a guest in whatever nation they may choose to have as their permanent home. If here, as guests of the American people and not of any American official or group of officials. It is the right of the people as a whole to know what UNO needs to function, not what it demands for a good time. And it is a matter of sober and serious thought for the whole people as well as for the inhabitants of various localities as to what land and where the UNO should be asked to settle itself. Any other nation, if it had been chosen as host by the UNO, would have acted in the manner outlined above.

There is much in this UNO situation of the same stuff which has caused the unrest and dissatisfaction in our armed forces of late. Good Americans don't like to see themselves or any other Americans shoved around, particularly shoved into back seats to make place for others.

To return to the matter of possible treason contained in the UNO situation. It would be well for Americans in office, both elected and appointed, to remember that they are servants of the American people. And when they propose to give away what belongs to Americans there is an orderly, decent, and proper way to approach this delicate and dangerous task. The way the UNO matter has been handled up to date is in all ways contrary to this proper way.

Every American within and without the confines of this country is menaced by the precedent of the Kurile Islands give-away of land conquered by our men and of vital value to us; and by the precedent of the UNO attempted action in our own country. The menace is no remote and theoretical one. It is immediate, personal, real.

The way to end this menace is to return power into its proper channels, to allow the American people knowledge, full knowledge, of what is going on in way of surrendering American rights all over the world. And to do everything though the proper constitutional processes—even the making of promises confined from now on to the elected National, State, and local authorities as constitutionally set up.

The UNO has started badly. The promise of its future is not great if judged by the land-grab attempt. Certainly it shows that the democratic methods we call American and are supposed to have fought for, are not understood or comprehended in any way by UNO as it functions today. It may be a warning against UNO.

There Is No Mystery About Soviet Policy

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1946

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Dorothy Thompson:

THERE IS NO MYSTERY ABOUT SOVIET POLICY
(By Dorothy Thompson)

In Senator VANDENBERG's speech he asked, "What is Russia up to?" He asserted, "Russia is a mystery." But what the Soviet Union is up to has been increasingly clear ever since the Yalta Conference. It is up to realizing, as far as possible, its aims since the 1918 revolution: the undermining or overthrow of every other social order and unification of the world under the Red Star.

During the war we had many reasons for believing that Stalin, for the sake of enduring friendly relations between the great powers had either abandoned that aim or was prepared to leave its fulfillment to history without active assistance of the U. S. S. R. After the attack on Russia, Stalin declared his allegiance to the Atlantic Charter. The Third International was formally dissolved and the Communist parties everywhere readjusted their previous line. Mr. Litvinov, in a speech in New York, envisoned a postwar reconciliation between the Communist and capitalist worlds through mutual modifications of program.

Hopes were encouraged that the 1937 constitution would be put into real practice in Russia and the Russian peoples extended, as a reward for their unexampled sacrifices, the civil liberties which were the fruit of the Western eighteenth century revolutions. Most prognosticators anticipated a general postwar turn to the left, with forms and degrees of socialism compatible with the circumstances and majority opinion of the various countries.

Whatever suspicions the Soviets might previously have entertained were removed, we thought, by the demonstrations of utter fidelity with which Britain and the United States observed the coalition.

These, among many other things, included the immediate British rejection of the Hess mission, offering to guarantee the British Empire in return for benevolent neutrality toward a war against Russia—a reversal of the up to then Russian role; they included shipments of lend-lease with absolutely no strings attached, amounting to $9,000,000,000 or a quarter of the Soviet war budget. They included unreciprocated visits of British and American statesmen to Soviet or Soviet-occupied territory, each attended by serious wartime dangers, the last made when the Soviets were unaware of President Roosevelt's precarious state of health. They included yielding on the matter of territorial gains made by Stalin during his pact with Hitler. And they included official silence on a great number of worrisome difficulties in relations.

All questions of prestige were laid aside in an effort to dispel Soviet "distrust." However sinister the Munich pact may have

seemed to Russia, it was certainly more than canceled by the Russo-German pact, which gave the green light to Hitler for the war against the west, made the Soviets for nearly two war years Hitler's silent partners, and turned Communists in all countries fighting Hitler into defeatists and saboteurs.

But by the late winter of 1944, when it was apparent that the German Armies could not long resist, Soviet policy changed, and, after Yalta, obviously. No one not politically deaf, dumb and blind, or utterly ignorant of Soviet and comintern history, could deny the evidence.

Soviet policy, proceeding without effective opposition, was to capture and integrate into its own economic and power complex Eastern Europe from the Baltic to the Adriatic, either by annexation, Quisling governments or popular front governments without effective guaranties for the equal participation of non-Communist parties.

Soviet policy was to enter the far eastern war at the last moment and play for a dominant position in the Far East.

Soviet policy was to disintegrate western Europe, beginning with Germany, in order to lay it open to revolutionary conquest when the German and European standard of living should have fallen to a sub-Balkan level.

Soviet policy was to divide the United States from Britain by reviving the slogan of the Russo-German pact, of the war for imperialism, work for the collapse of the European far eastern empires and fall heir to their disintegrating parts.

Soviet policy was to put Russia in such a position in Iran and Turkey as to bring pressures on the Middle East to which weak governments would yield without any premature Soviet act of open aggression.

Comintern policy was to support such revision of the French constitution as would give France the weakest possible government.

Comintern policy was to agitate for the withdrawal of American and British troops from Europe and Asia.

Comintern policy was to fan every social disorder in non-Communist countries with a view to producing internal chaos.

In short, Soviet and comintern policy is revealed to be the realization of Hitler's power aim, and by all of Hitler's methods short of war; to dominate the Eastern Hemisphere, divide Great Britain, the United States, and France, and undermine their societies from within.

And every British and American agreement contributed to its "peaceful" accomplishment, preeminently the insane "peace" of Potsdam, the visit to Canossa of Secretary Byrnes after the failure of London, and the tongue-tied dismay of American journalists fearful of rocking the boat.

There is no longer any mystery about Soviet policy. The mystery is how, step by step, American and British leadership should have made decisions or interim concessions, the probable results of which should have been obvious to any logical mind.

The Forgotten Man of the War

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. WHITE. Mr. Speaker, it appears that the same forces are at work in the world today that thwarted the plans of President Wilson to establish permanent peace and fair dealing among nations. There is inserted herewith an article by L. E. Shuck which appeared in the Progressive:

(By L. E. Shuck, Jr.)

For four long years, amid great fanfare and bally-hoo, millions of Americans have ranged thousands of miles from their homes to risk their lives in a war for freedom and democracy. They entered the world-wide struggle against the ideas and aims of fascism and dictatorship with glorious phrases against imperialism, racialism, and power politics ringing in their ears.

The people who remained at home were loud and eloquent in expressing their gratitude. There was a great deal of patting on the back and much of the "(you) give 'em hell for me" routine. Many a GI was so impressed with this talk that he was leaving for a war that would root out the very causes of war that he began to feel that if he did his bit in fighting the world's ills those who stayed at home could be depended upon to do their bit when their turn would come to fight for a just and democratic peace.

But the grim fact is emerging today that the forgotten man of 1945 is the soldier who was naive enough to believe that he was risking his life on battlefields far from home for something better than the selfish interests of the major powers.

The policy-making leaders of America and the Allied Nations seem to have repudiated the lofty pledges and noble sentiments of a few years ago. Now they appear to be mostly interested in allowing our allies—Britain, Russia, France, Holland, and their satellites—to grab all the distributable assets they can lay their hands on. The accepted definition of these assets is the domination and exploitation, political and economic, of millions of peoples of all colors who lack sufficient power to resist the greedy demands of the victorious Allies.

The great tragedy to the returning serviceman—only just back from helping to break the German and Japanese stranglehold over large areas of the world—is to read almost daily in his newspaper how the arrogant Allies are fastening their grip on these same areas for equally selfish purposes. The news from Europe, from Africa, from the Dutch East Indies, and from French Indochina tells the same depressing story of imperialism.

Truly the international scene makes those of us who survived feel grateful that we did not pay the supreme sacrifice for such lowly aims as are now being carried out by our leaders.

Today our military hospitals and cemeteries are jammed with men who helped beat Germany, Japan, and Italy. But the council tables of the victors are crowded with British, Russian, and French greedily reaching out for control over smaller nations and overseas empires.

It has been especially depressing to us to watch the British and Russians wrangling for control of Europe and the seaways and gateways to empire, without any thought for the aspirations or rights of the peoples concerned. Britain, determined to preserve her empire, and Russia, determined to build one, continue to make a mockery of everything we were assured we were fighting for.

Equally important is the struggle of the nations of southeast Asia for their basic freedom, that freedom which we demanded for all. Our press tends to treat the legitimate struggle of the Annamese for freedom from French domination as if it were an unjustifiable rebellion from justly constituted authority. This revolt is being put down with lend-lease materials and, in the final analysis, with American money as well.

Remember the people of Annam and the other Indochinese states had well-developed cultures and historic governments when the French walked in during the last half of the nineteenth century and took them over at the point of the gun merely because France wanted some stolen territory to compete with the many British grabs. It seems to be accepted as a foregone conclusion by our policy formers that Indians, Burmans, and southeast Asiatics in general must remain under British, French, and Dutch domination indefinitely.

It appears not unlikely that the ideals of fascism have triumphed in the war, after all. Since the close of hostilities little but Fascist methods have been in evidence. It has slipped the minds of most people that fascism is fascism whether it is carried on in the German language or in the Russian, English, or French languages. It its tacit support of many of the most selfish demands of the other great powers, our Government is giving aid and comfort to imperialism and totalitarianism all over the world. Yet we were told, as we were sent out to kill, that we were fighting a war against those very evils.

Many of us experienced a momentary lift by the outcome of the British election. But that hope was quickly battered down. In spite of the number of supposed liberals in the new British Government, it is obvious now that their liberalism and devotion to democratic ideals extend only to the United Kingdom. Others—lesser breeds of men—are regarded by them as undeserving of liberty or of any consideration which might interfere with continued British domination of 700,000,000 colored peoples and varying large numbers of European and Arabic whites.

Although even the official propagandists could never dub despotic Russia a democracy, that nation was referred to, during the war, as a "defender of democracy." Now, in her use of her tremendous new power and prestige, she appears to be inaugurating an imperialist policy which can make the Romanovs, Napoleon II, and Disraeli appear in history as small-time real estate operators.

The energetic movements for freedom and independence of Indians, Burmese, Koreans, Indo-Chinese, and Indonesians, to mention only the better known and better organized, are waiting to be heard in their demands for something fundamental and thoroughly just as their own political and economic freedom. They are being ignored while we entertain deputations of their unwanted overlords who are virtually blackmailing us for more handouts from American taxpayers—handouts to finance a ruthless crackdown of democratic forces.

Misconceptions

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mrs. DOUGLAS of California. Mr. Speaker, under leave to revise and extend my remarks in the RECORD I would like to include the following article by Eleanor Roosevelt:

[From the New York World-Telegram of February 25, 1946.]

MISCONCEPTIONS

(By Eleanor Roosevelt)

HYDE PARK, Sunday.—Judging from some of the fantastic misconceptions I am getting in my mail, it seems to me that some of our people are not approaching the aftermath of war with common sense. For one thing, I should like to make it entirely clear that I never said the children of Germany were chubby. No one in Asia or war-torn Europe is chubby. I did say that while there

was hunger in Germany, as yet there was no starvation.

The thing one dreads in war-torn countries is epidemics. These are more apt to occur where the people have been on low and undesirable diets for a long time and, therefore, have had their resistance undermined. That is the case in Europe wherever Germany was the conqueror in the early days of the war and was able to siphon off the available food into Germany, leaving the conquered nations a far lower minimum of calories than Germany herself is being allowed today.

Fifteen hundred calories is not enough, but 1,500 calories a day for a year or two is better than less than 1,000 calories for 4 or 5 years. The record will show that the German occupation in many cases meant less than 1,000 calories a day and that babies did die of starvation in the Allied countries.

It is true that people all over Europe, young and old, are dying perhaps more rapidly than they would have had there been no war, and I hope that a visit to Germany or any other country will make anyone conscious of the absolute necessity of working for the UNO and making it the people's instrument for peace.

Throughout most of Europe, from all I was able to learn, people living in the country are better off than those living in cities. That is true of people living in other nations during the war as it is true today in Germany. Because of the early bombing of Berlin, poor people in that city probably were hungry for 2 years before the final defeat of the Germans.

The people in other German cities fared better. Nevertheless—and I want to repeat what I said—as far as one can see, the children even of Berlin look no worse off than the children of Great Britain, who have been on a reasonably good, but extremely restricted, diet ever since Germany began the war.

Wherever the Japs have passed, starvation is staring people in the face, as it is in India. That is partly because of the narrow margin on which the people lived anyway. Whether we can keep a great number of people from dying of starvation, I do not think is yet known. It can only be done by coordination of all available food supplies in the world, and by careful direction of shipping and distribution.

I think we should be willing to do all we possibly can to prevent famine anywhere. But when people talk about feeding Germany better at the present time, yet do not seem to be concerned about giving our allies in Europe a better diet first, I think they have lost their sense of justice and have become hysterical and therefore unable to act in a common-sense fashion.

The Bomb and the Opportunity

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mrs. DOUGLAS of California. Mr. Speaker, under leave to revise and extend my remarks in the CONGRESSIONAL RECORD, I would like to include a statement by Henry L. Stimson, former Secretary of War who, with Franklin D. Roosevelt, carried us through those years of greatest national danger. The statement is on atomic energy and the position it holds on the Council of Nations:

THE BOMB AND THE OPPORTUNITY

(By Henry L. Stimson)

The advent of the atomic bomb has created a profound impression in all quarters of the globe. Bidden or unbidden, the atomic bomb sits in on all the councils of nations; in its light all other problems of international relations are dwarfed. This is so not because these other problems are no longer important in themselves, but because the question of the control of the atomic bomb towers above all else. No other problem has been so constantly in my thoughts as this one.

If the atomic bomb were merely another—though more devastating—military weapon, which could be assimilated into the customary pattern of international relations, conceivably we could then follow the old pattern of secrecy and sole reliance upon national military superiority, and depend upon international caution to stay the future use of the weapon. But, to my view, the recent unlocking of atomic energy constitutes a first step—and only a first step—in a new control by man over the primal forces of nature too revolutionary and dangerous to fit into the old patterns. The military application of this discovery underscores most sharply the divergence between man's growing technical power for destructiveness and his psychological power of self-control and group control—his moral power. If this is so, how this problem is approached in the sphere of the relations among the nations is a question of the most vital importance in the evolution of human progress.

The chief lesson I have learned in a long life is that the only way to make a man trustworthy is to trust him; and the surest way to make him untrustworthy is to distrust him and show your distrust. And it is from this lesson that I draw the conviction that only a direct and open dealing with other nations on this, the most pressing problem of our time, can bring us enduring cooperation and an effective community of purpose among the nations of the earth. It is the first step on the path of unreserved cooperation among nations which is the most important. Once the course of national conviction and action is set in this direction by the example of the major powers of the world, petty differences will be recognized for what they are, and the way toward a real fraternity of nations will be open.

We must not delay. The poisons of the past are persistent and cannot be purged by timid treatment. By its sole possession of the bomb, at least for the present, the United States finds itself in a position of world leadership. But this solitary possession is most certainly very transient. It must recognize this and act swiftly. It must take the lead by holding out an open hand to other nations in a spirit of genuine trust and with a real desire for a thorough-going cooperative effort in meeting and solving this problem. Truly this is a time for greatness of heart and of purpose, and unless we demonstrate these qualities now other nations cannot be expected to do so.

The development of atomic energy holds great, but as yet unexploited, promise for the well-being of civilization. Whether this promise will be realized depends on whether the danger of swift and unprecedented destruction can be removed from the earth. Whether it is removed depends on whether we and other nations move firmly, quickly, and with frank transparency of purpose toward the goal of uniting all men of good will against the appalling threat to man's very existence. The focus of the problem does not lie in the atom; it resides in the hearts of men.

Justice for Greece in Peace Treaties

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1946

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Sumner Welles:

JUSTICE FOR GREECE IN PEACE TREATIES URGED

(By Sumner Welles, former Under Secretary of State)

The deputies of the Foreign Ministers in London continue to debate the peace settlements to be taken up at the Paris Peace Conference scheduled for May. They have made little progress. The peace conference may have to be postponed.

But, so long as these discussions continue, the full influence of the United States should be exerted to make sure that when the final settlements are reached, justice is done to Greece. The peace treaties with Italy and with Bulgaria involve the vital interests of the Greek people. The frontiers to be fixed for Yugoslavia and for Albania will help to decide whether Greece will be protected from future aggressions.

The Greeks underwent 5 years of bitter suffering in their struggle against the Axis. It is tragic that after their liberation Greece should have become an arena for a contest between Soviet and British interests. All of the efforts of the Greeks to begin political and economic reconstruction have been blocked by this contest. It has encouraged civil war.

Whatever the political complexion of the government which is installed as a result of the approaching national elections, it is the obligation of all the major powers to assure the Greek people that when the peace treaties are written their claims to equitable treatment will not be overlooked.

No nation of Europe waged a more gallant fight against the Axis. American public opinion has not forgotten that when the Fascists treacherously attacked Greece in 1940, it was the unfaltering courage of the Greek people which drove the Italian invaders back beyond their frontiers.

Hitler was forced to divert many of the divisions which he had intended to use against the Soviet Union in order to subdue Greece. Greek resistance thus rendered a signal service to the Russian people. But the greatest service of the Greeks was when, in the most critical moment of the war, in the spring of 1941, supported only by a small expeditionary British force, they blocked for a few weeks the German advance to the south so that Hitler's plan rapidly to pass through Syria and Iraq to the Persian Gulf could not be carried out in time.

Had Hitler been able to reach Syria before the Iraq revolt had been put down by the British, the Germans and Japanese could have joined hands in the Persian Gulf; Suez and Egypt would have been cut off. The whole course of the Second World War might well have changed.

As a consequence of her resistance, Greece is economically prostrate. Dependent, if minimum living standards are to be maintained, upon her shipping and her export trade, Greece lost during the war 65 percent of her ocean-going freighters, and all of her coastwise shipping. The task of rehabilitation which the Greeks confront is staggering.

The Near East has become the scene of an increasing conflict of interest between the Soviet Union, bent upon an expansion of her

influence over that area, and the Western powers, which are determined to keep open to all nations the channels of communication through the eastern Mediterranean, the Suez Canal, and the Red Sea.

A peace treaty which gives the people of Greece a maximum assurance of security would constitute a bulwark for a free and stable order in the eastern Mediterranean.

The Greek people desire fair reparations for the damage done them by the Axis Powers.

They seek in addition three territorial adjustments.

The peace treaty with Italy will decide the future sovereignty of the Dodecanese Islands, in the eastern Mediterranean. The 150,000 inhabitants of these islands are in their vast majority, Greek—in origin, in language and customs, and in aspiration. United with Greece by their own demand in 1821 the great powers returned them to Turkish domination a few years later. As an outcome of the Italian-Turkish War in 1912, Italy seized the islands from Turkey. She remained in control of them until recently.

At the close of the First World War the Italian Government agreed to cede the islands to Greece. This agreement was never carried out. The present democratic leaders of Italy, almost without exception, recognize the right of Greece to obtain permanent sovereignty over the Dodecanese.

Recently the Soviet Government has refused to commit itself as to the ultimate disposition of the islands. It is reported determined to demand that an international trusteeship be established over them under Soviet administration. The control of these islands by any major power would be a potential threat to freedom of communications.

For reasons of international security, as well as for reasons of equity, the Greeks of the Dodecanese should be restored to Greek sovereignty.

The other two territorial adjustments demanded by Greece require rectifications of her frontiers with Albania and with Bulgaria.

In the first instance, ethnic considerations as well as reasons of security warrant such a change. In the second instance, where only a very minor rectification is sought, the security of northern Greece is involved. Neither demand can be legitimately denied.

Some of these territorial adjustments were urged in a resolution adopted by the United States Senate in 1920. A similar resolution is pending before the United States Senate today. It should be approved.

The question, as it affects the American people, is not merely one of gratitude to the people of Greece. They fought gallantly. But they were fighting in defense of their liberty and for a world in which they could live in safety and in freedom. They were fighting for the same reasons for which the American people were fighting.

The real reason—a question which directly affects the interests of the United States—is what peace settlements for Greece will be most likely to make for that kind of world order which both Americans and Greeks wish to see established.

Resolution of United Benefit Societies, of Cleveland, Ohio

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1946

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks, I desire to include a resolution adopted on March 3 by the United Benefit Societies at a meeting held in Cleveland, Ohio:

Whereas we, American citizens of German extraction from Hungary, Rumania, and Yugoslavia, have been and are true and loyal to our country, the United States of America, and during the war have contributed so much to our victory with our work and skill; and

Whereas thousands of the younger ones have served in our armed forces and many of them had to offer the highest sacrifices for our country; and

Whereas we men and women have blood relatives in those countries, Hungary, Rumania, and Yugoslavia; and

Whereas we have read in our American press and many of us have received personal letters informing us that the Russian Government, the Rumanian Government, the Yugoslavian and Hungarian Governments have ordered and already executed the forced evacuations of thousands of our relatives and friends and put in labor camps; and

Whereas it is only human that our hearts go out to those unfortunate men, women, and children: Therefore be it

Resolved, That we, American citizens and members (75,000) of the United Benefit Societies and having residence in the Twentieth, Twenty-first, and Twenty-second Congressional Districts of Ohio, in a public meeting held on the 3d day of March 1946 in the Banater Hall in the city of Cleveland, Ohio, do hereby respectfully request the President of the United States and the Secretary of State of the United States to enter an immediate and vigorous protest with the Russian, Rumanian, Yugoslavian, and Hungarian Governments and other concerned governments against the forced evacuation and the placing of any peoples into labor camps or other forced concentrations; and, further, to cause open communications to be established immediately and reopen service for the transmission of private and public aid to such peoples; and, further, to cause the immediate return of said peoples to their former homes and communities with the guaranty of their political freedom as well as reestablishment of their homes and communities by the concerned governments, including financial aid in payment for their destroyed possessions and any damages caused by their displacement.

John Fischer, President; Fred Teschner, Secretary; Karl Schmidt, Pete Sodlon, Stephen Halber, Anton Zellich, Peter Straky, Elizabeth Dietes, Adam Schneer, Executive Committee.

Crucial Importance of Small Investors

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 8 (legislative day of Tuesday, March 5), 1946

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the text of an address which I delivered before a free-enterprise forum of the Investors League at Buffalo, N. Y., on February 28, 1946. I ask that following my address, there be printed a series of three illuminating articles by Mr. Thomas Furlong which were printed in the Chicago Tribune of February 25, 26, and 27. These articles substantiate the theme of my address, namely, the crucial importance of the small investors to our American system of private enterprise. When we protect the interests of the 15,000,000 small investors of America, when we encourage them and others to invest wisely and soundly, we advance our system of private enterprise.

There being no objection, the address and articles were ordered to be printed in the RECORD, as follows:

THE INVESTOR: KEY MAN TO AMERICAN INDUSTRY

It is truly a pleasure and an honor to address this forum, devoted as it is to one of the most vital of all issues on the American scene. That issue is, of course, free enterprise versus shackled enterprise; or, expressed in other terms "private ownership versus public ownership," or "individualism versus collectivisim," or "the American way versus the alien way."

These are not just words or meaningless generalities. This is a real issue, a burning issue, an issue worthy of our mightiest endeavor on behalf of freedom and against our beloved America taking the road to serfdom.

It is particularly appropriate that we here take our stand on behalf of free enterprise in this great industrial city of Buffalo, this city of many races and creeds and colors blended as one into the American pattern, this city which furnished so vast a proportion of the sinews of war and thus enabled us to keep America free.

THE INVESTOR'S LEAGUE AND ITS VITAL WORK

Yes, it is more than appropriate that it is the Investor's League, led by your distinguished president, Dr. B. C. Forbes, which sponsors this forum. I have followed with interest and admiration the series of stimulating forums already held and planned in the future by your league.

Yours is an inspiring challenge: to protect and advance the interests of the American investor and in so doing, to protect and advance the American way—the way of political, economic, and social health and freedom.

Yes, I am certain that you will prove adequate to that challenge. You have met here in order to gain new strength and information for your crucial work. You have entered into this forum to get a healthy "shot in the arm," the kind we all need. It is the kind we need, particularly at times when not our confidence and belief in the American way but the confidence of some may wane a bit. Why does their confidence wane? It wanes because the American mind has been assaulted from every side by synthetic collectivist thinking.

I am certain, however, that your confidence in the American way, the investor's way, the free way is still very high. You may ask me why I am so confident? It is because I am talking to leaders, to men and women in the forefront of the battle for free enterprise in their community, to men and women battling to keep America American. I am talking to men and women who recognize that we of this generation are but the trustees of the great values bequeathed to us, and which we must pass on to future generations vital and unimpaired.

AMERICANS WORK OUT THEIR OWN SALVATION

On uplifting and challenging occasions such as this, I am often reminded of a story about man working out his own salvation.

"There was an old colored man named Mose who, during the depression, had no home to go to. He wandered up and down the highways and byways of the Southland. He had no worldly possessions, only a singing heart. He was a real singing Sam, but he had no place to rest his head. Once there was a white man like that. He was called Jesus of Nazareth, and of Him it was said, 'He was so poor that He had no place to lay his head.'

"This colored man roamed up and down the Southland. One day he was told, 'Mose, you can go up there in that half-acre lot. There is an old shack there that you can live in.' Mose went there, and he found that the shack was in very bad condition.

"The windows were broken, the shutters were about ready to fall off, the doors were falling off their hinges, and the roof was caved in. The half-acre lot was filled with weeds, stones, and poison ivy.

"But Mose went to work. By the next spring, Mose had fixed up the little shack. He had put the doors back on the hinges; he had repaired the windows and the roof, and he had painted the little building. Roses were climbing over it. Out in the half-acre lot the weeds and rocks were gone. Flowers were blooming there. Just about then the old colored parson came by. He said, 'Mose, you and the Lord is sure done a good job here.' Mose replied, 'Parson, you should have seen it when the Lord had it alone.' "

Mose didn't brood over the situation; no more should we. He had work to do; so have we.

Now, my fellow citizens, the meaning of this little story is clear. It is that every one of us must work out our own salvation in our own way, seeking divine guidance, but using our own brains and brawn, our own initiative, our own God-given talents, to handle our own problems, fearlessly. So, too, everyone of us, individually and collectively, must help work out the salvation of America—fearessly.

This means eradicating the weeds of communism, the rocks of loose thinking, the clutching vines of class hatred and intolerance, self-pity, and resentment.

You remember the words of Dante: "Give light and the people will find their own way."

He meant light—truth, not synthetic thinking. That is what we are seeking here today—light, truth. That is what all of mankind is seeking in this complex, atomic age with its startling discoveries and rapid changes.

THE INVESTOR'S KEY ROLE

There are few, if any, more important roles to be played in the continual growth and progress of our dear country than that of the American investor. Why? Because it is the investor who provides the financial means for private enterprise to continue to expand so that our people may have an ever and ever higher standard of living.

But before we go any further, let us see what this system is.

The system of private enterprise is a system of human relations where all men are free to work at tasks of their own choice, to invest their resources at their own discretion, and to enjoy the fruits of their labor and of their investment.

Free labor and free investment are two sides of the same coin. You cannot have one without the other. You cannot destroy freedom of labor without destroying freedom of investment. A system where men would be assigned to work by the Government or by unions, where men could not accumulate savings, where they could not invest those savings, where their investments were not protected but were instead confiscated and without due process of law—this would not be a free system. You and I need but look to Europe today to observe how these conditions exist in countless countries.

THE MEANING OF "INVESTOR"

Now, when we speak of investors we mean both material and spiritual investors.

By material investors we mean those who have invested in homes, in stores, in small and big businesses, in tools of their trade—the dentist's and doctor's equipment, the carpenter's tool kit. These men and women are sustainers, builders, creators of jobs and of wealth.

Of course, the most obvious example of material investors are the 85,000,000 holders of United States war bonds, the 70,000,000 holders of life-insurance policies, the 40,000,000 bank depositors, the fifteen and more million stockholders and bondholders.

We know how crucial these financial investments have been to our country. We know how the purchase of war bonds enabled our Government to finance the war program, how private life insurance policies insure the security of our people, how bank deposits prove so vital in times of personal emergency and, too, when things run smoothly.

We are also aware of the indispensable role of the stockholders and bondholders. It is they who have made our system of small and large businesses possible. It is they who have enabled America to be technologically head and shoulders above all the rest of the world combined.

Statisticians have estimated that it takes an average of $7,000 of capital investment to create a single industrial job today. Without that $7,000, the job cannot be created nor continued. Every year there is an addition of 700,000 new workers to our labor force. That means that there must be an investment of $7,000 times 700,000 workers or about $5,000,000,000 in investment capital simply to provide jobs for new workers.

Where does that capital come from? From the great mass of small investors, the men of industry, of thrift, of vision.

It is these small investors, 425,000 of them, who hold stock in the great General Motors concern; 700,000 of them hold stock in the American Telephone and Telegraph Co.; 270,000 hold stock in the Radio Corp. of America.

When we speak of these corporations, we must think of the investors in them, just as we must think of their labor and their management. The investor, the laborer, the manager, these are the three pillars of our industrial structure. Each must be free of termites, of wreckers. Each must be free to make its greatest contribution to the whole. Each must work as a teammate with the others.

THE INVESTORIC AGE

For too long has the role of one of the vital members of this team—the investor—been ignored and misrepresented. Actually, as I have indicated, the investor, by making his savings available to management, has become a key man to American industry. So true is this that your able forum director, Mr. William Jackman, has called ours an "investoric system."

This is indeed an investoric age, an age when it is absolutely necessary that great masses of men and women be encouraged to invest soundly and wisely so as to expand and develop our complex system.

Since 1870, over 15 million new jobs have been created in 15 major industries brought about by new inventions. Had investment money not been available to stimulate the development of these inventions, the auto industry, the aircraft industry, plastics, electronics, and so on would not have developed to their present advanced stages.

It was the industry, the inventive genius and accumulated savings of our forbears which in the brief span of 150 years have brought us the highest standard of living in the world.

Even before the war, America, with only 7 percent of the world's population and 6 percent of the world's land surface possessed 71 percent of the world's autos, 59 percent of the world's telephones, 52 percent of the radio sets, 31 percent of the railroad mileage.

Our entertainment and recreation facilities, our educational system, our health surpass those of any power on earth.

THE TERRIBLE ALTERNATIVE OF COLLECTIVISM

And yet, there are those in our midst—collectivists in word and deed—who would divide our house, who would tear down our industrial structure, who would make investments insecure and then confiscate those investments, who would replace our way of life with the slavery of bygone days and of today. We call that slavery stateism or collectivism or communism.

The alien way is apparent in Russia today in its economic system, in its political system, in its utter disregard of what we call the democratic way—the way of the Bill of Rights. We know that Russia has experienced centuries of submerged thinking and living—the past of the czars and the revolution. But before any American should be persuaded by the glib tongues of those who think that the Russian way should be exchanged for the American way, we should see what that way is.

Private property there is the exception. Her farmers are as serfs on their collective farms. Labor is regimented like soldiers. She has practically no middle class.

Many of the Russian people may be happy. They did a great job in this war. But they do not know freedom of speech, freedom of press, freedom of religion, freedom of assembly, trial by a jury of their peers. With our background, we could not be happy without those freedoms.

How could any clear-thinking, fair-minded man or woman be willing to trade our way of life for Russia's, our freedom for her slavery?

THE MENACE OF COLLECTIVISM HERE

And yet there are considerable numbers of vicious-minded or misguided individuals who would lead our beloved land down the road to serfdom.

It is these collectivists in our midst who seek to poison our minds against the investoric system. They picture the investor as a worthless parasite, as a bloated plutocrat. They try to smear the builders, the creators of wealth—men like the Fords and Rockefellers—and make them appear as enemies of Main Street.

They try to create a landless, homeless, rootless so-called proletariat—a mob of wreckers who would tear down our society.

We must antidote this collectivist poison. You ladies and gentlemen, through your national organization, your publications, your forums, your industrious Washington representative, Mr. Nathan J. Paulson, you have a genuine article to sell in this investoric system—this American system. You have a job on your hands to bring light, to bring truth, so as to dispel ignorance and misunderstanding.

You have a righteous cause in upholding the investor—keyman for industry, for prosperity—man of thrift, of initiative, of vision—the farmer, the small and big businessman, the professional.

You have a right to prove that Wall Street and its exchanges, wisely and soundly administered, are the friends of Main Street and are absolutely dependent on Main Street.

You have the right to uphold as an ideal not the so-called rootless proletariat but the homeowner, the small and big businessman, the stockholder, the bondholder—men and women with roots, with stability.

THE SIGNS OF COLLECTIVISM HERE

Your challenge is an inspiring one, and it is not an easy one. Already, there are many signs of collectivism contesting our way of life. One sympton I have already cited—the poisoned propaganda against investors. But there are also deeds and conditions which would undermine the position of investors and thus undermine our system. I will name six of these "wrecking" conditions:

1. The unbalanced budget: With Government deficit financing blowing up the national debt balloon—now almost $300,000,000,000—until it bursts and inflation results. Then the collectivists expect to pay

off the debt with worthless currency, although such payments would ruin our people.

2. An octopus bureaucracy with a stranglehold on agriculture and business, sending out arbitrary orders, nuisance questionnaires and incomprehensible directions. I wish that you could be in my office for one or two days to hear the factual stories of the small and large businessmen who write, wire and call me about bureaucratic maladministration which is holding back production.

3. Government competition with private enterprise: We need only to look around us to see how Government today has invaded innumerable sphere of private enterprise and is apparently seeking to drive private enterprise to the wall—in utilities, in lending functions, and in many others.

4. A throttling tax system which punishes initiative instead of encouraging it, which deprives men of the fruits of their labor and of their investment.

5. A despotic centralization of authority which, through the bait of money, takes away from our States and localities, functions which are rightfully theirs, which discourages them from solving their local problems at their local level, which sends them running to the Federal Treasury for more and more handouts.

6. The rule by a segment of our population: Racketeering labor bosses who dictatorially command what amount to field armies of men. These bosses can order strikes which can paralyze our Nation, which can lay us open helpless to atomic and rocket invasion. These bosses can levy tribute upon the consumer, upon management, upon labor itself.

THE COUNTERATTACK AGAINST COLLECTIVISM

Yes, these are six condition which warn us of worse conditions to come, ending finally in stateism, in a situation where there are no economic, political, or social checks and balances but where power is centralized, unopposed and capable of going to any excess. And let me say, my fellow Amtrcans, that this system of checks and balances, this system of three separate branches of Government, of big and little business, of investor, laborer, and manager is the very woof and warp of our American way of life.

Well, how are we going to preserve this system? How are we going to counterattack collectivism?

Let me suggest six ways. Other ways will ccour to you, I am sure:

1. We must balance the Budget and make the Federal Government live within its means. We must reduce the national debt and demobilize useless agencies and jobholders.

2. We must get rid of those in Goverment who are activated by a master complex, who do not recognize their function as public servants, who do not recognize public office as a public truso, who do not believe in the system of private profit and private enterprise. Get Government out of the "red" and the Reds out of Government.

3. We must get Government out of spheres which rightfully belong in the hands of private enterprise.

4. We must set up a tax system that is simple, clear-cut, and follows plans of justice and equity.

5. We must encourage local initiative and local self-reliance, rather than dependence upon the Federal Government.

6. We must curb the racketeer in labor just as we must curb any racketeers in management. We must provide for the responsibility of unions before the law, for publicized union finances, for democratic union elections. We must prohibit strikes in utilities and nation-wide industries and provide for compulsory arbitration as a last resort to prevent strikes and to insure continuous production.

This country belong to all of us—to the general public. It does not belong to this segment or that segment but to all segments—the working, saving, investing public.

CLEARING UP BASIC TERMS

I know that a collectivist hearing my views and recommendations might falsely denounce them as "reactionary." I do not want to bandy terms about, but I say that it is the collectivists who are the reactionaries. It is they who would turn the clock back. It is they who would return us to the dark ages of slavery, who would force us back to the days before there was a constitution, a bill of rights, a system of checks and balances.

I, for one, seek to conserve the best that is in America, to conserve our investoric system, to conserve our unsurpassed standard of living, our constitutional way of life—protection for all American rights. I want progress in the American way. If that makes me a conservative, then I am one.

There are too many folks about who are mistakingly called liberals who are liberal only with other people's money, who are prodigal with other people's resources and other people's liberties.

Their program is "Tax and tax, spend and spend, elect and elect"—not the American program—That is an alien program.

Your program, on the other hand, to encourage prudent investment, to safeguard such investment, to get full production is an American program.

SPIRITUAL INVESTMENT

My fellow citizens, we have seen that the investor is a keyman for American prosperity. We have seen the ways in which our investoric system may be developed.

But at an earlier point I referred also to spiritual investors, and to the old colored man, Mose, who worked out his problem.

I feel I would be remiss if I did not emphasize as my concluding theme the importance of spiritual investment.

You and I know that money and material values are but means to an end, not ends in themselves. Man must not make money a fetish. An individual in our great land may accumulate much wordly possessions by dint of ingenuity and industry. But he can't take those possessions with him. There are no pockets in a shroud.

While he is here on earth, his wealth gives him added responsibility to use it wisely—with discretion and judgment. It is his responsibility to help bring light to other men. "Ye shall know the truth and the truth shall set you free." It is confusion, ignorance and darkness, which make wreckers of men. Truth antidotes these evils by begetting poise and judgment.

The material investors of America have the responsibility of wise spiritual investment. "Man does not live by bread alone." In this great land, we do not count only our material blessings. Far from it, we reckon our spiritual blessings as the supreme blessings. These are the blessings that give us that inner glow of a job well done, that inner glow of growth and fruition.

But just how may we invest spiritually? May I cite three ways? They are the ways of the great, humble man whose birthday we celebrated earlier this month—Abraham Lincoln. They were the ways, too, of the Father of our Country—George Washington.

Lincoln, in particular, the lowly backwoodsman, the humble rail splitter, invested spiritually in faith in God and the common man, in love of the Republic, in humor.

His faith moved mountains. His faith was the substance—mark you, the substance—of things hoped for, the evidence of things unseen. His was the kind of faith that prompted an old darky to say: "Lord, there ain't nothing that you and me can't handle."

Lincoln's love of the Republic, of its freedom, its opportunities, its checks and balances was another investment that could never fall in value.

So, too, was his humor, his use of mirth—of a wholesome yarn, to refresh men, to release their taut nerves so they could work out their problems.

You and I can invest, too, spiritually—restoring, strengthening, and broadening the spiritual foundations of the Republic. You and I can hold unlimited shares of preferred stock in faith, in humor, in love of the Republic. You and I can help make the home, the school, and the church still stronger foundations of the Republic.

CONCLUSION

My fellow Americans, I have stated that yours is a great challenge—a gallant challenge—to bring light so that our fellow citizens will understand the job of the investors of America.

I conclude with this thought: You, ladies and gentlemen, leaders, trail blazers, will rise to that challenge.

You will be adequate. Of this I am certain. You will be adequate.

[From the Chicago Tribune of February 25, 1946]

BIG UNITED STATES FIRMS ARE OWNED BY SMALL HOLDERS

(By Thomas Furlong)

A majority of shareholders in American corporations are small investors. This is clearly established by examination of the ownership records of individual companies and more extensive surveys by the Securities and Exchange Commission and other agencies.

There are 13,810,000 separate shareholdings in 1,710 widely owned enterprises according to data compiled by the Securities and Exchange Commission. A break-down of these holdings showed that a little more than half of them had a value of $500 or less. Less than a tenth of them represented holdings valued at more than $5,000.

LIST HOLDINGS BY SIZE

The distribution of the holdings by the size of investment is detailed in the following table:

Value of individual holding based on 1937 market prices

	Shareholdings	
	Number	*Percent*
Up to $500	7,505,456	54.4
$501 to $1,000	2,061,244	14.9
$1,001 to $5,000	3,066,092	22.2
$5,001 to $10,000	613,490	4.4
Over $10,000	563,638	4.1
Total	13,809,638	100.0

The study was limited to corporations with securities listed on national exchanges.

There are 26,000,000 shareholders in the 473,000 active corporations doing business in the country. Because investors, on the average, own stock in three different corporations the SEC estimated that the actual number of shareholders is between 8 and 9 million.

DATA ON STOCKS' VALUE

Data were also compiled on the aggregate value of stocks owned by investors in the different brackets. This information for the 1,710 companies follows:

Value of individual holding

[000 omitted]

	Aggregate investment of group	*Percent*
Up to $500	$2,012,185	4.8
$501 to $1,000	1,552,604	3.7
$1,001 to $5,000	7,321,986	17.4
$5,001 to $10,000	4,619,353	10.9
Over $10,000	26,685,404	63.2
Total	42,191,532	100.0

Superficially, the foregoing figures bear out the claim that ownership of American cor-

porations is concentrated in the hands of relatively few individuals. The table shows, for example, that 4.1 percent of the shareholders own more than 63 percent of the stock in the companies studied.

HELD IN NAME OF COMPANIES

The majority of the holdings of common stock of 1,000 or more shares, however, were owned not by wealthy individuals, but were held in the names of charitable and educational institutions, investing companies, life insurance companies, banks and brokers and their nominees. Although registered in a few names the beneficial owners of these large blocks of stock are individual investors, insurance policyholders, estate beneficiaries, and others.

It was found, for example, that the largest single shareholder in 12 large corporations was the New York Life Insurance Co., one of the largest of the mutual companies whose affairs are controlled by policyholders. Prudential Life was the largest holder in 7 corporations, Sun Life of Canada in 7, Metropolitan in 10, and Equitable Life in 3. One large brokerage firm was the biggest single holder in five corporations, another the biggest holder in three. The brokers, of course, although the holders of record, were merely nominees for the actual owners.

[From the Chicago Tribune of February 26, 1946]

SMALL EARNERS GET BULK OF PROFITS IN UNITED STATES

(By Thomas Furlong)

Individuals with net income of less than $5,000 a year received two-thirds of all business profits reported in Federal income-tax returns by individuals.

The same income class received 30 percent of all dividend payments made by corporations to individuals and about one-quarter of all profits accruing to partnerships.

DEPEND ON BUSINESS, FARMS

These facts are drawn from the mass of statistical data compiled by the Treasury Department from information reported in tax returns. A third of all persons paying Federal income taxes depend for income, in whole or in part, on the profits of industrial business or farming enterprises.

The economic interest of this large group, conservatively estimated at 15,000,000 persons, is adversely affected by any Government action that seeks to redivide the country's production pie. If wages are raised without compensating price increases profits are curtailed. If both wages and prices are advanced profits may hold up, but an economic squeeze is applied to those who depend on fixed-income investments such as annuities, proceeds of life insurance, bonds, and rents.

LIST INCOMES OF 1942

Income from dividends and business profits received by individuals in different income brackets for 1942 (latest year available) is shown in the following table:

Net income classes	Business profits	Dividends
Under $5,000	$6,174,049,000	$859,076,000
$5,000 to $10,000	1,306,310,000	378,133,000
$10,000 to $25,000	1,002,347,000	548,913,000
$25,000 to $50,000	372,527,000	387,514,000
$50,000 to $100,000	201,385,000	293,145,000
$100,000 to $150,000	68,273,000	112,132,000
$150,000 to $300,000	64,514,000	106,077,000
$300,000 to $500,000	27,367,000	43,155,000
$500,000 to $1,000,000	20,963,000	47,215,000
$1,000,000 and over	14,560,000	33,233,000
Returns with no net income	23,468,000	23,928,000
Total	9,275,761,000	2,832,521,000

The foregoing tabulations are based on about 20½ million returns made in 1942 on tax form 1040. It is not complete because it omits dividends and business profits reported on form 1040A [optional for use by individuals with incomes up to $3,000]. If the latter returns were included, the aggregate dividend payments and business profits received by those with less than $5,000 net income would be somewhat increased.

TOTAL INCOME EIGHTY-SIX BILLIONS

Total income reported in 1942 by all individuals was $86,000,000,000, of which sixty-five and one-half billions was from salaries and other compensation. Of the other twenty and one-half billions, business profits and dividends accounted for about 62 percent.

Another important source of nonsalary income was partnership profits which aggregated $3,478,000,000. Of this total, eight hundred and ninety-one millions were reported in the returns of persons with net income of less than $5,000. More than two-thirds of the income reported from rents and royalties and from annuities was received by taxpayers reporting less than $5,000 of net income. A similar pattern was shown for income from dividends in Federal savings and loan associations.

[From the Chicago Tribune of February 27, 1946]

BIG BUSINESS: WHO OWNS IT? HERE'S ANSWER

(By Thomas Furlong)

The American Telephone & Telegraph Co. offers one of the best illustrations of the character and distribution of ownership in American corporate enterprise. There are 684,000 owners of American Telephone stock, one of the highest priced issues traded on the New York Stock Exchange. The company is one of the 20 large American corporations with more than 100,000 owners each.

The most recent figures reported by the company disclose that 518,000 of the stockholders own less than 25 shares each. More than 200,000 own less than 5 shares each. Holders of 100 shares or more, who own 47 percent of the total stock, number 39,000. Included in the holdings of more than 100 shares are 825 holdings of more than 1,000 shares, which constitute 15 percent of the total stock. There is a total of 19,750,000 shares.

BIG HOLDINGS BENEFIT MANY

As is true of other large corporations, a majority of the holders of 1,000 or more shares are not individuals but investment trusts, insurance companies, brokers, banks, and other fiduciaries. The company estimates that the beneficial owners of these holdings number considerably more than 3,000,000 persons.

Of particular interest is the fact that more women are registered owners of the stock than men. The company gives the following classification of its stockholders:

Men	184,000
Women	376,000
Joint accounts	82,000
Others	42,000
Total	684,000

Other facts disclosed by the company are:

There are 32,000 trust accounts that hold stock with a par value of $190,000,000.

Among the registered owners are 6,800 institutions, corporations, and private firms. Included in this group are many religious organizations, schools, colleges, hospitals, and other nonprofit institutions.

Of the present stockholders, more than half have owned their shares for more than 10 years; another 120,000 for more than 5 years.

FIFTY-FIVE THOUSAND EMPLOYEES OWN STOCK

Stock is owned by 55,000 employees of the company.

The largest holding by an individual is less than one-half of 1 percent of the total stock.

Stock ownership is widely distributed geographically. In no State are there fewer than 400 shareholders; in 6 States there are 40,000 or more holders; in 17 States there are between 5,000 and 40,000 holders.

The company reports that it has no exact information on the age and economic status of its shareholders. It expresses the opinion that a large number of the holders are elderly persons and that as a group they represent no stratified segment of the population. Like the stockholders in other company, the list "includes all classes of people who have shared the incentive to save and invest," says a company publication.

ASSETS TOTAL SIX AND THREE-QUARTERS BILLIONS

With assets which total $6,750,000,000, American Telephone is the largest nonfinancial corporate enterprise in the country, and its stock is more widely owned than any other concern. The ownership pattern of American Telephone, however, is strikingly similar to that of other large corporations, such as United States Steel, whose 12,500,000 shares are owned by a quarter of a million holders, including many charitable and educational institutions, insurance companies, and similar institutions. Included among the individual holders of Steel stock are 99,000 women who own 3,371,000 shares. The number of men owning stock is smaller, but their aggregate holdings are somewhat larger.

A 4–H Club Member Speaks

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks, I include the following remarks of Jane Chilcoat, of Maryland, at the breakfast meeting of the friends of 4–H Clubs, in Washington, D. C., March 6, 1946:

It is indeed a milestone in my life as a 4–H member to come here as a representative of the 4–H girls of America and talk to you about our work and its importance in the changing world of today. As one thinks of the ideals set forth in 4–H, it is fitting that we emphasize those things in our lives which have helped us develop our talents for greater usefulness. The very thought of 4–H immediately brings to mind certain ideas that have been instilled in us since we first joined the club—the working together with other young people, learning to do by doing, helping younger members through experiences of our own, helping to develop leaders, learning to think things through, and to accept responsibility.

We, who are youth, know we are living in a rapidly changing world. Also, we know we will be the leaders of tomorrow. By us its problems will be met and from us must grow a way to their solution. Four-H through its fourfold teaching—head, heart, hands, health—is building the kind of young adults who will be able to assume these responsibilities.

The main objective of club work is greater efficiency in agriculture and home economics, but even more important is the character-building effect which its activities is having on those who come in contact with them. The qualities built in youth through these activities live forever, along with the capabilities we acquire.

There is an exhibit here today of some of the things we learn to do in club work. It is not that we learn just to make a dress,

but we learn to clothe ourselves, prepare meals, manage a home. All of you know how difficult it has been to get dress materials of any sort. But we who live in rural areas, and yes, even some of our city cousins, have found a partial solution to this problem through the cooperation of the feed companies who began putting their feed in cotton print bags. The pretty print dress in the exhibit was once a feedbag. The wool suit in the exhibit was made by a 4–H girl from my county. One of the hostesses and a fellow club member of hers, took as a team demonstration project, the making of stuffed animal toys. Such demonstrations teach us to work together and to gain confidence in ourselves by getting before an audience and talking. Each time the girls gave the demonstration a larger number of toys was added to the group. Since these, too, were among the hard-to-get items during the war, the girls started getting requests from friends and relatives for their toys and soon had a flourishing business. Even though they were limited to the number of toys because of the scarcity of materials, they made around $100 on what started out to be just another team demonstration.

The social contacts made in 4–H are doing much to overcome the natural shyness found in so many young people and is building thoughtful, considerate men and women who will be welcomed into any society. Who knows just which of us will be the leaders of tomorrow and take your places in the public eye? Who knows just how many former 4–H members may be sitting in on a breakfast similar to this 10 or 15 years from now?

Baltimore County, my home county in Maryland, is one of 15 such counties in the State which has a young adult organization known as a senior council. This is an outgrowth of 4–H, composed of members over 16 years of age. It sponsors activities of the younger club members in the county and is helping to develop the leaders who will become members of the adult organization in the community.

Now that the war has been won, as far as the actual fighting is concerned, we are all more aware of the problem confronting us of building the peace so that the generations to come will not have to live through another era of death, destruction, misery, and hunger. The 10 guideposts which are being emphasized in our club work and during this National 4–H Club Week are indeed a challenge to the rural boy or girl who has grown up as a club member. They deal with the problems that face America and the work to be done in this period of reconversion. They present a challenge to each member to make his best better by acquainting himself with the job to be done and working together toward the goal of lasting peace and prosperity. Couldn't a program similar to this be adopted by the youth of the other nations of the world to reach a better understanding of other peoples and their problems? Permanent world peace seems to hinge on this.

Since we were 10-year-olds and started our first "needle and thimble" project, the ideals taught in 4–H have given us a good foundation for creating better homes for better living. As are our homes, so will our Nation be.

As the 4–H girl goes forth into the world as tomorrow's citizen, her 4–H principles and background will have helped her to become physically strong, mentally alert, and morally straight, and thus she will be better equipped to take her place in this changing world. The 4–H ideals learned in our earlier days have a greater meaning today than ever before as we rededicate ourselves to the tasks that lie ahead. This verse by Carl Schurz seems to sum up 4–H work and its effect on our lives better than any words of mine could ever do:

"Ideals are like stars,
You will not succeed in touching them with your hands,
But, like the seafaring man on the desert of waters,
You choose them as your guides,
And, following them, you reach your destiny."

The National 4–H Clubs

EXTENSION OF REMARKS
OF
HON. JOHN W. GWYNNE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. GWYNNE of Iowa. Mr. Speaker, last Wednesday morning it was my privilege to attend the national friends of 4–H breakfast. This was a part of the program in observance of National 4–H Club Week, March 2 through the 10th.

Among those on the program were two members of the 4–H Club who spoke on the subject What 4–H Club Work Has Meant to Me and to My Community. The speakers were Jane Chilcoat, of Maryland, and Durwald Lyon, who lives on a farm near Toledo, Iowa, in the district which I have the honor to represent.

The work of the 4–H Clubs is familiar to everyone here. Its character building program is one of the finest things we have in the country for young people. During the war the members did a great patriotic service in the food-production program. The 4–H Clubs are deserving of the support not only of this Congress but of all the American people.

I am enclosing a copy of the speech made by Durwald Lyon, as follows:

Friends of 4–H Clubs, I have been asked to say a few words upon what 4–H Club work has meant to me.

I live in Iowa, as has been said, in Tama County, which is in the central part of the State. I live on a 280-acre farm and the land is rolling. We are quite proud that we were the first farmers in Tama County that started a contour demonstration, where we laid our farm out in contours. Many farmers have since that time copied us and now Tama County is in a soil-conservation district.

We do principally livestock farming. We have a herd of 21 Jersey cattle that I started as a 4–H Club project, with 2 Jersey heifers. We are very proud of the production records that our herd has made. They have an average of 450 pounds of butterfat, for 2 years in a row, which is second high in the State, and we had a cow that was high production in the 4–H division.

I am sure that 4–H Club work has helped us to get this herd to be high producers. The things that I learned in 4–H Club work, such as feeding and management and judging, were invaluable to me when we started figuring out rations for our cattle.

I have had quite a little judging experience for the selection of these animals. At our dairy cattle congress, which is our State dairy show, we had a State judging contest for 4–H Club members. In 1943, I won this judging contest. In 1944, I was very disappointed. I wanted to be the only person ever to win it 2 years in a row, and I received second. They started reading the list of high individuals. They started with the fifth first, and the fourth and the third, and then they read my name for second, and I was very disappointed. But I felt a little better when they read the first-place individual—my younger brother, who defeated me. [Laughter.]

I was very unfortunate this spring, early in the year, when my father became seriously ill and I was called on to take over the management of the farm. I am sure that without the experience of my 4–H Club that I had in judging of livestock, in selection of livestock, in feeding them, and what I learned in crop rotation and soil conservation, I would not have been able to take over successfully our farm and manage it; also, what I learned about keeping farm records and the banking experience that I had, with the money that I had received as prizes and from the sale of my livestock, was very beneficial to me.

Our club is very active, the club of which I am a member, in demonstration work. We demonstrate to the farmers of our community at their fair meetings and sales barns, wherever we can get a place to talk, how to save money, how to save time, in different small things about a farm. Last year we demonstrated grub control. Grub costs the Iowa farmers several thousand dollars each year. We went to farmers' meetings around and demonstrated a very simple way, by using derris powder to sprinkle on the cows, and this gets rid of the grub. The county agent told me that in 1944, they sold only 5 pounds of this to Tama County farmers. After the 4–H Club demonstrated this, they sold over 250 pounds.

I had a friend who lives only 2 miles from our place, whose folks would not let him join the 4–H Club. Finally, I talked them into it when he was about 17 years of age, which was 2 years ago. His father probably raised the worst looking hogs in Tama County. It took him a whole year to get them ready for market, and then they weighed about 200 pounds and looked—well, they did not look very good. The boy went into the purebred Deward hog business, and now he and his father are in partnership. They are selling livestock, breeding livestock, and they get their hogs to market at about 6 months of age and they weigh about 230 pounds. This man is getting three or four times the profit that he ordinarily would get when he did it the old way, through the boy's 4–H experience.

I also think that the 4–H Club program has developed me individually. I can remember when I first started talking—it was at a 4–H Club meeting, and I tried to get up and make a motion, and I had the darndest time. [Laughter.] Finally, I learned to make motions, I learned to conduct meetings, and this year, when I was elected as president of the State boys' club organization, I had to make a few speeches. You probably think I haven't come a very long way in making speeches. [Laughter.] I remember, I used to turn sort of a dark red when I got up, and now it is sort of a bright pink. [Laughter.]

But, seriously, I think that the 4–H Club program has developed me to be a better citizen, and I think by being a better citizen in the United States, that is the best contribution that I can make to the world and to our country. I think by being a better citizen, the United States will be stronger, and if it is stronger, I think the world will be a better place in which to live. I thank you. [Applause.]

The Fertilizer Situation

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. COOLEY. Mr. Speaker, I submit a statement prepared by the American Plant Food Council, Inc., with regard to the fertilizer situation. The statement contains historical information of value and indicates that the fertilizer industry is making every effort to meet fully the plant-food requirements of American farmers.

While I congratulate the industry upon the splendid effort which has been made, the fact remains that there is still great need for further expansion if we are to safeguard properly our soil resources, provide food for our own people and contribute to the world's food supply.

At no time in history has there been a greater need for good husbandry and intelligent planning. I am sure that the information contained in the statement prepared by the American Plant Food Council will be of great interest to the farmers of America.

The statement follows:

THE FERTILIZER SITUATION

The record demand for fertilizer and plant-food materials this year will likely be somewhat in excess of supply although the Civilian Production Administration estimates that American farmers will have more total plant food during the current fertilizer year than ever before. Higher prices for farm products together with the critical need for full agricultural production and the relative low prices of fertilizer and plant-food materials largely created this unprecedented demand. Government controls of building materials made plant expansion practically impossible during the war while the recent steel strike cut the production of sulfate of ammonia by an estimated 75,000 tons. Substantial requests for plant-food materials have been received from many liberated and Allied countries since the end of hostilities. Production facilities were largely destroyed in some nations during the war so that today the combined food board is allocating most plant-food materials on the basis of world needs. The prewar excess capacity of the fertilizer industry in this country has made possible the record supplies of plant foods used by farmers during the war.

Fertilizers are recognized as one of the most effective means of greatly modifying soil productivity in regions where temperature and rainfall are suitable for crop production. The fertilizer industry hopes that American farmers will use a sufficient amount of the right kinds of fertilizer to safeguard our soil resources and produce an abundant supply of nutritious foods for all needs.

Recognizing that farmers should use larger amounts of commercial plant food and believing that increased consumption will be further stimulated through research and educational activities, the industry is planning to expand their facilities just as rapidly as materials are available and restrictions are removed. Surveys indicate that 30 or more new fertilizer plants were either started during the war or projected for construction by private industry. Most of the new construction is scheduled for the Midwest and west coast areas.

A survey of the facts pertaining to the fertilizer situation shows, first, the increased amounts of high-analysis fertilizers supplied for agriculture without any appreciable plant expansion as follows:

Year	Tonnage used	Average plant food content of all fertilizer
		Percent
1920	7,296,000	15.70
1930	8,425,000	18.08
1940	8,656,000	20.46
1944	12,468,000	20.64

Second, the trend of fertilizer prices compared with other major commodities purchased by farmers as follows:

[1910–14 prices=100]

	1939 index	*1945 index*
Seed	130	281
Feed	92	175
Farm machinery	154	176
Equipment and supplies	110	141
Building materials other than houses	148	208
Fertilizer	100	121
Average of all	122	174

Third, that our potash needs, formerly dependent upon foreign nations, have been recently supplied by domestic industry as follows:

Year:	*Production (tons K O)*
1921	10,171
1925	25,448
1930	61,270
1935	192,793
1940	379,679
1944	817,[illegible]92

Until the outbreak of World War I, all potash salts were imported. The war shut off our supplies and efforts were made to produce potash in this country. After the war, imports were resumed and the United States production practically ceased. One company, however, continued in operation and succeeded in developing a commercially successful process for producing muriate of potash from the brine of Searles Lake, Calif. Its production increased steadily during the twenties and has been further expanded to meet current requirements. In the meantime Government and private industry were exploring for potash salt deposits in the Southwest. Commercial deposits were discovered near Carlsbad, N. Mex., and production of crude salts started in 1931 and refined salts in 1932. Three companies are now producing from the Carlsbad deposits. The rapid increase in production in this country, even with labor and material shortages, gave American farmers more potash than they had previously used, filled military and industrial requirements and supplied part of the needs of our allies in several neutral countries.

Fourth, that the increased demand for nitrogen can now be largely supplied from domestic synthetic production as follows:

Year:	*Synthetic capacity tons N*
1925	15,300
1930	195,500
1935	341,350
1940	380,300
1944	[1] 1,186,100

[1] 755,000 tons represented by Government plants built largely for war purposes.

The consumption of nitrogen for fertilizer purposes has increased during the war period. In 1930 our farmers used 370,600 tons of nitrogen and the average annual consumption of nitrogen during the period 1930 to 1940 was about 325,000 tons each year.

Year:	*Total consumption tons N*
1940	419,093
1941	458,051
1942	398,563
1943	505,632
1944	626,208

Imports provided about one-half of our fertilizer nitrogen in prewar years and have been an important source of nitrogen during the war. For the period 1935 to 1939, imports averaged 191,800 tons of nitrogen. Approximately 55 percent of imports were from Chile, 20 percent from Canada, and 20 percent from Europe.

Fifth, that the production capacity of superphosphate always exceeded the prewar demand. The great expansion of the normal superphosphate industry was in 1900–1920. A comparison of production and total capacity figures indicates that during many relative good years production was about 50 percent of capacity. In 1932 it was only 17 percent of capacity and during the 10-year period 1931–40 production averaged about 37 percent of capacity. Shortages of labor and sulfuric acid as well as the diversion of elemental phosphorous from double superphosphate manufacture to military uses prevented capacity production of superphosphate. Despite this situation 1944 production was almost 50 percent greater than in 1940.

The American Plant Food Council, which represents an important segment of the fertilizer industry, recognizes that a stable and efficient agriculture must be based on soil maintenance and improvement. We know that soil management for efficient crop production depends upon many practices, including crop rotation, the use of lime and manures, the control of erosion, and the proper use of plant food. We advocate the various practices that make for efficient soil management. The council will use its influence to assure the production and use of the right kind and amount of fertilizer to foster a sound system of farming.

Lumber Shortage and Timber Culture

EXTENSION OF REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement made by me before the Agricultural Subcommittee of the House Committee on Appropriations on February 13, 1946, as follows:

Mr. TALLE. Mr. Chairman, in order to conserve the time of your committee I have prepared a written statement, which I submit for your consideration. In addition, I may say briefly that Mr. Brown and I, as well as other members of the Banking and Currency Committee, have struggled for months with the problem of getting increased supplies of lumber and other building materials for use in alleviating the serious housing shortage throughout our country. Had a program like the one proposed at this time been put into operation several years ago, we would not

now be so disturbed about our dwindling lumber resources.

Mr. Chairman, my statement this morning deals with three items in the appropriation for the United States Forest Service for the fiscal year 1947, namely, experimental forests and ranges, farm and other private forestry cooperation, and forest products, in the order stated.

EXPERIMENTAL FORESTS AND RANGES

The recent growth of interest in forest research in Iowa is probably a result of the difficulty which farmers experienced in securing lumber for farm use during the war years. When lumber imported from the West or South was no longer available a great many farmers found in their own wood lots a source of material that had been hitherto overlooked. Thousands of small sawmills which had previously received but scant attention suddenly won recognition in many communities. Wood-using industries turned to local wood lots for raw materials. These developments served to heighten interest in wood lots as income producers. But maximum income from timber production requires skillful management, and owners quickly discovered that information on woodlot management was lacking as compared with information on the management of other crops.

The Federal Government, through the Forest Service, has taken the lead in forest research, which is a comparatively new field of applied science. The Forest Service maintains 12 regional forest experiment stations, which serve all timber-growing sections of the Nation. Iowa is in the territory of the Central States Forest Experiment Station, with headquarters at Columbus, Ohio.

An "experimental forest" is a tract of woodland or potential woodland—such as submarginal farm land—representing a typical range of local conditions and set aside for forest research. Usually it exceeds 1,000 acres in area. It is an outdoor laboratory and has its counterpart in the experimental farms used in cropland research. In experimental forests technicians test improved methods of woodland management, logging and marketing of timber products, establishment of forest plantations, and other problems of concern to woodland owners of the local area. The most promising methods that result from this research are made available to farmers and other timber owners through agencies already set up, like the State forest service or the Agriculture Extension Service.

In the past a few experimental forests have been established and have demonstrated their usefulness. However, not until last year, when your committee granted an appropriation for the establishment of 11 experimental forests in the South, was there any effective support for the expansion of the experimental forest idea. The South is now urging establishment of 9 additional areas to complete a chain of 20; but it is equally important, I think, to extend the system to the Middle West, the Pacific Northwest, the Lake States, and the Northeast regions.

Last week the Forest Service outlined to your committee a 5-year plan for establishing experimental forests and ranges on a Nation-wide basis. Although this plan proposes the establishment of experimental forests in many States, including Iowa, the appropriation recommended by the Budget Bureau is not sufficient to provide for an area in Iowa in 1947. I urge that you give serious consideration to increasing the appropriation for this work in an amount sufficient to cover the Middle West region, and particularly Iowa. In this connection, I should like to point out that the purchase of land for an experimental forest in Iowa is not a problem since public land is already available for that purpose.

FARM AND OTHER PRIVATE FORESTRY COOPERATION

Secondly, Mr. Chairman, I should like to discuss briefly farm wood lots and the work of the farm foresters under the item entitled "Farm and Other Private Forestry Cooperation."

Forest trees on the farm add to its value and beauty. They supply timber needed for buildings, fences, fuel, and many other uses. There will often be a surplus which can be sold in the form of standing timber, sawlogs, posts, poles, cross ties, pulpwood, fuel wood, and so forth. Moreover, these trees can often be grown successfully on soils too poor or slopes too steep for the successful production of the ordinary agricultural crops. In addition to the commercial possibilities, a well-cared for home forest serves as a windbreak for buildings, a shelter for livestock, a protection against erosion, and a means for retaining soil moisture.

Under the authority of the Norris-Doxey law, and other acts, Congress annually appropriates money for cooperative work with private timber owners. Much of the work is handled through various State agencies. In my State it is administered by Prof. G. B. MacDonald, State forester, and head of the school of forestry, Iowa State College, at Ames.

The program in Iowa is carried out by technical foresters, each assigned an area comprising several counties. The foresters work in close collaboration with the county agricultural agents, acting as specialists in their line upon call of the agricultural agents. The forester gives the woodland owner assistance in marking timber for cutting, advice as to the best methods of utilization, information as to available markets, and counsel in many other problems. It is an established fact that the majority of our farmers know how to estimate, measure, and appraise ordinary farm crops much better than they do standing trees and logs. The work of the farm foresters is designed not only to improve forest management on the wood lot but also to demonstrate the additional income that can be secured therefrom.

Iowa needs more farm foresters than the recommendation of the Budget Bureau for farm and other private forestry cooperation makes possible, and it is respectfully suggested that this item be carefully reviewed.

FOREST PRODUCTS

Mr. Chairman, the third and final item I shall refer to is the appropriation for forest products. It is this item which provides funds for research in devising new and extended uses of wood and other products of the forest at the Forest Products Laboratory, Madison, Wis., and for the maintenance of forest-utilization services at various locations throughout the United States.

The research work of the Forest Products Laboratory was of incalculable value to the war effort, and there are many phases of the work which should properly be extended and expanded for peacetime application.

There are still large quantities of wood wasted in the forest and at the sawmills. I am informed that roughly one-third of the raw material is used to good purpose; the remaining two-thirds, in the form of unharvested down timber, limbs, slabs, edgings, and sawdust, constitutes an economic waste. Through the research carried on by the laboratory, it is reasonable to assume that this tremendous waste can be greatly reduced.

I understand that the Budget Bureau has recommended no increase over the appropriation for the current fiscal year except to provide for some minor adjustments in change of pay for Federal employees. At its peak capacity during the war, I am told, the laboratory employed about 700 people; this figure has now been reduced to 500; and my information is that, if the present Budget Bureau recommendation is accepted, it will be necessary to reduce personnel further to approximately 250 employees. During the past 2 years the regular appropriation for operating the laboratory has been supplemented liberally by funds from the War and Navy Departments and other war agencies. Those additional funds will unquestionably disappear at the end of the current fiscal year, and it would appear that serious thought should be given to replacing them, in part, by a moderate increase in the regular appropriation.

Mr. Chairman, I should like to incorporate the following letters which I have received from constituents as a part of my testimony:

(The letters referred to are as follows:)

DUBUQUE COUNTY FARM BUREAU,
Dubuque, Iowa, December 21, 1945.

Hon. HENRY O. TALLE,
House of Representatives,
Washington, D. C.

DEAR HENRY: During the past couple years, I have been reading accounts in the papers from time to time concerning the production of wood in the war effort. I sold some walnut timber myself, which was made into gunstocks, and was pretty much at a loss about the value of this timber and the price I should receive.

There is a lot of valuable timber, in northeast Iowa especially. Very little has been done in the past to take care of this resource. I understand there is a possibility of the United States Forest Service extending their research program into Iowa. This seems like a very good idea to me. Can you give me any information concerning these plans?

We are trying to get the farmers in our county to handle their timber as part of the farm crops, and we need all the help and information we can get. I would appreciate hearing from you in the near future.

Yours very truly,
JOHN B. COUSIN, *President.*

WAUKON, IOWA, *January 28, 1946.*

Hon. HENRY O. TALLE,
House of Representatives,
Washington, D. C.

DEAR MR. TALLE: We have had a forestry committee in Allamakee County for quite a number of years and surveys indicate that there are approximately 130,000 acres of timberland in our county. Logging, lumbering, and production of forest products has for many years been a vital part of our economic farm set-up. We are, therefore, very interested in any appropriation which can be secured to instigate or further any decentralization of forest research work so that our problem here in Iowa can be given due consideration, or which will provide us with assistance on a cooperative forestry basis.

We understand that the Appropriations Subcommittee on Agriculture is in session at present and we request your support in pushing appropriations of this type. We believe Mr. L. I. Barrett of the United States Forest Service there at Washington can give you specific information on these forestry appropriations if you can see fit to help us.

Very truly yours,
JOHN ROUSTER,
Chairman, Allamakee County Forestry Committee.

CURTIS COMPANIES, INC.,
Clinton, Iowa, February 1, 1946.

Hon. HENRY O. TALLE,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR HENRY: My attention has been called to the proposed legislation dealing with the appropriation for the Forest Products Laboratory. It is being considered, I understand, at the present time by the House Subcommittee on Agricultural Appropriations, with Judge MALCOLM C. TARVER, of Georgia, as chairman. The only member of the Appro-

priations Committee from Iowa is BEN JENSEN.

This is vitally important legislation to a good many of your constituents who are interested in the work done by the Forest Products Laboratory. We urge support of at least the Budget recommendation which merely provides that the existing facilities will be used at only one-half capacity. Of course, we would like to see the entire effort stepped up rather than curtailed, and actually I believe that the Forest Products Laboratory can stand on its record as being one of the few governmental agencies that has done a real constructive job.

Any influence you can bring to bear on the members of this subcommittee or on the members of the Appropriations Committee will be greatly appreciated.

With best regards,

Yours very truly,

G. M. CURTIS.

FARLEY & LOETSCHER MFG. CO.,
Dubuque, Iowa, February 2, 1946.

Hon. HENRY O. TALLE,
House Office Building, Washington, D. C.

MY DEAR MR. TALLE: It has come to the writer's attention that the agricultural appropriation bill for the fiscal year 1947 is now being prepared by the House Subcommitee on Agricultural Appropriations and that the Budget Bureau has recommended only sufficient funds to utilize one-half of the facilities at the Forest Products Laboratory in Madison, Wis.

We wish to point out that the Forest Products Laboratory, in our opinion, has done a most remarkable job on forest-product research. Forest Products Laboratory has been very helpful to us in establishing manufacture of impregnated compressed wood which we manufactured for the Army Air Forces to be used for propeller blades during the war. Further, we sold a large quantity of impregnated compressed wood for insulation spacers in naval vessels. This product has remarkable characteristics, and for your information we are enclosing a leaflet describing the product. Please note also at the bottom of page 3 the table of physical properties.

We cite our Farlite Compreg as only one example of a commercial product developed through the research efforts of Forest Products Laboratory. The writer wants to say that if all of the Government funds were expended as wisely as the money used for research at Forest Products Laboratory, taxpayers would not complain about the present heavy scale of taxes.

It will be appreciated if you would give this matter your attention and, if possible, have the appropriation in the agricultural bill increased for Forest Products Laboratory research, so that their good facilities can be used to the fullest extent. Please advise of any action you may take.

Very truly yours,

FRED R. LOETSCHER,
Manager, Plastics Division.

Mr. TALLE. Mr. Chairman, this concludes my testimony, and I thank you and your committee for your time and attention.

Mr. TARVER. Thank you, Mr. TALLE.

Upton Close

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Friday, March 8 (legislative day of Tuesday, March 5), 1946

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from the 6 p. m. newscast of Albert L. Warner, director of the Washington news staff of WOL, delivered on Wednesday, March 6, 1946, which I think under the circumstances exhibits remarkable restraint on the part of Mr. Warner.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

There is a kind of unwritten law in most newspaper shops and radio stations that one columnist or commentator does not find basic fault with another in the neighboring column or program. It is a type of professional immunity. You may criticize ignorance and malevolent confusion at a distance, but not in the critic at your elbow.

I propose to break that rule.

Upton Close was here last night and spoke over this and other stations on a sponsored program. This is the same Upton Close who minimized Japanese aggression against us before the war, and, on the afternoon of the Pearl Harbor attack, explained it as possibly a coup engineered by Germany, or a coup of a small portion of the Japanese Navy, or by some other Japanese group. Apparently it just couldn't be the war move, carefully planned, of the Japanese Government and its whole military machine.

On December 10, 3 days after the Jap attack, he suggested that the Japanese samurai code might be keeping them from bombing cities and probably was leading them to good treatment of American troops and civilians captured on the Asiatic coast. American prisoners who were slapped, beaten, starved, tortured and saw their comrades bayoneted know the answer to that.

So now we have Upton Close back. With him here last night was Tyler Kent, the clerk in the American Embassy in London. Kent, you recall, took confidential Government messages to his London apartment. The British say they got to the hand of pro-Germans. Close told the public last night that there was no emergency about the housing shortage, but primarily, he charged that American officials are working up two or three wars.

He attacks not only our own Government, but Great Britain, Russia, and France.

You don't have to guess, you know in advance what he champions—Fascist Franco and the Nazi henchmen who are on top in Argentina.

In his broadcast, Upton Close had a handful of alleged facts. Take a look at them. He says the State Department came out in favor of Vargas in Brazil, but the Brazilians elected Dutra. The fact is, Ambassador Berle spoke up against postponing the election. The effect, if any, was the very opposite of what Mr. Close said. It was against Vargas and for an election in which Dutra was the favorite.

The next thing you can put your finger on is the suggestion that our Government has told the number of airplanes it can furnish Communist-instigated France—those are Close's words—to fight the Spaniards. Here are the facts:

The French Government is allowed to buy American surplus military material. In fact, we equipped a gallant French force which fought with us in the war. France has not been given anything for the purpose, as Close intimates, of fighting the Spaniards.

Next, he says that Spain, under Franco, is so inviting a place that American money is being invested freely there.

The fact is, the State Department doesn't know of any investments going into Spain.

Then Close says that American money is completing some giant airfields in Spain so this may be our toehold when we send another military expedition to Europe.

The fact is, that Spanish money has bought some American surplus military equipment such as bulldozers to build an airport near Madrid for commercial air lines, and that's all.

Close says we intervene in Argentina but give it farm machinery to raise food for Britain.

The fact is, the State Department has spoken out against pro-Nazi activities of Presidential candidate Peron and yet saw to it also that Argentine people have the means to move their food from farm to ships to help feed the starving in Europe and Asia.

Close kisses off Franco as a man who never hurt us, but who had to "talk nice" to a government overrunning Europe. Let me read what Franco actually wrote to Hitler in 1941—"I stand ready at your side, entirely and decidedly at your disposal, united in a common historical destiny, desertion from which would mean my suicide. I shall always be a loyal follower." That's Franco. But enough of this tripe.

Where you find greed, selfishness, and stupidity, there you will find Upton Close. You could see him there last night, with the Dictator Franco at one shoulder and the Argentine Nazi Peron at the other; and behind him, the eager specter of Hitler and the drooling war lords of Japan.

Mediation and Arbitration in Labor Disputes

EXTENSION OF REMARKS
OF
HON. ROBERT M. LA FOLLETTE, JR.
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, March 8 (legislative day of Tuesday, March 5), 1946

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the labor situation delivered by me at New York, N. Y., February 25, 1946, before the United Labor Committee to Aid the UAW–GM Strikers.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Certain industrial events are in deadly parallel to those which followed the last war. A powerful minority of industrialists who were successful 20 years ago in their open-shop drive are setting the same stage and redecorating the old props. The same die-hard actors and paid stooges are rehearsing new lines to inflame and confuse the public. They seek to foment hysteria and thus secure passage of legislation that will hamstring labor and give them free rein.

Who are they? They are the remnants of the economic tories who led the great anti-union drive in the 1920's. They opposed and defied section 7a of the NIRA. They schemed to defeat the Wagner Act in the Congress and the courts. Since that time they have plotted to circumvent and nullify labor's charter. They have seized upon every occasion to try to discredit labor with falsehoods and half-truths.

These are no casual off-hand opinions. I know the records of many of these men and industries. When I was chairman of the Senate Civil Liberties Committee we took 30,000 pages—70 volumes—of printed testimony and heard more than 1,000 witnesses over a 4-year period, testifying under oath concerning the sordid practices of labor espionage, strike-breaking, private police excesses, the use of industrial munitions, and the like.

In our first report to the Senate in February 1937, we concluded: "This partial report of findings has uncovered a colossal drive to frustrate enunciated labor policy and to neutralize American labor laws." Subsequent records amassed by the committee showed conclusively that much of the labor unrest in this country is due to a poisoned attitude injected into labor relations by a minority of employers who are fighting labor to the last ditch.

During the present struggle, charges and countercharges have come thick and fast. There have been accusations of conspiracy, irresponsibility, and unreasonableness. In my opinion, Congress should sift these charges. To that end, I have joined with Senators KILGORE, MORSE, and MEAD in introducing Senate Resolution 228 which calls for an investigation into the "causes of current labor disputes, including economic and other factors and governmental policies affecting such disputes." I believe that this resolution should be adopted promptly and an investigation undertaken so that the Congress and the country may have all the facts.

There can be no doubt that some employers, who have never accepted collective bargaining in good faith, are seeking to use the present situation to destroy unionism. It is fairly evident also that some employers would like to use the present situation to break price control.

Clever antilabor propagandists are always trying to do two things: First, place the blame of the strike on labor. Second, exaggerate the extent and effect of the strike.

Let's be fair about the responsibility for strikes. Some people seem to think that striking is a pleasant diversion for the laboring man. Well, it isn't. Go into the home of a man who has been on strike for some time. You'll find a wife and family sorely in need of the barest necessities of life. You'll find hungry children. You'll find unattended illness and hardship. No; it isn't fun to go on strike. Then why does he strike? That's an easy one to answer: Because the man has the courage to fight for his rights and because he has a deep conviction that his cause is just. It is the same fighting spirit that won us our liberty years ago and very recently won us a war.

Frequently during the war years the propagandists were smearing labor. They were out to lick labor no matter what adverse effect it might have on war production. They sought to blame labor for the lack of sufficient guns, planes, ships, and tanks. They forgot about their monopolies and cartels that had created the real bottlenecks. They secured passage of the ill-advised Smith-Connally Act, and then whimpered when they found that some of its provisions could boomerang.

The truth is that during the war less than one-sixth of 1 percent of working time was lost due to strikes. That amazing record is almost twice as good as the prewar 1935–39 average. By way of contrast, it can be noted that industrial accidents and illness cost about 10 times as much lost time.

You know the other half of the story: what labor helped to accomplish in national production. American industry produced about 300,000 military aircraft; 64,000 landing vessels; 12,000 other naval and cargo ships, 22,000,000 rifles, pistols, and machine guns; 700,000 artillery, light field, and tank guns; 12,000,000 tons of bombs and ammunition; 2,500,000 trucks and tanks; $11,000,000,000 worth of radio and radar equipment; and 50,000,000 pairs of boots and shoes.

It is true that time lost since VJ-day is substantially greater than the wartime rate—almost three times as great, or about one-half of 1 percent of total working time. But let's look at that figure, too. The time loss is comparatively high because stoppages averaged 16.3 days for each worker instead of 5.3 days of idleness in the war months. This confirms the fact that the strikes we are experiencing now are bitter and prolonged because they cut deeply into new and basic industrial issues that cannot be settled as easily by ordinary conciliation and mediation.

Furthermore, as far as the over-all picture is concerned, it is easy to lose sight of the fact that much of our reconversion has proceeded more swiftly and smoothly than we had a right to expect. The fact that we have had strikes in key industries has dramatized the situation and affected more workers than usual.

Industrialists should recognize that it is good business to give their workers decent standards of living. The prosperity of industry, and that of farmers and service groups as well, depends largely on the prosperity of the worker. Labor is part of the mass market on which mass production depends. Farm prices and farm income are paid largely out of labor's share of industrial income. Historically, American industry has prospered when labor made its gains. Increased purchasing power, often very reluctantly given or wrested from industry, has been the life blood of our economic system.

Far-sighted management realizes that the greatest untapped market in the world is right here in this country among those who now have bare subsistence purchasing power. Give them a chance to increase their standard of living and you automatically shift our economic machine into high gear.

It is frequently argued that those industries which pay more than a bare subsistence have discharged all their responsibilities toward labor and society—that demands for higher wages or lower prices in these industries are not justified. Such an argument might be true in a static economy. It doesn't hold water in an expanding economy. The entire industrial history of our country attests to the fact that industry can raise wages and can lower unit prices and still make good profits. It's no magic. It's simply a practical lesson in mass production, efficiency, and technology.

It should be conceded that this very general analysis is not the complete picture of our present economic situation. There would have been fewer strikes since VJ-day had the President and other administration spokesmen laid down a definite blueprint with respect to wages and prices, instead of trying to mollify both sides with an indefinite and vacillating policy. In addition, several unusual temporary economic factors are highly important. First of all, a tremendous backlog of demand exists for many industrial products. Second, strong inflationary tendencies are lurking in the economy. Third, the necessity for the continuance of many governmental economic controls impairs the operation of certain checks and balances in collective bargaining. Fourth, the economic road ahead, after complete reconversion, is still uncertain.

Several facts stand out clearly in this confused picture. Many industries are assured of a market for everything they can possibly make for the next few years. In many cases it means lowered costs that should be reflected in higher wages and lower prices. Many industries have already benefited substantially by reduced average unit labor cost due to the reduction of overtime costs.

In those industries that cannot actually effect operating economies under these conditions, and where labor is working for wages that do not permit an adequate standard of living, now is the time to raise those wages, even if some price increases are necessary. Never will these industries be in a more favorable position to absorb increases. If this is not done, the effect will be to impose substandard conditions not only for the present, but for a long indeterminate period. All too often in a glutted labor market it is the industry with the marginal wage that sets the industrial standard.

When the initial backlog of demand is satisfied, there must be a continuing high-level demand. That can be assured only with a high level of purchasing power, gradually built up with an increase in real wages.

These and similar problems are the complex issues behind the labor scene. It is clearly apparent that restrictive labor measures are not the answer. Curtailment of labor's rights can only bring bitterness and discontent. The logical conclusion of such repressive measures is to abolish entirely the right to strike and the right to peaceful picketing. These are fundamental rights which stem from the Constitution.

I cannot emphasize this too strongly: this approach is the method of totalitarianism. The destruction of a free and strong labor movement was the first step in the subversion of the rights and liberties of all segments of the population. When total control was achieved, the status of labor, and in fact all culture, reverted to barbarism, including the exist-for-work theory of economics. This method to secure production is irreconcilable with democracy and freedom.

Punitive legislation against labor, or any group in society, inevitably entails the loss of freedom for all. Labor's basic rights are indivisible with other basic rights. Strike down the rights of labor and you have struck a major blow in wrecking the freedom of speech, and all other liberties that we cherish. It is part of the same pattern. It is part of the same freedom.

These self-evident truths should give warning to those who would extend the Federal power to curb alleged abuses of labor. A temporary victory resulting in a curtailment of labor's fundamental rights will pave the way for governmental encroachments on the rights of management. Permanent regulation of salaries, profits, and prices will be a logical outcome of Federal policies that place labor in a strait-jacket.

The serious situation we face today calls for a delicate operation on the ills of our economy—not a haphazard swinging of the meat axe and bludgeon. A labor strike is a symptom of industrial illness. Too many people are concerned only with the symptom.

The constructive approach to this critical problem is in the opposite direction. The only real answer is full and free collective bargaining, in an atmosphere permeated with mutual confidence instead of mistrust. The spotlight of public opinion must be turned on those who refuse to bargain in good faith.

The conciliation and mediation services of the Government must be strengthened. The use of voluntary mediation and arbitration must be encouraged. Such provisions written into a voluntary collective agreement will afford protection against work stoppages. Compulsory methods usually defeat themselves because they do not remove the friction and bitterness that must be resolved before a satisfactory employer-employee relationship can be had. Cooling-off periods are unsatisfactory because they can easily become heating-up periods or merely stalling-off periods.

I am satisfied that Americans can work out this problem. I am convinced that we can do it without surrendering our birthright of freedom. To achieve this end all elements in our country must have patience and forbearance. Above all, we must have faith in the democratic process and a determination to preserve our fundamental liberties.

In the most destructive war in history we proved that free men could outfight and outproduce nations governed by totalitarian states. We now have the opportunity to prove to the world that free men living in a democracy can have economic opportunity for a high standard of living without surrendering their fundamental rights.

The General Motors Strike

EXTENSION OF REMARKS
OF
HON. WILLIAM A. STANFILL
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Friday, March 8 (legislative day of Tuesday, March 5), 1946

Mr. STANFILL. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial which appeared in the Louisville Courier-Journal for March 5, 1946, regarding the dispute between General Motors and the United Automobile Workers. This, in my judgment, is one of the clearest statements about this entire matter I have seen, and I think the whole country would benefit if it should be inserted in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A STRUGGLE THAT CAN BUT WEAKEN EVERYBODY

The dispute between General Motors and its workers doubtless will go down in our industrial history as a horrible example of mishandling, confusion, and dubious motives; in short, as one of the most unfortunate of episodes, doomed in the end to serve nobody well, with candor, dignity, responsibility, and professed principles all affronted by both sides.

The union's offer to resume work under arbitration—an offer in which artifice and desperation seem to be equally mingled—and the company's rejection with a counterproposal that cunningly changes the subject by a taunting challenge, serve but to deepen the impression of a perversity that is almost malign.

Issues involved in the dispute were no more complex in the beginning than those which separated negotiators in other industries that long ago have reconciled their differences, if even as much as in some. But there was a kind of immoderation of attitudes on both sides that made this strike difficult. There was a virtual admission on part of the General Motors Division of the United Automobile Workers that its intent was punitive and destructive, that it was bent on a test of power as much as on a vindication of principle. It fairly flaunted its strategy of isolating company by company and bending each to its will. Partly defensive against this threat, partly aggressive against the union as such (the cancellation of contract ought to be evidence on this point), General Motors moved instantly to create a new set of issues, so that the original question was blurred at the start by economic theory and definitions of free enterprise. One may well suspect this to have been as deliberate as the union's plan of divide and conquer.

It was as if the two parties were engaged in a race in which each side darted off in opposite directions, or in a debate waged in different languages, so that the longer they kept at it, the farther apart they got. When one changed its course in pursuit of the other, directions were shifted, so that original issues seem now to have been forgotten (52-for-40, wage-price relationships, validity of fact-finding) and a sort of fluid, disingenuous wrangle to have taken the place of bargaining.

It may not be easy to escape the suspicion that, at this stage, the union's offer to return to work pending arbitration was made partly to get out from under the onus of compromise on a point on which it was furiously declared there could be no compromise, and partly to feint the company into the position, for public view, of wanting to prolong the strike.

Obviously the company does want to prolong the strike, possessing several advantages. Not the least of these is the union leadership's making a do-or-die point of 1 cent an hour, although it is diligently trying to minimize this weakness by talking of differences also on contract and working conditions. But the company's refusal of arbitration is based on grounds that seem pretty thin when it says that arbitration is bound to support its offer of an 18½-cent-an-hour raise, so why arbitrate? A genuine desire to get back to work and restore old relationships would find the proposal attractive.

The plain truth is that a pathological condition of mind has grown up in this controversy, a progressive degeneration of reason and responsibility on both sides, and the early show of bargaining has descended into a mutual vengeful snarling, as if each were determined now only upon destruction of the other. In the most recent tightening of the deadlock, the country must have a dismal feeling that this is where it came in, but an even more forlorn wonder as to where it possibly can go now in this matter.

Control of Atomic Energy

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Friday, March 8 (legislative day of Tuesday, March 5), 1946

Mr. McMAHON. Mr. President, I ask to have printed in the RECORD what I consider to be a very important article on the subject of the control of atomic energy. The article was written by George Fielding Eliot and published in the New York Herald Tribune of a recent date. The article is entitled, in part, "General Groves' Aims on Control of Atomic Energy Questioned." General Groves' aims need, in my opinion, plenty of questioning.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GENERAL GROVES' AIMS ON CONTROL OF ATOMIC ENERGY QUESTIONED—HIS COMPLAINT ON 'LEAKAGE' OF SECRETS IS SEEN AS A MOVE TO OBSTRUCT CIVILIAN DIRECTION AND AID MAY-JOHNSON BILL FOR "ATOMIC CZAR"

(By George Fielding Eliot)

The control of atomic energy affects the future safety of every citizen of the United States. American atomic policy must, therefore, be kept under the control of the people of this country through their duly elected public servants.

It is not exclusively a military matter, any more than it is exclusively political, or scientific, or economic. It has all these aspects, and it must be considered from all these viewpoints. But to consider it or to decide it on the basis of one of these aspects to the exclusion of the others can lead only to national disaster.

This basic issue has been sharply drawn by Senator BRIEN MCMAHON, of Connecticut, chairman of the Senate Committee on Atomic Energy, in his speech before the Overseas Press Club in New York on Thursday evening.

The vital importance of Senator MCMAHON's contentions have been vividly, though, one may be sure, unintentionally underlined by Major General Leslie R. Groves, chief of the Army's Manhattan Project, in a press interview on Friday.

A FORCE FOR PEACE

Said Senator MCMAHON: "We should now give notice to the world that we regard atomic energy as a force for peace by handing its control over to a civilian agency."

Said General Groves, referring to the forthcoming atomic bomb tests in the Pacific: "There has been too much discussion already. That's what concerns me. I'd like to see the press locked up on the press ship, taken out to a certain point, write what they can see of the explosion, and then send them back home."

"And then you would see an explosion," a reporter told him.

The general should not have to wait so long to see that explosion.

It is, indeed, high time that the press and the people of this country started asking a few questions of and about Maj. Gen. Leslie R. Groves.

Why, for example, did the general try to frighten the country by complaining about leakage of atomic secrets just at the time of the disclosure of Soviet espionage activities in Canada? These statements have been branded as completely false by the Association of Oak Ridge Scientists, and characterized as an attempt to obstruct passage of the McMahon bill for civilian control of atomic energy in favor of the May-Johnson bill, which would provide for military control. This bill is indeed so worded as to place dictatorial powers over atomic energy in the hands of a single administrator who could not be removed even by the President of the United States. There is good reason to suspect that this job of atomic czar could, in the minds of many proponents of the May-Johnson bill, be most appropriately filled by none other than Maj. Gen. Leslie R. Groves.

But it might be well for the people of this country to stop, look, and listen before they entrust their lives and the lives and futures of their children to one man over whom they will have no control and who could, under the terms of the May-Johnson bill, find ample authority to throw any citizen who protested against his acts into the penitentiary for a long term of years—that is, if the protest were at all specific, and could be construed as violating security.

It might be well to ask why it is that virtually every scientist of any reputation who has worked on the atomic projects regards General Groves with so much suspicion and distrust. It might be well to ask with what bogies General Groves so frightened the members of Senator MCMAHON's committee during his recent testimony in executive session (after the Canadian disclosures) that scientists who are in close touch with what is going on in Washington have now swung from optimism to pessimism over the prospects of a favorable report on the McMahon bill. It might be well to ask why Senator MCMAHON himself found it necessary to make so vigorous an appeal to the public to remember the essential principle of our government, the control of the military by the civil power, and to beg that it be not departed from in a matter of such vital consequence as the control of atomic energy.

INDEPENDENCE MISUSED

It might be well to recall that in every country where the military have gained independence of civilian control, that independence has been misused.

It might be well to ask why, when General Groves so plainly has no confidence in the people of this country, the people of this

country should have such unbounded confidence in General Groves as he seems to demand?

There has been too much discussion already, says the general. That's what concerns him, he tells us. There should be more discussion, a great deal more, and a lot of it should be about General Groves and what makes him tick, and why.

It is our lives you are playing with, general. It is our country's future. And we'd like, if you have no objection, to continue to have these affairs of ours controlled under the arrangements we have found satisfactory for the last century and a half—the arrangements set down in the Constitution of the United States.

Rural Electrification

EXTENSION OF REMARKS
OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 8 (legislative day of Tuesday, March 5), 1946

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address on rural electrification which I delivered at Buffalo, N. Y., on Tuesday, March 5, 1946, before the National Rural Electric Cooperative Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad to have the opportunity to participate in your annual meeting. An occasion like this does much to arouse enthusiasm to carry forward the fight to extend rural electrification. To give the farmers of America the miracles of an electrical age is a noble, humanitarian and economic objective. I am proud to have been associated with this movement from its inception.

The REA is less than 11 years old. It was created by Executive order on May 11, 1935, with an appropriation of $75,000, under the Federal emergency relief program. It was given continuing status by the congressional act approved May 20, 1936. The act wisely gave preference to cooperatives, public agencies, and limited profit groups.

In the short span of intervening years between then and the present, including the war years when most of the REA expansion activities were suspended, more than one and one-half million customers have been provided service from 500,000 miles of transmission lines and 64 generating systems financed by REA. Insofar as the National Rural Electric Cooperative Association is concerned, I note from the February issue of your official publication that you can now boast of 470 member cooperatives, with 699,996 consumer members. That is a splendid record of growth.

Perhaps the most significant figures that can be mentioned are the census figures on the extent of rural electrification. Only 10.9 percent of all farms had electricity in 1935. Ten years later, in 1945, about 44.7 percent of all farms were electrified. The large part of this progress was due directly to the REA.

To date, Congress has authorized about $725,000,000 for REA loans, exclusive of the $100,000,000 in the pending deficiency bill which will be approved shortly. The ultimate goal of complete electrification of all rural areas, which should be completed within 10 years, is estimated by the Budget Bureau to have a total cost of $1,825,000,000. It should be emphasized that this is not a burden on the taxpayer. This is money for loans, most of which are gilt-edge. The program's solid financial position is shown by the fact that delinquencies on the repayment schedules to date have been considerably less than 1 percent.

There were good economic reasons why the Government 11 years ago undertook the responsibility of promoting rural electrification through cooperatives. First and foremost, private utilities had not done the job. It was not because the utilities disliked the farmer, but merely because they did not choose to dilute their urban profits with less profitable rural operations. The incentive for rapid expansion was lacking.

It was clearly apparent then, as now, that an expansion policy for rural electrification based solely on anticipated profits would be very slow in reaching the farmer. Furthermore, it might actually doom many to indefinite darkness because a profits policy will inevitably skim off the best business and forget about the thin areas. The only way an integrated coverage could be obtained was to establish the REA and make it possible for the farmers to help themselves. That is where the Government came in; that is where the cooperatives came in.

Electricity has become such an important item in a decent standard of living that the Government cannot condone a situation where a large segment of our population must live without it, or pay prohibitive costs for it. It is a tribute to the ideals and efficiency of the rural electric cooperatives that they have been able to overcome the basic economic handicap of serving those whom the utilities would not serve, and yet give comparable service for all. Your rural cooperatives have supplied power to areas and farmers who would not have electricity for many years. Your cooperatives have substantially reduced the costs of rural service, so that more people can enjoy the benefits of electricity.

Electricity is bringing a new era into American agriculture. I venture the assertion that electricity will ultimately revolutionize agriculture more than all the farm inventions of the last century combined. Fortunately, most of the changes will be on the credit side of the national ledger. It is my opinion that the availability of cheap electricity on the farm is the best possible insurance that the farmer of tomorrow will have the social and economic status to which he is entitled as a major producer in our economy.

The family-owned and operated farm is one of the cornerstones upon which our political democracy rests. An adequate supply of electricity at reasonable rates will be an important factor in its preservation, as against corporate agriculture.

Once the farmer gets the power, he quickly learns how to make good use of it. Statistics of power consumption for newly electrified farms show a rapid rise in the rate of consumption over a period of the first few years, especially. Experts in the Department of Agriculture say that electricity has more than 50 different uses in the home, and more than 300 uses on a farm.

For example, a dairy farmer can make use of milking machines, milk refrigeration equipment, bottlewashers, equipment for sterilizing utensils and pasteurizing milk, barn ventilation fans, devices for heating the drinking water of cows, animal groomers, electrocution screens for flies and insects, and ensilage cutters. A poultryman can effectively use lighting to improve egg production, heat to control incubation, and ultra-violet light to improve the hardihood of young chicks. In general farming electricity can be used effectively for corn shelling, husking, and shredding; hay hoisting and baling; feed grinding; wood sawing; threshing; concrete mixing; and power for general machinery.

This is in addition to the usual applications of home, barn, and yard lighting; and the usual home appliances—radio, refrigerators, washing machines, irons, toasters, vacuum cleaners, and so forth.

It should be noted that each extension of rural electrification opens a vast new market for electric appliances. It is estimated, for example, that normal REA expansion in the next 3 years will create a market for more than 1,000,000 radios, 1,000,000 electric irons, 700,000 washing machines, 500,000 refrigerators, 400,000 toasters, 250,000 vacuum cleaners, 200,000 hot-plates, and 100,000 coffee makers.

There may also be a new additional service made possible through rural electrification. Telephone service may become integrated with it. It has been proved feasible to use rural power lines for carrier-currents for telephone service. Only last week it was announced that royalty-free patents were given to equipment manufacturers, and that it is expected that telephone service will be extended to an additional million farm families within the next few years. The REA, the Federal Communications Commission, and private telephone laboratories are all promoting this development which may mean a two-for-one bargain in rural electrification.

All of these facts add up to this: Electricity on the farm makes farming more profitable, reduces the drudgery of farm labor and, most important of all, makes the farm a more comfortable place for the farmer and his family to live.

From these self-evident truths and the great success of the REA program to date, it might be assumed that the REA would encounter no further opposition. But such is not the case. The private utilities are seizing every opportunity in their persistent efforts to cripple this great program. I know, because I have been in the thick of the fight on several fronts within the past few months; yes, even a few days ago in the Senate.

There are so many legislative issues that need careful attention that I was uncertain almost to the last day as to whether or not I could accept the invitation to be here. But I am glad I could come. And I intend to continue the fight on these issues in the Senate as long as I am privileged to have a seat in that great deliberative body.

For many years I sat side by side in that body with the man who led the fight to establish the REA on a permanent basis. Senator Norris never faltered when the going became tough. Now, when the private utilities are marshaling their forces to cripple and hamstring the program, it is up to us not to falter. We must organize and meet their challenge head on. Every friend of the REA, in and out of Congress, must give his best in the battle now being waged.

The opponents of cooperatives and rural electrification are not making a frontal attack. They know that public opinion could not be mustered on their side if a clear-cut issue of for-or-against is presented to the people. Therefore, they are making oblique, slashing attacks by which they hope to accomplish their ends.

You know the tactics: "The rural electrification cooperatives are all right, but—". "We have no quarrel with the cooperative movement, but we think it should be required to—".

Or, they contend that everything that needs to be done has been done by the Government; that the problem, great as it was, has now been solved. Then they add that additional rural electrification can be accomplished without further governmental aid. That argument was used 11 years ago when almost 90 percent of the farms of this country were without electric light and power.

Still another more subtle approach is that which tries to "improve the efficiency of rural electrification"—and I put that in quotation marks—by restricting the operations of cooperatives in the construction of competing generating plants and transmission lines.

As late as Friday in the Senate we had under consideration a deficiency bill which carried, among other things, an authorization of $100,000,000 for REA loans. This item was added to the bill on the House side to meet the situation with which you are familiar, namely, that almost all of the present funds are allocated and that no continuing authorization, such as the Poage bill, has yet been approved by Congress.

After the hearings had been closed, the Senate Appropriations Committee in executive session adopted an amendment which provided that no part of the money should be available for the construction of generating plants, unless it was certified by the Federal Power Commission that current was not available in the area at reasonable rates.

Those of us who realized the implications of this amendment—how it would in effect repeal parts of the REA Act—exposed it on the Senate floor, and stopped it cold, by a vote of 52 to 21.

What would this amendment have done? It would have deprived cooperatives of the bargaining power whereby they may secure reasonable rates from public-utility companies. They cannot ignore reasonable rates that would be set by actual or threatened competitive service. Everyone who is familiar with the history of the activities of the power corporations knows that even with this bargaining power cooperatives in some instances have been refused power at reasonable bulk prices.

It is highly significant that when cooperatives were forced under these circumstances to build competing plants, they were able thereby to secure lower rates. I am familiar with the Dairyland Power Cooperative and other cooperatives in my State. I know that unless that cooperative had had the ability to construct its own plants it would have had to take power from the power companies at 1.8 cents per kilowatt-hour. Instead, it was able to obtain its own power at 1.28 cents per kilowatt-hour. It thereby obtained a savings to the Dairyland Cooperative alone of $330,000 a year.

We had a similar congressional fight last December when utility interests tried to block various power projects and transmission lines that will mean lower rates to REA cooperatives. The issue is essentially the same on all multipurpose dams: the power companies want to obtain control of any power that is generated. A favorite method of trying to do that is to write legislative provisions into the law which will prohibit the Government from constructing transmission lines to the dam. The object is to place the private utilities in a position where they are the only customer for the power and thus to enable them to buy it at dump prices. We fought out that issue in the Senate last June when an effort was made to deprive the Department of the Interior of necessary funds to construct connecting transmission lines to Shasta and Keswick Dams. I discussed the issue at length and pointed out to the Senate at that time that the question before the Senate is, Shall these great power projects be operated for the public good, or turned over, lock, stock, and barrel to a private corporation for gain?

We won that fight, and also the previous one in November 1944 when we defeated the so-called Bailey amendment to a flood-control and power-project bill. The Bailey amendment also would have precluded the Government from building transmission lines when private interests wanted to buy the power at the dam.

I cite all these instances to emphasize the fact that we have strong opposition. And you know as well as I that it does not lack financial backing for propaganda purposes. From the steady stream of literature that comes across my desk—it is beautiful art work and well-written copy—I believe that it must serve at least one useful purpose—it must give employment to a great many people.

In all seriousness, we cannot afford to underestimate the drive that will soon be made in full force against all cooperatives on tax issues. We cannot afford to underestimate the further efforts that will be made to hamper REA expansion on this same issue of generating plants, or the more preposterous claims that the job of rural electrification is done, and that private utilities can handle the rest of the farmers. If I am any judge of the situation, these issues will be before the Congress soon again. Even the Harris bill in the House of Representatives, which has been reported from the subcommittee to the full committee on Interstate and Foreign Commerce, contains provisions which would restrict and hamper expansion. To obtain the kind of program we want, we need the help not only of you who are directly concerned, but every farmer who has a stake in rural electrification and every co-op member who believes in the cooperative movement. I call on all the friends of this great program to stand shoulder to shoulder in meeting the onslaughts of the utility interests.

Address by Hon. Lister Hill, of Alabama, to Gen. Henry H. Arnold, at Testimonial Dinner

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, March 8 (legislative day of Tuesday, March 5), 1946

Mr. HILL. Mr. President, on February 9, 1946, at the Statler Hotel in Washington, the Army Air Forces tendered a testimonial dinner to Gen. Henry H. Arnold on the eve of his retirement as commanding general of the Army Air Forces. I was privileged to make an address on that occasion, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We gather tonight to do honor to an old comrade, a great soldier, a great airman, a great military leader, a great servant of our country, Gen. Hap Arnold.

His is the story of the achievements of an American boy who was to rise step by step until he was to stand within the small and select company of the leaders who were to save our country and the liberties of all peoples. His is the story of the man who did the impossibles.

We see Hap Arnold, a lanky young second lieutenant graduating at West Point in 1907, winning Aviator's Certificate No. 29 in 1911, winning the first of all United States military aviation badges in 1912, and in that same year being the first Army officer to have his name inscribed on the Mackay Trophy.

World War I comes and he does well his part. In 1935 he wins for the second time the Mackay Trophy, and in 1938 brings the Collier Trophy to the Army Air Corps.

And then World War II, the greatest war in all the world's history. Hap Arnold is full-grown now, with his splendid personal leadership, driving spirit, and professional genius. His unerring vision grasped the picture and his sound judgment correctly estimated the situation. In his brain the eagles of battle built their eyries, and beginning almost from scratch without a precedent, without a pattern, he created the mightiest military machine of the air the world has ever known. He smashed precedent, he cut the lines of static thought, he did the needful and built anew. He demanded from his subordinates, from science, from industry and labor, from all America, twice as much as it appeared humanly possible to deliver. He got at least 50 percent more than anyone, except Hap Arnold expected to get. His driving spirit, the driving spirit of the Army Air Forces found translation in their motto, "It can be done."

In 1940, we had to get aircraft to England—not a few but a veritable flood of them. There was not sufficient shipping space to make even a start. Hap Arnold mused, "Airplanes are made to fly. We will fly them to England."

Oh, it could not be done; everybody except Hap Arnold knew that. It was a long way to England. The route lay across the icy wastes of the North Atlantic. There were no intermediate landing fields, no communications, no weather services. The losses would be terrible to contemplate. Maybe a few long-range bombers could make it in a few of the better days during the summer. But it was just impossible.

A few months afterward Hap Arnold was to report to a committee of Congress, "We did fly the planes, pursuits as well as bombers, to England, and during the winter with the same success as we did in the summer, with no greater losses."

American and Allied experts assured Hap Arnold that daylight, high-altitude, precision bombing was impractical and impossible. Our allies had tried and had given up. Theoretically and demonstratedly, it could not be done. We could not possibly break through German defenses without prohibitive losses. Even the Germans were convinced. But Hap Arnold knew that to win the war we had to go through, and we know how well and how often we went through in broad open daylight straight to the targets.

The general had to have fighters to accompany the heavy bombers over Germany. A young staff officer remembers vividly walking to his desk one morning and finding there a directive for a fighter aircraft that would escort heavy bombers from England to Berlin and return. The general wanted it in less than 6 months, and from the assembly lines came pouring the Thunderbolts and the Mustangs. When the first fighters accompanied the heavy bombers over Germany, and Nazi pilots reported them, the Nazi high command laughed and said that the pilots were seeing things. They said it was impossible for a fighter to fly that far, until one day the commanding general of the Nazi fighters went out to take a look at the air war and met four American Mustangs which chased him all the way back to Berlin. Then he knew how far the American long-range fighters could fly.

The European winter came, with its wretched weather, and our air operations were coming almost to a standstill. The general's answer was to find out how to bomb through the overcast. He rallied the world's scientists and forced the solution. Soon, our thousand-plane attacks were as regular in bad weather as in good. With our fancy radar and radio gadgets our planes were able to drop their bombs on the enemy almost as precisely as if they were seeing the targets.

There was often a scarcity of many of the critical materials needed for the building of our planes and their equipment. These materials were in demand by other leaders no less conscientious or patriotic who were carrying grave responsibilities. It was the driving spirit of Hap Arnold that made all appreciate the vast importance of his great bombing offensives, won the approval of the

President, and secured from the Joint Chiefs of Staff the overriding priority to meet his needs.

Great as were the planes that Hap Arnold built, he recognized that their effectiveness against the enemy depended upon who serviced and navigated and piloted and fought them. He realized that 65 percent of the Air Forces' enlisted personnel and practically all of its officers had to be technical specialists. He demanded that the Air Forces have only the best in officers and personnel. He got them. From the flower of American youth came his mechanics, his pilots, and his fighting airmen. They paid tremendous dividends.

When the war broke with such swiftness there was an insistent demand that Hap Arnold send all available trained personnel to stem the engulfing tide of enemy air power. He was too wise for this. He refused to hazard the future to serve the hour. He sent only a portion. With the remainder as a teaching nucleus he welded together the mighty Army Air Forces that whipped its weight in Messerschmitts, Focke-Wulfs and Mitsubishies. It was a tough decision. It was the right decision.

With his planes and his fighting airmen Hap Arnold carried the war to the very heart of Germany long before it was possible to land on the beaches of Normandy. Where Hitler and Goering with all their planes and strategems and all their vaunted Luftwaffe failed, Hap Arnold succeeded. While Hitler and Goering could not understand and appreciate the tremendous significance and import of strategic bombing, Hap Arnold smashed Nazi plants and production lines, paralyzed their transportation systems, blasted their reserves, and made possible the landings on the Normandy beachheads, the terrific and heroic drive of our ground forces across France, through the Siegfried line, over the Rhine and on to the complete disaster of the German Armies.

Few of us will ever know the difficulties encountered in keeping the European bombing offensive coordinated under the command of airmen so as to utilize maximum efficiency of air power. General Arnold well remembered those difficulties when he set up the great B–29 offensive in the Pacific. To insure that its mighty strategic strength would not be weakened by the divided command in the Pacific, he set up the headquarters of this great force here in Washington with himself directly in command. Here he was the Commanding General of the Army Air Forces, a member of the Joint Chiefs of Staff, a member of the Combined Chiefs of Staff, and in addition, brilliantly commanding the largest combat air force of all the world 5,000 miles from its theater of operations. What a general!

There is nothing in recorded history like it.

In early 1944 Hap Arnold took a trip to Europe. On the basis of what he saw there he decided in his own mind that the war in Europe would soon be finished. He forthwith cabled his staff in Washington to stop the enormous flow to Europe of aircraft, crews, bombs, ammunition, fuel, and all that goes with aerial war, and to channel the full weight of our air power potential toward Japan. A momentous decision, indeed. Only courage and military genius could make a decision of such import.

With that decision and all it meant in the bombing and burning and blasting of Japan, within 90 days from VE-day, without a single American ground soldier having to put his foot on the Japanese mainland, Japan surrendered and we celebrated VJ-day.

How sweet must be the thought tonight to Hap Arnold that his courage, his daring, his vision, and his genius contributed so much to the saving of the lives of thousands of American youth and of millions of American casualties.

It was a fateful quirk of chance that made Hap Arnold a member of the Joint Chiefs of Staff. But once he sat with the President and other service chiefs there was no question about the need for him in that body. At long last the Chief of the Air Service was in his rightful place. At long last air power had won recognition as an equal partner in waging the war. At long last the Army Air Forces had an authoritative voice in the decisions as to how and where they would be employed. Military aviation made its greatest forward step and Billy Mitchell stood vindicated.

Under Hap Arnold so brilliant were the achievements of the Army Air Forces, so magnificent their record, and so superior their contribution to the winning of the war that they cannot today be denied equal status and equal autonomy with land and sea forces. I tell you tonight that it shall be so written into the law of the land. Air power takes its place as America's first line of defense.

In this atomic age we know that our best hope for peace lies in an organized world under law and justice. We also know that until the world can be so organized—and the processes are slow, painfully slow—we must keep America strong if we would play our part in the leadership of the world and in the building of its peace. Men and nations do not follow weak leaders. And we must keep America strong that we may keep America free.

Hap Arnold, ever looking to the future, has already called in the scientists, the experts, and the best brains of our country and started them on mountainous research to find the answers, to look 20 years into the future that we may best plan and shape our defenses. In his historic document, the third report of the Commanding General of the Army Air Forces to the Secretary of War, he has left a rare testament of wisdom and of experience for our guidance.

As we pay tribute tonight to Hap Arnold, we cannot forget her who has been his best lieutenant, his kindest critic, his wisest counselor, and who has done so much to keep the home fires burning, Mrs. Hap Arnold.

Brooking no fear, quick to decide, going through with his purposes whatever obstacles opposed, Hap Arnold leaves an inspiring example of achievement, of devotion, of brilliant leadership that will quicken and strengthen the spirit of the Army Air Forces down the years.

As Hap Arnold departs from us he carries with him our affection for him as a comrade, our appreciation of all that he has done for the Army Air Forces, and our pride in his exalted services to our country and its free institutions. A searching survey of his record shows that there is no great act of his which our country would annul, no great decision by him which military judgment would reverse, no deed done which wisdom would deplore. His fame as a soldier is eternally fixed. He has won his place in the high fellowship of our country's great military leaders headed by George Washington. And we may know that if Washington were with us tonight he would join with us in saying to Hap Arnold, "Well done. Well done."

Statement in Opposition to Compulsory Military Training by Dr. John R. Sampey

EXTENSION OF REMARKS

OF

HON. WILLIAM A. STANFILL

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, March 8 (legislative day of Tuesday, March 5), 1946

Mr. STANFILL. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Dr. John R. Sampey of the Baptist Theological Seminary at Louisville, Ky., setting forth his ideas regarding compulsory military training. Dr. Sampey is recognized not only in Kentucky but throughout the Southland as a great spiritual leader of the people, and his words and advice carry great weight among religious people all over this country.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

A WORSHIPER OF LEE RENOUNCES WAR

(By John R. Sampey)

To show that I have not departed in the slightest from my great hero, Robert E. Lee, I wish to quote a brief passage from the authentic life of Robet E. Lee by Douglas Southall Freeman.

On page 497, of the fourth volume, on The Pattern of a Life, Dr. Freeman shows the marked change that came over General Lee after 1865. I quote as follows: "He was changed, also, in that, after 1865, he put out of his heart the military career that long had fascinated him. All the misgivings he had felt before the war regarding the pursuit of arms were confirmed by 5 years at Lexington. He spoke his conviction, as always, when he told young Professor Humphreys that the great mistake of his life had been in pursuing the education of a soldier, and he was not jesting in his encomium to General Ewell on the delights of a civil life. It was not by chance that he failed to keep step with the superintendent of VMI when the two walked together at the head of the column of cadets."

Dr. Freeman records the misgivings General Lee had felt before the war regarding the pursuit of arms. Please observe that he stated explicitly to Professor Humphreys that the great mistake of his life had been in pursuing the education of a soldier. He felt that he had largely thrown away his life in the work of destruction, and he devoted his closing years to the work of building up the young men of the South in order that they might build up Virginia and other States. He rejoiced in this work of reconstruction as opposed to the destructive activity of war.

From the days of West Point until Appomattox General Lee always conducted himself as a soldier, but after 1865 he refused to keep step when he marched with the superintendent of Virginia Military Institute at the head of the column of cadets. What could more strikingly show his renunciation of war?

I have long had some doubt as to General Lee's attitude toward war, and it is now perfectly plain to me that my great hero for the last 5 years of his life absolutely renounced war. He refused even to talk about the battles of the War Between the States lest the review of these terrible battles encourage hate against the North. He spent the closing years of his life in working for peace for his country.

It is well known to my many friends that I encouraged our people to give themselves heart and soul to winning the First World War against the Kaiser, and the Second World War against Hitler and his hordes. I was so earnest in my advocacy that I was deemed by some of my friends as a "war monger."

The question before the American people at the present time is the suggestion by President Truman and the leaders of our armed forces that youths of 18 shall be drafted for 12 months into military service. This would be far inadequate for the training of men in modern warfare.

I have two serious objections to this universal conscription of our American boys of 18. The first objection is that our only possible enemy in war in the future would probably be Russia. The plan to draft boys of 18 for only 12 months' military service

would be a joke in the eyes of Russia. With her population of 190,000,000, which is rapidly increasing through the encouragement of large families among the Russians, she will far outdistance us in building up a great army. She bore the brunt of the struggle against Hitler and his hordes during World War II. The Germans concentrated against Russia from two to three times as many divisions of their Army as they did against England and the United States. The proposed plan is wholly inadequate to provide any protection from an attack by Russia, if war should be brought on between our country and the Reds.

I have a second very serious objection to the conscription of our boys of 18 in our armed forces, as they are at present turned over to the sellers of liquid damnation in the form of whisky and beer. The example is set from the Chief of Staff and some of our top generals all the way down through the noncoms, and many thousands of our American boys who never touched alcoholic liquors in their homes in America have become addicts of liquor drinking. I cannot for a moment get my consent to encourage any lover of youth to vote for conscription of the 18-year-old boys as long as the distillers and the brewers flood our armed forces and all the world with alcoholic beverages.

I am authorizing my colleague, Dr. J. B. Weatherspoon, who is also chairman of the Social Service Commission of the Southern Baptist Convention, to send out to our Baptist papers and any other organs of public opinion, my intense opposition to the conscription of our 18-year-old boys.

The Fight Against Cancer

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Friday, March 8 (legislative day of Tuesday, March 5), 1946

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Doctors Are Out to Conquer Cancer and They Need Your Help," written by Eric A. Johnston and published in the Reader's Digest of March 1946.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DOCTORS ARE OUT TO CONQUER CANCER AND THEY NEED YOUR HELP

(By Eric A. Johnston)

Between Pearl Harbor and VJ-day, cancer killed 607,000 Americans—more than twice the number killed by Germans and Japs.

Cancer is the greatest killer of women between the ages of 35 and 55; the second greatest killer of men. Nearly 2,000 children die of it yearly.

Some 17,000,000 Americans living today are destined to die of cancer unless we do something about it.

Last year we started to do something about it. Responding to an appeal of the American Cancer Society, we subscribed approximately $4,000,000 to launch an all-out attack on the disease.

Of this, nearly $1,000,000 has already been made available for organized research. The National Research Council will serve as research adviser to the American Cancer Society; thus the campaign will be supervised by the same body to which the Government turned for advice on wartime research.

More than $2,500,000 has helped existing cancer clinics and hospitals with their immediate job. The immediate job—as distinct from the long-range effort to discover cause and cure—is far from hopeless. For, even on a basis of what we know now, we can save many cancer cases if the condition is detected and treated early enough. Early detection means periodic examinations by qualified cancer physicians in properly equipped clinics and hospitals. We have such facilities, but they are too few, too distant, too poorly equipped to serve all the 17,000,000 Americans marked for cancer death. At some clinics appointments must be booked 6 or 8 months in advance.

The funds you and I contributed last year have financed special cancer training for county medical examiners; surveys of State facilities for cancer treatment; refresher courses to qualify general practitioners to detect cancer early; radium, new X-ray machines, and other needed equipment for existing cancer clinics and hospitals.

But all this is only a beginning. We've set out to conquer cancer. Let's finish the job.

April is cancer-control month. At that time the American Cancer Society will launch its drive for $12,000,000 to speed up cancer research, extend public education, provide more and better hospitals and clinics, and train more specialists.

There is a high purpose in this campaign; the conquest of cancer must be undertaken. Your contribution to the American Cancer Society, Empire State Building, New York 1, N. Y., or to your own State cancer committee, will help.

The OPA

EXTENSION OF REMARKS
OF
HON. BOURKE B. HICKENLOOPER
OF IOWA
IN THE SENATE OF THE UNITED STATES
Friday, March 8 (legislative day of Tuesday, March 5), 1946

Mr. HICKENLOOPER. Mr. President, day by day it becomes increasingly apparent that the OPA is one of the biggest stumbling blocks to reconversion, and the production of needed goods in this country. I ask unanimous consent to have printed in the RECORD an editorial entitled "We Need OPA, but Let's Delouse It," from the Record-Herald and Indianola Tribune of February 21, 1946. Also I ask unanimous consent to have printed in the RECORD an editorial from the same newspaper of the issue of February 28, entitled "OPA in a Glass House."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Record-Herald and Indianola Tribune of February 21, 1946]

WE NEED OPA, BUT LET'S DELOUSE IT

L. S. Riford, agricultural cooperation chairman of the National Association of Manufacturers, said in Des Moines Saturday that price controls are a "road block that is impeding the progress of every industry." He declared they are strangling industry and agriculture.

A few hours later Secretary Wallace said to the same group of listeners that OPA must be backed for another year or there is imminent danger of wild inflation.

In this case the Record-Herald must agree with Mr. Wallace; but Mr. Riford is not altogether wrong. Price controls should be maintained for a limited time as a safeguard against inflation; but the cussedness and inconsistency can and should be taken out of OPA. The worst enemies of OPA are in its own organization.

OPA has discriminated against smaller businesses in spite of all its assurances of interest in them. There are too many crooks somewhere in its councils who talk one way and do another.

On the other hand, the ideas of businessmen that OPA should be completely scrapped are not to be taken with unreserved confidence. We must not forget that NRA in 1933 was the child of the United States Chamber of Commerce, yet was the biggest flop of its time. Businessmen, so-called, indulged in the orgy of stock and bond exploitation and installment buying which preceded the collapse of 1929.

But the mistakes of businessmen 20 years ago are no excuse for the mismanagement of OPA in 1946.

The gestapo tactics of some men in its enforcing division are reprehensible and amount to nothing less than high-handed chicanery. When Mr. Kline, head of OPA for Iowa, spoke to the Rotary and Lions Clubs of Indianola, he convinced most people of his personal sincerity; but he did not convince anybody of the sincerity of some of his superiors and subordinates, who are giving OPA a black eye. If OPA is our last line of defense against inflation, then the greatest threat of inflation lodges among some of the OPA employees, because they are wearing out public patience.

Mr. Kline asserted that violations of the OPA regulations would be enforced without fear or favor, that the violator would be prosecuted the same as if he drove through a stop light. That was the illustration he used.

It was an unhappy illustration from his standpoint. His entire audience was made up of men who try to obey traffic rules, not because they are afraid of being arrested, but because they believe them to be essential to safety.

Yet there was not likely a man among them who had not at some time unintentionally driven through a stop light and had not been arrested for it. And so long as he is a good citizen with due respect to the rights of his fellowmen, not one of them has any fear that in a month, 6 months, or a year after the mistake some 2-by-4 lawyer, who cannot make a living in private practice, will zoom down on him and prosecute him with added penalties for delay.

OPA regulations are so intricate and so constantly changing that no businessman can hope to go through a year without some technical violations of them. It is unfortunate that, no matter how conscientiously a man may try to comply with the spirit of OPA, he is constantly living in fear of prosecution for some violation of which he himself may not even be aware.

It is this, more than the broad, general purpose of the administration, that is driving people to distraction and to demand that the whole thing be wiped off the map.

[From the Record-Herald and Indianola Tribune of February 28, 1946]

OPA IN A GLASS HOUSE

Iowa OPA does not seem to be able to explain why the authorized increase in ceiling price of ear corn on the farm was withheld from Iowa farmers for nearly 11 months. At least the authorized statement by OPA given to the Tuesday edition of the RHT does not explain it. It comes nearer being an admission of the neglect rather than an explanation. The truth is the statement beats around the bush, dodges the issue, and says nothing. It admits the ceiling was raised

last March, but contains not a word of explanation of why Iowa farmers have been kept in the dark on it 11 months.

During that time Iowa farmers, those who are honest and loyal enough to cooperate with OPA, have lost thousands upon thousands of dollars by selling at 2 cents below the ceiling. Maybe it amounted to only ten, twenty, or a hundred dollars to the individual farmer; but altogether it would have been a right sizable sum.

In short, the OPA has gouged the very farmers who were its best friends. Those who sold on the black market have not been hurt.

Perhaps someone in OPA has slipped. It may have been an oversight. If so, OPA would do well to admit it frankly. But the embarassing question immediately arises: What would OPA do to a businessman or a farmer who made such a mistake?

OPA has had a disagreeable but necessary task to perform during the war, and even yet. It is easy enough to criticize, but not so easy for the critic to prove that he could have done any better. Perhaps the best thing to do is to forget this mistake. It may be the only thing to do, for the law provides no petty-fogging lawyers to sock OPA officials between the eyes for their mistakes.

However, if the Iowa farmers and the general public look with mercy on OPA, it may be expected in return that the gestapo agents of OPA will not be permitted to make for themselves records of prosecutions by hounding citizens who cannot keep up with all the meticulous regulations under which they are supposed to operate.

OPA in Iowa now seems to be in a glass house. It may be well to exercise considerable care in throwing rocks around.

Smear Campaign by Jewelry Manufacturers

EXTENSION OF REMARKS

OF

HON. E. P. CARVILLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Friday, March 8 (legislative day of Tuesday, March 5), 1946

Mr. CARVILLE. Mr. President, I ask unanimous consent to have printed in the Appendix an editorial entitled "Smear Campaign by Jewelry Manufacturers," from the Mineral County Independence-News, published at Hawthorne, Nev., and edited by Mr. J. R. McCloskey.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SMEAR CAMPAIGN BY JEWELRY MANUFACTURERS

The law of supply and demand is at work on the side of the mine operators of the West in their battle to prevent a raid by eastern jewelry manufacturers on the United States Treasury and secure silver valued at $1.29 an ounce at a special price of 71 cents an ounce. It was somewhat of a mystery to western men to understand the smear campaign carried on against William Jennings Bryan in his effort to monetize silver on the basis of 16 to 1 ratio with gold, states the Denver Mining Record in an editorial which continues:

The powerful jewelry manufacturing group wanted to continue to get cheap silver and they knew that the plan of Presidential nominee Bryan would end their racket. The same organization that smeared Bryan and constantly ridiculed silver as money is now before the United States Senate asking for special consideration and a bargain price for the white metal. The entire Nation believes in fair play and with the facts now under the limelight of publicity down in Washington, the western silver producers may after all these years get justice.

Western mining men should bombard United States Senators from eastern and western States with requests that they prevent the jewelers from successfully raiding the Treasury and getting $1.29 per ounce silver for 71 cents an ounce. Subscribers and readers of the Mining Record who are opposed to the jewelers' raid should write their Senators at Washington protesting against this plan to break the price of the white metal.

Senators who have believed in silver as a needed money metal have been subjected, in the past, to smear campaigns financed and paid for by the big eastern jewelers' organizations. National publications which many thought could not be bribed, printed scurrilious attacks on Senators presenting a solid front in their work for the white metal. Millions of dollars have no doubt been expended in this effort to break the price of metal, but now the demand exceeds the supply and if the Senate acts justly and wisely, it will prevent the proposed raid on the silver in the Treasury and make the jewelers pay the Treasury price for the metal just as they must pay the Treasury price for gold.

Price Controls

EXTENSION OF REMARKS

OF

HON. ERNEST W. McFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, March 8 (legislative day of Tuesday, March 5), 1946

Mr. McFARLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Let Us End the Controls," published in the Arizona Daily Star of February 28, 1946.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET US END THE CONTROLS

When the post-war "planners" in Washington announce that they are seeking by the present system of controls to prevent another 1919–20 boom and collapse, they imply that our country went through a desperate period after the end of that post-war boom. With ominous words they speak about the unemployment and the fall of prices, in a tone that would lead many to believe that the Nation barely survived.

Since there are many millions of people still alive in the United States who can speak from the actual experience of living through that period, perhaps their testimony is worth something. Certainly the black and dismal situation pictured by the "planners" did not develop. Not only did the Nation survive, but a period of great prosperity followed the collapse of 1920, a period in which the workers made enormous gains in their well-being. And it was all done without "planners."

After World War I there was a boom and a skyrocketing in prices of everything. Sugar went to 25 cents a pound; coffee to 60 cents; butter to 75 cents; eggs to $1 a dozen. Clothing went up, with shoes at $15 a pair; ordinary men's suits at $60; shirts at $4 and so on. Rents went through the ceiling, and there was similar scurrying about for houses. The stock market boomed. Wages followed prices and went to levels much ahead of prewar rates. And there were strikes, perhaps as many as there are today, but not involving as many workers.

In 1920 the thing blew up. The stock market crashed. General Motors was in difficulties. Great numbers of businesses failed. Unemployment became acute with a total of something like 4,000,000 unemployed. There was a definite amount of distress, but nobody starved.

The liquidation ran its course during the next year. Prices fell, but slowly and surely productivity revived and then began an era which was called profitless prosperity. Business hummed, but profits were small, until the big speculative period beginning in 1927 got under way.

The contrast between that record and what is being done today is a valuable one. The postwar period did one thing which is not being done now. It unleashed productivity by giving free play to American initiative Instead of being curbed, hamstrung, and punished the way they are today, producers were given a green light. The market was a free one. The high prices functioned as an automatic rationing plan. As production increased prices began to fall.

There was a similar housing shortage, and it was not cured with a year or two. As late at 1924 and 1925 there was still an acute housing shortage in Tucson. Very few houses were for rent, and prices were high.

What did follow from 1919 onward was an economy of abundance made possible largely by the opportunity for initiative. What we are seeing today is an economy of scarcity unwittingly promoted by the Government controls, which in existing circumstances, are fostering a growing black market. Rewards go to those willing to cheat; penalties to those who are honest and cooperative.

That shocking development is much worse than a temporary period of free price adjustment. It not only discourages and paralyzes the productivity that comes with free initiative; it sets a moral standard that will in time destroy civilization itself.

Would it not be better for the country to suffer some temporary inconveniences, rather than to bottle-feed the American people under the guise of economic security and stability, as if they could not withstand the shock of adjustment?

Let those who doubt, and who went through the postwar period of World War I, think back. Conditions were not as bad as the professional planners would have us believe. The progress that followed was real.

With a world crying for reconstruction, with millions of homes and their furnishings to be manufactured, with millions of automobiles to be sold and increasing millions of mouths to be fed, let us have enough faith in the principle of free initiative to bring an early end to these blighting controls. Let us not be frightened by bogeyman tales of the 1919–20 period. Let us have faith that what made this country great will continue to make it great, and that Americans are not weaklings, unwilling to take the risks and hardships that go with the functioning and the free market of a free society.

Let us end the controls.

Washington's Birthday Address by Hon. William Langer, of North Dakota

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 8 (legislative day of Tuesday, March 5), 1946

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an address I delivered at Minneapolis, Minn., on Washington's Birthday, before the George Washington Club.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friends, in this year of decision, 1946, we need more than ever the moral courage and the stamina of the man whose birthday we celebrate today—George Washington.

As a nation and as individuals we must have the vision to see what is right, the moral courage to act accordingly, and the stamina to follow through.

George Washington perceived that winning the war of independence was not enough. The peace must be won also. He had the moral courage to insist that a mere piece of paper, the Articles of Confederation, be thrown where it belonged, in the scrap heap, and a living organism be born which, given sunlight and proper environment, would grow greater with each passing year. And so his vision and courage gave us the foundation of the American way of life, the Constitution of the United States of America. Despite a strong inclination to retire from public life, he had the stamina to stay by the infant until it could stand on its own two feet. George Washington is truly the father of our country.

At the Constitutional Convention, inspired by the spirit of this great man, politicians became statesmen. Partisan politics were submerged as were individual hatreds and prejudices. Although jealous of States' rights and reluctant to relinquish any sovereignty when the convention first convened, gradually a spirit of compromise for the common good pervaded the discussions. Government of the people rather than of the States became the motive force.

Small States were given an equal voice in the Government by the establishment of the Senate of the United States, which consists of two Members from each State, whether the population is approximately 639,000, as it is in North Dakota, or 2,785,000, as it is in Minnesota.

The Constitution, born in blood, was baptized in a spirit of sacrifice for the common good.

Before the Constitution won the approval of the people of the United States, however, one major defect had to be remedied. The rights of the people had to be guaranteed. Having gained their freedom at great sacrifice, our forefathers did not regard it lightly. They prized their personal liberty. And so the first 10 amendments to the Constitution, known as the Bill of Rights, became the law of the land. The Constitution is the servant, not the master, of the people.

Ladies and gentleman, the United States has reneged on its heritage of freedom for all. In accepting the United Nations Charter, we literally crucified freedom in the world. How can we so piously applaud an organization that condemns half the world to remain in bondage? That condones Great Britain's imperial policies? That ignores the riots of the common people who ask only a voice in their own government? That is a mere impotent spectator to the Big Powers' private maneuvers?

When I first read the proposals for a world government outlined at Dumbarton Oaks I detected many weaknesses. The absence of the spirit of George Washington was too apparent. The Bill of Rights was forgotten. The Articles of Confederation lived again.

I voted against the Dumbarton Oaks proposals and advocated a counterplan of regional, self-sufficient governments of comparative size.

I had no occasion to change my mind when I read Charter of the United Nations Organization formulated at San Francisco. It is a government ruled by five men on the basis of power and power alone.

An even cursory study of the Charter reveals this fact. There is a General Assembly made up of all members of the United Nations and a Security Council, dominated by the Big Five Powers, as they are so often called.

Now here is the interesting point: The General Assembly has no authority to initiate any measures. It can merely consider, discuss, initiate studies, receive reports, and make recommendations about any matter in which the Security Council is interested.

The Security Council, the ruling body, consists of 11 men. Five of these men are permanent members. In other words, Russia, England, the United States, France, and China, the five big powers, will always be represented on the Security Council, which has the only authority to act. By what devine right are they given this power over the entire face of the earth? They are not elected by the people. They are merely appointed, as Edward Stettinius was appointed by the President. They are not accountable to the people. They are kings on throne. There is danger in placing so much power in the hands of a few men who are, after all, only human. Our forefathers, realizing this fact, set up a government of checks and balances. But the UNO Security Council has no check. It is certainly not balanced.

Of the six nonpermanent members, two are from countries in the British Commonwealth of Nations, Abdel Badawi Pasha from Egypt and Norman J. Makin from Australia. Another member is Zygmunt Modzelweski, of Poland, a country dominated by its powerful next-door neighbor, Russia. The other three members are from Mexico, Brazil, and the Netherlands.

Your very able and distinguished Senator, Hon. HENRIK SHIPSTEAD, and I were the only two to vote "no" to the United Nations Charter. Neither Senator SHIPSTEAD nor I would deny that we assumed certain responsibilities in Asia and Europe the day our soldiers set foot on foreign soil. But we do deny that the Charter accepts those responsibilities in a spirit of justice.

I would like to quote the words of a man whom I believe to be one of the most honorable men on the floor of the United States Senate, my very good friend HENRIK SHIPSTEAD:

"In liberating Europe we have devastated Europe. By annihilating the German state we have created a vacuum in Europe. The peoples of Europe must be helped to recovery and the vacuum will be filled either by our democratic concepts or by totalitarian ones. * * *

"The question at issue is whether this Charter is real or phony; whether it is in truth an instrument to secure international peace and justice, or a cynical imposture bred by hypocrisy out of power politics.

"Having fought and won this war, we owe it to those who have died to make sure that they shall not have fought for no purpose. Nor should we either by acclamation or by default allow the peace settlement to be dictated either by vengeans or the greed of the victors, thus once again sowing the seeds of a new world conflagration."

But, ladies and gentlemen, isn't that exactly what we are doing? It is apparent that Russia, England, and the United States, by virtue of power, of guns, of tanks, of the atom bomb, are going to have the deciding voice in all action taken.

It might be wise in the interest of peace to apply such a charter if—and here is the most important if in the history of the world—if these three countries acted in the interests of the many instead of the few if they were willing to settle around the conference table in a spirit of compromise and self-sacrifice for the common good, if they were really dedicated to liberty and justice for all.

But what do we find? The UNO refuses to intervene in Indonesia. Iran's protest against Russia shelved by Security Council. Anti-British riots in Egypt and India quelled with gunfire. Russia negotiates with Iran. (You can imagine what bargaining power weak Iran will have when she's up against the bold, brazen Russian bear.) Poland butchered as a present to Stalin. Is there liberty in all this? Is there justice?

I say that the UNO is not a democracy. It is an oligarchy. Five men can regulate the armament of every nation and establish and maintain their own military and naval staff. Small nations and minority groups are mere pawns in the hands of five men. And these five men are dominated by two, Ernest Bevin of Great Britain and Andrei Vishinsky of Russia. Edward Stettinius, our representative, is a school boy who was pushed ahead too many grades. He's lost and befuddled. There is no agreement in our foreign policy.

Our freedom has been bought too dearly to be entrusted to the whims of five men who are in no way accountable to the people for their actions.

Consider what the situation would be if the United States were governed like the UNO. The House of Representatives would be a mere debating society, made up of men appointed by the governors of the States. The Senate would represent only 11 of the 48 States, and those 11 men would be appointed by the governors also. Five of the largest States would always be represented in the Senate and they would control its action in their own interests. There would be no executive responsible to the people. There would be no government responsible to the people. Is this democracy?

The words I spoke when I voted "no" to the United Nations Organization on July 28, 1945, I repeat today:

"Mr. President, during my service in the Senate in behalf of the common people, I have never sold the truth to serve the hour. I have no quarrel with the vote of any honest Senator upon this floor. Each one took the same oath that I took, namely, to defend and uphold the Constitution of the United States of America.

"Practically all Members of this body have indicated that they will vote for the Charter. Under my oath, Mr. President, and under my conscience, I cannot so vote. If I did I would feel that I was betraying the hundreds of thousands who have died in this war for the United States, and the hundreds of thousands who have sacrificed their loved ones and their treasure. I would be willing to vote for the appropriation of the last dollar in the United States Treasury, and the last dollar that we could borrow if, by spending that money, we could eliminate war, which we all abhor and hate. I would unhesitatingly vote for the Charter if I felt that it offered even the tiniest hope of a permanent peace. But, in spite of that, Mr. President, I feel from the bottom of my heart that the adoption of the Charter—and, make sure, we are going to implement it—will mean perpetuating war. I feel that it will mean the enslavement of millions of people from Poland to India, from Korea to Java, as well as people in many other places on this earth.

"Mr. President, I feel that the adoption of the Charter will be one step more toward compulsory and military conscription, and all that which goes with war.

"In my opinion, the Charter is not at all similar to the Constitution of the United States which was adopted by the Original Colonies. I may say at this point that I agree with what the distinguished Senator from New Hampshire [Mr. BRIDGES] said earlier in the day, when he stated:

"Most important of all, the American Constitution went to great length to guarantee genuine equality to States entering into the Union. Neither Ben Franklin nor the other members of the constitutional convention would have tolerated a Constitution by which two or three or five of the States were given a veto power over all of the rest."

"Mr. President, I say to you and to the other Members of the Senate that, in my judgment, if the Charter had been in effect when the American Revolution took place, France and all other countries who came to help us would not have been able to come, and today we would still be a colony under the rule of England.

"Mr. President, in my campaign for the senatorship 5 years ago I pledged to the fathers and mothers of North Dakota that I would never vote to send our boys away to be slaughtered upon the battlefields of Europe. I kept that pledge on this floor. I promised in that campaign to vote in the Senate to expend the last dollar, if necessary, in order to defend the Western Hemisphere. Again I say, Mr. President, that I kept that pledge to the people of North Dakota.

"Having so pledged myself, and having been elected to my senatorship upon such a pledge, and not having been elected to create an organization to which we would give a promise, either express or implied, that it would have authority to send our boys all over the earth, I cannot support the Charter. I believe it is fraught with danger to the American people, and to American institutions. I further believe that when a candidate for office pledges himself by specific promises, these promises should be honored, regardless of the political consequences which may follow to the candidate who made them.

"Furthermore, Mr. President, I reiterate that we ought not to vote on this Charter in the absence of our 11,000,000 fighting men and women. They are now away, and we do not know what their attitude will be upon their return, after having been to the four corners of the earth and after having fought upon the seven seas. We sit here, Mr. President, in our fine offices and upon this senatorial floor, blissfully ignorant of what these 11,000,000 veterans may be thinking. After all, they constitute the backbone of the common people of America. Certainly there is no reason for such a hurry to pass this Charter that some steps could not have been taken to have referred the matter to the people of the country, including the men and women in the armed forces, before the final vote was taken upon it.

"As their representative here in the Senate, I cannot, I will not, God helping me, vote for a measure which I believe to be unlawful under out Constitution, a measure which, in my opinion, betrays the very people who sent us to the Senate as their representatives."

It grieves me to have to repeat these words. I wish with all my heart I had been wrong and the UNO would have functioned in the interest of justice and peace. But such is not the case. My worst fears have been realized.

As long as Russia and Great Britain continue to interfere in the internal affairs of smaller nations, fomenting race and class hatred, there will be cancerous danger spots.

Thus England supports and appeases the Arabs in order to maintain influence in the Middle East at the expense of the refugee Jews who are refused admittance to their national home, Palestine.

Thus Russia encourages Communistic minorities in Poland, in Yugoslavia, in Greece, in Bulgaria, in Rumania, in Iran, perhaps even in Iraq. In Poland this has resulted in the virtual annihilation of the more liberal elements, and Poland kneels cowed under the shadow of the Kremlin.

Thus England supports princes and wealthy landlords in India which is held in a state of "arrested development" in order to furnish markets and raw materials for British industry. This means that English colonies literally feed, clothe, and house the English people in Great Britain, and the people of India subsist on less than 3 cents a day. In India England has always played off the Hindus against the Moslems, preventing unified action on the part of the Indians. The recent three-man commission sent to India to discuss self-government does not in itself give much cause for elation. Such commissions have in the past been but sops to quiet too active resistance.

The crux of the matter, as I see it, is that when large powers deal with smaller and weaker powers their desire is only to exploit, not to develop. The UNO merely legalizes this exploitation.

There has been a great deal of name calling in recent sessions of the Security Council but almost immediately any vital problem has been shelved. The conflict of interest between England and Russia is so fundamental and selfish motives so apparent that no agreements of importance were reached.

If kicking and screaming is a sign of health, the UNO infant will live a long life. But I'm afraid the strong lungs are housed in a weak body. The UNO is doomed to die, deprived of the milk of human kindness.

The recent action of the UNO in regard to Iran is a case in point. Iran asked for redress against Russia whose troops are stationed in northern Iran. Russia retaliated with charges that Great Britain's troops in Greece and Indonesia are a threat to peace. Ernest Bevin shouted "liar" at Andrei Vishinsky. Russia threatened the veto on a proposed vindication of British policy. The problems were left to be solved by power politics.

The provision that any so-called big power can veto action taken by the other big powers makes a farce of the entire proceedings of the Security Council whenever a charge is brought against one of the powers who can invoke the veto power. It is indefensible in principle and means that power politics is the order of the day. And yet might is not right. How can we allow it to be so?

All over the world the common man is awakening. Stirred by the Japanese promise of pseudoindependence, by the Allied promise implicit in the Atlantic Charter and the "four freedoms," millions of men and women are stirring within the limits of the chains that bind them.

You see it in the riots in Egypt, in India, in Indonesia, in Palestine. Our moral duty is obvious. A country founded by refugees seeking a haven where all races can live in freedom from oppression must not repudiate the Declaration of Independence, the Constitution, the Atlantic Charter and the "four freedoms."

It is time we remembered the words of George Washington who warned us against siding with one nation against another. He would have insisted that as a nation we have the moral courage to stand for what is right, to insist on a world government that makes all people equal. He would warn us of foreign influence that is not in the best interest of the common people. There are his words spoken in his famous Farewell Address after two terms as President of the United States of America. His whole life had been a fight to free this country from the rust of foreign influence which could undermine the whole system of government at home. Of course he was speaking at a time when the wide expanse of ocean was a more formidable barrier than it is today. But his words never needed more consideration than they do now. I am quoting George Washington:

"Against the insidious wiles of foreign influence, I conjure you to believe me, fellow-citizens, the jealousy of a free people ought to be constantly awake, since history and experience prove that foreign influence is one of the most baneful foes of republican governments.

"The Nation which indulges toward another an habitual hatred or habitual fondness is in some degree a slave. It is a slave to its animosity or to its affection, either of which is sufficient to lead it astray from its duty and its interest."

Ladies and gentlemen, George Washington's words should be heeded. The United States cannot afford to continue to place itself in subservience to a third rate power like England with an "habitual fondness" that has no basis in fact. We are a strong nation and should lead, not follow.

When sea power was synonymous with world power, England could tie colonies throughout the world to her apron strings. This condition won't continue long in an air age of the atomic bomb. England will soon lose her slave labor and have to forage for herself. What the United States needs is a new Declaration of Independence. As George Washington said:

"Sympathy for your favorite nation, facilitating the illusion of an imaginary common interest in cases where no real common interest exists, and infusing into one the enmities of the other, betrays the former into a participation in the quarrels and wars of the latter, without adequate inducement or justification. It leads also to concessions to the favorite nation of privileges denied to others, which is apt doubly to injure the nation making the concessions, by unnecessarily parting with what ought to have been retained, and by exciting jealousy, ill will, and a disposition to retaliate, in the parties from whom equal privileges are withheld."

Which only goes to prove a point I have ben insisting on since the question of the $4,400,000,000 loan to England was introduced in the Senate. Why should we favor England with a loan that is in reality a gift? We are in debt to a frightening amount today because of lend-lease as well as our own expenditures and sacrifices on the altar of the god of war. Do you know that in order to pay this so-called loan, the normal income tax of 1939 has to be tripled?

If we have so much money, let's make the loan to the poor American farmer who is trying to bring his business up to date again. Let the farmer and the small home owner have a loan at 1-percent interest and give him 45 years to pay. At least we will get our money back and the entire country will benefit by the use of it.

We cannot support with $4,400,000,000 a third-rate nation that aspires to rule the world. We must become more realistic in our foreign policy and stop deluding ourselves that by adhering to the UNO we have ipso facto prevented a third World War. Such a hope is a long way from the truth.

The UNO is not spreading the gospel of freedom and liberty that is our heritage and our strength. The UNO is merely a club in the hands of five Caesars to maintain the status quo and improve the political strength of the big powers. The UNO does not diminish the enmity of Russia and England but merely legalizes it, placing us square in the middle. Force is the frightening dictator and the UNO merely the armor behind which the dictator parades.

Is that why we made the Declaration of Independence? Is that why George Washington said at the Constitutional Convention, "Let us raise a standard to which the wise and honest can repair. The event is in the hands of God." Is that why your sons and husbands and sweethearts and fathers fought and died in the last two World Wars?

George Washington's tired, ragged, hungry forces were the David that beat Goliath in the War of Independence. We need more Davids today, armed with bows of justice and arrows of truth. There is yet time but night draws near. The world has been bathed in the blood of your sons, but is not yet washed clean. We must, we will, dedicate ourselves to that task.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 8 (legislative day of Tuesday, March 5), 1946

Mr. MEAD. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very able statement presented to the subcommittee of the Committee on Foreign Relations, considering the St. Lawrence seaway legislation, by Reginald P. Long, supervisor of Grand Island, Erie County, N. Y. I also ask to have printed a copy of the resolutions adopted by the Board of Supervisors of Erie County, N. Y., bearing on the same subject.

There being no objection, the statement and resolutions were ordered to be printed in the RECORD, as follows:

I appear before your honorable body today as the official representative of the Board of Supervisors of Erie County, N. Y. Embraced within our county are the cities of Buffalo, Lackawanna, and Tonawanda, and 25 well-populated towns. We represent, in truth, the heart and soul of the Niagara frontier and, as such, have the deepest and most vital interest in the project before you today—the St. Lawrence seaway.

I represent on that board the town of Grand Island, which is, as its name implies, an island which splits the Niagara River in half and which lies midway between the Canadian and American shores. From a geographical standpoint, let me say parenthetically that we are in a good position to appreciate the claims of both Canada and our country in this matter. However, as a representative of the town, and as a member of the Board of Supervisors of Erie County, I convey here to you today our vigorous and wholehearted opposition to this project. We believe the St. Lawrence proposal to be economically unsound. Our belief in that regard has been substantiated by a survey made by the highly competent and entirely impartial Brookings Institution. The results would not justify the enormous cost. The seaway phase of this project calls for a 27-foot channel for a distance of 1,350 miles from Lake Superior to Montreal, with the widening and deepening of the St. Lawrence for a distance of 183 miles. Despite the prewar estimate of Government engineers that it would cost, including the power plant, slightly less than $600,000,000, competent impartial private engineers state that the cost would not be less than $1,000,000,000.

When we realize that the Panama, Suez, Welland and other canals have all cost from two to three times the original estimate, we may safely assume that the figures of the private engineers are conservative. All this money would be expended on a transportation outlet that for 5 months of each and every year would be useless, because of weather and ice conditions, and as a consequence, the privately owned railroads now operating so efficiently and which carried nobly their burden during the late war, would have to be maintained in operating condition for the entire year in order to function during the 5-month period that the Government-owned canal paid for by the taxpayers was not in operation. That obligation the railroads could not financially meet, and men of vision can see the Government some day subsidizing the railroads to provide for the transportation of necessary merchandise and that, I need not mention here, is financially and economically unsound.

You have heard many times the devastating effect the competition of this project would have on the Niagara frontier and the State of New York. Logical arguments support the contention that Buffalo and the Niagara frontier could tear down its enormous grain elevators and close its harbor, the Nation's greatest inland marine center, if this project was carried to completion. However, looking at the picture from a national standpoint, we ask ourselves is this seaway in the best interests of the United States as a whole. We ask ourselves would American shipping benefit, and the answer is definitely "No." Most vessels of the American merchant marine are too big for the proposed waterway. As a matter of fact, a very small portion of our merchant marine could utilize it. It would be used mainly by small tramp steamers under foreign flags and these tramp steamers operate on low wages. They have lower standards of food and poor accommodations for the crew. Such shipping would be indeed ruinous competition to our own Great Lakes fleet and the International Longshoremen's Association and the American Merchant Marine Institute back up that statement to the hilt.

We ask ourselves would a waterway create lasting jobs and again the answer is a resounding "No." Except for the initial construction the St. Lawrence seaway would destroy jobs rather than create them. Incoming tramp ships carrying coal and ore mined at low foreign wages and carried at ballast rates by underpaid crews would take jobs from American miners and railroaders and attack industry in general. We could go on indefinitely pointing out the danger to America as a whole, but you've heard these arguments and I am sure can recognize the truth in them.

The power project connected with the St. Lawrense seaway is just as economically unsound and as wasteful an expenditure of the people's money as the seaway itself, from the national standpoint, as well as that of the State of New York and the Niagaga Frontier, which I represent. The only portion of the State of New York, and for that matter the United States, which could be economically served by this power development, would have very little demand for the power, for the area comprising the northern portion of New York is not an industrial area and I understand it would not be feasible to channel the power a sufficient distance to strike our industrial area, where the demand might be heavy. I am not here to defend private industry as such, or public utilities as such, but we do feel that the American people are entitled to value for money spent, and we are of the firm belief that the power project itself would be a white elephant from the standpoint of this country, and at best could only be of use to the people of Canada.

We are, therefore, gentlemen, vigorously opposed to the St. Lawrence seaway project in its entirety and the Board of Supervisors of Erie County, N. Y., has gone on record in this opposition. I am filing, herewith, a certified copy of this resolution. We respectfully urge you gentlemen to protect the high standard of living of the United States and to protect those industries of the State of New York and the Niagara frontier which create and foster that high standard of living and which, during the war just ended acquitted themselves so nobly in producing the weapons of victory and to protect those industries which, if given the opportunity, will forge again the instruments of peace. We ask you to protect not only the Niagara frontier and the State of New York, but the Nation itself by preventing this unscrupulous raid on our national treasury which has as its motive the creation of a seaway which, in our opinion, will bring no good, but will be the most harmful blow ever struck against American industry and the American people as a whole.

STATE OF NEW YORK,
BOARD OF SUPERVISORS OF ERIE COUNTY,
BUFFALO, N. Y., *February 25, 1946.*

To Whom It May Concern:

I hereby certify that at a session of the Board of Supervisors of Erie County, held in the county hall, in the city of Buffalo, on the 17th day of April A. D. 1945, a resolution was adopted, of which the following is a true copy:

"Whereas on various occasions and over a period of years this board has gone on record in opposition to the St. Lawrence seaway; and

"Whereas said proposed seaway presents a present threat to the economy of New York State and especially to the Niagara frontier as great as at any time since its inception; and

"Whereas no evidence has been presented to show that whatever benefits might accrue to the Nation they would in no way justify the expenditure of a billion dollars at a time when the credit of the Nation has been strained to the limit in prosecution of the war; and

"Whereas the people of the State of New York have contributed millions of dollars to provide water transportation from Lake Erie to the port of New York; and

"Whereas New York State, because of its great percentage of national wealth, would be required to contribute a great part of the total cost of the proposed seaway and at the same time create a transportation system in direct competition with its own system; and

"Whereas the diversion of transportation to cheap foreign shipping and the opening of our inland markets to alien tramp steamers would be detrimental to American labor, the American farmer, and American industry and so lower the whole standard of American living: Now, therefore, be it

"*Resolved*, That this board renew its opposition to the St. Lawrence seawry, that it petition our representatives in the Congress of the United States to oppose any and all legislation proposing such a project; and be it further

"*Resolved*, That this board join with and urge all organizations, public, semipublic, and private, in the Niagara frontier to create a united force to the end that all opposition possible may be brought against this unsound and undesirable project."

Attest:

JEAN C. MARTIN,
Clerk of the Board of Supervisors of Erie County.

STATE OF NEW YORK,
BOARD OF SUPERVISORS OF ERIE COUNTY,
BUFFALO, N. Y., *February 19, 1946.*

To Whom It May Concern:

I hereby certify that at a session of the Board of Supervisors of Erie County, held in the county hall, in the city of Buffalo, on the 29th day of January A. D. 1946, a resolution was adopted, of which the following is a true copy:

"*Resolved*, That a committee consisting of the Rivers and Harbors Committee, the chairman of the board, the chairman of the

finance committee, a representative from the clerk's office and the county attorney be authorized to attend, in conjunction with a committee from the city of Buffalo, hearings in opposition to the St. Lawrence seaway at Washington, D. C."

Attest:

JEAN C. MARTIN,
Clerk of the Board of Supervisors of Erie County.

The Case of the Millers

EXTENSION OF REMARKS
OF
HON. ROY. O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1946

Mr. WOODRUFF. Mr. Speaker, under unanimous consent, I present for the RECORD an editorial from the New York Herald Tribune. Therein is presented the most flagrant, the most dastardly invasion of American constitutional rights that has come to my attention. It is becoming increasingly clear that unless Federal and State extend to our citizens the protection in their constitutional rights, and do so without further delay, free America will be a thing of the past.

The editorial follows:

THE CASE OF THE MILLERS

One of the first rules of sound journalism is that news and editorial comment should be strictly segregated. Nevertheless, every so often a news story bobs up which, without any conscious effort on the part of the writer to make it one, turns out, through its sheer simplicity and factuality, to be as effective an editorial as any that could be purposefully contrived.

Such a story is the half-column account sent in to the Wall Street Journal this week from New Canaan by Staff Correspondent Sydney B. Self on what happened to the Miller brothers of that little community, which borders on Stamford, Conn. The Millers, Mr. Self explains, are three brothers, who were brought up on a farm, knew all about dairying (and put all their savings into it), but who had reckoned without local 338 of the International Brotherhood of Teamsters, Chauffeurs, Stablemen, and Helpers, A. F. of L.

"Last week end," writes Mr. Self, "was probably the most trying in the lives of the Millers." The union had called out their drivers, demanding a new contract which was tantamount to a 50-percent increase in the pay roll, asked for an increase of 66⅔ percent in commissions and barred the Millers from doing any manual work around the dairy. Although the Millers had only 7 or 8 drivers working for them, the union sent in from 200 to 250 pickets from out of town to police the dairy (which necessitated the use of 60 State troopers to maintain order). When women customers drove up to the dairy to get milk for their families the tires of their cars were slashed.

The employees decided they had had enough and quit. And the Millers followed shortly. The Millers didn't have an accounting staff, but they could add and subtract, and they got out paper and pencil and did just that. Their business (around 2,000 quarts a day) grossed about $1,000 a week, out of which a $455 pay roll had to be met, in addition to the cost of trucks, gasoline, pasteurizing, bottles, and other necessary expenses of doing business. It did not take much figuring to see that with the pay roll jumped to between $600 and $700, themselves barred from working, and with other expenses continuing as usual the Miller brothers, as they wrote to Frederick Conrad, union president, in signing the proposed contract would simply be "signing a petition of bankruptcy in advance."

The union had a solution for this problem. Why, they suggested, didn't the brothers sell out to a larger concern, which would be better able to meet the union's wage demands. To this the Millers, who had built up a quality business, with butterfat content of the product well above the legal minimum, answered with a flat refusal. "We don't propose to ask our customers," they declared, "to go blindly to another, merely because we have turned over our route books and have written glowing praises of our successor—obviously put into our mouths."

The battle between the powerful teamsters' union and this little Connecticut enterprise was short, and the defeat was a crushing one. But it was more than a defeat for the Millers; it was one more defeat for the thing that over the years has been this country's greatest source of strength—the right of an American citizen to go into business for himself with a fair chance of making a success of it if he works hard and produces for himself with a fair chance of making a success of it if he works hard and produces something that the community wants and needs. That is the essence, not only of free enterprise, but of the only kind of equality that is consistent with the dignity of man—equality of opportunity. There are many threats to that system today, but none is greater than that presented by organized labor grown to manhood with respect to power, but with no corresponding increase in responsibility. As Congress prepares to write a new labor law, one could wish that every Member had the case of the Millers before him. Because the case of the Millers is neither more nor less than today's labor problem in America presented in simple microcosm.

Continue Price Control—Prevent Inflation

EXTENSION OF REMARKS
OF
HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. COCHRAN. Mr. Speaker under the permission granted me, I include as part of my remarks the following speech delivered by Hon. Chester Bowles, Director of the Office of Economic Stabilization at the annual convention of the National Farmers Union, Topeka, Kans., March 5. It follows:

I am delighted to be here tonight with my friends in the Farmers Union. There is no group in America among our farmers, our workers, or our businessmen, who had a more enviable record of public service during the war period. There is no group in America which has more enlightened leadership. There is no group in America which has more to contribute in our struggle to achieve a future of peace, prosperity, and plenty.

To say that we have been going through a crisis during the last few months is something of an understatement. There has been widespread dissension among us. There has been bitterness and disillusionment. We have found ourselves pulling in different directions with every group blaming everyone else for the difficulties which inevitably confront us as we reconvert from war to peace.

If we stop to think about it, I believe we will agree that this situation was scarcely unexpected. For more than 4 years we had been concentrating all our efforts on an all-out war in all parts of the world. The problems of our economic reconversion from war to peace has been clear to everyone. The problem of reconverting our thinking, our loyalties, and our prejudices, although just as difficult, has been far less appreciated. It has not been easy overnight to adjust ourselves to the ways of peace. It will take time for all of us to realize fully that only by pulling together and working together can we achieve the kind of future which all of us seek.

Today those among us who are inclined to be pessimistic will find plenty to worry about. There is the problem of our relationships to Russia, a relationship which for the good of all the world must be worked out on a reasonable and friendly basis. There is the problem of industrial strife and the tendency of many of our people to pit group against group for their own selfish interests. There is the grave danger of inflation, a danger which is greater today than at any period since Pearl Harbor.

But the outlook is not all gray. There is also a great deal to give us confidence in our future. During the war we have learned for the first time the real potentialities of American production on our farms and in our factories. Labor and management have learned what the farmers always knew—that only through unlimited production can great wealth be achieved. We have learned that no group among us can profit at the expense of the other.

Finally, during the war period, I believe we have cut loose, once and for all, from the narrow isolationism of the past. Although we still have our American nationalists, our Gerald Smiths, our imperialists, the country as a whole has come to recognize that unless the world is at peace with increasing prosperity everywhere, there can be neither peace nor sustained prosperity here at home.

Eactly what are the greatest hurdles that lie today between our people and this longed-for future of prosperity and plenty? By far the greatest single danger is, I believe, the danger of inflation.

There is no group in America which understands the consequences of inflation better than our farmers. It was our farmers who suffered most in the boom and collapse following World War I. And no group was harder hit than our farmers when the Wall Street stock-market crash set off the depression of the early thirties.

What is the record on price control in this war period in comparison to the war of 25 years ago? What about production, profits, and income. Can inflation really be controlled?

During the First World War we had only moderate controls over prices and rents. As a result while production increased only slightly—on our farms the increase was only 5 percent—prices and rents skyrocketed and eventually we were faced with a terrific collapse.

During this war prices and rents have been held more nearly in line, particularly during the last 3 years. During the war years, the cost of living has risen less than one-third as much as during the World War I inflation that reached its peak in 1920. Since spring of 1943, the increase has been held to less than 4 percent. And today industrial prices stand only about 4 percent above where they were in May 1943. To

those lobbyists who say that full production under price control is impossible, let me emphasize that it was in this same period that the records of production in our factories and on our farms have reached their greatest heights.

We have produced more in the price-control years than ever before in our history. More than that, each group has enjoyed greater prosperity. Our weekly earnings of factory workers have increased 86.2 percent since 1939. Business profits before taxes were nearly 5 times as large in 1945 as before the war, and bankruptcies fell to the all time low of 810—fewer than in any single month of the booming twenties. Our farmers as a whole are also better off than in any period in our history. The actual increase since 1939 in net operating income per farm is slightly over 300 percent.

This, however, is a dangerously misleading figure because it fails to take account of the shockingly low incomes which our farmers had in the prewar years. An increase in income from $400 to $1,200 looks impressive to the statistician. But you and your family are only too well aware that $1,200 is still a long way from actual riches.

Since VJ-day various mistakes have been made in the handling of the economic stabilization program. In the first place, we moved far too rapidly in removing controls over industrial production. It was proper, of course, to scrap the great majority of these controls following the end of the war with Japan. But clearly more of them should have been maintained to assist us in our efforts to increase our supply of clothing and building materials and other essential products.

We were expecting also a considerable drop in city employment. Some experts estimated that there would be at least 5,000,000 workers walking the streets in search of jobs by January 1. As a result of a drop in industrial wages, the experts expected a sharp decline in farm income.

Instead, employment has held up. Reconversion, although delayed by labor-management difficulties, is well ahead of schedule. The take-home pay of our factory worker, while less today than on VJ-day in spite of many increases in the hourly rates, has dropped far less than was expected.

As a result our national purchasing power has been maintained at a high level, and because the supply of goods is necessarily far below our actual needs, the pressure for higher prices and rents has been almost overpowering.

Two weeks ago a new economic stabilization program covering wages as well as prices and rents was developed to meet the new situation that confronted us. I was asked to leave my post at OPA to direct this over-all program and to see that inflation is kept under tight control.

Clearly the task will not be an easy one. The next 90 days will determine our success or failure. Between now and the first of June, one of the most fateful decisions in the peacetime history of our Nation will be reached. In that brief period the forces of greed will finally overcome us and inflation will be a rapidly growing fact, or the strength of the people will be reasserted and the stabilization program will be strengthened and maintained.

The crisis is an immediate one because it is between now and June that Congress must choose between a continuation of the price- and rent-control legislation beyond June 30 until June 30, 1947, or a disastrous inflation. Congress has the choice of eliminating this act completely and letting prices and rents go sky high, or modifying and weakening the act so that it is useless as a means of protecting you against the inflationary pressures; or frankly and firmly granting us the necessary powers to continue to hold the line as we have held it since May 1943.

Between now and June, Congress must also determine whether we are to continue to use subsidies to maintain food prices at roughly their present levels, or whether these subsidies are to be eliminated with a resulting sharp and dangerous rise in the cost of living for tens of millions of our people.

Between now and June, Congress must decide whether the Office of Price Administration, the Office of Civilian Production, and the Wage Stabilization Board are to receive sufficient funds to carry out their enormous responsibilities, or whether reduced appropriations are to be used as a cellar-door method to sabotage our efforts to fight off inflation.

Finally in the immediate future Congress must decide whether we shall move vigorously ahead to build the homes which millions of veterans are looking forward to at reasonable prices, or whether we shall continue to fumble with the housing crisis in the name of reaction and narrow selfish interests.

The next few weeks represent the Guadalcanal, the Okinawa, and the Stalingrad in our fight to maintain a stabilized economy. To lose this fight will mean disaster. To win it will pave the way to a future of sustained prosperity for all of us.

Day after day, the battle lines are being drawn with increasing sharpness. On the one side we have all the millions of inarticulate little people who have made our country great in the past and on whom its future depends. On their side are many leaders among our farmers, among our factory workers, and among our businessmen.

Opposed to them are some of the most irresponsible, reckless, greedy organizations in America. Let there be no question about whom I am talking. I am talking about the lobbyists of the National Association of Manufacturers. I am talking about the heads of the National Retail Dry Goods Association, with all the phony propaganda with which they seek to cash in on the apparel shortage. I am talking about some of the real estate lobbies, and your old friend the packers' lobby, and the textile lobby. I am talking about the dairy lobby.

I am talking about those lobbyists who haunt the Washington hotels and the halls of Congress and the governmental agencies, endlessly scheming and plotting to trade the interests of the great majority of our people for the narrow short-range profit of the groups which they represent. And finally, I am talking about those speculators in the commodity markets and those speculators in Wall Street who time and again have played the American public for suckers in their promise of speculative profits from stocks and securities, and who today are again irresponsibly whooping it up for inflation.

These people do not represent business. They do not represent the majority of our manufacturers, or our retailers, or our landlords, or textile operators, or dairymen, or our investors. They represent only themselves. But let's not underestimate their skill, their perseverance, or their reserves. They are out to eliminate or wreck the only controls which stand between our people and inflation. We are on the eve of a crisis which cannot be exaggerated. Between now and early June, we shall determine whether we are to have stable prices and stable rents; whether our savings and insurance policies are to be protected; whether our bonds are to be worth the money which we paid for them; or whether we are to start down the primrose path toward another inflation which will surely bring disaster to our economy and sweep away the life savings of tens of millions of our people.

During the coming months we shall also go a long way toward deciding the strength of our American democracy, for if the lobbyists and pressure groups can win this fight against the people, then our democracy indeed will have suffered a dangerous defeat.

A great deal depends in the next few weeks on our farmers. Every effort has been made and every effort will be made to embitter our farmers against the working people of our cities. Over and over again our farmers will be told that industrial workers and businessmen have been "getting theirs," and that now its their turn to get even.

This is a demagogic and dangerous appeal.

As you listen to this particular siren song remember that farm income has been maintained since VJ-day only because there has been only a relatively moderate drop—roughly 5 percent—in the total income of our city workers. Part of this has been due to the unexpected continuation of overtime work and part to the increases in wages that have already gone into effect. As the normal workweek becomes the rule, it will, of course, take increases in the hourly wages rate of many more of our factory workers to make up for the loss in take-home pay if we are to maintain demand for farm products and the income of our 6,000,000 farm families.

Most farmers dislike subsidies. Naturally, they would prefer the same amount of income as a result of a higher price. For this reason many farmers have told me, "I am highly in favor of price control. I want to see the price of farm machinery held down—farm fencing—building materials—apparel and housefurnishings. I am solidly behind you on that score. But I simply cannot go along with you on subsidies."

That is a natural viewpoint for farmers to take. But it has one basic fallacy, and that is the fact that without subsidies on food the stabilization of our economy is completely impossible. If subsidies were to be removed on July 1 when our present authorization runs out food prices would promptly move upward 8 percent.

Milk would increase at retail 2 cents a quart. Meat by from 3 to 5 cents a pound. Cheese by 14 cents a pound. Butter by 12 cents. Bread by 1 cent. Most canned fruits and vegetables by 1 cent a can. This would be a severe blow to millions of families living in the cities on narrow incomes. It would bring about widespread demands for wage increases and very probably the collapse of our wage stabilization program. And let's not forget that would not add a single penny to the income of our farmers.

On the contrary, as wages moved higher, manufacturing costs would again move upward, and so would the prices of things you buy in the store. The increase in the cost of the products and services you buy would leave our farmers considerably worse off than they are today. This would lead to further demands all around and an increasing inflationary spiral which could have only one final disastrous result.

Let there be no mistake about it. Whether we like it or not, subsidies and effective price control are indivisible. Without one we cannot have the other. That is why I say that the attitude of our farmers will decide the success or failure of our efforts to control inflation. If our farmers will close their ears to the propaganda of some of their own leaders and to the voice of the National Manufacturers Association and other groups which have subtly tried to drive a wedge between them and the other working groups; if our farmers will lend us their support and backing along with all the tens of millions of people in our cities, then there can be only one result between now and June, and that is a resounding people's victory over the forces of inflation.

Clearly, this victory over inflation is essential if we are to achieve the kind of future toward which every thinking person is hoping and praying. It is essential if we are to maintain the high purchasing power on which the prosperity of all of us depends. Throughout the war and particularly since VJ-day our farmers have learned the extent to which their own incomes are dependent on the purchasing power of our city people. The most effective over-all program for farm prosperity is a program that brings prosperity to all of our people and keeps all our millions of workers employed at good wages.

In the period which lies ahead, however, we must take additional steps designed specifically to help the 6,000,000 families who live on our farms. We must continue to push vigorously ahead with our program of rural electrification. We must move ahead in the field of crop insurance so that the farmers may have the same protection that businessmen and industrial workers have long enjoyed against mishaps beyond their control. We must develop long-range programs on all basic feeds to give us stability of supply and price. We must develop a program for the South which will raise the income of southern farmers as well as southern workers, a program which will take specific notice of the problem of cotton, the need for diversification of farming, and increased farm mechanization. We must move ahead vigorously in providing grants for rural schools, roads, housing, and health projects.

There will be opposition to many of the programs which are developed in the long-range interest of the farmer. But the farmer's fight for a more prosperous future is a fight which belongs to all of our people. The 25,000,000 men, women, and children on our American farms represent our greatest undeveloped market. Intelligent businessmen and city workers realize this. They know that until our farmers receive their just share of our national income that there can be no broad sustained prosperity for the rest of us.

Together—businessmen, farmers, and workers—we can and must move ahead to greater and greater heights of achievement. Working together as we worked together to win this greatest of all wars, we cannot fail.

Today the whole world is looking toward America. What we do or fail to do in providing additional food for Europe, India, China, and other areas faced with malnutrition and starvation will mean life or death to tens of millions of people in the immediate future. What we do or fail to do here at home in our fight against inflation, in our efforts to develop a sustained full-production, full-employment economy will have repercussions for good or for evil in every corner of the globe for generations to come.

Will we move ahead under a vigorous democracy to greater and greater heights of production? Will we move ahead to higher incomes for all of us, toward the elimination of slums, disease, ignorance, and ill health? Or shall we embark on an inflationary joy ride to disaster, with the spectacle of some strange new American fascism arising out of the bitterness and the disillusionment which will surely result? What will our American answer be to this gravest of all questions which ever faced our Nation during peacetime?

Will it be the answer of the NAM which has fought on the wrong side of every public question for the last 30 years? Will it be the answer of the pressure groups, the answer of organized greed?

Or will it be the voice of the everyday people of America, clear, strong, determined, confident—with their heads held high, and their eyes firmly fixed upon a future that for generations to come means the difference between hope and despair not only for 140,000,000 Americans but for all the people everywhere throughout the world?

Caviar at $24 per Pound and Pheasant at $2.25 per Pound

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. MURRAY of Wisconsin. Mr. Speaker, the following news articles appeared in the January 17, 1946, Times-Herald:

TODAY'S SPECIAL: CAVIAR $24 PER POUND

NEW YORK, January 17.—One Madison Avenue market, its meat supplies exhausted by the meat workers' strike, was displaying this sign for the benefit of its patrons:

"Plenty of pheasant, Scotch grouse, and caviar."

Pheasant was quoted at $2.25 a pound and caviar at $24 a pound. No price was given on grouse.

After reading this article certain situations are brought to mind. If imported foods such as caviar can be sold for $24 per pound and imported fowl for $2.25 per pound without causing inflation, why are domestic fowl subjected to such low ceilings?

On October 22, 1945, I called the attention of the Members of the House to OPA Revised Maximum Price Regulation No. 289, which was an amendment to provide imported Swiss cheese a 12¾-cent-per-pound ceiling above the ceiling of domestically produced Swiss cheese.

The OPA did not have the legal authority to place this ceiling on imported Swiss 12¾ cents per pound above the domestic Swiss. If anyone thinks this power has been delegated to the OPA, let them answer why it was necessary to spend 10 days on the reciprocal trade treaties that gave President Truman the power to reduce duties by 50 percent. If Chester Bowles had the authority to remove the duty of 5 cents per pound altogether, why pass a law giving the President the power to reduce the duty by only 2½ cents per pound?

No administration will ever talk about inflation more than the present one and it is doubtful if any administration will ever be in power that will do more to promote inflation.

The following is an advertisement which is one of several that have appeared in central Wisconsin papers during the past several months:

LIVE POULTRY WANTED

	Cents
Heavy hens	22
Leghorn hens	20
Heavy springers	24
Leghorn springers	20
Roosters	15

We had better have a fact-finding committee to find out what the producer received per hour for producing these 15-cents-per-pound roosters and 22-cents-per-pound heavy hens.

When President Truman provided the steel interests the $5-per-ton increase in the price of steel and the steel worker the 18-plus cents hourly increase in wages above the $1.08 average he was receiving, the Price Control Act was given a sleeping pill from which it may never recover.

Address of Hon. Henry Cabot Lodge, Jr.

EXTENSION OF REMARKS
OF
HON. GEORGE J. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. BATES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by the Honorable Henry Cabot Lodge, Jr., at the Middlesex Club, Boston, February 12, 1946:

We meet tonight on the one hundred and thirty-seventh anniversary of the birth of Abraham Lincoln—who led and inspired the forces which served our Nation in the very moment of its destruction and in so doing set a standard for all of us who come after him to follow.

Edmund Burke says that during the reign of the kings of Spain, whenever they were in doubt, their statesmen would say that they should consult the genius of Philip II. How natural, therefore, it is for us as Americans, when perplexed as we are today to consult the genius and memory of Abraham Lincoln. It is, moreover, imperative for us Republicans to look at his life, so rich in accomplishment, to study his character, so many-sided and yet always so noble, and to gain inspiration from his great soul.

Surely in contemplating the new dangers in the world today, we can agree that we need all the help and all the wisdom and inspiration that Lincoln can give us. The answer to so many of our present problems—from that of peace in a world of atom bombs to that of prosperity in an era of industrial disputes—is found, in the last analysis, in the hearts and souls of men who live their lives in the common life of every day. Lincoln's life inspires us all in its general course. But, beyond that, Lincoln's life is today actually a practical guide.

What a life it was. It contained what Carl Shurz called such a "weird mixture of qualities and forces." We can see the whole span of his growth in some of the things he said. In his maiden speech as a candidate for the Illinois Legislature, at the age of 23, he closed with these words:

"But if the good people in their wisdom shall see fit to keep me in the background I have been too familiar with disappointment to be very much chagrined."

And, after 30 years of public life, Lincoln wrote: "The mystic chords of memory, stretching from every battlefield and patriot grave to every living heart and hearthstone all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be, by the angels of our better nature."

How steadily, how swiftly, and how straight his stream of life flowed through those 30 years. In the words of Ecclesiasticus: "And God brought out a man of mercy, a man loved of God and man, whose memorial is blessed. He sanctified him in his faithfulness and meekness."

His life was nobly lived. At Ford's Theater in Washington that life was suddenly cut short. The chronicle of that day records: "Within the narrow compass of that stage box that night were five human beings, the most illustrious of modern heroes, crowned with the most stupendous victory of modern times; his beloved wife, proud and happy; two betrothed lovers with all the promise of felicity, that youth, social position, and wealth could give them; and a young actor, handsome as Endymion upon Latmus, the idol of his little world. The glitter of fame, happiness, and ease was upon the entire group; but in an instant everything was to

be changed with the blinding swiftness of enchantment. Quick death was to come on the central figure of that company * * * over all the rest the blackest fates hovered menacingly; fates from which a mother might pray that kindly death would save her children in their infancy. One was to wander with the stain of murder on his soul, with the curses of a world upon his name, with a price set upon his head, in frightful physical pain till he died a dog's death in a burning barn. The stricken wife was to pass the rest of her days in melancholy and madness; of those two young lovers, one was to slay the other and then end his life a raving maniac."

So reads the contemporary chronicle. But in the hearts of the generations which have outlived that chronicle Lincoln lived on. Succeeding generations have studied his life as we are doing tonight. What particularly impresses us today?

First on any list would be his human, loving kindness. We see his hatred of cruelty when in his early childhood he reproved some of his boyhood acquaintances for cruelty to a dumb animal. This same hatred of cruelty appears in his fight against slavery. And we again see his greatness of heart in his letter to Mrs. Bixby, who, in losing her five sons in the Civil War, had, as Lincoln said, "laid so costly a sacrifice upon the altar of freedom."

He loved his fellow man. Such love must be the guiding motive of those who govern in a democracy.

A second quality was his honesty. Horace White, a contemporary of Lincoln's and an active Republican, says this:

"The popular conception of Mr. Lincoln as one not seeking public honors, but not avoiding public duties, is a postbellum growth very wide of the mark. He was entirely human in this regard, but his desire for political preferment was hedged about by a sense of obligation to the truth which nothing could shake. This fidelity to truth was ingrained and unchangeable. In all the speeches I ever heard him make—and there were many—he never even insinuated an untruth, nor did he ever fail when stating his opponent's position to state them fully and fairly. He often stated his opponent's position better than his opponent did or could. To say what was false, or even to leave his hearers under a wrong impression, was impossible to him. Within this high enclosure he was as ambitious of earthly honors as any man of his time. Furthermore, he was an adept at logrolling or any political game that did not involve falsity. I was secretary of the Republican State Committee of Illinois during some years when he was in active campaign work. He was often present at meetings of the committee, although not a member, and took part in the committee work. His judgment was very much deferred to in these matters. He was one of the shrewdest politicians in the State. Nobody had had more experience in that way, nobody knew better than he what was passing in the minds of the people. Nobody knew better how to turn things to advantage politically and nobody was readier to take such advantage, provided it did not involve dishonorable means. He could not cheat people out of their votes any more than out of their money."

Such a principle is a charter for the enduring freedom of a people truly and enduringly free. Such a charter should be, and will be, the charter of the Republican Party, not for today or for a single adventure but for all the times that are to come.

Third on my list was his desire to unite the people. It was Lincoln who asked the famous question: "Must a government of necessity be too strong for the liberties of its people or too weak to maintain its own existence?" Lincoln saw with his genius for understanding and solution the horns of this dilemma. He knew, as Shurz said, "that in order to steer this Government by public opinion successfully through all the confusions created by the prejudices and doubts and differences of sentiment distracting the popular mind and so to propitiate, inspire, mould, organize, unite and guide the popular will that it might give forth all the means required for the performance of his great task, he would have to take into account all the influences strongly affecting the current of popular thought and feeling and to direct while appearing to obey. This was the kind of leadership he intuitively conceived to be needed when a free people were to be led forward en masse to overcome a great common danger under circumstances of appalling difficulty—the leadership which does not dash ahead with brilliant daring, no matter who follows, but which is intent upon rallying all the available forces, gathering in the stragglers, closing up the column, so that the front may advance well supported. For this leadership Abraham Lincoln was admirably fitted—better than any other American statesman of his day; for he understood the plain people, with all their loves and hates, their prejudices and their noble impulses, their weaknesses and their strength, as he understood himself, and his sympathetic nature was apt to draw their sympathy to him."

His passion to unify the American people was expressed in his ringing and solemn utterance: "A house divided against itself cannot stand. I believe this Government cannot endure permanently half free and half slave. I do not expect the Union to be dissolved; I do not expect the house to fall; but I do expect it will cause to be divided."

In our contracted modern world where we live shoulder to shoulder with other nations having different views of life, how vital it is for us never to be a house divided.

These then are three pinnacles of Lincoln's life: First, his loving kindness for his fellow men; second, his honesty; and, third, his passion to unify the people. There is, of course, one more. You may call it, as history has, a radical trait. Perhaps "independent" would be a better word. Others have described this trait. Phillips Brooks described it in these words:

"In him goodness and intelligence combined and made their best result of wisdom. For perfect truth consists not merely in the right constituents of character, but in their right and intimate conjunction. This union of the mental and moral into a life of admirable simplicity is what we most admire in children; but in them it is unsettled and unpractical. But when it is preserved into manhood, deepened into reliability and maturity, it is that glorified childlikeness, that high and reverent simplicity, which shames and baffles the most accomplished astuteness, and is chosen by God to fulfill his purposes when he needs a ruler for his people, of faithful and true heart, such as he who was our President.

"Another evident quality of such a character as this will be its freshness and newness, if we may so speak. Its freshness or readiness—call it what you will—its ability to take up new duties and do them in a new way, will result of necessity from its truth and clearness. The simple natures and forces will always be the most pliant ones. Water bends and shapes itself to any channel. Air folds and adapts itself to each new figure. They are the simplest and most infinitely active things in nature. So this nature, in every virtue of its simplicity, must also be free, always fitting to itself each new need. It will always start from the most fundamental and eternal condition and work in the straightest, even although they be the newest, ways to the prescribed purpose. In one word, it must be broad and independent and radical. So that freedom and radicalness in the character of Abraham Lincoln were not separate qualities but the necessary results of his simplicity and childlikeness and truth."

This man "of freedom and radicalness," let us remember in conclusion, reminded his fellow countrymen that "this country with its institutions belongs to the people who inhabit it. Whenever they shall grow weary of the existing Government they can exercise their constitutional right of amending it, or their revolutionary right to dismember or overthrow it." We cannot be timid and be worthy of Lincoln.

One final word from him, one word of thunder that comes breaking out from the past to help us today: "The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion. As our case is new, so we must think anew and act anew. We must disenthrall ourselves."

If we but let our minds be bold, in the spirit of these words, and follow the bright light of Lincoln's genius we need have no fears about the future.

What Really Is Happening?

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. MURRAY of Wisconsin. Mr. Speaker, in the December 31, 1945, What's Happening in Washington, I find in the column pertaining to inflation under No. 4, the following:

Prices and cost of living will edge up another 5 to 10 percent.

Under general domestic conditions, No. 29, I find:

Farm income may fall about 10 percent.

I have noted in the press and the publications of the United States Department of Agriculture that the farmers are expected to receive 10 to 15 percent less income in 1946 than in 1945. It is to be regretted that the administration cannot or does not find a formula that will look after the interests of the farmers of the country. The Department of Agriculture constantly spends more time on propaganda and less on agricultural problems. The propaganda is based on half-truths and has reached a point where the farmer takes their utterings with many, many grains of salt. This country is fortunate in still having some of the old civil-service men in the Agriculture Department to give that Department at least some respectability. However, they are gradually being pushed into the background, and their studies painted up by the New Dealers and presented by the politicos who are evidently more interested in the vote crop than in any crop any farmer ever grew at any time.

More of this can be expected as we see the Tammany, Kelly-Nash, and Hague corrupt political machines take over the party once known as the Democratic Party. These machine politicos had better quit harboring the thugs operating under the benign leadership of Dan Tobin. The farmers do not like to have their heads bashed in when they take their produce to market, and would like

to have a small slice of the "four freedoms"—freedom from fear—while they carry on their great work of feeding the people of the Nation and, to a great extent, the starving people of the world.

With the present set-up where the CCC has millions upon millions to carry on its operations, it appears that national farm income can be just about what the politicos and bureaucrats want or wish it to be.

Long Beach Editorial Reminds Loan Is Not All

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. DOYLE. Mr. Speaker, I thank you and the membership of the House for granting me unanimous consent to place in the Appendix of the CONGRESSIONAL RECORD of today an editorial which appeared in the Long Beach Press-Telegram-Sun at my home city on December 16, 1945.

It appears as timely now as it did when it first was written, in its statement of some of the factors which must be considered by the American people in their final decision upon this very matter:

LOAN TO BRITAIN IS NOT ALL

Perhaps because it is easier to understand than the other terms, the $4,400,000,000 loan by the United States to Britain nearly monopolizes the discussion on both sides of the Atlantic of the economic agreements negotiated by the American and British governments. It is unfortunate, because the loan is far from being the whole of the agreement, and it may turn out to be not even the most important part of it.

Besides the loan and related provisions for cancellation of the greater part of Britain's lend-lease obligations to the United States, the agreements contain provisions for restoration and development of international trade by removing or reducing barriers to the free movement of commerce among nations.

Britain agrees to modify its policy of trade preference maintained before the war between it and British dominions and colonies, thus opening new markets to American goods. It agrees to modify its policy of promoting British trade in some sections of the world to the disadvantage of American trade by manipulation of international exchange through use of monetary pools.

Coupled with reciprocal tariff concessions and the Bretton Woods provisions for a world bank and an international exchange stabilization fund, the little discussed conditions of the Washington agreement compose a program for expansion of world trade, in which the United States and Britain are the biggest factors.

Britain cannot survive without world trade, and the United States must have world markets for surplus goods if it is to have maximum production and employment, without which there will not be jobs for all the 55,000,000 or 60,000,000 Americans who will want to work, and the American people will not have sufficient income to bear the burden of the Nation's war debt.

All of this seems to be forgotten in the uproar in both countries over interest rate and other terms of the loan.

President Truman's Speech to Federal Council of Churches of Christ in America

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. VOORHIS of California. Mr. Speaker, I am deeply impressed by the speech delivered by President Truman to the Federal Council of Churches of Christ in America on yesterday. In this speech the President goes to the very heart of the problems of mankind and calls on us all to bring to bear upon them those spiritual forces which alone can bring about their solution.

Under leave to extend my remarks, I am therefore inserting this very fine address in the CONGRESSIONAL RECORD, as follows:

Friends of the Federal Council of Churches of Christ, I like to consider this conference to which you have so kindly invited me, as one which represents no one particular sect or creed, but rather as one which represents the spirit of religion as a whole. We are a people who worship God in different ways. But we are all bound together in a single unity, the unity of individual freedom in a democracy.

We have just come through a decade in which forces of evil in various parts of the world have been lined up in a bitter fight to banish from the face of the earth both these ideals—religion and democracy. For these forces of evil have long realized that both religion and democracy are founded on one basic principle, the worth and dignity of the individual man and woman. Dictatorship, on the other hand, has always rejected that principle. Dictatorship, by whatever name, is founded on the doctrine that the individual amounts to nothing; that the state is the only thing that counts; and that men and women and children were put on earth solely for the purpose of serving the state.

STRUGGLE BETWEEN DOCTRINES

In that long struggle between two doctrines, the cause of decency and righteousness has been victorious. The right of every human being to live in dignity and freedom, the right to worship his God in his own way, the right to fix his own relationship to his fellow men and to his Creator—these have again been saved for mankind.

The fight to preserve these rights was hard-won. The victory took a toll of human life and treasure so large that it should bring home to all of us forever how precious, how invaluable, is our liberty which we had begun to take for granted.

Now that we have preserved our freedom of conscience and religion, our right to live by a decent moral and spiritual code of our own choosing, let us make full use of that freedom. Let us make use of it to save a world which is beset by so many threats of new conflicts, new terror and destruction.

FORCES AGAIN AT WORK

In our relations abroad and in our economy at home, forces of selfishness and greed and intolerance are again at work. They create situations which call for hard decisions, for forthrightness, for courage and determination. But above everything else they call for one thing, without which we are lost. They call for a moral and spiritual awakening in the life of the individual and in the councils of the world.

The last 5 years have produced many awesome discoveries in material things. But it has been truthfully said that the greatest discoveries of the future will be in the realm of the spirit. There is no problem on this earth tough enough to withstand the flame of a genuine renewal of religious faith. And some of the problems of today will yield to nothing less than that kind of revival.

If the world is long to survive, the gigantic power which man has acquired through atomic energy must be matched by spiritual strength of greater magnitude. All mankind now stands in the doorway to destruction—or upon the threshold of the greatest age in history. Only a high moral code can master this new power of the universe, and develop it for the common good.

REASON FOR RULE OF FORCE

When the sages and the scientists, the philosophers and the statesmen, have all exhausted their studies of atomic energy, one solution and only one solution will remain—the substitution of decency and reason and brotherhood for the rule of force in the government of man.

If men and nations would but live by the precepts of the ancient prophets and the teachings of the Sermon on the Mount, problems which now seem so difficult would soon disappear.

That is the great task for you teachers of religious faith. That is a supreme opportunity for the church to continue to fulfill its mission on earth. The Protestant church, the Catholic church, and the Jewish synagogue, bound together in the American unity of brotherhood, must provide the shock forces to accomplish this moral and spiritual awakening. No other agency can do it. Unless it is done, we are headed for the disaster we would deserve. Oh, for an Isaiah or a Saint Paul to reawaken a sick world to its moral responsibilities!

The need for this moral awakening applies to all men and women everywhere, but it applies particularly to the youth of today from whom the leadership of tomorrow will come. The aftermath of a major war always includes an increase of juvenile delinquency. Sometimes it is the fault of the boys and girls. More often it is the result of everything that is abnormal in war—including the absence of fathers and mothers in the armed forces or in business or war industries.

TO WOMEN OF AMERICA

We shall always be grateful to the women of America, who have performed such an outstanding service to our country during the war. In some cases, however, this patriotic devotion to the national interest has resulted in unavoidable neglect of children. Smaller children were taken care of through the help of the Government in child-care centers. But this could not be done in the case of older children. We are now paying the social penalty for failing to provide adequate supervision and guidance for many of our children during their formative years.

Whatever the cause, the need is now pressing and unyielding. The younger generation of today yearns for moral uplift. To the parents of the Nation—and to you of the churches of God—has come the responsibility of helping them on to the right path.

And one of the ways we can all help not only the youth of the Nation but all men and women is by the provision of decent homes. To make up for the lag in home building during the years of the war, this country has embarked on the most ambitious civilian housing program in our history. Every possible resource of Government will be used to reach our goal of 2,700,000 low-cost homes within the next 2 years. Nowhere can the influence of deep religious faith and ethical living be more adequately felt than in the homes of the Nation. The spiritual welfare of our people of tomorrow is going to depend

on the kind of home life which our Nation has today.

"SHARE THE HOME" EFFORT

That is why it is so important that all churches throughout America cooperate in the "national share the home" effort. If each congregation of the 250,000 churches and synagogs in this country would open their spare rooms to only 4 veterans, 1,000,000 veterans and their families could receive temporary shelter until new houses are available.

Nothing could be more helpful in reaching the goal of a decent home for every American—and by that I mean Americans of all races and religions and of all income groups—than the active cooperation and inspiration of the churches of the Nation. By working in your local communities where the primary job and responsibility lie, you can help make this program the success which it must be. For home life reflects the Nation's life. It must conform to an ever-rising standard.

To raise that standard should be, and is, the constant aim of your Government and the underlying basis of its policies. It would make the effort so much easier if people and nations would apply some of the principles of social justice and ethical standards which have come down to us from biblical times. All the questions which now beset us in strikes and wages and working conditions would be so much simpler if men and women were willing to apply the principles of the Golden Rule.

BROTHERHOOD OF MAN

If we really believed in the brotherhood of man, it would not be necessary to pass a Fair Employment Practices Act.

If certain interests were not so greedy for gold there would be less pressure and lobbying to induce the Congress to allow the Price Control Act to expire, or to keep down minimum wages, or to permit further concentration of economic power.

A truly religious fervor among our people would go a long way toward obtaining a national health program, a national housing program, a national education program, and an extended and improved social security program.

As among men, so among nations—nothing will do more to maintain the peace of the world than the rigorous application of principles of our ancient religion.

We have tried to write into the Charter of the United Nations the essence of religion, the end of aggression, the maintenance of peace, the promotion of social justice and individual rights and freedoms, the substitution of reason and justice for tyranny and war, the protection of the small and weak nations—by these principles the United Nations have laid the framework of the charter on the sound rock of religious principles.

UNITED STATES STAND ON CHARTER

The United States expects to support that charter. It expects to defend that charter. It expects to expand and perfect that charter. And we are confident that all the other United Nations expect to do the same.

In the crisis of global war the common peoples of all the world became bound together in a great fraternity. It was dedicated to resistance against aggression and determination to overcome the tyrants and dictators who sought to enslave. The resources of all the United Nations were pooled into one fund of power. Weapons, supplies, ammunition, equipment, ships, food—the wealth and manpower of each were dedicated to the common good of all.

Now that victory has come, that has stopped. But throughout the world there are now millions and millions of men, women, and children who still look to the rich and powerful nations of the world for help. Principally they look to the people of the United States for help. Not help to fight an enemy, nor help for luxuries and extravagances—but just help to keep themselves alive, help in the form of food and clothing, the barest necessities of life. Of course, we cannot feed them all. But we can go a long way.

APPEALS FOR FAITH

As your President, I appeal to you again—and to all Americans everywhere—to prove your faith and your belief in the teachings of God by doing your share to save the starving millions in Europe and Asia and Africa. Share your food by eating less, and prevent millions from dying of starvation. Reduce your abundance so that others may have a crust of bread. In short, prove yourselves worthy of the liberty and dignity which you have preserved on this earth, by helping those less fortunate who have been starved by the dictators for so many long years and who still starve even in liberation.

Ours should be a continuous thanksgiving for the fact of victory and for the blessings which are still with us in this land. The brave men and valiant women who made this possible under God will inspire us to face our new problems with resolution. They are problems which will call for the best in us. As long as we remain true to the spirit of these men and women, to the religious faith which carried them to victory, we shall not fail.

We have this America not because we are of a particular faith, and not because our ancestors sailed from a particular foreign port. We have our America because of our common aspiration to remain free and our determined purpose to achieve for ourselves, and for our children, a more abundant life in keeping with our highest ideals.

Let us determine to carry on in that same spirit—in a spirit of tolerance and understanding for all men and for all nations—in a spirit of religion and religious unity.

What Is a Fair and Acceptable Rural Hourly Take-Home Pay?

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. MURRAY of Wisconsin. Mr. Speaker, the following news item which appeared in the Manawa (Wis.) Advocate is of interest:

Wisconsin farmers earned nearly four times as much per hour of labor at the wartime peak as they did in 1939—but the catch is that they averaged only 14 cents an hour in 1939.

This news item was probably released by the State agricultural college as they have cooperated for many years with Dr. Wylie D. Goodsell, of the United States Department of Agriculture, on his studies of the returns for farm labor. While the 1939 figures coincide with the reports from Dr. Goodsell, the 14 cents per hour was the average hourly return for labor on the farms studied and beyond question were greater than the State average of all farms.

First. The following paragraph is from the January 5 Surplus Foods Report, an agricultural economic analysis:

Dairy products: A letter has been written from Secretary Anderson to Mr. Bowles, via Judge Collett's office covering the dairy products picture for 1946 and including a recommended increase in the price of butter. This recommendation has been rumored to be from 10 to 13 cents a pound. Whatever the recommendation the OPA will object to it. Instead of an increase in the price of butter, it has been suggested that there be some consideration given to a roll back in the prices of some other manufactured dairy products.

Second. The following paragraph is from the January issue of Nation's Business:

Most business plans for 1946 are based on expectation of a persistent upward trend in raw-material prices, wages, and total production costs. * * * Government commodity experts predict general wholesale price level may advance as much as 8 percent in 1946. Only exceptions of this general trend are farm product prices, rural land values, and food prices.

In November the United States Department of Agriculture predicted a 10- to 15-percent reduction in the 1946 national farm income in comparison to 1945. Inasmuch as the USDA has the funds with which to control markets the national farm income in 1946 can be expected to be just about what the bureaucrats want it.

The program proposed appears to be more for everyone except the farmer. If the above-average farmer did receive 56 cents per hour for his labor in 1945 is he now to be confronted with higher production costs but at the same time receive a cut in the hourly returns for his labor?

There are 12,000,000 workers who are going to be paid less than even the Steagall amendment states, if the USDA does not change its ways. Will 6,000,000 farmers sit idly by and see it happen?

Veterans' Housing—Same Old Runaround

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1946

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit a letter which I have received from the dean of the John McNeese Junior College of the Louisiana State University, at Lake Charles, La., in my district in regard to his efforts and my efforts to obtain housing units to take care of veterans enrolling in this college in my district.

Mr. Speaker, this is a good example of the treatment of veterans who have no place to live, as well as the treatment accorded veterans who are trying to go to colleges to take up their education where they left off when they went to the wars to defend their country.

Mr. Speaker, from the letter which I ask be included following these remarks, it will be seen that they are trying to pass us with broken-down trailers, notwithstanding there are ample substantial housing units available for my college in the area where located; however, all the veterans get is the usual runaround to veterans, and a continuation

of bureaucracy existing in practically all of the departments of this Government.

"Oh, Heaven," he cried, "my bleeding country save."

The letter follows:

LOUISIANA STATE UNIVERSITY,
JOHN MCNEESE JUNIOR COLLEGE,
Lake Charles, La., March 1, 1946.

Hon. HENRY D. LARCADE, JR.,
Member of Congress,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I appreciate your letter of February 26, and I sincerely know you are using your efforts to assist in this matter to the fullest extent. It seems to me that it is unfortunate that these agencies will, in some instances, not try to do the economical thing. For instance, I spent Tuesday in Orange, Tex., with the head of the housing project there. They have 616 housing units available for colleges. Only 235 have been allocated. Those have been allocated to Texas Christian University, at Fort Worth, and are now being torn down, put on trucks, and hauled to Fort Worth, which is about 400 miles, on a cost-plus basis. Others are being torn down and hauled to Hammond for Southeastern College. In the letter of Amis, which you enclosed with yours, he stated we would get some from Leesville. I sent a man to his office in Fort Worth Monday from the college with plans prepared by Shutts Bros., and my man was told that the ones in Leesville were not available, and now we would get some from Baton Rouge. I am at a loss to understand the situation, and it does not seem like there is much that can be done about it. My understanding is that the more pressure you put on, the more you get.

I have the site selected, have hired the best engineers in southwest Louisiana to make the necessary maps and drawings, and I don't know what else to do.

The trailers are not satisfactory where they are located, and, of course, I imagine Amis and his crowd would like to spend several thousand dollars fixing them up so two or three men would have a job looking after them, and, at the same time, would keep the city from getting them. Amis is misrepresenting facts to you when he says that we were allocated 20 trailers. We were allocated, according to his telegram, 20 housing units, and housing units to other colleges seems to mean the housing units are to be moved from Orange, Tex., to Southeastern, and from other points to other colleges, but, according to Amis, the interpretation at McNeese means trailers.

I appreciate your interest, and will keep you advised. They did tell my man, while he was in Forth Worth, that we would get 10 housing units, and they are now supposed to come from Baton Rouge. Next week I do not know where they will come from.

With kind regards, I am,
Cordially yours,
L. E. FRAZAR, *Dean.*

Political Economists Again Discredited

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1946

Mr. SHAFER. Mr. Speaker, if things keep going as they are, the people of this Nation will lose faith in the words of supposedly unbiased, nonpolitical Government economists and statisticians as they have lost faith in the printed and spoken words of administration leaders past and present.

Here is a good example. Those persons who have any kind of a memory and like to keep up with current events to see if they jibe with the predictions of leaders in the past will recall that shortly after VJ-day last August administration economists began to predict that we would have 8,000,000 unemployed by the spring of 1946. They allowed themselves to be quoted freely, basing the prediction on a looked-for decline in employment through reconversion and from other natural causes.

Yet, as everyone knows, except that unemployment caused because strikers will not work or because employers will not hire demobilized servicemen at a living wage, there is no real unemployment in this country—and likely will not be any for years, considering the dammed-up purchasing power.

This situation is not unexpected among economists who had no ax to grind last fall. But the political economists in this administration were off base because of one good reason: They wanted to see the administration ram through a lot of bills which since have rested in House and Senate committees.

Remember, these politically minded and now-discredited bureau economists had to say what the administration wanted them to say. And, in that period last year, to frighten us in Congress into action, the economists predicted unemployment which they knew likely would not come to pass this spring. I am glad to be able to say that many Members of Congress were not hoodwinked and browbeaten into action. We have learned that the boys in the executive branch will make up any kind of a story to get what they want.

Reduction and Control of Armaments

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. MARTIN of Massachusetts. Mr. Speaker, "Churches and the World Order" was a title of a report submitted yesterday by John Foster Dulles, noted American diplomat, as chairman of the committee to the Federal Council of the Churches of Christ in America.

This organization is representative of 27,000,000,000 members of Protestant churches. In that report was a resolution calling for an international agreement to abolish universal military conscription in peacetime, which is in accord with a resolution I have filed in the House. The resolution was adopted.

The part relating to the subject of an international agreement on abolition of conscription reads as follows:

A. REDUCTION AND CONTROL OF ARMAMENTS

10. The charter of the United Nations contains provisions for the regulation and reduction of national armaments by international agreement. We recognize the psychological and political obstacles which stand in the way of world disarmament. Yet we hold that the certain dangers of world rearmament require every effort to bring about the international reduction and control of weapons for mass destruction.

If the nations are to break the cycle of wars and preparation for war, they must follow a bold and farsighted policy. Nothing less will suffice. The General Assembly, as well as the Security Council, should apply the provisions of the charter for the regulation of armaments. The representatives of the United States in the UNO should immediately seek agreement on a comprehensive plan for the progressive reduction of military establishments throughout the world, for the universal abolition of peacetime conscription, and for the outlawry and effective control of weapons of mass destruction.

11. In the initial use and continued production of atomic bombs, the United States has given and is giving sanction to these weapons of mass annihilation. We believe that this policy must not be continued. Our Nation, having first used the atomic bomb, has a primary duty to seek to reverse the trend which it began. Unless the United States will give moral leadership and accept risks for the sake of a new birth of confidence, we see little hope for escape from the growing crisis.

What Must We Do To Help Feed Europe?

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD a statement and résumé of my remarks, on the Town Meeting of the Air, given last night in New York, over the American Broadcasting Co., on the subject What Must We Do To Help Feed Europe? The other participants on the program, included the Secretary of Commerce, the Honorable Henry Wallace; Senator Claude Pepper; and H. J. Heinz 2d.

Now, Mr. Denny, Senator PEPPER, recently returned from an extensive trip through Europe, says the job of feeding Europe is terribly easy, but he admits, in the same breath, that, the record shows that it has not been done. It seems to me that he should give specific suggestions on feeding Europe. He talks about a loan to Britain. He should call it a gift, and certainly, the Senator must know that this money will not help feed the starving people of Europe. The Senator scolds the Agricultural Department for not extending credit to UNRRA when it was needed. He wants the OPA extended as a method of helping to feed Europe. This agency fathers the black market and their foolish pricing policy has caused a shortage of everything from butter to milady's girdles. It will take far more than a loan to Great Britain, or the continuation of OPA, to get food, immediately, to those who are starving.

In reviewing Secretary Wallace's remarks, we must remember that he is a member of the President's Cabinet. We can all agree that partisan politics, in the feeding of the starving people of Europe, should not be tolerated, but I would remind the distinguished Secretary that the production, processing, distribution, and pricing of food in the United

States is honeycombed with politics. This administration cannot escape its responsibility in the present break-down of supplying food to Europe.

I think it is true that there are some Americans who are knee deep in calories and are literally digging their graves with their teeth. The housewife scans the food advertisements and there are moments of indecision as to whether she wants sirloin steak, veal, fowl, or fish, together with a large choice of vegetables and fruits.

At the same time, the world looks to America for food. To them we are a land of plenty. We are told that millions are on the verge of starvation. Help must be given before June 1, or many will starve. What can be done? Can the agreements and commitments made, be kept? If not, why not? I doubt if we can keep our commitments. The bureaucrats of Washington have fooled the American people and those of foreign countries. The information they gave out about our food supply was incorrect. This country promised 300,000,000 pounds of meat to Europe in the first 3 months of this year. Senator PEPPER has stated we supplied about 3 percent to February 19. Europe is receiving about 60 percent of the flour we promised. To produce flour, we must move the wheat from elevators, now plugged full. I present a wire of recent date, from western Nebraska, stating that it will take 2 years, at the present rate they are receiving cars, to move the wheat from the elevators and bins of the farmers. Who is to blame for this?

Europe needs canned goods and yet, according to the Department of Commerce, over which you preside, Secretary Wallace, the carry-over of canned vegetables is 51 percent below 1940, and canned fruits about 61 percent below 1940. This is an all-time low.

For 20 years before the war we imported more agricultural products than we exported. In 1944 we imported 260,000,000 bushels of wheat and exported 15,000,000 bushels. We had a billion-bushel crop of wheat, not only in 1945 but also in 1915. In 1915 we had no foolish plowing under of crops or pig killing, regimented agricultural program.

Wasting food should be stopped. The garbage pails of some American families would feed many in Europe. The Army saved 20,000,000 pounds of cooking fat last year. They are now saving 720,000 pounds of bread per month. They are saving 56,000 pounds of sugar per month by not sweetening their prunes.

Volunteer rationing would be a great help.

Make it possible to mail food packages to Europe. Six countries are now denied food through this source. Individuals in Greece may receive one 11-pound package every 2 weeks; Italy a 4-pound package every month, in limited areas. As Mr. Heinz has so well stated, tell the American people the truth through the press, radio, and from the pulpit about the plight of starving millions. Their generosity, decency, pride, and self-sacrifice knows no limits.

Encourage and increase the number of victory gardens. They produced a million tons of food last year.

Place one individual over all food production, pricing, and distribution. At the present time a dozen agencies have their finger in the food pie, and the program is one of rules, directives, confusion, and a merry-go-round of red tape.

For a long-term food-production program, under one Government head, I suggest providing the farmer, not only with help, but machinery, fertilizer, and an adequate price. Selective service stripped the farmer of experienced help. The Tydings amendment, as passed by Congress, provides that no essential farm labor should be drafted without a proper replacement. This has not been followed. The farmer, unable to get new machinery, is struggling with old, outmoded equipment. Due to strikes, little farm machinery is being manufactured. The farmer has been denied fertilizer for the production of crops. One Southern State received 11 percent of all the fertilizer and yet produced only 2 percent of the food crops. There is no food value in tobacco and cotton sandwiches.

To help feed Europe, we should cooperate, fully, with the recently created Famine Emergency Committee. They will have some good suggestions to offer the Government and the American people. The American people should be willing to accept substitutes in their diets.

Government promises to the farmer must be kept. There can be no prosperity in this country, with a sick agriculture. We cannot attain prosperity and happiness through a policy of scarcity. Our farmers are patriotic citizens. During the war, their wives, their children, and the older men worked from daylight to dark. They were producing food for their sons fighting in fox holes all over the world.

Government subsidies, regulations, and red tape discourage the farmer. The subsidy on butter is 17½ cents a pound, but where is the butter? Government controls create emergencies and emergencies create controls. It is a vicious cycle and is moving faster and faster.

The immediate problem of supplying Europe with food centers around one of transportation, voluntary rationing, and cooperation of the public and responsible Government agencies. This Government should cut the red tape in the handling of food, for regulations kill our best impulses, smothers our conscience, and trips up progress in the delivery of food to the starving.

Praise Where Praise Is Due

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1946

Mr. SHAFER. Mr. Speaker, it is well known that I have never been much of a hand to praise the New Deal. At the same time I have always felt keenly that Republicans should give praise where praise is due. Therefore, I take this occasion to compliment Gen. Arthur J. Browning, new Director of the Office of Domestic Commerce in the United States Department of Commerce.

It seems that General Browning, at a press conference last Monday, had the fortitude to tell an economic truth in the presence of his boss, Henry A. Wallace, causing the latter's face to become a fiery red.

Here is what General Browning said:

> Our interviews with numerous manufacturers indicate that they lose their best production men because they feel that it is useless to get a salary increase which will be taken away by higher taxes.

In other words, according to General Browning, the 13-year trend of tax laws, as sponsored first by President Roosevelt and Morgenthau and now by President Truman and Secretary Vinson, actually discourages individuals from doing their best work. The tax laws, as Republicans have said time and again, as presently constituted do not provide an incentive for men to work harder, to think and plan and produce more vigorously.

Newsmen, including Dan Kidney and Peter Edson, who were alert enough to see the difference between what Browning said and what Wallace has been preaching all these years, had a field day pointing to the Commerce Secretary's embarrassment.

After all, this is liable to come to anyone who tries to talk out of both sides of his mouth at the same time.

The REA Program in Oklahoma and the Nation

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. WICKERSHAM. Mr. Speaker, in response to the demands of rural people who do not yet enjoy electric service, REA-financed cooperatives and other borrowers have swamped the Rural Electrification Administration with the greatest wave of loan applications in the agency's history. Line construction is in progress throughout the country and will expand as the materials situation improves.

During the fiscal year ending next June 30 Congress authorized REA to lend $200,000,000—the greatest 1-year loan fund in its history. On January 1, with 6 months of the fiscal year remaining, approximately $145,000,000 from this fund had already been allotted to borrowers, leaving only $55,000,000 available from current REA funds. At the same time pending applications on hand or in process in the field totaled more than $200,000,000, only approximately one-fourth of which could be approved from 1946 funds. By the first of the year, borrowers in 21 States had exhausted the loan funds available to them from the lending fund for fiscal 1946.

This great demand for REA loans is a reflection of the insistence with which the Nation's rural residents are demanding electricity, now that wartime restrictions on line construction have been removed. Slightly more than half of the Nation's 6,000,000 farms still lack central-station electric service. Another 3,000,000 nonfarm rural homes, rural schools, churches, stores, factories, and other rural establishments remain to be served with electric power. These 6,000,000 potential rural electric consumers represent the job ahead in rural electrification.

The REA borrowers are undertaking this job on an area-coverage basis, serving thinly settled sections along with more densely populated areas. By careful advance planning of lines and sound business management, REA believes that its borrowers can attain their goal of electric service for every rural community.

At the time REA was established in 1935, only 743,954 farms, or 10.9 percent of all the farms in the United States, had received central-station electric power. The latest official estimates show that on

June 30, 1945, 2,725,610 farms, or 44.7 percent of the total, were electrified. Approximately half of the farms electrified since 1935 are served by REA-financed systems.

Through November 30, 1945, the latest date for which statistics are available, REA had allotted $654,057,000 in rural electrification loans to 955 borrowers—879 locally owned, member-operated electric cooperatives, 57 public bodies, and 19 private utilities. Eight hundred and forty of the borrowers had lines and other facilities in operation. These borrowers operated 445,000 miles of lines serving 1,359,000 farms and other rural consumers in 46 States, Alaska, and the Virgin Islands. Most of these systems were operating only distribution facilities and buying wholesale power. Seventy-five of them were generating part or all of their own power. During the year ending June 30, 1945, REA-financed systems distributed more than 2,000,000,000 kilowatt-hours of power.

As of November 30, REA had advanced $456,096,000 on the loan allotments to its borrowers. The borrowers had made payments of principal and interest of their loans amounting to $99,789,000. Of this amount, $19,684,000 represented advance payments on principal in excess of the amount due. Delinquencies on REA loans, consisting of amounts more than 30 days overdue, totaled only $519,000, slightly more than one-half of 1 percent of the amount due.

Oklahoma REA borrowers, already serving 36,000 rural power users, have completed plans for service to several thousand others as rapidly as line construction materials become available. As of January 1, Oklahoma borrowers had received $5,360,000 in loan allotments from REA loan funds for fiscal 1946. This money will be used to finance power lines to reach more than 10,000 unserved rural consumers.

From its $200,000,000 loan fund for fiscal 1946, REA earmarked $6,126,600 for loan allotments in Oklahoma. Since more than 80 percent of this amount had been allotted by January 1, only $766,600 was still available for lending in Oklahoma during the remaining 6 months of the fiscal year. On the same date, REA had on hand and in process $3,815,000 in loan requests from the State to finance rural electric facilities to reach around 7,500 unserved rural consumers.

Before the REA program began, fewer than 6,000 Oklahoma farms had electric service. This number had increased to 36,000 by July 1, 1945, according to REA estimates. On the same date, estimates show, 143,287 of the State's farms, or 79.7 percent of the total, still were without electricity. In addition, many nonfarm rural dwellings and other rural establishments remained unserved.

Since 1935 REA has allotted a total of nearly $20,000,000 in loan funds to 24 borrowers in Oklahoma. Twenty-three of these borrowers are rural electric cooperatives and one is a private utility. These borrowers operate 15,000 miles of power lines serving 36,000 rural consumers, most of them farms. One cooperative is generating part of its own power; the others are buying at wholesale from public agencies and private power companies.

Oklahoma REA borrowers are more than meeting the required payments on their Government loans. According to REA's financial summary, Oklahoma borrowers have paid $1,728,000 on principal and interest due, including $353,000 repaid on principal in advance of the time it was due. Less than $17,000 was overdue.

Birth of the Federal Reserve—A Money Control System That Has Spread Around the World

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. WHITE. Mr. Speaker, today on a small island off the coast of the State of Georgia a small group of people are meeting to launch a new international money and credit control system, commonly known as the Bretton Woods plan. That will, in effect, as stated by the English Lord Keynes, one of the originators of the system, be the economic government of the world. A plan, as he pointed out to the British Parliament, that would provide excellent machinery for enforcing financial blockades. What is being done on this island off the coast of Georgia today brings to mind another momentous meeting of financiers on a small island off the coast of Georgia, as told by one of the conspirators, Frank A. Vanderlip, in an article which I have condensed and taken from the February 9, 1935, issue of the Saturday Evening Post, reprinted here:

As early as 1907 I had found myself in hearty accord with Woodrow Wilson about the matter of the social value of publicity for the affairs of big corporations. He had stated publicly at that time that he thought the aggressive antagonism toward trusts was due to the fact that the people were kept in ignorance of the affairs of the trusts. He had said further, and I still agree with him, that corporation lawyers injured the interests of their clients by counseling secrecy. My views on this subject were considered radical by some of my close associates when I was president of the National City Bank.

A SECRET EXPEDITION TO JEKYL ISLAND

Despite my views about the value to society of greater publicity for the affairs of corporations, there was an occasion, near the close of 1910, when I was as secretive, indeed, as furtive, as any conspirator.

For me the beginning of the adventure, I should think, was a letter that came from Mr. Stillman in Paris. He said he had just had a long conference with Senator Nelson Aldrich, Zivil in our code, who was very keen to get to work on banking and currency revision. Aldrich, Mr. Stillman reported, regretted that Henry Davison, of J. P. Morgan & Co., and I had been unable to join him in Europe during the summer; he felt that over there we might have had plenty of time for our discussions, and been free from interruptions. In a moment of entire candor he would have said, "free from reporters." Mr. Stillman said he had told Mr. Aldrich that freedom from interruptions was essential, but that it could be accomplished by getting Davison and me down to Warwick, his place in Rhode Island, without anyone's knowing of it. That was Mr. Aldrich's plan as he left Paris. Mr. Stillman wrote me that I should make everything else subservient to giving my whole time and thought to a thorough consideration of the subject. He said that Aldrich was persuaded that he could accomplish more by getting out of the Senate, so as to put the work of revision on a nonpartisan basis. Mr. Stillman expressed to me his fear that after revision the banks might not be so well off. He wrote that from that time on Davison and I ought to follow the matter very closely, and keep in touch with Aldrich. Aldrich, I was informed, believed in some sort of centralization, but not in the establishment of a central bank such as France had. Mr. Stillman also reported to me that in his talk with Senator Aldrich he himself had not expressed any views, except as he had impressed on the Senator his belief in the necessity of not being too much influenced by our Wall Street point of view.

But would the electorate have believed that? I question their ability to do so. Just to give you a faint idea: Senator Aldrich was the father-in-law of John D. Rockefeller, Jr., and himself a very rich man. Once I had written to Woodrow Wilson at Princeton, inviting him to speak at a dinner. Wishing to impress him with the importance of the occasion, I had mentioned that Senator Aldrich also had been invited to speak. My friend Dr. Wilson had astonished me by replying that he could not bring himself to speak on the same platform with Senator Aldrich. He did come and make a speech, however, after I had reported that Mr. Aldrich's health would prevent him from appearing. Now then, fancy what sort of headlines might have appeared over a story that Aldrich was conferring about new-money legislation with a Morgan partner and the president of the biggest bank.

On October 22, 1910, I wrote to Mr. Stillman in Paris: "Senator Aldrich met with what came very near being a severe, if not fatal, automobile accident. You probably have seen the report of it in the papers. He was pretty well bruised, having cuts on each side of his face. He is very much better now, but the accident has naturally postponed the conference that was in mind. He will be about in a few days, and Mrs. John D., Jr., tells me that they do not think there will be any serious effect from the accident."

BANKERS IN DISGUISE

As the time for the assembling of Congress drew near, Senator Aldrich became increasingly concerned about the report he must write on behalf of the Joint Monetary Commission; likewise, there ought to be, he knew, a bill to present to the new Congress, and none had been drafted. This was how it happened that a group of us went with him to the Jekyl Island Club on the coast of Georgia.

Since it would be fatal to Senator Aldrich's plan to have it known that he was calling on anybody from Wall Street to help him in preparing his report and bill, precautions were taken that would have delighted the heart of James Stillman. Those who had been asked to go were Henry Davison, Paul Warburg, Ben Strong, and myself. From Washington came A. Piatt Andrew, Jr., who was then an Assistant Secretary of the Treasury, and who now is a Member of Congress from Massachusetts. We were told to leave our last names behind us. We were told, further, that we should avoid dining together on the night of our departure. We were instructed to come one at a time and as unobtrusively as possible to the railroad terminal on the New Jersey littoral of the Hud-

son, where Senator Aldrich's private car would be in readiness, attached to the rear end of a train for the South.

When I came to that car, the blinds were down and only slender threads of amber light showed the shape of the windows. Once aboard the private car we began to observe the taboo that had been fixed on last names. We addressed one another as "Ben," "Paul," "Nelson," "Abe"—it is Abraham Piatt Andrew. Davison and I adopted even deeper disguises, abandoning our own first names. On the theory that we were always right, he became Wilbur and I became Orville, after those two aviation pioneers, the Wright brothers. Incidentally, for years afterward Davison and I continued the practice, in communications, and when we were together.

SECRET MEETING ON JEKYL ISLAND

The servants and the train crew may have know the identities of one or two of us, but they did not know all, and it was the names of all printed together that would have made our mysterious journey significant in Washington, in Wall Street, even in London. Discovery, we knew, simply must not happen, or else all our time and effort would be wasted. If it were to be exposed publicly that our particular group had got together and written a banking bill, that bill would have no chance whatever of passage by Congress. Yet who was there in Congress who might have drafted a sound piece of legislation dealing with the technical banking problem with which we were concerned? Indeed, there were surprisingly few bankers, besides those of us who had been called together, who had given the special matters under consideration any thorough study whatever. Most bankers were reluctant to accept any change; George Baker was.

We proceeded, in the rear room of that private car, to get to work as soon as the train was moving. That first discussion of the banking structure and of what ought to be done about it produced scraps of ideas as formless as the contents of a rag bag. Everyone had some little piece of project to throw on the table for discussion, and everyone's pet scheme encountered some other fellow's objection.

We had traveled a good many miles without making much progress, when I told my companions of a piece of advice, as to the proper way to conduct a conference, that had been given to me by Frank Trumbull, a dear friend of mine who was then the chairman of the board of the Chesapeake & Ohio Railway.

"What we ought to do first," I said, "is to set down those things about which we are agreed; then, one by one, we can take up those things about which we seem to disagree."

From then on we made swift progress. I was appointed amanuensis and in my paleolithic shorthand recorded those proposals which we all were ready to echo as we heard them; of course, we knew that what we simply had to have was a more elastic currency through a bank that would hold the reserves of all banks.

We were taken by boat from the mainland to Jekyl Island and for a week or 10 days were completely secluded, without any contact by telephone or telegraph with the outside. We had disappeared from the world onto a deserted island. There were plenty of colored servants, but they had no idea who Ben and Paul and Nelson were; even Vanderlip, or Davison, or Andrew, would have meant less than nothing to them. There we worked in a clubhouse built for people with a taste for luxury. The live-oak trees wear fantastic beards of Spanish moss on Jekyl Island; in November brown leaves make its forests utterly charming. Without our ever stopping to hunt, deer, turkey, and quail appeared on the table; there were pans of oysters not an hour old when they were scalloped; there were country hams with that incomparable flavor that is given to them in the South. We were working so hard that we ate enormously. We worked morning, noon, and night.

We put in the most intense period of work that I have ever had. Sometimes Davison and Strong would be up at daybreak to get a horseback ride or a swim before breakfast, but right after breakfast the six of us would gather around the table and resume where our discussion had ended the previous midnight. We stuck to the plan of putting down on paper what we agreed upon; there was no back-tracking, no wrangling. Harry Davison was a splendid person to prevent wrangles in any company. Warburg, the best-equipped man there in an academic sence, was so intense and apparently felt a little antagonism toward Aldrich that some of our moments of strain might have developed into real hindrance had it not been for Davison. Always he could be counted on to crack a joke just at the right moment to ease a strain. No telephones rang, none could bother us to ask for an opinion of the market, there were no directors' meetings, no interruptions whatever. Thanksgiving occurred during that week, and we ate wild turkey with oyster stuffing and went right back to work. We gave, each of us, every bit of our mental energy to the job, and I enjoyed that period as I never have enjoyed anything else. I lived during those days on Jekyl Island at the highest pitch of intellectual awareness that I have ever experienced. It was entirely thrilling.

COLLABORATING WITH ALDRICH

As we dealt with questions I recorded our agreements in that shorthand I had first practiced with chalk on the tail stock of my lathe back in Aurora. If it was to be a central bank, how was it to be owned—by the banks, by the Government, or jointly? When we had fixed upon bank ownership and joint control, we took up the political problem of whether it should be a number of institutions or only one. Should the rate of interest be the same for the whole Nation, or should it be higher in a community that was expanding too fast and lower in another that was lagging? Should it restrict its services to banks? What open-market operations should be engaged in? That was the sort of questions we dealt with, and finally, at the end of our week, we had whipped into shape a bill that we felt, pridefully, should be presented to Congress. As I recall it, Warburg had some objections, but we were in substantial agreement on the measure we had created. We returned to the North as secretly as we had gone South. It was agreed that Senator Aldrich would present the bill we had drafted to the Senate. It became known to the country as the Aldrich plan. Aldrich and Andrew left us at Washington, and Warburg, Davison, Strong, and I returned to New York.

Congress was about to meet, but on a Saturday we got word in New York that Senator Aldrich was ill—too ill to write an appropriate document to accompany his plan. Ben Strong and I went on to Washington and together we prepared that report. If what we had done then had been made known publicly, the effort would have been denounced as a piece of Wall Street chicanery, which it certainly was not. Aldrich never was a man to be a mere servant of the so-called money interests. He was a conscientious, public-spirited man. He had called on the four of us who had Wall Street addresses because he knew that we had for years been studying aspects of the problem with which it was his public duty to deal.

As is now well known, the bill we drafted did not get through Congress. Aldrich retired from the Senate, and then a Democratic majority came down to Washington along with Woodrow Wilson, who had defeated President Taft. The platform on which he was elected contained a statement expressing the opposition of the Democratic Party to the Aldrich plan, or a central bank. There was a good deal of discussion about that. It was contended that originally the platform committee had agreed upon the statement: "We are opposed to the Aldrich plan for a central bank."

Now, although the Aldrich Federal Reserve plan was defeated when it bore the name of Aldrich, nevertheless its essential points were all contained in the plan that finally was adopted. It provided an organization to hold the reserves of all member banks and arranged that they would always be ready to relieve a member bank under pressure by rediscounting loans that it held. The law as enacted provided for 12 banks instead of the one which the Aldrich plan would have created; but the intent of the law was to coordinate the 12 through the Federal Reserve Board in Washington, so that in effect they would operate as a central bank. There can be no question about it: Aldrich undoubtedly laid the essential, fundamental lines which finally took the form of the Federal Reserve Law.

Housing Subsidies

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article:

HOUSING SUBSIDIES

During the war subsidies were paid on food and other products to hold down prices. Under wartime conditions a strong case could be made for subsidies on a limited scale. Unfortunately, despite the many pledges to discontinue subsidies after hostilities ceased, we find today not only a continuation of the wartime program but recommendations to expand it. Housing Expediter Wyatt followed this plan in his proposed housing program. After the House voted against housing subsidies Mr. Truman described this action as "a blow at the heart of the veterans' emergency housing program." The bill has now been passed by the House—minus its subsidy provisions—and on this issue we believe that the House is on sounder ground than the administration.

Under the proposed housing program the taxpayer was asked to subsidize all home builders to the extent of $600,000,000 or more. To justify this huge expenditure, the program was described as a veterans' housing program. However, there was nothing in the program to prevent nonveterans, including many people who have accumulated large wartime savings, from acquiring building materials for homes they desire to purchase. Certainly these people should not be subsidized when they acquire new homes. If the objective is to hold down the cost of new homes to the veteran, there is no reason why some special financial provision cannot be made which applies to that group alone.

Additional subsidies would further unbalance the Federal Budget and increase the inflationary pressures which Mr. Wyatt proposed to counteract by the payment of subsidies. If the present price level is to be maintained, the inevitable result would be more and more subsidies. This is particularly true since it was proposed that wage

June 30, 1945, 2,725,610 farms, or 44.7 percent of the total, were electrified. Approximately half of the farms electrified since 1935 are served by REA-financed systems.

Through November 30, 1945, the latest date for which statistics are available, REA had allotted $654,057,000 in rural electrification loans to 955 borrowers—879 locally owned, member-operated electric cooperatives, 57 public bodies, and 19 private utilities. Eight hundred and forty of the borrowers had lines and other facilities in operation. These borrowers operated 445,000 miles of lines serving 1,359,000 farms and other rural consumers in 46 States, Alaska, and the Virgin Islands. Most of these systems were operating only distribution facilities and buying wholesale power. Seventy-five of them were generating part or all of their own power. During the year ending June 30, 1945, REA-financed systems distributed more than 2,000,000,000 kilowatt-hours of power.

As of November 30, REA had advanced $456,096,000 on the loan allotments to its borrowers. The borrowers had made payments of principal and interest of their loans amounting to $99,789,000. Of this amount, $19,684,000 represented advance payments on principal in excess of the amount due. Delinquencies on REA loans, consisting of amounts more than 30 days overdue, totaled only $519,000, slightly more than one-half of 1 percent of the amount due.

Oklahoma REA borrowers, already serving 36,000 rural power users, have completed plans for service to several thousand others as rapidly as line construction materials become available. As of January 1, Oklahoma borrowers had received $5,360,000 in loan allotments from REA loan funds for fiscal 1946. This money will be used to finance power lines to reach more than 10,000 unserved rural consumers.

From its $200,000,000 loan fund for fiscal 1946, REA earmarked $6,126,600 for loan allotments in Oklahoma. Since more than 80 percent of this amount had been allotted by January 1, only $766,600 was still available for lending in Oklahoma during the remaining 6 months of the fiscal year. On the same date, REA had on hand and in process $3,815,000 in loan requests from the State to finance rural electric facilities to reach around 7,500 unserved rural consumers.

Before the REA program began, fewer than 6,000 Oklahoma farms had electric service. This number had increased to 36,000 by July 1, 1945, according to REA estimates. On the same date, estimates show, 143,287 of the State's farms, or 79.7 percent of the total, still were without electricity. In addition, many nonfarm rural dwellings and other rural establishments remained unserved.

Since 1935 REA has allotted a total of nearly $20,000,000 in loan funds to 24 borrowers in Oklahoma. Twenty-three of these borrowers are rural electric cooperatives and one is a private utility. These borrowers operate 15,000 miles of power lines serving 36,000 rural consumers, most of them farms. One cooperative is generating part of its own power; the others are buying at wholesale from public agencies and private power companies.

Oklahoma REA borrowers are more than meeting the required payments on their Government loans. According to REA's financial summary, Oklahoma borrowers have paid $1,728,000 on principal and interest due, including $353,000 repaid on principal in advance of the time it was due. Less than $17,000 was overdue.

Birth of the Federal Reserve—A Money Control System That Has Spread Around the World

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1946

Mr. WHITE. Mr. Speaker, today on a small island off the coast of the State of Georgia a small group of people are meeting to launch a new international money and credit control system, commonly known as the Bretton Woods plan. That will, in effect, as stated by the English Lord Keynes, one of the originators of the system, be the economic government of the world. A plan, as he pointed out to the British Parliament, that would provide excellent machinery for enforcing financial blockades. What is being done on this island off the coast of Georgia today brings to mind another momentous meeting of financiers on a small island off the coast of Georgia, as told by one of the conspirators, Frank A. Vanderlip, in an article which I have condensed and taken from the February 9, 1935, issue of the Saturday Evening Post, reprinted here:

As early as 1907 I had found myself in hearty accord with Woodrow Wilson about the matter of the social value of publicity for the affairs of big corporations. He had stated publicly at that time that he thought the aggressive antagonism toward trusts was due to the fact that the people were kept in ignorance of the affairs of the trusts. He had said further, and I still agree with him, that corporation lawyers injured the interests of their clients by counseling secrecy. My views on this subject were considered radical by some of my close associates when I was president of the National City Bank.

A SECRET EXPEDITION TO JEKYL ISLAND

Despite my views about the value to society of greater publicity for the affairs of corporations, there was an occasion, near the close of 1910, when I was as secretive, indeed, as furtive, as any conspirator.

For me the beginning of the adventure, I should think, was a letter that came from Mr. Stillman in Paris. He said he had just had a long conference with Senator Nelson Aldrich, Zivil in our code, who was very keen to get to work on banking and currency revision. Aldrich, Mr. Stillman reported, regretted that Henry Davison, of J. P. Morgan & Co., and I had been unable to join him in Europe during the summer; he felt that over there we might have had plenty of time for our discussions, and been free from interruptions. In a moment of entire candor he would have said, "free from reporters." Mr. Stillman said he had told Mr. Aldrich that freedom from interruptions was essential, but that it could be accomplished by getting Davison and me down to Warwick, his place in Rhode Island, without anyone's knowing of it. That was Mr. Aldrich's plan as he left Paris. Mr. Stillman wrote me that I should make everything else subservient to giving my whole time and thought to a thorough consideration of the subject. He said that Aldrich was persuaded that he could accomplish more by getting out of the Senate, so as to put the work of revision on a nonpartisan basis. Mr. Stillman expressed to me his fear that after revision the banks might not be so well off. He wrote that from that time on Davison and I ought to follow the matter very closely, and keep in touch with Aldrich. Aldrich, I was informed, believed in some sort of centralization, but not in the establishment of a central bank such as France had. Mr. Stillman also reported to me that in his talk with Senator Aldrich he himself had not expressed any views, except as he had impressed on the Senator his belief in the necessity of not being too much influenced by our Wall Street point of view.

But would the electorate have believed that? I question their ability to do so. Just to give you a faint idea: Senator Aldrich was the father-in-law of John D. Rockefeller, Jr., and himself a very rich man. Once I had written to Woodrow Wilson at Princeton, inviting him to speak at a dinner. Wishing to impress him with the importance of the occasion, I had mentioned that Senator Aldrich also had been invited to speak. My friend Dr. Wilson had astonished me by replying that he could not bring himself to speak on the same platform with Senator Aldrich. He did come and make a speech, however, after I had reported that Mr. Aldrich's health would prevent him from appearing. Now then, fancy what sort of headlines might have appeared over a story that Aldrich was conferring about new-money legislation with a Morgan partner and the president of the biggest bank.

On October 22, 1910, I wrote to Mr. Stillman in Paris: "Senator Aldrich met with what came very near being a severe, if not fatal, automobile accident. You probably have seen the report of it in the papers. He was pretty well bruised, having cuts on each side of his face. He is very much better now, but the accident has naturally postponed the conference that was in mind. He will be about in a few days, and Mrs. John D., Jr., tells me that they do not think there will be any serious effect from the accident."

BANKERS IN DISGUISE

As the time for the assembling of Congress drew near, Senator Aldrich became increasingly concerned about the report he must write on behalf of the Joint Monetary Commission; likewise, there ought to be, he knew, a bill to present to the new Congress, and none had been drafted. This was how it happened that a group of us went with him to the Jekyl Island Club on the coast of Georgia.

Since it would be fatal to Senator Aldrich's plan to have it known that he was calling on anybody from Wall Street to help him in preparing his report and bill, precautions were taken that would have delighted the heart of James Stillman. Those who had been asked to go were Henry Davison, Paul Warburg, Ben Strong, and myself. From Washington came A. Piatt Andrew, Jr., who was then an Assistant Secretary of the Treasury, and who now is a Member of Congress from Massachusetts. We were told to leave our last names behind us. We were told, further, that we should avoid dining together on the night of our departure. We were instructed to come one at a time and as unobtrusively as possible to the railroad terminal on the New Jersey littoral of the Hud-

son, where Senator Aldrich's private car would be in readiness, attached to the rear end of a train for the South.

When I came to that car, the blinds were down and only slender threads of amber light showed the shape of the windows. Once aboard the private car we began to observe the taboo that had been fixed on last names. We addressed one another as "Ben," "Paul," "Nelson," "Abe"—it is Abraham Piatt Andrew. Davison and I adopted even deeper disguises, abandoning our own first names. On the theory that we were always right, he became Wilbur and I became Orville, after those two aviation pioneers, the Wright brothers. Incidentally, for years afterward Davison and I continued the practice, in communications, and when we were together.

SECRET MEETING ON JEKYL ISLAND

The servants and the train crew may have know the identities of one or two of us, but they did not know all, and it was the names of all printed together that would have made our mysterious journey significant in Washington, in Wall Street, even in London. Discovery, we knew, simply must not happen, or else all our time and effort would be wasted. If it were to be exposed publicly that our particular group had got together and written a banking bill, that bill would have no chance whatever of passage by Congress. Yet who was there in Congress who might have drafted a sound piece of legislation dealing with the technical banking problem with which we were concerned? Indeed, there were surprisingly few bankers, besides those of us who had been called together, who had given the special matters under consideration any thorough study whatever. Most bankers were reluctant to accept any change; George Baker was.

We proceeded, in the rear room of that private car, to get to work as soon as the train was moving. That first discussion of the banking structure and of what ought to be done about it produced scraps of ideas as formless as the contents of a rag bag. Everyone had some little piece of project to throw on the table for discussion, and everyone's pet scheme encountered some other fellow's objection.

We had traveled a good many miles without making much progress, when I told my companions of a piece of advice, as to the proper way to conduct a conference, that had been given to me by Frank Trumbull, a dear friend of mine who was then the chairman of the board of the Chesapeake & Ohio Railway.

"What we ought to do first," I said, "is to set down those things about which we are agreed; then, one by one, we can take up those things about which we seem to disagree."

From then on we made swift progress. I was appointed amanuensis and in my paleolithic shorthand recorded those proposals which we all were ready to echo as we heard them; of course, we knew that what we simply had to have was a more elastic currency through a bank that would hold the reserves of all banks.

We were taken by boat from the mainland to Jekyl Island and for a week or 10 days were completely secluded, without any contact by telephone or telegraph with the outside. We had disappeared from the world onto a deserted island. There were plenty of colored servants, but they had no idea who Ben and Paul and Nelson were; even Vanderlip, or Davison, or Andrew, would have meant less than nothing to them. There we worked in a clubhouse built for people with a taste for luxury. The live-oak trees wear fantastic beards of Spanish moss on Jekyl Island; in November brown leaves make its forests utterly charming. Without our ever stopping to hunt, deer, turkey, and quail appeared on the table; there were pans of oysters not an hour old when they were scalloped; there were country hams with that incomparable flavor that is given to them in the South. We were working so hard that we ate enormously. We worked morning, noon, and night.

We put in the most intense period of work that I have ever had. Sometimes Davison and Strong would be up at daybreak to get a horseback ride or a swim before breakfast, but right after breakfast the six of us would gather around the table and resume where our discussion had ended the previous midnight. We stuck to the plan of putting down on paper what we agreed upon; there was no back-tracking, no wrangling. Harry Davison was a splendid person to prevent wrangles in any company. Warburg, the best-equipped man there in an academic sence, was so intense and apparently felt a little antagonism toward Aldrich that some of our moments of strain might have developed into real hindrance had it not been for Davison. Always he could be counted on to crack a joke just at the right moment to ease a strain. No telephones rang, none could bother us to ask for an opinion of the market, there were no directors' meetings, no interruptions whatever. Thanksgiving occurred during that week, and we ate wild turkey with oyster stuffing and went right back to work. We gave, each of us, every bit of our mental energy to the job, and I enjoyed that period as I never have enjoyed anything else. I lived during those days on Jekyl Island at the highest pitch of intellectual awareness that I have ever experienced. It was entirely thrilling.

COLLABORATING WITH ALDRICH

As we dealt with questions I recorded our agreements in that shorthand I had first practiced with chalk on the tail stock of my lathe back in Aurora. If it was to be a central bank, how was it to be owned—by the banks, by the Government, or jointly? When we had fixed upon bank ownership and joint control, we took up the political problem of whether it should be a number of institutions or only one. Should the rate of interest be the same for the whole Nation, or should it be higher in a community that was expanding too fast and lower in another that was lagging? Should it restrict its services to banks? What open-market operations should be engaged in? That was the sort of questions we dealt with, and finally, at the end of our week, we had whipped into shape a bill that we felt, pridefully, should be presented to Congress. As I recall it, Warburg had some objections, but we were in substantial agreement on the measure we had created. We returned to the North as secretly as we had gone South. It was agreed that Senator Aldrich would present the bill we had drafted to the Senate. It became known to the country as the Aldrich plan. Aldrich and Andrew left us at Washington, and Warburg, Davison, Strong, and I returned to New York.

Congress was about to meet, but on a Saturday we got word in New York that Senator Aldrich was ill—too ill to write an appropriate document to accompany his plan. Ben Strong and I went on to Washington and together we prepared that report. If what we had done then had been made known publicly, the effort would have been denounced as a piece of Wall Street chicanery, which it certainly was not. Aldrich never was a man to be a mere servant of the so-called money interests. He was a conscientious, public-spirited man. He had called on the four of us who had Wall Street addresses because he knew that we had for years been studying aspects of the problem with which it was his public duty to deal.

As is now well known, the bill we drafted did not get through Congress. Aldrich retired from the Senate, and then a Democratic majority came down to Washington along with Woodrow Wilson, who had defeated President Taft. The platform on which he was elected contained a statement expressing the opposition of the Democratic Party to the Aldrich plan, or a central bank. There was a good deal of discussion about that. It was contended that originally the platform committee had agreed upon the statement: "We are opposed to the Aldrich plan for a central bank."

Now, although the Aldrich Federal Reserve plan was defeated when it bore the name of Aldrich, nevertheless its essential points were all contained in the plan that finally was adopted. It provided an organization to hold the reserves of all member banks and arranged that they would always be ready to relieve a member bank under pressure by rediscounting loans that it held. The law as enacted provided for 12 banks instead of the one which the Aldrich plan would have created; but the intent of the law was to coordinate the 12 through the Federal Reserve Board in Washington, so that in effect they would operate as a central bank. There can be no question about it: Aldrich undoubtedly laid the essential, fundamental lines which finally took the form of the Federal Reserve Law.

Housing Subsidies

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article:

HOUSING SUBSIDIES

During the war subsidies were paid on food and other products to hold down prices. Under wartime conditions a strong case could be made for subsidies on a limited scale. Unfortunately, despite the many pledges to discontinue subsidies after hostilities ceased, we find today not only a continuation of the wartime program but recommendations to expand it. Housing Expediter Wyatt followed this plan in his proposed housing program. After the House voted against housing subsidies Mr. Truman described this action as "a blow at the heart of the veterans' emergency housing program." The bill has now been passed by the House—minus its subsidy provisions—and on this issue we believe that the House is on sounder ground than the administration.

Under the proposed housing program the taxpayer was asked to subsidize all home builders to the extent of $600,000,000 or more. To justify this huge expenditure, the program was described as a veterans' housing program. However, there was nothing in the program to prevent nonveterans, including many people who have accumulated large wartime savings, from acquiring building materials for homes they desire to purchase. Certainly these people should not be subsidized when they acquire new homes. If the objective is to hold down the cost of new homes to the veteran, there is no reason why some special financial provision cannot be made which applies to that group alone.

Additional subsidies would further unbalance the Federal Budget and increase the inflationary pressures which Mr. Wyatt proposed to counteract by the payment of subsidies. If the present price level is to be maintained, the inevitable result would be more and more subsidies. This is particularly true since it was proposed that wage

increases for building workers should be financed in part by subsidy payments. To the extent that a subsidy program succeeded in holding down the prices of homes, it would aggravate the present difficulties in another way. The shortage of housing is measured by the difference between the demand for new homes and the supply that can be made available. At lower prices the magnitude of the shortage would inevitably be greater than at higher prices. The lower prices would encourage a continuation of the large demand for new homes, even by persons who now have adequate housing. At the same time there is no assurance that subsidy payments would stimulate supplies as much as anticipated by Mr. Wyatt. Thus the payment of subsidies would not correct the present shortage.

It would be much more realistic to permit a price increase for building materials. Such an increase would act to stimulate the output of the required materials and would cut off some of the less necessitous demands. It would also permit a return toward a free economy rather than the further extension of Government control which would accompany subsidy payments.

Amendments to GI Bill

EXTENSION OF REMARKS
OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. HAND. Mr. Speaker, acting on the belief that the important amendments to the GI bill are of great interest to the veterans of my district, and that they are entitled to be fairly acquainted with their rights under the amendments, I am, by unanimous consent, placing in the RECORD a brief analysis of the amendments, and a schedule of the original provisions of the act, which have not been changed:

EDUCATION AND TRAINING

Extension of time: The time during which a course may be initiated is extended from 2 to 4 years after discharge or end of the war, whichever is later, and the time limit for completing the course is raised from 7 to 9 years after end of the war.

Age limit removed: Any eligible veteran now may receive 1 year of education or training, plus additional education (up to a maximum of 4 years), for total length of active service. He need not have been under 25 years when he entered service, nor need he show that his education was interrupted by war service.

Short intensive courses: Courses are no longer limited to a cost of $500 for an ordinary school year. Short intensive courses may be undertaken and the additional cost prorated against the period of eligibility to which the veteran is entitled at the rate of $500 per school year. No such short course may cost more than $500.

Correspondence courses: A veteran may apply to take a correspondence course under the new provisions, but he is entitled to no subsistence allowance. One-fourth of the elapsed time used in pursuing such a course is charged against the veteran's period of eligibility. Total amount payable for correspondence courses for any veteran is limited to $500.

Subsistence allowance increased: Monthly subsistence allowances are increased from $50 to $65 for veterans without dependents, and from $75 to $90 for veterans with dependents.

VOCATIONAL REHABILITATION OF DISABLED VETERANS

Extension of time: Vocational training under Public Law 16, involving more than 4 years of training, may be begun by a disabled veteran, subject to Veterans' Administration approval, and the time for completing such training is extended from 6 to 9 years after the end of the war.

Subsistence allowance increased: Disabled veterans now will receive a minimum of $105 per month without dependents, $115 with a dependent, plus $10 for the first child, $7 for each additional child and $15 for any dependent parent. This represents an increase over previous allowances. If the veteran is receiving a lesser pension he will receive the above amounts while he is in training status. In no event will his pension be reduced by entering training.

GUARANTY OF HOME, FARM, AND BUSINESS LOANS

Guaranty is automatic: These loans may now be made by any lending agency which is subject to examination and supervision by a Government agency, and restrictions of certain Federal laws are removed. A loan becomes automatically guaranteed if the lending agency and the veteran close the deal, the terms being in accord with the provisions of the act. The only other requirement is that the cost does not exceed the appraisal made by a VA-designated appraiser. Loans made by individual lenders (not falling in the class of approved institutions indicated above) must obtain prior approval by VA in order for the loan to be guaranteed.

Amount of real-estate-loan guaranty increased: Any loan on real estate may be guaranteed up to a maximum guaranty of $4,000 of the loan, as compared with a $2,000 limit under previous law. The Government guaranty remains 50 percent of the total loan up to the maximum amount. The business-loan guaranty limit remains at $2,000, or 50 percent.

Amortization limit extended: Real-estate loans may be amortized over a period up to 25 years, and farm-realty loans up to 40 years. Maturity on non-real-estate loans may not exceed 10 years.

Purchase of lots: Proceeds of a loan may be used to purchase a lot in connection with home construction.

Normal value out: Phraseology of the previous law is changed from "reasonable normal value" to "reasonable value" in connection with appraisals of property upon which a guaranteed loan is sought.

Loan purposes broadened: Provisions of the act are liberalized so that loans may be made for all ordinary farming purposes, for any normal business enterprise, and so that existing indebtedness in default may be refinanced in connection with all types of eligible loans.

MISCELLANEOUS PROVISIONS

No deduction from future bonus: That portion of the law (sec. 1505) which provided that any financial benefits received under the act would be deducted from any future bonus authorized, is repealed.

United States veterans in Allied service now eligible: Anyone who served in the active military or naval service of an Allied Government and was a United States citizen when entering such service is eligible for the benefits of the act and of Public Law 16 (78th Cong.). He must, however, be a United States resident at the time claim is filed, and must not be receiving similar benefits from another nation.

Persons on terminal leave: Educational and loan-guaranty provisions of the act, and vocational rehabilitation under Public Law 16, are extended to persons on terminal leave or who are being hospitalized pending final discharge. No subsistence allowance may be claimed, however, by persons taking education or training under the act or under Public Law 16. This section is made retroactive to June 22, 1944, when the original Servicemen's Readjustment Act became law.

Artificial limbs: Provision is made to insure ample authority for Veterans' Administration to procure prosthetic appliances for veterans and instruct them in the use of such appliances, including payment of any expenses involved in the veteran's traveling to and from the center where the appliance is fitted and training given in its use.

Office space for service organizations: Veterans' Administration is authorized to provide office space, if available, to paid, full-time representatives of recognized veterans' organizations.

Veterans' Administration procurement of space: The act makes permanent Veterans' Administration's authority to procure necessary space for administrative, clinical, medical, and out-patient treatment purposes by lease, purchase, construction, condemnation, or declaration of taking. This authority previously was limited to 6 months after the end of the war.

PROVISIONS NOT CHANGED

Major provisions of the law which remain unchanged are:

Eligibility requirements: A veteran must have served in the active military or naval service on or after September 16, 1940, and prior to the termination of the present war. He must have been discharged or released under conditions other than dishonorable after active service of 90 days or more or because of an injury or disability incurred in line of duty.

Hospitalization program: Veterans' Administration is authorized and directed to expedite additional hospital construction, and to establish all necessary administrative offices to make veterans' benefits more readily available.

Review of discharge: Ample provision is made for review by the War and Navy Departments of unsatisfactory discharge from service. A new amendment, of minor importance, is designed to clarify the intent of the law.

Job assistance: All previous regulations relating to Government assistance in helping veterans obtain employment are continued. The United States Employment Service and the Veterans' Placement Service Board are directed to cooperate in seeing that all veterans, able and willing to work, obtain employment.

Readjustment allowance: Unemployed veterans who register with an office of the United States Employment Service are entitled to a readjustment allowance of $20 per week while unemployed. An eligible veteran may receive such payments up to a maximum of 1 year, depending on length of service. Self-employed veterans with net earnings of less than $100 per month may receive an allowance amounting to the difference between net earnings and $100 in any month, up to a maximum of 1 year, also depending on length of service.

WHERE TO APPLY FOR BENEFITS

Prosthetic appliances: Any Veterans' Administration hospital or regional office.

Education and training: Any Veterans' Administration regional office or at the school you wish to attend.

Vocational rehabilitation: Any Veterans' Administration regional office.

Loan guaranty: Any eligible lending institution as outlined above. If negotiating with a private lender, any Veterans' Administration regional office.

Review of discharge: The War Department or the Navy Department, whichever was your branch of service.

Job assistance: Nearest office of United States Employment Service.

Readjustment allowance: Register at nearest office of United States Employment Service.

Farmers Demand Enactment of Hobbs Antiracketeering Measure

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. CRAWFORD. Mr. Speaker, a few weeks ago the House passed the Hobbs antiracketeering bill which is still pending with the other body. The recent issue of the National Grange Monthly, the official magazine of the National Grange, contained an article on this measure by Mr. Fred Brenckman, well-known Grange leader. His statement so clearly states the farm interest in this legislation that I am urging my colleagues to read it and for that purpose I am submitting it for the RECORD.

It follows:

FARMERS DEMAND ENACTMENT OF THE HOBBS ANTIRACKETEERING MEASURE—FOES OF THE BILL PASSED BY THE HOUSE BOAST THEY WILL SMOTHER IT IN SENATE, AS WAS DONE IN THE LAST CONGRESS

In an effort to correct the evil consequences of the Supreme Court decision in the Teamster's Union case of nearly 4 years ago, the House of Representatives on December 12 passed the Hobbs antiracketeering bill (H. R. 32), which has been referred to the Senate Committee on the Judiciary, headed by Senator PAT MCCARRAN, of Nevada.

Foes of the measure, the labor unions, together with their supporters in Congress, have publicly declared their intention to kill the bill in the Senate, just as they succeeded in preventing action on a similar bill that was passed by the House by a big majority in the last Congress.

SUPREME COURT PROTECTED RACKET

Recalling the circumstances that brought about the introduction of the Hobbs bill, on March 2, 1942, Associate Justice James F. Byrnes handed down a decision of the Supreme Court, in which it was held by the Court that Local 807 of the Teamsters' Union, of New York, together with 26 of its individual members, were not guilty of violating the Antiracketeering Act of 1934.

The evidence presented in the case showed that it was a common practice for members of the teamsters' union to hold up motortrucks at the New York end of the Holland Tunnel and demand a day's wages for a union member to drive the truck to its destination, often only a few squares away.

If the driver of the truck said he did not need any help, he was informed that he would have to pay the fee just the same. This amounted to $9.42 for a large truck, or $8.41 for a small one. Threats, intimidation, and often physical violence, were used to compel the owner or driver of the truck to comply with the demands of the members of the Teamsters' Union. In one instance, a farmer and two of his sons were attempting to deliver a load of produce to a ship berthed in the Hudson, were thrown into the river and narrowly escaped drowning. A large proportion of the trucks held up were owned or driven by farmers.

When the perpetrators of these outrages were indicted they were found guilty, after a trial of 6 weeks in a United States district court. However, the circuit court of appeals reversed the lower court, whereupon the case was taken to the United States Supreme Court.

GIST OF THE DECISION

In handing down the decision of the Supreme Court, Justice Byrnes, who is now Secretary of State, declared that the Antiracketeering Act was passed "to close gaps in existing Federal laws and to render more difficult the activities of predatory criminal gangs of the Kelly and Dillinger types," but that the law did not apply to labor unions or their members.

According to the decision, "accepting payments even where services are refused," is a form of union activity beyond the ban of the Antiracketeering Act and, therefore, beyond the reach of present Federal laws. Continuing, the Court in its decision said:

"This does not mean that such activities are beyond the reach of Federal legislative control. Nor does it mean that they need go unpunished. The power of State and local authorities to punish acts of violence is beyond question. It is not diminished or affected by the circumstance that the violence may be the growth of a labor dispute. The use of violence disclosed by this case is plainly subject to the ordinary criminal law."

It is worthy of note that the authorities of New York City, where these outrages were committed, gave no protection whatever to the victims of the racket. Federal action in the case was based on the ground that the racketeers were guilty of obstructing interstate commerce, bringing the matter under the jurisdiction of the Federal Government.

In a vigorous dissenting opinion to the Supreme Court decision, Chief Justice Stone said that there was evidence in the record to show that the defendants in the case conspired to compel trucks drivers or their employers, by force and violence, to pay the sums of money demanded. He further said that the payments were made by the drivers and truck owners to purchase immunity from violence, and that this was the end knowingly sought by members of the union. Justice Stone likewise declared that to sanction such practices would make common-law robbery appear "as an innocent pastime."

HANCOCK SUMMARIZES NEW BILL

In opening the debate on the Hobbs bill in the House on December 12, Congressman CLARENCE HANCOCK, of Syracuse, N. Y., fittingly said:

"Mr. Chairman, this bill is made necessary by the amazing decision of the Supreme Court in the case of the United States against Teamsters' Union, 807, 3 years ago. That decision practically nullified the antiracketeering bill of 1934.

"In effect it legalizes in certain labor disputes the use of robbery and extortion, two crimes that are recognized as serious in every State of the Union and in every civilized country, whether made use of by union men, nonunion men, professional racketeers or plain hoboes. In effect the Supreme Court held that it was the intent of Congress and the meaning of the act that members of Teamsters' Union, 807, in New York City were exempt from the provisios of that law, when attempting by the use of force or the threat of violence to obtain wages for a job, whether they rendered any service or not.

"In my judgment that is a gross misinterpretation of the law and a distortion of the intent of Congress. Of course, it never was the intent of Congress to legitimize crime; nevertheless, the decision of the Supreme Court in the teamsters' case will be the supreme law of the land until the Supreme Court reverses itself, which is not likely, because five of the members of the Court who made that astounding decision are still members of the Court; or until Congress acts to correct and supersede the decision and adopts a new law written in clear and unmistakable language.

"This is all the bill does. We think a mistake was made by the Supreme Court; we are attempting to correct it through enacting a new law which will accurately and definitely reflect the attitude of the Congress, the general public and the honest, law-abiding members of labor unions."

During the course of the debate on the bill, it was claimed by some Members of the House that the abuses which the Hobbs bill aims to correct no longer exists.

MINNESOTA FARMER VICTIMIZED

However, other Members stoutly denied this, Congressman H. CARL ANDERSEN, of Minnesota, submitted an editorial from the Dawson (Minn.) Sentinel, to show the length to which racketeering members of the teamsters' union go in his section of the country. The editorial was as follows:

"Last week a Dawson farmer was sent to Des Moines, Iowa, to pick up some machinery needed to complete the installation of corn driers at the local elevators. The trucker made the trip without mishap or difficulty with Iowa labor groups. He loaded his truck with his shipment and then was told by labor representatives that he not only had to unload the truck and take it back to Dawson 300 miles away, empty, but also that he had to join the local truckers' union and pay dues of $32 before they would permit him to leave with his truck. And this is a free country where free enterprise is encouraged. Any other organization or individual attempting such action would have been promptly jailed and charged with highway robbery, and in addition would probably have to answer charges of threatening, intimidation, and interference with commerce. It is incidents like this which make one wonder just how far some can go with racketeering methods without being made to account for their actions."

SOME EXAMPLES FROM CALIFORNIA

Congressman JACK ANDERSON, of California, who is a farmer, said:

"A lot of our produce is hauled into the city of San Francisco. The man who drives the truck, who hauls our fruit and produce into San Francisco, must belong to the teamsters' organization or he must pick up a member of the teamsters' organization, carry him on the truck to the point of unloading and pay him for all the time that the truck is in the city of San Francisco.

"The farmers of the four counties I represent have been forced on many occasions, while hauling their own produce in their own trucks, to pick up members of labor organizations at the city limits of San Francisco, carry them on the truck to the point of unloading and back again to the city limits and pay them their wage for that period of time. This must be done in spite of the fact that the man who is thus paid does no work as far as driving or unloading the truck is concerned."

Continuing, Mr. ANDERSON said:

"I recall a time, back about 1938, when milk in the San Francisco milkshed was declared 'hot' and the members of the teamsters' union refused to haul the milk for the dairymen. Because the farmers' milkers declined to join the dairy workers' union, a secondary boycott was declared, and the teamsters left the milk to spoil instead of hauling it to the city for processing and bottling. As a result of such high-handed action the public went without milk and the farmers lost money. This ridiculous policy was carried so far in one instance in southern California that a farmer who fed his cows hay that was declared 'hot' because it was hauled by a nonunion truck driver, also had his milk declared 'hot' and the teamsters' union refused to haul the milk."

Not so long ago, the Golden Rule Church, of San Jose, Calif., bought a cooperative creamery which had a contract with the teamsters' union. Several members of the congregation were notified that they could not work in the plant unless they joined the

union, and this decision was upheld by the National War Labor Board.

A FEW TYPICAL CASES

To show that the racketeering complained of is still being practiced, last summer a fruit grower connected with the Berks-Lehigh Cooperative Fruit Growers, Inc., of Pennsylvania, took a load of 225 bushels of peaches to Philadelphia. Before the driver of the truck was permitted to unload the peaches he was compelled to join the Philadelphia local of the teamsters' union, which cost him $29.

Later a driver for the same organization carried a consignment of peaches to Newark, N. J. In this case the driver was obliged to join the Newark local of the teamsters' union before he could unload. The fee charged in this instance was $51. There have been innumerable instances of this kind.

The Walker-Gordon Dairy Farm, of Plainsboro, N. J., was outrageously treated by the Newark local of the teamsters' union last year. The union boycotted the milk of this company during January 1945, and in a period of about 2 weeks the owners of the farm lost about $20,000. In the end the company had to agree to let the union organize the 150 workers at its plant, although the majority of the workers had no desire whatever to join the teamsters' union.

During the negotiations in this connection, spokesmen for the union boasted that they intended to organize all the big farms first and then the rest would have to fall into line. The argument of the union is that any place that uses a milking machine is no longer a farm but an industrial dairy establishment. It is interesting to note that there are more than 46,000 milking machines in use on the farms of New York State alone.

HOBBS MARSHALLS FACTS

In closing the debate on his bill in the House on December 12, Congressman HOBBS, in answer to the claim that racketeering was no longer being practiced, said:

"May I say that I have had more than 1,000 letters and telegrams from organizations of farmers all over the United States saying that the condition is even worse than it was in 1943, when we passed this bill before, for the simple reason that then they were charging only the price of a day's union wage, $8.41 for a light truck and $9.42 for a heavy truck; whereas now they not only charge those fees for chaperoning farmers on city streets to save their lives, but in addition they charge from $30 to $56 as an initiation fee into the union, which the farmers never get the privilege of joining. * * *

"Hon. Joe Eastman, then head of the Office of Defense Transportation, told me that his examiners reported 1,000 trucks a night being held up and robbed in various cities of this Union from Los Angeles to Seattle, across through Milwaukee and Chicago, and through Scranton, Pa., which was another hot spot; Philadelphia, and New York, and over 100 a day at the New York end of the Holland Tunnel. He was begging as a witness in 1943, pleading the cause of defense transportation, and called attention to the numbers and numbers of trucks loaded with shells and guns for our Army and Navy, which were held up and robbed by those goons at the mouth of the Holland Tunnel. These authorities prove that racketeering was bad enough in 1943 to cause our faces to be set like flint against it. It is worse now."

Since more than 2 years have elapsed since the hearings were held on the original Hobbs bill, it is possible tha the Senate Committee on the Judiciary may appoint a subcommittee to hold new hearings. There could be no legitimate objection to such a procedure. However, the supporters of the Hobbs bill want action this time. They do not want the measure to be smothered by inaction in the Senate, the fate that befell the previous bill.

The National Grange and the other farm groups, together with thousands of unorganized farmers throughout the country, want to see agricultural producers freed of the necessity of paying tribute to the teamsters' union. Every decent American joins in voicing the demand that this brigandage must stop.

FRED BRENCKMAN.

Why the Loan to Britain Stands By Itself

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1946

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Arkansas Gazette for March 3, 1946:

WHY THE LOAN TO BRITAIN STANDS BY ITSELF

Many people may have figured that if we lend $3,750,000,000 to Great Britain we should lend other billions to other nations. But President Truman, who is going to ask Congress to add $1,250,000,000 to lending funds of the Export-Import Bank, holds that other foreign loans should be limited through the next fiscal year to the amount of the bank's expanded capital, and that the proposed British loan is a unique case which would not be a precedent for a loan to another country.

Why should the British loan be distinguished from all other proposals?

More than 40 percent of the foreign trade of the United States is with the British Empire. Britain is the center of the sterling area, which except for Canada, includes the Empire and some Near East countries. During the war Britain spent $13,000,000,000 in the sterling area. If the countries can now spend $13,000,000,000 only for British goods, large amounts of American goods will be kept out of the sterling area. It is said that for generations the people of India, Egypt, the Near East, and South America would buy goods in Britain because they could spend sterling there. Australia, for example, can use sterling to buy cotton in the United States, but can buy cotton in the sterling area.

The loan agreement provides that at the end of a year anybody may exchange British pounds for dollars or any other money desired. And anybody who sells goods to Britain can get in return money to spend in the United States or any other country.

It is insisted by those who should know that action on the British loan may determine whether this is to be a world trading by groups and blocs or a world with three-fourths of the trading area free; and that Britain's situation will determine whether the world moves in the direction of expanding private enterprise in international markets or reverts to discrimination and hampering blocs.

We are told that if Britain, for lack of dollars with which to buy, is forced to make deals with various countries other than the United States, and to resort to every sort of restriction and discrimination, it might be difficult ever to change these conditions and open the world's markets to our goods.

The people of Great Britain have got to have employment; they have got to be able to import material; they have got to eat and live.

A Congressional Office in Action

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by me recently over the radio:

Today, ladies and gentlemen, I would like to give you a verbal picture of your Congressman's office and the manifold and varied duties which are performed therein. In this connection and in order to more quickly acquaint you with the functions of a congressional office, I quote in part a very interesting speech made 6 years ago, shortly after I came to Washington, by Representative LUTHER PATRICK, of Birmingham, Ala., and naturally a dyed-in-the-wool Democrat. Luther is a very good friend of mine and he is not only quite a wit but before coming to Congress was a radio commentator in his home city. He drew up and submitted to each Member of Congress 10 simple rules of conduct for our use and I give them to you at this time because of their full conception of the manifold duties which we are called upon to perform and which at the same time do somewhat handicap us in our performance of the careful study and prosecution of legislation for you and for the Nation at large. I repeat these rules:

"1. Entertain, with a smile, constituents, their wives, their sons, sons' wives, etc. Go with them to the White House, show good reason why you are unable to personally have them meet the President, take daughters to meet midshipmen at Annapolis.

"2. Explain what bill is up for debate, points for discussion, how it will be passed, how you will vote and why.

"3. Attend to balcony and point out Speaker Bankhead, Leaders Rayburn and Martin, Ham Fish, Dewey Short, that man Martin Dies, and name each lady Member of Congress.

"4. Respond to worthy causes, make after-dinner speeches, before-dinner speeches, learn to eat anything, anywhere, any night—work all day, dictate all night, and be fresh as a rain-washed daisy for next day's duties.

"5. Be a cultured gentleman, a teller of ribald stories, a profound philosopher, preserve a store of "Confucius say" gags, be a ladies' man, a man's man, a he man, a diplomat, a Democrat with a Republican slant, a Republican with a Democrat viewpoint, an admirer of the Roosevelt way, a hater of the New Deal, a New Dealer, an old dealer, and a quick dealer.

"6. Learn how to attend six to eight major functions, rushing home and back during each term on one round-trip travel pay.

"7. Have the dope on hot spots in town, with choice telephone numbers for the gay boys from back home, and help to contact all local moral organizations and uplift societies in Washington.

"8. Learn to be an expert guide. Keep car in tip-top shape.

"9. Know names and dates related to all points of interest, and be able to explain and supply information regarding public buildings, and statuary about Washington.

"10. Be an authority on history, travel, psychology, philosophy, education, economics, civics, finance, export trade, Government printing, international relations, neckties, and fishing tackle."

Frankly, I must agree with much of what is tabulated in the foregoing rules and with Mr. PATRICK'S further comments:

"Understand, I do not claim to come up to it all, especially as to telephone numbers, hot spots, stories, and so forth.

"A Congressman has become an expanded messenger boy, an employment agency, getter-out of the Navy, Army, Marines, ward healer, wound healer, trouble shooter, law explainer, bill finder, issue translator, resolution interpreter, controversy oil pourer, gladhand extender, business promoter, convention goer, civic ills skirmisher, veterans' affairs adjuster, ex-serviceman's champion, watchdog for the under dog, sympathizer with the upper dog, namer and kisser of babies, recoverer of lost baggage, soberer of delegates, adjuster for traffic violators—voters straying into Washington and into the toils of the law—binder up of broken hearts, financial wet nurse, good samaritan, contributor to good causes—there are so many good causes—cornerstone layer, public building and bridge dedicator, ship christener—to be sure he does get in a little flag waving—and a little constitutional hoisting and spread-eagle work, but it is getting harder every day to find time to properly study legislation—the very business we are primarily here to discharge, and that must be done above all things. To go on would not help a lot. We are running our legs off on details, but we must keep the approval of Mr. and Mrs. Voter, so we find here a subject upon which we can all agree; and regardless of these labors involved, I for one, prefer it to any job I have ever had, and do not expect to relinquish it without a powerful fight. I hope I am here to stay many, I trust, useful years."

Now it has not been my practice on these broadcasts to quote at length one of my Democratic colleagues, but we know they, too, are capable or we would not have our traditional two-party system in this country, under which our Nation has grown to its present world-wide leadership, and they are our personal friends down here even though we do not vote alike, and above all they have our wholehearted respect. I am simply calling his timely observations to your attention because I believe they explain—even though rather humorously—the complexities of a congressional office.

As you can appreciate from the foregoing, our tasks down here are indeed tremendous and when I say our tasks I pay whole-souled and wholehearted respect to my office staff. They are the ones who, of necessity, must carry the burden of the many detailed duties attached to this office and which—in the name of your Congressman—they are called upon to perform. I believe I have as fine a staff as any to be found on Capitol Hill. My staff consists of my secretaries, Mrs. Anne Cook, of Rogers City, and Mrs. Madlyn Grabowsky Fall, of Ingallston (in Menominee County), and my veterans' secretary, former Staff Sergeant Alvin Christopherson, of Alpena, who met with an accident over in Tunis. My staff and I frequently call ourselves "Bradley, Incorporated," and we are just that, because we work as a team all the way through. My principal task—and for which you elected me—is to study and prosecute legislation, but that, too, during the past war years has become tremendously complex. In addition, requests to perform individual services are increasing daily, and which requests, naturally, have nothing whatsoever to do with the study of legislation and on which I personally am expected to spend a considerable portion of my own time.

The first thing in the morning, I read the paper and the CONGRESSIONAL RECORD to keep up with daily events. I try to do this before coming to the office because once I enter my office door the day's work begins—the telephone rings constantly—visitors call and many times I have difficulty in making my committee meeting at 10 a. m. My principal committee is the Merchant Marine and Fisheries Committee that has jurisdiction over all legislation pertaining to all phases of shipping, shipyards, seamen, etc., operating on the Great Lakes and on the oceans, over all forms of fishing, over the Coast Guard, over the Panama Canal, etc. In committee is where we do a great part of our congressional work, where we hold public and private hearings, listen to the testimony of all kinds of witnesses, and then draft, study, and re-draft legislation. At 12 noon we go to the House floor for the daily session, and, as a rule, do not get back to the office much before 5; then if I have made a speech I have to go over it carefully—possibly revise it with one of my secretaries—and then seriously get into my day's dictation.

Now let me tell you in a little detail what my office is called upon to do by taking you through our pending files as of today:

Here we have numerous requests for civil-service retirement refunds. In some instances the application for refund filed by the individual concerned never reached the Civil Service Commission. In other instances Civil Service does not have the man's pay record and no action can be taken by them until the department concerned sends in the proper form. This necessitates our contacting the civilian personnel records office—which in most instances is a decentralized division no longer located here in Washington and calls for a letter of inquiry to another State and the awaiting of advices that the proper pay record has been sent to the Commission whereupon repeated telephone calls are necessary until we are advised a check has gone forward to our constituent.

Then we have numerous letters from young folks interested in securing Government positions overseas. In cases of this kind we contact departments here to ascertain where positions are open and determine the specific qualifications for same and our constituent is then sent the proper application form and advised to return it either to my office or to the department in question—after which we keep in telephone contact with the agency in the hope of securing an assignment. And, of course, being a Republican, I have no patronage to hand out.

My time on the air does not permit me to elaborate on the work involved in visa cases—where American citizens here wish to have their nephew, uncle, aunt, brother, or friend brought to America and call upon me to assist them in obtaining immigration visas which are necessary. At times it takes weeks to get the desired information from our State Department and calls for correspondence direct to our consular offices or embassies abroad. Then, too, there are American citizens in Europe who want to come back home and it is necessary that they secure passport approval which has to be cleared with our State Department. Then, at times we are called upon to arrange for transportation for English and Australian GI wives, and this frequently takes months to accomplish. Further, we have requests to protect American interests in foreign countries, and this calls for the verification of all documents sent to us by individuals by the State Department, thence by the diplomatic offices abroad, and finally by the foreign government wherein the interests are located. Because of the confusion in Europe today it takes weeks or months to clear all information and then at times after building up a tremendous file of correspondence and making repeated trips to the State Department or foreign embassies—we are set back on our haunches by the verdict that the American interests, in reality, are held by persons who now await trial as Axis sympathizers. These are heart-breaking cases to myself—and certainly so to my constituents—but we must accept the facts as given to us until proven false.

No little of our problems entail our servicemen. Some of them we have to get back to the States on emergency leaves because of sickness at home; others are, frankly, just lost—nobody has heard from them for months, and this entails the headquarters concerned contacting commanding generals abroad in an effort to locate a man's whereabouts and report to us. Then, too, my friends, strange as it may seem, we must play the part of Dr. Anthony in locating husbands who were discharged but never returned home. And then there is the myriad of correspondence which comes to our office on veterans' pensions, claims, discharge certificates, arrears in pay, etc., which reminds me of a case we had the other day that illustrates the carelessness of our discharged veterans in being so anxious to get home that they sign their papers without being sure they are in order. We have repeatedly tried to warn the boys against this. One young man wrote us that he was anxious to get married and when he and his young lady sought to get their marriage license, and they asked for his discharge certificate, lo and behold, he was astounded to find that his marital status thereon was listed as "narried." So we were asked to straighten that matter out. Meanwhile the young man and his bride-to-be learned that "haste makes waste."

We do our best to process rural route extension applications; check on unemployment-compensation cases; the extension of REA lines; answer the voluminous correspondence on protests to the way your Government is being run by this administration; acknowledge views on pending legislation; assist in the securing of Government loans for industries or civic organizations; then a certain city wants a small boat harbor and that has to be taken up either in form of legislation or with the Army engineers; someone wants a postmastership—this, of course, is Democratic patronage, and I, as a Republican, have no say-so. We are called upon to handle patent cases, homestead applications, priorities, etc. We send out all documents made available to Members of Congress to our libraries, our county clerks, our parents, and those who specifically request publications. To keep abreast of happenings back home we daily check our district newspapers.

Naturally, you can see from the foregoing we must have a working knowledge of all departments, and, friends, with the present shifting about of governmental bureaus and agencies that is no small trick. I stress again, we are always glad to be of service to you. However, if at times you do not receive a reply as promptly as you expect, please realize it is because many times we are just plain "snowed under."

Frequently it is long after 8 or even after 9 at night before your Congressman gets home for his dinner, but that is the life of a Congressman in Washington. Am I complaining about it? Definitely not. I hope you reelect me next fall because I like the work. We enjoy giving you the best service possible.

I have devoted this broadcast to the workings of a congressional office. I have attempted to impart to you the workings of a congressional office so that those few who take frequent occasion to jump on us, who feel we are overpaid, may appreciate that we, too, have an arduous job to do down here in Washington, which we consider not only a distinct privilege but a pleasure. We shall continue to serve each and every one of you, regardless of your political connection, to the best of our ability.

Now, in conclusion. I came to Washington in January of 1939 and from then on until the summer of 1944 all of us were on the job

12 months of the year. In the summer of 1944 we had our first vacation of 2 months but, even so, our Washington office had to be kept open, and so my secretary, Mrs. Fall, of Ingallston, Mich., remained behind to take care of those duties. If you don't think those were manifold, then listen to the following poem which she composed early one morning in August of 1944 based on the morning's correspondence, which she sent to me out of the heat of Washington to the cool of northern Michigan. It speaks for itself, and I read it to you now:

Now here I sit amidst the mail
A frettin' and a stewin'
A truck they want—and tires, too.
Then—my boy is sick—what will I do?
My checks don't come, I am in need
See that they get here with undue speed.
The neighbor's cows are in my hay
Please get me wire without delay.
My neighbor's dogs ate up my sheep
Please write at once—attorney fees won't keep.
My health is failing fast and speedy
My farm is overgrown and seedy
My Joe is over there a fightin'
But I ask what for—I expect your writin'!!
Please get our check from CCC
To pay us for canning the lowly pea.

With all of the taxes, why do they mention
"You better watch out" if we don't get our pension.
Total conscription is their aim
If you don't accept it—what be our gain?
Then—write at once upon receipt
Of my lengthy letter—done up so neat.
What be these Social Security rules
They take our money and spend it like fools.
Get up and do your bit
We true Americans must not quit—P. S. I know you're writing!

Then on we go to still some more—
If you will permit, I'm getting sore.
I went into the valley of death for my son
Now get him back to me—on the run.
We can't get our mail up here
So call up Walker and make that clear.
My son writes saying he is a physical wreck
Call the General at once and make a thorough check.
We engineers work hard all day
Call up Headquarters and get us subsistence pay.
Chevrolet cars are selling for a fraction
Button-hole Chester and get some action.

Then news comes—in words so few
And a Joey is killed in Tim-Buck-Too.
And all the rest is put aside
For he was their son in whom they took such pride.
And though numerous thoughts and words we say
None can comfort those people today.

But the world moves fast—and back we go
To the man in the Army with the broken toe.
So it's off we are to check again.
The District produces—a one, two and three
The baby books off the shelves do flee
Publications come in and out they go
Bearing the stamp—a hie-de-ho.

The papers aren't read—the days are too short
The filing sits idly—it brings forth a snort.
The floors are all waxed
The desks are all polished
But to top it all off—our "Schoolcraft" did perish.
And so—I sit upon my cushioned chair
And wonder what I am doing there.
But after all is said and done
It truly is a lot of fun
And even though my brow is corrugated—
I'm proud to be one of "Bradley, Incorporated."
But now I find I scooped Al Weber
Looks like I am based myself—as well as that

Requisition of Surplus Property for the Soil Conservation Service

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. LECOMPTE. Mr. Speaker, Monroe County, Iowa, has a very active soil-conservation district organization and the commissioners are very much interested in legislation permitting the requisition of surplus property for the soil-conservation service to be used in erosion control. In this connection I ask consent to extend my remarks in the RECORD and include therein a resolution adopted by the board of commissioners of the Monroe County Conservation District on February 27, 1946:

The matter of securing surplus Government machinery and equipment for earth moving and soil-conservation development was discussed, to request action in Congress on the Poage bill, H. R. 538, and the McKellar bill in the Senate, or proposed legislation to speed action in making such equipment available to soils districts, the following resolution was adopted on motion by Foster, seconded by Martin.

Whereas there is great need in Iowa soil-conservation districts for heavy earth-moving equipment for development of soil-conservation practices on the farms of district cooperators; and

Whereas the above-mentioned bills provide for making surplus war machinery available: Be it

Resolved by the Board of Commissioners of Monroe County Soil Conservation District, That we urge prompt action in Congress passing this legislation, and that letters be written to Congressman KARL M. LECOMPTE, Congressman THOMAS E. MARTIN, Senator BOURKE B. HICKENLOOPER, and Senator GEORGE WILSON requesting the facilities of their good offices to speed action on the bills mentioned.

E. G. HAWK,
Chairman.
STERLING B. MARTIN,
Secretary.
JAMES W. FOSTER,
Member.

The Housing Bill

EXTENSION OF REMARKS
OF
HON. P. W. GRIFFITHS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1946

Mr. GRIFFITHS. Mr. Speaker, I have listened through the entire debate on the Patman housing bill and it appears to follow the same pattern; yes, the very same arguments are being made as on all previous bills, viz., here is a chance to do something for the veteran.

Now I would like to see every veteran able to acquire a home of his own, but I am afraid the veteran still will be without a home if this bill passes because where is any guaranty that any homes will result? Certainly they cannot be made without lumber, brick, tile, glass, and so forth. You do not build homes with paper, hot air, or pious declarations. Yes, he will have as much chance of getting a home as he now has of acquiring surplus property.

Let us look at the record as regards just one item of surplus property—tractors. During the war about 80,000 were manufactured, of which approximately 80 percent went overseas and stayed there. Of those remaining in this country about 8,000 have been distributed to purchasers—the number going to the veteran, however, has been an infinitesimal percentage because the veteran comes third in preference.

On February 1, 1946, SWPC had issued approximately 36,000 certificates for crawler type tractors.

On same date, WAC had requests for 37,000 wheel and crawler type tractors from Federal and State agencies. So what good is the veteran's certificate. It is just a hunting license. Why continue to fool the veteran? Why not be honest?

Now I have been informed that there might possibly be another five or six thousand come through. Now just think of this, UNRRA wants 10,000 and according to the law as written can take them all and there will not be a single one for anybody in these United States. Good heavens, why not get these little plots of ground in Europe going with some Missouri mules of the four-legged type, some horses and hand plows, but do not be foolish enough to let them strip this country of tractors which they cannot economically turn between their hedges and above all let us get the veteran machinery to go to work with and amend the Surplus Property Disposal Act, if necessary, so that when the veteran gets a certificate to purchase he has something instead of a meaningless hunting license.

"Dear Congressman"

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Life magazine of March 8, 1946:

"DEAR CONGRESSMAN"—HERE IS SOMETHING WORTH WRITING TO HIM ABOUT: PUTTING HIS OWN HOUSE IN ORDER

When an editorial exhorts its readers to write their Congressmen, it usually means the writer can't think of anything else to say. Yet here is a matter in which a volume of mail is really called for if we are to have a Congress worth writing to at all. For, after 54 weeks of study, a joint House and Senate committee has proposed a reorganization of Congress. These proposals add up to the best horse sense that Congress has spoken to itself in several decades. If adopted, as they certainly should be, and in toto, Con-

gress can become a more effective body, well on the path to retrieved success.

Many people think of Congressmen as windy old dopes enjoying free haircuts, subsidized lunches, and a lot of joy rides at public expense. Actually most Congressmen are harassed, overworked, underpaid, conscientious men, who, though directors of the greatest enterprise in the word, are handicapped at every turn by methods, machinery, and facilities that belongs to the era of red velvet and brass spittoons.

WORKSHOPS

The joint committee, whose chairman has been Senator ROBERT M. LA FOLLETTE, a Progressive from Wisconsin, and whose vice chairman has been Representative MIKE MONRONEY, Oklahoma Democrat, proposes as its most vital point a wholesale revamping of the present committee structure. This is wise because no less than 90 percent of the legislative job is done in these committee workshops. Among them are such outmoded committees as the Senate's on Interoceanic Canals. It may have been vital when the Panama Canal was built, but not today. During the Seventy-eighth Congress it paid more than $10,000 to clerks who assisted it in the "task" of passing on but 2 out of the 709 public and general bills of that session. The House has four elections committees. Not one has a contest before it at this time, yet each has a clerk on the pay roll at $2,760 a year and a janitor at $1,260.

The joint report observes, "We recognize the difficulties inherent in simplifying this old system of 81 standing committees." What it means is the difficulty in persuading Congress to give up the oddments of patronage contained in these clerkships, the free junkets hither and yon that are perquisites of membership, the prestige of being chairman of some committee, even if it's only the Committee on Interoceanic Canals.

It will require some public clamor to drive through the joint report's plea that committees be condensed and rationalized. For example, it is proposed to lump eight committees—Interoceanic Canals, Commerce, Indian Affairs, Irrigation and Reclamation, Mines and Mining, Public Buildings and Grounds, Public Lands and Surveys, Territories and Insular Affairs—into one new streamlined Committee on Interior, Natural Resources, and Public Works. By such means the Senate's 33 committees would be reduced to 16 and the House's 48 to 18.

Obviously, Congressmen cannot bloom overnight into experts on all the diverse matters laid before them daily. They need facts and assistance. Since 1919 Congress has had a Legislative Reference Service. The joint committee finds the present budget of $198,000 a year inadequate and urges boosting it to $750,000. Its research staff would be augmented by authorizing four experts at from $6,000 to $8,000 apiece for each of the streamlined committees. It is shocking to think that a legislative body for a country apparently destined to spend twenty-five to thirty billion dollars a year has been so backward in research. Congress now gets its information haphazardly and wastefully from the newspapers, from pipe lines, and from questioning department heads. Properly equipping the committees with experts would end the necessity for constantly creating new special investigating committees, the authors of the joint report believe.

PURSE STRINGS

The way that Congress holds the national purse strings is hardly less alarming. The left hand spending money never knows what the right hand that is raising money is doing. There is no firm, set relationship between income and outgo. The joint committee has some good proposals here. The Revenue and Appropriations Committees would be required to report early each session just how much was coming in, and how much was projected for outgo. If the two sums did not balance, Congress would either have to reduce appropriations by a uniform percentage—except for interest, pensions, and other fixed items—or increase the public debt.

Appropriations originate in the House Appropriations Committee, which has a number of subcommittees dealing with specific expenditures, a subcommittee for the Navy, for Interior, Justice, etc. These subcommittees meet in executive, which is to say secret, session. Some no doubt operate very well, others, equally without doubt, operate very poorly. The system of review by the parent committee is, to speak mildly, perfunctory. Frequently, consideration by the Appropriations Committee of a bill involving billions is given less than 1 hour.

Here again the joint report's recommendation for added, qualified personnel will help the committee understand more about what it is doing and the secrecy, as the joint report agrees, must end. These hearings should be open to press and public, unless some matter of national security is under consideration. Another useful recommendation is that the functions of the General Accounting Office be expanded to give "information that will enable Congress to determine whether public funds are being carelessly, extravagantly, or loosely administered and spent."

Although much has been written about the demands made upon Congressmen by folks back home—everything from getting baby books off to new arrivals to sending flowers for lodge funerals—the joint committee found little that could be done to save the time of Congressmen. Quite a bit of this errand running is good for democracy. It is an open channel from the people to their Government.

Another recommendation that is worth at least a trial calls for establishment of minority and majority policy committees. The idea here is to clarify party lines and cause (a) the two major parties to adopt a line on a wider variety of public issues and (b) to encourage individual Congressmen to follow their party line. Slavish devotion to a party line would be, of course, undesirable and is not intended. Yet it is a fact that a citizen cannot vote for a Democratic or Republican Congressman these days with any assurance he will follow the announced platform of his party.

Conservative Republicans are more often to be found voting with southern Democrats than with liberal Republicans and vice versa. Party organizations within Congress are now in poor repair. The coordination between the majority party and the White House is likewise poor. It is planned that the majority committee would consult with the President frequently, harmonizing and adjusting the party policy at both the White House and congressional levels.

PAY

We have saved until last the item that will probably arouse most reaction. The present pay of Congressmen is $10,000. The joint report recommends $15,000. This is still low for the quality of people we want in Congress. It is especially low when it is remembered that two homes must be maintained, sundry political contributions made, dinner checks of visiting firemen picked up, and so on. President Truman and the National Planning Association advised up to $25,000 a year. That is nearer the mark.

In addition to an increase in pay, the report urges that Congressmen be permitted to join the Federal retirement system on the same contributory basis as other Federal employees. This is a vital proposal. When it was advanced a few years ago there was a storm of thoughtless disapproval. The report circulated that a Senator might after only 1 year's service retire for life on $400 a month. Actually, that would have applied to only one Senator, a veteran who had served with distinction for 35 years, and it would have applied to him only if he had made substantial back payments. As it turned out, this Senator failed of reelection and finished his days, not exactly in poverty, but unable to afford amenities for himself or his aging wife. He was George Norris. Few men have deserved more from their country.

Congressional pay and retirement arrangements are now wrong and must be corrected. It is one way to attract better people to serve in Congress. But, when you write your Congressman in support of raising his pay, don't neglect to insist that this is only a part of the package of reform that Congress needs. Let more pay be the just reward for self-reorganization under the plan of the joint committee.

Address of Most Rev. Richard J. Cushing, D. D.

EXTENSION OF REMARKS
OF
HON. GEORGE J. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1946

Mr. BATES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an anniversary address by Most Rev. Richard J. Cushing, D. D., and the introductory remarks by Rev. Ladislaus A. Sikora, of Salem, Mass., at the special Polish services in the Cathedral of the Holy Cross, Boston, Mass., Sunday, February 17, 1946, during the bicentennial celebration of Thaddeus Kosciusko.

No country has suffered more down through the centuries than Poland, and the words contained in this address set forth clearly the trials and tribulations of that great nation and its people.

ADDRESS BY REV. L. A. SIKORA

We are gathered in this beautiful cathedral, the mother church of our diocese, at the generous, thoughtful, and heart-warming invitation of our revered archbishop, to pay tribute to the memory of a distinguished son of Poland, Thaddeus Kosciusko.

He left his beloved native land after resisting the force and might of the ancient enemy of his people and came to our shores to offer his services in the cause of freedom and right. He knew the lot of the oppressed. His magnificent contribution to the achievements of the American ideals is too well known for me to recount here.

But, there is one significant item, not too generally known which shows forth the character of the man, the all-embracing humanity character, that was his by the birthright of his Catholic faith.

In his last will and testament, he asks his friend Thomas Jefferson, to dispose of his earthly possessions, which by the way consisted of a grant of land given by our own grateful Nation in recognition of his outstanding services. The proceeds of the sale of this land were to be used to purchase the freedom of the slaves.

With profound gratitude to God, for having given us so exalted hero, a hero, who belongs not to Poland, not to America, but to all mankind, we plead the cause of Poland.

Our national honor places upon us a clear duty to see that Poland, the land of Kosciusko, and during this last war, a most faithful ally, be treated as a friend, and an ally.

On this Kosciusko Bicentennial Day we pay tribute to the achievements of his genius.

We honor today the defenders of Warsaw, Narvik, Tobruk, and of Monte Cassino. We honor the memory of thousands, hundreds of thousands of Americans who fought for our ideals. These ideals which are being denied to Poland—to Poland, called the inspiration of the world. We plead the cause of heroic Poland, of democratic and tolerant Poland, of Christian Poland.

We greatly appreciate Governor Tobin's timely proclamation, for it aids the cause.

We are exceedingly grateful to his excellency, our beloved archbishop for the generosity of his noble and understanding heart. He has endeared himself to all, but the Polish people especially are grateful for what he has done for them and what he is doing for the cause of Poland.

Through his thoughtful invitation we are here, and join him in pleading prayer to the Almighty God.

ADDRESS BY MOST REV. RICHARD J. CUSHING, D. D.

During the past week Polish people and their friends throughout the world celebrated the bicentennial of the Polish hero of two continents, Thaddeus Kosciusko.

His memory is commemorated by a monument here in the city of Boston; another in our National Capital, and a third at West Point. A foundation perpetuating his name flourishes in New York City. Elsewhere in this country and in France there exist material memorials to the valiant and virtuous personality of this Polish soldier to whom our newly founded Nation was deeply indebted.

Even if these monuments did not exist, the name and the achievements of Thaddeus Kosciusko would still be deathless in the hearts of the proud people of Poland and the grateful hearts of America. Thaddeus Kosciusko was born February 12, 1746; he died October 15, 1817. The people of Poland and their friends need not be told the story of the manner in which, between these two dates, this great and good man served the cause of liberty in two hemispheres. The mere history of his life I shall not repeat here this afternoon.

I do wish, however, to recall what the point and lesson of his life should be for those who are worried about Poland at this present moment of her history. Usually it is unhealthy to live in the past. Our people particularly are tempted to dwell on the past glories and the past griefs of their nations; as a consequence, too often the initiative in the future is left to those who despise the past. It is usually a mistake either for individuals or for nations to look back too much on what is now no more.

But sometimes it is very inspiring to recall the past, especially when we do so in order to meditate on the parallels between the dark chapters of past history and the worries of the present. Sometimes by turning our gaze into the forgotten past we discover grounds for new hope, new courage, and new determination in the future.

That should be the lesson of Thaddeus Kosciusko for the Polish people in our own day. There are so many parallels between the Poland of his day and the Poland of ours that the reasonable man will be inspired by his history to persevere in the hope that Poland is by no means doomed today. Poland will survive unto new glory in the fulfillment of her ancient destiny.

Those who still remember, as all men should, the circumstances which involved Poland in the recent war will be struck with the parallel between them and the circumstances under which the Polish hero, Thaddeus Kosciusko, entered American history. He had scarcely finished his education when he came to these shores, moved by his hatred of oppression, to ally himself with the American patriots who were then struggling against fearful odds for their liberty as a people. His declaration to General Washington is historic; it breathes the abiding spirit of Poland. He said, "I have come to fight for the cause of independence," and in reply to Washington's question as to what he could do, "Try me" was his typical answer. Washington did try him, and as a result he moved from honor to honor until, our national independence having been secured, he was named a brigadier general and cited by our Congress for his "long, faithful, and honorable services" in the cause of political freedom and a people's independence. The parallel is striking between the spirit in which Kosciusko fought for us and the spirit in which Poland bled for the rest of the world during the terrible months of the recent war when she was butchered by Nazi and Communist hordes.

But the story of Thaddeus Kosciusko yields other coincidences. After the War for Independence, Kosciusko returned to his native soil. In 1791 he tried, with thousands of other valiant men in Poland, to do for his own country what he helped us to do for ours. At that time, and so often since, the Polish Nation was obliged to resist the tyrannical interference of Russia. Kosciusko and his patriotic associates tried to free Poland from the despotic and deadening influence with which Russia attempted to subjugate the Polish people and subordinate their natural development to Russian interests.

The technique of imperialist Russia was a familiar one; it is by no means unknown to modern history. It supplemented acts of external aggression and prepared for these with carefully planned production of internal dissension and the promotion of internal debilitating factionalism. Kosciusko collaborated in the defense of a Polish constitution which was designed to secure the just rights of the people, to grant full and entire social liberty to all, and to eliminate the causes of class conflict and partisanship which were the death of Poland and the strength of her enemies. The adoption of this constitution was the pretext of a declaration of war against Poland; it was a brief, bloody war, and the Russians won it easily. They set up a puppet government.

Kosciusko was morally incapable of serving under a government which was Polish only in name. By his refusal to become a collaborationist with the enemy-dictated government set up in Poland, he incurred the necessity of becoming an exile in France. Here is another and a curious parallel: He became a kind of one-man government in exile, anxiously promoting, as best he could, the interests of his nation, and watching every opportunity to serve them. He led one momentarily successful but ultimately doomed effort to deliver Poland from the yoke of her captors. For a time, the patriotic zeal and the soldierly endurance of the Polish people were enough to offset the tremendous advantage in numbers and resources of their enemies, but finally the Polish forces were routed and Kosciusko fell a wounded prisoner. He was confined in a Russian dungeon—and with him were locked away the last hopes of the national salvation of Poland.

Those who read in history of that bloody and bitter chapter of Poland's story may find strange, grim grounds for consolation as they read its modern counterpart.

There is another parallel between the life and the times of Kosciusko and the spirit of those who today love Poland. When Napoleon entered upon his efforts to organize Europe in accordance with his ideas and ambitions, efforts were made to induce Kosciusko, now an old man and weary of war, to identify himself with the Napoleonic campaign against Russia. The efforts were implemented by promises of the part Poland might hope to play in Napoleon's victory. There was vague talk of the rewards that Poland might expect if Kosciusko could induce the Polish people to cooperate in the realization of a new order. Again Kosciusko's answer was historic, and Polish people down to our day can understand and echo it: "On no conditions," said he, "will I engage in your enterprise unless you will guarantee to Poland a free national government and its ancient limits; do this, and whatever of talents or influence I possess shall be at your disposal."

So from the memory of Kosciusko let all Polish peoples and all the friends of Poland take heart forever. The sorrow of Poland is the same now as it was then. The source of the sorrow is the same, the tests of the Polish power to endure are the same. So also, as there be a God, shall the eventual outcome be the same. Please God that outcome will be brought to pass by legal means and peaceful stratagems. When it shall come, no man knows. But this is certain: Poland shall not die.

It must not die. The fate of Christendom, as well as that of Poland, is always involved when Polish destiny is at issue.

We are told that for reasons of politics we should keep silent about Poland. We are told, even by those who believe in democracy, that we must forget about the rights of Poland, which had a democratic constitution since the First World War, in order to protect, at the expense of Poland, stronger nations which are just beginning to talk about democracy. We are told, even by some who believe in religion, that we should temper our concern for the future of the faith in Poland in order that Christianity may not be too annoying to governments which repudiate it. We are told that the new lords and masters of Poland and of eastern Europe do not like to hear priests speak of these matters, and that we should, therefore, leave them to the world's political leaders.

Well, so be it. But perhaps we can remind political leaders who hope to build a peace, of one fundamental religious fact about Poland which has enormous political significance. It has had in the past, it will have in the future. It is a fact which could be productive of unmeasurable good, the good of peace included. A great Englishman of letters expressed it accurately and dramatically when he said, "Poland is the culture thrust like a sword blade between the Byzantine tradition of muscovy and the materialism of Prussia." That is what Poland is; and that is infinitely the most real, practical, determining, and important thing about Poland. "Poland has traditionally been the providential Catholic wall between Asiatic mysticism to her east and Prussian materialism to her west." "For generations Poland spared the world the dread possibility of a fusion between these two titanic forces, forces which even singly bode no good for Christendom and united could lay waste the western world."

History bears witness that there has been one people in eastern Europe upon whom Christendom and the western world could always rely. The other peoples have their virtues, their traditions of valor and of achievement; they have their particular glories and special vocations, these orthodox nations of the east. But in times of crisis for Europe and for Christendom, they went their several ways and closed up within themselves, preferring their national religions, national destinies, and national survival to adherence to Catholicism, to the general destiny of the western world and to the survival of Christendom. Poland has always chosen for Christendom and for Europe, and for that choice she has been willing to pay with the partition of her land, the destruction of her state, and the persecution of her religion.

That is why Christendom and our democratic western world owe Poland so much. And that is why the consciences of Christians and of democrats are so troubled by the silence about Poland today.

The people of Poland, at home or abroad, well know wherein lies the only hope of their survival. It is not in politics nor in diplomacy. It is certainly not in militarism; armed revolution in this age of total mechanical warfare is never the way by which to secure national independence and a chance to live as a nation. The way out lies in the rededication of the Polish people to the faith that taught them the truth which made them free. The Polish people have always associated their faith with their freedom; they have themselves said that their love for freedom was inspired by and subordinate to their love for the faith: "We love liberty more than anything on earth," the Polish people said to Catherine of Russia in the days of Thaddeus Kosciusko, "but we love the faith even more than freedom!"

In that spirit, the spirit of Poland in the most gloricus pages of Polish history, all those who love them pray that the people of Poland may persevere through these dark days of their betrayal.

During the nineteenth century, when suffering under oppression, the Polish people adopted as a national hymn one containing the prayer: "Return to us, Lord, our motherland and freedom."

In 1918, on regaining their independence, they changed the words to: "Preserve for us, Lord, our motherland and freedom."

When the country was overrun by the Germans in 1939, the original words were restored.

Today, in spite of the efforts of the provisional government to change the wording again, the churches still resound to the people's cry: "Return to us, O Lord, out motherland and our freedom."

Please, God, that prayer will one day be answered.

Suggestion for an Autonomous Self-Contained City for the UNO

EXTENSION OF REMARKS
OF
HON. ANDREW L. SOMERS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. SOMERS of New York. Mr. Speaker, the vexing problem of how and where best to locate the headquarters of the United Nations Organization is one that is of vital interest to all Americans, as well as to all the member governments.

Discussing the problem with a lifetime friend, Maj. Joseph Caccavajo, former consulting engineer of the city of New York, who served with distinction in the Army Corps of Engineers, he suggested a possible solution which I believe is most interesting, and I feel is worthy of careful study by all concerned.

The idea is to create an autonomous island, which will meet all the requirements of the UNO, and to provide sufficient area for all present and future needs.

A place where a city can be laid out and developed without the restrictions and obstacles such as are present in and about all of the other sites suggested to date.

The plan I here present for consideration in my opinion, and that of others acquainted with it, will be entirely free of most, if not all, of the drawbacks and problems involved in the Connecticut-New York area, now being given primary attention.

It involves no interference with any valuable business or residential areas, public utilities, highways, Federal or State functions.

It removes any possible threat or fear of interference from pressure groups, picketing, demonstrations, or other disturbances mentioned by some of those who spoke in London recently. It will be autonomous to a greater extent than Vatican City in Rome because it can easily be provided with direct and uninterrupted communication by air and sea with the outside world, and have its own railroad connection by land.

One of the several draw-backs to the Connecticut-New York site is the loss of many millions of dollars in annual tax returns to the States and municipalities in the area. Capitalize this loss and it will add hundreds of millions of dollars to the initial cost of the project. In addition, serious consideration must be given to the disturbance and destruction of thousands of expensive homes and a considerable number of valuable properties and business establishments.

The policing of the boundaries also involves an annual expenditure of huge proportions, and there will be added problems such as exist at all international frontiers.

Another factor which must be considered if, as has been stated, the UNO area is extended to embrace 40 or 50 square miles, is that Americans who may be permitted to remain in the UNO area will be deprived of any voice in local government, and as residents on "foreign soil" may be deprived of other rights and privileges enjoyed by American citizens.

The construction of an autonomous island will save many millions of dollars in initial cost, permit of a comprehensive orderly plan for development of a world capital and the construction of official buildings, homes, hotels, utilities, and so forth. Best of all it will allow an independence for all concerned in keeping with the ideals and objects of the UNO and our own Government.

There are a number of places where such an island might be located. The site which Major Caccavajo and I suggest for the UNO city may not be the best but it has, in my opinion, advantages which certainly warrant serious consideration. It is on the New Jersey coast, a few miles north of Atlantic City, within a matter of minutes from New York City, Philadelphia, and Washington. La Guardia Field is about 90 miles away; Philadelphia, 50 miles; Washington, less than 150 miles. It is little more than 100 miles from New York by motor car.

Adequate air-field accommodations and water deep enough for ships can be made available so as to permit direct communication with all parts of the world by air and sea. The construction of a comparatively short spur will permit of direct railroad connection with the American railroad systems.

No buffer state or neutral zone will be necessary and the policing of the UNO area will be self-contained to an extent not otherwise possible.

Electric light and power, gas and water supply, sewage disposal, police and fire protection, and so forth, will be entirely in the hands of the UNO government. Internal management will be entirely free from any interference with or by our own Federal or State Government departments or agencies.

The property to be acquired for the site can be secured at small cost and very few people will be disturbed. Major construction operations can be carried forward with practically no interference with business or people in and near the site.

The whole project can be completed within a few years.

The island as contemplated will lend itself to landscaping comparable to what was accomplished on the filled-in area used so successfully by the New York World's Fair in 1939–40.

It is suggested that it cover no more than 10 square miles, which is sufficient to meet all the needs of the UNO. Ten square miles, 6,400 acres, nearly half the size of Manhattan Island, can accommodate hundreds of thousands of people if need be.

A number of our leading cities cover less than 10 square miles, and though a considerable part of their area is given up to business and industrial plants, which condition will not exist in the UNO city, they have many times as many residents as UNO city will ever have.

For example:

Cambridge, Mass., 7 square miles, population, 1940, 110,879.

Camden, N. J., 9.8 square miles, population, 1940, 117,536.

Paterson, N. J., 8.4 square miles, population, 1940, 139,656.

Reading, Pa., 8.8 square miles, population, 1940, 110,568.

Trenton, N. J., 7.7 square miles, population, 1940, 124,697.

In other words, 10 square miles can take care of all possible governmental requirements, including airfield, and provide adequate living room for 100,000 or more people, without need for encroachment on any surrounding territory.

A rough plan of the proposed UNO city, prepared by Major Caccavajo, shows a system of streets and broad boulevards, radiating from a central plaza, with ideal locations for monumental buildings and sites where each of the United Nations may establish distinctive and individual replicas of their homelands. The artistic and architectural possibilities are almost without limit.

May I suggest that the chief of engineers through the Secretary of War, be asked to give a rough estimate of the cost of constructing such an island in or near the site mentioned, or elsewhere, if the idea meets the approval of the UNO officials.

While the site mentioned has many advantages, the main idea I desire to present is to create an autonomous city, and there may be other sites where it might be located when further study of such a project is made.

The main advantage of the site I have suggested herewith is that it can be constructed with little interference with surrounding areas at a cost which will undoubtedly be considerably less than might be possible elsewhere. There is also the advantage of location and the time element, both of which are most important.

Hold the Line

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following story from a recent issue of the Green Bay Press-Gazette:

HOLD THE LINE, 23-CENT BULGE COSTS $25 FINE

The man had just entered the Press-Gazette editorial room and stood before one of the desks grinning sheepishly.

"I have just been nicked by the OPA," he told the reporter and then after a pause "does that have to be published?"

Assured that he was only one of many and that he had no chance to escape publicity he said:

"That's O. K. if they will just tell why I was fined. It is a small matter and if it's explained I don't care at all. I am George Herlache. I manage the Deprey furniture store at 720 Main Street. I sold a rug for $54 and gave the lady 50 cents discount. The net price was $53.50; now it seems the ceiling price should have been $53.27. I was 23 cents over. I don't know how I did that but on some items we get 4-percent discount for 10 days, and on some we get 2 percent for 30 days. I must have figured the 2-percent discount."

The reporter looked at the man suspiciously and asked, "Is that all? Your only overceiling sale?" When he assured the reporter that it was, he asked, "How did the OPA find out about this?" and he went on with the astonishing story:

"They take our invoices and bills, and they figure the discounts and when they have the cost they add our mark-up and they have the ceiling price. Then they check back against our sales."

The reporter suggested that it must have taken some time to find this little item, and he went on:

"He was there from about 9 in the morning until 3 p. m. When he showed me the error I took the slip and gave the lady 75 cents discount. But he said, 'That doesn't change anything. You made the sale.' Then I showed him that the rug was still in the store, and I asked him, 'What if she doesn't take it and the sale is off' but he would only say, 'You made the sale.' So I paid the $25 today."

At the OPA office it was said that the store had not been previously visited by the price panel of the Brown County price control board nor had the store been checked by OPA prior to the spot check. A member of the enforcement staff said that the $25 penalty had been accepted rather than to go through considerably more work to determine whether other overceiling sales had been made.

OPA Policies

EXTENSION OF REMARKS
OF
HON. CHESTER H. GROSS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

PENNSYLVANIA SAW CORP.,
Newark, N. J., March 1, 1946.

Mr. CHESTER H. GROSS,
New House Office Building,
Washington, D. C.

DEAR MR. GROSS: If ever the OPA should go out the window it is now. It may be all right to hold it for a few things like rent control, etc., but it is tying up the productive ability of practically 100 percent of the manufacturers of this country. As an instance, in 1944 we had quite a large manufacturing loss. It took 1 year for the OPA to decide to give us a 6-percent increase in our selling prices. They figured that this amount was just about enough to let us break even. When asked what we were going to do to recup past losses they said, "It is too bad." When asked about a little profit they merely laughed at us. Now comes along an increase in the price of steel. It will amount to approximately 12 to 14 percent as far as we are concerned. The steel company is now beginning to ship us steel at the old prices and on the invoices they state that they will send the corrected invoices at such time as the OPA determines just what the price of steel should be. In the meantime we don't know what our costs are. We may be running into the red for all we know and there is no way of determining it until we know what the steel is going to cost. If we run into the red we are supposed to apply to the OPA Stabilization Director for price increase. By the time they wake up to doing something about it another year will probably go by. We have taken all the losses we can now take, and if we are going to be further handicapped we are going to merely lock our doors. That is the position that a great many people are taking, including, as we understand it, the big American Chain plant at York. They are closed down tight and it is our understanding that they have no intention of opening up again until they get an actual price increase for their goods.

It is high time that Congress did something about this or America will be seen going to the dogs. I know you do not want that, so as Tennyson advised, "Let your voice rise like a fountain night and day."

Very truly yours,

F. G. ACOMB.

YORK, PA., *March 6, 1946.*

Hon. CHESTER H. GROSS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN GROSS: This year our company is celebrating its ninetieth anniversary and in our entire career we have been able to operate successfully under Government regulations. This includes the period of the last 12 years, when we operated under Government regulations to a larger extent than in all the previous years combined.

For the first time in our entire history the road ahead does not seem to be clear, because of the conditions with which we are confronted as a result of the settlement of the steel strike. This settlement came as a distinct shock to us, as we believe it has to all steel fabricators, in that no provisions were made to absorb the increase in the price of steel, and a wage increase, with which we are definitely faced because of the national pattern which was set by the Government in settling the steel strike. It was our hope that in the length of time that was taken to settle that strike, provisions would have been made which would automatically have permitted steel fabricators to pass on the increase, the same as the makers of steel are permitted to pass it on to us.

It has been our practice during the last 12 years to operate our company on the basis of a sales forecast, broken down month by month, against which we budgeted all items of cost, month by month, and predetermined our profit, before and after taxes, at the end of each year. We have 12 years' experience operating under this plan and each year we have come out within 1 percent of our predetermined figure.

In forecasting our sales for 1946 and budgeting all items of cost, including material, labor, and overhead, the figures were based on material prices and labor costs as they existed January 1, 1946, and this enables us to very definitely allocate to our 1946 operations what the increase in the cost of steel, and a comparable increase in labor rates, will mean to our 1946 operations; and instead of coming out with a profit, through which the taxes we would have paid would have been $136,981, we will come out with a loss of approximately $182,000. Our prices on 80 percent of the volume of business for 1946 and under OPA regulations are the same as they were in October 1941.

We believe this situation is not peculiar to our company, but that the same conditions will apply to practically all manufacturers of capital equipment, the nature of which does not lend itself to mass production procedure.

It occurs to us that the Office of Price Administration is losing sight of the serious problem with which manufacturers of our type are confronted. Our figures show that if we are to pay the taxes that are reflected in our predetermined method of operating our business, we will require as a minimum a 7½-percent across-the-board increase in order to absorb the increase in the price of steel and the increase in wages, with which we are definitely faced.

We believe the time has come when the Congress should investigate the power that is vested in a few men in OPA, as undoubtedly the lack of profits and, therefore, the lack of taxes from many companies, will make a greater contribution to an inflationary spiral than is being anticipated.

Our relations with our employees is very satisfactory and the cooperative spirit existing between management and labor in our company is commendable and even with the critical situation facing us, we intend doing our level best to bring the year through as near a break-even point as possible and in this effort we will have the wholehearted assistance of all our employees; but unless price relief is granted, and as we see it today, our company will make no contribution toward the national budget.

We intend making application to OPA on their prescribed forms for price relief, but we are fearful that the processing of our requests will be delayed to such an extent as to have no effect upon this year's operations; therefore, we do not believe the answer to this serious problem will come through the processing of requests by individual companies, and since time is the essence of this situation, it is our thought that OPA should grant an across-the-board price increase to steel fabricators on the basis of somewhere between 5 and 20 percent.

We do not favor the abolishing of OPA entirely, but it seems to us to be practical for OPA to control inflation through granting increases gradually as conditions dictate,

percentagewise across the board, to industries whose production is of a similar nature.

The Congress are the only ones whom we recognize as the direct representatives of the people and, therefore, the only hope we have for immediate relief under present circumstances is for the Congress to take this situation in hand and from the Congress itself dictate the policies of the Office of Price Administration.

Because we believe the present situation is critical from the standpoint of the national budget, I am addressing this appeal to you in the hope that it may be of some assistance to you in dealing with this important problem.

Sincerely yours,

A. B. FARQUHAR CO.,
WM. J. FISHER, *President*.

P. S.—You will be interested to know we have a union contract with three unions of the American Federation of Labor.

The Housing Program

EXTENSION OF REMARKS
OF
HON. ANDREW J. MAY
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by Earl Godwin:

Good evening, folks. Building a home in America should be one of the most joyous experiences of all life; and building homes for the generation of veterans who have won the war and brought glory to our land should be a nationally uplifting episode. But, sad to relate, the preparations for this home-building program have been a long-drawn-out caterwauling process between and among various groups and political parties.

The Government's housing program is for 2,700,000 homes in 2 years, and, to make sure there is a clear road to this ambitious goal, the chief governmental policy is to insure priority to building material for such homes. Give the veterans priority on buying and financing such homes. And a genuine effort to keep down the price of these homes!

The first difficulty the builders run into is the lack of material, and that's where the first Kilkenny cat fight started.

The Government at Washington is so used to solving all problems by writing a directive or concocting a regulation or rushing up to the Treasury for a cartload of money to be used in paying part of your grocery bill or something, that the housing program heads—of whom Wilson Wyatt of Louisville is chief—said, "Well, boys, let's pay some of these building manufacturers a little extra money so they will quit sulking and come out in the open with plenty of bricks, shingles, doorknobs, and such other gadgets as a veteran needs for a house."

The building-material boys, who have been bogged down flat as a pancake under price controls, figured that any more dealings with Washington would be disastrous and said, "Nothing doing. The war is over. For the love of Mike let's restore the old law of supply and demand and insure plenty of material, as it always was from the beginning of time under the healthful impetus of American competition."

Well, somehow or other, in the last few years, American competition has been smeared until competition takes on the aspects of Captain Kidd and Lucretia Borgia. Anyone who speaks of Americanism or free competition is called a Fascist. The only way many officials want to deal with American business—which made America fairly strong—is to tie it down, give it a bottleful of dope, and then allow it to take a few minutes' exercise in the prison yard accompanied by at least one strong-armed OPA keeper. The great sin in America today is being successful enough to make a profit of more than 4 cents on the dollar. Anyone who makes a nickel finds it taken away on the ground that the Government knows best and, besides, money is not going to do you much good, anyhow.

Well, when the housing program, which is all that could be desired in its aims, reached the point in Congress where it was about to be implemented with $600,000,000 of Treasury money which was to be spread about among the doorbell and doorknob manufacturers, brick makers, saw mills, and what have you, there arose in the House of Representatives a whirlwind of sentiment against any more artificial help or restraints on business—big, medium-sized, or little.

Practically every Member of the House, at least those who live in the average medium-sized city or rural area, has from one to a thousand merchants and small manufacturers on his neck with bitter complaints about being kept in red ink and loss and lack of help by wartime restrictions which ought to be gone by now. That is their complaint. I am being a realistic reporter, telling you why the housing program is as it is at this moment.

Business wanted to be free to do this huge building job without handcuffs, questionnaires or special trips to Washington.

The administration folks couldn't see it that way.

They said, if you do that, prices will rise and you cannot build these veterans' homes to be sold at anything like $6,000, which is the ideal.

But the House of Representatives boiled over and refused to O. K. that $600,000,000 subsidy.

You know that sum amounts to about $223 per house. And it doesn't seem likely that success or failure in America depends on any such little money as that.

The point of my story is not an argument in favor of one side or the other, but is a report that the House of Representatives represents people and people at home are sore at continued Government controls; and, whether right or wrong, their Congressmen expressed this view. They would rather have some rough going for a few weeks than experience further dealings with boards and commissions down here at the National Capital.

The various veterans' lobbies, labor, and other liberal organizations have been whipped up to a frenzy against the American plan as finally rated by the House, threatening to defeat every Member of Congress who voted for free enterprise. They charge their Congress has succumbed to the real-estate trust, or some other lobby, but here is a point these furious young men overlook: Members of the Houses are experts in public opinion in their own neighborhood, and all 435 come up for renomination and reelection this year. Politics boils in every district. These Congressmen are presumed to know how their folks feel. And from the talks I have had with many of them, the folks feel they can build all these veterans' homes without any difficulty if Washington will get off their necks. That viewpoint may turn out to be disastrous, but that's the ruling sentiment just now.

I think a little common sense may be required. With all this burst of freedom, someone has got to ride herd on some of these house and home builders, or the price will shoot up somewhere and spoil the whole deal. And, of course, this program has yet to pass the Senate.

Violent predictions of failure of the building program have been and are now being made, but may I call your attention to the fact that predictions in Washington are worth about a dime a dozen. I have particular reference to the dire prophecies of doom and destruction made by Government officials on high levels, who warned that Congress must pass a bill guaranteeing everybody a job or we would all be selling apples on the street corners by this time.

Sidney Hillman, in August, last, predicted 10,000,000 unemployed within 6 or 8 weeks.

Secretary Wallace, on October 30, last, approved the idea that unemployment would reach 8,000,000 right now. Arthur J. Altmeyer, Chairman of the Social Security Board, had 5,500,000 unemployed by last Christmas; 8,000,000 unemployed by next summer. One of his estimates—and he was throwing them in the air like a juggler keeping four scintillating balls going at one time—had 8,000,000 unemployed last Christmas.

Secretary Schwellenbach, last November, threw up his hands and said it would be impossible to estimate within one or two million the number of people who would be unemployed, and he had 8,000,000 men out of work just about now.

And John W. Snyder, conservative and well-founded, was bitten by the bally-hoo bug and had 8,000,000 people out of employment at this particular moment.

Now, what are the facts? Instead of 8,000,000 people out of work last Christmas, there were less than 2,000,000. Instead of five, six, seven, or eight million people out of work this spring, the actual official figures are 2,300,000 and the normal corps of unemployed is two and one-half million people, which may or may not include the million or more out of work voluntarily because of strikes.

At any rate, after that terrific blast which was made for the purpose of bally-hooing or driving Congress into guaranteeing a Government job or some other kind of a job for everybody in the country, you must remember that nature has taken its course; the original fantastic full employment bill was not passed, although a better and common-sense maximum employment law is now on the books. So the prophets of doom turn away from the unemployment that didn't happen and are bally-hooing for further control by the Government over the manufacturing industry and individual enterprise.

The real fight is not for or against houses for veterans. The real argument has been on the best method of obtaining 2,700,000 modest homes within 2 years.

Russia makes the headline of the week, but first here is some sound advice as to what we all should do to protect today's higher property values.

At last, American officials are not afraid to speak their minds on Russia. When Senator VANDENBERG came out and said every time Russia moved the rest of us inquired "What's Russia up to now?" it brought a hurry-up speech from Secretary of State Byrnes, which did not mention Russia, but came out flatly against some of the Russian shennanigans.

Diplomats have a way of speaking without mentioning the man they're berating. Like the card-playing miner in the old six-shooter days, who was convinced that the dealer in the game was crooked. The dealer was a one-eyed man. And the suspicious miner finally pulled out his weapon and spoke as follows:

"I ain't mentioning no names. But if a certain guy in this game don't quit dealing 'em off the bottom, I'm going to shoot out his other eye."

That's about the way Jimmy Byrnes talked to Joe Stalin. Of course, words are just words and nothing else.

Then along came Winston Churchill. He said tougher things about Russia than anyone has said since Russia and Hitler were hand-in-glove. Suggests a military alliance between the British Empire and the United States to make us feel good and strong, as the Russian bear arises and shakes his paws. Chances are very much against any such military alliance. Better still, let us put every ounce of strength possible into the United Nations. Call another meeting of the United Nations and ask Russia to lay its intentions right on the line. Then if there's no good answer, then talk about an Anglo-American alliance.

Among the immediate effects of Winston Churchill's speech is a greater realization in Washington that the American people have O. K.'d a far-flung foreign policy which requires that we be strong in every corner of the world. And we have shucked off our Army and Navy strength until we could scarcely quell a riot, much less stand up to a really strong adversary.

And at the end. Did you hear my coworker Walter Winchell say J. Edgar Hoover may be pleasantly surprised this week? Well, the surprise may well be a medal pinned on J. Edgar Hoover for outstanding and even yet secret work during the war. Watch for this event tomorrow.

General Motors Strike

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. BIEMILLER. Mr. Speaker, the General Motors Corp. is blocking production. The United Automobile Workers has made a proposal which the majority of the American people consider fair, but the arrogance of the corporation continues. It is high time the General Motors management recognized it has some social responsibility. A typical comment is that of the following editorial from the Milwaukee Journal of March 6, 1946, entitled "Waiting on GM and UAW":

The almost complete break-down of all negotiations between the UAW and General Motors presents a most discouraging picture. The Nation waits while the two sides fence.

After weeks of moves and countermoves, GM made what it called its top offer of 18½ cents an hour, and asked, in event of a rejection by strike leaders, that the offer be submitted to the membership by secret ballot.

The strike leaders rejected the offer and refused to submit it, by itself, to a referendum. But the strike leaders did come back with a fair counterproposal containing these two questions:

"1. Do you favor returning to work and ending the current dispute on the basis of the corporation's offer of 18½ cents an hour increase and its latest proposal on basic contract matters? or

"2. Do you favor returning to work on the basis of the corporation's 18½-cent wage increase offer and its latest proposals on basic contract matters, with the understanding that all issues still in dispute shall be submitted to arbitration by an arbitrator appointed by the President of the United States?"

We see nothing wrong with that and we think GM would have been wise to accept it. Somebody has got to budge, somewhere, if this controversy is ever to be settled. While the Nation waits, its needs remain unmet.

Outfitting an Industrial Lifeboat Two-Way Job

EXTENSION OF REMARKS
OF
HON. EMILY TAFT DOUGLAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mrs. DOUGLAS of Illinois. Mr. Speaker, under permission granted me to extend my remarks, I wish to include a column from the Galesburg Labor News of February 14. It is entitled "Outfitting an Industrial Lifeboat Is a Two-Way Job," and was written by Edwin R. Wright, former president of the Illinois State Federation of Labor:

OUTFITTING AN INDUSTRIAL LIFEBOAT IS A TWO-WAY JOB

A lot of people have the idea that if you firmly grab a dollar by its edges and exert enough strength you can stretch it, as least, to two or three times its ordinary dimensions. In fact, although it is not referred to as dollar stretching this procedure has become a favorite pastime of the intelligensia—college professors, radio commentators, editorial writers, and, especially, third- or fourth-string "industrial experts." The really big ones know better. And we can prove it.

For our part, we know that a dollar can be stretched, because we have had some part in this stretching process. We didn't do it alone—no one can—although we have, we often think, wasted reams of good paper and pounds of ink and slapped our brain up to a peak in attempting to row our boat without oarlocks, if you get what we mean.

Sometimes, of course, we trades unionists, have forged a set of crude but workable oarlocks for our own boat, for our own purpose, and then started working out a corresponding set for the other side of the boat—which is the sole property of our bosses.

Where we meet a measure of cooperation—and, sometimes, but rarely, we do—the task is possible and the results encouraging.

We're neither a reformer nor a "sorehead," so let's let it go at that. If we can prove a point without name calling we all feel better about it.

Oh, well, here's another try at reaching a better understanding with our bosses, our own members, and, incidentally, our own ego.

What do we know about business? That means, of course, what do we do with our union's money.

First, we pay dues into the union. In one fund of a particular union we have built up a reserve of $2,467,746.28. Out of and because of this fund we are selling—and have for 40 years—life insurance to our members at a premium rate of less than $6.00 per $1,000 coverage per annum. We think that is "businesslike."

Another fund totals $3,809,543.66. Out of and because of this accumulation this international union is enabled to pay an old age pension benefit of $40.00 per month. Additional sums are paid from local union funds and the larger city organizations pay their elderly incapacitated members about $30.00—a total monthly sum approachng or reaching $70.00—12 times each year.

We think this is "good business" because this feature costs considerably less per member than does the government maintained old age pension—which, of course, our members receive also. Old-age pensions of about $40.00 from the Government ($20 additional if married and age limits permit) and $70 from our own funds, well, do you agree that's "good business"?

We go further. If a member of this union wishes, he may pay $12 per year for sick and accident insurance and receive $10 a week over a long disability period.

Again, a sick or incapacitated or elderly member—this is cared for in another fund but paid into the union as dues—may go to a private national hospital—transportation, meals, and sleeper prepaid, yes, tips, too—and receive every care and comfort, including all professional service, clothing, and even a spending-money allowance.

And, please remember, there isn't even a hint of charity in all this—it's all paid for in union dues, paid by our individual members working as a union.

"Your men and women"—yes, our women receive the same pay, do the same work and receive the same benefits as the men—"have strikes or lock-outs, don't they?" you ask.

Of course, but not too many. We finance these difficulties on the same broad principle as we do all our other activities.

"Sometimes they cost you a lot of money?"

Yes. One such argument with an employer has been running for more than 50 years and another for more than 40. This union is somewhat tenacious, perhaps, in such matters.

These labor difficulties have cost these particular employers, directly or indirectly, we think, sums equal to or exceeding the physical valuations of their businesses. These employers may have a different point of view, but that's their privilege, of course.

The union has paid out a lot of money, too, but nothing comparable with that of our former employers, and we think that is "good business"—not, of course, to have strikes, but to have the courage and ability to meet them, if we must.

Because of this policy, in part at least, we believe, we have very few strikes or lockouts. We sincerely wish that we had none at all.

Labor peace is the best of "good business."

"You pay big salaries to get men to do your business as you want it done?"

Sure! Sure! We regard officership in our union as a high honor and most of our officers—all, we think—have fewer financial resources at the end of their terms than they had when they started them.

Our international officers receive $7,500 per year. Our local officers receive the equivalent of the highest union scale in their cities—with an additional $10 weekly, perhaps, for good measure—but nothing for overtime and the many extra services they perform. The same effort and responsibility and "know how" would, in private business life, pay them much more liberally.

"You're proud of your union, aren't you? What else do you do as an organization?"

We train our members in their craft as well as in their civic and union duties and responsibilites. Every apprentice is required to take a full course in craft education and to pass a stiff examination before he or she is allowed to join the union.

Our union "card" is very near a guaranty of proficiency in one or another of the branches of our calling—and every year we are raising the standard. This is not a simple procedure because of changes and improvements in technique and in equipment, but its "good business" to go as far and as fast as we may.

We have given a bare outline of the International Typographical Union. The benefit features are the same in principle—and sometimes in amount, in New York, Chicago, and Galesburg—except that the smaller cities pay less amounts in purely local activities. (And pay smaller union dues, too.)

Many, many trade-unions do almost as much for their members—some claim more—but let them tell their own story.

Today America is placing heavy emphasis on "efficiency," "production," and "understanding" and this brings up the question: "Is labor doing its part?"

We think so.

We think if you understood us better that you, too, would think so.

We thank you.

The Army and Navy Forever

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. PLUMLEY. Mr. Speaker, under leave heretofore granted me, I wish to include in the RECORD an anonymous poem The Army and Navy Forever—a la Hamlet's soliloquy:

THE ARMY AND NAVY FOREVER

That it should come to this
The war but two months dead! Nay not so much; so excellent a team; that was, to others
Hyperion to a satyr; so loving to each other
That one might not between the winds of Heaven
Visit the other too roughly. Heaven and earth!
Must I remember? Why Army would hang on Navy
As if increase of harmony had grown
By what it fed on. And yet, with a month,
Let me not think of it; Frailty, thy name is woman.
So little time; or ere those shoes were old
With which she leaped ashore from Navy decks
Like Artemis, all haste; why she, even she,
Oh Heaven! a beast, that wants discourse of reason,
Would have pondered longer marriage with the Navy
Her brother in arms; but no more like the Army
Than I to Hercules; within a month
To marry! Oh most wicked speed, to post
With such dexterity to incestuous sheets!
It is not, nor it cannot, come to good,
But break my heart, for I must hold my tongue.

FSA Program as It Applies to Veterans of World War II

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

THE RURAL REHABILITATION PROGRAM

Mr. WICKERSHAM. Mr. Speaker, applications from veterans of World War II for initial rehabilitation loans are being filed at an accelerating rate, region VIII figures show. The figures:

Applications for initial rural rehabilitation loans

December	745
January	1,594
Cumulative	4,418

Indications are that the peak demand for loans is still many months ahead.

Inquiries made in four Oklahoma counties in January indicated that slightly more than half of the men who went into the armed services were still to be returned to civilian life.

Of those who have returned, many are still in the adjustment period and have not decided their future course definitely enough to come to FSA to apply for financial help. All applications thus far received from veterans have come from those who have been out of service long enough to have reached a decision and to have made arrangements to go back to work.

Army surveys have resulted in a statement that a million veterans are expected to return to the farm. Companion surveys have resulted in an estimate that 75 percent of the veterans returning to farms will require financing of some kind.

If the commonly accepted figures showing that about 10 percent of the Nation's farms lie within region VIII are correct, it would indicate that a total of 100,000 veterans may seek to return to the farm within this region; and that some 75,000 of them will require financing of some kind.

FSA, of course, will not finance all of the veterans requiring help, nor will all of them turn to FSA. However, an insight into the proportion of veterans seeking FSA financing, as compared to other types of agricultural financing is afforded by figures on applications for so-called GI loans in region VIII:

During January, applications for GI guaranteed loans totaled 121. During January, applications for initial rural rehabilitation loans — FSA — totaled 1,594.

Cumulative figures show a total of 4,418 applications for FSA's rural rehabilitation loans; 351 applications for GI loans.

In other words, veterans are applying for rural rehabilitation loans, as against GI loans, at a rate of more than 12 to 1.

This is only a part of the story. The figures on GI loans include applications for both personal property loans and real property loans.

FSA is receiving applications for real-estate loans at an increasing rate. The figures:

Applications for farm ownership loans

December	412
January	825
Cumulative	2,728

Add the applications for rural rehabilitation loans, 4,418, and 2,728 applications for farm ownership loans, and the total number of applications becomes 7,146, about 20 times as many applications for loans under FSA's programs as for GI loans.

As applications come in more and more rapidly, the loan-making rate rises correspondingly. The figures:

Initial loans made to veterans

December	287
January	842
Cumulative	1,764

In December, $479,757 was loaned to World War II veterans in the rural rehabilitation program; in January, $1,287,479. In all, $2,697,666 has been advanced to World War II veterans under the rural rehabilitation program.

Farm ownership loans to veterans

December	24
January	49
Cumulative	111

Rehabilitation loans made between now and the end of the fiscal year will depend on the money available. Indications are that there will always be a backlog of unfilled applications.

Farm-ownership loans to veterans will depend largely upon the availability of land, reasonably priced. Many applications received to date have been for loans upon farms which would not appraise out. This factor is the principal obstacle in the way of an accelerated FO program for veterans.

As to FSA's future ability to meet the demand from World War II veterans for agricultural financing in region VIII:

In his statement before the Agriculture Subcommittee of the House Committee on Appropriations, the FSA Administrator said:

> A loan authorization of $67,500,000 has been recommended for the fiscal year 1947. This amount will enable us to provide the supplemental assistance to present borrowers necessary for their continued progress toward rehabilitation and initial rehabilitation assistance to approximately 25,000 additional farm families—or about 8 per county.

In region VIII applications for initial rehabilitation loans received from veterans alone, in 1 month alone—January—averaged more than 4.4 per county.

Applications from veterans alone on hand at the end of January totaled 1,776, or approximately 5 per county.

And the peak demand, as has been indicated, is still ahead.

On the basis of the evidence presented here, region VIII will need, for veterans alone, all of the money the Administrator says will be available for the "25,000 families" over the entire country. Poor civilians! Poor other 10 regions!

Congress should increase the authorization and appropriation immediately.

South Dakota Has Largest Per Capita Hunting Revenue in the United States

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. MUNDT. Mr. Speaker, South Dakota's famed hunting advantages have become a million-dollar industry. Last year, only Pennsylvania and Michigan exceeded South Dakota in hunting revenue, with the result that by several times over South Dakota has the largest hunting revenue of any State in the Union.

Mr. Speaker, the reasons for South Dakota's unique and interesting record as the hunting paradise of the United States are numerous and obvious.

First, sir, give credit to the State bird of South Dakota and the royal game bird of the whole United States, the sporty,

delectable South Dakota ring-necked pheasant.

Secondly, let credit go to the renowned hospitality of South Dakota folks.

For other reasons, give thought to the healthful, stimulating, exhilarating, zestful climate which South Dakota invariably turns on to greet the visiting hunters during the more than 100-day-long open season on King Pheasant.

Or if you please, sir, consider South Dakota's vast productive soil which raises the corn, grain, fruit, shrubs, and berries which are so coveted by the pheasant and so conducive to general human happiness and prosperity. Add to that, the beautiful lakes and streams of South Dakota—practically all free from pollution—the good highways, the opportunity to fish trout, cast for black bass, hunt wild geese and ducks, and even shoot an elk or deer while visiting South Dakota in quest of pheasants and you will realize why South Dakota's popularity as a hunter's paradise is growing by leaps and bounds.

Mark up your personal calendar, Mr. Speaker, to visit South Dakota next fall along with the many of our colleagues who make the trip each year. Like them, I am sure you will get your daily bag limit of pheasants and you will find no limit on the enjoyment and adventuresome experiences which you will share.

There follows hereafter some arithmetic which indicates how many good Americans are making it a habit to go to South Dakota for their hunting adventures:

STATE STANDS THIRD IN HUNTING REVENUE—JUMPS FROM TENTH PLACE IN TOTAL COLLECTED FROM LICENSES

WASHINGTON, March 5.—The 48 States collected $15,512,252 from the sale of 8,190,901 hunting licenses in the year ended last June 30, compared with $13,547,152 for 7,505,258 licenses in the preceding year.

Reporting this today, the Fish and Wildlife Service said the number of licenses issued last year set a record for the war period.

Despite travel restrictions and the rationing of gasoline and tires, nonresident hunting licenses jumped from 107,685 in 1943–44 to 154,363 in 1944–45.

Pennsylvania led all other States in revenue received with $1,395,841. Others in the big ten in revenue included Michigan, $1,198,437; South Dakota, $1,087,122; California, $913,307; New York, $854,827; Ohio, $669,256; Wisconsin, $617,857; Washington, $511,268; Colorado, $510,888; and Illinois, $473,339.

South Dakota has the sharpest increase, jumping from tenth place in 1943–44 with $465,602 to third.

Economic Gymnastics

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. WEICHEL. Mr. Speaker, under leave to extend my remarks, I want to include an editorial of Spencer A. Canary, editor of the Daily Sentinel-Tribune of Bowling Green, Ohio, describing the economic gymnastics of the New Deal:

"HOLD THAT LINE"

If the clumsy efforts of President Truman and his New Deal advisers to "hold that line" were not so tragic in their import for America, they would be pathetically humorous.

Their apparent intent is good; but, like Hell, the present economic status of the country is paved with good intentions; and the future paving blocks seem likely to be of the same material.

They are trying to "make two blades of grass grow where but one grew before" with half the fertilizer. They are trying to make 60,000,000 jobs with 30,000,000 opportunities. They are approving greatly increased wages for workers and at the same time trying to "hold that line" of prices by limiting employers to a profit based on the rate of profit on net worth earned before the war sent prices upward.

Here is the New Deal formula for profits: "To earn an average rate of profit equal or as nearly as may be to the rate of the return on net worth earned by the industry in the peacetime basic period applicable to that industry."

For example, suppose the net worth of a business before the war were $100,000, that it did business amounting to $200,000 a year and made a net profit of 6 percent, or $12,000. Suppose that the present net worth were 25 percent greater because of increased cost of replacements, therefore being $125,000. Under the New Deal rule it would be allowed a net profit of 6 percent of $125,000, or $7,500—if it could make it without the ceiling price being raised; and, if it were raised so that consumers had to pay more, would that be "holding the line"?

Let's see. Suppose the business were automobiles and that the cost of labor going into them before the war were 40 percent. The 40-percent cost for labor would take $80,000 of that $200,000 business, which yielded $12,000 profit. But suppose that 40 percent were increased 18 percent, making it 58 percent as the cost of that labor. That 58 percent would take $116,000 out of that $200,000, which would be the selling price of the factory's product, if the selling price were retained, an increase of wages by $36,000; and, of course, the rest of the cost, for materials, etc., would also be higher.

But under the New Deal theory the $200,000 selling price should remain the same or be increased only enough to allow a profit of $7,500. If the selling price were permitted to be increased to care for the increased cost of labor and of materials, the price to consumers would be 18 percent or $236,000 for the factories' products.

So the public would have to pay $36,000 more for the same products, while the capitalists would get only $7,500 return on its net worth, or about 3 percent.

This allows nothing for replacements due to depreciation in the factory or for enlargements which might mean more employees. Fine business theories of the New Deal.

It is in line with the OPA ruling that permits a good price on cotton but keeps the price of textiles so low that they are of inferior quality.

More Truman Snap Judgment

EXTENSION OF REMARKS
OF
HON. HARVE TIBBOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. TIBBOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Johnstown Tribune, Johnstown, Pa.:

MORE TRUMAN SNAP JUDGMENT

President Truman's announcement excluding the steel fabricators from the benefits of the price increase granted on basic steel products has thrown a good-sized monkey wrench into the machinery set up for the settlement of strikes affecting the smaller industries of the Nation. Just how the President expects the fabricating concerns to survive if they are compelled to grant an 18½-cent-an-hour increase in wages and the $5-a-ton increase in the price of steel is quite beyond our comprehension.

The decision of Mr. Truman, it seems to us, is radically at variance with his professed love for "the little fellows" in industry. In a sense, too, it is a slap in the face for Chester A. Bowles, his new Stabilization Director, who had announced that the fabricators would be permitted to adjust their prices in line with the increase granted basic steel.

Unfortunately, many of the fabricating companies have already signed contracts at the new wage rate on the assumption that they would be granted price relief. Those who have not yet signed up, therefore, are in a more fortunate position.

The Presidential decree will have the effect of prolonging the strikes among all such concerns and thereby keep well over 200,000 workmen idle.

Mr. Truman is rapidly acquiring a reputation for snap judgment on important problems, and this would appear to be another case in which he has spoken without giving the subject the consideration it should have had. He has had to reverse his position a number of times in recent months, and he will have to do it again if he wants to save the smaller industries from collapse.

Major General Willoughby Lauds MacArthur's Rule of Conquered Japanese

EXTENSION OF REMARKS
OF
HON. CHESTER H. GROSS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Gettysburg Times of March 3, 1946:

MAJOR GENERAL WILLOUGBY LAUDS MACARTHUR'S RULE OF CONQUERED JAPANESE

More interested in talking about the achievements of his chief than about his own distinguished war record, Maj. Gen. Charles A. Willoughby, crack intelligence officer for General MacArthur from Bataan to Tokyo, declared in an interview here Friday evening that MacArthur's conduct of the Japanese occupation would have won for him an immortal place in history without his previous combat record.

The general came to Gettysburg Friday afternoon as the week-end guest of Mrs. E. S. Lewars and her brother and sister-in-law, Mr. and Mrs. Paul Singmaster, Seminary Ridge. He will return to Washington, D. C., Sunday afternoon, and on Monday will board a plane which will take him back to Tokyo and General MacArthur. He consented to an interview by a reporter for the Gettysburg Times Friday evening at Mrs. Lewars' residence.

HAS MANY DECORATIONS

General Willoughby, who wears all the important Army decorations given by this Nation excepting the Congressional Medal of Honor, is generally credited with being in a

large measure responsible for the low casualty rate of MacArthur's land invasions through the thoroughness of his intelligence work.

With coveted decorations from China, the Dutch and Russia yet to be bestowed, General Willoughby already possesses the Distinguished Service Medal, the Distinguished Service Cross, the Silver Star, the Philippine DSM, the Order of the British Empire, the Philippine Liberation ribbon and the Presidential unit citation with two bronze clasps.

These decorations are in addition to those he accumulated in western front duty under MacArthur in World War I. That list included the French Croix de Guerre and Italian and British awards. South American countries also have added to his collection of medals.

TOOK A FEW CHANCES

The Distinguished Service Cross was given for action in the Palau Islands "where I took a few chances," the general explained in answer to the reporter's questions. The Silver Star was given for Willoughby's emergency action on January 24, 1942, on Bataan when he took command of a Philippine battalion "and kept them going for a day."

The DSM, the general said, covered his war services generally but the citation read to him at General MacArthur's headquarters in February 1944, when the award was made, did not use such modest terms.

The general was cited for "exceptionally meritorious service to the Government in a position of great responsibility." It went on to say that General Willoughby "speedily and with brilliant resourcefulness planned and put into action necessary agencies for providing the command with reliable and comprehensive information concerning the enemy in vast and inaccessible areas."

PRAISES MAC ARTHUR

Returning again to his emphatic praise for General MacArthur's occupation policies in Japan, General Willoughby said: "The situation in Japan today is very similar to that in the Philippines from 1904 to 1908. Our fair treatment then of the Philippine insurrectionists won them over to us, and, when the time came, they fought gallantly at our side."

Comparing General MacArthur's military stature with such great leaders as Lee and Napoleon, the general declared: "I've never known a commander who inspired such loyalty or who had a more intuitive grasp of the science of warfare."

Speaking of the bloodless occupation of Japan's mainland, General Willoughby observed that MacArthur's "superb judgment enabled him to sense just how far he could go to make the Emperor and the nation bow to his rule. Had he not made exactly correct decisions the occupation of Japan would have been a bloody affair."

The atomic bomb was the "last straw" for the Japs and broke their will to resist. Without the use of the bomb, the costly victory would have come from 1 to 4 months after the invasion of Kyushu, the general believes.

AVOIDED CHAOS IN JAPAN

"MacArthur took over Japan with a handful of men, literally surrounded by 51 divisions of Japanese troops and menaced by an air force of several thousand planes with Kamikaze pilots. We used the only man in Japan who could implement our orders—the Emperor. There were "continue the war" hotheads in his council but he cast the deciding vote for surrender. If Hirohito had not been handled as aptly as he was, there would have been chaos in Japan.

"We had only a handful of Japanese speaking officers and 4,000 Nisei, whose intelligence work in the Pacific was of greatest value. If the Emperor had quit or been killed, we would have had the impossible task of running Japan.

"In Japan there has been no trouble, no sabotage, no fighting, no deaths—thanks to MacArthur's discreet handling of a situation that had trouble constantly seething beneath the surface.

"Let's leave this brilliant commander alone. There is nothing that a four-power committee can do in Japan half as well as this great patriot and statesman has done and is doing," he urged.

PRAISES NISEI

General Willoughby has the greatest praise for the services of the Nisei (Jap-Americans). "They were our greatest discoverers of information. They hit the beach with the combat forces—knowing that if they were captured they'd be boiled in oil at least—and rounded up every scrap of paper information they could find—letters, diaries, orders, troop dispositions, and so on.

"The Bismarck Sea victory brought Intelligence its first big break in the Pacific war. It was probably the biggest single 'find' of the Pacific war. The Jap Navy was utterly routed, but a handful of survivors—machine-gunned by Australians as they landed—brought ashore a three-volume copy of the latest Japanese Army register with 2,700 pages of Jap officers and their latest assignments. Our Niseis translated the document, and we supplied copies to all our forces and allies in the Pacific.

"From that day on, by picking up Jap division radio messages, we were able to trace not only the exact location of each division but we knew where most of their officers were at all times.

"We kept casualties at a minimum by gaining complete information on every sector before we attacked. We knew where the tough spots were and avoided them. They were taken from the rear later. I was a company commander in the First World War, and I decided then that if ever I was in a position of authority I would see to it that officers had all the information possible about the territory they were attacking. We supplied detailed maps to every officer, down to platoon leaders, showing the section he was operating in—even down to jungle paths. That helped a great deal.

"MacArthur had the toughest task of any war commander. Through late 1942 and much of 1943, when a vast part of our war plant production was going to north Africa, MacArthur was getting only a drop.

"At the same time he was placed in the position of being unable to lose a single battle. One defeat and the white man would have lost face completely in the Far East and I believe China would have quit."

General Willoughby, a graduate of Gettysburg College in 1914, was in Gettysburg last in 1938. During that visit, he served as interpreter at a luncheon given at the Hotel Gettysburg by General Marshall, then Chief of Staff, for the Brazilian chief of staff who came here to visit the battlefield.

General Willoughby returned to the Philippines with General MacArthur in March of 1939 to head his intelligence staff. He was with MacArthur at Bataan and went with him in March 1942, on that hazardous trip by PT-boat and Flying Fortress to Australia.

The general was interested to learn Friday evening that an Adams County boy, Sgt. Henry Pecher, was a member of the crew of one of the four B-17's that went on that rescue mission. Pecher was in one of two planes that crashed en route to meet MacArthur's party.

It was the tall General Willoughby who met with the first Japanese peace envoys as the Pacific war was ending and he had an official role in the formal surrender ceremonies aboard the battleship *Missouri* when the Japs quit.

General Willoughby has been in the States for the last month—in Washington, D. C., and visiting with friends. He came here from Bronxville, N. Y., where he was the guest of Arthur J. Singmaster, brother of Mrs. Lewars.

Price Control Means Production Control

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. SCHWABE of Oklahoma. Mr. Speaker, I have received many letter recently from constituents of mine and people from different sections of the United States. It seems that they have about come to the conclusion that fixation of prices, planned economy, and regulation of commodity prices in the name of inflation prevention, have exactly the opposite effect from that they were designed to have. Price controls mean production controls.

But this is in keeping with the New Deal philosophy of scarcity. Scarcity means limited production, and limited production really means higher prices. Higher prices, with inflated currency such as we have, means inflation. The red tape of OPA and other agencies controlling prices and regulating production has resulted in the closing of many businesses and the curtailment of much production. What we need is an abundance of production, rather than limited production. Controlled economy will not result in abundant production. Only abundant production will bring about an equitable price structure. The law of supply and demand, if unhampered and uninterfered with by "new dealocracy," will produce the desired results and avoid inflation.

Some time ago I received a letter from one who seems to know his subject and who perceives where the "new dealirium" is leading us. I quote the letter from an Oklahoma City, Okla., citizen:

HON. GEORGE SCHWABE,
House Office Building,
Washington, D. C.

DEAR MR. SCHWABE: About 150 years ago, according to what I consider reliable authority, France, after one of her many wars, tried to work a system of price controls because there was a shortage of materials and prices were increasing at a tremendous rate and runaway inflation was very evident. They even went so far that people were tried and sent to prison, even put to death. They found after about 2 years that price control was not only not keeping prices down, but it was causing the very thing that the government feared most—that was inflation—because price control did not control prices, it only controlled production, because the goods people wanted could not be produced by the manufacturers so they just quit and left all production to the black markets, who were not controlled and they, in time, produced enough that they supplied the market and the prices came back. Now we have the same thing. Are you controlling prices or are you controlling production? I, for one, and there are many millions like me, am very much convinced that you are only controlling production and that nothing you can do in the way of laws will change the law of supply and demand and nothing but that law will keep prices down.

I do not see how anyone could help but realize that what is causing the strikes is higher cost of living, yet Mr. Bowles would have us believe that it costs no more now than in 1942; that is, when we asked him

for a rent adjustment. But take a $5 bill and go to a grocery store—I do not say that they are not justified in getting the prices they ask and get, but at least we do have groceries. But how in Heaven's name can General Motors be expected to raise wages to meet the strikers' demands if they have the prices controlled on their cars? What is the result? They do not make cars. The officials will be able to pay their grocery bills for several months without making cars, but what about the workers? Maybe they can be paid by the Government, and then what have you? It just does not make sense to me. Maybe I am dumb, but since the law of supply and demand has always worked, why all at once does it not work? I believe it will.

Of course, we have had a big war and the American people produced enough war material in two short years to win that war against nations that had been preparing for it for 10 years while we were being told by our leaders in Washington, and I quote: "No mother's son will ever fight on foreign soil if I am elected." You no doubt remember that very well. If the people could do that in that time, does it seem reasonable that we cannot produce enough to stop inflation from running away? I think we can. But again, only production will stop it; price control which only controls that production will not.

Do you think even a small manufacturer is going to go out and buy a lot of raw material on which the prices, to a great extent, are not controlled, and make up a lot of articles and then take a chance that some bureaucrat who knows nothing about his line will set a price on it that will break him, or he will have to pay off so much that it will break him? If I were he I would lock the door and go fishing. Wouldn't you? And that is what thousands of them are doing now. And we do not like it at all. We want radios, cars, and such things.

Mr. Bowles is boasting that rent control is working. Of course, it should, because the property owner is taking a beating every month. Property is running down and no repairs are being made, or it is being rented on the black market, either of which is bad. But is it working, or is it causing a greater housing shortage? I believe that in Oklahoma City there are about 3,000 vacancies, part of them caused by property being held for sale, of course, but I believe a lot of them are vacant because the owners cannot afford to rent them at the ceiling prices. Here is just one example. In the 600 block of Third Street is a large house in which there are three apartments. The owner pays the bills. The OPA cut the rent to $4.50 per week which is about $54 per month for the whole house and the bills run over $50. That house is locked up now and I see many others like that over the city. There is no question in my mind but that the OPA can cure the house shortage here in 60 days by doing two things. And believe it or not it is not the elimination of rent control, though I think it would be a good idea; but if the regulation which keeps a property owner from getting possession of his property was done away with, and a 20-percent increase in rent was allowed the property owners, the housing shortage would be solved here, because there are enough houses vacant which the owners will not rent because they cannot get possession of them when they want to take care of the situation. Again, does price control really control prices, or does it only control production? Of course, I may be wrong, but I have spent most of my life in this business.

Did it ever occur to you that we could not pay on a national debt of $300,000,000,000 without inflation of some kind? Well, it has to most of us. It will cost more to run the Federal Government this year than all the people made in 1933. Then why not try to cut the cost of the Government, and do away with some of the bureaus and bureaucrats, or are they bigger and stronger than our Congress? If they are, maybe we should get a new Congress. A lot of us are thinking about that, too.

How far have we come along toward national socialism in the last 15 years? I do not need to ask you. You know. But the one thing that most of us cling to is that under our system we can sometimes change the men in office and it will work better than changing the form of government. I think we have the greatest country and the greatest Government in the world and we want to keep it that way. That, I am sure, you will agree with; then why try to change it? I believe the people are smart enough to run their own business, and I believe that you think so too. Why not let them try? It could not be a much worse mess than it is now.

The immediate need, of course, is production and more production. We have the raw materials, we have the manpower, we have the machinery, we have the money to pay for the goods. We seem to have everything except the brains to get it started. You cannot control one thing without throwing something else out of line and then when you try to control that you throw something else out of line, and so on. This system of controls which is the law of supply and demand has been built up over a period of 160 years and it works. Of course, if we want to pattern after England, then we can have Government control; but our forefathers left that country many years ago because they did not like that. Were they all wrong? I do not think so.

At least you can do this. The present price-control law will not expire until June 30. What is the use of renewing it now? It cannot hurt anything to wait and the thing may look entirely different by then. A great many things have happened in a much shorter time. We may not need it then, and it might not hurt the tax burden of the people if about a million of the people now on the pay roll would have to look for a job, and I believe it would help our idea of Congress. It is something to think about, anyway.

Milwaukee Wants More Air Service

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. BIEMILLER. Mr. Speaker, I wish to insert in the RECORD a resolution of the Common Council of the City of Milwaukee protesting the report of an examiner of the Civil Aeronautics Board which is against the interests of our city and the entire area of which it is the center.

At the present time Milwaukee, the thirteenth city in the country, has direct service from only two air lines, one to the East and one to the East and Northwest. Five other air lines have petitioned the Commission to initiate direct service between Milwaukee and other parts of the country, and their petition has been denied.

Milwaukee needs such service, particularly to the South, Southwest, and California, and can support it. The air lines are eager to give it. The Chicago airport, through which a large part of Milwaukee air travel must be shuttled, is already overcrowded and inconveniently located. Milwaukee is 90 miles away from Chicago and is definitely not a suburb of that city. Milwaukee is the thirteenth largest city in population and tenth in value of manufactured products.

I sincerely hope the Civil Aeronautics Board will overrule the short-sighted report of its examiner.

Whereas the applications of the United Airlines, American, Chicago and Southern, and Eastern Airlines, also the Midwest Airways, Inc., of Milwaukee, as well as other feeder lines, for routes to Milwaukee have been rejected by the Civil Aeronautics Board examiner, much to our regret and surprise; and

Whereas the examiner's recommendations would deny Milwaukee what it is rightfully entitled to, that is, the right to give and have air service throughout the Nation, as well as transcontinental service; and

Whereas the Civil Aeronautics Board will rule upon the findings of the examiner, we believe every effort should be made to give Milwaukee (which is the thirteenth largest city in the Nation) such service as it deserves and that we should petition this board to give us favorable consideration: Now, therefore, be it

Resolved, That the Common Council of the City of Milwaukee does hereby petition the Civil Aeronautics Board to set aside the recommendations of the examiner, Mr. F. Merritt Ruhlen, and urges the Board to give its approval of the applications of the United Airlines, Chicago and Southern, American, and Eastern Airlines, also the Midwest Airways, Inc., of Milwaukee, to serve Milwaukee as well as other Wisconsin feeder routes; and be it further

Resolved, That the common council offers its wholehearted support to the County of Milwaukee and the Milwaukee Association of Commerce in making this appeal to the Civil Aeronautics Board for favorable action and that copies of this resolution be forwarded to the Civil Aeronautics Board, the Milwaukee Association of Commerce, the county board, and to our United States Senators and Representatives in Congress.

More New Deal Scarcity

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. SCHWABE of Oklahoma. Mr. Speaker, the philosophy of the New Deal has been a philosophy of scarcity. Under the guise of attempting to hold prices down for the consumer, there has been developed a scarcity of commodities and consumer goods. This has made prices higher. It has promoted inflation. Some argue that we should keep price controls until production approaches the demands of consumption. But the longer we wait, the scarcer the articles become and the more difficult it is to remove the controls. Then, when they are removed—and I

doubt if the New Dealocrats actually want to remove imposed regimentation or planned economy at any time—the prices may skyrocket and inflation may become rampant.

Water will always seek its own level, if unrestrained. The same principle applies to the field of economics. What we need is not more limited production, but more abundant production. Abundance will bring prices down to the level at which the producer cannot expect to, and will not, receive more for his commodities than the cost of production plus a reasonable profit. That is the way the natural law of supply and demand has always worked and always will work successfully. That prevents inflation, and it is the only sure prevention. But the New Deal theories of scarcity will some day develop a serious inflation, a runaway inflation, and we will be caught with high prices and scarcely any production. This will be the result of more New Deal scarcity which we are having forced upon us constantly by OPA and other regulatory and regimenting agencies and bureaus of the National Government.

Mr. Speaker, I am just in receipt of a letter from J. E. McDonald, commissioner of agriculture of the great State of Texas, dated March 4, 1946, in which he encloses a copy of a telegram he said he sent to President Truman on the date he wrote me. Mr. McDonald requested me to take time to read his telegram and give its contents favorable consideration. I was so impressed with the soundness of his thinking and the expressions of his convictions as set forth in his message to the President, that I thought it might be well to pass it on for the benefit of my colleagues and of all who read the CONGRESSIONAL RECORD. Mr. McDonald's telegram to the President follows:

AUSTIN, TEX., *March 4, 1946.*

President HARRY S. TRUMAN,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: Rather than the suggestion that the American people consume 25 percent less food in order that starving peoples in war-torn nations may eat, why not ask American farmers to produce 25 percent more food and then either remove OPA or increase ceiling prices sufficiently to enable them to do so? Recently, organized labor and the steel industry were granted substantial wage and steel price increases and now comparable farm wage increases and higher prices for farm products must be provided or the Nation will be confronted with a greater scarcity of food and a lopsided economy, unemployment, and Government subsidies. The announced 2 percent to 3-percent raise in ceiling prices for grain is grossly insufficient and taken into comparison with the 15- to 20-percent wage increases recently given industrial workers constitutes an insult to the intelligence of the American farmer. This Government has tried and proven the fallacy of attaining prosperity and happiness through the policy of scarcity. May we never again make the mistake of plowing up cotton and killing little pigs and cattle or otherwise curtailing production while there are hungry and naked at home or abroad. Full production of agricultural and industrial commodities with equitable and full parity prices paid for that portion domestically consumed and world-market prices for that portion exported would give this Nation security and tax-paying power to liquidate the enormous national debt. We need equitable floor prices on agricultural commodities to encourage production and not unfair ceiling prices to discourage and make impossible adequate production. Let this be a government of and for all the people as our forefathers intended it to be.

J. E. MCDONALD,
Texas Commissioner of Agriculture.

Lumber Production

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. VURSELL. Mr. Speaker, I am inserting in the RECORD, as a part of my remarks, a communication from the Illinois Lumber and Material Dealers Association, directed to me and other members from Illinois, the contents of which I urge the Members of the House to read and study carefully because you will get a clearer picture and the reasons why lumber is not available for the building of homes for veterans and for other purposes.

The Illinois Lumber and Material Dealers Association makes out the case for your lumber dealers in every State and in every district in the Nation. It is not only a call for greater production, citing the reasons how it can be brought about but it is a desperate plea of the retail lumber dealers throughout the Nation for the preservation of private enterprise.

I urge the Members to study this analysis from the Illinois Lumber and Material Dealers Association because in it you will find information you should have in approaching the question of the extension of the OPA for another year.

You will see why the OPA officials must have some common sense knocked into their heads by definite amendments in order to get better administration of the act, or in the event the act cannot be amended, the best reason why the OPA should be abolished.

The communication follows:

ILLINOIS LUMBER AND MATERIAL DEALERS ASSOCIATION, INC.,
Springfield, Ill., March 7, 1946.

Hon. CHARLES W. VURSELL,
House of Representatives,
Washington, D. C.

DEAR SIR: As the congressional representative of the people of Illinois, I feel sure that you are greatly concerned with the problems which beset its citizens, the small businessmen, their employees and their families. For that reason I am submitting to you the following report of conditions in the retail lumber distribution field which is a true and factual report and not in accord with the fanciful statements you have been receiving from Washington departments.

I am asking you to read carefully this report, beginning with the following telegram:

"FEBRUARY 21, 1946.

"Mr. GEOFFREY BAKER,
"Deputy Administrator in Charge of Price,
"Office of Price Administration,
"Washington, D. C.:

"Very possible that any further attempts to force absorption on retail lumber dealers can result in many yards closing, further hampering distribution of materials to alleviate housing shortage. Many others will disregard regulation reminiscent of eighteenth amendment. Action preventing yards handling self-owned timber discriminatory and will reduce production. Suggest you get practical advice of industry advisory committee. Above consensus of 1,222 Illinois dealers.

"J. D. MCCARTHY,
"Secretary, Illinois Lumber and Material Dealers Association.

"During the entire period of the war the retail lumber dealers contributed wholeheartedly to this program both in delivery of lumber to the war effort, and to the domestic essential economy. War plants which were unable to secure even a promise of lumber shipments from the mills were able to get it on an hour's call from the local dealer. Cargo ships in the ways were rushed to completion because the dealers along the Gulf coast rushed needed lumber to them in a matter of hours, and not months.

"The retail lumber dealers made no effort to take advantage of this emergency situation by highly inflated prices. They adhered strictly to the mill ceiling prices as established by the OPA, and added only the historic percentage mark-up which they had used over many years—and which experience had taught they required to continue in existence.

"On August 11, 1943, the OPA established RMPR 215, which was a pricing formula by which the retail lumber dealer established his selling price. This formula was only established by the OPA after exhaustive examination of the historic percentage mark-ups which Illinois dealers have always used; the cost of doing business and the profit returns as discovered through the Bureau of Internal Revenue and the Labor Department.

"I wish to repeat with emphasis that this formula was established wholly by the OPA as a fair and equitable retail sales price for the seller and the consuming public.

"The war ended and the lumber industry appeared to be in a favorable position with no reconversion problems but with the tremendous task ahead of supplying the materials and building the homes which had been at a practical standstill for over 4 years. But instead of building materials being produced in greater volume, the production rapidly decreased and in some cases seemed almost to disappear.

"Why? The answer to the question and the blame for the conditions can be laid directly on the doorstep of the OPA.

"Why is there no lumber for the building of homes for GI veterans? Because the State Department and the Foreign Economic Administration have taken 225,000,000 board feet of lumber for the first quarter of 1946, 1,000,000 board feet for the full year of 1946, or enough lumber for 85,000 homes, for shipments to foreign countries such as Spain and others in South America to maintain diplomatic and export relations.

"Because the OPA, by the use of fancy clauses, permits the lumber manufacturer to receive as much as $8 a thousand board feet premium for shipping this lumber out of the country as he would receive if sold to lumber dealers for use in a GI house.

"Because the OPA by the use of fancy clauses permits the lumber manufacturer

for a rent adjustment. But take a $5 bill and go to a grocery store—I do not say that they are not justified in getting the prices they ask and get, but at least we do have groceries. But how in Heaven's name can General Motors be expected to raise wages to meet the strikers' demands if they have the prices controlled on their cars? What is the result? They do not make cars. The officials will be able to pay their grocery bills for several months without making cars, but what about the workers? Maybe they can be paid by the Government, and then what have you? It just does not make sense to me. Maybe I am dumb, but since the law of supply and demand has always worked, why all at once does it not work? I believe it will.

Of course, we have had a big war and the American people produced enough war material in two short years to win that war against nations that had been preparing for it for 10 years while we were being told by our leaders in Washington, and I quote: "No mother's son will ever fight on foreign soil if I am elected." You no doubt remember that very well. If the people could do that in that time, does it seem reasonable that we cannot produce enough to stop inflation from running away? I think we can. But again, only production will stop it; price control which only controls that production will not.

Do you think even a small manufacturer is going to go out and buy a lot of raw material on which the prices, to a great extent, are not controlled, and make up a lot of articles and then take a chance that some bureaucrat who knows nothing about his line will set a price on it that will break him, or he will have to pay off so much that it will break him? If I were he I would lock the door and go fishing. Wouldn't you? And that is what thousands of them are doing now. And we do not like it at all. We want radios, cars, and such things.

Mr. Bowles is boasting that rent control is working. Of course, it should, because the property owner is taking a beating every month. Property is running down and no repairs are being made, or it is being rented on the black market, either of which is bad. But is it working, or is it causing a greater housing shortage? I believe that in Oklahoma City there are about 3,000 vacancies, part of them caused by property being held for sale, of course, but I believe a lot of them are vacant because the owners cannot afford to rent them at the ceiling prices. Here is just one example. In the 600 block of Third Street is a large house in which there are three apartments. The owner pays the bills. The OPA cut the rent to $4.50 per week which is about $54 per month for the whole house and the bills run over $50. That house is locked up now and I see many others like that over the city. There is no question in my mind but that the OPA can cure the house shortage here in 60 days by doing two things. And believe it or not it is not the elimination of rent control, though I think it would be a good idea; but if the regulation which keeps a property owner from getting possession of his property was done away with, and a 20-percent increase in rent was allowed the property owners, the housing shortage would be solved here, because there are enough houses vacant which the owners will not rent because they cannot get possession of them when they want to take care of the situation. Again, does price control really control prices, or does it only control production? Of course, I may be wrong, but I have spent most of my life in this business.

Did it ever occur to you that we could not pay on a national debt of $300,000,000,000 without inflation of some kind? Well, it has to most of us. It will cost more to run the Federal Government this year than all the people made in 1933. Then why not try to cut the cost of the Government, and do away with some of the bureaus and bureaucrats, or are they bigger and stronger than our Congress? If they are, maybe we should get a new Congress. A lot of us are thinking about that, too.

How far have we come along toward national socialism in the last 15 years? I do not need to ask you. You know. But the one thing that most of us cling to is that under our system we can sometimes change the men in office and it will work better than changing the form of government. I think we have the greatest country and the greatest Government in the world and we want to keep it that way. That, I am sure, you will agree with; then why try to change it? I believe the people are smart enough to run their own business, and I believe that you think so too. Why not let them try? It could not be a much worse mess than it is now.

The immediate need, of course, is production and more production. We have the raw materials, we have the manpower, we have the machinery, we have the money to pay for the goods. We seem to have everything except the brains to get it started. You cannot control one thing without throwing something else out of line and then when you try to control that you throw something else out of line, and so on. This system of controls which is the law of supply and demand has been built up over a period of 160 years and it works. Of course, if we want to pattern after England, then we can have Government control; but our forefathers left that country many years ago because they did not like that. Were they all wrong? I do not think so.

At least you can do this. The present price-control law will not expire until June 30. What is the use of renewing it now? It cannot hurt anything to wait and the thing may look entirely different by then. A great many things have happened in a much shorter time. We may not need it then, and it might not hurt the tax burden of the people if about a million of the people now on the pay roll would have to look for a job, and I believe it would help our idea of Congress. It is something to think about, anyway.

Milwaukee Wants More Air Service

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. BIEMILLER. Mr. Speaker, I wish to insert in the RECORD a resolution of the Common Council of the City of Milwaukee protesting the report of an examiner of the Civil Aeronautics Board which is against the interests of our city and the entire area of which it is the center.

At the present time Milwaukee, the thirteenth city in the country, has direct service from only two air lines, one to the East and one to the East and Northwest. Five other air lines have petitioned the Commission to initiate direct service between Milwaukee and other parts of the country, and their petition has been denied.

Milwaukee needs such service, particularly to the South, Southwest, and California, and can support it. The air lines are eager to give it. The Chicago airport, through which a large part of Milwaukee air travel must be shuttled, is already overcrowded and inconveniently located. Milwaukee is 90 miles away from Chicago and is definitely not a suburb of that city. Milwaukee is the thirteenth largest city in population and tenth in value of manufactured products.

I sincerely hope the Civil Aeronautics Board will overrule the short-sighted report of its examiner.

Whereas the applications of the United Airlines, American, Chicago and Southern, and Eastern Airlines, also the Midwest Airways, Inc., of Milwaukee, as well as other feeder lines, for routes to Milwaukee have been rejected by the Civil Aeronautics Board examiner, much to our regret and surprise; and

Whereas the examiner's recommendations would deny Milwaukee what it is rightfully entitled to, that is, the right to give and have air service throughout the Nation, as well as transcontinental service; and

Whereas the Civil Aeronautics Board will rule upon the findings of the examiner, we believe every effort should be made to give Milwaukee (which is the thirteenth largest city in the Nation) such service as it deserves and that we should petition this board to give us favorable consideration: Now, therefore, be it

Resolved, That the Common Council of the City of Milwaukee does hereby petition the Civil Aeronautics Board to set aside the recommendations of the examiner, Mr. F. Merritt Ruhlen, and urges the Board to give its approval of the applications of the United Airlines, Chicago and Southern, American, and Eastern Airlines, also the Midwest Airways, Inc., of Milwaukee, to serve Milwaukee as well as other Wisconsin feeder routes; and be it further

Resolved, That the common council offers its wholehearted support to the County of Milwaukee and the Milwaukee Association of Commerce in making this appeal to the Civil Aeronautics Board for favorable action and that copies of this resolution be forwarded to the Civil Aeronautics Board, the Milwaukee Association of Commerce, the county board, and to our United States Senators and Representatives in Congress.

More New Deal Scarcity

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. SCHWABE of Oklahoma. Mr. Speaker, the philosophy of the New Deal has been a philosophy of scarcity. Under the guise of attempting to hold prices down for the consumer, there has been developed a scarcity of commodities and consumer goods. This has made prices higher. It has promoted inflation. Some argue that we should keep price controls until production approaches the demands of consumption. But the longer we wait, the scarcer the articles become and the more difficult it is to remove the controls. Then, when they are removed—and I

doubt if the New Dealocrats actually want to remove imposed regimentation or planned economy at any time—the prices may skyrocket and inflation may become rampant.

Water will always seek its own level, if unrestrained. The same principle applies to the field of economics. What we need is not more limited production, but more abundant production. Abundance will bring prices down to the level at which the producer cannot expect to, and will not, receive more for his commodities than the cost of production plus a reasonable profit. That is the way the natural law of supply and demand has always worked and always will work successfully. That prevents inflation, and it is the only sure prevention. But the New Deal theories of scarcity will some day develop a serious inflation, a runaway inflation, and we will be caught with high prices and scarcely any production. This will be the result of more New Deal scarcity which we are having forced upon us constantly by OPA and other regulatory and regimenting agencies and bureaus of the National Government.

Mr. Speaker, I am just in receipt of a letter from J. E. McDonald, commissioner of agriculture of the great State of Texas, dated March 4, 1946, in which he encloses a copy of a telegram he said he sent to President Truman on the date he wrote me. Mr. McDonald requested me to take time to read his telegram and give its contents favorable consideration. I was so impressed with the soundness of his thinking and the expressions of his convictions as set forth in his message to the President, that I thought it might be well to pass it on for the benefit of my colleagues and of all who read the CONGRESSIONAL RECORD. Mr. McDonald's telegram to the President follows:

AUSTIN, TEX., *March 4, 1946.*

President HARRY S. TRUMAN,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: Rather than the suggestion that the American people consume 25 percent less food in order that starving peoples in war-torn nations may eat, why not ask American farmers to produce 25 percent more food and then either remove OPA or increase ceiling prices sufficiently to enable them to do so? Recently, organized labor and the steel industry were granted substantial wage and steel price increases and now comparable farm wage increases and higher prices for farm products must be provided or the Nation will be confronted with a greater scarcity of food and a lopsided economy, unemployment, and Government subsidies. The announced 2 percent to 3-percent raise in ceiling prices for grain is grossly insufficient and taken into comparison with the 15- to 20-percent wage increases recently given industrial workers constitutes an insult to the intelligence of the American farmer. This Government has tried and proven the fallacy of attaining prosperity and happiness through the policy of scarcity. J. E. MCDONALD,
Texas Commissioner of Agriculture.

Lumber Production

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 8, 1946

Mr. VURSELL. Mr. Speaker, I am inserting in the RECORD, as a part of my remarks, a communication from the Illinois Lumber and Material Dealers Association, directed to me and other members from Illinois, the contents of which I urge the Members of the House to read and study carefully because you will get a clearer picture and the reasons why lumber is not available for the building of homes for veterans and for other purposes.

The Illinois Lumber and Material Dealers Association makes out the case for your lumber dealers in every State and in every district in the Nation. It is not only a call for greater production, citing the reasons how it can be brought about but it is a desperate plea of the retail lumber dealers throughout the Nation for the preservation of private enterprise.

I urge the Members to study this analysis from the Illinois Lumber and Material Dealers Association because in it you will find information you should have in approaching the question of the extension of the OPA for another year.

You will see why the OPA officials must have some common sense knocked into their heads by definite amendments in order to get better administration of the act, or in the event the act cannot be amended, the best reason why the OPA should be abolished.

The communication follows:

ILLINOIS LUMBER AND MATERIAL DEALERS ASSOCIATION, INC.,
Springfield, Ill., March 7, 1946.

Hon. CHARLES W. VURSELL,
House of Representatives,
Washington, D. C.

DEAR SIR: As the congressional representative of the people of Illinois, I feel sure that you are greatly concerned with the problems which beset its citizens, the small businessmen, their employees and their families. For that reason I am submitting to you the following report of conditions in the retail lumber distribution field which is a true and factual report and not in accord with the fanciful statements you have been receiving from Washington departments.

I am asking you to read carefully this report, beginning with the following telegram:

"FEBRUARY 21, 1946.

"Mr. GEOFFREY BAKER,
"Deputy Administrator in Charge of Price,
"Office of Price Administration,
"Washington, D. C.:

"Very possible that any further attempts to force absorption on retail lumber dealers can result in many yards closing, further hampering distribution of materials to alleviate housing shortage. Many others will disregard regulation reminiscent of eighteenth amendment. Action preventing yards handling self-owned timber discriminatory and will reduce production. Suggest you get practical advice of industry advisory committee. Above consensus of 1,222 Illinois dealers.

"J. D. MCCARTHY,
"Secretary, Illinois Lumber and Material Dealers Association.

"During the entire period of the war the retail lumber dealers contributed wholeheartedly to this program both in delivery of lumber to the war effort, and to the domestic essential economy. War plants which were unable to secure even a promise of lumber shipments from the mills were able to get it on an hour's call from the local dealer. Cargo ships in the ways were rushed to completion because the dealers along the Gulf coast rushed needed lumber to them in a matter of hours, and not months.

"The retail lumber dealers made no effort to take advantage of this emergency situation by highly inflated prices. They adhered strictly to the mill ceiling prices as established by the OPA, and added only the historic percentage mark-up which they had used over many years—and which experience had taught they required to continue in existence.

"On August 11, 1943, the OPA established RMPR 215, which was a pricing formula by which the retail lumber dealer established his selling price. This formula was only established by the OPA after exhaustive examination of the historic percentage mark-ups which Illinois dealers have always used; the cost of doing business and the profit returns as discovered through the Bureau of Internal Revenue and the Labor Department.

"I wish to repeat with emphasis that this formula was established wholly by the OPA as a fair and equitable retail sales price for the seller and the consuming public.

"The war ended and the lumber industry appeared to be in a favorable position with no reconversion problems but with the tremendous task ahead of supplying the materials and building the homes which had been at a practical standstill for over 4 years. But instead of building materials being produced in greater volume, the production rapidly decreased and in some cases seemed almost to disappear.

"Why? The answer to the question and the blame for the conditions can be laid directly on the doorstep of the OPA.

"Why is there no lumber for the building of homes for GI veterans? Because the State Department and the Foreign Economic Administration have taken 225,000,000 board feet of lumber for the first quarter of 1946, 1,000,000 board feet for the full year of 1946, or enough lumber for 85,000 homes, for shipments to foreign countries such as Spain and others in South America to maintain diplomatic and export relations.

"Because the OPA, by the use of fancy clauses, permits the lumber manufacturer to receive as much as $5 a thousand board feet premium for shipping this lumber out of the country as he would receive if sold to lumber dealers for use in a GI house.

"Because the OPA by the use of fancy clauses permits the lumber manufacturer

to receive as much as $10 a thousand more for the sale of lumber to railroads than he would receive if he sold the same items to retail lumber dealers to be used in the building of a GI house.

"Because the OPA still clings to pricing formulas which were given the lumber manufacturers as an incentive to produce heavy items for the war effort in the South Pacific whereby the lumber manufacturer receives $6 and $8 a thousand premium for these timbers and heavy dimensions over the amount he can receive for those items necessary to build homes; such as, siding, centermatch, shiplap, flooring, and ceiling.

"As an incentive to stimulate production of southern pine lumber, the OPA granted the southern lumber manufacturers an increase of $2.50 a thousand on November 29, and a second increase of $3.25 a thousand on February 13 They have also granted the manufacturers of hardwood flooring an increase of 10 percent to stimulate production. In all of these price increases to the mills, they have simultaneously issued regulations which force the retail lumber dealer to absorb these price increases. In addition to this absorption, they have also provided that the retail lumber dealer must now discontinue the handling charges which have always been recognized as a cost of doing business and which the OPA themselves recognized and set up in the RMPR 215 formula.

"So that you may more fully understand the penalty which is being imposed on the retail lumber dealer, I give you below two tables, the first of which shows how the dealer arrived at this retail selling price under the original formula, and what is now proposed by OPA regulations:

"Original formula MPR 215 of Aug. 11, 1943

"In-yard cost of item	$50.00
"Handling charge	$5.00
	$55.00
"30-percent mark-up	$16.50
"Retail selling price	$71.50
"Profit in dollars	$21.50
"Percent mark-up on cost	43
"Percent mark-up on sales	30

"New formula of OPA

"In-yard cost of item	$50.00
"2-percent buying commission	$1.00
	$51.00
"30-percent mark-up	$15.25
	$66.25
"Less wholesalers' commission of 5 percent	$2.50
"Retail selling price	$93.75
"Profit in dollars	$13.75
"Percent mark-up on cost	27.5
"Percent mark-up on sales	20.75

"Both the percentage mark-up on cost and the percentage mark-up on sales is now much below the amounts the dealer was accustomed to receive in prewar years, and which we hold is an illegal violation on the part of the OPA which, when created by Congress in the War Powers Act, established they could not impose any regulations which would disturb or disrupt established practices of industry.

"The OPA admits that more than 50 percent of southern pine lumber is now being sold through the black market. This is an understatement—it actually amounts to over 80 percent. Truckers with no identifying names on their vehicles are peddling black-market lumber on the streets of every town and city in the entire southeastern area. The prices they are demanding and receiving from contractors building night clubs, saloons, bowling alleys, theaters, etc., are far in excess of the legitimate retail ceiling price. The mills themselves are in violation of the OPA regulation which stipulates they cannot sell at retail.

"Despite repeated protest by the industry, the men who are in charge of OPA from Chester Bowles down to office clerks have refused to take any action whatever against these black-market violations. Rather, their whole attitude is one of encouragement and assistance to increase the scope of these black-market activities.

"The retail lumber dealers of Illinois have been willing to comply with OPA regulations as long as they permitted a fair and legitimate profit for the operation of their business, and so long as the OPA made honest efforts to prevent price violations by either mills or unscrupulous retailers. But in view of the record of the OPA, and in the light of their discriminatory tactics and un-American policies, the dealers' position and intention is set forth in the wire which was sent to Mr. Geoffrey Baker.

"You owe it to your constituents in Illinois to take vigorous action in their defense and have two apparent courses open. Take this matter up on the floor of Congress and demand that the OPA either completely abolish the absorption policy and impose compliance—or else vigorously take your stand with those Congressmen who demand the complete abolishment of the Office of Price Administration.

"The retail lumber dealers of Illinois would appreciate having from you some acknowledgement of the above statement with some indication of what definite action you propose to take in regard to the conditions which we have above set forth. May we hear from you at an early date?

"Yours very truly,

"J. D. McCARTHY,

"Secretary, Illinois Lumber & Material Dealers Association."

Price Control

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the Progressive Mine Workers of America, in convention assembled, February 26, 1946, at Springfield, Ill., in support of extension of the Office of Price Administration:

Whereas America's peacetime prosperity depends upon full production and full employment; and

Whereas this goal can be achieved only by maintaining mass purchasing power so that there will be a steady demand for the products of industry and agriculture; and

Whereas inflation destroys the purchasing power of the masses and thus destroys the market for the plentiful supplies of goods that will become available when peacetime production is fully resumed; and

Whereas price control, during the transition period while goods are scarce and demands are heavy, will prevent inflation: Therefore be it

Resolved, That this convention go on record requesting that all Representatives of the Congress of the United States support the Office of Price Administration 100 percent; and be it further

Resolved, That all Representatives of Congress be requested to vote in behalf of said program; and be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, one to Chester Bowles, director of Economic Stabilization, and one to Paul A. Porter, Administrator of the Office of Price Administration.

Tax Exemptions for Veterans

EXTENSION OF REMARKS

OF

HON. JOHN B. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 8, 1946

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks, I am including herewith a resolution taken from the American War Dads' publication of February 1946 with reference to tax exemption for veterans of World War II:

TAX-EXEMPTIONS RECOMMENDED

Whereas the American War Dads realize the abrupt transition to civilian life by our boys released from the armed forces, which does not give them an opportunity to adjust themselves to the employment wage deductions pertaining to withholding tax and social security; and

Whereas a situation has arisen and continues to become more serious in that a veteran returning from service discovers that after income tax and other deductions, his take-home pay is not in sufficient degree greater than the allowance granted by the Government, resulting in a decision to accept the Government allowance in order to hopefully seek occupation with greater remuneration: Therefore be it

Resolved, That we, the American War Dads, herewith petition our representatives and Senators in Congress to amend the income-tax law of the Nation by exempting from income tax the first $2,500 of earned salary per year of a veteran of World War II and that such exemption be extended to a period of 3 years from date of said veteran's discharge from the service, thereby granting to the veteran the opportunity to rehabilitate himself into civilian life by enabling him to be employed at the prevailing rate of wages and not be compelled to accept remuneration offered by the Government for the 52 weeks under the unemployment section of the GI bill of rights.
